Unfortunately, even if the former barriers were not present and patient safety was a top national priority, progress would still be sluggish. Unlike establishing new clinical guidelines, such as best practices of care, patient safety reform needs to begin with the provider and the executive leadership of the health care organization and then disseminate through all levels of the field. It requires innovation in all aspects of medicine: professional, personal, organizational and societal (Leape, 2005). Safety should not just be an organizational priority; it should be the only priority interwoven in all aspects of practice and understanding (Mechanic et al, 2005). Health care organizations should not simply respond to accidents, but should be proactive against hazards. High Reliability Organizations (HROs) such as those in the aviation and nuclear power industry have successfully implemented this culture into their daily routines. These organizations actively seek out weak links in the chain and repair them before any adverse events occur. They work in highly regulated, functional and supportive teams. Modern health care organizations – unlike HROs – are highly complex and highly dysfunctional. Hospitals tend to approach the problem of error with the intent of saving their reputations rather than dealing with the issue. They would prefer to fix the immediate problem, instead of fixing the underlying issues that caused it. Finally, since most physicians consider themselves per-diem contractors, it is difficult for instill in them a sense of responsibility and overall logistic consistency Mechanic et al, 2005).

It comes as no surprise that a field as highly complex and intricate as medicine and –even more so – surgery is the host to many barriers preventing improvement. Fortunately, organizations and individuals stood up to the challenge to attempt to reduce errors in the perioperative setting. The two spearheads of this campaign have been The Joint Commission (TJC), which established The Universal Protocol and the WHO, which created the Surgical Safety Checklist and launched educational

campaigns to meet the global need to make surgery safer (The Joint Commission, 2006; WHO, 2006).

The Joint Commission led the campaign to reduce surgical errors, beginning in 1998 when the organization disseminated the first Sentinel Event Alert newsletter on the topic. A follow-up alert was issued in 2001. Finally, on May 9th, 2003 TJC hosted the Wrong Site Surgery Summit. The meeting's specific goal was to develop and obtain consensus for preventing surgical errors, specifically wrong-side, wrong-procedure and wrong-person operations The summit was hosted by TJC in collaboration with the American Medical Association, American College of Physicians, American College of Surgeons, American Dental Association and a plethora of other governing and regulatory professional organizations (The Joint Commission, 2005). Summit participants agreed that a universal protocol would help to alleviate the incidence of surgical errors and adverse events. The participants agreed that the protocol should be specific to eliminate confusion, yet flexible to accommodate unique surgical situations (The Joint Commission, 2005).

In addition to the summit, TJC pursued broad consensus on the initial drafts of the Universal Protocol to make it more valuable and useful to the majority of surgical situations and surgeons (The Joint Commission, 2005). Their work elicited nearly 3,000 responses from surgeons, nurses and other healthcare professionals. The public comments led to refinements in the original protocol. Shortly after publication in 2005, over 50 professional organizations and associations endorsed the Universal Protocol (The Joint Commission, 2005). Finally, in July 2003 The Joint Commission Board of Commissioners approved the Universal Protocol for Preventing Wrong-Site, Wrong-Procedure and Wrong-Person Surgery. On July 1st, 2004 it became effective for all accredited hospitals, ambulatory care facilities and office-based surgery facilities. Before discussing what the Universal Protocol

mandates, it is imperative to note that Joint Commission participation is voluntary for hospitals and clinics. Due to this, TJC cannot mandate compliance from non-participating hospitals and clinics.

The three crucial components of the Universal Protocol mandate that the operating room team must: complete a preoperative verification process, mark the operating site, and perform a "time out" immediately prior to incision. This process confirms that the appropriate patient has consented and is present for the procedure. Either nursing or anesthesia can perform the patient identification process; however, one stakeholder must be with the patient until he or she enters the operating room. Also, the surgeon must mark and initial the site of incision before the patient enters the operating room. Once the patient is inside, the marked site must remain visible during draping and must be indicated during the "time out". The "time out" is then preformed; it is a team process lead by the surgeon and monitored by the other stakeholders. It is performed just before incision and all activity must be stopped until the time out is completed. It must consist of three questions: Who is this patient? What procedure is being performed? And is this the correct site of mark to perform incision? Most facilities go beyond the essential three questions and have even established hard-stops to prevent early incision (Gibbs, 2012). A hard-stop is an essential protocol which does not allow the patient to be moved from his bed unless the nurse confirms that all protocol has been followed.

While the Universal Protocol is comprehensive and mandated only in all Joint Commission accredited institutions, its effectiveness and implementation varied across facilities (Michaels et al., 2007). This became clear when results of a project within 8 hospitals determined that even after full compliance with the Universal Protocol, wrong-site surgeries occurred as many as 40

times per week (Crane, 2011; Joint Commission Center for Transforming Healthcare, 2011). Even more

frighteningly, these numbers only account for TJC accredited hospitals, meaning that they are grossly underestimated. It is clear that healthcare organizations need more than just policies and processes to implement; they also require guidance on how to successfully make these processes and policies work (Gibbs, 2012).

Utilizing the basic concepts of TJC, the WHO created their own list of criteria intended to increase safety and reduce errors in the perioperative setting. At the initial consultation in 2007, complications of improving surgical safety were recognized and reviewed. The WHO recognized the complexity of the modern operating room and formulated 10 essential, but basic, objectives that are flexible enough to accommodate all surgical cases. The WHO identified four areas of possible improvement: 1) safer surgical teams by improving communication between team members, 2) safer anesthesia by improving patient monitoring, 3) surgical site infection prevention with antisepsis and contamination control, and 4) measurement of surgical services to measure basic outcomes of surgical care. Furthermore, it was guided by three principles: 1) simplicity since exhaustive lists will lead to protocol fatigue, 2) wide applicability since the field of surgery is infinitely diverse, and 3) measurability since the measurement of impact is key. The WHO believed that if these three principles are followed the goal of safer surgery would be feasible.

From 2007-2008, the WHOs Safe Surgery Saves Lives Challenge went into effect in 8 hospitals across the globe as a pilot study. Baseline data was collected from 3733 consecutive patients over the age of 16 who underwent non-cardiac surgery; subsequently, data from 3955 patients was collected consecutively after the implementation of the WHOs Safe Surgery Saves Lives program. Patients were monitored for any complications that occurred within 30 days postoperatively. Complications were

defined as they are by the American College of Surgeons, ranging from acute renal failure, to bleeding requiring 4 or more units of blood within 72 hours postoperatively, to cardiac arrest. The results obtained were quite remarkable. All complication rates dropped from 11.0% at baseline to 7.0% after the WHO Surgical Checklist was introduced ($P<0.001$); the hospital death-rate dropped from 1.5% to 0.8% ($P=0.003$), and the overall surgical site infection ($P<0.001$) and unplanned reoperation rates ($P=0.047$) dropped significantly as well (Haynes et al., 2009).

Although implementation of the WHO's Surgical Safety Checklist had led to statistically significant improvements in surgical patient outcomes, the mechanism of this type of dramatic improvement is unclear (Haynes et al., 2009). Implementation of the checklist and its related interventions required systematic changes at several medical centers and these changes could have easily resulted in the same outcomes. For example, improvements in airway evaluation could have been the result of improved anesthesia care. Additionally, the Hawthorne effect could have played a role during the time of study. Haynes et al., admit that it is difficult to disentangle the Hawthorne effect from this study since peers orally perform the checklist. However, their analysis shows that the presence of study staff in the operating room did not change frequency of complications (Haynes et al., 2009).

The significant improvements in patient outcomes found by Haynes et al. can be attributed to proper implementation, understanding and enthusiasm. Although subsequent studies showed improvements in patient outcomes with the implementation of the checklist, none were as notable as the original study. For example, Van Klei et al., (2012) retrospectively looked at 25,513 patient records at a single institution after the implementation of the WHO surgical checklist, thus removing observer

bias. Crude mortality dropped from 3.13% to 2.85%. This effect was strongly correlated with checklist compliance (Van Klei et a., 2012).

Regrettably, not all studies of surgical safety obtained the same positive outcomes as Haynes et al. (2009) and Van Klei et al., (2012) did. A study of the implementation of WHO's Surgical Safety Checklist in Norway lead to little change in hospital safety culture. Although patient outcomes were not studied, Haugen et al. looked at pre- and post-intervention surveys that were distributed to clinicians and ancillary staff; the outcome studied was the effects of the WHO checklist on surgical safety culture perceptions by the clinical staff. Response rate to the survey was 61% at baseline and 51% post-intervention. Unfortunately, the authors determined that the WHO surgical safety checklist had limited impact on safety culture ($P < 0.05$) (Haugen et al., 2013). Conversely, Low et al. (2012) received a 71% response rate and found that surgical teams valued the WHO's Checklist and thought that it contributed to patient safety. In fact, staff even insisted that the Checklist be completed in its entirety (Low et al., 2012).

The large spectrum in the effectiveness of WHOs Surgical Safety Checklist can most readily be attributed to large discrepancies in implementation. Implementing and mandating compliance without proper enthusiasm will simply lead providers to reject it. Oftentimes, safety process measures appear so duplicative to surgeons that they merely "go through the motions" without a vested interest or belief in what they are doing, hoping that someone will catch an error somewhere down the line. Thus, it takes more than a simple mandate to go beyond "passing a test". The goal all healthcare organizations should be striving for is patient safety. So, active leadership, deliberate enrollment, extensive discussion, training, piloting and ongoing feedback should all be part of checklist

implementation (Conley et al., 2011).

Despite demonstrating such improved outcomes in the pilot study, realistically, the WHO Surgical Safety Checklist's real world impact will vary greatly based on implementation (Conley et al., 2011). Health care organizations should make systematic efforts to explain why the checklist is being implemented and how it works. Additionally, proper extensive education regarding its proper use will result in better buy-in from the surgical staff. This will, ultimately, lead to improved compliance and improved outcomes as portrayed by the Haynes et al. (2009) surgical checklist pilot study (Conley et al., 2011; Lyons, 2013).

Due to the fact that a lot of surgical safety revolves around proper communication of the surgical staff, it is valuable to discuss a project to improve communication in the health care setting. The AHRQ and the Department of Defense (DoD) embarked on a patient safety initiative that revolves around communication in the medical setting. TeamSTEPPS is a systematic approach to integrating teamwork into practice. Using catchy jargon and real world situations TeamSTEPPS – when effectively implemented - demonstrates improvements in communication and interactions (Clancy, 2007). It is estimated that 70 percent of all medical errors are the result of miscommunication or improper interaction (Studdert et al., 2002). Optimistically, studies have shown that TeamSTEPPS helps to instill the confidence to speak out if a team member realizes something has gone awry. Additionally, TeamSTEPPS trained groups demonstrated significant increases in the quantity and quality of pre-surgical procedure briefings and the use of quality teamwork behaviors during case (Weaver et al., 2010)

When properly disseminated within a surgical setting, TeamSTEPPS helps to alleviate some of

the silos that plague surgical personnel. Fortunately, implementation across an organization is fairly simple to accomplish. The issue lies in sustainability. The ultimate goal of this program is to lead to cultural change. However, culture change is difficult to accomplish. It is due to this that the DOD and AHRQ recommend that a powerful group must lead the change, and members of that group must work together as a team – setting the example – to bring about change within the organization (Ferguson, 2008).

The final intervention strategy that was – and still is – being implemented is the EMR (electronic medical records). Although it is widely believed that the adoption of EMR systems will lead to reduced costs long-term, reduced medical errors and improved quality, only about 35% of acute care hospitals had adopted the EMR systems by 2008 (Hillestad et al., 2005; Radley et al., 2013). The main reason for late adoption of the EMR system in hospitals across the nation is cost. Between implementation, maintenance and education, cost of the EMR system can be well over a million dollars for individual hospitals and thousands for private clinics (Kazley, 2007). As with any investment, the cost of implementation needs to be weighed against the benefit of having the product. The main reason for adopting EMR system is to improve quality, efficiency and cost of medical care (Chaudhry et al., 2006). For the purpose of this paper, focus will be prioritized on quality.

Given the fragmented nature of health care in the United States, the immense size of transactions within the system, the need to integrate new evidence based practices and the complex style of information being exchanged, the limitations of paper-based medical records is quickly apparently (Chaudhry et al., 2006). It is theorized that hospital EMR use may reduce errors by reducing poorly handwritten patient charts, physician orders, diagnoses, and provider notes. Additionally,

medical records can be programmed to act as a safety net capturing adverse drug interactions and overdoses, which can reduce unnecessary testing and treatment. Although not all EMR systems are programmed to capture all these variables, most offer some possibility of reducing harm to the patient (Chaudhry et al., 2006). In fact, the IOM called for an "elimination of most hand written clinical data by the end of the decade in their 2001 report *Crossing the Quality Chasm: A New Health System for the 21st Century*.

Although currently there is no literature on the effect of EMR on the rate of surgical errors, a plethora of publications exist on medication errors. These are important in all aspects of surgical care since a medication error can lead to drug interaction during surgery. Medication errors in hospitals are common, expensive and harmful to patients. Errors range from too much vitamin C, which is benign, to too much acetaminophen, which can lead to liver failure and death (Radley et al., 2013). Radley et al. conducted a literature review to estimate the effects of EMR on medication errors (2013). The results obtained were significant. Processing a drug order through en EMR system reduced the likelihood of an error by 48% ($P < 0.05$). Given the rate of EMR adoption and implementation in 2008, their findings suggest that medication errors – and in turn, medical and surgical errors – were reduced by 12.5%, which equates to roughly 17.4 million fewer medication errors over a one-year period. They attest that if all US hospitals adopted EMR systems, as many as 51 million medication errors per year could be avoided (Radley et al., 2013). On the fiscal end of the spectrum, Hillestad et al. believes that with 90 percent adoption inpatient and outpatient savings can total more than 77 billion dollar annually.

The projected reduction in errors found by Radley et al. represents an important indicator of the potential rewards of hospitals using electronic medical record systems. Even though the rate of

medication errors had significantly dropped, it was unclear – according to Radley et al – if this reduction led to improved patient outcomes (2013). Although it is unclear whether or not this would translate into the complex field of surgery, it is important to note that an improvement in process measures does not always lead to an improvement in outcome measures (Finney et al., 2011).

The success of the interventional strategies on surgical safety described above range from insignificant to major in semi-controlled environments, studies and hospitals. However, real world application contains greater variably and is less controlled than studies. Such discrepancies arise because researchers and facilities often ignore the interwoven relationships between process measures and outcomes measures (Finney et al., 2011). For example, policy makers and health organizations might assume that if an intervention for a particular problem results in improvement in a particular study or hospital, this improvement can translate to improvement at any facility.

A field as complex and multifaceted as surgery requires interventional policies to be succinct, evidence-based, and useful. Bureaucratic policies with no evidence will receive poor compliance from physicians and hospitals. Surgeons, when confronted by a constant barrage of new protocols, policies and regulations will comply poorly out of protocol fatigue. The reality is that nearly a decade and a half after the IOM report "*To Err is Human,*" the system has failed to make medicine safer (Safe Patient Project, 2009). This means that in the past fourteen years, nearly 1.4 million lives were unnecessarily lost and billions of research dollars wasted. New research is paving the way for new interventions (Bates and Gawade, 2000). The next painfully difficult task will be to measure the effects and implement effective evidence-based policies that will appeal to both providers and patients. With the

Patient Protection and Affordable Care Act on the near it is the perfect time to act, change, and bring medicine and surgery into the 21st century, as neither patients nor providers can wait another decade and be met with failure (Patient Safety Project, 2009; Bates and Gawande, 2000).

Discussion:

The 1999 report by the Institute of Medicine (IOM). titled *"To Err is Human: Building a Safer Health Care System."* placed the issue of patient safety high on the national health care agenda. The findings that 44,000 to 98,000 people die from preventable medical errors each year incited considerable clinical, political and national concern. Independent of the fact that these preventable errors result in $17 to $29 billion health care dollars spend, the main point of interest was that – even at the most modest level – medical errors are a leading cause of the death in the United States. Regardless of claims of whether the data used by the IOM is overestimated (Sox and Woloshin, 2001) or underestimated (Krizek, 2000), the reality is that a large number of people die from preventable medical and surgical errors. Although the accuracy of the IOM report is highly debated, there is widespread agreement that errors pose a serious risk to the health of patients.

Information regarding surgical errors and complications depends mostly on retrospective analyses or self-reporting by hospitals. Although this is a debated method of analysis, it represents the best information available in the field today (Krizek, 2000; Sox Woloshin, 2001). One of the most highly quoted and regarded studies was conducted by Harvard Medical School in 1991. Brennan et al. used stringent criteria to retrospectively review over thirty thousand medical records(1991). They found that adverse events occurred in 3.7 percent of patients (1133) and 48% (544) of these adverse events were surgical (1991). This study was used by the IOM to estimate that surgically adverse events due to medical management can potentially range from 21,120 to 47,040 when extrapolated for the United States. One year later, Atul Gawande of Harvard followed up with a more in-depth study of surgical adverse events. A review of nearly 15,000 discharged patient charts identified an adverse event rate of

three percent –consistent with the findings of Brennan et al.

Since retrospective studies pose limitations on reporting, studies have been conducted in a prospective manner as well. Krizek (2000) and Bosma, Veen and Roukema (2011) analyzed the incidence of errors prospectively, 21.2 percent and 19.5 of adverse events or errors were identified and surgery was the cause of 7.5 percent and 6 percent, respectively.

To combat the effects of lapses in surgical patient safety in the United States health care system, the Joint Commission (TJC), The WHO, National Quality Forum (NQF) and Agency for Health Care Research and Quality (AHRQ) decided it was time to intervene. Three interventions have been identified in this paper: The Universal Protocol, The Surgical Safety Checklist and EMR implementation.

Leading the campaign against surgical errors the Joint Commission convened and approved a groundbreaking protocol in 2004. The Universal Protocol mandated that the operating room team must: 1) complete a preoperative verification process, 2) mark the operating site, and 3) perform a "time out" immediately prior to incision (The Joint Commission, 2005). Although TJC mandated compliance in all their hospitals, individual success of implementation varied. This lack of success became clear when even with 100% Universal Protocol compliance, wrong-site, wrong-procedure, wrong-patient surgeries occurred as many as 40 times per week in the United States (Crane, 2011; Joint Commission Center for Transforming Healthcare, 2011).

Following TJC, The WHO created basic objectives that were flexible enough to meet all surgical cases. These objectives were focused on simplicity, applicability, and measurability. The WHO believed that if these three principles are followed, the goal of safer surgery could be attained. From 2007-2008, the WHO's Safe Surgery Saves Lives Challenge went into effect in 8 hospitals across the globe as a pilot

study. The results obtained were remarkable; complication rates dropped from 11.0% at baseline to 7.0% after the WHO Surgical Checklist was introduced and mortality dropped from 1.5% to 0.8% in the 8 hospitals (Haynes et al., 2009). Although subsequent studies showed improvements after implementation, none were as notable as the original study by Haynes et al (2009).

The final intervention was electronic medical record (EMR) implementation. Even though it is believed that EMR adoption will lead to reduced costs long-term, reduced medical errors and improved quality, only about 35% of acute care hospitals had adopted the EMR systems by 2008 (Hillestad et al., 2005; Radley et al., 2013). The biggest reason for this lack of universal adoption is cost-, as EMR systems can cost well over 1 million dollars for hospitals and tens of thousands for private clinics (Kazley, 2007). Unfortunately, even with full implementation that led to a reduction in errors, it is unclear if EMR implementation led to improved outcomes in patients (Radley et al., 2013).

Because widely disseminated public knowledge regarding surgical errors is only fourteen years old it is limited when compared to other fields of research. Thus, the literature presented has many weaknesses but also certain strengths. Beyond that fact that many providers believe that the data provided by the IOM is overestimated due to extrapolation of a study to the nation, other issues exist in the current literature as well.

Since no universal error reporting system exists in the United States, there is little incentive for hospitals to report errors unless mandated. This lack of reporting leads potential case studies and learning opportunities to be missed. Furthermore, root cause analyses within hospitals might not occur if they are not mandated by agencies such as TJC or Center for Medicare and Medicaid (CMS).

Another weakness is the fact that most information regarding errors comes from retrospective

chart review. Traditionally, there has been reluctance to document errors in official medical records for fear of litigation. This leads to missing pertinent data for research purposes and to an underestimation of the actual problem. Prospective study review is not without faults as well. As with retrospective studies, documentation by residents in prospective studies can lead to omissions of events since residents are not always competent enough to document properly. Additionally, the Hawthorne effect comes into play. Staff might work better under observation, which can lead to less errors and improved outcomes. Finally, prospective studies offer much smaller sample sizes than retrospective ones, which might not lead to statistically significant results. These issues are the reason why there is such a wide discrepancy between the results of retrospective and prospective studies regarding surgical errors and adverse events – 3 percent to 7.5 percent at the largest points.

The final weakness is the relevance of the results that are currently available. The most quoted study presents chart reviews from 1984, which might not be applicable to the current health care and hospital situation in the United States. The field of medicine and surgery evolves swiftly and providers often disregard results from 1984 published in 1991. This, in turn, leads to a lack of knowledge regarding interventions attempted to reduce surgical errors. It is impossible to fully comprehend the effects of interventions by the WHO and TJC without large-scale studies, which the literature currently lacks.

Even though there are significant limitations to the literature, it does present several strengths. First, the massive sample size found in retrospective reviews provides a strong starting point to dictate further research. The problem of errors and adverse events in the perioperative setting is clearly understood and the reliability is fairly stable throughout the various studies performed. Both

retrospective studies obtained results in the 3% range and both prospective studies obtained results within the 20% range.

Nearly all health care organizations – hospitals, policy makers and leadership – have all become aware of the problem of surgical errors and adverse events. The support of these organizations has helped to form a plethora of agencies such as TJC, AHRQ, NQF and various others whose main purpose is to alleviate this problem of surgical errors. Thus far, success has been minimal but measurable. Checklists, protocols and safety nets have been able to capture a multitude of problems that arise in the complex operating room. Although studies conducted do show improvements in surgical patient safety, it is not possible to quantify the number of errors today and therefore it is impossible to conclude if the goals of the IOM have been met since the literature does not exist.

The demand for more literature should begin now. Retrospective data from thirty years ago cannot be applicable in today's modern operating room. Additionally, even if the operating room culture and complexity has not changed it behooves researchers to better understand the effects that the Universal Protocol and the Surgical Safety Checklist has had on errors and adverse events. Policies are only effective if they are proven to be effective. Since process measures do not always translate to outcomes measure it is important to know if funding and investments need to continue or be halted for the current programs in place. The only way to accomplish this is with more research. Both retrospective and prospective studies should be conducted. Retrospective studies should use the criteria utilized by Brennan et al. (1991) to be able to compare the results of the current incidence after the implementation of the various interventions attempted. Prospective studies should begin immediately and utilize large enough sample sizes to obtain statistically significant results. Additionally,

a distinction needs to be made between surgical errors and medical errors. Although a large body of literature exists on medical errors, literature on surgical errors and adverse events is lacking. Since 48% of all errors occur in the perioperative setting, it behooves researchers to separate the two drastically different fields of medicine.

As with any field, in order for significant changes to occur in the field of surgical patient safety, certain policies need to be adopted. Adverse events and errors are often based on poor adoption, implementation and research of current policies and regulations. These policies should focus on providers, organizations and patients alike, as a multidirectional approach might prove to be more effective. The following 5 policy recommendations are a few ideas that might accomplish the goal of improved surgical patient safety: 1) develop a national entity to track progress 2) universally mandate error reporting and disclosure 3) improve error reducing technology 4) train providers in teams 5) improve patient responsibility.

First, fourteen years after *To Err is Human*, the United States still has no national entity to track progress. The closest the United States has come is the development of the AHRQ. Unfortunately, the AHRQ is a comprehensive organization that is not able to collect data nationally. It merely approximates national progress on surgical safety through claims data provided on patients in the Medicare and Medicaid systems, hospital billing data and other resources like vital statistics and census data (Safe Patient Project, 2009). An additional limitation of the AHRQ is that it does not disclose provider or facility specific information. The data is provided on a national or state aggregate. Thus, prospective patients, policy analysts and researchers cannot differentiate between high error and low error hospitals. Furthermore,

the data is not current. The ever evolving area of surgery requires information to be as current as possible; the AHRQ is often three to four years behind in its~~their~~ reports (Safe Patient Project, 2009). These delays are a chronic problem in health care data and often results in a reduction of relevance of the report as a learning mechanism. Stale data might not be applicable to current practices inside the modern complex operating room. The AHRQ is aware of the problem and in a 2008 report states that "data remain incomplete for a comprehensive national assessment of patient safety." (AHRQ, 2008). This claim is an unfortunate indicator of how little advancement in data collection of surgery safety has occurred.

In 1999, the Institute of Medicine recommended tracking national progress with quarterly surveys such as the ones conducted for the IOM's *To Err is Human* estimate. It behooves researchers to use medical technological ~~advanced~~ to make this task simpler. Electronic medical records can be accessed remotely and provide researchers and policy makers with applicable and up-to-date data on surgical patient safety. Unfortunately – nearly a decade and a half after the IOM report – a comprehensive national tracking system does not exist and it is difficult to tell if significant progress towards patient safety has occurred.

Second, the surgical error reporting system in the United States is cumbersome and confusing. The different requirements for reporting errors and adverse events by CMS and TJC can lead events to fall through the cracks. In addition, patients cannot know which health care organizations provide subpar data on errors. No single nationally mandated reporting system exists. Since 1999 error reporting has primarily consisted of voluntary, confidential and aggregate systems mandated by CMS. In fact, laws in seventeen states prohibit release of

medical harm data to protect hospitals (Patient Safety Project, 2009). Other organizations such as TJC and NQF only mandate reporting from private membership hospitals and their required list of adverse events is not exhaustive.

Mandated error and adverse event reporting will signify a huge change in a system known for opting to hide errors. While the current error reporting systems fail to create an atmosphere of pressure for change, a m~~. M~~andated reporting system can hold all of the United States health care organizations to the same level of accountability. Discrepancies should not exist between states, just as lapses in patient safety should not. A national entity should exist that will require all health care organization to publically report adverse events that occur in their facilities.

Third, the current medical technology is ever-improving; ~~,~~ funding should be provided for better equipment. Improvements in electronic medical records, diagnostic tests and safety net technology can have a two-fold effect on error reduction. First, improvements in EMRs can provide up-to-date data for research. As recommended above, it is much easier to remotely review patient data for errors. Current literature is several years behind and this lag reduces its relevance. EMR systems can allow researchers to quarterly review data on national progress and provide policy makers and health care organizations with the latest data available. Second, improvements in diagnostic tests and safety net technology can catch errors before they occur. Providers are human and will make errors; however, improved software and technology can trigger alerts that will advise providers of errors before they occur. For example, software can advise anesthesiologists of possible drug interaction as the time of intubation and safety net

technology can prevent wrong patient surgery by using thumb print confirmation of the patient.

Fourth, as described above, many errors and adverse events occur because of~~y~~ breakdowns in communication. Discrepancies often occur between different teams of clinicians. Oftentimes physicians, physician assistants, nurses and patient care techs will fail to communicate or understand each other sufficiently. ~~often experience breakdowns in understanding~~ (Leape and Berwick, 2005). Team training can better prepare teams for adverse events that can occur. Simulation training has continuously shown breakdowns in communication between physicians and nurses (Leape and Berwick, 2005). Training future physicians, nurses and ancillary clinical staff from school to residency can help to alleviate these breakdowns. Better communication has been shown to reduce errors and improve employee satisfaction as shown by the TeamSTEPPS project described above.

Finally, the patient must be proactive. Patients should be proactively involved in their care. They should ask pertinent questions of their providers, such as inquiring about his infection rates, surgeries completed this year, and his outcomes. Since the patient is the only individual present throughout every aspect of his or her~~their~~ care, he or she is ~~they are~~ the most valuable resource available to providers. The patient is~~y are~~ the final safety net that can prevent wrong-site, wrong-patient and wrong-procedure adverse events. Patients should not just be able to speak up, but take an active role in their care. This can reduce their risk of harm and improve their chances of positive outcomes from their hospitalization. Additionally, many errors and adverse events occur in the operating room before anesthesia induction. For example, allergic reactions to medications or hand hygiene have a high chance of being observed by the patients. Thus, it is pertinent that funding and research becomes available to educate the patient. Providing complete information and education to

the patient will not only result in reduced errors and better outcomes but also reduction in lawsuits that can be caused by adverse events.

Conclusion:

It has been nearly a decade and a half after the Institute of Medicine described that anywhere between 44,000 and 98,000 people die from preventable medical errors annually in the United States. Despite millions of dollars invested, an abundance of interventions attempted and fourteen years of continuous work, researchers are still unsure whether there have been significant improvements in surgical patient safety. There is nearly no reliable evidence that surgery is any safer than it was a decade and a half ago. Whether due to better reporting, outdated reports, or better surgical error reporting it is unknown whether medical and surgical errors are the 6th leading cause of death of Americans.

The uproar of To Err is Human has subsided and although countless editorials, organizations, policies and task forces have been organized and written, key recommendations for the future remain sluggish. Patients, health care leaders, providers, policymakers and all stakeholders in patient safety need to work together to accomplish this goal of making surgery safety in the United States. Acting now will prevent the same question being asked in another decade and a half: is surgery safer?

Physical Activity of Brooklyn Older Adults: Measuring self-reported daily activity logs using the Compendium of Physical Activity

ABSTRACT

Intro: Physical activity (PA) is recognized as an important determinant of health. While the older adult population represents the fastest growing age group in the United States, it is the least active, with the majority of the population leading a sedentary lifestyle. Research focused on PA in older adults is sparse. The purpose of this study was to characterize the activities of urban older adults and the associated metabolic expenditures with those activities. **Methods:** PA logs from 100 participants aged 59-99 in the Cardiovascular Health of Brooklyn Seniors and the Built Environment Study completed at baseline were examined. Logs were coded and entered in Excel using the Compendium of Physical Activity to characterize activities and the corresponding metabolic expenditures (METs) of those activities. Descriptive statistics, frequencies, and bivariate tests were performed in SAS to better understand the sample population. **Results:** Younger age, race/ethnicity (Latino), higher levels of education, being married or living with a partner, and higher income levels were associated with higher mean amounts of METs expended per week. Hours spent in home activity, self-care, inactivity, and miscellaneous activity represent the Compendium categories most frequently reported by the sample. The greatest mean amount of hours per week were spent in inactivity, even when eliminating sleeping from that category. **Conclusion:** Results of this study support previous research that older adults live a sedentary lifestyle. Providing preliminary data, this study characterizes activities of older adults that are not revealed by other measures of PA, such as accelerometers. Recommendations for further research are presented.

INTRODUCTION

Physical activity is recognized as a determinant of health and an important part of healthy aging, yet the majority of Americans are unaware of and/or do not meet the national physical activity guidelines developed in 2008, and more than 35% of adults in this country are obese.(1, 2) The older adult population represents the fastest growing age group in the United States and also the least active, with the majority of the population leading a sedentary lifestyle.(3, 4) Presently, less than 20% of older adults engage in physical activity, and fewer engage in strengthening exercises.(5)

Participating in regular physical activity can reduce the risk of obesity and obesity-related conditions such as type 2 diabetes and hypertension, leading risk factors for chronic disease estimated to cause 7 in 10 deaths in the United States.(2, 6) The estimated medical cost of the obesity epidemic is about $147 billion, with medical costs of obese people $1,429 higher than people of normal weight.(7) The 2008 Physical Activity Guidelines for Americans suggests between 500 and 1,000 METs per week for adults of any age to receive health benefits from physical activity.(8) Recommendations for older adults to improve and maintain health include aerobic and muscle-strengthening activities, activities to maintain or increase flexibility, and balance activities to prevent falls.(9) The Centers for Disease Control recommend at least 150 minutes of moderate-intensity aerobic activity weekly in addition to muscle strengthening activities two days per week for older adults to enjoy the health benefits of physical activity.(8) The Centers for Disease Control report that while gardening and walking are the most popular physical activities for this population, the prevalence of inactivity is greater among women, minorities, and those with lower income and education status.(10) Increasing levels of inactivity are causing public health concerns that the benefits of physical activity for older adults are not being utilized.(11)

Physical activity has been shown to reduce functional limitations of older adults and improve measures of fitness.(12, 13) Physical activity has also been shown to positively influence outcomes associated with a higher quality of life for older adults.(9) Though earlier literature suggests results of physical activity improving cognitive function are inconclusive, new findings suggest exercise is beneficial for both younger and older adult cognitive function.(12, 14) Exercise has shown to be associated with improved mood, and even low levels of light-intensity physical activity has been associated with lower levels of depression in older adults.(15-17) In addition to these physical, mental, and emotional benefits for individuals, physical activity could also help reduce medical expenditures in the older adult population. It has been shown that increasing physical activity to three

or more days from an inactive state can reduce total healthcare charges more than $2,000 within two years.(18)

It is well documented that physical activity rates decline with age, and in addition to the natural decline there are many barriers to physical activity participation for older adults. Many older adults report being intimidated by fitness facilities, and though enjoy an exercise class setting, are concerned that they may slow down the rest of the group.(19) Fear of falling is a serious health concern for older adults, and in addition to ill health, is associated with physical activity reduction.(20, 21) Efforts by caregivers and family members to protect older adults from harm, as well as common beliefs and expectations for aging, also appear to restrict physical activity efforts in older adults.(20, 22)

Measuring physical activity and validating self-reported physical activity continues to be difficult, especially for the older adult population.(23) Complicating measurement of physical activity for older adults is the tendency for this population to engage in light or low-level intensity activities and the difficulty to recall activity over long periods of time. In response to this, indirect measurement options such as physical activity surveys have been developed specifically for the older adult population.(24, 25) Activity logs or diaries have also been used to document the types of physical activity engaged in, and when used in conjunction with a tool such as the compendium of physical activity, can categorize and estimate the intensity of metabolic expenditure for many, but not all, activities.(26) Direct measures of physical activity, though generally considered more accurate, can be expensive and burdensome for the participant. Pedometers and accelerometers are the most common direct measures for older adults, but cannot describe the activity the subject is participating in.(27)

Overall, research focused on physical activity (PA) in older adults is sparse. While accelerometers have become the gold standard in PA measurement, they have not been used in a large sample of older adults. It is unclear whether they are sensitive enough to pick up low levels of activity that may be present among the older adult population, and there are few measurement tools tailored to reflect or monitor activities of daily living among urban older adults.

This study uses data collected by the Department of Preventive Medicine at Mount Sinai School of Medicine for the Cardiovascular Health of Brooklyn Seniors and the Built Environment Study (BSBE). This study aimed to examine the effect of the food and physical activity environment, as well as other built environment characteristics, on health behaviors and health outcomes.

Participants were recruited at senior centers throughout Brooklyn, and diet, physical activity, and cardiovascular risk factors were monitored. The study consisted of interviewing 1,453 English and Spanish-speaking seniors. Participants were contacted twice, once at baseline at a senior center and again one and a half to two years later. After agreeing to participate, seniors returned to their center and cycled through a number of research stations: medical screening station, nutrition interview/24 hour diet recall station, built environment review station, thoughts/perceptions/cultural attitudes about food, physical activity, environment and transportation interview station, and the accelerometer instruction and physical activity interview station. Follow-up interviews one and a half to two years later were conducted at the senior center or via telephone. Built environment audits were conducted twice, once at baseline and again two years later, investigating a 300-meter area around each participant's home.

As a student intern on BSBE, I participated in data collection, coding, and data entry at the end of second year follow-up. Though the daily activity logs had been collected in 2009, they had not been used for any data analysis. Working with the principal investigator of BSBE Dr. Kimberly Morland and study coordinator Susan Filomena, we aimed to characterize the activities of urban older adults and the associated metabolic expenditures with those activities by analyzing the self-reported daily activity logs of study participants. We anticipate this will help develop a more comprehensive list of common activities the urban older adult population participates in, as well as detail the amount of time spent and the amount of energy expended in those activities. Additionally, using the Compendium of Physical Activity will provide an alternate estimate of energy expenditure known as METs (metabolic equivalent) that may not be recorded using accelerometers. METs are calculated as the ratio of energy spent in a given activity to the rate of energy at rest. First published in 1993 and updated in 2000 and 2011, the Compendium of Physical Activities was designed to aid epidemiologic studies in assessing and standardizing energy expenditure in physical activities using METs. The Compendium currently has twenty-one activity categories and more than 800 specific codes.(28)

METHODS

Study Population

A total of 870 participants in the Cardiovascular Health of Brooklyn Seniors and the Built Environment Study completed daily activity logs at baseline in 2009 and 2010. Due to time constraints and to pilot the protocol, we generated a random sample of this cohort in SAS based on community districts, totaling 150 people. From this sample we excluded logs that had a significant amount of incomplete data (missing one or more full days), and those that were completed in Spanish due to not having a translator available. This process resulted in 100 physical activity logs suitable for coding. (Appendix 1)

Among the sample of 100 participants, 81% were women and 19% were men (Table 1). White and Latino populations were about equally represented, while blacks were underrepresented in our sample. The majority of the sample completed grade 9-12 and had a yearly income from all sources of under $30,000. The majority of the sample was single, separated, divorced or widowed, followed by married or living with a partner. Almost every Brooklyn community district is represented in the sample, as well as two districts from Queens. There were a number of Cardiovascular Health of Brooklyn Seniors and the Built Environment Study participants that attended senior centers in Brooklyn but lived in Queens, hence their appearance in our random sample.

Study Design

Participants were asked to enter all activities they engaged in for seven days on an activity log sheet for each day. After examining the logs chosen, we realized that entries range from a few activities listed per day to complete entries for each hour of the day for all seven days. Every activity log begins at 5:00 am with a line for each hour of time to record activities for that hour. (Appendix 2) We will code the activity logs using the appropriate Compendium of Physical Activity code and corresponding METs for total amount of time per activity.

We anticipate that many participants' entries will be vague, or less specific than listed in the Compendium, therefore default codes were chosen so that coding will be consistent between coders. In general, our protocol calls for underestimating the number of METs spent for a given activity. Therefore, the chosen default codes are usually described as "general" for the activity and "light

effort". Additionally, any activity where there is a choice between standing, sitting, or lying down, but the position is not specified by the participant, we will default code the activity in the sitting position.

We anticipate that many participants will list more than one activity per hour. In this case, we will split the time evenly between the listed activities in that hour. For example, if a participant wrote that they took a shower and brushed their teeth in one hour, thirty minutes will be coded as taking a shower and thirty minutes will be coded as brushing teeth. Also, if transportation was part of the activity we will treat them as two separate activities. For example, if a participant wrote that they walked to the grocery store from 2:00 pm to 3:00 pm, walking for transportation will be coded for 2:00 pm to 2:30 pm and food shopping will be coded for 2:30pm to 3pm, thirty minutes for each activity. Additionally, if the participant listed "had some lunch" or "made breakfast" for one hour, we will assume that they spent some period of time preparing the meal (as most of our participants report cooking for themselves) and then consuming it. Therefore the hour will be coded as thirty minutes food preparation and thirty minutes eating.

While coding there were alterations to our initial protocol. With walking activities, because many participants did not specify how fast they walked but did specify if they were walking for transportation or walking for pleasure/exercise, we chose one code for walking and added our own code when the participant specified walking for pleasure or exercise. We also wanted to distinguish between visiting with one person or a small group (i.e., 'visited my friend') and participating in larger group social activities (i.e., 'family BBQ party at my daughters house' or 'holiday party at senior center'). Since the Compendium only offers one code for visiting with family and friends, we created a subset code. For unspecified senior center activities we used an amended Compendium code for a group or family gathering, but if the activity at the senior center is listed (i.e. 'knitting class at senior center') we used the code that best fit that activity, and noted the location was at the senior center. For small group or one-on-one visits, we also used an amended Compendium code and for larger gatherings or parties, including parties at the senior center, we used the true Compendium code.

Coded activity logs will be entered into an Excel spreadsheet, one for each participant. The subject ID, the day of the week, and the start time and end time for each activity will be listed. Each day begins at 5am and ends at 5am the following day. The total hours per activity is calculated automatically via the formatted cells. (Appendix 3)

Data Analysis

Each Excel file was imported into SAS to develop a dataset. Age was dichotomized into ten-year intervals in order to accommodate the age range of the sample, and marital status was dichotomized into those participants who appear to be living with a partner and those who appear to be living alone. Because many of the participants are on fixed incomes, income level was dichotomized into greater than $30,000 per year from all sources and less than or equal to $29,999 per year from all sources. Descriptive statistics were performed to better understand the older adult population in our sample. The dataset was analyzed for frequencies of Compendium codes and means of METs and hours per activity category. Mean METs expended by gender, age, race, martial status, education level, and yearly income was also examined.

RESULTS

On average, study participants expended 228.58 METs per week. (Table 2) Though a recommended weekly range of METs is not determined specifically for older adults in the 2008 Physical Activity Guidelines for Americans, participants in our study fell below the recommended range for adults in general. Participants reported sleeping an average of 56.3 hours per week. The Compendium activity category participants reported the most hours spent per week was Inactivity with 21.55 hours. This category includes codes such as sitting quietly and watching television and lying in bed. Participants spent 20.21 hours and 33.63 METs per week on average in activities within the Self-Care category that includes codes for eating, bathing or showering, dressing, and taking medication or attending a medical appointment. Participants spent 19.44 hours and 43.67 METs on average per week in activities categorized Home Activity, which includes codes such as general cleaning, cooking or preparing food, doing laundry, and food or non-food shopping. Participants reported an average of 18.80 hours and 28.33 METs per week in the Miscellaneous category. This category includes codes for sitting and talking in person or on the phone, unspecified senior center activity, playing cards, sitting and reading a book or newspaper, and visiting with friends or family. Participants spent an average of 3.85 hours per week and 10.81 METs per week walking. While the full Compendium of Physical Activity has twenty-one activity categories and more than 800 specific codes, our analysis produced eighteen activity categories and ninety-five corresponding Compendium codes, as well as the four codes we amended and a code for "missing data". (Appendix 4)

When examining average METs expended per week, there was little difference found between females and males. (Table 3) The youngest participants, those aged 59 – 70, expended about ten METs more per week than older participants. The oldest study participants, those aged 81 - 99, averaged about four METs more per week than those aged 71 – 80. Participants who reported being married or living with a partner expended almost twenty more METs per week than participants who appear to be living alone. Participants that completed education levels beyond elementary school or junior high expended about twenty more METs per week than those that did not, and those with higher incomes averaged about ten more METs per week than those with incomes less than or equal to $29,999.

DISCUSSION

Our study supports previous findings that older adults live a more sedentary lifestyle, though we were able to characterize activities they participate in that would not be picked up by an accelerometer, such as self-care and home activities. Our study also supports the Center for Disease Control's findings that walking is one of the most popular physical activities for older adults, a more popular physical activity than dance, conditioning exercise, bicycling, or sports for our participants. We did not find that our study supports that same popularity finding for gardening. Given that the older adults in our study live in an urban environment and may not have the space for lawn and garden activities, this is not surprising.

Our study did not find great variation by study population characteristic with regard to mean amount of METs expended per week. Our finding that younger participants in our sample expended more METs per week on average than older participants is expected. Our study supports previous findings that those with higher levels of education and income are more physically active. Our finding that Latinos expended more METs per week than any other racial/ethnic group was unexpected, as previous research reports minorities have a higher prevalence of inactivity.

There are several limitations to this study. While the NYC Department of Aging reports that almost 25% of Brooklyn older adults have mobility and self-care issues, our study does not control for injuries, illness, chronic conditions or other physical health problems that could affect activity.(29) Having difficulties with self-care activity may account for why this category is one of the most frequent reported by our participants, as it may take more time to complete these activities for older adults with self-care impairments. Future studies of this sort should control for mobility problems as well as other characteristics that have been shown to impact physical activity such as prevalence of disease, mental health status, body mass index, smoking status, neighborhood environment and social support networks. Additionally, this study relies on self-reported activity logs, which are subject to recall bias and may be particularly problematic for older adults with memory issues. Also, instructions to participants when asked to fill out the seven-day physical activity logs may need to be improved, instructing participants very specifically as to how to fill out the log in an attempt to minimize missing data and get a fuller picture of daily activities.

While this study only provides preliminary data, the next set of tests performed may want to explore activity hours and METs by gender, race, education level, or income, with age ranges. Since this study uses data from participants recruited at senior centers, it may be interesting to examine how

much of the participants physical activity takes place at senior centers, in an effort to strengthen the argument for greater funding of these centers and their importance. Because people participating in senior centers may be different than those who don't, future studies should include a broader sample of older adults. Future studies may also want to broaden the diversity of the sample, increasing the amount of blacks participating and including Asian-Americans.

Additional research is needed to document the activities of older adults in order to examine correlates of physical activity in this population. Further research is also needed to continue developing the best ways to measure physical activities, especially tools able to measure lower levels of physical activity and routine daily activities, among older adults. The results of this study support the need for physical activity interventions among the older adult population in order to prevent the increasing prevalence of inactivity and its negative effect on health.

Health Information Technology and Mental Health:
Developing a Public Health Intervention for New York City

Received an "A" in course

Capstone advisor: Linda McDowell
Date of submission: December 14, 2013
Abstract word count: 231
Text word count: 5531

Abstract

Objective: To customize and launch an internet-based intervention to address the mental health needs of New Yorkers exposed to the disastrous effects of Hurricane Sandy.

Methods: The five-module application Bounce Back, originally created in response to Hurricane Ike in Texas, was selected for use. We customized Bounce Back to make it more appropriate for New York City users, editing content and programming instructions in these areas: urbanization and localization; programmatic messaging; increasing usability and literacy-level appropriateness; copyediting; and branching logic. After customization was complete, the application was beta-tested by program staff and demonstrated for Agency leadership.

Results: The customization process produced scripts and on-screen changes of content for all five modules that was more reflective of the demographics and vernacular of the New York City population; corrected grammar, spelling and formatting; and streamlined text. However, the fundamental problems of the application, including poor navigation and density, proved insurmountable within our resources, and the decision was made to abandon the project prior to launch.

Conclusions: The urgency of choosing and disseminating a product in the aftermath of Hurricane Sandy derailed the integral review, evaluation and selection process; the application that was chosen ultimately could not meet our needs. Future steps should include a thorough selection and preparation process during business-as-usual time, as well as an application that would be appropriate for use in general and in the wake of a disaster.

Introduction

Mental illnesses, including mood, behavior, and substance-use disorders, present a world-wide public health problem.[1–3] Globally, these disorders are a leading cause of disability, are associated with a significantly diminished quality of life, excess mortality and considerable societal costs.[4] One of the most common disorders, Major Depressive Disorder (MDD), is projected to be the second most disabling medical condition worldwide by 2030, led only by HIV/AIDS.[4]

Despite the universal pervasiveness and the related burden of these illnesses, care and treatment continue to fall short of the need.[4] A significant number of affected people do not seek professional help – it is estimated that only 25 – 50% of those with mild, moderate, and severe disorders seek treatment. There is a robust body of research indicating that individuals exposed to a potentially traumatic event are at increased risk of developing of a range of mental health issues, including post-traumatic stress disorder, depression, drug and alcohol abuse, and increased cigarette use.[5] However, certain of these at-risk groups seek mental health services at strikingly low rates.[6]

Many individuals who might benefit from mental health treatment are reluctant to initiate care because of stigma, discomfort in talking about private issues with an unfamiliar person, and fear about loss of confidentiality.[7] Many go without care at all, or delay seeking it until they are in a crisis state, when treatment is more difficult. Though the gap between prevalence and treatment can be, in part, attributed to consumer preference (low perceived need, cultural beliefs around the unacceptability of mental health treatment), poor access also interferes with the receipt of treatment.[7] This is true regardless of a person's insurance status: individuals with private or public insurance often find it difficult to locate or receive quality services due to limited provider availability or long waiting lists;[7] in most Medicaid and uninsured populations, the need for services far exceeds the capacity of safety-net providers.[7] Moreover, many who seek help often face long waiting periods and do not receive evidence-based treatment.[4] Access to quality mental health care is limited in nearly all populations, but is particularly limited for vulnerable populations such as the oldest and youngest persons, racial/ethnic minorities, and socioeconomically disadvantaged populations.[7]

In light of these barriers, there is growing interest and evidence base for easily accessible, empirically-supported, cost-effective treatments.[4] The rapid expansion of the internet and mobile technology offers great potential in the treatment of mental disorders, in the possibly of providing widespread, inexpensive, standardized evidence-based treatment, particularly for those with limited access to services due to availability and/or stigma.[4] Health Information Technologies (HIT) such as smart phones, apps or desktop software, and the Internet are rapidly becoming a mechanism for delivering mental health care.[8]

Interventions delivered through HIT may lower the threshold for people who do not seek traditional treatment, thus extending the reach of entry-level mental health services.[7] Additionally, most face-to-face mental health care is focused on the treatment of active disorders or conditions; there are few traditional preventative or early-intervention mental health programs available at a population level. Compared to face-to-face interventions, HIT can be more widely distributed at a lower cost per person and thus may facilitate prevention programs more efficiently[7]. While still in early stages, research on the use of HIT interventions for mental health following a disaster has shown promise in fostering post-disaster resilience and recovery.[5,9]

Worldwide, internet usage has more than doubled since 2005; 81% of the American population uses the internet, and 97% of American youth between the ages of 12 and 18 use the internet.[10] Twenty-six percent of adult internet users have searched for information about mental illness, and 25% of young people have used the internet as a source of mental health information, searching for depression, violence, and problems with drugs and alcohol.[9] However, it is necessary to recognize the continued existence of the digital divide, referring to the disparity in internet access and usage between the general population and underserved populations, including minorities and the elderly.[9] Though recent data indicates that the digital divide may be decreasing, the required reading level for most websites is 12thgrade , which may exclude less educated people even though they may be connected to the internet.[9]

Mental health HIT includes all forms of electronic mental health services delivered over the internet, ranging from informational and educational products to direct services offered by professionals.[9] There are four general categories of HIT: Informational, Screening, Clinician-Delivered Care, and Self-Management.

Informational: There are many informational mental health websites, with varying degrees of accuracy and comprehensiveness. Some have accurate information but lack a complete evidence-based overview of the disorder.[9] Of the health sites visited most often among US users, those most accessed are medical journals (45%), commercial health sites (44%), and academic/research institutions (43%).[9]

Screening: The purpose of online screening tools is to help consumers identify personal mental health conditions.[9] There is some evidence that self-assessment may be more accurate than clinician assessment: people with depressive symptomology and suicidal ideation in particular prefer computer-based over personal interviews.[9] Many clinician-administered screening instruments have been adapted for self-use, however not all have been validated for self-administration.

Clinician-delivered care: Clinician-delivered care refers to both individual and group sessions that are conducted by a clinician, and occur either through email or in real-time via messaging or video chat. Though informational, screening, and self-management HIT can be used in tandem with clinician-directed care, this category is specific to the therapeutic time delivered by a clinician. It has been shown to be effective, but predominantly when used as an adjunct to in-person therapy; potentially due to the

loss of nonverbal clues that prohibits communication through body language, voice fluctuations and intonations.[9]

Self-Management: Self-management interventions are primarily used for posttraumatic stress disorder, depression, anxiety and panic disorders, and alcohol misuse. Most interventions have common components – they are developed from a Cognitive-Behavioral Therapy framework and include modules that address psychoeduction, cognitive restructuring, goal setting, and exposure.[6] Existing studies suggest that these Internet-based interventions (IBI) can be efficacious in addressing a range of mental health symptoms; a number of studied IBIs produced effect sizes comparable to clinician-administered interventions for anxiety and depression. [6] The research around the efficacy of IBIs for PTSD is not as conclusive, and IBIs have shown less utility for alcohol misuse, substance use disorders, eating disorders, and tobacco-cessation.[6,11,12]

Though application of technology is evolving and expanding rapidly, there is little consensus in the field on the best use of HIT for promoting mental health on a population-level. Though there is a robust and growing body of literature that indicates that HIT can and does deliver efficacious interventions at a low cost in the privacy of the consumer's home, the challenge of having these tools used population-wide continues. For example, two depression IBIs developed in Australia were found to be highly effective and user-friendly, however, only about 20% of users were spontaneous; the rest were recruited by screening questionnaires sent to randomly selected registered voters, selected students, or groups that were otherwise pre-selected.[13]

Continued research is needed to understand how to promote and utilize mental health HIT population-wide, and to use HIT to the fullest extent to improve the delivery of and access to mental health care.

Agency background

The New York City Department of Health and Mental Hygiene is the governmental agency responsible for public health. The Department's mission is to protect and promote the health of all New Yorkers, and to promote the full realization of those with disabling conditions.[14] The Department achieves this mission through a) ongoing assessment of the health status of the community, b) formulating policies and implementing programs to promote the public's health, and c) ensuring access to services by providing direct public health services or facilitating access to health care and ancillary services.[14] The Department's Division of Mental Hygiene's mission is to partner with consumers, families, advocates, and providers to ensure access to high quality services and to improve the lives of New Yorkers with mental health and substance use disorders and those with developmental disabilities and delays.[14]

The Department's 2013 budget was $38 million; and employs approximately 6000 New Yorkers.[14]

Project description

The Division of Mental Hygiene had begun examining the potential of public-facing HIT to advance its agenda in the early fall of 2012. Hurricane Sandy made landfall in New York City on October 30, 2012, and shortly afterwards, the Division's leadership made the decision to launch an IBI to serve the immediate and short-term mental health needs of New Yorkers affected by Hurricane Sandy. Mental health IBIs interventions had been previously used and evaluated in other disaster-affected populations (e.g., recent rape and assault; 2008 Hurricane Ike; September 11, 2001 terrorist attacks)[5,11]; however, all of these interventions were conducted in a research setting at least six months following the precipitating event[11]. There was no peer-reviewed evidence of any mental health IBI that was used outside of a research setting in a population representative of New York City's, nor one that had launched less than six months after the disaster.

Though the Division had not yet finished its examination and evaluation of all of the potential mental health IBIs, the pressing need to offer easily-accessed mental health support as soon as possible prompted the decision to select an application that had been developed by a team of researchers at the Medical University of South Carolina (MUSC), in response to Hurricane Ike[11]. The application, Bounce Back, was a web-based product with modules to help the user in five different areas: panic, stress, alcohol use, smoking, and depression[15]. Bounce Back had content in three of the four HIT categories: screening, informational, and self-management.

Bounce Back was chosen for a few key reasons. There was peer-reviewed evidence support for its feasibility and efficacy in a research setting[11], and it was "out of the box" – in other words, complete and ready to be used. The development and production teams at MUSC were willing and available to customize the application to better suit New York users. Because the application was developed by a research institutions and not a commercial business, the costs involved with licensing, customization, and support were relatively low. In addition, the content of the application was broad enough to be relevant outside of a disaster-context; most components did not address the disaster specifically, and the application could be used by many people with mental health challenges city-wide – not just those directly affected by the Hurricane.

The purpose of this project was to customize Bounce Back for New Yorkers, and ensure that its usability and presentation was appropriate to be branded and promoted by the Department. The author of this paper was the Project Manager, and coordinated the efforts discussed in the following sections. This paper will describe the customization process and challenges, the ultimate decision to abandon the project prior to launch, and discuss factors involved in the project's failure as well as recommendations for alternate processes in future similar projects.

Methods

Stage 1: Customization

Once Bounce Back was selected as the application to use, the first stage of this process was determining how to customize it for New York City users, as well as make it specific to those who were impacted by Sandy while creating broadness to be applicable to and potentially benefit New Yorkers whose mental health and substance use issues are not linked to the storm.

A team of staff members from different areas of the agency – Mental Health; Alcohol and Drug Use Prevention, Care and Treatment; Children, Youth and Families; and Tobacco Control – initially reviewed the application online, acting as users from one of MUSC's pilot settings. This initial review was not systematic, but provided the team with the opportunity to learn the application's interface and structure in the way an end-user would.

Team members' first impressions were that the application was clunky, not user-friendly, and too text-heavy. However, the application did have promise: it was evidence-supported, it had a substantial amount of information and tools in several different areas of mental health, and perhaps most importantly, it was ready to launch as soon as it had been customized. Because of its promise, and the desire to launch as soon as possible in order to be relevant to Sandy response, the team decided to move forward with the customization process despite concerns about the functionality of the application.

MUSC provided us with word documents that contained the scripts of each module. The programming language was included in the scripts, however the graphics were not. The scripts were written in advance of the modules' original development; they were not updated to correspond to the changes that were made throughout the course of the development process. This proved challenging, in that there were multiple instances where the text on the screen did not match the script or that the programming language written into the script was not reflected in the mapping of the module.

The editing /customization fell into five categories: urbanization/localization; aligning content /programmatic message with that of DOHMH; increasing usability and literacy-level appropriateness; copy editing; and correcting branching errors.

Urbanization and localization

Bounce Back was created by a team of researchers in South Carolina for users in South Carolina and Texas. To make the program more appropriate for New Yorkers, some of the vernacular needed to change, for instance, replacing the term "pop" for "soda", or "sucker" for "sucking candy". We also felt it necessary to change many of the graphics; several of the stock photos that originally accompanied the text were in bucolic settings, and not representative of New York City. In addition, the people in many of the original photos were white, and approximately between the ages of 20 and 45. We asked for changes to many of these photos to better reflect the racial, ethnic, and age makeup of our intended users.

Aligning content/programmatic message with that of DOHMH

We made heavy edits to the Smoking module in order to align the content with the messaging around tobacco cessation that DOHMH already had, mostly in the form of the NYC Quits website. The edits included adding New York City-specific resources for quitting smoking, including information about local low-cost ways to get over-the-counter nicotine replacement therapies, and altering some language for factual correctness - for example, changing "…increasing certain health problems such as heart attacks…" to "…increasing *risk of* certain health problems such as heart attacks…". There were also edits to highlight certain quitting strategies that NYC Quits promotes, such as adding "cost of cigarettes" to the interactive list of pros and cons of smoking.

Both the Panic and PTSD modules had guided exercise for the user to increase his/her exposure to bodily sensations associated with a panic or trauma-response. Though these exercises are commonly used in a therapeutic environment, our team was concerned about issuing this guidance on a website, for an individual to use without the presence of a mental health professional. We edited these pages to add a warning before each exercise that encouraged the use to use caution when performing the exercise, to consult with his/her physician prior to doing the exercise if the individual had any medical conditions, and to seek in-person help if needed.

Increasing usability and literacy-level appropriateness

The team found that many of the pages were text heavy, with an average of 400 words per page, all laid out in the same font size and style. We thought the density of the text was a barrier to an individual reading it and advancing through the module, and suggested reducing the word count. We also believed that the modules were too long, and requested that MUSC reduce the number of pages of content.

The text was written in the second person, and the tone was informal and conversational. While we considered this beneficial in general, there were some places where it felt inappropriate and we asked for it to be removed. For example, in the Panic module, a section discussing fear of losing control said "If people with panic attacks were at high risk of driving off a bridge or getting into an accident during an attack, you can bet they would not be allowed to get driver's licenses so easily!"; though the statement made a point, we believed it was an unsuitable example and asked for it to be removed.

Copy editing

Though the application had been tested and used by research subjects, there were still spelling, grammatical, capitalization, and formatting errors throughout. We made edits to all of these errors in order to create a more professional-looking product.

Correcting branching errors

Again, though MUSC had tested the application and it had been used by research subjects, there were still errors in the page sequencing. For instance, in the Alcohol module, if a user responded "yes" to the screening question "Have you or someone else been injured as a result of your drinking?", the following page would read "[Your answers] indicate that you are not currently at risk for experiencing drinking-related problems." The other major functional issue was the absence of a "back" button, for a user to change his/her answer or explore a different route in the module. In the absence of a "back" button, if a

user instead used the browser's back button, the module would not register the change in answer and would progress with the originally selected answer. Alarming problems like this created an unexpected need for systematic branching review and qualitative review. The Agency's Department of Information Technology (IT) was asked to participate in this review, and did a comprehensive analysis of branching errors. Program staff did less-systematic branching reviews while assessing content.

Stage 2: Updating the application

Because MUSC still held the rights to Bounce Back and controlled the platform, all edits needed to be done by their staff. We submitted to them the scripts with track changes and comments containing our edits, a quality analysis spreadsheet developed by IT that listed the branching errors, and screenshots with comments for graphics or formatting that needed a visual to best explain the proposed edits.

Stage 3: Testing and Demonstration

The final stage of this process was a systematic side-by-side comparison between the scripts and the live modules to ensure that all of the edits were made, and to consider the overall impact of changes that could not be made. This included going through each module multiple times to ensure that all branches were viewed. Once the project team finished testing the application, we demonstrated the re-vamped application to senior staff within the Division of Mental Hygiene.

Results

Stage 1: Customization

The customization process produced five revised scripts, each between 30 and 45 pages long. All of our edits were done in track changes and comment bubbles to simplify the updating process. The revised scripts also now included graphics and screen shots to aid communication between DOHMH's team and MUSC's team, and were edited to accurately match the screen in instances where the application had been changed during the original research but the scripts had not been accordingly updated.

The text in the final scripts was aligned with DOHMH's program messages, had accurate branching logic, and corrected grammar, spelling, punctuation and capitalization. In order to improve readability/usability, we also removed or replaced passages that we believed were unnecessary (e.g., streamlining examples, removing extraneous descriptions).

Due to resource allocation for this project, there were some aspects of customization in which we gave guidelines for changes, and requested that MUSC determine the specifics. For example, we asked for a reduction in word count for many of the text-heavy pages, but did not rewrite the passages; we asked for more racial, ethnic, and age diversity in the images, but did not supply the photos.

Stage 2: Updating the application

MUSC was able to make edits within three weeks, and returned the scripts to us with their comments on any changes that could not be made. Edits that were not made fell into two categories: lack of resources and ideological objections.

Lack of resources drove the inability to create a working "back" button. The platform that Bounce Back was originally created on did not support that functionality; only a change in platform could address that. Changing the platform would require complete re-programming of the application, which was far beyond the resources available for this project. MUSC investigated the possibility of disabling the "back" button on the browser to at least avoid the user inadvertently experiencing incorrect branching, but that, too, was beyond the resources of the project. Instead, on the registration page, we inserted language explaining the functionality and limitations of the application. The same limitations of the platform were also the determining factors in not being able to create a navigation bar to allow the user to skip ahead within a module.

Our request to reduce the number of pages and the amount of text on many of the pages was met with ideological objections. MUSC's researchers who wrote the original scripts were adamant that it was critical to the integrity of the product that all of the scientific evidence and explanation remain in the modules. We believed that while it was important, the general public (as opposed to research subjects) would lose interest due to the length and density, and fail to complete the modules. Ultimately, because we did not have the resources to rewrite the pages ourselves to use as a starting point for negotiation, almost all of the pages remained in the modules, and many of them stayed over 400 words.

Stage 3: Testing and demonstration

Our testing found that almost all of the requested and agreed-upon edits were accurately made; there were a few omissions that MUSC immediately corrected. The branching logic was corrected whenever possible. The subsequent demonstration of the revamped application for senior staff was met with mixed results. The general consensus was that, though the customization process had improved the application and it better reflected the DOHMH's programmatic messages, it was not sophisticated or user-friendly enough to brand with our name and promote as our product.

Senior staff found several major problems with the application – its length (the number of pages of information and questions before the user gets to the tools/exercises and completes the module), the density of the text, the lack of functionality with no "back" button, and most importantly, the navigation (no navigation bar to allow the user to skip around in the module).

The project team and senior staff were aware that addressing these major problems was not a possibility given the resources that had been allocated to the project. We proposed de-branding the application, and posting a link to it as one of several external resources on DOHMH's website, but not dedicating further resources to promoting or maintaining it. Senior staff considered this proposal, but ultimately decided against it; they felt that without a comprehensive comparison of Bounce Back to all of the other similar applications available, it would not be appropriate to passively endorse it. Ultimately, the decision was made to abandon the project.

Discussion

The objective of this project was to customize and launch an internet-based mental health intervention to address the mental health needs of New Yorkers exposed to Hurricane Sandy. Though the customization and beta testing process made a substantial amount of progress toward that goal, ultimately the fundamental problems with the application proved to be insurmountable, and we were not able to create a product that we believed would effectively serve New Yorkers or communicate the public health messages of the Agency.

Previous research has shown that an intervention's implementation is a key influence on the outcome of a project.[16] A five-factor framework of implementation variables that contribute to the success of a project has been identified: community, providers, innovation, delivery system, and support system (figure 2).[16] Community-level factors encompass the outer setting and sociocultural context in which the project is embedded, and in the case of Bounce Back would include New York City, the aftermath of Hurricane Sandy, population-wide mental health care access, and population-wide internet access.[16,17] Provider-level characteristics are the skills and perceptions of anyone who is in contact with a patient to deliver an intervention; though Bounce Back would be delivered by the internet and not a human being, these provider-level characteristics would be most relevant in the individuals who created the content of the application.[16,17] Innovation characteristics related to implementation are adaptability and compatibility – that the program can be modified to fit the needs of the community and that the program fits within the organization's mission and priorities.[16] The delivery system includes organizational capacity, including leadership effectiveness, shared decision-making, and employee morale. The support system includes technical assistance and provider training.[16,17]

Using this framework in an analysis of Bounce Back, we found that innovation factors and delivery system factors were ultimately responsible for its failure (figure 2). Innovation characteristics that would have allowed for necessary customization were absent from the beginning. The key problems with the application, namely poor navigation, length and density, were well-known at the initiation of the project, and may have been able to be addressed with appropriate resources for customization. However, it's important to recognize that the urgency to provide widely available, low-cost mental health services after Hurricane Sandy initially (and reasonably) overshadowed the limitations of the application. Once the immediacy of the disaster had passed, the significance of these limitations couldn't be avoided and drove the decision to terminate the project.

The delivery system factor that most contributed to the project's lack of success was primarily the decision-making process of selecting this application. In hindsight, it appears that the only way to have altered the course of this project would have been to have chosen another application from the outset. In the face of the urgency of disaster response, the best solution would have been to have carefully evaluated all of the available applications, and then chosen, customized, and tested one in advance of the event; any necessary modifications to reflect the specifics of Hurricane Sandy could have been made quickly in the days following, and the application could have launched within a few weeks.

In order to choose the most appropriate product, we recommend preparing clear evaluation standards in advance of a review, and reaching a consensus among senior leadership as to the content of those

standards. It is also imperative to avoid evaluation and review of a product in the immediate aftermath of a disaster; such review and evaluation can be done more thoroughly and thoughtfully when the Agency is not in disaster-response mode.

It may be impractical, however, to dedicate resources to creating an internet-based mental health intervention that would not be used until another natural or man-made disaster strikes New York City. Though the events of the last several decades and climate-change weather predictions indicate that a similar event may be in the foreseeable future, the Agency could use the same evaluation, review, and customization process to create an internet-based mental health intervention that is not specific to disaster recovery, and instead promotes mental health and wellness in the general New York City population throughout the lifecycle. Indeed, research has shown that mental health wellbeing is a protective factor and promotes resiliency in the face of tragedy[18]. An application that is designed for use during "business-as-usual" time, with an added module for disaster-response to be used if needed in the wake of a disaster would be valuable product to promote mental health throughout the City.

Figure 2. Framework for Effective Implementation [16]

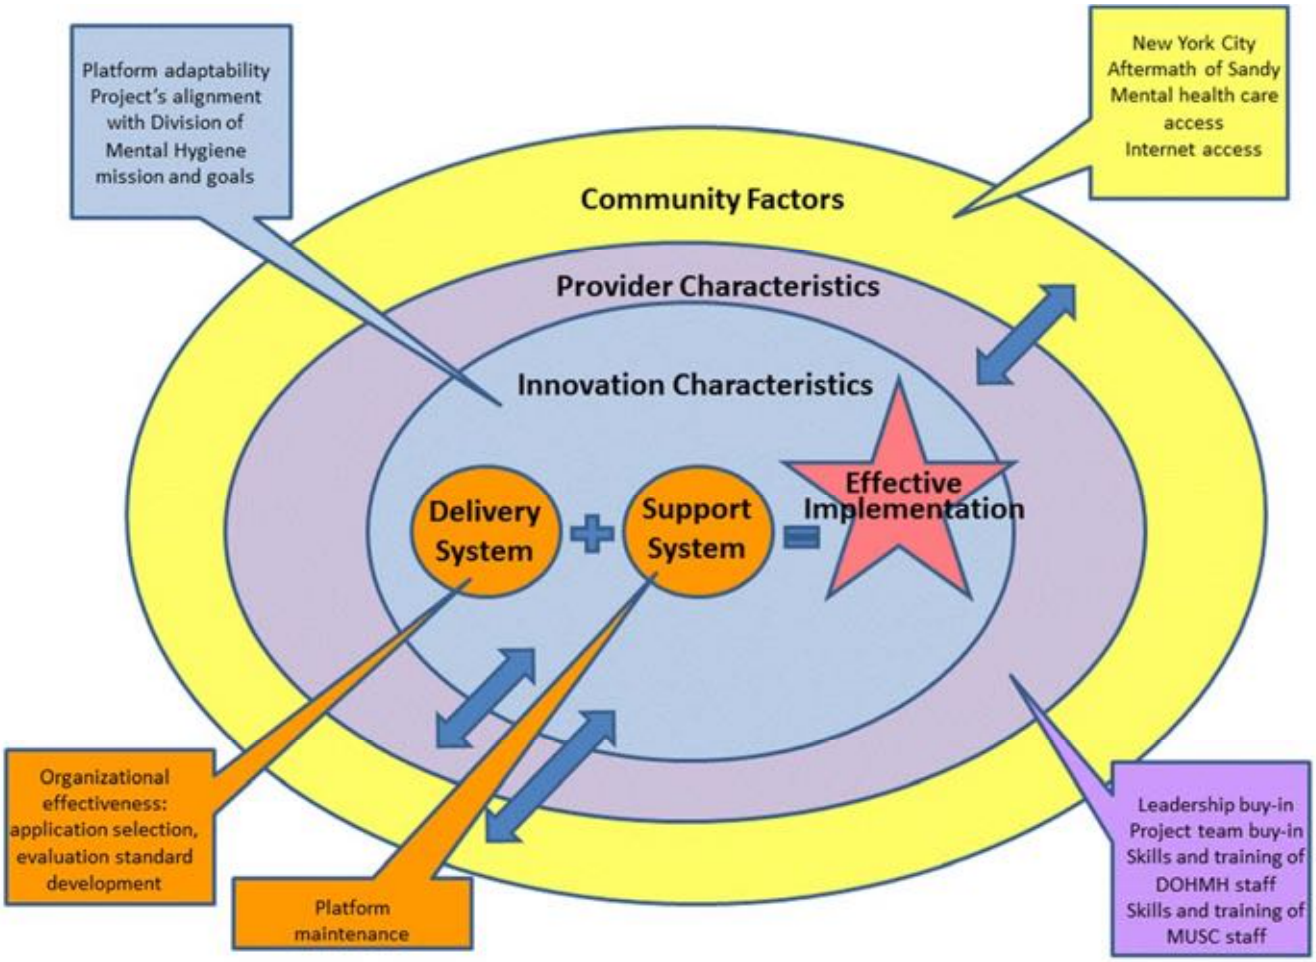

Figure 3. Projected Timeline

(Note: Timeline describes projected schedule at project's initiation; red arrow indicates point at which the project was terminated)

October 29, 2012	Hurricane Sandy makes landfall in New York City
November 2012	Bounce Back selected to use as disaster-response mental health self-management application
December 1, 2012	Customization of scripts and branching analysis begins
December 21, 2012	Customization and branching analysis complete, begin updating application
January 2, 2013	Create marketing campaign
January 15, 2013	Updating complete Beta testing begins
January 22, 2013	Second round of updating begins
January 30, 2013	Second round of updating complete
February 1, 2013	Demonstration for senior leadership (updating continues until February 15, 2013)
Project terminated →	*Implement marketing campaign*
February 3, 2013	*Demonstration for Agency staff, soft launch*
February 15, 2013	*Full launch* *Begin data collection* *Monitor and fix bugs*
March 2013	*Develop initial data analysis plan*
April 2013	*Begin monthly data analysis*
August 2013	*Release version 2.0, as needed*
October 15, 2013	*Begin second marketing campaign in lead-up to anniversary of Sandy*

Capstone Response Letter to Reviewer

Dear Professor Wyka,

Thank you for your review of this capstone paper and the thoughtful comments you have provided. In response to your comments, we have made the following changes:

1. The scope of the problem section would benefit from adding information about mental health needs in the wake of disaster. Consider rewriting middle of 2nd paragraph in Introduction. (page 4, paragraph 2)
   We have added additional information about elevated risk of developing mental health-related issues after exposure to traumatic event.

2. Consider moving this information (end of 2nd paragraph in Introduction, about access) to the next paragraph where you talk about access to mental health care. (page 4, paragraph 2/3)
   We have moved the information about access to mental health care for vulnerable populations to the end of following paragraph, which discusses other barriers to care.

3. Describe findings from research on the use of HIT following disaster. (page 5, paragraph 1)
   We have added a statement that while the research on using HIT for mental health following a disaster is limited, the evidence that does exist has shown promise in promoting positive mental health outcomes. We have added references that support this statement.

4. Include summary of what will be covered in the paper, in the last paragraph of the Project description section. (page 8, paragraph 4)
   We have added a brief summary of in the paper to the Project Description section.

5. Add clarity about Student's role in the project. (page 8, paragraph 4)
   Within the summary of the paper, we have added a statement about the author's role in the project.

6. Reference graphs and figures in the text. (page 14, paragraph 3)
   We added a reference to the Framework for Effective Implementation figure in the Discussion section where the framework is discussed.

7. Project timeline in confusing – was the application finally launched? (page 18)
   The project was not launched. We have added a note under the heading indicating that the timeline describes the projected schedule at project's initiation. We have also added a graphic on the timeline at the point at which the project was terminated, and gray-scaled and italicized the font of events beyond that date to indicate their unfulfillment.

8. Correct spelling and grammar. (throughout)
   We have corrected the spelling and grammar errors that were noted in track changes, including changing "excluding" to "which may exclude"; "~" to "about"; hyphens to commas as appropriate; removing "for us"; adding (IT) to follow the first time the acronym is spelled out; and added "Sandy" to a mention of "the Hurricane" for clarity.

9. Minor revisions for appropriate language for scientific writing. (throughout)
   We have revised the language as suggested, changing "work" to "purpose"; "we" to "the team"; "be bored" to "lose interest due to…"; "quickly" to "immediately"; and "not-too-distant" to "foreseeable".

Thank you again,
And kind regards,

Introduction

Commented [BP1]: Needs citations

The burden of disease resulting from exposure to toxic pollution continues to be an overlooked contributor to the global burden of disease. While elements such as arsenic may occur naturally in the environment and negatively impact our health, small- and large-scale industrial processes concentrate these elements in and around the places we live. Whether it is the use of lead in artisanal ceramic workshops or chromium steel manufacturing or leather tannery operations, these pollutants have many routes of exposure that present a risk toward human health. These pollutants find their way into the soil in and around homes, into sources of water, onto the clothes of workers and into the homes of their families.

Commented [BP2]: Provide some more background- how many people are exposed in developing countries. What is the burden of disease

Formatted: Indent: First line: 0.5"

As public health officials, governments and communities in low- and middle-income countries continue to face numerous public health threats from pollution with limited resources, the value of quantifying and prioritizing these threats increases. More recently, attempts have been made to more accurately quantify risk factors contributing to health loss amongst a population, represented both by physical and mental disability or a loss in quality or length of life. [1] Summary measures may then be used during the policymaking process to discern what public health threats are of greatest concern, and furthermore, what policies and interventions are most effective. [1]

Known health effects from exposure to heavy metals

Arsenic is a naturally occurring element found in ores containing metals such as copper and lead. Its release into the environment from the sites investigated resulted from tailings from mining operations and smelting processes. Exposure to arsenic may result in

skin rashes, a decrease in red and white blood cell production, and in extreme cases, death.

Lead (Pb) is a heavy metal and powerful neurotoxin that occurs naturally in the environment. Its release into the environment from the sites investigated resulted from lead smelting, mining, used lead-acid battery (ULAB) recycling and as a glaze for ceramic pottery. Exposure to lead may occur through inhalation of contaminated air, ingestion of contaminated soil, water or food and through dermal contact. The resulting health effects include neurological damage, IQ decrement and hypertension, resulting in an increase incidence of cardiovascular disease.

Chromium (Cr) is a naturally occurring heavy metal found in the earth's crust. Its most common uses at the sites investigated included steel manufacturing and leather tannery operations. Depending on its route of exposure, chromium can cause respiratory and gastrointestinal system damage, and is a known carcinogen.

Now put in the goals of your study

Methods

Site identification

Environmental and biological exposure data was obtained from the ~~A~~ Toxic Sites Identification Program ~~database~~ (TSIP), ~~was created by~~ a joint project between Pure Earth and the United Nations Development Organization. The TSIP identifies hazardous waste released from active and former industrial sites in low- and middle-income countries. The TSIP does not include exposure data from non-point sources such as vehicle traffic and sewage contaminated water. ~~a non-governmental organization dedicated to combatting toxic pollution in low- and middle-income countries. This~~

~~database contains environmental and biological sample data corresponding to known hazardous waste sites~~ .

~~This study used data collected in the Latin American countries of~~ Three specific countries were identified for analysis, Argentina, Mexico and Uruguay. In order for a hazardous waste site to be included in the analysis some marker of exposure, either biological or environmental, needed to be available. ~~Only sites containing environmental or biological samples referencing potential exposure to heavy metals were included in this study~~. A site's inclusion into the study -was ~~additionally~~ also dependent on the availability of the following data points: the site's location, a description of the activities suspected of contributing to environmental contamination, a completed exposure pathway, and ~~an accurate~~ an estimate of the potentially affected population. ~~, and an environmental exposure measurement.~~

Using these criteria t~~T~~he TSIP database ~~was found to~~ contained 74 fully completed site surveys in Mexico, 37 in Argentina and 52 sites in Uruguay with a total a of 446 data samples that met the study criteria. ~~Only sites containing environmental or biological samples referencing potential exposure to heavy metals were included in this study. A site's inclusion into the study was additionally dependent on the availability of the following data points: the site's location, a description of the activities suspected of contributing to environmental contamination, a completed exposure pathway, an accurate estimate of the potentially affected population, and an environmental exposure measurement.~~

~~Sampling Guidelines~~Exposure Assessment

~~within a half-mile of the investigated sites, based on input from local site investigators aerial photography.~~

~~Calculating risk per person~~Risk estimates

Risk was calculated for both cancerous and non-cancerous health endpoints due ~~to~~ to toxicology of the metals ~~arsenic or chromium exposure~~.[4] The United States Environmental Protection Agency's (U.S. EPA) Regional Screening Level Calculator for Chemical Contaminants was used to calculate long-term cancer risk per unit toxicant.[4,9] The U.S. EPA's Integrated Risk Information System database contains reference doses (RfDs) and reference concentrations (RfCs) for non-cancer health effects that were applied to each sites suspected exposure pathway and sampled pollutant concentration.[10] A linear dose response was assumed using the relevant RfD or RfC.[4] Disease incidence and burden for lead was calculated using the U.S. EPA's Integrated Exposure, Uptake and Biokinetic (IEUBK) model and tools developed by WHO.

~~Calculating i~~Incidence of disease

The incidence of disease resulting from exposure to arsenic and chromium was calculated by multiplying the risk per person by the quantity of contaminant found.[11] For environmental lead samples, blood lead levels were first estimated using the U.S. EPA's IEUBK model. Ingestion of levels of lead through soil and drinking water were assumed to be similar to those found in indigenous populations. Disease incidence and disability-adjusted life years~~DALYs~~ resulting from measured blood lead level samples and estimated blood lead levels were calculated separately using spreadsheets created by the WHO.[12] Using these spreadsheets, both incidence of mild mental retardation (MMR) and anemia in children and cardiovascular disease in adults was calculated for lead.[4]

Commented [BP9]: Make a citation to what estimates you used

As the linear slope factors used to calculate incidence can result in overestimates of disease incidence, namely for chromium, incidence for all disease was capped at 5%.[4]

Burden of disease calculation

~~This study used a~~ The disability-adjusted life years (DALY) ~~calculator~~ metric, previously ~~created by~~ described by ~~-~~Chatham-Stephens et al.[4], was used to quantify the burden of disease on caused by exposure to pollutants. ~~Burden of disease has previously been expressed through a metric known as disability-adjusted life years (DALYs).[2]~~ The DALY is a time-based measure of health that combines indices of ~~computed values for both~~ years lived with disability (YLD) and years of life lost (YLL). YLD and YLL were calculated based on exposure estimates collected in the field. YLD is the product of years lived with a disability and ~~Previous studies have utilized~~a specific disability weights~~-~~ (DW)~~. calculated by the WHO for a variety of chemicals and exposure routes in order to determine a burden of disease expressed as both YLD and YLL.~~ A DW is scaled between zero and one; with zero representing perfect health and one represented the worst possible state of health.[3] ~~This study used a DALY calculator previously created by Chatham-Stephens et al.[4]~~

In order to calculate YLD and YLL, each heavy metal was assigned both the relevant type of cancer or noncancer health effect and corresponding DW.[4] Years lived with disability (YLD) resulted from an estimation of years lived multiplied by the disability weight appropriate for the exposure scenario.[4] Years of life lost (YLL) were calculated only for carcinogens[4]; as a result, lead exposure did not contribute to YLL. Cancer incidence in each country by age group was calculated with data from the WHO

International Agency for Research on Cancer (IARC) Mortality Database. In conjunction with survival data, these cancer incidence distributions were used to calculate deaths, represented by YLL.[4]

Commented [BP10]: You don't need to keep citing.

Disability-adjusted life years (DALYs) resulting from cardiovascular disease were transformed into percentages to show a distribution across age groups for each country using the WHO's Global Health Estimates Summary Tables.[5] The percentage of DALYs attributable to ischemic heart disease, cerebrovascular disease, hypertensive disease and all other cardiac diseases were calculated for each country individually. By using BLLs and this percentage of DALYs attributable to cardiovascular disease in a WHO spreadsheet, DALYs attributable to lead exposure were calculated.[4,6]

Weighting factors, along with a discount rate, were applied to both YLD and YLL to provide a range of DALY estimates accounting for variances in the value of different age groups, as well as the uncertainty in predicting future exposure.[4, 7] Both the age weights and discount rates are signified in the notation $DALYs_{(r,K)}$, where r is the discount rate and K is the age weight used. DALYs were calculated separately for each pollutant at sites, as coexposures can lead to an increase or decrease of health effects resulting from synergistic or antagonistic effects.[4]

~~***Population at risk of exposure***~~

~~It has been well documented that children are more susceptible to negative health effects brought on by exposure to toxic pollution. For this reason, an age distribution of the population must be used when calculating the burden of disease resulting from exposure to heavy metals. As age distribution was not recorded as part of Pure Earth's protocol, country-specific age distributions generated by the U.S. Census Bureau were~~

used.[4, 8] The database often presented data in geographical sectors, pairing an environmental or biological sample with a subset of the population for each site. The estimate of the population affected by pollution was assumed to reside within a half-mile of the investigated sites, based on input from local site investigators aerial photography.

Calculating risk per person

Risk was calculated for both cancerous and non-cancerous health endpoints due to arsenic or chromium exposure.[4] The United States Environmental Protection Agency's (U.S. EPA) Regional Screening Level Calculator for Chemical Contaminants was used to calculate long-term cancer risk per unit toxicant.[4, 9] The U.S. EPA's Integrated Risk Information System database contains reference doses (RfDs) and reference concentrations (RfCs) for noncancer health effects that were applied to each sites suspected exposure pathway and sampled pollutant concentration.[10] A linear dose response was assumed using the relevant RfD or RfC.[4] Disease incidence and burden for lead was calculated using the U.S. EPA's Integrated Exposure, Uptake and Biokinetic (IEUBK) model and tools developed by WHO.

Calculating incidence of disease

The incidence of disease resulting from exposure to arsenic and chromium was calculated by multiplying the risk per person by the quantity of contaminant found.[11] For environmental lead samples, blood lead levels were first estimated using the U.S. EPA's IEUBK model. Burden of Disease Resulting from Heavy Metals Exposure at Toxic Waste Sites in Argentina, Mexico and Uruguay
December 8th, 2015

Abstract

Background: Calculations estimating the burden of disease from toxic exposures have previously accounted for exposure to only one pollutant per site.

Objective: Using a disability-adjusted life year (DALY)-based method previously created by Chatham-Stephens et al., we estimated the burden of disease resulting from exposure to arsenic, lead and hexavalent chromium in toxic waste sites in three low- and middle-income countries (LMICs).

Methods: Toxic waste sites identified through Pure Earth's Toxic Sites Identification Program (TSIP) were screened for one of three heavy metals found in both biological and environmental media. An estimate of DALYs for each population thought to be at risk was generated.

Results: Approximately 508,422 persons in three countries were at risk of exposure to pollutants in 160 unique sites identified through TSIP. Exposure to pollution was estimated to result in 47,293 – 104,924 DALYs.

Conclusions: The burden of disease estimate for exposure to three heavy metals in three low- and middle-income countries is comparable with myriad public health threats, and may be used as a tool to generate support and funding for the remediation of toxic waste sites.

Introduction

Environmental exposure to pollution from hazardous waste sites continues to be an overlooked contributor to the global burden of disease.[1] Continuing industrial development, urbanization and socioeconomic forces in Latin America have contributed to increases in environmental pollution and the negative health effects resulting from exposure.[2] In order to quantify the health impacts caused by toxic waste, researchers have used the disability-adjusted life year (DALY) metric, which takes into consideration the burden of disease resulting from illness, injury and death.[3] A previous study by Prüss-Ustün estimated that exposure to various chemicals accounts for 5.7% of total global DALYs and 8.3% of global deaths.[4] Another study estimated that 0.22% of the total estimated DALYs from all causes in India, Indonesia and the Philippines were attributed to pollutants found at hazardous waste sites.[5]

It is estimated that 94% of the burden of disease resulting from pollution falls on LMICs with limited resources to remediate the problem. As the global community has made significant progress in eliminating the burden of illness caused by non-communicable disease, chronic illness continues to affect a greater population. Chronic illnesses are often linked to exposure to environmental threats, including: cardiovascular disease, neurodevelopmental disorders and cancer.[12] Efforts to lessen the burden of disease in LMICs due to chronic illness must include interventions to reduce exposure to toxic pollution.

As public health officials, governments and communities in LMICs continue to face numerous public health threats from pollution with limited resources, quantifying and prioritizing pollution problems becomes increasingly valuable. Recently, attempts

have been made to more accurately quantify risk factors contributing to health loss amongst a population, represented both by physical and mental disability or a loss in quality or length of life. Summary measures may then be used during the policymaking process to discern what public health threats are of greatest concern, and furthermore, what policies and interventions are most effective. [6]

In developing countries, heavy metals are still widely used in the production of consumer goods. Inadequate pollution controls and improper disposal can expose populations living near manufacturing and disposal sites. Three metals of particular concern in developing countries include arsenic, lead and chromium. Although the risk of disease resulting from exposure to these metals is widely known, widespread use continues. Lead is still used in manufacturing artisanal ceramics, while chromium is used in waste incineration and leather tanning, despite less hazardous alternatives. Over time contaminants can migrate from these sites into residential and agricultural soil and water exposing populations living near these sites.

Arsenic is a naturally occurring element found in metal ores. It is released into the environment from improper disposal of mine tailings and during metal smelting. Arsenic exposure may lead to the development of arsenicosis, a disabling and disfiguring ailment, as well as the occurrence of both internal cancers, skin cancers, diabetes, high blood pressure, respiratory, circulatory and reproductive disorders. [7] Exposure to arsenic may also result in skin rashes, a decrease in red and white blood cell production, and in extreme cases, death. Arsenic may also find its way into the body through ingestion of crops irrigated with contaminated water. [8]

The hazards of lead have been known for centuries, yet it is still used in an number of industrial processes. Anthropogenic sources of lead in the environment include smelting, mining, used lead-acid battery (ULAB) recycling and ceramic pottery glaze. Lead is a potent neurotoxin and can cause neurological damage, IQ decrement and hypertension, causing an increase incidence of cardiovascular disease. Additionally, lead may have a severe effect on visuospatial skills, and has even been linked to antisocial behavior if exposure occurs too early in development. [9] Acute or chronic exposure to lead is also of grave concern to pregnant women, as lead may be transferred through the placenta to the fetus. [9]

Despite negative health effects resulting from exposure, chromium continues to be used in leather tanning, metal processing and stainless steel welding operations. Adverse health effects resulting from chromium exposure differ depending on the route of exposure and the form of chromium involved. Hexavalent chromium poses greater health risks due to its higher toxicity and associated cellular uptake pathways. [10] When inhaled, chromium is known to cause respiratory damage, while ingestion of contaminated soil particles may lead to gastrointestinal system damage with recent studies showing hexavalent chromium to be a stomach carcinogen in humans. [11]

Previous studies that have investigated the health effects from living in close proximity to hazardous waste sites have generally only accounted for one pollutant per site. [5] However, toxic waste sites often contain multiple pollutants that pose unique health threats. This research aims to accurately quantify the burden of disease caused by one or more known pollutants found at toxic waste sites in Argentina, Mexico and Uruguay. The resulting analysis aims to provide a basis for public health intervention and

environmental remediation at both the national and regional level, as well as to inform strategies for continued site investigation of contaminated sites.

Methods

Site identification

Environmental and biological exposure data was obtained from the Toxic Sites Identification Program (TSIP), a project carried out by the New York-based non-profit Pure Earth and funded jointly by the United Nations Industrial Development Organization (UNIDO) and the European Commission (EC). The TSIP identifies both active and legacy hazardous waste sites resulting from industrial and informal activities in LMICs. A majority of the locations screened are abandoned (legacy) sites, including former tanneries and small-scale artisanal sources such as ULAB recycling and artisanal gold mining.[5] The TSIP does not include exposure data from non-point sources such as vehicle traffic and sewage contaminated water. Heavy metals are often the key pollutant of concern, exposing the population via the water supply, contact or ingestion of contaminated soils or through inhalation of contaminated air.[13] Three countries were identified for this analysis: Argentina, Mexico and Uruguay. These countries were chosen due to the quality and availability of data in the TSIP database. In order for a hazardous waste site to be included in the analysis, a credible exposure pathway and a biological or environmental sample had to be present. A site's inclusion into the study was also dependent on the availability of the following information: the site's location represented by GPS coordinates, a description of the activities suspected of contributing to the contamination at the site, a completed exposure pathway and an estimate of the potentially affected population. Using these criteria the TSIP database contained 74

completed site surveys in Mexico, 36 in Argentina and 50 sites in Uruguay, representing 160 sites analyzed with data including one or more of total a 394 environmental or biological samples. These sites represent a fraction of those found in these countries; therefore DALY estimates are representative of screened sites only.

Exposure Assessment

Site investigators in the field collected environmental and biological samples. Exposure pathways in the analysis included the inhalation of dust and ingestion of soil for all three heavy metals (n=389), while arsenic and chromium had additional pathways resulting from the ingestion of water via drinking, bathing, washing or irrigation practices (n=5). The residents' arsenic and chromium exposure was estimated by soil or water samples (n=155) while resident's lead exposure was estimated through blood lead levels (BLL) (n=75) or soil concentrations (n=164). Multiple environmental media and exposure routes were considered and sampled at sites suspected of arsenic or chromium contamination. This included soil in both industrial, residential and agricultural areas (mg/kg) and water used for crop irrigation, bathing, and drinking (µg/l). Chromium in soil values were reported as total chromium values and hexavalent chromium (Cr VI) values, the form of chromium most often associated with causing death and disability. As total chromium values may include less harmful forms such as trivalent chromium (Cr III), a speciation coefficient of 0.6 was used to estimate Cr VI levels where only total chromium was reported. [14] In areas suspected of lead contamination, BLLs were prioritized, as they are the standard marker of human exposure. Blood samples were tested using a Lead Care II analyzer (Magellan Diagnostics, MA USA) onsite or sent to a

local laboratory for analysis. [15] The U.S. Centers for Disease Control and Prevention (CDC) sets an upper limit of 5 μg/dL for children under the age of 6 years. [16] Table 1 depicts the range and average BLLs found in countries where blood lead level data was available. When biological samples had a sample size of less than five, environmental sample data, such as lead in soil were used to calculate burden of disease estimates.

Population estimates and age distribution

It has been well documented that children are more susceptible to negative health effects caused by exposure to toxic pollution. [17] Hazardous chemicals are absorbed and inhaled into the body of children at a much higher rate than adults. Furthermore, toxicants can affect children during their 'critical windows of development', when their bodies and minds are most at risk. Children also have different behaviors than adults; they are lower to the ground and tend to have more unwashed hand to mouth contact than adults. Therefore, an age distribution of the population must be used when calculating the burden of disease. As age distribution was not recorded as part of Pure Earth's TSIP protocol, country-specific age distributions generated by the U.S. Census Bureau were used in disease estimates. [5] [18]

In order to determine the number of people affected by each hazardous waste site, a half-mile radius was drawn around the site. A half-mile was chosen due to the relatively low mobility of heavy metals in soil. The exact location of each site was based on input from local site investigators and confirmed via satellite imagery. Anyone residing within that area was considered potentially exposed to the site and estimates of the number of individuals living within a half-mile of the facility was ascertained from local community

members. Age distributions and population counts were then paired to determine the number of individuals within each age category.

Risk estimates

Risk was calculated for both carcinogenic and non-carcinogenic health endpoints due to toxicology of the metals. [5]The United States Environmental Protection Agency's (USEPA) Regional Screening Level Calculator for Chemical Contaminants was used to calculate long-term cancer risk per unit toxicant. [5, 19] The USEPA's Integrated Risk Information System database contains reference doses (RfDs) and reference concentrations (RfCs) for non-cancer health effects that were applied to each sites suspected exposure pathway and sampled pollutant concentration (Table 1). [20]A linear dose response was assumed using the relevant RfD or RfC. [5] However, disease incidence and burden for lead was calculated separately using the USEPA's Integrated Exposure, Uptake and Biokinetic (IEUBK) model and tools developed by the World Health Organization (WHO). The IEUBK model is used to estimate BLLs in children resulting from exposure through soil, air, water, diet and maternal blood lead concentrations. [15] Blood lead levels were extrapolated for adults using the USEPA's Adult Lead Methodology (ALM). [21]

Incidence of disease

The incidence of disease resulting from exposure to arsenic and chromium was calculated by multiplying the risk per person by the level of contaminant found in each medium. [22] For environmental lead samples, blood lead levels were first estimated using

the US EPA's IEUBK model. Ingestion of levels of lead through soil and drinking water were assumed to be similar to those found in indigenous populations.[23,24] Disease incidence and disability-adjusted life years resulting from measured blood lead level samples and estimated blood lead levels were calculated separately using spreadsheets created by the WHO.[25] Using these spreadsheets, both incidence of mild mental retardation (MMR) and anemia in children and cardiovascular disease in adults was calculated for lead.[5]As the linear slope factors used to calculate incidence are largely based on animal testing, disease burden may be overestimated. Therefore, incidence for all disease was capped at 5%.[5]

Burden of disease calculation

The DALY is a time-based measure of health that combines indices of years lived with disability (YLD) and years of life lost (YLL). YLD and YLL were calculated based on exposure estimates collected in the field. YLD is the product of years lived with a disability and a specific disability weight (DW). A DW is scaled between zero and one; with zero representing perfect health and one represented the worst possible state of health.[26] For example, mild mental retardation attributable to lead exposure has a DW of .361.

In order to calculate YLD and YLL, each heavy metal was assigned both the relevant type of cancer or noncancer health effect and corresponding DW.[5] Years lived with disability (YLD) resulted from an estimation of years lived multiplied by the disability weight appropriate for the exposure scenario.[5] Years of life lost (YLL) were calculated only for carcinogens; as a result, lead exposure did not contribute to YLL. This

seems to be the standard route for calculating lead induced MMR, as lead exposure very rarely results in death. Cancer incidence in each country by age group was calculated with data from the WHO International Agency for Research on Cancer (IARC) Mortality Database. In conjunction with survival data, these cancer incidence distributions were used to calculate deaths, represented by YLL.

Disability-adjusted life years (DALYs) resulting from cardiovascular disease were transformed into percentages to show a distribution across age groups for each country using the WHO's Global Health Estimates Summary Tables.[27] The percentage of DALYs attributable to ischemic heart disease, cerebrovascular disease, hypertensive disease and all other cardiac diseases were calculated for each country individually. By using BLLs and this percentage of DALYs attributable to cardiovascular disease in a WHO spreadsheet, DALYs attributable to lead exposure were calculated.[5,28]

Weighting factors, along with a discount rate, were applied to both YLD and YLL to provide a range of DALY estimates accounting for variances in the value of different age groups, as well as the uncertainty in predicting future exposure.[5, 29] Both the age weights and discount rates are signified in the notation $DALYs_{(r,K)}$, where r is the discount rate and K is the age weight used. Results expressed as $DALYs_{(3,1)}$ represent a 3% discount rate and full age weighting, while those expressed as $DALYs_{(3,0)}$ include only the discount rate. $DALYs_{(0,0)}$ represent a burden of disease estimate without weighting. DALYs were calculated separately for each pollutant at sites, as co-exposures can alter health effects resulting from synergistic or antagonistic effects.[5]

Sensitivity Analysis

A range of estimates was also created through a sensitivity analysis by adjusting the population at risk, as well as changing the disease incidence cap from 5% to 2.5%; disease incidence never exceeded 3.5%.

Results

Exposure data were collected from 160 hazardous waste sites across Argentina (n = 36), Mexico (n = 74), and Uruguay (n = 50). The geographical distribution of the sites is shown in Figures 1 and 2. The estimated population at risk of exposure was 508,422 individuals (mean=3178; median=300 per site), which is approximately 0.31% of the total population. Of this population, it was estimated that 126,090 were women of childbearing age (15-49 years of age), while 182,907 individuals were older than the age of 18 years (see table 2). Of the exposed population, the proportion of women of childbearing age was relatively equal across the three countries.

394 biological (n=75) and environmental measurements (n=319) were used to calculate risk, with some sites containing multiple measurements. Mean blood lead levels (BLLs) in Mexico (n=56) and Uruguay (n=19) were found to be 19.63 ug/dL and 13.3 ug/dL respectively (Table 3). Of the three metals quantified, lead concentrations in soil (n = 164) were the highest and relatively uniform across the three countries (Table 4). Mean soil lead concentrations in Mexico (2748 mg/kg) were the largest, followed by Uruguay (2559 mg/kg) and Argentina (1730 mg/kg). Total and hexavalent chromium levels in soil showed the greatest amount of variability with concentrations spanning three orders of magnitude depending on the country. Mean soil chromium concentrations were highest in Mexico (1504 mg/kg), followed by Uruguay (643 mg/kg) and Argentina (2.4 mg/kg). Arsenic concentrations were measured in both soil (n = 57) and water (n =

4). Paradoxically, Uruguay had the highest mean arsenic concentration in soil (1210 mg/kg) and the lowest mean arsenic concentration in water (23 ug/L).

YLDs, YLLs, and DALYs by pollutant are shown in Table 5. BLLs were used to estimate DALYs in exposed populations in Mexico (n=79,196) and Uruguay (n=5,859). Since BLLs were not collected in Argentina, DALYs based on that exposure measurement could not be calculated. Elevated BLLs were responsible for 18,807 DALYs in Mexico, representing 47% of the disease burden estimated as a result of lead exposure. Elevated BLLs were responsible for 978 DALYs in Uruguay, representing 46% of the total disease burden.

An estimated 26,544 DALYs resulted from exposure to lead in soil. Combined with an estimated 19,785 DALYs based on BLL, lead was the largest contributor to YLD of the three heavy metals included in the analysis. Overall, lead exposure accounted for a total of 46,339 YLDs, or 99.5% of total YLDs resulting from exposure to metals analyzed in this study. The estimated population at risk for exposure to lead was 316,703, largely derived in sites from Mexico (189,593) and Argentina (112,208).

The estimated population at risk of exposure to arsenic was 129,820, with the vast majority living in Mexico (95%). An estimated 778 DALYs resulted from exposure to arsenic in the three countries. Arsenic had the largest contribution to years of life lost (YLL) accounting for 603 YLLs, or 81.4% of total YLLs resulting from heavy metals exposure. However, exposure to arsenic represented only a small fraction (0.37%) of the total years lived with disability (YLD)

Exposure to hexavalent chromium contributed 38 YLDs and 138 YLLs to our DALY estimates, affecting an estimated population of 61,899 in the three countries of

study. The YLDs and YLLs contributed by chromium represent 0.3% and 5% of their respective burden of disease contribution.

The overall burden of disease and premature death contributed by exposure to three heavy metals at screened sites were calculated. An estimated 46,544 years lived with disability (YLD) and 748 years of life lost (YLL) resulted from exposure to three heavy metals at the 160 unique toxic waste sites in Argentina, Mexico and Uruguay. These estimates form a combined 47,293 $DALYs_{(3,1)}$ with a value of 0.25 $DALYs_{(3,1)}$ per person estimated from screened sites (Table 5). Additionally, it was estimated that 368 persons would die prematurely from cancer, from exposure to arsenic and hexavalent chromium at these sites.

Sensitivity analysis

Without age weights, 42,131 $DALYs_{(3,0)}$ resulted, while removing both age weight and discount rate resulted in 104,912 $DALYs_{(0,0)}$. If the exposed population is 25% less than the original estimate, the resulting $DALYs_{(3,1)}$ are 35,470. If the exposed population is 25% greater than the original estimate, the resulting $DALYs_{(3,1)}$ are 59,110. If the disease incidence cap is set to 2.5%, 47,275 $DALYs_{(3,1)}$ resulted. Disease incidence never exceeded 3.5%. A remediation scenario where all pollutants were adjusted below international standards resulted in 7,628 $DALYs_{(3,1)}$. In comparison with the initial $DALYs_{(3,1)}$ estimate, 39,665 $DALYs_{(3,1)}$ could be eliminated if these sites were remediated, with the largest contribution from the reduction of concentrations in lead contaminated soils (38,806 DALYs), followed by arsenic (722 DALYs) and chromium (137 DALYs) (Table 6).

Discussion

This study sought to characterize the number of years lost due to illness, disability, or early death in Argentina, Mexico, and Uruguay. Environmental levels of three heavy metals were characterized in those countries and DALYs were calculated based on estimated exposure. In total, an estimated 47,293 DALYs resulted from exposure to arsenic, chromium, and lead from 160 toxic waste sites located throughout the study region. This burden of disease estimate represents screened sites only, and is likely to be largely underestimated. The estimated burden of disease as a result of exposure was approximately 0.11% of DALYs for all causes in the three countries of interest as estimated by the WHO. [27]

By quantifying disease burden from heavy metal pollution through a DALY-based method, comparisons can be made to other public health threats and chronic illnesses. The burden of disease estimated for exposure to arsenic, lead, and hexavalent chromium at screened sites is comparable to the burden resulting from chronic illnesses such as Parkinson's disease (52,800 DALYs) and multiple sclerosis (27,500 DALYs), as well as neglected tropical diseases such as Leishmaniasis (44,000 DALYs), in the three countries of analysis. [27, 30]

The ingestion and inhalation of heavy-metal contaminated soil and dust was the main exposure pathway, while exposure to lead was the largest contributor to estimated disease burden (98%) of the three heavy metal exposures evaluated. Biomarkers (BLLs) were used in the calculation of disease burden for lead exposure in Mexico and Uruguay, accounting for 42.7% of the DALYs estimated in those countries. Mexico is the fourth-largest producer of lead world wide, having generated 222,000 metric tons in 2012 and

continues to increase output.[31] Sites in Mexico included in the lead exposure analysis were currently or previously involved with production of earthenware with leaded glaze (n = 31), mining operations (n = 22), smelting activities (n = 3), used lead-acid battery recycling (n = 1) and manufacturing (n = 4).

Interventions aimed at reducing BLLs could potentially eliminate the 19,785 DALYs in Mexico (18,773 DALYs) and Uruguay (976 DALYs). Such interventions include the introduction of lead-free glaze in ceramic ware, introduction of legislation to regulate battery recycling, reduction of lead dust in the home, outreach and education about the health effects resulting from exposure to lead, as well as continued monitoring of BLLs. Despite producing lead in smaller quantities, exposure contributed significantly to disease burden in both Argentina (83,700 metric tons in 2013, 4,271 $DALYs_{(3,1)}$) and Uruguay (no lead production data available, 2,126 $DALYs_{(3,1)}$).[31]

Exposure to arsenic contributed an estimated 773 $DALYs_{(3,1)}$ in Mexico, but had little impact on populations living in Argentina and Uruguay. Major sources of arsenic in groundwater include alluvial aquifers, geothermal waters associated with recent volcanic activity, as well as areas where mining takes place.[32] Recommended interventions for arsenic exposure include reducing the affected population's intake of arsenic-rich groundwater and foods, introducing a safe water supply for irrigation in affected areas and disseminating information to educate residents about the associated risks of arsenic ingestion.[8]

A previous burden of disease study by Chatham et. al. found 54,432 DALYs attributable to lead exposure in India (n = 24), 78,982 DALYs in Indonesia (n = 28) and 394,084 DALYs in the Philippines (n = 27). While these estimates are larger than the

estimated 39,943 DALYs attributable to lead-contaminated sites in Mexico (n = 59), an estimated .39 DALYs per person resulted from lead exposure at these sites, higher than previous estimates for India (.21 DALYs per person), Indonesia (.21 DALYs per person) and the Philippines (.30 DALYs per person). In the same study, .10 DALYs per person were estimated for exposure to eight chemicals in India, Indonesia and the Philippines (mean population at risk of exposure per site = 23,079), while an estimated .24 DALYs per person occurred due to exposure from three heavy metals in Argentina, Mexico and Uruguay (mean population at risk of exposure per site = 3,158). This higher average DALY per person was likely a result of a smaller population at risk of exposure in the three sites, with higher average DALYs per person resulting from higher sample concentrations mostly due to lead exposure.

Industrial sources of chromium contamination include production of treated lumber, steel manufacturing and leather hide processing. In Uruguay, a number of smaller metal salvaging and burning operations were located in close proximity to informal settlements, which contributed to increased exposure. Alternatives exist for both the reduction of hexavalent chromium in industrial processes and ways in which to remediate contaminated-soils. Although naturally occurring tannins can be used to process animal hides many manufacturers continue to use hexavalent chromium due to its low-cost and rapid effectiveness. Efforts must be made to convince manufacturers of the economic viability of alternative, safer techniques. Bioremediation techniques include the use of salt-tolerant bacteria to reduce chromium levels in soil, while bone charcoal is known to be effective in removing chromium from contaminated bodies of water. [33,34] Injection of molasses into chromium-contaminated soils has also been shown to be

effective, as bacteria feeding on molasses transform hexavalent chromium to less harmful forms likely to bind with available rock substrates. [35]

A number of limitations for the calculation of disease burden should be noted. A limited number of environmental and biological samples were taken, and as a result, the population at risk was extrapolated from available data to those residing within a half-mile of the site. While BLL data were analyzed as biomarkers of exposure, these values were extrapolated to the remaining populations that were not screened.

While the analysis incorporated the three Latin American countries represented by the largest number of investigated sites in the TSIP database, a dearth of data existed for both Argentina and Uruguay. As a result, of the estimated population to be at risk of exposure, 62.6% resided in Mexico. Further site investigation is necessary in these countries to better estimate the scope of potential disease and disability resulting from exposure to pollution. While the analysis examined potential exposure from three heavy metals, a number of other pollutants of concern exist. Site investigators collected data for a number of other pollutants such as mercury, pesticides and various particulates contributing to air pollution. However, these analyzed samples were too few in number to generate an accurate burden of disease estimate. The use of mercury in artisanal small-scale gold mining (ASGM) is a known threat to public health in Latin America, and future site investigations must continue to identify sites of mercury exposure. [36] Additionally, further research is necessary to establish a disability weight for exposure to elemental mercury. Indoor air pollution, largely resulting from the burning of solid and biomass fuels, is estimated to be responsible for 1% of DALYs and more than 1.5% of premature deaths in the three countries of analysis. [37] Continued monitoring of both

indoor and ambient pollution is necessary to estimate a burden of disease resulting from these exposures, particularly in rural areas of Mexico. It is believed that cases of acute pesticide poisoning are underreported by 50 to 80% in Latin American countries. [38] Further site investigation must include screening for pesticides and continued exposure monitoring is necessary, especially for children who represent a large part of the agricultural workforce. [39] As the analysis was solely focused on exposure to three heavy metals, it is likely that the burden of disease resulting from exposure to toxic pollution is largely underestimated.

As a large portion of the disease burden estimated by the analysis was derived from exposure to lead, intervention and remediation programs should continue to focus on lead-contaminated sites in Argentina, Mexico and Uruguay. However, site investigations and efforts to estimate the burden of disease caused by pollution must continue to incorporate threats from exposure to multiple pollutants. Future studies should attempt to extrapolate these estimates to unscreened sites in an effort to estimate a more accurate burden of disease. This larger estimate is likely to be comparable with the burden of disease resulting from myriad chronic illnesses, and may be used as a tool to generate support and funding for the remediation of toxic waste sites in these countries and others. While it is believed that Argentina and Uruguay have largely concluded the epidemiological transition from infectious to non-communicable diseases, Mexico continues to struggle with threats from both. [40] While the three countries of study have protocols in place to monitor children's BLLs and reduce lead exposure, programs to regulate ULAB recycling exist in Argentina, while regulations limiting the content of residential paint exist in both Argentina and Uruguay. Efforts to reduce the burden of

disease resulting from lead exposure must include the introduction of such interventions in Mexico.

Tables

Table 1. Per capita cancer and noncancer human health risks by chemical and media for chemicals other than lead

		Cancer risk				Noncancer risk		
	Per ug/m^3 in air	Per mg/kg in soil	Per ug/L in water		Per ug/m^3 in air	Per mg/kg in soil	Per ug/L in water	
Arsenic	4.30 x 10^-3	4.69 x 10^-9	2.23 x 10^-5		NA	4.29 x 10^-6	8.57 x 10^-9

Abstract

Purpose

Ghana receives and recycles large amounts of e-waste without resources or regulations for safe handling and disposal. Work is done through the open burning of wires to recover copper, a profitable metal. Burning leads to toxic exposures for local populations and the environment. A team sought to improve hazardous working conditions of electronic scrap handlers and to mitigate the environmental pollution and public health exposure risk.

Methods

To implement this initiative, controls in the form of wire stripping technology were used as an alternative to burning. An assessment of the equipment was done through onsite training and a feasibility study was designed to assess the economic incentive and benefits of using alternative technology. The study consisted of two teams using the respective method of burning or wire stripping to process 40 pounds of cable/wire bundles daily for 6 days.

Results

The cable stripping method on average took 3 hours longer than the burning method. The average weight of copper extracted using tools was 8% higher. The average difference in sale price for clean copper versus charred is about 28 Ghanaian Cedis.

Discussion

This intervention serves as a starting point to reduce toxic exposure for the local population, workers, and the environment. The biggest challenge is the processing time of manual wire stripping, which does the price differential does not outweigh. Organization of site, increased role of GASDA, implementation of regulations, and a centralized system for access and maintenance of equipment will collectively aid in decreasing the burning.

Introduction

Background and Significance

Electrical and electronic waste (e-waste) is an emerging environmental and human health problem in the world. E-waste described as e-waste consists of any appliance using an electric power supply that has reached its end-of-life. [1] In our technology driven world we tend to cycle through electronics and electrical products at a higher rate. Production of electronics with shorter life spans and continual advancement in technology yield a higher turnover rate, which increases the amount of discarded items and production of e-waste.

The global generation of e-waste is estimated to be 20 to 25 million tons per year according to the United Nations Environment Programme (UNEP). [2] According to a Greenpeace report, e-waste makes up 5% of all municipal solid waste worldwide, whereas in wealthy countries it may constitute up to 8%. [3, 4] One key study indicates that the amount of e-waste continues to rise and about 75 to 80% is shipped to countries in Asia and Africa, as a cost effective method of disposal. [5]

The mainstream movement of electronic waste is from wealthy countries to poor countries where methods of recycling and treatment are subpar. Recycling and disposing of e-waste in wealthier countries is relatively more expensive and complex due to systematic regulations. In these countries where e-waste is regulated, producers are required by law to establish electronic recovery programs as in the United States. [6] However, despite regulations some items that are deemed useless by donor countries are still of use to countries that accept e-waste items as second-hand donations, while other items are disposed. [7] The shipment of e-waste falls under the regulation of the Basel Convention, which is an international treaty controlling trans-boundary movements of hazardous waste and its disposal. [8] A gap in the treaty allows shipment of second hand donations to poorer countries as a method to transport unusable items that will end up in landfills or scrap yards. [7] Exportation can also continue with clandestine operations and by countries that have not ratified the treaty. [3]

Most developing countries where three-quarters of e-waste is shipped lack a comprehensive system for the collection and processing of e-waste, due to inadequate infrastructure, safety protocols, and access to technologies and funds. [5] E-waste is distinct from other forms of industrial and municipal waste because it contains both valuable and hazardous materials that require special handling and recycling methods to avoid harmful exposure to people and environmental contamination. [5] Workers have the potential to be exposed to heavy metals, inorganic acids, and poly-aromatic hydrocarbons when burning and dismantling e-waste. Recent, studies indicate causal evidence that there is a strong relationship between environmental pollution and e-waste. Research on air pollution has shown that burning activities at e-waste sites produce hazardous emissions that may have damaging health effects. [9] E-waste workers are exposed to airborne materials via inhalation, dermal contact, and ingestion, which may contain harmful levels of heavy metals. [10] Other studies show that e-waste recycling and treatment sites can potentially contaminate nearby soil, streams and rivers. Heavy metals and inorganic acids can leach into these waterways through wastewater or ambient air emissions and have the risk of contaminating soil, crops, fish, livestock, and drinking water. [9]

Site Characteristics

Ghana is one of the poorer countries that receives and recycles large amounts of e-waste without resources for safe handling and disposal. The Agbogbloshie site is the largest and main center for e-waste recycling and disposal in Ghana. [4] Agbogbloshie is a 15 acre site, on a flat terrain located on the west side of the Odaw River in the city of Accra, the capital of Ghana and is adjacent to the Agbogbloshie Food Market, as shown in *Figure 1*. [7] The site originally started as a food market for onions and yams, and although the market remains, there has a drastic increase of e-waste recycling over the years. As a result, the land was leased in 1994 from the National Youth Council as the Scrap Dealers' Association of Ghana. Since then, Agbogbloshie has been the hub of informal recycling industry in Ghana. [12]

The site is part of an industrialized area that consists of scattered recyclers working out of small sheds in an open area. Workers and families are located to the east of the site (about 100 meters across the Odaw River) in small informal settlements with little electricity and running water. [7] E-waste recycling at Agbogbloshie is done on an extensive level in a rudimentary way by manually disassembling e-waste items by hand, and open burning of wires and cables to recover copper which is covered by plastic encasements. Copper is a profitable metal that is then sold to make wages for the day. [4] This work is often carried out by children. About 73% of the workforce is aged 21 to 30 years using handmade tools and without personal protective equipment, leaving them susceptible to exposures. [4, 7] In addition, the site is a dumping ground for unused items including tin cans, remnants of disassembled machinery, and polyethylene bags that litter the land and obstruct sewer systems. [11] E-waste operations at Agbogbloshie are classified as informal recycling with limited worker health and environmental precautions.

E-waste site: Agbogbloshie

Electrical and electronic equipment imported into Ghana in 2009 was estimated to be about 215,000 tons, according to a Ghana e-waste Country Assessment Report. [13] Majority of the e-waste is imported from Europe and North America. [14] Of these imported items, about 30% are new products and 70% are used. Of the used products, it is estimated that 15% are broken and outdated, which is a significant portion that is directed to informal recycling. [14, 15] The used items have a shorter lifespan compared to new products, which leads to a higher e-waste generation per year.

A socio-economic assessment on sustainable e-waste management in Ghana focused primarily on Agbogbloshie, found that 10,000 to 13,000 metric tons of e-waste was treated annually by the informal sector. The refurbishing and recycling contributes about 105 to 268 million indirectly to the Ghanaian national economy. [15] Despite the amount of e-waste recycling and treatment that occurs in Ghana, primarily in Agbogbloshie; Ghana currently has no regulations for recycling and disposing of e-waste and does not enforce any regulations for the air, water, and soil quality. [7] Ghana ratified the Basel Convention in 2005, but has not incorporated it into the national legislation, therefore not put into practice. In addition there are no specific laws regulating the working conditions of e-waste workers. [16] Therefore the burning of the plastic sheathing of wires and cables to recover copper leads to toxic exposures for local populations by polluting the air, soil, and water.

A previous Blacksmith Initiative study was conducted based on occupational and environmental exposure to electronic waste recyclers in Agbogbloshie Market. This assessment confirmed that burning of copper wires is a leading source of toxic exposure for workers and surrounding communities. [7] A Greenpeace study confirmed levels 100 times the average background levels of concentration of copper, lead, zinc, and tin at the scrap yard. Also, lead in soil and ash were found to be as high as 5,510 mg/kg of dry weight from the Greenpeace team. [4] According to the Greenpeace report by Brigden and colleagues, most samples contained numerous toxic and persistent organic chemical pollutants and high levels of toxic metals. The majority of these compounds were intentionally used in electronic devices, and likely to be formed during open burning of materials such as PVC. Overall, a wide range of chemicals were present that are toxic, and can accumulate in the body. [4]

A Health Assessment study aimed to assess health symptoms and chemical markers in urine and blood serum among e-waste workers was conducted with a control population. From the total of 174 participants it was found that high levels of barium, manganese, chromium, selenium, and zinc were present in urine of the exposure population versus the unexposed. [17] As a result, adverse health outcomes were detectable in the exposure population at the Agbogbloshie e-waste site.

It is confirmed that toxic exposures occur at Agbogbloshie's waste site from previous studies consequently affecting human health and the environment. [4, 7, 17] Despite the potential exposure, e-waste provides thousands of jobs as a rising source of employment that supports families. [14]The amount of collectors, recyclers, and refurbishers employed at the site is estimated to be about 30,000 people from both the city and the country.[15, 18] Many of these workers in their varying roles live in extreme poverty, with their income ranging from $70 to $285 a month depending on their position. Also, it was found that most workers are between the ages of 14 to 40 years and work about 10 to 12 hours a day, which is about 300 to 360 hours a month. [15] Given the estimated low wages of these workers, long hours of daily work, and hazardous working conditions the state of Agbogbloshie's e-waste site is a major challenge.

Project Partners

The project team consisted of the CUNY School of Public Health, Blacksmith Initiative UK, Green Advocacy Ghana (Green Ad), and the Greater Accra Scrap Dealers' Association (GASDA) all considered part of the Blacksmith Initiative Team. Faculty and selected students from the CUNY School of Public Health at Hunter College participated in the research of purchased wire stripping technology, demonstration and training of equipment, and aided in the design of feasibility study. Blacksmith Initiative UK, an international not-for-profit organization geared to solving life-threatening pollution issues in the low and middle-income countries. Blacksmith played a role in organizing key players, distributing funds for the project, and coordinating the feasibility study. Green Advocacy Ghana (Green Ad) is an organization that aims at upholding and enhancing sustainability and integrity of Ghana's environment. [12] Green Ad staff participated in training of e-waste workers, implement study, and recordkeeping. The Greater Accra Scrap Dealers' Association (GASDA) is an umbrella organization made up of individuals involved in the scrap business in the Greater Accra Region. GASDA workers participated in training and were part of the feasibility study. Overall support for this project was given through Comic Relief Research to purchase wire stripping technology, initiate field training, and implement the feasibility of alternative technology study.

Purpose

A team of partners consisting of members from the CUNY School of Public Health, Blacksmith Initiative, Green Ad, and GASDA sought to improve hazardous working conditions of electronic scrap handlers and to mitigate the environmental pollution and public health exposure risk to Southern Accra. The main toxic exposure for the local population and e-waste workers is the burning of plastic sheathing of wires and cables to recover copper, a profitable metal at Agbogbloshie. This burning poses a risk to the population and also contamination to the environment. Also, there is a lack of a coordinated approach for collection, transportation, storage, and disposal of e-waste at Agbogbloshie with less stringent regulations.

To implement the initial training which leads into a study, controls in the form of wire-stripping technology were used as an alternative method to burning of copper wires to serve as a starting point to reduce toxic exposure. The first part of this intervention consisted of training with CUNY and Green Ad staff. Green Ad staff then trained e-waste workers. This was to allow workers to be comfortable in being training with the equipment by personnel who spoke the same dialect and languages. Then, an onsite field demonstration with Green Ad staff, GASDA workers, and Blacksmith staff took place to replicate a normal work environment. A few days after the field testing, the staff of Green Ad and Blacksmith met to discuss the field testing activities and assess the technology. It was then determined that a longer field trial with a quantitative assessment to determine feasibility would be necessary before launching the new technology.

The feasibility study took place at Agbogbloshie under normal conditions and onsite selling to mimic realistic prices. These procedures attempted to replicate normal e-waste site operations as closely as possible with the implementation of engineering controls to reduce bias.

The training session and feasibility study raised awareness in already known issues of site and potential risk to local population and workers. Also, the project provides a step forward in implementing a solution through alternative technology.

Methods

Research and selection of technology

In early 2012, the Blacksmith team consisting of Hunter College faculty and students researched and purchased wire stripping technology. Research began in a general method, examining all types of wire stripping tools and technology based on internet searches, tool catalogues, and experience from past visit to Agbogbloshie. Tools that could strip wires of varying gauge sizes and length were also taken into account to allow for a wider range of use.

After this general assessment of available technology, elimination began based on what would be most suitable at Agbogbloshie's e-waste site. The Blacksmith Initiative team had a prior visit, therefore firsthand accounts on what may be most applicable to the site was provided. This list included equipment that was non-electric, portable, and reasonably inexpensive. Further elimination was done based on these factors, which resulted in a list of wire stripping technology that was purchased.

With the wire stripping equipment at hand, two days of preliminary testing and training of the tools and equipment were conducted in New York. The testing aided evaluating and selecting efficient technologies and methods in ensuring that the initiative team was thoroughly familiar with the equipment to train Ghanaian partners. In this testing phase, old wires, cords, and cables were used to extract copper. An unused computer tower was also taken and dismantled by hand by the team using the available purchased equipment. All wires used were clean and undamaged upon initial use. From this hands-on assessment, only the most cost effective tools were chosen to be taken overseas to conduct a field training and assessment at Agbogbloshie's e-waste site. The tools consisted of hand-held wire strippers/cutters, adjustable wire strippers, automatic wire strippers, cable strippers, a wooden plank with grooves and utility knives, manual bench top wire stripper, and a manual wire stripping machine. Descriptions of purchased technology are shown in *Table 2*.

Green Ad recruited subjects form GASDA and ensured compliance with Ethical Review Board policies for the training and feasibility study.

Field Training and Assessment of Wire-stripping technology

In Mid-March of 2012, the Blacksmith Initiative team traveled to Accra, Ghana with equipment. Initial training consisted of demonstration and hands on training of wire stripping technology with Green Advocacy Ghana staff at their headquarters, which is about 15 miles from Agbogbloshie's e-waste site. This initial training took place so Green Ad staff could train e-waste workers from the site.

The technology was arranged by stations based on types of wires that it can be used on. There were groups for small diameter wires that consisted of handheld stripping equipment, another for medium sized cables, and another for larger diameter long segments of wire that consisted of the bench-top strippers and stripping machine. The Blacksmith Initiative team demonstrated the usage of the tools based on the stations. All wires and cables used in this process were clean and undamaged. After the demonstration, Green Ad staff were able to become familiar with the types of technology. This initial training with staff lasted for about 2 hours.

For the second portion of the training, 6 GASDA workers arrived at Green Ad's office. These workers were chosen by Green Ad and senior leadership of GASDA based on the familiarity of working together. The workers were paid to participate in this initial training. The e-waste workers brought material from Agbogbloshie, which consisted of a bundle of worn out cables and wires. The GASDA workers became familiar with the stations of equipment and received demonstration from Green Ad staff. The e-waste workers were able to get hands on experience with the equipment to gain familiarity on its usage, using the bundle of wires from the waste site. This part of the training lasted for about 2 hours until workers felt comfortable with all tools. Blacksmith Initiative staff observed this portion of the training and assisted workers with questions and additional demonstration, records of workers opinions on the tools were also noted. The acquaintance between GASDA workers and Blacksmith staff would aid in the next step of the training.

After preliminary demonstration and training of the technology off-site, all the wire stripping equipment was taken to the Agbogbloshie's e-waste site the next day. The 6 GASDA workers that participated in the previous day's training were present and given an additional paid incentive for the two days of onsite training that would take place. All staff were taken to the usual work station of the GASDA members in Agbogbloshie. This area consisted of a small wooden shed with wooden tables, benches, and chairs. The shed served as a break area for workers to eat and relax as it was opened to the rest of the waste site. In this portion of the site, dismantling of e-

waste occurred by hand. Another area served as the burning site. As in the preliminary training, the equipment was set up in stations and laid out on the benches. The chosen GASDA workers were able to bring their own acquired wires and performed wire stripping using the technology. As the GASDA team used the equipment, other e-waste workers came and demonstrated the tools, some brought their own wires and tested on the equipment. This lasted for a period of two working days. During this time, assessments of wire-tripping technology were performed based on the two days of training, taking into account the advantages and disadvantages of each tool. This was done based on workers opinions of using the tools and also through a consensus of workers during operations of using the wire stripping technology in their normal work setting. The results of this assessment can be found in *Table 2*.

Feasibility Study of Copper Recovery through Cable Stripping

The economic feasibility of time and financial benefits of using wire strippers as an engineering control to extract copper was quantified and assessed, to compare to the process of burning wires. This study focuses on two groups, one using the burning method to remove plastic sheathing from wires, and the other using wire stripping technology demonstrated through offsite and onsite training.

Methods of Study

Participants of the study consisted of six experienced electronic scrap workers and burners selected from the GASDA that also participated in the onsite training in March 2012. These workers were chosen based on their familiarity of the introduced technology that will be piloted in the study. Each of the six workers were paid for each day, which was the same amount for each person to participate in the study. The six GASDA workers were divided into two teams, Team S (wire-stripping team) and Team B (burning team). The division of teams was based on random selection to prevent bias. Team S acted as the experimental group using the new alternative stripping technology, and Team B acted as the control group using the normal method of burning. Each participant was familiar and comfortable in using either method.

Technology and Materials Used

At Agbogbloshie's e-waste site there are various gauges and types of cables and wires that contain copper. To simulate a normal work setting, each team worked with a variety of thin wires, coiled wires, transformer wires, and other various types. The sources of these materials included ICT equipment, old vehicles, telecommunication equipment, and other household electrical cables. The cables and wires were obtained or purchased by members of the teams from onsite dealers who procure bundles from scavengers. The targeted daily quantity for copper extraction by the two teams was a total of 80 pounds or 40 pounds each. Scales were available on site at various selling points belong to metal buyers. Therefore it was not necessary to obtain a scale specifically for the pilot exercise, although these scales did not provide high accuracy in weighed materials in decimals. The scales were used for the weighing of raw cables before using stripping or burning respectively, and copper after processing for both teams. Overall the study was designed to involve routines and materials that were used in an ordinary day operation.

The equipment used for wire striping by Team S consisted of technology assessed and used in training and demonstrations. This included knives, blades, automatic strippers, manual wire stripping machines, bench top wire strippers, pliers, and cutters; with further descriptions noted in *Figure 2*. The equipment used for burning by Team B consisted of Styrofoam, matches, and containers of water that are used under normal operating conditions.

Cable Processing

The total of 80 pounds of cable bundles obtained on site by members of the teams were mixed up, divided, weighed, and apportioned into two equal parts, taking into account a variety of cable types and sizes for both teams. This division of wires was completed by Green Ad staff to ensure fairness, and weight was taken from onsite scales. Team S set up wire stripping tools on working tables and benches and prepared for work. Team B purchased needed equipment from the site to be used as fuel for the fire. The stripping and burning activities of the two teams were carried out at different locations on the e-waste site.

The two teams started their respective operations of cable stripping and cable burning at the same time (9:00 am), each processing a batch of 40 pounds of identical cables. Each team was supervised by a Green Ad research member to ensure equal distribution of copper, record working time and conditions, and to ensure independence in two teams. Green Ad also ensured additional workers did not interfere with each teams work for the day to prevent bias.

After the given amount of cables and wires (40 lbs.) was processed, the teams respectively collected their generated copper for the day. When processing was completed, the team was allowed to complete their duties for the study, despite if one team finished before another.

Team S collected the clean copper wires into a container and the plastic sheathing collected in a waste bin.

Team B used a pole to assemble the hot copper wires from the burning spot and sprayed the hot copper with water to cool it down. In addition to the copper oxide char present on the burnt copper, the process of dragging the hot cables through the dirt caused further contamination on the wires. The charred copper wires were transferred into a container.

Both sets of products produced from both teams, clean and charred copper were weighed using an on-site scale at one of the selling points. Weighing was monitored by the Green Ad staff and then sold to a metal buyer based on the team's discretion to obtain a realistic price. The selling of the daily output was immediate after processing was completed. Green Ad staff also recorded the weight in amount of extracted copper and the price that it was sold for. The money collected from sold copper were kept by workers in addition to their paid incentive. This added an additional incentive so if more copper was produced the more they would obtain.

This overall process was repeated for seven additional days to allow for a pool of data to be gathered by Green Ad staff.

Results

During the duration of the feasibility study there was no interference of rainy weather. The weather was hot and dry. Daily operations continued under normal conditions. The scrap market was active with people hauling in parts, trading, dismantling, burning, and selling during the study.

During the first two days of the feasibility study, the amount of materials was inadequate as a result of artificial scarcity of strictly copper wires. Although results for all days were recorded, only the results of days 3 to 8 were used in the analysis.

The range of processing time for cable stripping was between 159 to 201 minutes. The average time spent to extract processed copper using wire stripping technology was about 185 minutes, with a range between 8 and 12 minutes. The amount of time taken to extract copper through burning was an average of about 10 minutes. For both methods, the initial amount of wires was 40 pounds each. The cable stripping method on average took about 3 hours longer than the burning method. However, the average weight of copper extracted using tools was 8% higher than the burning method. The amount of copper extracted using technology ranged from 30 to 32 pounds, with an average loss of 22%. The amount of extracted copper using open burning ranged from 27 to 30 pounds, with an average loss of 30%. The comparison of weight of extracted copper and the corresponding processing time are present in *Table 3*.

On average 78% of processed copper was recovered from manual wire stripping. The sale price of clean copper ranged from about 162 to 173 Ghanaian Cedis. The average sale price for processed copper was about 168 Cedis for about 31 pounds of copper, which is equivalent to 5.4 Cedis per pound. For open burning, on average 70% of copper was recovered. The sale price of this charred copper ranged from about 135 to 150 Cedis. The average sale price for charred copper was about 141 Cedis for about 28 pounds, which is equivalent to about 5 Cedis per pound. The average difference in sale price for clean copper versus charred copper was about 27 Ghanaian Cedis. The comparison of the fraction of copper recovered and sale price of varying techniques is presented in *Table 4*.

Post assessment of technology

Some tools were considered suitable for stripping activities at Agbogbloshie, while others turned out to be less appropriate. Comments found below were taken from workers during the initial training sessions and from the feasibility study by Blacksmith Initiative Team and Green Ad.

For the Board (channel) stripper it was quoted, "*This is a very good idea but very slow. I am not sure my people would be willing to waste all the time stripping."* The automatic hand stripper was popular for short segments of small wires. The crank stripper machine was the most efficient and popular technology. One worker talked about the cranker as *"Very good ideas but get us a motorized cranker which is bigger; we would be willing to contribute and pay for it."* Workers were excited to learn the new techniques, as quoted from one of the workers, "*We thank them for bringing this equipment because I know that burning is damaging our health."*

One of the chairmen of GASDA said, "*….at this stage, it is important for capital investment especially towards the purchase of cables, processing, and subsequent sales to ensure that the situation is run as a business."*

Discussion

Various wire-stripping controls introduced at Agbogbloshie provide an alternative solution to burning for workers at the e-waste site. The feasibility study indicates that the processing time was about 3 hours more for manual wire stripping as opposed to open burning. However, cable stripping produces about 8% more in pounds and on average 28 Cedis more than the open burning method.

From previous studies, it is known that open burning produces toxic health effects. This is one of the first studies to introduce an intervention in the form of a feasibility study to assess factors to prevent burning. The study compared factors such as processing time, sale price, and amount of copper recovered from the normal method of open burning compared to manual wire stripping. The common goal for all parties involved in this project, including workers was to stop or minimize the burning due to its adverse health effects.

The processing time was arguably the biggest challenge to reconcile. In a subsistence economy such as in Ghana, livelihoods are often extremely time based as it can take an entire day's work to earn enough income to support basic needs. The extra time spent on manual wire stripping could impact other income generating activities for workers. Although, cable stripping produce more clean copper at a higher price, the price differential does not outweigh the time restraint to provide an incentive for the workers to switch their methods. One of the tools used, the MWS-808 manual wire stripping machine known as the cranker was most effective with the workers in terms of processing clean copper in a fast and efficient manner. This machine is costly with a price of about $500 US dollars and is most efficient and useful with increased organization. For this reason, GASDA believes the best option would be for the association to purchase the cables wholesale and manage the entire sector with the organization of equipment to ensure that all workers are using the stripping method.

There are two groups of buyers, onsite and off-site buyers that influence the sale price of copper. The onsite buyers are those who operate at Agbogbloshie. The off-site buyers are in factories purchasing bulk quantities for export. The off-site buyers are primarily interested in clean copper and are willing to pay the extra premium. The onsite buyers also pay a little more, about 0.4 Cedis additional than what they usually pay for the burnt copper. However, there was a reported growing market for clean copper which can provide further incentive in using alternative technology. At this time, majority of the copper available to buyers was burnt and oxidized. Through surveying, it was revealed that if there was an option to purchase clean copper on a consistent basis, the premium will rise. At this point, there were few workers offering to sell non-burnt copper that buyers cannot rely on a steady stream of clean product. Further investigation should be conducted into the buyer's perspective on this issue.

Regardless of the limitations in processing time, it was learned that workers as well as the GASDA organization want to step away from their current method of burning. Most workers understand and agree that the burning of cables is not the best solution, and would readily embrace an alternative as long as the cost and time remains competitive. The recommendation at this time is that the technology can be improved to include more sophisticated machines. Further training and awareness can go a long way to change the perception on the equipment and tools and increase familiarity.

E-waste recycling is a rapidly expanding industry at Agbogbloshie. Despite the environmental tolls, this sector has the potential to create safe and sustainable jobs. The expansion

of GASDA has laid the groundwork for much needed organization. The expansion in the number of members, indicates that many e-waste workers are looking for a more stable work environment. Although a great deal more needs to be done to create infrastructure and business networkers required to sustain a profitable economy. To catalyze this shift, an organized labor force would be critical to improve the quality of life for the industry from e-waste dealers to collectors and to recyclers. Workers will need to continually organize and promote their interests and needs at both the local and national level. If workers can invest in strengthening their organizational infrastructure, they can start to consider the purchase of shared equipment and technology in a cooperative way. A centralized system can enable equitable access and maintenance of equipment. It can also strengthen the community's voice to the government to demand social benefits and protections.

The major outcome of this intervention was the awareness that was raised in the introduction of methods that can serve as a starting point to reduce toxic exposure to the local population, workers, and the environment. A local television station was onsite during the training and broadcasted messages based on alternatives to burning. Also, government agencies will take more of an initiative to participate in working together with GASDA and other agencies to stop the burning, provide a framework to address e-waste issues, and formalization of regulations. GASDA also realized that they need to play more of a role in the recycling of e-waste in providing more guidance and organization.

Future Study

The next phase of this work will focus on building business groups based on specialties that can be registered as a company under GASDA. This will lead to more organization of the site. More research can be done using electric equipment to determine feasibility of its usage along with more efficient technology as opposed to various types. Conducting a study using efficient technology can then show a significant difference in alternative technology compared to burning. In addition, to using more efficient technology there should be options for workers to recycle and sell plastic sheathings. When using the wire-stripping method, pure copper is retrieved along with plastic. This can lead to additional profits and demand for a plastic market on the site.

Children should be prohibited from working on site and to implement this fines should be imposed. Along with organization of the site, social amenities in the form of training and meeting rooms can be established to initiate more collaborative efforts between workers. Additional training should also be conducted on an ongoing basis for workers who would like to become familiar with methods. Also, awareness sessions should be conducted to increase workers knowledge of the health effects and alterative solutions that are available. These sessions can also include introduction of personal protective equipment that can minimize exposure.

Appendix

Figure 1: Location of Agbogbloshie in Accra, Ghana highlighted in red.

Homes of the e-waste workers are noted to the east of the site. The food market is adjacent to the entry of the e-waste site leading into the recycling operations. The burn sites can be found at the south east portion of the area closest to the homes of workers. The Odaw River surrounds the two sides of the Agbogbloshie market then runs south through the city of Accra where it meets the Gulf of Guinea.

Table 2: Assessment of wire stripping technology

Tool	Cost (dollars)	Description	Advantages	Disadvantages
Hand-held wire strippers/cutters	15-25	Strips wire gauges 12-32 AWG	Useful for small segments leaving a clean cut	Time consuming, not ideal for large, long segments
Adjustable Wire Stripper, 18-28 AWG	46	Adjustable for gauges 18-28 AWG	Quick, handy, light weight, simple to use, precise stripping	Not ideal for long segments, requires force
Automatic Wire Stripper, 8-22 AWG	25-35	Automatic stripper for 8-22 gauges	Quick, handy, light weight, simple to use, does not require much force	Only for certain sizes, not useful for large or long segments
Klein Radial Coax Cable Stripper 2-Level	13	Light weight hand held tool, uses finger loop and pre-set rotating cutting blade	Useful for small segments, precise cut, adjustable gauge	Not ideal for long segments
Wooden Grooves and Utility Knife	10	Table top apparatus with various size of grooves using a utility knife to cut wire sheathing	Ideal for stripping long segments, can be made specific to wire length and diameter	Not ideal for large diameter wires, two people needed for efficiency purposes
Seatek SA200 Strip-All cable and wire stripper	15-21	Light weight, compact, hand held tool, uses calibrated dial for precise depth of cut	Useful for medium to large diameter wires of long segments, adjustable blade	Not ideal for small wires, requires human force
Manual Bench-top Hand Wire Stripper	65	Mounted table top device that uses human power and skill to manually strip wires	With desired setup, stripping can be quick, efficient for long pieces	Manually adjustments of blades need to be set for varying sizes, not suitable for small wires, human force required
MWS-808 Manual Wire Stripping Machine	525	Mounted table top device that automatically adjusts wire sizes with nine channels of cutting blades	Quick, simple to use, efficient, ideal for stripping long segments, separates copper and plastic sheathing	Human force required, not efficient for bundled/twisted wires

Table 3:

Comparison of Weight of extracted copper and processing time

Day	Weight Before Processing (lbs)	Cable Stripping for Copper		Cable Burning for Copper		Difference in Time (minutes)
		Weight After Stripping (lbs)	Processing Time (minutes)	Weight After Burning (lbs)	Processing Time (minutes)	
1	30	21	120	15	10	110
2	36	27	200	33	09	191
3	40	31	185	28	11	174
4	40	32	178	30	08	170
5	40	30	198	29	09	189
6	40	31	159	27	09	150
7	40	31	189	28	12	177
8	40	32	201	27	11	190
Total	240	187	1,110	169	60	**1,050**
Average	**40**	**31.2**	**185**	**28.2**	**10**	**175**

Table 3 shows that the average time spent to extract processed copper using technology was about 185 minutes. The amount of time taken to extract copper through burning was an average of about 10 minutes. When using both methods the initial amount of wires was 40 pounds. The cable stripping method on average took about 3 hours longer than the burning method. However, the average weight of copper using tools was 8% higher than the burning method.

Table 4:

Percent of copper recovered and sale price comparison

Day	Copper from Stripping			Copper from Burning			Difference in Price (GHS)
	Copper Recovered (lbs)	% of Cu Recovered	Sale Price (GHS)	Copper Recovered (lbs)	% of Cu Recovered	Sale Price (GHS)	
1	21	70.0	113.4	15	50.0	75.0	38.4
2	27	75.0	145.8	33	75.0	165.0	(20.8)
3	31	77.5	167.4	28	70.0	140.0	27.4
4	32	80.0	172.8	30	75.0	150.0	22.8
5	30	75.0	162.0	29	72.5	145.0	17.0
6	31	77.5	167.4	27	67.5	135.0	32.4
7	31	77.5	167.4	28	70.0	140.0	27.4
8	32	82.0	172.8	27	67.5	135.0	37.8
Total	**187**	**469.5**	**1,009**	**169**	**422.5**	**845**	**164.8**
Average	**31.2**	**78.3**	**168.2**	**28.2**	**70.4**	**140.8**	**27.5**

Table 4 shows that on average 78% of processed copper is recovered from the cables while 70% of copper is recovered from open burning. The average sale price for processed copper is about 168 Cedis for about 31 pounds of copper, which is equivalent to 5.4 Cedis per pound. The average sale price for charred copper is about 141 Cedis for about 28 pounds, which is equivalent to about 5 Cedis per pound. The average difference in sale price for clean copper versus charred copper is about 27 Ghanaian Cedis.

Assessing grit lead levels from roadsides in neighborhoods affected by Superstorm Sandy in NYC

Abstract

Background. Previous studies have identified a direct association between elevated blood lead levels and soil lead, but there are no known studies of soil lead in NYC.
Objectives/Methods. This study attempts to compile a background of residential grit lead levels in NYC by investigating the relationship between urban grit after Superstorm Sandy comparing roadside grit from storm affected areas one month (n=99) and six months (n=98) after the storm to areas that were not affected (n=76) by the storm surge. Grit lead levels were also compared in order to determine if samples containing construction debris had higher levels of lead. **Results**: The sampling analysis revealed that there was no significant difference between grit lead levels one month mean, (95% CI: 0.0, 204.7 ppm, p=2.40) or six months after the storm mean (95% CI: 5.6, 97.7 ppm p=1.33;) compared to unaffected areas. However, there was a significant decrease overall in grit lead levels within the same sample sites (p=0.0005). Findings show that samples containing construction debris (n=42) did not have a significantly high levels of lead p=0.78). **Conclusion**. Although mean lead levels were below the EPA standard of 400 ppm, the geometric means for grit lead in affected areas during Phase 1 (82.4 ppm) and unaffected areas (80.1 ppm), were at levels known to cause intellectual detriment to children. Therefore, further studies in NYC may prompt a regulatory change to create standards limiting soil lead levels below 80 ppm similar to California's standard which can be of substantial benefit for children.

Abstract: 250

Word count: 3140

Background

On October 29, 2012, Superstorm Sandy hit the most densely populated city on the eastern coast of the United States, New York City. The storm surge from Sandy reached up to 14 feet, [1]higher than any other high-water event in NYC over the past century.[2] As of March 2013, 57,000 flood claims were made in New York state alone.[3] Sandy's significant size left damage far exceeding that of previous natural disasters in the United States, such as Hurricane Katrina, which was estimated to exceed $84 billion in damages.[4]

More than 100 homes burnt completely in the gated community of Breezy Point in Queens, NY. In the aftermath of Superstorm Sandy, thousands of homes were left with water damage. Many homeowners were unable to return to their homes immediately after the storm. However, within weeks, homeowners began demolition of water damaged homes and debris removal from homes, many of which were built prior to the 1970s.[5] When houses containing lead paint are demolished, large quantities of lead-containing dust can be generated.[6] Demolition and debris removal from homes built prior to the 1978 Federal ban on lead paint in residential buildings has been associated with increased lead levels in ambient dust, [6]which can easily settle on topsoil or on roadway surfaces. The US Environmental Protection Agency (EPA)[7] reported an estimated 18 million homes built prior to the eighties to have soil lead concentrations above federal standards.

Natural levels of soil lead in the United States are usually below 50 ppm, but can exceed 200 ppm in urban soils.[8],[9] The U.S. EPA's standard for soil lead in children's play area is 400 ppm and 1200 ppm for all other residential soils.[10],[11] Although the EPA has set a guideline to keep children's blood lead levels at 10 µg/dL, studies have shown that intellectual impairment in children can be seen at lower levels ([12],,[13] Lead poses a significant risk to young children under the age of 6 and is a major public health concern; however, the risk varies significantly with age due to lead's ability to be stored in the bone .[14] Exposure to lead can lead to neurotoxicity, developmental delays, hypertension, impaired hearing acuity, impaired hemoglobin synthesis, and male reproductive impairment.[14,15] Using a modeling system, California's Office of Environmental Health Hazard Assessment (OEHHA) has developed soil and dust lead guidance below 80 ppm, level at which children's blood lead levels may be raised by 1 µg/dL and is known to reduce their IQ by 1 point.[16,17]

Until recently, studies were inconclusive as to a positive correlation between lead contaminated soil and lead exposure.[18] However, recent studies show that soil lead is an equally, if not more, important source of blood lead exposure as lead paint due to the addition of lead in gasoline and paint from 1920s to 1989.[19-21] According to the agency for Toxic Substances and Disease Registry (ATSDR), the greatest anthropogenic release of lead into the environment occurred from 1950 to 2000 due to the use of leaded gasoline and can be commonly found in soil especially near roadways, old homes, incinerators, landfills, mining areas, and industrial sites. [10]

Zahran et al[22,23] showed that immediately after Hurricane Katrina therewas a significant association between neighborhood soil lead and blood lead levels in children. Zaharan et al[23] found that as soil lead level decreased from 328 to 204 ppm to after Hurricane Katrina children's blood lead levels also decreased significantly by 1.20 to 1.65 µg/dL $p \leq 0.01$). [t values are not

usually quoted, only the p value] Two years after Hurricane Katrina, Rabito el al[24] found that elevated lead levels in residential soil and dust was most closely associated with the age of housing. In a comparison of pre and post-Katrina samples, the median soil lead level was 37% higher in the 2007-2008 survey than the 1998-2000 survey. Of the homes surveyed, more than 61% had indoor and outdoor lead levels above federal standards, most of which were considered to be low risk homes when controlling for sociodemographic variables. Almost half (46.7%) of the 90 homes with bare soil surveyed had soil lead levels above 400 ppm and 26.7% of homes had soil lead levels above 1200 ppm. Age of housing was significantly associated with high lead levels ($p<0.05$) in both unadjusted (OR=82.0; 95% CI: 10.3, 6151.5) and adjusted (OR=8.9; 95% CI: 3.1,26.0) models. In areas with high levels of lead in soil, children may be exposed to a greater burden of blood lead levels.[18]

A recent study shows that elevated blood lead levels (EBL) in children in New Orleans, after Hurricane Katrina and Rita, are more likely associated with soil lead than lead paint.[25] The most common pathway for lead in soil is ingesting lead by hand to mouth behaviors[15] via contaminated hands, toys, food or if the child inhales lead dust that can easily be released into the air during dry periods.[26]

The US EPA's,[27] *Child-Specific Exposure Factors Handbook* estimates that a child from 6 weeks up to 12 months ingests about 60 mg of soil and dust per day and 30 mg of soil per day. Children ages 3 to less than 6 are estimated to ingest 200 mg/day of soil and dust at most; The central tendency ingestion rate is 50 mg/day, while those who exhibit geophagy is estimated to ingest 50 g/day. Elevated blood lead levels in children have shown be considerably higher during the summer months than winter months in New York State,[26] as have been seen in other states, [28]correlating with an increased contact with contaminated dust and soil during the summer.

Based on previous data, storm-related renovations may pose an increased health risk among children. The EPA Integrated Risk Information System (IRIS)[14] does not provide an RfD for lead because there are no known safe levels of lead. There are many sources of lead in the urban environment; however, increased demolitions and debris removal may be a major source of lead dust accumulation on roadsides and sidewalks which may easily be tracked into homes on the bottoms of shoes, by pets, and on clothing. Children can also ingest lead through hand to mouth contact.

There are few published reports providing background lead soil or lead grit data for NYC. The goal of this project was to establish background grit lead levels in NYC for future studies in the aftermath of Sandy and to provide a survey of residential lead hazard in the aftermath of Sandy. In this study grit was defined as a combination of soil, outdoor settled dust, sand and urban rubbish that may be found on roadsides. Samples were collected in 2 phases. During the first phase, samples were collected about one month after the storm, while for the second phase, samples were collected about 6 months after the storm.

Methods

Sample Site Selection: Sample locations were selected based on a worst-case scenario method. The NYC flood evacuation map was examined to determine areas with the highest potential of flooding (Zone A, 7-12 feet storm surge). Google's Interactive Hurricane Sandy Crisis Map was examined to determine locations of relief aid stations within Zone A neighborhoods. Highly affected Zone A neighborhoods in Far Rockaway (Region 1), Rockaway Beach (Region 2), Breezy Point (Region 3), and Coney Island (Region 4) were identified. An on-site visual evaluation was conducted to choose sample locations. Samples were collected in a grid format. Ten to twenty-three samples were collected in these regions. Sites sampled in this study were categorized into 7 regions according to location. The samples were collected in mostly residential neighborhoods and some commercial/residential neighborhoods. Samples were collected on November 20th, 2012.

Grit samples collected in Staten Island (Regions 4-7) were obtained. Samples that were collected in Staten Island were randomly collected in three different regions along the eastern coast. A total of 26 samples were collected in these regions. Samples collected in regions 4 to 7 were all collected on November 25th, 2012. On April 9th and April 13th, about six months after the storm, phase 2 of sample collection was conducted. Samples were taken from storm affected areas using the same methods as those used to collect samples in November the previous year.

Background samples were obtained from areas away from storm activity. Samples were collected from roadsides along the Select Bus Service (SBS) routes in the Bronx (Region 8) and Manhattan (Regions 9-12). SBS bus route maps were used as sampling maps in order to identify sampling locations. Bus stops were selected as sample locations along each route. The SBS routes were along major thorough fares in mostly commercial neighborhoods along large roadways. Fourteen to 21 samples were collected along each route. The samples were collected late November to early December of 2012. Phase 2 sampling was not conducted for unaffected areas along the bus routes.

Sample Collection: Outdoor surface grit samples were collected using a dustpan and a brush into 50 mL plastic centrifuge tubes. Samples were collected within a 3 ft by 3 ft area. One to three samples were collected within each city street. The background samples were collected using the same methods and equipment. Samples that were collected from construction debris were labeled with the letter "C."

Samples collected for Phase 2 of the data collection were collected from as close to Phase 1 sampling locations as possible. However, it rained for 2 days before sampling was conducted on April 13th, making it difficult to take grit samples from roadsides in some locations due to a lack of drains and flooded streets. For areas that were flooded after the rain, samples were taken as close to the curbside as possible.

Sample Analyses*:* Sample locations were mapped using Google Earth. First, using a ppb RAE Plus Systems Photoionization Detector, volatile organic chemicals (VOCs) were measured in the head space of the centrifuge in parts per billion (ppb) using isobutylene as the calibration gas.

The VOC levels were not analyzed for this paper. Grit lead samples were analyzed for heavy metals using an Innov-X Systems α-4000 hand held X-ray Fluorescence (XRF) analyzer. Although an XRF is accepted as a field screening tool, studies have confirmed handheld XRF analyzers to be reliable[29] within 85% of inductively coupled plasma atomic emission spectrometer (ICP-AES) when sampling for lead.[30] Before use, the XRF analyzer was calibrated each day using a lead plate provided by the manufacturer. The XRF analyzer was able to provide a real-time measurement for several heavy metals (Ag, As, Ba, Cd, Cr, Hg, Pb, Se). Due to time limitations, only data collected for lead was analyzed. For all real-time lead measurements, the grit was poured into a small, 3"x4" plastic sampling bag before using the handheld XRF analyzer. Samples were gathered to one corner of the plastic sampling bag. The XRF was placed on a volume of about a third to half an inch of grit and held to the sample for 24 to 30 seconds. Measurements were recorded onto the chain of custody. The results were reported in parts per million (ppm). Samples collected in Region 9 were sent to Schneider Laboratories, Inc. for analysis. Lead level measurements were provided in ppm.

***Statistical Analysis**:* All statistical analysis was performed using excel and SPSS. A paired t-test was performed to compare the geometric means of samples collected one month and six months after the storm in affected areas. In Phase 2 of the soil survey, a sample was missing from the Coney Island dataset; therefore, samples for that location was excluded from statistical analysis. An independent t-test was performed to compare the means of Phase 1 and Phase 2 samples from affected areas to the unaffected areas. For non-detectable (ND) and limit of detection (LOD), half the lower limit of the LOD was taken as described in EPA's (36) *Guidance for Data Quality Assessment: Practical Methods for Data Analysis*. Independent t-tests were performed to compare Phase 1 and Phase 2 affected areas with unaffected areas and construction debris and non-construction debris containing samples. Then a paired t-test was performed to compare changes between Phase and Phase 2 samples.

Results

Table 1 indicates sample collection sites by site number and region identifier. There were 12 sites and 273 samples. Seven sites were in affected areas in Queens, Brooklyn, and Staten Island, from which 99 samples were collected during Phase 1. Grit samples from unaffected sites were in Manhattan and Bronx, which had 5 sample collection sites and 76 samples. A total of 98 grit samples were collected during Phase 2 from affected sites, however, no samples were collected from unaffected sites during this phase.

Figure 1 shows evacuation zones for NYC. Zone A has a potential of flooding from any hurricane. Figure 1 indicates that all sample collection sites in affected areas were within evacuation Zone A. Table 3 shows the minimum, maximum, median, and the geometric mean of grit lead in all locations given by affected areas in Phase 1 and Phase 2, unaffected areas, and a summary of samples that showed evidence of containing construction debris Samples collected along the bus routes in unaffected areas ranged from 5 to 354 ppm, with a mean value of 80.1ppm, and did not contain any grit samples at or above the USEPA standard for play areas of 400 ppm (Table 3). The median grit lead level in unaffected areas was 70 ppm Samples for unaffected areas were collected during Phase 1 only. Phase 1, ranged from 12 to 2119 ppm, with a mean value of 82.4 ppm (Table 3). Of ~~of~~ grit samples from affected areas, 9.1% contained lead

levels above 400 ppm and 4.0% contained levels above 1200 ppm (Table 2). ~~[rule against starting a sentence with a number]~~

Phase 2 sampling results ranged from 5 to 962 ppm, with a mean value of 51.6 ppm (Table 3). The median grit lead level in affected areas from Phase 2 samples was 74 ppm. From Phase 1 to Phase 2, there was a 6% decrease in the number of samples containing lead; none of the samples from Phase 2 had lead levels at or above 1200 ppm (Table 2). During Phase 1, samples above 400 ppm were collected from Far Rockaway, Breezy Point, and Tottenville (Figure 2). The median grit lead level in affected areas during Phase 1 was 69 ppm. In Phase 1, Breezy Point had the highest median grit lead level (1782 ppm) and Eltingville, Staten Island had the lowest median grit lead level (28 ppm). In Phase 2, lead levels above the EPA play area standard were found in Far Rockaway (962 ppm) and Rockaway Beach (641 ppm), both of which were higher than the previous phase (687 and 248 ppm). There was no significant difference in the geometric means of grit lead levels for Phase 1 ($p=2.40$) and Phase 2 ($p=1.33$) of affected areas when compared to unaffected areas. Breezy Point had the highest grit lead level (2119 ppm) in Phase 1, whereas Coney Island had the lowest (12 ppm). Half the samples collected in Breezy Point were above the federal standard of 400 ppm. Grit lead levels decreased significantly ($p=0.0005$; 95% CI: 25.3, 77.9) from Phase 1 to Phase 2.

Samples were sorted by construction and non-construction debris containing grit. Samples containing construction debris ranged from 23 to 962 ppm, with a mean value of 74.9 ppm. The non-construction debris ranged from 5 to 2119 ppm, with a mean of 63.2 ppm. Grit determined to contain construction debris did not have a significantly higher level of lead ($p=0.78$, independent sample t-test).

Discussion

After Superstorm Sandy, there were no background soil or grit lead levels in NYC for comparison. Samples collected one month and six months post Sandy had lead levels ranging from 12 to 2119 ppm and 5 to 962 ppm. The grit lead levels had decreased significantly from Phase 1 to Phase 2, which was unexpected. Although there was a decrease in mean lead levels, the maximum lead levels in Far Rockaway and Rockaway Beach increased. Although lead levels generally decreased, it is important that a third and fourth set of samples be taken during the dry summer months when more construction is expected and 1 year after the storm for comparison. Samples collected from commercial neighborhoods in Manhattan and Bronx, along SBS routes show that the NYC lead levels are below the EPA standard of 400 ppm in children's play areas, although maximum grit lead levels did reach up to 354 ppm. This shows that NYC background lead levels may be much higher than normal urban lead levels of 50 to 200 ppm.

Initial sampling indicated widespread lead contamination in Breezy Point, not far from where many homes burnt down, During Phase 1, lead levels in Breezy Point, were significantly higher than all other locations, however, maximum grit lead levels went down as low as 91 ppm 6 months after the storm. The decrease in lead may be attributed to the heavy rains and snow over the winter months.

Limitations. A limitation of this study was that background samples, in regions that were in close proximity to affected areas or conducted within the affected areas prior to Sandy were not collected or available for comparison. Another limitation of this study was that Phase 2 samples were not collected along the bus routes in unaffected areas, therefore, any change in the background samples were not tracked. Variations in sampling methods and locations due to weather conditions and previous damaged drains may be a cause of error. A source of error was that not all samples were labeled with the letter "C", even if containing construction debris, especially during the first phase of sampling in Breezy Point, which may have resulted in a high p-value for construction and non-construction debris sample comparison. Therefore, a labeling may be a reason for not seeing a positive correlation with construction debris and grit lead levels.

Lead in soil is a significant public health hazard in the United States, especially in young children. This is the first known study of residential lead hazards in NYC in the aftermath of Superstorm Sandy. Grit lead levels in NYC range from 5 to 962 ppm and the median lead level was 80.1 ppm. This raises concern, as lead levels below 80 ppm have been found to cause a loss of IQ in children. California's OEHHA has already lowered its state soil lead standards to below 80 ppm, whereas NYS has not established its own standard as of yet. This may indicate a need for regulatory change in NY. With an increase in storms, it may be necessary to understand how rebuilding homes after natural disasters can change health hazards such as lead exposure and to truly understand if demolition affects lead levels in grit. Due to time limitations, the VOCs and level of other toxic heavy metals, such as arsenic, were not analyzed. Further research is necessary to understand potential changing hazards in the aftermath of a storm like that of Sandy's magnitude.

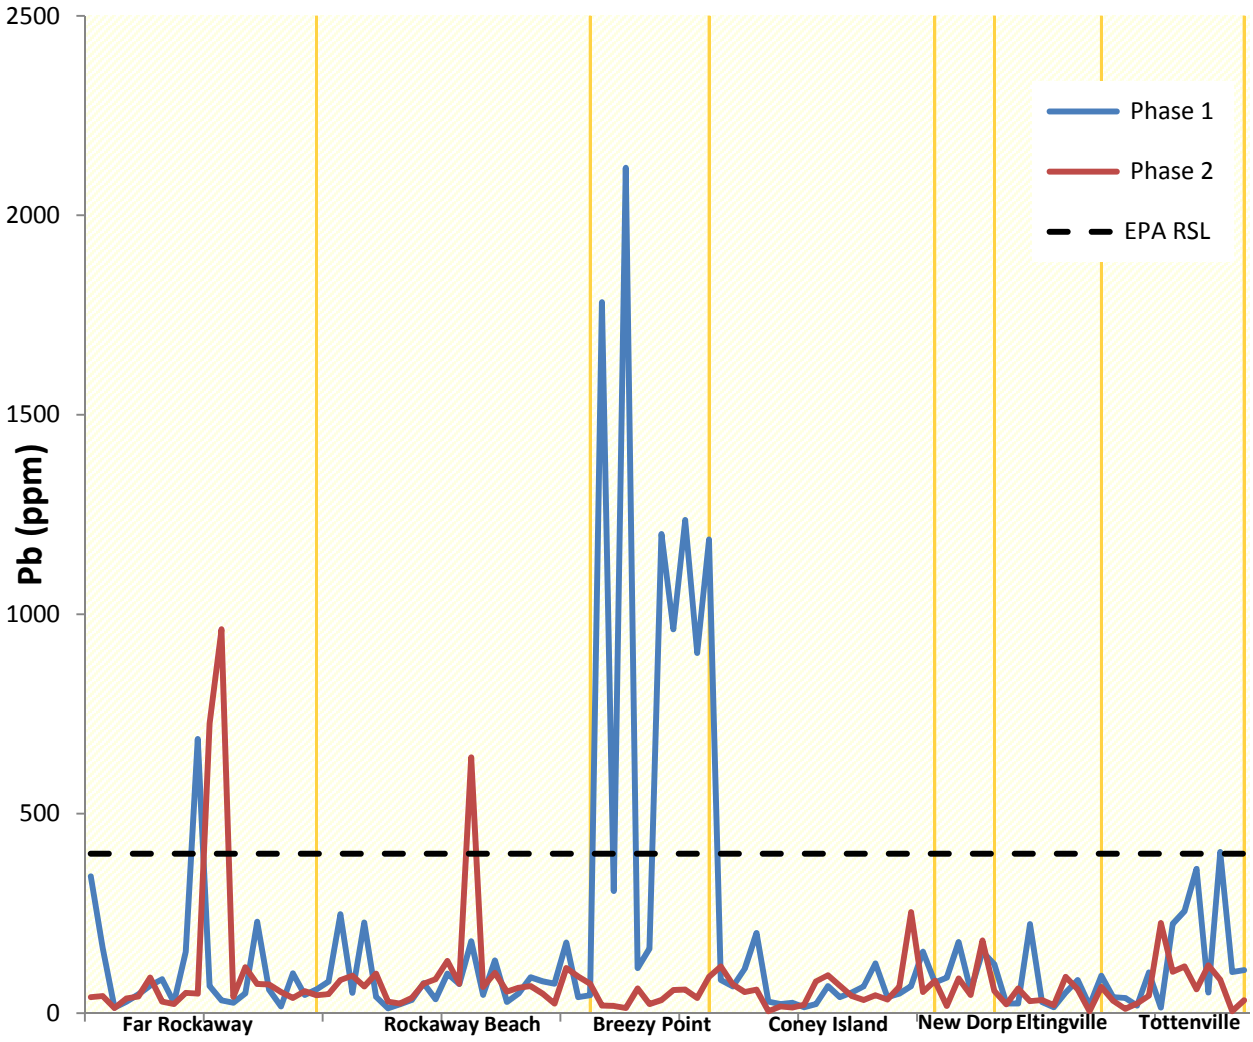
9	M34A-E	Manhanttan (M34A eastbound)	13	
10	M34W	Manhattan (M34 westbound)	13	
11	M15S	Manhattan (M15 southbound)	20	
12	M15N	Manhattan (M15 northbound)	14	
Total			**175**	**98**

Samples were collected from Far Rockaway, Rockaway Beach, Coney Island, and Staten Island (storm affected areas) and were compared to samples collected in Manhattan and Bronx (unaffected areas). A total of 273 samples were collected from the 12 sample collection sites. Phase 1 of sampling was conducted 1 month after the storm and Phase 2 was conducted almost 6 months after the storm.

Figure 1. Map of NYC evacuation zones indicating sample collection sites



This map was created using Google Earth and WNYC Evacuation Zones map. The map show a rough indication of Zone A (potential flooding from any hurricane), Zone B (potential flooding from category 2+ hurricane), Zone C (potential flooding from category 3-4 hurricane, and sampling sites) and sample collection sites. All samples sites were located within evacuation zone A. Some samples from Tottenville, SI were located in both zones A and B.

Table 2. Fraction of grit lead samplesindicating homes with elevated lead levels [n(%)]

	HUD/U.S. EPA Standard	Phase 1 – Unaffected Areas	Phase 1 – Affected Areas	Phase 2 – Affected areas
Grit sample (n=273)	>400 ppm	0(0.0)	9 (9.1)	3(3.1)
	>1200 ppm	0(0.0)	4 (4.0)	0(0.0)

In Phase 1, grit samples in unaffected areas, along the bus routes show that no samples were found to be over the EPA play and non play area Pb hazard standards. However, 9 samples (9.1%) were found to have Pb levels above the EPA play area Pb hazard standard and 4 (4.0%) samples were found to be above the non-play areas standard of 1200 ppm. In Phase 2, only 3 (3.1%) of grit samples contained Pb in, having a 6% decrease from Phase 1.

Figure 2. Comparison of grit lead levels in Phase 1 and Phase 2 by sample location

In Phase 1, Breezy Point had the highest grit Pb level with 2119 ppm; Staten Island and Coney Island had the lowest grit Pb level, at levels below the limit of Detection (LOD). Most grit samples in Breezy Point had Pb levels higher than the EPA soil play area standard. In Phase 2, Far Rockaway had the highest grit Pb level at 962 pp in Far Rockaway. The graph indicates that grit levels were generally lower during Phase 2 than Phase 1. The geometric mean of grit Pb level in Phase 2 was significantly lower than Phase 1 (p=0.0005; 95% CI: 25.3, 77.9).

Table 3. Summary of number of samples (n), minimum, maximum, and median lead (Pb) concentration (ppm) found in grit samples by areas left affected and unaffected by Superstorm Sandy by phase, both one month and six months after the storm (samples collected November 2012 and April 2013, respectively), as well as samples containing construction debris.

	Construction Debris	Non-construction Debris
n	42	153
Minimum	23	5
Maximum	962	2119
Median	60.5	60
Geometric Mean	74.9	63.2
p (t-test) one-tailed	0.78	

[a]Medians above the USEPA standard for soil Pb in play areas in 400 ppm and 1200 ppm for non-play areas.
[b]All Non-detectable (ND) levels were below 15% of the Lower limit of detection (LOD) which is 10. Half the value of the LOD was taken for these sample measurements (36).

Samples collected one month (Phase 1) after Superstorm Sandy had a minimum of and a maximum of 12 and 2119 ppm of Pb and a median of 69 ppm. Samples collected almost 6 months (Phase 2) after the storm had a minimum of 5 ppm and a maximum of 962 ppm of Pb in grit. For the background samples collected along the bus routes of unaffected areas, the minimum and maximum soil Pb levels were 5 and 70 ppm. In Phase 1, the highest median Pb level was found in Breezy Point, Queens, however, in Phase 2, the median Pb level in Breezy Point was 19 ppm. The geometric mean of affected areas was not significantly higher than that of unaffected areas during Phase 1 of sampling (p=2.40). The geometric mean of samples from Phase 1, 2 and the unaffected areas from Phase 1 was 82.7, 66.3, and 51.6 ppm, respectively. The geometric mean in Phase 1 was significantly higher than the geometric mean in Phase 2 (p=0.0005). A comparison of construction and non-construction debris showed no significant difference (p=1.17).

Regional Environmental Characterization of Artisanal Gold Mining Operations in La Cordillera Real, Bolivian Andes, Bolivia:

MS. EOHS
Capstone Paper Review Version 4

Abstract:

Objectives:

Our primary goal was to characterize the regional environmental conditions by analyzing soil metal concentrations at and near ASGM processing centers and villages located throughout the Cordillera Real (Real Mountain Range) of the Andes Mountains. Soil sampling for heavy metals was performed and compared to US Environmental Protection Agency (EPA) Ecological Soil Screening Levels (ESSLs). Our secondary goal was to use soil characterization data to ascertain the hazard risk index of populations residing in proximity to ASGM processing centers to determine whether or not they are at risk.

Methods:

A total of n=88 soil samples and n=211 air samples were collected from one village, two mining processing centers and one concentrated tailing sample (molida) with a Jerome 7405 Mercury Vapor Analyzer and an Innov-X (XRF) Systems analyzer. Data was segregated by location for calculation and interpretation of blood lead levels, heavy metal concentrations, and non-carcinogenic and carcinogenic hazard indices in accordance with EPA Risk Assessment Guidelines. Extent of soil contamination was determined by comparing geometric mean concentrations to ESSLs.

Results:

Concentrations of arsenic, manganese, cobalt, mercury and lead were above ESSLs. Of these mercury and arsenic were of significant concern due to their associated health effects. Mean soil arsenic and mercury concentrations were 997 ppm and 53 ppm respectively. Mean mercury vapor concentration was 3.5 ppm. Regional combined carcinogenic and non-carcinogenic hazard index based primarily on arsenic and mercury exposure was 7.4 for adults and 11.1 for children.

Conclusions:

Commented [BP1]: Needs to be less than 180 words

Environmental characterization of La Cordillera Real identified concentrations of heavy metals above ESSLs and greater than previously identified concentrations in similar studies within the Andes Mountains. ASGM communities within La Cordillera Real are at high risk due primarily to exposure to high concentrations of arsenic and mercury.

Introduction:

During artisanal and small-scale mining (ASGM), mercury (Hg) is used as an amalgamating agent to bind and extract gold from crushed ore. When gold is extracted from the amalgamation mercury vapor and other heavy metals are dispersed into the environment. There are two primary methods utilized in ASGM. The first is whole ore amalgamation (WOA) and the second is concentrate amalgamation (CA).[1]

Large aggregate material with veins of gold, known as ore, is mined beneath the ground or along mineral rich plutonic outcroppings. The ore is crushed in a tumbler loaded with steel/iron spheres and mixed with Hg, facilitating the first stage of amalgamation. After the crushed ore has been thoroughly pulverized, it is mixed with amended water and allowed to pass through a sluice box or channel with mercury covered copper plates.[2] During the sluicing process, mercury may be accidently spilled on the ground, wiped on clothing, or lost to the environment as mercury flour. Gold rich perrita is mechanically separated from tailings. The perrita is then further refined by panning with mercury or perrita is spread on copper plates lined with mercury to extract sequestered gold. The amalgam is then dried and crudely burned. The burning is performed with blow torches or large pyres . Since the boiling point of mercury is lower than that of gold mercury to evaporates into the atmosphere leaving behind gold.[2] These gold "chips" are sold to smelters who then refine the gold and pour ingots. During this entire process the mercury is often manipulated by hand with no personal protective equipment.

ASGM leads to large quantities of silt and sediment contaminated with chemicalsand metals such as arsenic, lead, and mercury. In South America, ASGM has been common in countries such as Brazil, Venezuela, Colombia, Bolivia, French Guyana, Guyana, Ecuador, and Peru since the 1980s, where unskilled miners first used greater quantities of mercury to increase

Commented [BP2]: So what is the difference between the two? Don't discuss your site yet.

Commented [BP3]: What is that?

Commented [BP4]: What is perrita?

Commented [BP5]: The next paragraph should discuss health effects to miners. Talk about mercury poisoning.

Commented [BP6]: Citation

Commented [BP7]: In order to reduce word count I would remove this. After the first sentence you need to state the aims of your study.

gold recovery. Soil sampling for heavy metals was performed and compared to US Environmental Protection Agency (EPA) Ecological Soil Screening Levels (ESSLs). Our secondary goal was to use soil characterization data to ascertain the hazard risk index of populations residing in proximity to ASGM processing centers to determine whether or not they are at risk.

Commented [BP8]: What metals?

Methods:

Site Description:

Commented [BP9]: This is where you should describe the sites you sampled.

Air and Soil Sampling:

A total of 88 soil measurements were collected at two mine processing sites and one village. Soil measurements were collected with an Innov-X (XRF) Systems analyzer. Specific metals sampled were titanium, manganese, iron, cobalt, zinc, arsenic, rubidium, strontium, zirconium, mercury, and lead. Samples collected at the mine processing center were representative of day-to-day work tasks performed including mining, loading, panning, sifting, trommel operation, equipment repair, and on site living quarters. Soil sampling in the surrounding village was performed within random areas where children were observed playing, such as the clinic, school yard, and adjacent open spaces.

Commented [BP10]: Which ones

Commented [BP11]: How was the XRF calibrated

Airborne mercury (n=211) samples were collected with a Jerome 7405 Mercury Vapor Analyzer for periods of 16 seconds at each sample locations.

Commented [BP12]: How was this calibrated? What locations were sampled.

Molida

Molida is the amalgamated material that is extracted from within the trommels and mercury lined sluice channels. This material is removed by hand or with simple hand tools. Molida is processed further by either panning or concentrating on a mercury coated copper plate.

Two (2) molida samples were collected from the excess spill over material beneath a secondary trommel at the Yani processing center. Sample was analyzed once per day over the course of eight days. Resulting molida sample analysis and soil data maxims were utilized to assess waste stream characteristics.

Commented [BP13]: What does this mean?

Risk Assessment:

A risk assessment of potential metal exposure was conducted in accordance with standard US Environmental Protection Agency (EPA) risk assessment guidance for noncancerous health endpoints. Exposure routes included dermal, incidental ingestion, and inhalation pathways. According to the Exposure Factors Handbook, the average daily dose (ADD) as measured in mg/kg day for an element via ingestion, inhalation and dermal exposure pathways can be estimated using Equations (1), (2) and (3) respectively:[5,6]

Equation 1:

$$\text{ADD ingestion} = \frac{C*IngR*EF*ED}{BW*AT}$$

Equation 2:

$$\text{ADD inhalation} = \frac{C*t*InhR*EF*ED}{BW*AT}$$

Equation 3:

$$\text{ADD dermal} = \frac{C*SA*AF*ABS*EF*ED}{BW*AT}$$

Where:

C = Element concentration (mg/kg)
IngR = Ingestion rate (mg/day)
IngR = Inhalation rate (m^3/m^3)
ABS = Dermal absorption factor
AF = Skin adherence factor (mg/cm^2per hour)
SA = Exposed body surface area (cm/hr)
EF = Exposure Frequency (days/year)
ED = Exposure Duration (years)
BW = Body Weight of exposed population (kg)
AT = Average time (days)
T = exposure time (hours/day)

Measurements below the limit of detection were replaced with the $\left(\frac{1}{sqrt2}\right) * LOD$. Since the data was highly right skewedgeometric means were used to calculate risk estimates. Analysis for ADD was stratified into two groups, children age 0 – 17, and adults age 17 – 30. Exposure estimates for indigenous populations were used for our risk assessment: 400 mg/day incidental ingestion rate for all age groups and 30 m^3/day inhalation rate for adults.[7] US EPA recommended inhalation rates ranging from 3.6 to 15.2 were used for age groups 0 - 17.[5] Body weight inputs as defined in the USEPA's Exposure Factor Handbook were used for our calculations. 10kg for ages 0-1, 15 kg for ages 2–6, 30 kg for ages 6– 17, and 70 kg for ages 17–30.

Commented [BP14]: Confusing since you only have two age groups listed

Based on calculated ADD's, non-cancerous hazard quotients (HQ) were calculated using Equation 4 and 5.[5] Metals selected for analysis were arsenic, cobalt, manganese and mercury.

Commented [BP15]: Why only these?

Reference doses (RfD) and reference concentrations (RfC) were obtained from the US EPA's Integrated Risk Information System (IRIS). Where RfD's or RfC's were not established by the USEPA, recommended RfD's and RfC's were obtained from the Agency for Toxic Substances Disease Registry (ATSDR) and the EPA's National Center for Environmental Assessment (NCEA). To communicate cumulative non-carcinogenic risks due to multiple routes of exposure, a total exposure Hazard Index (HI) was calculated using Equation 6.

Equation 4:

$$HQ = \frac{ADD}{RfD}$$

Equation 5:

$$HQ = \frac{ADD}{RfC}$$

Equation 6:

$$HI = \sum_1^i HQ$$

In addition to manual calculations for incidental ingestion rates and risk, the Risk Assessment Information System Preliminary Remediation Goals (RAIS) Calculator, developed

by the Oak Ridge Operations Office, was utilized to calculate non-carcinogenic dermal and inhalation risks based on volatilization factors (VF) and particulate emission factors (PEF) using default presets for both equations. Surface area for VF and PEF was corrected to 1 – 2 acres based on observed site conditions. Non-carcinogenic and carcinogenic hazard indices were added to provide a total hazard index for selected sites and exposure to selected metals.

The USEPA's Integrated Exposure Uptake Biokinetic (IEUBK) model was used to blood lead levels (BLL) at all sites Only soil concentrations were used to estimate pediatric BLLs Analysis was stratified by one year increments from birth to the age of 6 years. For the purpose of simpler interpretation, estimated BLL's were aggregated into age segments, 0 – 2 and 2 – 6 years of age.

Commented [BP16]: This wouldn't be conservative. Conservative would be to use all routes.

Results:

Soil descriptive statistics are shown in Table 1.A total of n=18 soil samples were collected throughout the school yard and clinic in the village of Ingenio. Mean values for arsenic, mercury and lead were 801 ppm, 74 ppm, and 41 ppm respectively, maximum concentrations of 5,903 ppm, 658 ppm, and 201 ppm were observed. (Table 1). A total of n=35 soil samples were collected throughout the YMCP. Maximum arsenic, mercury and lead concentrations of 137,022 ppm, 737 ppm, and 789 ppm, respectively, were detected along the perimeter and delta of constructed concrete channels designed to divert excess water and waste spillage. (Table 1) A total of n=23 soil samples were collected throughout the DMPC. Maximum arsenic, mercury and lead concentrations of 80,605 ppm, 29,483 ppm, and 575 ppm, respectively, were detected along a series of unprotected culverts where runoff and spillage was diverted. (Table 1)

Commented [BP17]: You should compare values between towns instead of just giving means. Also talk about the spread of the data. How many order of magnitude did it span.

A total of n=33 air samples were collected from YMCP. Samples were collected from locations believed to be representative of work processes and areas of habitual use during the course of artisanal gold mining operations. Due to the nature of our environmental sampling, significant right skew was observed in the data. Average mercury vapor concentrations were calculated to be 13.58 ppm whereas the geometric mean was 2.78 ppm. (Table 3) Maximum recorded concentrations of 186.73 ppm mercury was observed within the workshop where miners

Commented [BP18]: Need a topic sentence

Commented [BP19]: Clean up this paragraph.

blowtorch amalgam. (Table 3) A total of n=61 air sampling points collected within frequently occupied, outside areas, collected at height of approximately 3 feet, yielded average concentrations of 1.994 ppm. With a minimum of 0.51 ppm and max 7.95 ppm. A total of n=117 air samples were collected throughout DMPC, village, and homes. Samples were collected from locations representative of work processes and areas of habitual use during the course of artisanal gold mining operations. Average mercury vapor concentrations were calculated to be 9.44 ppm whereas the geometric mean was 5.77 ppm. Maximum recorded concentrations of 55.33 ppm mercury was observed throughout what appeared to be the panning and burning section of the facility. (Table 3)

Calculated average daily dosage for dermal, ingestion and inhalation exposure can be examined in table 4. Within the village of Ingenio, calculated HI's for children due to incidental ingestion of arsenic was 2.97. Based on estimated volatilization of soil mercury, calculated inhalation HI for children within Ingenio village was 3.5. Calculated HI's for children due to incidental ingestion of arsenic risk was calculated to be 1.34. While significantly elevated concentrations, >25 ppm were detected within the foreman's living quarters and the storage shed. HI based on volatilization and suspension of mercury contaminated soils within the mine was 6.31. In addition, combined carcinogenic and non-carcinogenic inhalation risk based on directly observed mercury vapor concentrations, averaging 13.583 ppm, were calculated to be 4.57. Two samples were collected for analysis. Sample concentrations were measured once a day while wet and dry over the course of 8 days. Minimum concentrations for all tested metalloids were detected while the molida was wet. Mean concentrations of arsenic, mercury and lead were measured to be 47,752 ppm, 116 ppm, and 586 ppm, respectively, with maximums of 86,863 ppm, 190 ppm and 959 ppm. Molida is a representative of a cross section of waste discharge in the sluicing process. Maximum contaminant concentrations collected from tailings at sampled sites was averaged with molida sampling results to establish a representation of tailings being discharged into the environment as a result of ASGM. HI derived from volatilization and

Commented [BP20]: Revise paragraph

suspension of mercury contaminated soils within the mine was 6.9. Based on collected air and soil data, children living in Ingenio are 11 times more at risk of developing adverse health effects from exposure to all measured environmental contaminants, with a significant portion of that risk, 8.0, being attributed solely to mercury exposure. For adults the HI value was 8.0. However this is a conservative estimation as nearly all residents engage in some type of gold processing work, whether it be mining, sluicing, burning amalgam or similar other jobs where exposure rates have been demonstrated to be higher than baseline outdoor conditions.

References to estimated blood lead levels can be observed within table 5. Modeled blood lead levels were calculated for two age groups, 0 – 2 and 2 – 6. Modeled BLL's were 1.1 and 0.8 respectively. (Table 5)

Commented [BP21]: Discuss the data

Discussion

ASGM is associated with significant rates of mercury intoxication.[12] As calculated by our risk assessment, adults working at Yani and Dorado are 14 and 9 times at risk of developing adverse health effects in their lifetime. Chronic and acute mercury exposure impact the central nervous system, endocrine system and pulmonary systems to varying degrees of toxicity.[20] Acute exposure to inhaled mercury can cause bronchitis and interstitial pneumonitis, and in extreme cases can be accompanied by tremors and severe neurological disorders.[20] Indoor metallic pollution rates are correlated to outdoor concentrations and in the case of mining, significantly increased in part to inadequate doffing of work clothes which leads to increased transport of contaminants into the home.[24,25]

Commented [BP22]: Check to see interpretation. Not sure if you can say 9 to 14 x higher

Commented [BP23]: At what levels. Compare to yours.

Commented [BP24]: Inside workers homes?

Commented [BP25]: Your study or previous study. If yours, what was the correlation coefficient

Clusters of mercury contamination were detected in areas associated with direct use of mercury in ASGM. Maximum mercury concentrations of 737 ppm were detected in soil beneath

the tumblers, where workers pour mercury to facilitate raw ore amalgamation. During the filling and cleaning process, mercury flour and tailings are spilled and dispersed throughout the processing site and village by incidental transportation. As has been previously documented, contaminated waste inevitably makes its way from the workplace to the surrounding environment during artisanal extraction of gold. [11,12] Our data demonstrated concentrations as high as 137,022 ppm of arsenic and 789 ppm of lead. GIS interpolation of the Yani mine illustrates the distribution of mercury and arsenic soil concentrations. Total hazard indices derived from geometric means of heavy metals at YMPC were above 1.0 and denote a potential for the development of adverse health effects.

Whereas YMPC was tightly arranged and isolated from the village, the DMPC extended approximately 200 feet across and was located 20 feet from the village without any form of protective barrier or delineation. Soil concentrations measured as high as 80,605 ppm, 29,483 ppm, 575 ppm and 3,422 ppm for arsenic, mercury, lead and cobalt respectively. Children and adults were observed engaging in recreational activity within areas identified as having metal concentrations above recommended ESSLs. Without a distinct separation, it is assumed that children and adultswere exposed to contaminated soil . Hazard quotients indices for DMPC were above 1.0 and denote a potential for the development of adverse health effects. Soil metal concentrations within the village were sufficient to pose a hazard to children and adults. Individuals residing in proximity of the DMPC live in an area where they are 9 times more likely to develop adverse health effects due to chronic exposure.

Commented [BP26]: I am not sure you can interpret HQ's this way.

Since many ASGM operations are familial, and women participate in the process by burning amalgam in their homes, the elevated concentrations within the village may be attributable to this process. A study performed in Mali, found that children as young as 6 years old were seen digging mine shafts, carrying and crushing stone, and panning for gold alongside adults.[16] The study also found that between 20,000–40,000 children from that country work in gold mining, and that many among them carry out amalgamation, which can result in protracted exposure to mercury vapor.[16,23] Total calculated mercury HI to children for region the 11.1. Children exposed to combinations of organic and inorganic mercury are at risk of developing adenopathy, gingival discoloration and dermatological abnormalities.[23] In addition, children

Commented [BP27]: citation

exposed to inorganic mercury grow with developmental deficiencies due to cognitive dysfunction and mercury's destruction of neural communication pathways.[22]

A previous study found ASGM health effects are not limited exclusively to mercury; arsenic, cadmium, chromium, and other heavy metals have been measured at elevated concentrations surrounding industrial facilities and mining sites. [27] In the present study large concentrations of arsenic were detected throughout the study region. This is likely due to thr combination of environmental contamination and unknown geological conditions, Previous studies have demonstrated environmental arsenic availability correlates to bioavailability. Urinary arsenic concentrations have been demonstrated to correlate with arsenic concentrations in soil.[31] Arsenic concentrations ranging from 99 ppm to 9136 ppm corresponded with a 58% reporting rate for dermatological symptoms consistent with arsenicosis.[28] Compared measured arsenic in that study our results were higher (range: 801-8,944 ppm).. In addition, as has been shown with mercury, heavy metals such as arsenic are also easily transported into the ecological distribution chain and make their way into the water supply and food consumption pathways.[29,30] Our results yielded waste stream As concentrations averaging 77,396 ppm, and are likely contributing to the dispersal and amplification of As throughout the region.

Additionally, chronic exposure to cobalt has been shown to cause cardiovascular failure, liver failure, allergic dermatitis and gastrointestinal distress.[32,33]And while the EPA has yet to set forth a RfD or RfC, the EPA's National Center for Environmental Assessment has established a dose recommendation of 0.002 ppm. The collective contribution of risk from Co and Mn were below 1.0.

In conjunction with our environmental characterization, our colleague Dr. Jean Grassman performed medical surveys and conducted medical screenings of representative residents of the mining community. Preliminary analysis showed 17% of the men (n=11/89), 25% of the women (n=6/24), and 25% of the children (n=5/21) were found to have levels greater than 25ug/l mercury in urine. Individuals surveyed were from the surrounding mining communities. These results require further inquiry before establishing any relationships.

Commented [BP28]: revise. Soil availability

Commented [BP29]: revise

Commented [BP30]: How does this compare to guidance value

Waste Stream Characterization:

ASGM tailings are comprised mainly of fine particles and fit the chemical profile of the geographic region where the bulk ore is mined. Molida is a good indication of ASGM tailings as it is found directly beneath processing and sluicing equipment. To better represent the general regional characteristics of tailings, maximum measured metal and metalloid concentrations observed at each site were averaged in conjunction with molida concentrations and can be seen in table 6. These samples were collected from soil predominantly layered with tailings and waste. Our data show arsenic concentrations ranging from 5,093 ppm within Ingenio village to 137,022 ppm. Isolating the data to represent worse case concentrations across all sites, or those identified as waste tailings, yields an average concentration of 77,395 ppm of arsenic, 712,976 ppm iron, 16,858 ppm manganese, 7,767 ppm mercury, and 616 ppm lead. For comparison, in an examination of two ASGM facilities located within the Bolivian Andes Mountains, surface soil concentrations were analyzed and their results yielded soil concentrations of 14.5 ppm near incineration areas and 0.17 ppm at control sites.[13] Our findings demonstrate mean environmental concentrations of heavy metals throughout the studied region were elevated in comparison to nearly every established ecological soil screening level. Previous studies have shown that abandoned sites contained elevated levels of secondary environmental contaminants such as iron, manganese, lead, cadmium and arsenic.[14,153] Soil lead levels within the region were below recommended ESSLs. All estimated blood lead levels were below CDC recommended <10ug/dl for children at all sites.

Commented [BP31]: Not sure what this means

Commented [BP32]: I disagree with this assessment. I think you should compare your data in the village and site to these two studies. I think that is a better comparison.

ASGM communities do not employ best practice methods and generally there are no encatchment basins, settling tanks, or primary filtration methods employed. The lack of these control methods can lead to the release of mercury flour, which is fine sediment embedded with small (<1mm) mercury particles, into the environment.[2,16] This mercury flour can migrate into the river and lakesediment and damage the aquatic environment. In addition, mercury vapor can be released into the environment and settle on plants, soil, and nearby waterways.[9,17,18]

Since the gold processing sites are often located in residential areas, metal exposure is not limited to only ASGM workers. Children and adults living in the communities near mines can be exposed through multiple routes. Residents not directly exposed to fumes or contaminated dust are still at risk of ingesting mercury that has migrated into the waterways contaminating fish

stocks[11,12,19] Although this is a concern this routes was not considered due to the complex nature of metabolic transformation of methylmercury and its subsequent transportation and bioaccumulation throughout the food chain.[17,20,21] Observations noted throughout all studied sites confirmed what currently exists in the literature. Little to no protective measures were employed in the design of the processing sites. In the case of the Dorado site, runoff from the sluices, trommels, panning, and cleaning were readily observed flowing freely along the village.

Area air sampling at the Yani mine processing center identified three distinct "hot" zones, the garages where amalgam burning is performed (mean?=187 ppm), the repair shop (46 ppm) and the foreman's bed (19 ppm). With the exception of the foreman's living quarters, these hot zones corresponded with measured soil "hot zones". Elevated mercury vapor concentrations in the presence of moderate soil mercury concentrations within the foreman's home is likely due to the transference of mercury flour on clothing, hair, and skin to his living quarters. as studies have demonstrated adsorption rates of 0.1 to 0.2 microgram per 100 square centimeters, or roughly 20 – 40 micrograms total. Over time, mercury flour will accrue on the cloth bed sheets, blankets, and mattress. The associated risk with burning amalgam has been thoroughly studied and the detection of concentrations as high as 187 ppm within the vicinity of a retort not in operation within the repair shop at YMPC supports the notion that exposure to mercury vapor continues well beyond the act of burning.

Study Limitations and Lines of Further Inquiry:

Based on our site observations, trommel operators were observed to be responsible for the preparation, loading, and cleaning of the trommels as well as the sluicing tables. Miners were observed working within the mines as well as the amalgamation process. It should be noted that all worker uniforms were visibly stained with site dust and silvery residue. This may be a potential source of mercury vapor exposure and should be given further consideration in future studies.

Commented [BP33]: revise

Commented [BP34]: Confusing revise. Also need citation

Commented [BP35]: Accumulate

Commented [BP36]: Revise and need citations

Commented [BP37]: Not sure if this paragraph belong here

While our study focused on the environmental characterization of multiple sites throughout the Bolivian Andes, our study was limited to soil and air concentrations. The elevated presence of these contaminants in conjunction with Dr. Grassman's findings regarding local population health indicators, necessitates the need for further comprehensive characterization of all contamination pathways including food and water. High inorganic mercury directly correlates to organic mercury concentrations.[9] Environmental impacts of these high mercury concentrations are observable in the soil, water and also in the flora and fauna as organic methylmercury.[9] The presence of mercury in water is a persistent concern when examining the impacts of ASGM. High quantities of dissolved mercury are commonly found in water samples collected near ASGM runoff basins. One such study conducted in the Philippines determined that concentrations of mercury were up to two orders of magnitude above natural background levels, and at concentrations far above World Health Organization (WHO) guidelines.[19] On the extent of pulverization and amalgamation, tailings vary in size. It is not uncharacteristic for tailings to be comprised of particles ranging from <50um to 500um.[34] A particle profile was not performed as part of our characterization and requires further study to better ascertain the degree of silt deposits within the waterways.

As noted previously, the presence of elevated heavy metals also requires further research. The interrelated effects of exposure to multiple metals across multiple exposure pathways must be fully assessed and correlated to actual human derived data in order to comprehensively characterize exposure, dose, and health risks within ASGM communities in the Bolivian Andes.

Due to industry informality, there is little knowledge regarding best practices at the local level, which puts the community at risk. Non-industrial and individual purchases of mercury is illegal in most countries, however imports are routinely diverted and sold in informal markets. These circumstances pose a set of physical hazards via violence and imprisonment. The mining sites are usually abandoned once the gold ore has been worked out. Usually there are no formal clean up or containment procedures for waste at ASGM sites. If these sites were located within the United States, they would easily qualify as National Priority Sites. There are thousands of abandoned small-scale mining sites worldwide, of which many if not all have a history of mercury pollution and widespread health impacts.[3,9,28,35] Perhaps if steps can be taken to

adequately assess, catalogue, and transition out of amalgamate processing, environmental contamination can be reduced and risks minimized.

ENVIRONMENTAL REGIONAL ENVIRONMENTAL CHARACTERIZATION OF ARTISANAL GOLD MINING OPERATIONS IN LA CORDILLERA REAL, BOLIVIAN ANDES, BOLIVIA:

City University of New York: Hunter College - Environmental and Occupational Health Sciences (EOHS) Master of Science Capstone Paper

MS EOHS

Abstract:

Objectives:

Our goals were to characterize regional environmental conditions and ascertain hazard risk indices of populations residing near ASGM processing centers and villages located throughout the Cordillera Real of the Andes Mountains. Soil sampling for heavy metals was performed and compared to US Environmental Protection Agency (EPA) Ecological Soil Screening Levels (ESSLs).

Methods:

A total of n=84 soil samples were collected from multiple sites. Data was segregated by location for determination of blood lead levels, heavy metal soil concentrations, non-carcinogenic and carcinogenic hazard indices in accordance with EPA Risk Assessment Guidelines.

Results:

Concentrations of arsenic, manganese, cobalt, mercury and lead were above ESSLs. Mean soil arsenic and mercury concentrations were 997 ppm and 53 ppm respectively. Regional combined carcinogenic and non-carcinogenic hazard index based on heavy metal soil concentration was 5.5 for adults and 9.5 for children.

Conclusions:

Environmental characterization identified concentrations of heavy metals above ESSLs and greater than previously identified concentrations in similar studies performed within the Andes Mountains. Regional ASGM communities are at high risk due primarily to exposure to high concentrations of arsenic and mercury.

Introduction:

During artisanal and small-scale mining (ASGM), mercury (Hg) is used as an amalgamating agent to bind and extract gold from crushed ore. When gold is extracted from the amalgamation, mercury vapor and other heavy metals are dispersed into the environment. In the first stage of ASGM, aggregate material, rich with gold, is mined beneath the ground or along

plutonic outcroppings. The ore is then crushed in a tumbler loaded with steel/iron spheres and mixed with mercury, facilitating the first stage of amalgamation. Pulverized ore is then channeled with a mixture of water and surfactants through a sluice box or channel with mercury covered copper plates.[1] Next, gold rich silt is mechanically separated from waste tailings by use of a rocker box. The silt is collected and further refined by panning with mercury or spread on copper plates lined with mercury to extract sequestered gold. The amalgam is then dried and crudely burned. The burning is performed with blow torches or large pyres. Finally, gold is sold to smelters who then refine the gold and pour ingots.

Worker exposure to mercury and environmental contamination can occur along multiple steps in the process. Since the boiling point of mercury is lower than that of gold, mercury will volatilize leaving behind gold.[1] During this entire process mercury is often handled by workers without personal protective equipment such as chemical protective clothing and respirators. During the sluicing process, mercury may be accidently spilled on the round, wiped on clothing, or lost to the environment as mercury flour which readily contaminates soil and waterways near processing centers.[2,3] Chronic and acute mercury exposure results in a variety of adverse neurological effects such as tremors, loss of coordination, and neurodegenerative disease as well as renal failure and interstitial pneumonitis.[4,5] Children exposed to mercury can develop permanent neurological damage including developmental delays.[6]

ASGM sites are also commonly associated with other heavy metal contamination.[7] Exposure to elevated concentrations of heavy metals such as arsenic, mercury, cadmium, chromium, manganese and cobalt, as a consequence of mining, are linked to increased risk of developing adverse health effects and long lasting ecological damage.[8,9]In South America, ASGM is common in many low and middle income countries including Brazil, Venezuela, Colombia, Bolivia, French Guyana, Guyana, Ecuador, and Peru. This industry employees many unskilled workers and has the potential to expose many miners to large concentrations of mercury and other heavy metals.[10]

The primary goal of this study was to characterize regional environmental concentrations of mercury, arsenic, cobalt, and manganese in soils at and near ASGM processing centers and villages throughout La Cordillera Real of the Andes Mountains. Soil sampling for heavy metals was performed and compared to US Environmental Protection Agency (EPA) Ecological Soil

Screening Levels (ESSLs). Our secondary goal was to use soil values to characterize risk to populations residing in proximity to ASGM processing centers.

Methods:

Site Description:

The study region was located in La Cordillera Real range of the Andes Mountains in Bolivia located approximately 15 miles northeast of the city of Sorata. The elevation at the study sites was approximately 13,147 feet. Data was collected from processing centers located approximately less than 100 feet from the homes in the village.

Soil Sampling:

A total of 84 soil measurements were collected at two mine processing sites, Yani (n= 35) and Dorado (n= 23) (pseudonym), one village, Ingenio (n= 18), and concentrated molida (n=8). Soil measurements collected with an Innov-X (Massachusetts), x-ray fluorescence (XRF) Systems analyzer. Specific metals sampled were titanium (Ti), manganese (Mn), iron (Fe), cobalt (Co), zinc (Zn), arsenic (As), rubidium (Rb), strontium (Sr), zirconium (Zr), mercury (Hg) and lead (Pb). XRF analyzer was calibrated prior to and periodically during sample collection using a National Institute of Standards and Technology (NIST) calibration standard supplied by Innov-X for use with the XRF. Samples collected at the mine processing center were representative of day-to-day work tasks performed by workers including mining, loading, panning, sifting, trommel operation, equipment repair, and on site living quarters. Soil sampling in the surrounding village was performed within random areas where children were observed playing, such as the clinic, school yard, and adjacent open spaces.

Molida and ASGM Waste Stream

Molida is the amalgamated material that is extracted from the trommels and mercury lined sluice channels. This material is removed by hand or with simple hand tools. Molida is processed further by either panning or concentrating on a copper plate coated with mercury.

Molida is characteristic of ASGM tailings found directly beneath processing and sluicing equipment. Eight (8) molida samples were collected from the excess spill over material beneath a secondary trommel at the Yani processing center. Tailings of the gold extraction process were observed throughout the processing center along the ground adjacent troughs, sluice channels, shaker beds, and drainage culverts. Maximum soil concentrations were detected along these areas. To better represent the general regional characteristics of ASGM waste stream (n=11), maximum measured metal concentrations observed at each site were averaged in conjunction with molida concentrations to assess characteristics and assess environmental risks in comparison to US Environmental Protection Agency established ecological soil screening limits.

Risk Assessment:

A risk assessment was conducted in accordance with standard US Environmental Protection Agency (EPA) risk assessment guidance for noncancerous health endpoints. Risk characterization was performed on selected metals including arsenic, cobalt, manganese and mercury based on available reference values. Exposure routes included dermal, incidental ingestion, and inhalation pathways. According to the Exposure Factors Handbook, the average daily dose (ADD) for an element via ingestion, inhalation and dermal exposure pathways can be estimated using Equations (1), (2) and (3) respectively:[11,12]

Equation 1:

$$\text{ADD ingestion} = \frac{C*IngR*EF*ED}{BW*AT}$$

Equation 2:

$$\text{ADD inhalation} = \frac{C*t*InhR*EF*ED}{BW*AT}$$

Equation 3:

$$\text{ADD dermal} = \frac{C*SA*AF*ABS*EF*ED}{BW*AT}$$

Where:

C = Element concentration (mg/kg or mg/m^3)
IngR = Ingestion rate (mg/day)
IngR = Inhalation rate (m^3/day)
ABS = Dermal absorption factor
AF = Skin adherence factor (mg/cm^2per hour)
SA = Exposed body surface area (cm/hr)
EF = Exposure Frequency (days/year)
ED = Exposure Duration (years)
BW = Body Weight of exposed population (kg)
AT = Average time (days)
T = exposure time (hours/day)

Measurements below the limit of detection were replaced with$\left(\frac{LOD}{sqrt2}\right)$. Since the data was highly right skewed, geometric means were used to calculate risk estimates. Two age groups were considered for the analysis, children age 0 – 17 years and adult's age 18-38 years. Risk assessment assumed 24 hour per day exposure, 365 days a year and an estimated lifetime expectancy of 70 years. Exposure estimates for indigenous populations were used for our risk assessment: 400 mg/day incidental ingestion rate for all age groups and 30 m^3/day inhalation rate for adults, and 20m^3/day for children.[11,1311] Body weight inputs as defined in the USEPA's Exposure Factor Handbook were used for our calculations; 10kg for ages 0-2, 15 kg for ages 2–6, 30 kg for ages 6– 17, and 70 kg for adults. Exposures were averaged across age groups, no differentiation based on gender was performed.

Calculated ADD's, and non-cancerous hazard quotients (HQ) were calculated using Equations 4 and 5.[11]Reference doses (RfD) and reference concentrations (RfC) were obtained from the US EPA's Integrated Risk Information System (IRIS). If RfD's or RfC's were not established by the USEPA, recommended RfDs/RfCs were obtained from the California Environmental Protection Agency (CalEPA), or the EPA's National Center for Environmental Assessment (NCEA). If no RfD/RfC could be found, minimum risk levels (MRLs) published by the Agency for Toxic Substances Disease Registry (ATSDR) were used. Where published ingestion RfD's were available yet no dermal factors published, dermal reference dose was calculated by the product of the ingestion RfD and the gastrointestinal absorption factor (arsenic

Commented [Y1]: I read all the comments you had here regarding listing the values, because some of them differed across age groups, I thought it would be cleaner if had it in the paragraph below instead of writing a bunch of different numbers next to the defined terms.

Commented [BP2]: Same comment from before , what was the BW you used?

Commented [Y3R2]: Exactly how it's written. Calculations were performed for all blocks. The only variable that changed was the body weight per stratified age groups. Then the total exposure was averaged. Is that not a weighted average? I'm going to change the next comment on weighted vs averaged just in case.

100%, manganese 5%, cobalt 5%)[14-16] In the absence of reliable RfD/RfC or MRL, hazard quotients were not calculated. To communicate cumulative non-carcinogenic risks due to multiple routes of exposure, a total exposure Hazard Index (HI) was calculated using Equation 6.

Equation 4:

$$HQ = \frac{ADD}{RfD}$$

Equation 5:

$$HQ = \frac{ADD}{RfC}$$

Equation 6:

$$HI = \sum_1^i HQ$$

In addition to manual calculations for incidental ingestion rates and risk, the Risk Assessment Information System Preliminary Remediation Goals (RAIS) Calculator, developed by the Oak Ridge National Lab, was utilized to calculate non-carcinogenic inhalation risks based on volatilization factors (VF) and particulate emission factors (PEF) using default presets for both equations. Surface area for VF and PEF were corrected to 1 – 2 acres based on observed site conditions. Non-carcinogenic hazard quotients were added to provide a total hazard index across selected sites and selected metals. Regional HI's were calculated using raw sample collection data to ensure equal weighting for all collected samples.

USEPA's Integrated Exposure Uptake Biokinetic (IEUBK) model was used to estimate blood lead levels (BLL) at all sites. Only soil concentrations were used to estimate pediatric BLL's. Analysis was stratified by one year increments from birth to the age of 6 years. For the purpose of simpler interpretation, estimated BLL's were aggregated into age segments, 0 – 2 and 2 – 6 years of age.

Results:

Dorado and Yani both exhibited large differences in range compared to Ingenio for arsenic, mercury, cobalt and lead. Soil descriptive statistics are shown in Table 1. Whereas

Commented [BP4]: Please read the EPA guidance that I provided in the email. This is not true if you are conducted EPA RA.

Commented [BP5]: Same as above

Commented [BP6]: Same comment from your last revision. Just listing values is not effective writing. Discuss the variability. Which site was highest. You have a three orders of magnitude difference in arsenic levels between sites. This is important.

Commented [YJD7R6]:

Ingenio exhibited a large range in manganese concentrations not observed elsewhere that may be due to the baseline geologic profile of the parent material in and around the village. Likely due to the lack of processing equipment in the village. Due to the large variance and range of metal concentrations throughout study sites, geometric means were calculated and used to assess site conditions. Ingenio and Dorado both shared similar arsenic (239 ppm and 318 ppm) and lead (30ppm and 32 ppm) concentrations, and varied significantly from Yani (arsenic 1,783 ppm and lead 100 ppm). Mercury concentrations at Dorado (56 ppm) and Yani (58 ppm) were both greater than that of concentrations measured at Ingenio Village (31 ppm), and while geometric mean arsenic concentrations between Ingenio (239 ppm) and Dorado (318 ppm) were proximally closer to each other in comparison to Yani (1,783 ppm), the maximum concentration and standard means of Dorado (Mean = 5,208 ppm, Max = 80,605 ppm) and Yani (Mean = 8,944 ppm, Max = 137,022 ppm) were both significantly greater than that of Ingenio Village (Mean = 801 ppm, Max = 5,093 ppm). These data do not take into consideration spatial relationships to metal concentrations and as they are geometric means and not an expression of concentrations in the upper standard deviations, these data are likely an underrepresentation of actual conditions.

Maximum soil metal concentrations measured along unprotected culverts and deltas of constructed concrete channels designed to divert excess water and waste spillage to determine the characteristics of the waste stream entering the environment. Maximum soil metal concentrations from Yani (n=1), Dorado (n=1), and Ingenio (n=1), in conjunction with tumbler waste (n=8) were used to calculate a regional waste characterization profile. Data was highly variable and geometric means were utilized for characterization. Geometric mean concentrations of arsenic, mercury and lead at 41,921 ppm, 254 ppm, and 492 ppm, respectively. These concentrations were all above applicable mammalian and plant ESSL's. With the exception of manganese (413 ppm) and mercury (53), all other selected metals were above mammalian ESSL's, however these two compounds were found to be above invertebrate ESSL's. Mercury and manganese concentrations at all study sites were above all applicable ESSL's. In addition, with the exception of lead, the geometric mean soil metal concentration of all tested metals were above plant ESSL's.

To determine if hazardous conditions beyond ESSL plant, invertebrate, and mammal limits were present throughout study sites, geometric mean soil metal concentrations from Yani, Ingenio, and Dorado were utilized to quantify exposure hazards in terms of the hazard quotients

for specific metals through inhalation, ingestion, and dermal routes of exposure and hazard indexes for the same. Calculated hazard quotients for dermal, ingestion and inhalation exposure are shown in Table 2. Hazard indexes derived from respective hazard quotients are shown in Table 3.

Commented [BP8]: Need a topic sentence

Hazard quotients from inhalation of volatilized mercury proved to be the largest contributor to total HI (30% in children and 93% in adults). Clusters of mercury contamination were detected in areas associated with direct use of mercury in ASGM. GIS interpolation (Figures 2 and 3) illustrates the distribution of mercury and arsenic soil concentrations at Yani processing center. Total hazard indices at Yani were three times as high as those observed at Ingenio village and approximately twice as great as observed at the Dorado facility. This was largely due to the significant concentration of arsenic present at Yani.

Commented [BP9]: Good paragraph!

In comparing total HI's of children to adults, children were more susceptible in all categories of exposure throughout the region. Child HI's ranged from 6.6 to 15.1 with a regional average of 9.5 in comparison to adults range of 3.7 to 7.4 and regional average of 5.5. These results are unsurprising given that children have higher ingestion rates and weight considerably less. Accounting for both a higher ingestion exposure rate and greater dose to weight ratio. Regional HI based on arsenic exposure was 2.6 out of 8.8 in children in comparison to 0.3 out of 5.5 in adults. Furthermore, site specific interpretation demonstrate that children within all tested sites have an HI greater than 1, the greatest of which was Yani at 15.1.

Estimated blood lead levels in children are shown in Table 5. Modeled blood lead levels were calculated for two age groups, infants (0 – 2) and children (2 – 6). Regional modeled BLL's for infants and children were 1.8 ug/dL and 1.5 ug/dL respectively. Infant BLL's ranged from 1.4 ug/dL at Dorado and 2.3 ug/dL at Yani. Child BLL's ranged from 1.1 ug/dL at Dorado and 1.8 ug/dL at Yani. These results indicate lead exposure is not a concern in the region as they were all below the World Health Organizations recommended 5 ug/dL limit.[17]

Discussion

The overall goal of this study was to characterize metal contamination at and near ASGM processing centers and villages located throughout the Cordillera Real (Real Mountain Range) of

the Andes Mountains. Soil sampling for heavy metals was performed and compared to US Environmental Protection Agency (EPA) Ecological Soil Screening Levels (ESSLs). The secondary goal of the project was to characterize risk to populations residing in close proximity to ASGM processing centers using soil data.

ASGM communities do not employ best practice methods and generally there are no catchment basins, settling tanks, or primary filtration methods employed. The lack of these control methods can lead to the release of mercury flour, which is fine sediment embedded with small (<1mm) mercury particles into the environment.[1,18] This mercury flour can migrate into the sediment of waterways and damage the aquatic environment. In addition, mercury vapor can be released into the environment and contaminate soil and crops.[2,19,20] In a similar study of two ASGM facilities located within the Bolivian Andes Mountains, surface soil concentrations were analyzed and their results yielded mean soil concentrations of 14.5 ppm mercury near incineration areas and 0.17 ppm mercury at control sites.[21] In comparison to our study, where maximum concentrations of mercury were as high as 184 ppm at the incineration site and 29,483 ppm near the drainage canals and regional geometric mean for mercury was 53 ppm, 3 times greater than the similar study performed in the Bolivian Andes Mountains. [21] Furthermore, characterization of soil metal concentrations throughout all study sites also demonstrated geometric mean metal concentrations above one or more ESSL's. Our findings demonstrated considerable higher environmental contamination of regional environmental concentrations of heavy metals elevated in comparison to nearly all established ecological soil screening levels (Figure 1).

Elevated heavy metal concentrations of this magnitude induce stress in fish, amphibians, birds, and small mammals.[22] Based on the results of our waste characterization, it can be assumed that the majority of waterways in the vicinity of our study locations are void of life and at best provide sub-optimal conditions for ecological stability. Especially concerning was the high arsenic concentrations representing regional waste streams, which at 41,921 ppm is nearly 10,000 times higher than the mammalian ESSL of 46 ppm. Mean mercury concentrations were approximately 850 times that of the acceptable plant ESSL. Furthermore, elemental and inorganic mercury that enters local waterways is transformed by microorganisms into methylmercury, which then contaminate fish and other aquatic wildlife that may be consumed by

Commented [BP10]: If this is your goal, you need to have a paragraph in the results

Commented [BP11]: ppm of what? This does not seem high>

Commented [BP12]: These values need to be compared to ESSL since this was a goal of your study

Commented [BP13]: By the water or in the fish?

Commented [Y14R13]: In regards to the overall scope of this capstone paper, does it really matter? It's a finding from other studies showing inorganic mercury contamination leads to organic transformation and ultimate ingestion by the population.

local populations downstream of mining sites and processing centers.[23-25] Although this poses a serious health concern, this route was not considered in our study due to the complex nature of metabolic transformation of methylmercury and its subsequent transportation and bioaccumulation throughout the food chain.[5,19,26] Little to no protective measures were employed in the design of the processing sites. In the case of the Dorado site, contaminated water from the sluices, trommels, panning, and cleaning operations were readily observed flowing directly into the village. Based on our risk assessment, soil metal concentrations within the village and processing center were sufficient to pose a hazard to children and adults. The HI of populations living in the region demonstrate significant risk of developing adverse health effects from exposure to all measured environmental contaminants. Our data was collected primarily throughout common areas and processing centers. Average HI for adults was 5.5 at the three different sites, with a minimum total risk of 3.7 attributable to Ingenio Village and maximum total risk of 7.4 attributable to the Yani processing center. Of the various exposure pathways and metals, hazard quotients for mercury inhalation proved to be the largest contributor to total HI. Within the village of Ingenio, calculated HI's of children and adults exposed to mercury was 3.5. Previous studies have demonstrated indoor metallic contamination is associated with inadequate doffing of work clothes which leads to increased transport of contaminants into the home.[3,22] Previous studies have shown children exposed to inorganic mercury are at risk of developing adenopathy, gingival discoloration and dermatological abnormalities.[27,28]

In our study regional mercury HI for children were 5.1, confirming the high risk scenario posed by exposure to mercury due to ASGM. In addition, children exposed to inorganic mercury grow with developmental deficiencies due to cognitive dysfunction and mercury's destruction of neural communication pathways.[6] Furthermore, a study performed in Mali, found that children as young as 6 years old were seen digging mine shafts, carrying and crushing stone, and panning for gold alongside adults.[29] The study also found that between 20,000–40,000 children from that country work in gold mining, and that many among them carry out amalgamation, which can result in protracted exposure to mercury vapor.[18] Previous studies have demonstrated ASGM health effects are not limited exclusively to mercury contamination; arsenic, cadmium, chromium, and other heavy metals also contribute to disease burden. [6,18] In our study large concentrations of arsenic were detected throughout the study region. Arsenic has been previously documented, contaminated waste inevitably makes its way from the workplace to the

Commented [BP15]: Based on what? The ESSL. Be specific

Commented [BP16]: Not sure what this means

Commented [BP17]: Did you look at different metal speciations?

Commented [BP18]: Same comment as before, you need to assess across all three routes of exposure.

surrounding environment during artisanal extraction of gold. [8] Urinary arsenic concentrations have been demonstrated to correlate with arsenic concentrations in soil demonstrating a completed exposure pathway.[24,25] Arsenic concentrations ranging from 99 ppm to 9136 ppm are associated with a high rate of dermatological symptoms consistent with arsenicosis.[30]In comparison, our measured arsenic concentrations ranged from 9 ppm to 137,022 ppm and regional child hazard indices as a consequence of soil arsenic concentrations were measured at 2.6, with the highest index of 7.7 attributable to Yani. Like mercury, heavy metals such as arsenic are easily transported into the ecological distribution chain and make their way into the water supply and food consumption pathways.[31]

Commented [BP19]: 137 or 137,000

Limitations and Further Research

While our study focused on the environmental characterization of multiple sites throughout the Bolivian Andes, our study was limited to soil concentrations. The elevated presence of these contaminants necessitates the need for further comprehensive characterization of all contamination pathways including food and water. High inorganic mercury directly correlates to organic mercury concentrations.[9,32] Environmental impacts of these high mercury concentrations are observable in the soil, water and also in the flora and fauna as organic methylmercury.[20] The presence of mercury in water is a persistent concern when examining the impacts of ASGM. High quantities of dissolved mercury are commonly found in water samples collected near ASGM runoff basins. One such study conducted in the Philippines determined that concentrations of mercury were up to two orders of magnitude above natural background levels, and at concentrations far above World Health Organization (WHO) guidelines.[20]

On the extent of pulverization and amalgamation, tailings vary in size. It is not uncharacteristic for tailings to be comprised of particles ranging from <50um to 500um.[23]A particle profile was not performed as part of our characterization and requires further study to better ascertain the degree of silt deposits within the waterways. As noted previously, the presence of elevated heavy metals also requires further research. The interrelated effects of exposure to multiple metals across multiple exposure pathways must be fully assessed and correlated to actual human derived data in order to comprehensively characterize exposure, dose, and health risks within ASGM communities in the Bolivian Andes.

Simulated Diabetes Assessment: A Distance Learning Tool for Dietetics Students

Advisor: Arlene Spark
Submitted: 12/21/2015
Abstract Word Count: 172
Text Word Count: 3,019

Abstract

Objectives: The aim of this project was to create a distance learning tool for dietetics students that simulated how to perform a nutritional assessment of a recently diagnosed diabetes patient and incorporate that information into an electronic medical record (EMR).

Methods: A literature review revealed an absence of simulation education in dietetics. Development of a diabetes patient persona and corresponding nutritional assessment was executed on selected GoAnimate software and synced with an EMR portal.

Results: A four minute animated tutorial was constructed using contemporary tone, design, and storytelling style to simulate the dialogue between a diabetes patient and his dietitian. The simulation links to an EMR portal where students can enter their observations and compare them to an existing EMR sample.

Conclusions: Simulations provide experiential learning opportunities for dietetics students unable to secure on-site clinical placement. They are easily tailored to different patient and disease scenarios, allowing for variety and affordability, and with EMR integration introduce students to patient portals. Further testing and feedback is required to determine the efficacy of our simulation for dietetics students.

Introduction

Simulated Education in Health Care

The use of educational simulations in health care has been evident throughout the past couple of decades. But it is only recently, within the last five years, that the field of health care has begun to truly tap into the potential that patient simulations can deliver. Simulations provide an immersive alternative to on site learning that may not be accessible to students or professionals. Following in the footsteps of many other leading industries like aviation, health care has joined the ranks in investing in the creation and implementation of simulations that allow participants to learn and hone their abilities when it comes to patient understanding, diagnosis and treatment, safety, quality, and efficiency. [1]

While simulations may be the new horizon, they above all are only a technique, not a replacement for more traditional health care education and practice. They further provide supplemental experience to often substandard clinical internships, apprenticeships, and general training opportunities. Health simulations have been known to promote education, provide rehearsal opportunities, foster teamwork, speak to a variety of different health care situations, encourage communication, and ground the conceptual into the practical. Some believe that measurability and cost of simulations are still points of consideration in their success. Others, however, stand firm that this is just the beginning of major progress in a new and trailblazing approach to health care.[1]

The driving force behind the implementation of health care simulations is to provide students and continuing education professionals with the opportunity to develop clinical reasoning and problem solving skills.[1,2] Traditional academic education does provide first-rate learning opportunities, but simulations aim to fill the void of experiential, real-life learning often left behind or unavailable. Providing a hands-on approach to learning through simulations lends students the opportunity to address diverse patients and cases as they themselves would in the real world, all the while minimizing risk and reinforcing the fact that not all scenarios are black and white.[1,2] One study found that students who participated in a life threatening simulation performed better in emergency assessment and management.[3] Another study reported positive changes in self perceived ability and satisfaction among students who engaged with an educational simulation.[4]

The health care profession has defined simulation as a way of recreating real life experiences with guided aid to elicit aspects of the corresponding actual reality.[5] However, there is still slight dispute as to whether simulations must incorporate an actual technology or rely only on actor or mannequin based exercises.[6] Yet, successful simulations, no matter how they are executed, must provide a researched, compelling, and applicable narrative to provide participants with an ideal experience from which to learn.[6,7] In the realm of technology based simulations, such aspects of storytelling often play on and borrow from video gaming. Role playing, skill level, aesthetics,

virtual environments, back stories, and representational conventions all contextualize the simulation and ground it for easy digestion by students. Similar to video games, there is also an importance of immersion in health simulations. Enveloping message intent in fiction and imagination or dramatization and exaggeration allows students to connect with the story and learn at their own pace.[7]

Nursing as a Model

While the landscape of simulation based education in healthcare is still quite limited though simultaneously accelerating, the field of nursing has been somewhat of a pioneer in this movement toward such progressive and alternative pedagogy.[8] The infancy of their methods, however, has identified a remaining lack of evaluated infrastructure among simulated education techniques.[8] Furthermore, efforts to measure the extent of student competence post simulation interaction are still a matter of contention. Simulated education in the health sector is an unsaturated area, leaving no real clinical benchmarks as a guide for evaluation.[8,9] But, in one study, nursing students reported having an overall better grasp of their clinical responsibilities and better communication techniques following their interaction with a simulated experience.[9]

A Simulation Void in Dietetics

Compared to the field of nursing, the field of dietetics remains stagnant in its efforts to keep relevant and evolve its educational practices.[10] Incorporating simulated educational experiences into dietetics teaching appears favorable when assessing its impact in nursing, but a sizeable shortage exists in dietetics simulation research to prove its effectiveness.[10] Additionally, lack of training among dietetics educators to implement simulations and cost cutting administrations prove problematic for trial success.[11] However, dietetics organizations like The Academy of Nutrition and Dietetics, The Academy of Nutrition and Dietetics Foundation, and The Accreditation Council for Education in Nutrition and Dietetics have recently encouraged the pursuit of simulation creation, recognizing their potential in utility, variety, and skill acquisition and maintenance, especially in supplemental didactic education for students and interns.[11,12]

Diabetes Standardization

Connecting dietetic students with clinical experiences is crucial in honing their craft and their eventual ability to assess and treat specific diseases. If clinical opportunities for students to adequately learn their trade are limited, it is ultimately the patients who suffer. The need for educated dieticians is crucial, especially now with obesity at an all-time high in the United States resulting in case after case of diabetes diagnoses.[13] And while simulated education is absent among dietetic studies, one study among resident physicians who engaged with a simulated educational activity showcasing a standardized patient with diabetes resulted in their elevated cognitive skills of diabetes management in addition to their self-reported improved knowledge and confidence in their abilities.[14] Patient and disease standardization, in another study among dietetic students, was noted for its ability to provide objective and immediate evaluation and more thorough education and patient connection.[15,16]

EMR Literacy and Integration

As health fields attempt forward leaps in their educational applications, there must also be awareness and incorporation of other industry advances currently in execution, specifically EMRs, to anticipate and ensure eventual and ultimate reciprocity among health care undertakings. Regarding diabetes care in the United States, EMRs have not only been used to track patient health in general but have also aided in pattern recognition in diabetes risk forecasting as well as provided data to better assess diabetes quality of care.[17,18,19] EMR literacy and utility must be a consideration point when constructing future simulations, lending to the possibility of a simulation and EMR integration to expedite and recognize best practices in patient care. Similar to educational simulations, the use of EMRs is also a newer practice in the field of health. Marrying these novel tools will allow for more cost effective and seamless educational protocol for students regarding health technology comprehension as well as lay the foundation for more transparent communication and more well-rounded navigation surrounding patient care.[20]

Methods

Literature Review

The first step in designing an interactive, educational simulation was to research the current health communications landscape to understand what other systems have been implemented and successfully adopted. While educational simulation is somewhat of a new pursuit in the health sector, the field of nursing specifically has been a forerunner in several iterations of such technologies. However, upon further investigation, simulations currently in practice have lent themselves to educating on procedure and protocol through the use of mannequin simulations or question-based computer tutorials that rely on students watching and listening to monotonous talking heads of medical professionals. With the embrace of modern technology and innovative learning methodologies in the classroom and in distance learning worldwide, there is still a void in contemporary, immersive simulated health education. And while the nursing profession has been open and welcoming to new educational methodologies, the field of dietetics remains static.

Software Platform Selection

Identifying this absence of simulated teaching practices allowed the research team to start from scratch in terms of brainstorming how to deliver the immersive simulated experience. After engaging with multiple simulation platforms, the team selected GoAnimate, an animation software that consists of a user friendly interface, resulting in animation that is relatable to an audience based on its wide use among American universities and feedback from past users. The program removes antiquated coding and animation processes and allows the designer to easily create an animated environment simply by dragging and dropping design elements. The ability to tailor characters and dialogue was also a consideration when choosing a system as it was crucial the simulation reflect gender, racial, and ethnic diversity in addition to providing variety in location and background setting options. Turning away from more traditional simulations,

GoAnimate also allowed for the incorporation of special effects and music to reinforce the truly immersive, multimedia experience needed for dietetics students eventually using the simulation; an experience that focuses on *showing* students how to navigate a dietetic consult rather than *telling* them how. This software was also a very economical choice that suited our specific needs and more importantly provided a system that was easily repeatable if other professionals were to potentially pursue similar simulations in the future.

Story and Patient Development

Next phases focused on story development including demographics of patient, specifics of disease, and treatment options. In efforts to minimize bias, both patient profile and disease diagnosis were randomly selected and a nutritional assessment conducted accordingly. Behavioral characteristics, professional career, family life and history, and lifestyle choices and habits were also considered to create a holistic and realistic persona. The protagonist, known as Stan, is white, male, middle-aged, overweight/obese, and recently diagnosed with Type 2 Diabetes. He was once a healthy athlete circa his college years, but his body mass index (BMI) now borders 30, suggesting that he is overweight/obese. He is also divorced with two children, works a typical stationary desk job, eats an overall unhealthy diet, does not exercise, takes Colace and Pepto Bismol to alleviate heartburn and constipation, uses sleeping pills and St. John's Wort for depression, and has a family history of high blood pressure, high cholesterol, heart disease, gallstones, and arthritis.

Most significantly, Stan's Type 2 Diabetes diagnosis is a surprise to him, which is understandable, as most of the general population is blind to their own diagnosis. He finds himself in the hospital for a broken femur which in turn leads to his doctors running other tests and uncovering his Type 2 Diabetes, thus referring him for a dietetic consult. This story background helps to further portray an accurate representation of patients whom dietetics students encounter in real-life clinical environments. Once the basic character details are outlined and noted by students participating in the simulation, the virtual dietitian can further assess the patient and provide care. By interviewing the patient, the dietitian can probe for other important data while students observe the dialogue between the two and learn the appropriate way to interact with a patient and how best to move forward with dietary advice in the situation.

EMR Incorporation

The GoAnimate software also allowed for the ability to link out from the simulation to a standardized EMR interface. This is a supplemental element of the simulation to promote EMR utility and literacy in which students will ultimately enter data they have noted while engaging with the simulation and observing the conversation between the patient and the dietitian. Students will also be able to compare their notes against a pre-existing, completed EMR to check for accuracy and attention to detail. This EMR capability required hosting on a secure backend server. It was also essential to make certain the final pre-existing EMR would reflect any

changes in the storyline that came about from edit discussions among the team, i.e. medication or diet changes, during simulation construction.

Simulation and EMR Construction

Accounting for all the character and storyline details, a working script was greenlit and construction on the simulation and data entry into the sample EMR began. The GoAnimate software provided a password protected space in which only team members could view project progress. Constant editing suggestions and feedback were given by team members to ensure proper balance between educational and interactive aspects of the simulation. Multiple revisions were made, music was incorporated, and the EMR was synced to the end of the simulation. The ending was also further focused to concentrate more on how to handle next steps in day to day life once the patient departs the hospital.

Results

Simulation Tone

While the team set out to construct a fully immersive simulation in which dietetics students can actively partake in the consultation between a newly diagnosed Type 2 Diabetes patient and a Registered Dietitian, the final simulation is much more observational than participatory. However, utilizing the colorful style and creative animation capabilities of the GoAnimate software, the simulation does deliver a more playful tone when compared to more traditional tutorials. And while the severity of a diabetes diagnosis is significant, the lighter tone of the simulation provides a more digestible understanding of the actual scenario. In reality, the majority of a nutritional assessment occurs in a clinical setting; however this simulation takes the viewer out of that environment and shows them first-hand vignettes of what Stan is referring to when he discusses his personal and professional life, diet, and medical and family history (see figures 1-4). Utilizing this story telling technique aims to keep viewers more engaged with the narrative and therefore more likely to note the vital information they are looking for to assess Stan's health. It also provides a sense of relatability to the patient.

Simulation Design

Design elements like detailed backgrounds and character props, character traits like accents and diverse skin color, and filming techniques like zooming and fading also work to better appeal to present day students and specifically target their visual and auditory senses to maintain their undivided interest for the full four minutes in which the simulation runs. Similarly, more experimental imagery and out of the box special effects and sound choices produce a more creative and more exciting viewing experience, one that maximizes our main goal of showing students how to navigate a dietetic consult verses just telling them how to do it (see figures 1-4).

Narrative Technique

The simulation provides fluidity between characters and a virtual aesthetic that helps to destigmatize an all too familiar health scenario of disease diagnosis. There is a sense of team

work and health promotion manifested in the simulation that is essential for any dietitian to translate to a patient. While the simulation guides dietetic students through the vernacular of a nutritional assessment it also shows them appropriate and sympathetic bedside manner and the importance of reinforcing to patients that they must take what they learn with them once they leave the hospital and apply it to their daily lives.

EMR Interaction

The simulation ends with a link to the EMR portal that is in harsh contrast to the simulation itself, looking more like a database that requires a user login and password for users. Upon entrance into the interface, users can enter in the notes they took while watching the simulation and conclude their overall assessment of the patient (see tables 1-2).

Discussion

Responding to a Need

The landscape of interactive, fully immersive multimedia health tutorials is limited. While research reveals sporadic use of more traditional simulations in the nursing profession, the field of dietetics remains stagnant. Creating a modern nutritional assessment simulation for dietetics students who are unable to secure clinical training is a much needed endeavor, especially when clinical placements for dietetics students are few and highly competitive. A simulation such as this one is a trailblazing concept in the dietetic community. Not only will it allow students the ability to learn remotely but it will also help to propel the field of dietetics into today's tech savvy world.

Limitations

Since the idea of a nutritional simulation is novel, the research team encountered several limitations throughout the execution process. The team had originally hoped to create a more immersive experience for dietetics students in which they could physically participate in the simulation by selecting different scenarios and outcomes themselves, guiding the story on their own and tailoring their experience to their own interests. The simulation software marketplace is lacking on such affordable technology for academia at present and therefore the simulation software that we ultimately chose did not allow for such an extensive interactive and in-real-time capability.

Also, the heavy cartoon stylization of the simulation is specific to the GoAnimate software. It does raise awareness as to how this simulation will be received by students using it and others observing it and whether they find it engaging or distracting. Additionally, the EMR integration occurs at the end of the simulation which could pose problematic for students looking to simultaneously enter in data while engaging with the simulation.

Recommendations

The simulation and EMR have yet to be focus group and pilot tested among students pursing dietetic careers. With more time, the research team expects to gain feedback on user experience and navigation, aesthetic appearance, level of utility, and extent of applicability and educational impact.

The team will recruit university students to engage with the simulation. Prior to initial simulation use, these students will be surveyed on their perspectives on distance learning tools and simulation tutorials, their confidence in learning new software, and their personal experience with patient portals and EMRs. After they have engaged with the simulation and EMR, they will be surveyed again on the same topics as well as additional questioning on their personal experience with our simulation and if they have any suggested alterations or feedback.

Conclusions

As other health fields look to incorporate simulated teaching methods into their educational practices, dietetics has yet to join the ranks. Guided by the strides made in the field of nursing specifically, simulated nutritional assessment tools will fill a void in viable observational learning options for dietetics students who are unable to secure in-person clinical placement to further their education. EMR integration into simulated education tools will also provide a foundational familiarity and navigational literacy of patient portals for students. Simulations also offer educational experiences that can be easily tailored to specific patient personas and diseases leading to an easily repeatable and cost effective alternative to on site clinical experience. With more focus group and pilot testing, the incorporation of dietetic simulations into didactic programs will result in standardized evaluation benchmarks with hopes of creating a rubric for successful distance learning simulations in nutrition education.

Development of an electronic medical record breast milk feeding exclusivity tracking tool for an outpatient, primary care pediatrics practice.

Advisor: Dr. Arlene Spark
Submitted: November 13, 2015
Abstract Word Count: 170
Text Word Count: 2780

Abstract

Objectives: To develop an electronic medical record (EMR) breast milk feeding (BMF) exclusivity tracking tool for use in an outpatient pediatrics practice.

Methods: A literature review determined that there was no standardized method of categorizing BMF exclusivity in the outpatient setting. Synthesizing three frequently cited definitions allowed us to create a standard set of definitions. Collaboration with the medical team and evaluating the current EMR documentation allowed us to utilize these definitions to create a BMF exclusivity tracking tool.

Results: A standardized set of definitions to categorize BMF exclusivity was developed and utilized to create the tracking tool. We also created an education schematic to train physicians to properly utilize the tracking tool and developed standardized language for EMR documentation of infant diet.

Conclusions: This comprehensive BMF exclusivity rate tracking tool, created from standardized definitions, is to be implemented into an outpatient, primary care pediatrics practice. The next step is to pilot, evaluate and revise the tool. This tool can provide practitioners with precise data for research and targeted interventions to promote exclusive BMF.

Introduction

Throughout this paper the use of the term "breast milk feeding," abbreviated BMF, instead of "breastfeeding" is deliberate to be inclusive of breast milk provided through all modes including breast, bottle, cup, and other supplemental devices.

Benefits

Breast milk provides infants the ideal nutrition and provides immune factors, passed from mother to infant, that improve their immune system.[1,2] This benefit lasts well into adulthood. Health benefits of BMF include a reduction in childhood conditions such as upper respiratory infections and ear infections, and conditions later in life such as the occurrence of obesity and type 2 diabetes.[1,2] Health benefits are not exclusive to the infant, mothers who provide breast milk to their infant also benefit from a reduction in risk of ovarian, breast, and uterine cancer, positively correlated with the duration of providing breast milk.[1,2] Other maternal health benefits may include returning to pregnancy weight sooner and promoting uterine involution.[1,2]

It is well-established that breast milk is the preferred food for providing the infant's sole nutrition from birth to six months.[1] After six months it is recommended by the Academy of Pediatrics (AAP) to continue providing breast milk for at least the first year, along with complementary foods, and continued as long as desired for by mother and infant.[1] The World Health Organization (WHO) recommends providing breast milk for at least the first two years of life.[2]

Health improvements due to BMF contribute a substantial cost savings in the health care system. If 90% of women BMF exclusively for six months and, along with complementary foods, for the first year, there would be a $13 billion reduction in direct pediatric health care costs in the United States.[1]

Barriers

Despite economic and health benefits there are many reasons why women may not initiate BMF or prematurely discontinue BMF. Barriers to BMF include lack of education, misinformation about BMF, lack of social support, medical contraindications to BMF, or personal choice.[3,4] Low income, minority women are at higher risk of early BMF cessation compared to women of other socioeconomic and ethnic groups.[3,4] Understanding the reasons for BMF cessation in an outpatient, primary care pediatrics setting can help practitioners target interventions to promote BMF exclusivity in alignment with the AAP and WHO guidelines.[3]

Definitions

Over the past three decades, three different definitions for BMF exclusivity have been proposed. In 1990 the Interagency Group for Action on Breastfeeding created three categories that were further divided into six subcategories.[5,6,7] Eight years later, the WHO created five categories.[6] The new set of definitions aimed to simplify the more detailed definitions that were developed in 1990. In doing so the ability to account for differences in the volume of complementary feedings and the proportion of breast milk was lost. In 2010, with the aim of creating classifications that take into account the proportion of breast milk feeding, the Association of Women's Health, Obstetric and Neonatal Nurses proposed a new set of definitions.[8] Table 1 compares the content for each of the three categorical definitions.

Data Collection

BMF initiation rates are commonly captured during the hospital stay in the United States, although there is not a standardized method for collecting BMF data in the research or outpatient settings.[5,6,7,8,9] While there is no established standard for measuring and reporting BMF data, the three definitions presented in Table 1 are the most frequently used definitions in the literature. It is important to note that these definitions do not differentiate clearly between feeding an infant directly at the breast and feeding of breast milk through any modality, such as bottle, cup, or other supplemental device, nor do they capture lifelong BMF exclusivity.

Methods used to measure the duration of exclusivity have an influence how the data collected is interpreted. Exclusivity recall from the past 24 hours may garner different results than if the recall were over one week, one month, or many months.[10] How the information is gathered – interview with mothers, feeding logs, or a combination, may also yield different results.[11,12] Few studies have attempted to validate accuracy in recall verbally versus feeding logs, although one study was able to validate verbal recalls and written feeding logs.[12] When questions are asked appropriately and in a standardized manner, data collected through a verbal recall can be as accurate as a written point in time log.[12]

Background of Project Setting

The outpatient, primary care pediatrics practice this project was conducted in serves a diverse, low-income population. Parents are recruited to become patients prenatally in the adjoining women's health practice and from the labor and delivery floor in the affiliated hospital.

Population

Understanding where a diverse population of infants and mothers fall on the spectrum of exclusive BMF, at what point in time exclusive BMF decreases to BMF and ultimately to no BMF, and why these changes occur can help practitioners target interventions.[3] The population within the pediatrics practice for which this tool was designed is demographically diverse with respect to race, age, marital status, and is of low socioeconomic status, factors that are known contributors to lower BMF rates.[3,4] Having reliable and accurate data about BMF exclusivity and duration rates will allow public health practitioners to know where to best target their efforts aimed at increasing both exclusivity and duration of BMF.

Current Practice

Increasing BMF rates is a core objective shared between the prenatal practice and hospital from which patients are recruited, and the pediatrics practice itself. Prenatally BMF education is conducted and classes are offered; during the hospital stay one-on-one support is provided and classes are offered; in the pediatrics practice BMF education and one-on-one support is offered on an as needed basis. Currently, requirements exist from the Joint Commission on Hospital Accreditation to collect data on BMF initiation and exclusivity rates during the hospital stay.

Need

No formal system exists to capture rates once the mother and infant have been discharged from the hospital. A clear, consistent method of collecting BMF data, as well as concise definitions of exclusivity, in an outpatient, primary care pediatrics setting is important to improving public health.

Tool

Creation of a standardized BMF exclusivity tracking tool to be implemented in an outpatient, primary care pediatrics practice, with questions asked by pediatricians, will allow practitioners to target interventions to effectively promote BMF exclusivity and increase duration of BMF. It will also provide a source of data from which further research on BMF and health outcomes can be conducted.

Methods

Literature Review Conducted

We conducted a literature review to determine how BMF is currently being defined and categorized. From this literature review we determined that standardized definitions of BMF duration and exclusivity are not used. Few have developed definitions of duration and exclusivity however these definitions are not used consistently in research. No standardized definitions are used in the outpatient, primary care pediatrics practice in which this project took place. Studies reviewed differed in their definition of BMF and often the parameters of measurement for the level BMF exclusivity and duration of BMF were not clearly defined.

In three of the most cited definitions, there is no consensus on terminology, percentage of BMF for exclusivity, nor interval of recall. Lack of standardization in definitions makes it difficult to compare study outcomes to one another and identify cause and effect of breast milk consumption. Variations in recall duration can impact the accuracy of the data collected as well as the effect of BMF on study outcomes.

Definitions of BMF Developed

The word breastfeeding is not inclusive of all modes of providing breast milk to an infant. To breastfeed is defined by Merriam-Webster as "to feed (a baby) from a mother's breast,"[13] thusly to breastfeeding is feeding a baby from a mother's breast. This does not account for other modes of feeding an infant breast milk including cup, bottle, or at the breast supplemental devices, to name a few.

We developed a hybrid of the three most cited definitions for use in the outpatient, primary care pediatrics practice. Taking into consideration the level of clarity desired, the term "breast milk fed" rather than "breastfed" was chosen to define the act of feeding an infant with breast milk. To retain the focus on breast milk feeds the level of BMF exclusivity is defined based on the amount of breast milk being fed. Exclusively breast milk fed, predominately breast milk fed, partially breast milk fed, minimally breast milk fed and exclusively formula fed. Each of these measures of exclusivity is correlated to a percentage of feeds from breast milk.

Feeding Recall

In research the duration of BMF is often based upon a 24 hour recall. While this eliminates much of the recall bias that may occur it does not take into consideration infant feeding patterns since birth. As research continues to emerge attributing BMF duration to positive health outcomes it is important to understand how that BMF data was captured, as a point in time recall or as lifelong data. Collecting lifelong data in standard interview methods, such as a survey or interview, when an infant is 6 months or 1 year can be confounded by recall bias, making it difficult to properly determine the lifelong level of BMF exclusivity.

While any percentage of BMF exclusivity is preferred to formula feeding only, the recommendations are to exclusively breast milk feed for six months. Our research site is a unique setting that lends itself to the longitudinal collection of data. Here, patients present at regular intervals, helping to eliminate the long duration between interviews. Longitudinal tracking of BMF exclusivity eliminates much of the recall bias and allows for more exact tracking of exclusivity rates over the course of a infant's first six months of life.

Documentation of Data

We determined that data would be best captured in the pediatrician's assessment note, as feeding questions are already asked. We determined that alteration of the existing assessment note template was the best way to incorporate the standardized method of data collection. Here, pediatricians will be able to document the mode of BMF (at breast or supplemental device), and if formula is being given, in a standardized drop down list, rather than the narrative they currently write. We also added a 'reason for non-exclusive BMF' question including top reasons for not exclusively BMF to help tailor future interventions.

We determined that BMF exclusivity will be measured at the first newborn visit asking recall since birth, one week of life asking recall for the past week, two weeks of life asking recall of past week, one month of life asking recall of past two weeks, and then monthly until six months, asking recall of one month. This corresponds to the follow up schedule for infants already in place in this pediatrics practice. Frequent data collection with his schedule of visits reduced the recall period increasing the likelihood for accurate data collection.

The assessment section of the pediatrician note was identified as an ideal location for a drop down list to categorize the infant as exclusively breast milk fed, predominately breast milk fed, partially breast milk fed, minimally breast milk fed, or exclusively formula fed. An educational schematic was developed to aid the pediatricians in categorization of exclusivity of BMF.

Results

Standardized Definitions

We created of standardized definitions of BMF exclusivity through synthesizing the three most cited definitions while enhancing applicability to the outpatient setting. Standardizing language to be inclusive of BMF at the breast and BMF through another modality as well as creating clear categorization for intensity of BMF was important. The subsequent definitions are outlined in table 2, alongside the definitions that served as their foundation.

In addition to creating standardized definitions to categorize BMF exclusivity we developed questions to determine life-long exclusivity. Having a method to determine the duration of BMF exclusivity at regular intervals, including since birth or since last visit, strengthens the data collected. The physician education schematic outlines how to determine the duration of exclusivity (Figure 1).

Education Schematic

Since pediatricians will be the ones asking mothers and caretakers how their infants are fed and documenting in a standardized way, it is important to have an tool for educating pediatricians on

the definitions and how to determine classification of exclusivity and duration. Figure 1 outlines the method to categorize the infant's BMF exclusivity intensity while also determining the duration of the exclusivity.

Language for Tool in EMR

Utilization of standardized language in the electronic medical record is imperative for consistent data collection. Currently, feeding data is collected in narrative form within the subjective section of the pediatrician's note. Changing this narrative section to a formalized, multi-select drop-down list allows for the pediatrician to document feeding behavior in a standardized way. Figure 2 represents various drop-down lists available for the diet section. Each heading allows for multi-selection to fully capture the variation in feeding mode and nourishment. A placeholder, represented by ***, was added to allow for free texting of information where appropriate.

An important attribute of this drop down list is the inclusion of reasons for non-exclusive BMF. Included here are commonly named reasons for non-exclusive BMF, with the option to free text any reason given that is not listed.

We determined that the BMF exclusivity tracking tool should be added to the EMR in the assessment section of the pediatrician's note. The tracking tool is a drop-down list to document the categorization of BMF exclusivity. Figure 3 represents the standardized definition categories in which the infant's feeding pattern will be classified. These are not multi-select; infant feeding should be classified into only one level of exclusivity. A placeholder, represented by ***, was added to allow for free texting the time frame of exclusive BMF.

Discussion

Goal of Tracking

The goal of creating a standardized BMF tracking tool was to have consistent language and method to collect BMF data in the outpatient setting.

From this standardized documentation of both feeding behavior and exclusivity category, data can be extrapolated for future research and/or interventions. Collecting BMF duration and exclusivity intensity in a standardized way will provide data for secondary analysis. This data, collected with clear, standardized definitions and a limited recall timeframe, will help strengthen existing evidence of health correlations related to BMF. Additionally, a standardized method of collecting reasons for non-exclusive BMF will help practitioners to best target interventions, for both caregivers and providers, to increase exclusive BMF rates.

Tracking BMF rates in the hospital setting requires facilities to be accountable for the education, support, and medical treatment of women and infants. If this data was collected in the outpatient setting, facilities could be held accountable in the same way as hospital settings, with the added advantage of flexibility to initiate interventions and monitor outcomes.

Tool Implementation

Implementing a new way to document in the EMR will require the assistance from the EMR team, review and support from inter-professional staff members, as well as education of

pediatricians on accurate documentation. This BMF tracking tool is in its initial stage of development. Additional inter-professional review and edits prior to implementation will strengthen the tool and increase future participation in accurate documentation.

Limitations

One limitation of this BMF tracking tool is the lack of consideration for intake from other nourishment sources beyond breast milk and formula. While the AAP recommends no other forms or nourishment are to be provided to infants before six months of age that does not mean that caregivers always refrain from providing alternative nourishment sources to their infants before six months. Since the framework for BMF exclusivity intensity is written in relation to breast milk consumption other forms of nourishment could potentially be accounted for within the formula consumption however this is not explicitly noted.

Recommendations

This tracking tool needs to be pilot tested, reviewed, and evaluated upon initial implementation. We will need to assess the accuracy of EMR tracking tool completion before data can be extracted and used for future interventions and/or research purposes. Once the tool has been implemented in the EMR, chart reviews and comparison to feeding logs can be used to validate accuracy of documentation.

Conclusions

Currently, no formal definition of BMF exclusivity, nor a way of collecting data, exists for use in an outpatient, primary care pediatrics practice. Having standardized definitions of BMF exclusivity and a standardized method to determine duration of exclusivity is valuable to improve public health. From this data interventions can be tailored to at risk populations with the aim of increasing BMF duration and exclusivity throughout infancy. Additionally, rigorous research relating BMF exclusivity and duration to health outcomes can be completed without the confounder of unclear definitions of feeding.

The definitions and exclusivity tracking tool still need to be validated and piloted before accepted as standard but are a starting point to improve BMF data collected in the outpatient setting.

Part I: The Culminating Experience

Introduction
This handbook was developed for CUNY SPH students who are completing one of the following degree programs:

Specialization	**Degree**
Community-based Public Health & Health Equity	MPH
Community Health Education	MPH
Environmental & Occupational Health Sciences	MPH
Environmental & Occupational Health Sciences	MS
Epidemiology and Biostatistics	MPH
General Public Health	MPH
Health Care Policy & Administration	MPH
Health Policy & Management	MPH
Public Health Geographic Information Sciences	MPH
Public Health Nutrition	MPH

Although the capstone courses have different names and numbers, they share the same requirements for three major deliverables: (1) the writing assignment, (2) the presentation, and (3) the reflection. This handbook describe in depth each of these three major assignments and their various components. Guidelines, resources, and other helpful information are also presented. Capstone faculty must approve of the deliverables so students are advised to regularly consult capstone faculty.

Brooklyn College	**HNSC 7950X: Capstone Project** This course consists of a structured seminar aimed at allowing students to apply experiences gained during their graduate program and synthesize that knowledge and experience in the form of a major writing project. It is expected that students use a combination of synthesized evidence, theoretical models, and empirical research to answer a public health research question or practice problem using interdisciplinary perspectives. **HNSC 7999X: Thesis Research** Research for master's thesis supervised by a faculty member. Credit is not earned until the thesis is accepted. Students register for this course only once. **HNSC 7935X: Research Seminar II (taken with HNSC 7999X)** Examination of quantitative and qualitative techniques appropriate for research in the health sciences. Class discussions of each student's efforts in developing a master's thesis.
Hunter College	**PH 73800: Capstone Project** This course consists of a structured seminar aimed at allowing students to apply experiences gained during their graduate program and synthesize that knowledge and experience in the form of a major writing project. It is expected that students use a combination of synthesized evidence, theoretical models, and empirical research to answer a public health research question or practice problem using interdisciplinary perspectives.

Lehman College	**PHE 790: Capstone Project (for CBPHHE students)** This course consists of a structured seminar aimed at allowing students to apply experiences gained during their graduate program and synthesize that knowledge and experience in the form of a major writing project. It is expected that students use a combination of synthesized evidence, theoretical models, and empirical research to answer a public health research question or practice problem using interdisciplinary perspectives. **PHE 791: Workshop in GISc Research for Public Health (for GISc students)** An advanced examination of mapping and of new computer-aided technologies in the natural and social sciences, including research design and methodology and designing and conducting an independent GIS public health research project, conforming to generally acceptable professional geographical practices and techniques, under the supervision of faculty.

Core Competencies
Through the three major assignments of the capstone course, students demonstrate they have achieved the core public health competencies developed by the CUNY School of Public Health.

By the time you graduate, you are expected to be able to:
1. Apply the public health core functions of assessment, policy development and assurance.
2. Apply theories, concepts, models and methods to the design of public health research, policy and practice
3. Adhere to ethical and social justice principles and standards
4. Interpret and analyze public health literature and apply evidence-based research
5. Apply basic statistical and informatics techniques
6. Communicate public health information through oral, written, digital and visual presentation
7. Explain how social, behavioral, biomedical and environmental determinants affect population health
8. Design and evaluate interventions to prevent or control public health problems
9. Collect, analyze and interpret public health data
10. Engage and collaborate with diverse groups
11. Describe the legal foundations of the U.S. public health system and its interrelationships with other systems including health care, education and environmental protection
12. Apply a framework for the planning, implementation and evaluation of public health programs, policies and interventions
13. Explain the context of public and private health-care systems in which health care and public health policy are made and healthcare is delivered

Evaluation and Grading
Capstone faculty from the student's specialization has primary responsibility for guiding the student through the Capstone Project while the Faculty Mentor has primary responsibility for guiding the student through Master's Thesis.

The Capstone faculty member from the student's specialization assigns a grade to the written work, the portfolio, and other applicable assignments such as Blackboard posts or attendance. The presentation is assigned an average grade based on all faculty member evaluations. The Capstone faculty member from the student's specialization assigns the final grade for the course, as well. The minimum passing grade for the capstone course is "B."

Capstone Project	Master's Thesis	Presentation	Portfolio

	Hunter, Lehman, and Brooklyn	Brooklyn & Hunter	Hunter, Brooklyn & Lehman	Hunter and Brooklyn[1]
1st reader	Capstone faculty member in student's specialization	Faculty mentor	All capstone faculty members	Capstone faculty member in student's specialization
2nd reader	Non-capstone faculty member in any specialization	Capstone faculty member in student's specialization		

	Grade Weight by Campus		
	Brooklyn	Hunter	Lehman
Assignment			
Major writing assignment	70%	75%	60%
Oral or poster presentation of the major writing project	15%	15%	40%
Portfolio (required in order to earn a grade for the course)	5%	5%	
Participation	5%	5%	
Blackboard Posts	5%		
Total	100%	100%	100%

[1] Lehman College requires a Fieldwork reflection piece in place of a portfolio, which is graded as part of the Supervised Fieldwork course.

Part II: Writing Assignment

Students complete either a Capstone Project or a Master's Thesis. Both are described below:

Master's Thesis

A master's thesis refers to a paper that reports on original research, with the general expectation that the finished product is of publishable quality, meets professional standards, and is useful to some external audience (e.g. journal readers, practitioners, advocates, other researchers).

At Hunter, capstone students with a GPA ≥3.8 may opt to write a master's thesis in lieu of a capstone paper, with formal approval of the academic faculty advisor and a mentor. At Brooklyn College, any capstone student may elect to write a master's thesis as their capstone paper. Students are advised to make this decision one year before they expect to graduate.

Eligible students who choose the thesis must submit a detailed proposal to the capstone faculty member by the end of the semester preceding the semester in which the student expects to enroll in the capstone course (that is, one semester in advance). The proposal should be 2 to 4 single-spaced pages, it should outline and describe the project, and include the names of the master's thesis mentor and one or more additional reviewers. If the thesis falls in the category of research report, the plan must include background and significance, hypothesis, data and methods. The capstone faculty member reviews the plan, assesses whether the proposal is expected to be of publishable quality, and approves/disapproves it.

Format

Students writing a master's thesis must follow the guidelines for the particular journal to which they expect to submit the manuscript. Every journal has on online Information for Authors section that describes in detail requirements for style of the main text, length of the manuscript, references and artwork. The suggested length of the thesis option at Brooklyn is 40 to 60 double-spaced pages.

Publication

Students are strongly encouraged to submit their master's thesis for publication. Advisors can be co-authors on the paper, but generally, the student is expected to be the first author. Student and advisor should discuss and agree on the publication plan, co-authorship possibility, and order of co-authors before submission of the master's thesis proposal, and should ensure that the final authorship follows IJCME guidelines. No matter the type of major written work the student chooses to do, a summary of the work will be presented in a lecture format or as poster. Part III of this handbook provides the specifics on the two means of communicating their work to others.

Capstone Project

There are two types of capstone projects students may choose: a practice project/essay that is based on work conducted during the fieldwork experience, and a research project/essay that is based on original research and data analysis. MPH students in the Maternal, Child, Reproductive, and Sexual Health (MCRSH) concentration are required to conduct their fieldwork and write their capstone paper on a topic in MCRSH that is relevant to their area of specialization.

Practice Project/Essay: Students conducting a practice project identify a problem to be studied, systematically review the literature associated with the problem, plan, implement, and evaluate a program or intervention to ameliorate the problem, discuss the results or outcomes of the project, and present conclusions and recommendations based on the project.

Research Project Report: Students conducting a research project identify a problem to be studied, systematically review the literature associated with the problem, collect primary or secondary data (see below) about the problem (quantitative and/or qualitative), analyze the data in order to either answer research questions or support or refute a pre-selected hypothesis, discuss the results, present conclusions, and make appropriate recommendations based on the study, which might include the need for further research. GISc students and MS-EOHS students must select this option.

- *Primary data* collection and analysis for capstone is usually in the context of an ongoing study, but it is also possible for highly-motivated students to initiate an original study. In the latter case, the student must allow substantial lead time for research planning and Institutional Review Board (IRB) approval
- *Secondary data* analysis is research typically using an existing data set, or exploiting published data. The appropriate IRB approval may need to be obtained for any project that uses data gathered from human subjects. Even in cases where the data is de-identified, a *determination* must be sought from the IRB office

With the permission of capstone faculty, students may also select to write one of the following:

- **Policy analysis—**Students conducting a policy analysis would analyze the public health implications of a current or proposed policy. The project could include perspectives on economics and financing, need and demand, politics/ethics/law, or quality/effectiveness.
- **Evaluation of an existing program** – Students evaluating an existing program will provide a description of the program, explain the purpose of the evaluation, describe the methods and procedures used to evaluate the program, identify the logistics of carrying out the evaluation, and present the results of the evaluation.
- **Written plan for a program** – Students creating a plan for a new program will conduct a needs assessment, create a program mission, goals, and objectives, develop an intervention, describe how the program will be implemented, and explain how the program would be evaluated.
- **Grant proposal** – Students writing a grant proposal for a public health initiative will identify the problem for which the grant would be used, explain the significance, list the hypotheses/questions to be answered, review the literature associated with the problem, create goals and objectives, methods, create a timeline and budget, and explain how the intervention would be evaluated.
- **Manual** – Students creating a manual for a public health initiative will demonstrate the need for the manual, create goals and objectives for the manual, create a table of contents, develop the content for the manual, describe how the manual will be used, and explain how the manual would be evaluated.
- **Systematic review of the literature** – Students conducting a systematic review will define a study question, create a strategy to identify appropriate literature, read and review the literature, extract the appropriate information from the literature, summarize the findings, present conclusions, and make recommendations based on the systematic review. Students selecting this option must follow standard guidelines for conducting a review, such as STROBE or PRISMA. For more information on this option, refer to the AJPH Author Instructions.

Format and Structure of the Capstone Paper

The paper will take the form of a peer-reviewed journal article, such as articles that appear in the Research and Practice section of the *American Journal of Public Health* (*AJPH*). The main text of the capstone paper will be 3000 to 5000 words in length, excluding abstract, table of contents, references, tables, and figures. There will be a title page, structured abstract and table of contents, followed by the main text, references and then tables and figures (one to a page). If there is an appendix, it is placed at the end. Grammar, quality of writing, illustrations and overall presentation are considered when the paper is being evaluated. The paper follows the outline below.

1. Structured abstract (180 words)
2. Table of contents
3. Introduction & literature review/problem statement/background (750 - 1250)
4. Agency background, purpose and project rationale (450-750)
5. Methods/Project description/process (750-1250)
6. Results/Project outcomes (450)
7. Discussion, limitations, recommendations (450-750)
8. Conclusions (150)
9. References
10. Tables, graphs, figures, etc.
11. Appendices

Title page: Include title of the document, student's name, CUNYFirst number, email address, name of capstone advisor, date of submission, abstract word count, and text word count. Do not use a large format font or other decorations on the title page as they may interfere with entering comments in track changes.

Structured abstract: Summary of key points. The abstract should briefly describe: 1) the background and focus of the paper; 2) the methods utilized; 3) a summary of the results; 4) conclusions. Instructions for developing a structure abstract. Instructions for developing a structured abstract are available from the National Library of Medicine via this link.

Table of Contents: Insert electronically. Instructions for creative an electronic table of contents can be found via this link.

Introduction: Background including significance of public health issue. This section relates to the background of the paper, including a statement of the problem, and the specific aims of the study. The literature review section should contain scientific evidence from a variety of text and electronic sources including limitations of the research findings; relevant and appropriate information sources; and interpreted scientific information. Even if it is innovative, the paper should be presented so that it is related to an existing body of knowledge or work on the subject with review of the literature, and identification of the gap to be addressed by this paper. Statement of question you will address, which should integrate an understanding of the health status of the population; determinants of health and illness; factors contributing to health promotion; influencers of the use of health services; and/or policy and apply that understanding to the issue of interest. Variables relevant to public health are selected and defined. The research question should be clearly, concisely, and coherently stated at the end of the introduction.

Methods & materials: For research papers, a clear description of the methods or methodological model and theory (where applicable) that another public health professional might be able to use to replicate the findings. Any previously published procedures should be referenced in the reference section.

For practice papers, present the design of the project: Describe the project procedure in the sequence in which the project segments will be performed. Provide a Gantt chart. Describe each method or approach to be utilized, the population participating in the project, the project site. Provide information about the relevant institutional resources available to help complete your project. Provide a logic model. At a minimum, a practice project will require IRB determination, which should be mentioned in the Methods section.

IRB: Research projects will likely require IRB clearance. If your project is based on some aspect of your fieldwork experience, you should have IRB clearance already. In that case, you do not need additional clearance. However, if your capstone paper in not related to your fieldwork, IRB clearance is required for capstone. In either case, attach a copy of any IRB application and/or IRB determination letter with your portfolio (discussed in Part IV).

Results: Present the collected data and analysis. Alternatively, utilize the relevant methodological model (and theory where applicable) to present and describe the finding of the assessment, or the plan for the service program, education campaign, or program evaluation.

Discussion/Future directions/Policy recommendation: Provide conclusions drawn from the data and analysis. The discussion should reflect the project findings, including unexpected results, and relate these to existing knowledge on the topic. Any difficulties encountered or recommendations for further study should also be included. If the student has completed an assessment, education or program plan, or evaluation project, he/she should highlight and summarize the significant issues. Limitations of the research or project should be addressed in this section. A brief presentation of next steps/future directions is appropriate and encouraged. The core competencies of public health practice should be addressed.

Conclusions and recommendations: Conclusions should be based on evidence and relevance to the core competencies of public health practice. The relevance of findings to public health practice and any limitations of the study/project should be discussed. Recommendations for program improvement, policy changes, and future study should be made as appropriate.

References: Every statement of fact in the text should be referenced and cited in the bibliography. Pertinent journal articles and reference texts should be cited. Unless otherwise instructed, use the *AJPH* style for all capstone papers, which is the same style used by the *Journal of the American Medical Association* (*JAMA*). Refer to the *AMA Manual of Style, 10th edition*.

Tables/Figures: Insert tables, illustrations or charts at the end of the text (after references). Do not insert them in the body of the text. (Inserting and attempting to place these items in Word is time-consuming and can cause formatting problems. Most journals require these items to be sent separately from the text. Typesetters at the journal integrate these items for publication.)

- ➢ Place tables after the references in the main text (insert a page break). Then insert tables, charts, illustrations one to a page separated by page breaks.
- ➢ Each table or figure should have a clear title and short description if relevant. Please ensure that sufficient information is provided so that the tables/figures can be understood standalone. Students using photographs or large files are advised to make the file small enough to be transmitted by email. Please ensure that any figures copied from other sources are fully referenced and redrawn as necessary. This can usually be done by re-formatting using the compress function. If this fails, make a special arrangement with the capstone faculty member.

Appendices: Supplemental material should be added to the main document set off by page breaks. Examples of appendix materials are questionnaires, data collection instruments or checklists, or data too lengthy to be published with the paper. This material must not make the paper too lengthy to email. The manuscript is ready to be submitted for review when you have completed the following checklist.

Yes	No	Objective
		The structured abstract provides a summary of the paper
		The background, rationale, and purpose for the project are clearly stated
		The methods are clearly described and appropriate for the purpose of the project
		The results are presented clearly, using tables and figures if appropriate
		The discussion relates the findings to the existing literature, identifies strengths and limitations, and describes any implications for public health

Submitting the manuscript for review

- Submit the manuscript as a single file to facilitate distribution and storage. Consider 4 or 5 megabytes as the maximum file size for email transmission and distribution. If the file is too large and cannot be emailed using the college email system, it is the student's responsibility to make the document email friendly (see below).
- The paper should be emailed to the student's capstone faculty member. That faculty member is responsible for forwarding the paper to the second reviewer.
- The subject line in your transmitting emails should be "Capstone Paper - *Lastname Firstname_ Paper title_Date*."
- The revised paper should be transmitted with a subject line "Capstone Paper revised - *Lastname Firstname_Paper title_date*"
- The response to reviewers should be transmitted with a subject line "Response to reviewers - Lastname *Firstname Paper Title_date*."

Grading the manuscript

The penultimate draft of the written assignment is reviewed by the capstone faculty and a second reader. Reviewers complete an evaluation rubric that uses this scale to evaluate the points listed below; the complete rubric can be found in the appendix. Keep these points in mind when writing the paper.

Evaluation	Score	Description
Excellent	4.0	All relevant concepts correctly applied
Good	3.5	Most relevant concepts correctly applied
Fair	3.0	Some concepts are correctly applied
Failing	2.5-0.5	Incorrect application of most relevant concepts
	0	Missing

1.	Structured abstract: summary of key points
2.	Effectively enables reader to anticipate the paper
3.	Readily identifiable, clear, concise, and coherent
4.	Significance, originality, and background
5.	Review of literature, analysis, assessment
6.	Results, discussion, consideration of limitations/weaknesses/strengths
7.	Evidence of critical thinking, and recommendations
8.	Items presented support thesis
9.	Clear, accurately summarizes paper
Demonstrates a clear understanding of the 5 public health disciplines:	
10.	Epidemiology
11.	Biostatistics
12.	Social and Behavioral Science
13.	Public Health Administration
14.	Environmental Health
15.	Correct referencing style; at least 12 peer-reviewed articles
16.	Effective use of headings and subheadings
17.	Basic mastery of written English: grammar, syntax, word usage, spelling, etc.
18.	Tables, graphs, maps, diagrams, photographs used

Final submission of manuscript

The penultimate draft of the paper that has been evaluated by two reviewers is returned to the student. Guided by suggestions and comments made by the reviewers, the student makes final revisions to the paper and composes a response letter. The letter and final draft of the paper are submitted together to the capstone faculty member, who grades it after reading it one last time.

Response letter
The response letter clearly states the changes made in the manuscript in response to the concerns expressed by the two reviewers. A justification must be provide if the student disagrees with any of the reviewers' suggestions. The appendix contains a template for a response letter. *Please use this style when composing your own response.*

Part III: Presentation

In addition to producing a major written report, all capstone students present an overview of their capstone project to fellow classmates, preceptors, academic advisors, capstone faculty members, mentors and other interested parties. This presentation occurs during the last weeks of the capstone semester. During the spring term, the

presentations coincide with the school's annual research day. Students choose to present a summary of their work in either a lecture or in a poster format.

Oral Presentation
Presentations must not exceed 10 minutes--with an additional 2 to 3 minutes of time for questions. The format for the oral presentation must include the following:

1. Title
2. Overview/Outline
3. Introduction/background
4. Project Methods
5. Results/Findings
6. Discussion
7. Conclusion
8. Acknowledgments

Organization is key when giving a successful 10-minute talk. Time is extremely limited so you need to know exactly what you want to convey and what information is necessary to convey it. The talk should have no more than **10-12 slides** - that means only about a minute to talk about each slide. And don't load more information onto one slide just to have fewer slides.

Start with a clearly defined problem and progress through the talk in a logical manner. State a question/ problem ("I was interested in the following question…"). How did you go about answering it? ("This is the strategy I used to answer the question…") What did you find? ("These are my results…") What do the findings mean? ("This is how I interpreted the results…")

Do not linger on the introduction and/or summarize the entire history of the field. Minimize time on background information in order to present methods, results and discussion. You should provide enough information to give a general understanding of why you are asking the question you are asking. The introduction should last no more than 1-2 minutes and consist of **1-2 slides.**

Data should be the bulk of your talk. The point of giving the talk is to present your data. Therefore, spend as much time as possible doing so. Do not be afraid to jump right into the data – limiting the use of transition slides allows for a smoother presentation. You do not need to go into extreme details of the methods used unless it is absolutely critical for proper interpretation of the data. If people are curious about how you did something, they will ask. Data should be limited to **3-6 slides** and last 6-8 minutes.

Have data tables or graphs and explain them. But, show only relevant data - anything more will just confuse the audience. Help the audience by 'walking through' each table or figure with a pointer. If you say "look only at this column" then take the other columns out! .

The conclusion is the part of the talk in which you interpret your results in light of the question posed at the beginning of the talk. An effective conclusion can fit onto **1 slide** and be stated in 1-2 minutes. *Do not include a reference slide. Don't end the presentation with "That's all."*

Breathe and relax. It is only 10 minutes and remember--you know more about your topic than anyone else in the room. **Don't panic** if you make a mistake.

Practice! Practice! Practice! This cannot be stressed enough. Go through the talk at least 2-3 times before actually giving it. You will be surprised how long it will be the first time around. Practice out loud, and edit the talk until you can do it in less than 10 minutes. Many times the presentation takes longer than you think it will. This will give you breathing room for questions and any technical difficulties. Practice with friends, other students, or even your advisor—they will have invaluable feedback.

Powerpoint Tips
1. Have one main point per slide. Do not show a collection of assorted data. Try not to use more than 4 or 5 bullets per slide
2. Try to use a font that is 28 point or larger for readability on a large screen

3. Make slides simple, clear, and easy to understand. If the audience is trying to figure out what the slide is showing, then they are not paying attention to what you are saying. You may use any design template in PPT -- but make sure that it is not too busy and does not distract the audience from the words/data on the slide
4. Expand margin lines of text boxes in order to increase font size for readability, but not to gain more space to add more information on the slide.
5. Slides should be free of nonessential information- other data will only distract and confuse. Do not show a table with comprehensive data; just show the important stuff. Save the rest for the paper!
6. Avoid using full sentences; use phrases and key talking points as a prompt for you to say more.
7. Avoid abusing PPT animation. A successful talk should rely on data, not Power Point prowess. More often than not, animation is distracting and sometimes even condescending.
8. Use Arial font. No gradient backgrounds (light backgrounds and dark text always works best). Most people use white background since colors show best (some use white/yellow text on a blue background. Use common sense with visual contrast: No black text on blue background.
9. Use notes portion of PPT to remember facts and things that you would like to point out for each slide. Remember to print out the notes pages of your presentation. DO NOT READ YOUR NOTES TO THE AUDIENCE

Poster Planning and Preparation

1) The preparation *process takes longer than you think,* so get started early. Write introduction and methods now!
2) Review text and poster approach with advisor and other major collaborators!!
3) Look for illustrations or photos to shorten needed text. They may be reproduced from books or slides via color photocopy.
4) Preparing a poster is very different from preparing a paper. Your main objective in preparing text for this presentation is to edit it down to concise language. Use bullets and numbers to break text visually and aid you in the interactive use of your poster.
5) A suggested title format is 90 pt Helvetica or a sans serif font, use bold as this reads better from a distance. Sub titles should be 72 pt.
6) Divide your title information into: Title; Name(s); Program; CUNY School of Public Health.
7) Within the poster presentation space divide information into - Introduction; Methods; Results; Summary; Acknowledgments (optional). Provide references in handout form as they are not necessary for poster presentations and reduce needed space.
8) Other poster text should be 18 pt; space and a half; bold. Never use smaller than 14 pt print. If your poster is legible when printed on A4 paper and held at arm's length, then it is about right.
9) Spell-check and proof text very carefully before your final print out.

Other Poster How-To's:

- ***Organization:*** Use headings to help readers find what they are looking for (fieldwork setting, objectives, results, conclusions, etc.). Most experts suggest a columnar format: top to bottom, left to right. The width of the poster should be greater than its height. Use pleasing and balanced arrangement of graphics, text, colors. Remember that people prefer shapes in the golden ratio, and tend to look at the top right corner.
- ***Less** is **more:*** Keep the verbiage to a minimum. Again, this is not simply pages of text. All text should be in fonts large enough to be read from 3-6 feet away (minimum font size: 18 pt). Titles should be in larger font sizes to be read from far away. Use simple fonts (e.g., Arial, Helvetica) and do not use more than 2 types.
- ***Colors:*** Use a theme of 2-3 colors; avoid overly bright (neon) colors. Dark colors on a light background are easiest to read.
- ***Graphics:*** Use graphics (simple charts, tables, graphs) and photos as appropriate. Not only do pictures help tell the story, they also help attract the audience.

Part IV: The Portfolio/Reflection

Why is a portfolio required? The portfolio serves many functions:

- To provide a means of self-assessment indicating how you achieved core and concentration- specific competencies through master's courses and fieldwork, community service, and paid volunteer work experience.

- To demonstrate to the graduate faculty that you have attained at least entry-level public health competencies in the core public health areas. IOW: The portfolio is a means for faculty to assess educational outcomes.
- To provide information that will be used by the Council on Education in Public Health to assess the curriculum's effectiveness in providing students with the opportunities necessary to become competent in the core public health areas and in specialized areas.
- The portfolio is intended to be a useful career tool for you. With the portfolio, you should be able to promote yourself by showcasing your professional development, skills, experience. Your portfolio organizes critical information for potential employers while it showcases your accomplishments and abilities.
- Because learning and development are a continual part of professional life, a portfolio remains useful to you throughout your career. Keeping copies of your completed portfolio forms can help you demonstrate to yourself (and others) the paths you have taken and assist you in determining future growth and career directions.

Review and Evaluation of the Portfolio

The portfolio is submitted as a component of the capstone course. The capstone course is taken during the last or next-to-the-last semester of your graduate degree training. As the portfolio will not be returned to you, we urge you to keep an electronic copy for yourself.

You and your program academic advisor are responsible for periodically reviewing your portfolio. From time to time, your advisor will ask to discuss the portfolio with you. By tracking progress on achievement of competencies during your MPH/MS training, you can identify any areas that are deficient in your program of study and work with your academic advisor to make certain that those shortcomings are addressed before graduation. Courses and other learning experiences should be selected to strengthen competence in specific areas. Ultimately, the final product is evaluated by your capstone faculty member.

Components of the Portfolio

(1) Title page

This page contains general information for each student.

- Student's full name
- Contact information (address, phone, e-mail, fax)
- Area of specialization

(2) Table of contents

Insert a table of contents to make the portfolio easy to search.

(3) Professional mission statement

State your public health focus and your expertise, and how you expect to promote yourself as a public health practitioner. Write this as a concise statement of your individual, focused purpose in your public health career and the specific contribution you hope to make.

Reflect

- Think about your goals and how your unique knowledge, skills, and experience will help you reach those goals.
- Think about what you have to offer professionally as a public health practitioner and what specific contribution you can make to the public health field.

Write

- Communicate these thoughts in a concise professional statement that reflects your goals, focus and skills, and the contribution you expect to make to public health. Be as focused and specific as possible. "To improve the public's health" is neither focused nor specific; everyone with an MPH wants to do that.

Distinguish yourself from the others by indicating your specific area of focus and the specific way in which you hope to improve the public's health. You may want to consult the following resources which describe how to write an effective professional mission statement:

- State your professional mission and goals.
- Reflect on those mission and goals. As you reflect, you may find that you have refined your mission and goals over time.
- Discuss the extent to which you have realized your mission and achieved your goals.
- Suggest future actions you might take to further realize your mission and goals.

(4) Résumé
This section contains your professional résumé.

Minimum requirements include:

1. Name
2. Contact information
3. Education completed
4. Public health and other relevant work experience (in chronological order)
5. Honors and awards (chronological order)
6. Special skills

The career development office offers counseling and guidance for writing résumés, as well as other professional services. There are many sites on the internet with instructions for preparing resumes.

(5) Experience in public health
This section provides documentation and evidence of commitment and experience in the field of public health.

Minimum requirements include:

1. Certification of IRB training (CITI certificate)
2. A chronological list of all the public health experiences you have had. Include dates, agency name & address, your supervisor's name, credentials & title, your title and responsibilities. Use these section headings:
    - Paid professional experience
    - Volunteer experience
    - Fieldwork experience
    - Other

(6) Core competencies
In this section, indicate the extent to which you have acquired the core competencies required of all graduates of public health programs. Use the worksheet on the next page to explain how you know you have acquired each core competency. Your statement for each competency may be as long as needed. Where possible, provide in an appendix documentation that illustrates how you know the competency has been achieved, such as your written (or other) response to an assignment in a particular course, a letter acknowledging your paid or volunteer activity, a certificate of completion for a CE course, and so on. When you are attaching documentation, indicate in your statement the name of the document so we know what to look for in the appendix.

At Lehman, students complete two reflection assignments during Supervised Fieldwork. The first is to prepare an in-depth reflection paper that identifies and discusses the fieldwork experiences with regard to satisfaction with the extent to which learning goals were met, challenges encountered during the fieldwork experience and how they were addressed and how the fieldwork experience informed or influence the student's practice within public health. The second assignment is a public health organizational analysis of the setting where fieldwork was conducted. Under guidelines based on key core competencies, the student assesses the extent to which the organization applies the core public health functions of assessment, policy development and assurance to the development and analysis of public health problems and their solutions; applies ethical principles to public health activities; applies the core orientation and values of public health in professional practice. Specifically, students assess competencies by way of analysis of the leadership and management of the organization, staff competencies, organizational culture, degree to which organizational mission and goals are met, and evidence of commitment to health equity and social justice. The outcome of this assignment is to identify the implications for public health practice within the community served.

(7) Specialization-specific competencies
Students in these areas must provide evidence of membership in at least one professional organization related to their specialized area. Each specialization has its own competencies. These concentration-specific competencies specify the skills graduates need to have in order to receive the master's degree. In this section of the portfolio you provide documentation and evidence of competence in your specific program. Complete only the worksheet for your specialized area from the list above. Use the worksheet to explain how you know you have acquired each specialization competency. Your statement for each competency may be as long as needed. Where possible, provide in an appendix documentation that illustrates how you know the competency has been achieved, such as your written (or other) response to an assignment in a particular course, a letter acknowledging your paid or volunteer activity, a certificate of completion for a CE course, and so on. When you are attaching documentation, indicate in your statement the name of the document so the public health faculty member who is reviewing your portfolio knows what to look for in the appendix.

(8) Community service
This section provides documentation and evidence of community involvement and service outside of the academic environment. Include at least two examples of community involvement.

(9) Fieldwork
This section provides documentation and evidence of the student as a reflective public health practitioner. Fieldwork may include aspects of your employment in a healthcare, public, occupational or environmental health agency.

Minimum requirements include:

1. List of fieldwork placements. For each, provide: dates, preceptor (name, credentials, title), your responsibilities, tangible products of the fieldwork experience
2. Reflections about your fieldwork experiences, including:

    - Reflections on the extent to which your course work at Hunter prepared you for the fieldwork experience.

    - Reflections on the quality of on-site supervision you received during your fieldwork. Was someone generally available to answer your questions and provide feedback (even if you didn't seek it)? Discuss the usefulness and value of the feedback you received.

    - Reflections on challenges or problems you encountered during the fieldwork and how they were addressed. What technical or human obstacles did you encounter? Were there any deviations from your original plan or expectations for the fieldwork (for better or worse!). Discuss things you hoped to get out of the fieldwork experience, but didn't.

- Reflections on the overall quality of the fieldwork. Were there particular skills, knowledge or lessons that you acquired unexpectedly? Explain. Was the fieldwork a good educational experience – why or why not? How did it provide you with a better sense of the skills needed for employment in the profession? Discuss recommendations for improving your fieldwork experience. What were the most valuable lessons you learned? Explain why you would or would not recommend that other students conduct fieldwork with the same department or agency.

(10) Other

Use this section to present and discuss other topics that have contributed to your professional development. Some examples of additional areas include leadership activities, conferences attended, non-credit courses completed, and track-specific competencies attained outside of your specific area.

APPENDIX

Contents

1 Capstone paper evaluation rubric

2 Response letter template

3 Oral presentation evaluation rubric

Appendix 1: Capstone Paper Evaluation Rubric

Student's Name_____

Degree MPH in_____ or EOHS-MS_____

Title of paper_____

Category of paper (circle one): Practice Project Report Research Project Report Policy Analysis Grant Proposal Written Plan for a Program Evaluation of an Existing Program Manual Systematic Review of the Literature

Reviewer_____ **Date**_____

	Capstone Paper Grading Rubric	

	Description	4.0 **Excellent** All relevant concepts correctly applied	3.5 **Good** Most relevant concepts correctly applied	3.0 **Fair** Some concepts are correctly applied	**Failing**					
					Incorrect application of most relevant concepts					Missing
					2.5	2	1.5	1	0.5	0
OVERALL PAPER EVALUATION	Articulates ability to synthesize and apply public health competencies; discusses relevance of findings to public health practice									
Structured Abstract	Summary of key points; 250 words, maxi									
Introduction	Effectively enables reader to anticipate the paper									
Thesis Statement	Readily identifiable, clear, concise, and coherent									
Content (all items may not be applicable)	Significance, originality, and background									
	Review of literature, analysis, assessment									
	Results, discussion, consideration of limitations/weaknesses/strengths									
	Evidence of critical thinking, and recommendations									
Evidence	Items presented support thesis									
Conclusion and Recommendations	Clear, accurately summarizes paper									
Core Disciplines (Demonstrates	Epidemiology									

understanding and application of core public health disciplines)	Biostatistics					
	Social and Behavioral					
	Public Health Administration					
	Environmental Health					
References and Bibliography	Correct referencing style; at least 12 peer-reviewed articles					
Style	Effective use of headings and subheadings					
Quality of Writing	Basic mastery of written English: grammar, syntax, word usage, spelling, etc.					
Graphics	Tables, graphs, maps, diagrams, photographs used

Appendix 2: Response Letter Template

[Insert date here]

Dear Dr. *or* Professor *or* Ms. *or* Mr. [insert 1st & 2nd readers' last names]:

Re: Revisions to capstone paper, "[insert title of your paper]"

Thank you for your comments and suggestions on my manuscript. They were helpful and enabled me to improve the quality of my paper. The following pages contain point-by-point responses to your remarks. *My responses are in script.* I also use yellow highlight for additions, and ~~strikethroughs~~ for deletions. For example: "In accordance with the suggestions of the Reader, **[insert changes you made according to suggestions]**

I hope that you find the revisions in the manuscript and accompanying responses are satisfactory

Yours sincerely,
[insert your name, degrees & title, if appropriate]

----------new page ----------

Responses to the comments of Reader #1

1. [insert 1st reader's 1st comment; if the comment is lengthy, copy and paste it here directly from the reader's letter]
Response: **[insert your response]**

2. [insert 1st reader's 2nd comment: copy and paste it here directly from the reader's letter]
Response*:* **[insert your response]**

3. …and so on.

Responses to the comments of Reader #2

1. [insert 2nd reader's 1st comment: if the comment is lengthy, copy and paste it here directly from the reader's letter]
Response: **[insert your response]**

2. [Insert 2nd reader's 2nd comment: copy and paste it here directly from the reader's letter]
Response*:* **[insert your response]**

3. …and so on.

Appendix 3: Oral Presentation Evaluation Rubric

Student's name_____ **Reviewer**_____

Degree MPH in_____ or EOHS-MS_____ **Date**_____

Title of presentation_____

Category of work presented (circle one): Practice Project Report Research Project Report Policy Analysis Grant Proposal Written Plan for a Program Evaluation of an Existing Program Manual Systematic Review of the Literature

Oral presentation components	**Max score**	**Score**	***Comments***
Title	0		
Background and Significance	10		
Methods, or Project Description	10		
Results, or Project Outcomes	10		
Discussion and Conclusions	10		
Recommendations	10		
Overall presentation style and demeanor	40		
Handout	10		
Total	**100**		

Evaluation of Capstone Oral Presentation

1. Title of presentation _____
2. Brief background and significance of research/project (10 pts)
    a. Public health scope of problem
    b. Importance of project to public health community and knowledge
3. Methods or Project description (data collection etc…) (10 pts)
    a. Sample
    b. Data collection or description of processes (project paper)
    c. Analytic framework
4. Results or project outcomes (must include at least 2 tables for a research paper or at least 1 table for project paper) (10 pts)
    a. Table quality and ability to convey results
    b. Explanation of results
5. Discussion of results and Conclusions drawn from research or project (10 pts)
    a. Analysis, synthesis and interpretation of results
    b. Limitations and strengths
    c. Draws conclusions about results

6. Recommendations (which can include but not limited to additional research, policy and/or practical implications) (10 pts)
7. Overall presentation style and quality (40 pts)
    a. Speech quality
    b. Graphics
    c. Timing
    d. Response to questions
8. One-page handout (10 pts)

DPH Community, Society, and Health				
	CSH Specialization Competencies	**Specialization Courses**		
		Community Health Interventions: Theory and Methods (PUBH 810)	Social Behavioral Dimensions of Health: Theory and Methods (PUBH 811)	Evaluation of Public Health Programs and Policies (PUBH 816)
1.	Draw on social science and behavioral theories to analyze the impact of class, race, ethnicity, gender, disability and sexual orientation on the health of individuals and communities.		P	R
2.	Assess community needs, assets and capacity to promote health.	P	R	P
3.	Apply quantitative and qualitative or, when appropriate, mixed methods to community health research and evaluation.	P	R	P
4.	Investigate through multidisciplinary methods the potential implications and impact of policies and politics in health, education, justice, housing, welfare, child and family services and other sectors on individual and community health.	R	R	P
5.	Develop and teach educational curricula on community health using theories and methods from the social sciences and public health disciplines.	P	P	R

DPH Environmental and Occupational Health			
	EOH Specialization Competencies	**Specialization Courses**	
		Emerging Issues in Environmental and Occupational Health (PUBH 830)	Environmental and Occupational Health Risk Assessment, Management and Communication in Urban Settings (PUBH 831)
1.	Assess and analyze the influence of infrastructure (e.g., transportation, water supply/waste disposal systems and the built environment), global influences (e.g. climate change, energy use), and macro-social trends (e.g., affecting labor practices, immigration, and regulatory oversight) in creating or mitigating environmental and occupational health hazards.	P	R
2.	Identify and quantify the toxicological, physical, behavioral and susceptibility factors contributing to environmentally and occupationally-related illness and anticipate how these factors interact within the environment.	P	R
3.	Design research to identify, monitor, evaluate, or ameliorate occupational environmental hazards and/or their health effects using the appropriate methods and tools, which may include epidemiology, GIS mapping and spatial analysis, contaminant analysis, and developing community partnerships.	R	P
4.	Critically analyze environmental health risks within the current scientific, political, economic, social, cultural and regulatory contexts and use this analysis to develop management strategies that incorporate public participation, sustainable development, environmental justice and cumulative and competing hazards.	R	P
5.	Plan, direct, implement and evaluate occupational and environmental health programs appropriate for a variety of contexts including educational, government, and advocacy settings.	R	P
6.	Explain the impact of occupational and environmental hazards in a manner appropriate for the target audience including students, professionals, community, and advocacy.	P	P
7.	Demonstrate the leadership and teamwork skills appropriate for working with students, communities, organizations, health professionals and regulators in developing strategies for controlling occupational and environmental hazards.	P	R

DPH Epidemiology								
	EPI Specialization Competencies	**Specialization Courses**					**Other**	
		Epidemiologic Methods II: Study Design and Analysis (PUBH 821)	Epidemiologic Methods III: Seminar in Epidemiologic Methods (PUBH 822)	Epidemiologic Methods IV: Seminar in Applications of Epidemiologic Methods to Urban Health (PUBH 823)	Applied Biostatistics I (PUBH 824)	Applied Biostatistics II (PUBH 825)	Second Exam/Dissertation	Practicum
1.	Determine the influence of social, cultural, historical, behavioral and biological factors in population health.	R	P		R	R	R	R
2.	Operationalize studies of the complex interactions between multiple determinants of population health in a variety of settings, exploiting the differences between settings as a source of insight.	P	P	P	R		R	R
3.	Design and implement research projects that: a. Quantify health and the burden of disease in populations b. Perform surveys and risk factor analyses c. Apply causal inference to study design, study implementation and data analysis d. Identify vulnerable populations and their attributes; apply rigorous methods to examine and monitor health disparities e. Identify effective interventions to improve population health equitably f. Evaluate the effectiveness of interventions designed to improve population health g. Give appropriate attention to the potential for bias, as well as exposure and outcome measurement issues	P	P	P	P	R	P	P
4.	Conduct public health surveillance of diseases, events, and health states, as well as their risk factors and drivers.	R	P				R	R
5.	Demonstrate mastery of causal inference and apply these techniques to scientific questions relevant to at least two current public health issues or population groups that are relevant to the student's substantive content interests.	R	P	P	R	R	P	R
6.	Identify and apply appropriate biostatistical approaches to analyses that address epidemiological questions in public health research and practice.	R	R	R	P	P	P	R

7.	Present empiric findings persuasively to a wide array of audiences (oral and written)	R	P	R	P		P	R
8.	Work with colleagues to translate epidemiologic findings into practicable interventions	P	R		R		R	P
9.	Teaching epidemiologic methods to students, more junior colleagues or to others in public health		R		R			P*

* We do not require that the practicum experience include a teaching component, this is optional, so for students who chose to include teaching in their practicum experience this is a major focus or "P"

DPH Health Policy and Management					
	HPM Specialization Competencies	**Specialization Courses**			
		Seminar in Health Policy and Management (PUBH 840)	Quantitative Methods in Health Services Research (PUBH 841)	Public Health Economics (PUBH 842)	Health Policy Analysis Methods (PUBH 843)
1.	Assess and analyze the impact of public policy interventions within the various domains of public health, the theoretical motivations for undertaking them, the influence of the political, bureaucratic, and social environmental in which policy decisions are made, the consequences of such decisions.	P	P	R	P
2.	Understand and analyze the policy environment for healthcare organizations.	P		R	P
3.	For healthcare and public health organizations, discuss how each of the following affect organizational behavior and service delivery: organizational structure, motivation and incentives, individual and group behavior, group decision making, quality measurement and improvement, and organizational relations with their environments. Develop interventions to change at least 3 of the above to improve health care and public health service delivery and health outcomes.	P		P	P
4.	Understand organizational behavior and organization theory as frameworks for examining relationships between diversity and disparities in healthcare quality.	P			P
5.	Understand and appropriately apply analytical strategies used in health policy research, such as costing analysis, cost effectiveness and cost benefit analysis.		P	P	
6.	Develop familiarity with and critically analyze federal, state, and municipal laws/regulations and their historical context as relevant to public health management and policy decisions.	P		R	
7.	Formulate alternative options for resolving problems in health policy or management, evaluate their economic, practical, ethical, legal, administrative, and technical feasibility and recommend preferred options based on and supported by your analysis.	P	R	P	

MPH Epidemiology & Biostatistics (Biostatistics Track)						
	BIO Specialization Competencies	**Specialization Courses[1]**				
		Applied Biostatistics I (BIOS 75000)	Applied Biostatistics II (BIOS 75100)	Epidemiological Methods I: Study Research Design (EPI 75000)	Epidemiological Methods II: Survey and Research Methods (EPI 75100)	Applied Research: Data Management and Analysis (EPI 75200)
1.	Describe assumptions, procedures, strengths and limitations of statistical methods that are used in public health research	P	P	N/A	N/A	R
2.	Select statistical methods that are suitable for different purposes of analysis and different types of data	P	P	N/A	N/A	R
3.	Apply statistical methods correctly in public health research	P	P	N/A	N/A	R
4.	Use information technology and computer software effectively for collection, management, analysis and presentation of public health data	P	P	N/A	N/A	R
5.	Accurately describe computer outputs of those analyses and appropriately interpret the statistical results	P	P	N/A	N/A	R
6.	Write scientific reports of statistical analyses correctly with tables and figures	P		N/A	N/A	P
7.	Orally present statistical findings clearly and effectively	P	P	N/A	N/A	P
8.	Summarize correctly and critically evaluate statistical analyses in published literature	P	P	N/A	N/A	R

[1] Epidemiological Methods I (EPI 75000) and Epidemiological Methods II (EPI 75100) only address competencies in epidemiology

MPH Community Health Education						
	COMHE Specialization Competencies	**Specialization Courses**				
		Community Health Assessment (COMHE 75000)	Community Health Interventions (COMHE 75100)	Community Organizing and Development for Health (COMHE 75200)	Health Program Planning and Funding (COMHE 753)	Research and Evaluation for Community Health (COMHE 754)
1.	Apply social and behavioral theory and evidence to assess, plan, implement and evaluate community health programs, policies and interventions that promote health equality and reduce inequities.	R	P	R	R	R
2.	Demonstrate team building, negotiation, and conflict management skills in community health interventions.	R	R	P	R	
3.	Use qualitative and quantitative research methods to generate insight into community health issues.	P	R		R	P
4.	Apply ethical, socially just, and culturally competent principles and strategies to community organizing, community health assessment, program planning, implementation and evaluation.	P				R
5.	Engage communities to propose solutions to health inequities that recognize the role of power and stratification systems		R	P		

MPH Community Based Public Health and Health Equity					
	CBPHE Specialization Competencies	**Specialization Courses**			
		History and Philosophy of Public Health (PHE 700)	Health Equity and Social Justice (PHE 709)	Applications of Research Methods in Public Health (PHE 710)	Planning and Evaluation of Community-Based Programs (PHE 715)
1.	Analyze critical health inequalities confronting urban populations by social and economic determinants such as race, ethnicity, income and neighborhood	R	P	P	R
2.	Identify aspects of public health ethics and values of social justice that affect public health practice and decision-making	R	P	P	R
3.	Assess the health needs and issues confronting communities	R	R	P	P
4.	Synthesize theories, methods and practice of public health to address income inequities within communities	R	P	P	R

MPH Environmental & Occupational Health Sciences						
	EOHS Specialization Competencies	**Specialization Courses**				
		Occupational Health and Safety (EOHS 70200)	Environmental Chemistry (EOHS 70500)	Hazard Evaluation and Instrumentation (EOHS 74700)	Environment and Occupational Toxicology (EOHS 75400)	Environmental Audits and Remediation (EOHS 76500)
1.	Identify and describe environmental and occupational sources of chemical, biological, physical and/or safety (CBPS) hazards.	P	P	R	R	R
2.	Predict and prevent health, safety and environmental risks from processes, work tasks, the built environment and other economic and/or social activities	P	R	R	R	
3.	Evaluate the human health risks from CBPS hazards using qualitative, quantitative and/or instrumental assessment methods	R	R		P	P
4.	Recommend appropriate engineering, personal protection or administrative controls and policies for CBPS hazards and evaluate their effectiveness.	P		R	R	R

MPH Epidemiology & Biostatistics (Epidemiology Track)						
	EPI Specialization Competencies	**Specialization Courses[1]**				
		Applied Biostatistics I (BIOS 75000)	Applied Biostatistics II (BIOS 75100)	Epidemiological Methods I: Study Research Design (EPI 75000)	Epidemiological Methods II: Survey and Research Methods (EPI 75100)	Applied Research: Data Management and Analysis (EPI 75200)
1.	Identify key sources of data for epidemiologic purposes	N/A	N/A	P	P	P
2.	Use measures of disease frequency and association to appropriately describe the distribution and determinants of disease, and appropriately characterize statistical uncertainty around such estimates	N/A	N/A	P	P	R
3.	Critically read and evaluate the strengths and limitations of epidemiologic literature from a methodological perspective	N/A	N/A	P	P	R
4.	Select epidemiologic study designs, data collection techniques, and analytic approaches suitable for different scientific inquiries	N/A	N/A	P	P	R
5.	Identify key threats to validity (internal and external) within and across epidemiologic studies	N/A	N/A	P	P	R
6.	Use statistical software to collect, retrieve, analyze and summarize epidemiologic data	N/A	N/A	P	P	R

[1] Applied Biostatistics I (BIOS 75000) and Applied Biostatistics II (BIOS 75100) only address competencies in biostatistics

MPH General Public Health					
	GPH Specialization Competencies	**Specialization Courses**			
		Conducting Community Needs and Strengths Assessment (HNSC 7163X)	Health Services Planning and Implementation (HNSC 7164X)	Program Evaluation in Community Health (HNSC 7171)	Research Seminar in Health Science I (HNSC 7930X)
1.	Apply approaches for improving the health status of populations, including a specific initiative for a target population	P	P	P	R
2.	Apply principles of planning, development and practice of organizational and community initiatives that relate to program planning, policy formulation or research	P	P	P	
3.	Use audience-appropriate written and oral communication to convey public health information	P	R	P	R
4.	Develop collaboratively public health programs and strategies responsive to the diverse cultural values and traditions of the communities being served	R	R	P	
5.	Differentiate among evaluation methods in relation to their strengths, limitations and appropriate uses	P	R	P	R
6.	Analyze the effects of political, social and economic policies on public health systems at the local, state, national and international levels	R	P	R	

MPH Health Policy Management						
	HPM Specialization Competencies	**Specialization Courses**				
		Public Health Management (HPM 75000)	Public Health and Health Care Law (HPM 75100)	Comparative Analysis of Urban Health Care Systems (HPM 75200) OR Public Health Advocacy (HPM 75400)	Public Health Policy Analysis (HPM 75300)	Public Health and Health Economics (HPM 75500)
1.	Apply relevant theoretical/conceptual models and leadership principles to developing health policy and administrating health programs	P	R	R (HPM 75400)	P	R
2.	Evaluate public health programs and health policies and apply evaluation results to their improvement	R		R	P	
3.	Identify and discuss the partnership and collaborative skills needed to develop effective public health programs and policies	P	R	R	P	
4.	Analyze and critically evaluate theoretical and conceptual models used to describe the U.S. health care system and the delivery of health care	R	R	R (HPM 75200)	P	P
5.	Apply strategies for advocating for effective public health policies and programs		P	R	R	
6.	Identify and analyze the legal, economic, ethical and health bases and implications of public health policies that affect urban populations			R	P	P
7.	Identify non-public health policies and describe how they can mitigate or exacerbate health disparities and influence the health of urban populations				P	R
8.	Apply economic concepts and theories to the analysis of health care policy and management issues that inform decision-making and policy development					P

MPH Health Care Policy and Administration					
	HCPA Specialization Competencies	**Specialization Courses**

1.	Identify and describe environmental and occupational sources of chemical, biological, physical and/or safety (CBPS) hazards.	P	R	R	R	R	R
2.	Predict and prevent health, safety and environmental risks from processes, work tasks, the built environment and other economic and/or social activities	P	R	R	R	R	R
3.	Evaluate the human health risks from CBPS hazards using qualitative, quantitative and/or instrumental assessment methods	R	P				R
4.	Recommend appropriate engineering, personal protection or administrative controls and policies for CBPS hazards and evaluate their effectiveness.	P	R		R	R	R

Last Updated August 28, 2015

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
BIOS 75000: Applied Biostatistics I
3 Credits
Fall 2015

Time and location	Wednesday, 6:05-7:50 pm, Silberman (2180 3rd Ave), Room C08
Instructor	Shiro Horiuchi, PhD Professor, CUNY School of Public Health 2180 3rd Ave, Room 521 Phone 212-396-7749 Shiro.Horiuchi@hunter.cuny.edu (preferred contact)
Office hours	Wednesday 4:00 – 5:30pm or by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	A follow up course to PH 7500/75100 and PH 75200/75300, covering intermediate-level statistical methods commonly used in public health research. Topics include: simple and multiple linear regression; logistic regression; residual analysis; variable selection. Focus on practical applications, utilizing statistical software.
Course prerequisites	PH 750/751 and PH 752/753 or equivalents
Course format	This course is taught with a combination of lectures and in-class computer exercises using SPSS (for linear regression), SAS (for logistic regression) and Excel (for basic statistical analysis). All materials are available on the course website.
Required reading and resources	Ford AC, et al. 2005. *American Journal of Epidemiology* 162:454-460. Hall SL, Greendale GA, 1998. *Calcified Tissue International* 63:183-189. Simanek AM, Dowd JB, Aiello AE. 2009. *International Journal of Epidemiology* 38:775-787. Wisborg K, et al. 2001. *American Journal of Epidemiology* 154:322-327.
Suggested reading and resources	Fox J. *Applied Regression Analysis and Generalized Linear Models. Third Edition*. Sage Publications; 2015. ISBN-10: 1452205663, ISBN-13: 978-1452205663. (Second Edition is also all right.)

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Biostatistics-track Competencies		
Describe assumptions, procedures, strengths and limitations of statistical methods that are used in public health research	• Describe and explain the model equations, assumptions and estimation procedures of linear regression and logistic regression* * "Linear regression and logistic regression" in this table include both simple regression (one independent variable) and multiple regression (two or more independent variables)	• Mid-term and Final Examinations • Homework 1 & 2
Select statistical methods that are suitable for different purposes of analysis and different types of data	• Identify if linear regression or logistic regression is a suitable tool for investigating the research question with the given data, and assess its advantages and limitations*	• Mid-term and Final Examinations • Homework 1 & 2 • Research Notes 1 & 2
Apply statistical methods correctly in public health research	• Set up linear regression and logistic regression models that are suitable for the data and research question*	• Mid-term and Final Examinations • Homework 1 & 2 • Research Notes 1 & 2
Use information technology and computer software effectively for collection, management, analysis and presentation of public health data	• Run at least one of widely used statistical software packages to conduct linear regression and logistic regression*	• In-class Computer Exercises • Research Notes 1 & 2
Accurately describe computer outputs of those analyses and	• Interpret results of linear regression and logistic regression analyses; assess the extent to which the results support the initially	• Mid-term and Final Examinations • Homework 1 & 2

appropriately interpret the statistical results	proposed hypothesis; evaluate the predictive accuracy and reliability of the results; and examine if the results are consistent with the statistical assumptions of the methods and models*	• Research Notes 1 & 2
Write scientific reports of statistical analyses correctly with tables and figures	• Write scientific reports of linear regression and logistic regression analyses, with properly formatted and labeled tables and figures*	• Research Notes 1 & 2
Orally present statistical findings clearly and effectively	• Orally present results of linear regression and logistic regression analyses	• Research Notes 1 & 2
Summarize correctly and critically evaluate statistical analyses in published literature	• Correctly summarize results of linear regression and logistic regression analyses in published literature, and critically evaluate statistical aspects of the research*	• Research Notes 1 & 2
Epidemiology-track Competencies		
Identify key sources of data for epidemiologic purposes	• Describe the design of major US surveys (NHANES) and explain how this affects analysis of the survey • Conduct a web search to identify publicly available population-based health data to answer research questions	• In-class Computer Exercises • Research Notes 1 & 2
Use measures of disease frequency and association to appropriately describe the distribution and determinants of disease, and appropriately characterize statistical uncertainty around such estimates	• Compare the interpretation of absolute and relative risk • Apply methods to determine effect modification, including homogeneity and expected versus observed • Explain additive and multiplicative effect modification	• Research Notes 1 & 2 • Mid-term and Final Examinations • Homework 1 & 2

	• Apply descriptive and analytic statistics to describe the distribution of health conditions using publicly available data • Test hypotheses regarding associations of health with environmental, demographic, social and economic factors using publicly available data. • Use confidence intervals and p-values to assess statistical uncertainty using publicly available data	
Select epidemiologic study designs, data collection techniques, and analytic approaches suitable for different scientific inquiries	• Compare different methods for identifying confounders • Compare the biases generated by colliders and confounders • Discuss planning and evaluating epidemiologic studies, threats to validity and value of the inferences drawn from these studies • Construct a data analysis plan for a publicly available dataset that is appropriate given the study design used to collect that data and the research question being addressed	• Mid-term and Final Examinations • Homework 1 & 2 • Research Notes 1 & 2
Use statistical software to collect, retrieve, analyze and summarize epidemiologic data	• Identify the type of data to be analyzed • Implement descriptive and analytic analyses in SPSS and SAS • Select appropriate statistical methods for the data type and the research question	• In-class Computer Exercises

Course Assessments

Descriptions on details about the assignments and grading criteria will be shown on the course website

Mid-term Examination: Students will take an in-class examination, about 50~60 minutes long, solving technical and computational problems that are mostly related to linear regression analysis.

Final Examination: Students will take an in-class examination, about 100 minutes long, solving technical and computational problems that are mostly related to logistic regression analysis.

Homework 1: Students will solve a set of technical and computational problems that are mostly related to linear regression analysis and submit the answers.

Homework 2: Students will solve a set of technical and computational problems that are mostly related to logistic regression analysis and submit the answers.

Research Note 1: A subset of data from a health survey will be provided. Each student will develop a hypothesis that could be investigated with the data, analyze the data using linear regression, and write a research report.

Research Note 2: A subset of data from a health survey will be provided. Each student will develop a hypothesis that could be investigated with the data, analyze the data using logistic regression, and write a research report.

In-class Computer Exercises: During the last 20~40 minutes of most classes, students will do computer exercises using computer terminals in C08, and upload their output files onto the assigned location of Discussion Board of the course website or submit them to the instructor by email after the class. The output files may be edited to remove results with errors.

Class Participation: Students should actively participate in the classes by asking questions to the instructor and orally responding to questions from the instructor during the lecture and in-class exercise.

Grading

Evaluation criteria

Evaluation criteria for research notes are described in the assignment instructions, which will be posted on the course website. In-class examinations are assessed primarily with respect to the accuracy of answers and the appropriateness of the approach adopted to solve the problems. In-class computer exercises and homework 1

and 2 are assessed primarily according to whether a sufficient amount of effort has been made. Class participation is assessed in terms of the quality and frequency of questions and replies.

The relative weight of each course component is as follows:

Assessment	Weight
Mid-term in-class examination	20%
Final in-class examination	25%
Research note 1	20%
Research Note 2	25%
Homework 1	2.5%
Homework 2	2.5%
In-class exercise and class participation	5%
	100%

The grading system for the course is as follows:

Letter Grade	Quality Points	Percentage
A+	4.0	97.0 - 100
A	4.0	93.0 - 96.9
A-	3.7	90.0 - 92.9
B+	3.3	87.0 - 89.9
B	3.0	83.0 - 86.9
B-	2.7	80.0 - 82.9
C+	2.3	77.0 - 79.9
C	2.0	70.0 - 76.9
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an “unofficial withdrawal” (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Attendance is required. No student will get a full point for "in-class exercise and class participation" if s/he misses more than 3 classes or the number of in-class exercise outputs that are not submitted in time is 3 or more.

Late/incomplete submission of assignments

Late/incomplete submission of Research Notes is not accepted. Late submission of Homework is not accepted. In-class exercise outputs are accepted if they are submitted by the end of the class or within 4 days after the class.

Make-ups, rewrites, and extra credit

With permission of the instructor, students may be allowed to resubmit research notes, homework assignments, and in-class computer exercise outputs before the due date.

Expectations of students

- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Know how to use library resources and citation tools.
- Show respect to everyone in the course.
- Classes are offered in a computer laboratory. During the class, NEVER do any email work or website browsing unrelated to the class.
- Complete all assignments by their assigned due date.
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Regularly check the course website and official university email for course correspondence.
- There is no group discussion in this course, but students are expected to participate actively in the classes, by asking scientific and technical questions to the instructor if there are any unclear issues, and by responding to questions from the instructor.

- Contact the professor directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.
- Because in-class exercise outputs and homework assignments 1 and 2 are not returned with corrections or comments, students are expected to compare their outputs and answers with the model scripts/outputs and answer keys that will be posted on the course website.

Expectations for the instructor

- Provide course materials (including presentation files, data files, computer programs, assignment instructions, copies of or links to articles in the required reading list), regular announcements, reminders, suggestions on the course website.
- Answer questions asked by students during the class.
- Respond to students' email inquiries within 2 days.
- Provide students with individualized in-person instructions during their office-hour visits.
- Communication about grades and progress in the course will be given through the course website.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

This schedule may change as the semester progresses. Refer to the current academic calendar for important dates.

Session	Date	Topic	Readings/Resources	Assessment
1	9/2	Introduction to multiple linear regression 1: Basic models and partial regression coefficients (Part 1)	JF 5	ICE
2	9/9	Introduction to multiple linear regression 1: Basic models and partial regression coefficients (Part 2)	JF 5; HG	ICE
	9/16	9/16 - Last day to drop without a grade of "W"		
3	9/16	Introduction to multiple linear regression 2: Categorical independent variables	JF 7.1-2	ICE
	9/23	No class		
4	9/30	Introduction to multiple linear regression 3: Ordinary least squares and R^2	JF 5	ICE
5	10/7	Introduction to multiple linear regression 4: Statistical inference.	JF 6.1-2	ICE Homework 1 assigned
6	10/14	Issues in regression analyses 1: Examination of hypotheses on causal relationships I. Explanation of RN1. HW1 answers	JF 6.3 & 1.2	Homework 1 due Research Note 1 assigned
7	10/21	Issues in regression analyses 2: Nonlinearity (Mid-term in-class examination)	JF 12.3	Mid-term in-class examination
8	10/28	Introduction to logistic regression 1: Basic models	JF 14.1	ICE
9	11/4	Introduction to logistic regression 2: Adjusted odds ratio	JF 14.1; AF; KW	ICE Research Note 1 due
	11/9	Last day to withdraw with a grade of 'W'		
10	11/11	Issues in regression analyses 3: Interaction	JF 7.3	ICE
11	11/18	Introduction to logistic regression 3: Maximum likelihood estimation.	JF 14.1.4-5	
12	11/25	Issues in regression analyses 4: Examination of hypotheses on causal relationships II.	SDA	ICE Homework 2 assigned

				Research Note 2 assigned
13	12/2	Introduction to logistic regression 4: Ordinal and polytomous logistic regression.	JF 14.2	ICE Homework 2 due
14	12/9	(Final in-class examination)		Final in-class examination
15	12/16	Issues in regression analyses 5: Multi-collinearity, stepwise regression, partial and part correlation	JF 13	ICE
	12/20			Research Note 2 due

Keys: AF = Ford et al. 2005; HG = Hall & Greendale 1998; ICE = In-class computer exercise; JF = recommended textbook by John Fox; KW = Wisborg et al. 2001; SDA = Simanek Dowd & Aiello 2008.

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
BIOS 75100: Applied Biostatistics II
3 Credits
Fall 2015

Time and location	Silberman room C-06
Instructor	Levi Waldron, B.Sc., M.Sc., Ph.D. Best way to contact: levi.waldron@hunter.cuny.edu
Office hours	By appointment (www.calendly.com/lwaldron to schedule an appointment.)
Course website	https://bbhosted.cuny.edu/webapps/blackboard/execute/launcher?type=Course&id=_1185885_1&url=
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	A follow up course to BIOS 75000 Applied Biostatistics I, covering intermediate and advanced statistical methods commonly used in public health research. Topics include: log linear and generalized linear models; random and mixed effects models; survival analysis. Focus on practical applications utilizing statistical software.
Course prerequisites	Bios 75000
Course format	Hybrid: all classes available in person or online.
Required reading and resources	none
Suggested reading and resources	Vittinghoff E, Glidden DV, Shiboski SC, McCulloch CE. Regression Methods in Biostatistics: Linear, Logistic, Survival, and Repeated Measures Models (Statistics for Biology and Health). Springer; 2005.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Describe assumptions, procedures, strengths and limitations of statistical methods that are used in public health research	• Describe the assumptions necessary for statistical inference in generalized linear models, especially for regression models and models of count data • Describe the assumptions necessary for statistical inference in a repeated measures setting, both for traditional methods as well as random and mixed effects models • Recognize inherent limitations in both the data under study as well as the statistical method used to analyze the data	• Assignments 1-4
Select statistical methods that are suitable for different purposes of analysis and different types of data	• Explain censoring and recognize when it is appropriate to utilize Survival Analysis methods • Recognize connection and difference between Poisson and Negative Binomial regressions • Apply random and mixed effects models to account for within and between subject correlations. • Identify potential for over-fitting, develop and assess regression models in such situations appropriately.	• Assignments 2-4
Apply statistical methods correctly in	• Apply and interpret Poisson and	• Assignments 1-4

public health research	Negative Binomial regression models, Cox Proportional Hazard models, Linear Mixed Effects models, and Penalized Regression • Show competency in assessing model fit and modifying the models as well as finding alternatives when appropriate	
Use information technology and computer software effectively for collection, management, analysis and presentation of public health data	• Identify various public health data structures • Master the use of statistical software for analysis of public health data • Utilize statistical software to produce high quality graphical displays	• Assignments 1-4
Accurately describe computer outputs of those analyses and appropriately interpret the statistical results	• Show competency in interpreting computer output from Poisson and Negative Binomial regression models, Proportional Hazard models and Linear Mixed Effects models	• Assignments 2-4
Write scientific reports of statistical analyses correctly with tables and figures	• Produce data analysis reports of the highest quality as to their conciseness, readability and cohesion • Create appropriate tables and figures that adequately convey the key points of statistical analysis	• Assignments 1-4
Orally present statistical findings clearly and effectively	• Orally present your findings clearly and effectively • Incorporate feedback into improved data analysis report after in class “peer review”	• Oral presentation of one assignment
Summarize correctly and critically evaluate statistical analyses in	• Recognize research questions posed in published reports	• Assignments 1-4

published literature	• Reflect intelligently on analytic approach and data presentation in published research	

Course Assessments

Your understanding of the course material will be evaluated through a total of four (4) data analysis reports. Each student will be expected to present draft results in class and actively participate in the constructive critique/review of the work of his/her peers. You will have the chance to revise and resubmit each report after the first round of critique/review. This will give you the chance to deepen your analysis and bolster your mastery of the statistical methods.

Grading

Evaluation criteria

Rubrics provided with each assignment. Participation is based on handing in a rough draft of each assignment on time, effort put into presentation, and feedback provided through discussion forums and during presentations.

The relative weight of each course component is as follows:

Assessment	Weight
Assignment 1	20%
Assignment 2	20%
Assignment 3	20%
Assignment 4	20%
Participation	20%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw

from a course. Failure to officially withdraw may result in an “unofficial withdrawal” (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Participation will be assessed based on your project presentation, and ongoing participation in class and / or online discussion. You are required to be in class on the first day and on the one when you are presenting.

Late/incomplete submission of assignments

All projects will have a specific due date and will be returned to students within 7 days. Late homeworks will be penalized by deducting 10% from the earned grade per day, with no credit after 5 days unless prior arrangements for extenuating circumstances are made.

Make-ups, rewrites, and extra credit

Make-up assignments will be provided only under exceptional circumstances. In this case, the final grade will be the average of grades for the original and make-up assignments.

Expectations of students

Students are expected to attend every class either online or in person, and to attend in person on the day they are presenting. It is encouraged for students to help each other in figuring out how to do assignments, and to share pieces of code, however the work you hand in must be primarily your own, and any borrowed code must be attributed to

its author. Students are expected to participate in class discussions or online discussions, whether attending online or in person.

Expectations for the instructor

The instructor will be available for help through the online discussion forum, and by appointment (www.calendly.com/lwaldron to book an appointment). Appointments may be in person in room 538 of the Silberman building, by phone, or by Skype/Hangout. Students can expect an welcoming and respectful learning environment.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

The following schedule is subject to change (last updated: August 31, 2015).

For key dates regarding withdrawals etc, see:
http://www.cuny.edu/academics/calendars/fall-2015.html

Session	Date	Topic	Suggested reading
1	9/2 in-class attendance mandatory	**Introduction** • Review of syllabus • Review of linear and logistic regression • Introduction to R (time permitting)	4.1 - 4.6 5.1 – 5.3
2	9/9	**Generalized linear model (GLM)** • Analysis of variance and deviance table • Residual analysis • Multicollinearity	4.7 5.4 – 5.6
3	9/16	**Report 1: First Submission + Presentations and Critique**	
4	9/30	**Loglinear Models** • Analysis of multi-way contingency tables • Poisson regression for count data • Loglinear models as special case GLM **Report 1: Final Resubmission**	8.1-8.3
5	10/7	**Loglinear Models** • Negative Binomial regression for count data • Residual analysis and model diagnostics	4.2
6	**10/14**	**Report 2: First Submission + Presentations and Critique**	
7	10/21	**Basic Methods for Survival Analysis** • Life tables • Kaplan-Meier curves • Log-rank test **Report 2: Final Resubmission**	3.5, 6.1
8	10/28	**Cox Proportional Hazards Model** • Model specification • Residual Analysis	6.2, 6.4
9	11/4	**Extending the Cox Regression Model** • Stratification • Time-varying covariates • C-statistic for evaluating survival models	6.3
10	11/11	**Report 3: First Submission + Presentations and Critique**	
11	11/18	**Longitudinal Data** • Basic methods for longitudinal data • Covariance structures	7.1-7.5

		• Linear Mixed Effects Models • Variance components • Random intercept models **Report 3: Final Resubmission**	
12	11/25	**Multilevel/Hierarchical Modeling** • Random effects models • Extensions	handouts
13	12/2	**Advanced model assessment** • Cross-validation • ROC plots • Alternative measures of goodness of fit	handouts
14	12/9	**Report 4: First Submission + Presentations and Critique**	
15	12/23	**Regression with many variables** • Exploratory methods • Bias-variance tradeoff • Over-fitting • Penalized likelihood regression **Report 4: Final Resubmission**	handouts

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
COMHE 75000: Community Health Assessment
3 Credits
Fall 2015

Time and location	Silberman 329 Wednesdays 4:10-5:55pm
Instructor	Meredith Manze, MPH, PhD Assistant Professor Meredith.manze@hunter.cuny.edu (best way to reach me) Silberman Room 523 (212) 396-7736
Office hours	Wednesdays 3-4pm
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course prepares students to collect and analyze data on community health from a variety of sources, to identify problems and assets, and to develop objectives for community health interventions.
Course prerequisites	PH 75500
Course format	Lecture, partially online
Required reading and resources	Hodges, Bonnie C & Videto Donna M. Assessment and Planning in Health Programs. 2nd edition. Jones & Bartlett. 2011. Other articles available on BlackBoard
Suggested reading and resources	See last page

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply social and behavioral theory and evidence to assess, plan, implement and evaluate community health programs, policies and interventions that promote health equality and reduce inequities.	• Compare and prioritize health issues for action and community resources and capacity, based on epidemiological evidence, equity, feasibility and other considerations • Identify community level health and social indicators and specify whether appropriate tracking data exist or need to be collected	• Community map • Community Profile Part I • Community Profile Part II • Quiz #2
Demonstrate team building, negotiation, and conflict management skills in community health interventions.	• Design a process for establishing community or organizational health priorities and strategies through community dialog • Identify and incorporate principles of CBPR into a community health assessment • Formulate an assessment planning model that ensures participation for key community constituencies including beneficiaries of anticipated health promotion efforts • Describe the power dynamics involved in a particular community collaboration, the importance of these dynamics, and ways of addressing them	• Discussion board participation • Community Tour • Community Board Meeting
Use qualitative and quantitative research methods to generate insight into community health issues.	• Locate, analyze and interpret community-level qualitative and quantitative data on health from a variety of sources • Construct and deliver a presentation on the health of a community (overall or with respect to specific health	• Community map • Community Profile Part I • Community Profile Part II • Oral presentation • Community Tour • Community Board

	issues) that synthesizes data from multiple sources and incorporates community perspectives • Design, conduct and interpret community level qualitative research, using ethnographic observation, in-depth interviews and content analyses, using community sourced documents or texts	Meeting • Quiz #1
Apply ethical, socially just, and culturally competent principles and strategies to community organizing, community health assessment, program planning, implementation and evaluation.	• Practice reflexivity with respect to one's own social position vis a vis the community being assessed.	• Community Impression

Course Assessments

You will be assigned to a community district which will be the subject of the following assignments: community impressions, community tour, community board meeting, community map, community profiles I & II and your oral presentation. Despite being assigned in groups to districts, the only assessments that should be done as a group are the two profile papers. The oral presentation should also be done as a group but you will receive an individual grade. All other assessments should be completed independently and without the help of group members. The page limits listed below for each assignment do not include tables, figures or references. Please keep these at the end of your papers so I am able to easily assess if you are within the page limits. To be clear, a page length of 2-3 pages means at least two pages but no more than three pages (so it ends somewhere on the second or third page). All written assignments will be scanned in BlackBoard for plagiarism via SafeAssign. You will be able to review your score. You will have 2 attempts to upload each assignment to BlackBoard (so if you receive a high score for copied text in the first submission, not related to quotes or citations, it is up to you to review and edit and resubmit before the deadline). Allow yourself time for potential revisions before the deadline.

Your district is designed to be a community that you don't work or live in. It will likely take you some time to commute to your community district but you only need to do this once if you conduct the tour on the same day as the board meeting. You will be given a "free" class for the time it will take to visit your community.

1. Community Impressions (reflexive exercise):

In qualitative research, we often engage in reflexive exercises to understand how our own biases may impact our research. Reflexivity is "acknowledging the existence of researcher bias and explicitly locating the researcher within the research process" (Finlay). It emphasizes the importance of self-awareness and self-questioning. It is an ongoing process to understand "what I know and how I know it" (Patton). In this way, before you plan your walking tour of the community, write down your impressions of the community to which you have been assigned. Articulate how you think you developed these thoughts (press, movies, discussions, etc.) and how these impressions could impact your assessment of the community.

DUE DATE: 9/16
Length: 2-3 pages (not including references, tables or figures)

2. Community Tour
"Ethnographic" exercise

Take a walking tour of the community to which you have been assigned. In an expository description, state the day of the week and time of day you walked around the neighborhood and summarize your insights and feelings about walking around the

community. Were there any surprises? The description should answer questions such as:

General Observations of the community

1. What kinds of noises do you hear on the street? Where are the noises coming from?

2. Do the streets appear clean? At night, are there working streetlights on the streets?

3. What kind of transportation do people use? How accessible is the neighborhood? What kind of traffic is there?

4. How safe is the neighborhood? Explain your perceptions.

Population

1. Who are the people on the street? Describe their age, gender, race/ethnicity; what languages do you hear spoken? If people are hanging out in groups, note who they are with - - families, intergenerational groups, friends of the same age, race/ethnicity?

2. What are people doing? (Shopping/ "hanging out"/recreational activities) Are there local gathering spots for some people in the community such as parks, cafes, community centers?

3. What are people buying in the neighborhood supermarkets? Do community residents go to specific local restaurants or bars?

4. Does the population of the neighborhood change according to the time of day? Is there a large influx of people from outside the community during business hours (how do you know this)?

Institutions

1. What kind of commercial businesses are in the neighborhood? Are they "small" businesses or franchises?

2. What kind of religious institutions are there in the community?

3. What kind of government offices, schools, libraries, other city-run services exist in the neighborhood? Are the buildings clearly marked and what is the physical condition of the structures?

4. What kind of social service institutions or community groups exist? Are there youth service organizations, community centers, day care or senior centers?

5. What kinds of health services are available in the community? Drug stores? Private doctors offices? Hospitals? Community clinics? Drug treatment centers? Nursing homes? Others?

DUE DATE: 10/28
LENGTH: 2-3 pages (not including references, tables or figures)

3. Participant observation exercise

ATTENDANCE AT A COMMUNITY BOARD MEETING in the community to which you have been assigned is mandatory. Access to information about Community Boards can be found by going to the WebPages at *www.nyc.gov*. Meetings generally take place once a month. The following questions must be answered and please provide any additional comments about the Community Board Meeting.

1. Before you attend the meeting, write down your expectations. How many people will attend? What are the topics that will be addressed? What will the site be like? Compare these notes with your actual experience and describe this in your report.

2. Describe the process of finding out when and where the meeting will occur and any concerns or suggestions that you might have about the process. See if you can obtain the minutes of a previous meeting.

3. Note the make-up of the board and of the attendees. Do they reflect the overall makeup of the population? What are the topics on the agenda? What discussions occurred? How are decisions handled?

4. How effective is the mechanism of community boards in reaching out to and learning about community level concerns? Would you attend another meeting? Would you consider becoming more involved in the future? Explain why.

DUE DATE: 10/28 *(Note: if you are not able to attend a board meeting until after this date, please notify the instructor. You will be given 7 days from the date of the board meeting attended to submit the paper without penalty.)*
LENGTH: 2-3 pages (not including references, tables or figures)

4. Community Maps:
This is a creative exercise to construct a community needs assessment and assets map for your assigned community. Draw/create **1 or 2** community map(s). One that represents a needs-based approached and one that represents an assets-based approach, or you can make one map that combines both. Use the lecture and reading

for examples and as guide for your maps. Your maps should focus on the needs/assets of the community as a whole.

Some suggestions for the maps:
Needs Based Map
- What are the problems facing the community?
- What are the basic needs that are lacking in the community?
- Represents the barriers that people face in that community in order to lead a healthy life
- Orient whoever is looking at the map to the deficits that exist in the community and depending on the strategy used exactly where these deficits are located
Assets Based Map
- What are the assets present in the community?
- How can aspects of the community that may represent a barrier be looked at as an asset?
- What are the other non-economic or physical resources present in the community that can be used to improve health and the condition of the community?
- Are these assets wide-spread or located in particular areas?

In the end be creative, this is an exercise in presenting information in a different format. Think about how you would present this to members of the community you were assigned.

Include a list of references (but no formal write-up is required). Examples will be shown. You will briefly (1-2 min.) present your "map" to the class on the due date. See instructions posted on BlackBoard.

DUE DATE: 12/2

5. <u>Quizzes</u>
There will be two quizzes, one for each of the other online classes **(10/21 & 11/25)** that will cover the readings and lecture slides for each class, respectively. Quizzes are to be completed independently. (Note for each of these online classes you will also need to participate in the Discussion Forum. See description in "Attendance & Participation" section below.)

6. <u>Community Profile Paper:</u>
The major course assignment will be a two -part community profile project. Part I & II are both group projects. Each student has been assigned a Community District for this semester-long project. Throughout the semester, time will be allotted during class for you to meet with your fellow classmates who are assigned to your same Community District. All citations and the bibliography must be in AJPH format. The *New York City Department of Health Summary of Vital Statistics* must be included in your reference list.

The community profile is a written description of the community. Listings of data or presentation/copying of books/reports without written description are unacceptable. Included in the report **MUST** be:

PART I:

a. **Description of the history and physical environment** of the community (who founded the community and when, what is it like today, physical boundaries, names and roles of major institutions in the formation of the neighborhood, historical landmarks, types of housing stock (including rental vs. ownership), types of transportation including names and routes, etc.)

b. **Demographic profile** of the community (race/ethnicity, sex ratio, percentages and numbers of persons in all age categories listed by groups of 5 and younger and then in ten year integers up until 85+.) Note- you do NOT need to present the breakdowns of race/ethnicity and gender by each age category. The table should reflect the % and raw numbers by the following three variables: age (listed by groups of 5 and younger and then in ten year integers up until 85+), gender and race/ethnicity. One way to organize it is in the left hand column of your table to list each of these categories, with the other columns showing their respective % and raw numbers. You can also present these separately in different tables, pie charts, graphs, etc.

c. **Social and economic profile** of the community (religious affiliations, social successes and problems, environmental successes and problems, political affiliations and numbers of voters, types of employment, and numbers of employees and those on public assistance).

d. **Epidemiologic profile** of the community: including a description of the health status of your community, a comparison of rates for the five major causes of death in your community, rates for the five major causes of death in New York City and rates for the five major causes of death in the United States (A possible listing of fifteen major causes of death). Chart format will be provided on BlackBoard. You can use either the age-adjusted rate or the non-adjusted rate for this table. (Age-adjusted is preferable, if available.) Whichever you use, though, be sure that is consistent across your district, NYC and the US- and cited. There must be a written discussion/comparison of data across these three levels.

e. **Analysis** of the economic, social and health trends of your community. Identify existing organizational resources (name and type of organizations, scope of services provided, etc.) that help address the needs of the community. Indicate gaps in services.

DUE DATE: 11/11 (One (1) paper per group)
LENGTH: 6-8 pages (not including references, tables or figures)

PART II

a. **Selection of Primary Health Concern**: Describe five current or potential major public health concerns in your community. Select one **concern** (it must be listed in *Healthy People 2020)* that your group will address in this paper. This concern does not have to be a major cause of death, but what you define as a major public health problem based on your community research. This condition/disease may be one for which there are primary, secondary or tertiary prevention intervention strategies. Describe and justify your choice of a major public health problem in your community. If you are selecting drug use, please choose a specific drug such as alcohol, heroin, etc.
b. **Review the literature** on your selected public health problem. Define and discuss a) what is it, including its physiologic manifestations? b) What causes it? c) Can it be prevented? d)Who gets it? and e) What are the treatments?
c. **Review at least two intervention studies on your health condition.** Give a rationale for the articles your group selected. Be sure to remark on programs, goals and objectives, study population, duration of study, involvement of community, funding, findings and limitations.
d. **For your community, write at least two program objectives:** What are the best ways to approach going about reducing the burden of the condition you have chosen, given all that you know about the area and population that lives in that area? Include a brief overview of the proposed program/intervention your group has developed and list at least two detailed program objectives.

DUE DATE: 12/16 (One (1) paper per group)
LENGTH: 6-8 pgs (not including references, tables or figures)

7. Oral Presentations:

During the last 2 sessions of class, each group will present a summary of their assigned community as if they were presenting to their assigned community board. The presentation should highlight 1) a description of what was learned about the community; 2) key health data and health concerns identified; 3) description of the sources used to find your data and how the community board can take advantage of these resources such as the environmental tracking portal; 4) community assets/resources; 5) the major health concern that you think the community board health subcommittee should focus on and recommendations for how and what they should do reduce the burden of the health concern. Please review the instructions posted on BlackBoard for the oral presentation. Each group member will have 5 minutes to present. You will need to submit your slides by 3pm on the day of the presentation via BlackBoard. Use of powerpoint slides submitted later will result in a penalty, in fairness to other students. You will present as a group but receive individual grades.

12/9 or 12/16 (your group will sign up for a time slot earlier in the semester)

8. Group Member Evaluation: 5% of your final grade will be an average of your peer evaluations for your group work. The group member evaluation form is posted on BlackBoard. If you do not submit a group member evaluation form your group members will all receive the highest score as a default and your own grade will be deducted by 1 point.

DUE: 12/17

Grading

Evaluation criteria

The relative weight of each course component is as follows:

Assessment	Weight
Regular class attendance	5%
Class participation	10%
Quizzes (2 quizzes, 5% each)	10%
Community Impressions	10%
Community Tour	5%
Community Board Meeting	5%
Community Maps	10%
Community Profile Part I (group)	15%
Community Profile Part II (group)	15%
Oral Presentation (group)	10%
Group member evaluation	5%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Your attendance grade reflects the number of in-class sessions you attend fully and on time. Excessive lateness and absences will be noted and reflected in your final grade. Class will start promptly at 4:10pm in order to maximize our time together. If you are going to be late or going to miss a session, please inform the instructor via email *prior* to the class. It is your responsibility to obtain the content and assignments for those sessions you miss (network with your classmates). If you miss *more than two* classes you risk receiving a failing grade for this course. Please initiate a meeting with the instructor if you miss three or more courses.

Participation in class discussion and Blackboard (when assigned) is vital in this course. Your participation grade will reflect consistent, thoughtful contributions to class discussions. Your participation should reflect your reading and understanding or questions related to the assigned reading. For the in-class sessions, it's impossible to participate unless you are in attendance. Two classes will be held online this semester in order to facilitate student work schedules. For the online sessions, participation will be graded based on your contribution of at least one response to the discussion

question posted by the instructor AND at least one response to another student's comments (comments due by the following Tuesday at 4:10pm - see schedule below).

Late/incomplete submission of assignments

All work is expected to be presented on time. 5% will be deducted for each day a written assignment is late. **After one week of lateness you will not receive any credit for that assignment.** In case of extenuating circumstances, please contact me. Please note the following specifications for all assignments: Papers and other assignments are due at the beginning of the class period (4:10pm) via BlackBoard unless otherwise noted. Any assignment submitted at or after 4:11pm will be considered late. If you anticipate the need to turn in work late, please negotiate with me a mutually acceptable submission plan in advance of the established due date. **DO NOT SEND AN E-MAIL REQUESTING AN EXTENSION ON THE DAY THE ASSIGNMENT IS DUE.** Papers and reports should be kept to the maximum length specified. I will stop reading after the maximum length and you will be marked down, accordingly. It is expected that your writing will be of graduate-level quality, presented in a readable and consistent manner: Times New Roman 12 pt font, double-spaced, typewritten, with one inch margins all around and proof-read. All written assignments should use the American Journal of Public Health reference format (this journal uses AMA style format).

Make-ups, rewrites, and extra credit

There are no make-ups, rewrites or extra credit offered for this course.

Expectations of students

All students must enroll in BlackBoard. BlackBoard will be used on a routine basis as a learning tool to distribute course materials, as well as to facilitate communication with the instructor and classmates. You are expected to check your Hunter email daily for course updates.

The classroom is a community. Respectful interaction with classmates, the instructor and guests is expected at all times. Public health deals with controversial issues from multiple perspectives and consideration of these issues may cause disagreements among us or may evoke strong personal feelings, depending on our individual experiences, histories, identities and worldviews. Therefore, in all of interactions and communications, it is important that students strive to demonstrate mutual respect for one another and for any course guests and members of the community with whom they come into contact.

Please avoid crosstalk, text messaging, and turn off (or set to vibrate) cell phones etc., anything that can be distracting and take away from a climate of mutual learning or attentive listening and participation. Student announcements of related events and opportunities of interest to students may be made at the end of the class. Students should let the instructor know if they have an announcement to make. Feel free to

bring refreshments to class for yourself and/or others; but please help clean up afterwards.

Expectations for the instructor

Direct any inquiries to the instructor via e-mail. A response can be expected within 72 hours. Assignments will be graded within two weeks of the due date (unless otherwise stated). I will post lecture slides (if applicable) within 48 hours after our class.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857. If you have special accommodations that are necessary for class sessions, exams or presentations, please let me know at the beginning of the semester.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Help with research and writing: Feedback will be given on the quality of all written assignments. If you require further assistance with improving your writing skills, consider visiting the Student Reading and Writing Center on the main campus. For more information, visit http://rwc.hunter.cuny.edu/ .

Course Schedule

The schedule and assigned readings are subject to change throughout the semester. The "Last Updated" Date in the header references the current version of the syllabus and will be updated if a change in schedule is made. Please refer to the Hunter Academic Calendar for important dates including holidays, course meeting dates and withdrawals.

Session Date	Topic/Assignments	Readings
Session 1: 9/2	Introductions and Overview Definitions of community & health	Larson, Jewkes 1996
Session 2: 9/9	Community health assessment process overview	Hodges Ch. 1, Jewkes 1998, Sharma, Finlay, Gandelman Recommended: Bronx Community Needs Assessment
Session 3: 9/16	Theories of Health Promotion & Education; Conceptual models ***Guest Lecturer: Mia Brezin, CB11 E. Harlem*** **Due: Community Impressions Assignment**	Community Board 11 Statement of Need; Hodges Ch. 6, Earp, Morgan, Dunn
Hunter College Closed: No Classes 09/23		
Session 4: 9/30	Planning tools for CHA: Precede-Proceed Model	Castellanos, Buta, Hale, Hodges Ch. 2
Session 5: 10/07	Engaging Communities: CBPR Orientation, "insider" vs. "outsider" perspectives & power dynamics	Israel Ch. 5; Minkler, 2004; Minkler Ch. 1; Kerstetter; Carcari-Stone, Faridi
Session 6: 10/14	Data collection methods: overview, finding secondary data ***Guest Lecturer: John Pell, CUNY SPH Librarian***	Hodges Ch. 3, Finifter; Ulin Ch. 1 & 2
Session 7: 10/21 (ONLINE ONLY*)	**ONLINE: *Data collection methods: participant observation, "windshield tours"***	Hirsch, Israel Ch. 6, Ulin Ch. 5, Emerson

	Quiz #1 (online) **Due: Discussion Board comments (10/27)**	
Session 8: 10/28	Data collection: content analysis & document review **Due: Community Tour & Board Mtg. written assignments**	Borzekowski, Hsieh, Hussain, Latimer
Session 9: 11/4	**GROUP WORK – NO CLASS**	
Session 10: 11/11	Case Study: St. Vincent's Medical Center Closure ***Guest Lecturer: Diana Romero, PhD*** **Due: Community Profile Part I**	Romero (2012) & Romero (2012) – 2 readings
Session 11: 11/18	Data collection: Interviewing techniques	Ritchie Ch. 7; UCLA Section4; Van der Wees
Session 12: 11/25 (ONLINE ONLY*)	**ONLINE: *Identifying & Employing Community Assets*** **Quiz #2 (online)** **Due: Discussion Board comments (12/1)**	Kretzman; Sharpe
Session 13: 12/2	Program Planning & implementation; Logic models **Due: Community Map**	Hodges Ch. 4 & 9; Kellog Ch 1 & 2, McAlister
Session 14: 12/9	Oral Presentations	No reading
Session 15: 12/16	Oral Presentations/Wrap-Up **Due: Community Profile Part II**	No reading

*indicates class will meet online. You should NOT come into class on those days.

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College

COMHE 75100.02 "Community Health Interventions"

3 Credits
Fall, 2015

Time and Location	Online and in-person: Silberman, Room 216, Tuesdays, 6:05-7:50pm
Instructor	Jessie Daniels, PhD, Professor | Email: jdaniels@hunter.cuny.edu , Twitter: @JessieNYC
Office hours	Tuesdays, 4-6pm & by appt.
Course website	https://canvas.instructure.com/courses/867603
Support resources	Twitter, course hashtag: #CMHE751 | We will share relevant info about the course here
Course description	An introduction to community-level interventions as explained by theories of individual, organizational and community change from the disciplines of psychology, sociology and health education.
Course prerequisites	PH 75500, COMHE 75000
Course format	Hybrid, a mix of online and in-person: 9/1, 10/13, 11/10, 12/15
Required reading and resources	*Health Education: Critical Perspectives*, Katie Fitzpatrick, Richard Tinning, Editors, (Routledge, 2014). (*Two copies of this book are on reserve at the Silberman Campus Library.)
Suggested reading and resources	Additional open access, peer-reviewed articles and documentary films will be required and made available on the course site.

Learning Objectives:

This course is intended to prepare students to think critically about the theory, design, and implementation of community health interventions in urban settings. As such, the course prepares students to: 1) understand theories from psychology, sociology and health education meant to improve the public's health; 2) critically analyze public health intervention projects; 3) write and present clearly about community health concerns; 4) design multi-level, theory-driven interventions that support community health goals, particular in multiethnic, urban populations; and, 5) present research findings (individual) and proposed intervention (group) to the class.

Program Competencies Addressed in this Course

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to achieve the following competencies which are expected of MPH graduates in your specialization track:	*After successfully completing this course you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Identify theories from psychology, sociology and health education that apply to behavior change and maintenance.	1. Understand theories from psychology, sociology and health education meant to improve the public's health	Assements 1-6
2. Conduct literature reviews and Internet searches on selected health issues and interventions.	2. Critically analyze public health interventions.	Assements 3,6,9,10-13
3. Apply principles of effective communication, by using various media and formats, applied to different audiences and communities.	3. Write clearly about community health concerns.	Assements 3,6,9
4. Develop theory-driven health education programs.	4. Design multi-level, theory-driven interventions that support community health goals, particular in multiethnic, urban populations.	Assements 9, 10, 11
5. Involve communities in the design of appropriate intervention strategies.	4. Design multi-level, theory-driven interventions that support community health goals, particular in multiethnic, urban populations.	Assements 9, 10, 11
6. Develop, produce and evaluate media campaigns to create health consciousness.	5. Present research findings (individual) and proposed intervention (group) to the class.	Assements 8, 14,15
7. Develop and/or incorporate culturally sensitive and age appropriate health education materials.	5. Present research findings (individual) and proposed intervention (group) to the class.	Assements 8, 14,15

Course Assessments

Your understanding of the course material will be evaluated though class participation and discussions, several individual writing assignments, oral presentations (both individual and group), and through group work.

1. In-Person Class Attendance (5%). This class will meet four (4) times in person. Each student is required to attend all in-person class meetings.
2. Online Class Participation (15%). This class will meet throughout the semester online. Each student is required to participate online in the course several times a week, through the course management site (Canvas), through Twitter, and through Google Hangouts/Air. Each student, either individually or in pairs, will be tasked with scheduling and leading at least one Google Hangout/Air for other students during the semester. These sessions will happen most every week at a time chosen by the students leading them. Assessment on this component is subjective and up to the instructor's discretion, but in general terms is an evaluation of a student's active participation in the online components of the course.
3. Individual Written Assignments (30%). A large portion of any public health professional's working life is accomplished through clear, effective written communication. These assignments are intended to develop the ability to write about community health effectively and clearly.

- **Written Assignment 1: Community & Health Condition of Concern (10%).** Briefly describe the community you are interested in, be sure to include demographics and evidence of negative health outcomes, along with strengths and assets of the community. Identify at least three current public health concerns in your community, select one concern to address in this paper, and justify your choice. Review the literature on your selected public health problem, and be sure to detail the proximate, distal and fundamental causes. Present data on the incidence and prevalence in the community and in New York City as a whole. Are there specific populations within your community that are particularly vulnerable to this condition? Who are they and why are they susceptible? **5 pages, double-spaced, 1250 words. Due: September 14.**
- **Writing Assignment 2: Successful & Failed Interventions (10%).** Review five (5) intervention studies on your health condition. Identify at least one intervention that in your view "failed", in other words, note the ways that the interventions described did not reduce the burden of the health condition on the intended community. In light of your research, write four or more program objectives that encapsulate your view of the best ways to reduce the burden of the condition you have chosen in your community. **5 pages, double-spaced, 1250 words. Due: October 5.**
- **Writing Assignment 3: Theory-Driven Proposal for a Structural Intervention (10%).** Drawing on the assigned readings and the literature reviewed in your previous two writing assignments, propose a theory-driven rationale for a structural intervention to reduce the burden of the condition you have chosen in your community. **5 pages, double-spaced, 1250 words. Due: October 26.**

4. Group Work: Design a Multi-Level Community Health Intervention (25%). In the field of community health, interventions are almost always designed by groups of people working in collaboration with one another. This assignment is intended to simulate that experience. Class sessions will be designated in which students can work together in their groups. This group work may be done online or in-person, mostly at the students' discretion (some of this group work will be done during in-person sessions at the instructor's direction). Working in groups, students will design a multi-level community health intervention, including a theory-driven logic model. To help you progress along the way to the final project, the logic model will be required earlier (**due: November 25**). Students will present this work in written form and in oral presentation. **10 pages, double-spaced, 2400 words. Due: December 15, at the time of scheduled oral presentation.**

5. Oral Presentations (10%). Professionals working in the field of public health are often required to give oral presentations of their ideas, proposals, and projects. This assignment is intended to develop the necessary skills to do that well.

- **Individual Presentation (online - 5%).** Using VoiceThread (www.voicethread.com - free but requires registration), each student will prepare a brief (no more than 5 minutes) oral presentation. This presentation will be image-driven, with audio content based on Writing Assignment #2.
- **Group Presentation (in-person - 5%).** The culminating course assignment is a presentation that you will give with your group. Throughout the semester, time will be allotted during class for you to meet with in these groups. During the last two class sessions, each group will present an overview of their multi-level intervention and field questions from their peers about the proposed intervention. This presentation will be image-driven and no longer than 15 minutes.

Hybrid Course: Please note that this course is a hybrid course, meaning there will be a mix of online and in-person class sessions. There will be four (4) required in-person sessions and the rest of the course will happen online, in both synchronous and asynchronous sessions.

The required in-person meeting dates will be: **9/1, 10/13, 11/10, and 12/15**. These in-person meetings are required. If you do not attend, you will lose points toward your final grade. Students in the class may choose to meet more often in-person or online. We will meet in Room 216, at the Silberman Campus of Hunter College.

For the uninitiated, hybrid courses may seem easier (only 4 sessions! woo-hoo!). This is a mistake. If anything, hybrid courses are *more difficult* than traditional face-to-face classes because they require students to be more self-directed in their learning.

As with many online learning environments, the model here is "peer-to-peer" learning rather than "sage on the stage." In other words, the goal is that you will learn from each other as much or more than from the professor. Again, if this is a new way of learning, this may prove challenging at first, but ultimately is more rewarding and accrues greater long-term benefits.

Grading (relative weight of each component):

Class attendance (in-person)	5%
Class participation (online and in-person)	15%
Individual written assignments (online)	45%
Group Work (in-person; written & oral)	25%
Oral presentations (online and in-person)	10%
	100%

The grading scale for the course follows that in the Hunter Catalog:

Letter Grade	Quality Points	%
A+	4.0	97.5-100
A	4.0	92.5 - 97.4

A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C-	2.0	70.0 - 77.4
F	0	<70

Withdrawal: If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Last day to drop the course with the grade of "W": Monday, November 9.

Grade of incomplete: Incompletes are not recommended. Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade Appeals: When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance/Class Participation: This class will meet four (4) times in person. Each student is required to attend all in-person class meetings. This class will also meet throughout the semester online. Each student is required to participate online in the course several times a week, through the course management site (Canvas), through Twitter, and through Google Hangouts/Air. Each student, either

individually or in pairs, will be tasked with scheduling and leading at least one Google Hangout/Air for other students during the semester. These sessions will happen most every week at a time chosen by the students leading them. Assessment on this component is subjective and up to the instructor's discretion, but in general terms is an evaluation of a student's active participation in the online components of the course.

Late/Incomplete Submission of Assignments: Students should strive to submit assignments on the dates and times they are scheduled. In the event that this is not possible, late assignments will be accepted.

Make-ups, rewrites and extra credit: The goal of this MPH course is "mastery" over some difficult concepts. If students would like to rewrite an assignment because they believe it will help them develop mastery, then they will be given this opportunity. There will be no make-up or extra credit assignments.

Expectation of students:

- add a photo and some text to complete your profile on the course site;
- attend in-person class sessions;
- participate online (lead a Google Hangout, share information on the course hashtag via Twitter);
- connect with other people in the class (your peers are your 'co-learners' and you will help each other);
- manage your time well (the course goes very quickly, and it's easy to fall behind);
- check into the course site often (part of how you'll manage your time and keep up);
- do the readings, watch the videos, think critically;
- turn in assignments when they're due;
- don't get behind and don't get discouraged;
- have fun!

Expectations for the instructor:

- help students navigate instructional technology used in the class (course site, Google Hangouts, Twitter);
- set readings, videos and assignments for the entire course;
- evaluate and provide feedback on students mastery of course material;
- lead in-person class sessions;
- guide students in leadership skills to lead discussion sections.

Hunter College Institutional Policies
(http://www.hunter.cuny.edu/provost/reports-policies/policies)

Accessibility: "In compliance with the American Disability Act of 1990 (ADA) and with Section 504 of the Rehabilitation Act of 1973, Hunter College is committed to ensuring educational parity and accommodations for all students with documented disabilities and/or medical conditions. It is recommended that all students with documented disabilities (Emotional, Medical, Physical, and/or Learning) consult the Office of AccessABILITY, located in Room E1214B, to secure necessary academic accommodations. For further information and assistance, please call: (212) 772- 4857 or (212) 650-3230."

Academic integrity: "Hunter College regards acts of academic dishonesty (e.g., plagiarism, cheating on examinations, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures."

Help with research and writing: "Students must demonstrate consistently satisfactory written English in coursework. The Hunter College Writing Center provides tutoring to students across the curriculum and at all academic levels. For more information, see http://www.hunter.cuny.edu. In addition, the Teacher Placement Office in the School of Education offers a writing workshop during the semester and a series of free writing classes are offered to students who are in need of additional support in improving their writing skills. In both cases, stop by room I000 West for information and dates of workshops."

Course Schedule

Session	Format	Date	Topic	Readings & Assignments
1.	In-person	Sept 1	Introduction to Interventions & Group Selections	
2.	In-person	Sept 8	Colonialism, Healthism & Public Health & Group Work	Part 1. Fitzpatrick & Tinning
3.	Online	Sept 15	Inventing Health Issues	Part 2. Fitzpatrick & Tinning
Writing Assignment #1 Due. (online)				
4.	Online	Sept 22	Structure, Theory & the Limits of Individual Behavior Change	Additional online readings
5.	Online	Sept 29	Power, Participation, and Engaging Communities	Additional online readings
6.	Online	Oct. 6	Policy Interventions	Additional online readings
Writing Assignment #2 Due. (online)				
7.	Online	Oct 13	Impact & Effectiveness	Additional online readings
8.	Online	Oct 20	Successful & Failed Interventions	Additional online readings
Individual Oral Presentations Due. (online)				
9.	In-Person	Oct 27	Designing Interventions & Group Work	Part 3. Fitzpatrick & Tinning
Writing Assignment #3 Due. (online)				
10.	Online	Nov 3	Communication, Dissemination & Collaborative Decision-Making	Additional online readings
11.	Online	Nov 10	Theory-Driven Logic Models	Additional online readings
12.	Varies	Nov 17	Group Work	---
13.	Varies	Nov 24	Group Work	---
Logic Models Due. (online)				
	No Class	Nov 26	Thanksgiving Holiday	
14.	In-Person	Dec 1,8	Group Work	---
15.	In-Person	Dec 15	**Group Papers & Oral Presentations Due.** (in-person)	---

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
COMHE 75400:Research and Evaluation for Community Health
3 Credits
Fall 2015

Time and location	Thursdays 6:05-7:50pm; Silberman 329
Instructor	Jocelyn Apicello, DrPH, Adjunct Instructor Best contact: japicell@hunter.cuny.edu
Office hours	Thurs 5-6pm and 8-9pm; or by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Basic concepts, methods and approaches for evaluation research applied to community health education and health-related programs through a critical review of literature and a program evaluation design.
Course prerequisites	15 credits in program including PH 75000 or PH 75100, PH 75500, COMHE 75000, COMHE 75100, COMHE 75200
Course format	Seminar with in-class discussions and group work
Required reading and resources	Required book: Rossi PH, Lipsey MW, Freeman, HE. *Evaluation: A Systematic Approach*. 7th ed. Thousand Oaks (CA): Sage Publications; 2004. Additional required readings are indicated below in the course schedule and are posted on Blackboard when available.
Suggested reading and resources	Recommended book: Perrin, KM. *Principles of Evaluation and Research for Health Care Programs.* Burlington (MA): Jones & Bartlett Learning; 2015. Additional suggested readings are indicated in the course schedule and are posted on Blackboard when available.

Program Competencies	**Course Learning Objectives**	**Assessment Methods**
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply social and behavioral theory and evidence to assess, plan, implement and evaluate community health programs, policies and interventions that promote health equality and reduce inequities.	• Assess program theory based on evidence from the public health literature • Identify the role theory and logic models play in designing comprehensive impact evaluations • Use process measurement to differentiate between failures of theory and failures of implementation • Design processes to involve stakeholders in evaluation planning • Explain the relevance of program sponsors, decision makers, managers, users and community stakeholders to the evaluation process	• Quiz 1 and 2 • Classroom discussions • Measure development assignment • Qualitative interview guide assignment • Group evaluation plans
Use qualitative and quantitative research methods to generate insight into community health issues.	• Select a research design appropriate to the evaluation purpose, available resources, and situational concerns • Define and operationalize proximate and distal outcomes • Identify valid, reliable scales • Design and conduct stakeholder interviews	• Classroom discussions • Measure development assignment • Qualitative interview guide assignment • Group evaluation plans
Apply ethical, socially just, and culturally competent principles and strategies to community organizing, community health assessment, program planning, implementation and evaluation.	• Identify the criteria for human subjects' research • Articulate the purpose and function of the IRB process and be able to identify some of its historical context	• Quiz 1 • Informed consent assignment • CITI Social and Behavioral Training for Human Subjects • Group evaluation plans

Course Assessments

Quizzes:

Students are responsible for completing two (2) online quizzes during the semester. The quizzes will be posted on Blackboard one (1) week prior to being due. Quizzes are open book and are timed: once a student begins a quiz they will have a limited amount of time to complete it. Quiz answers must be posted via Blackboard. These are individual quizzes – collaboration with peers is not allowed. Quizzes are worth 20% of the student's final grade (10% each quiz).

Program evaluation plan:

The most appropriate method for acquiring evaluation skills is to work together with colleagues on an evaluation plan of a program. Throughout the entire semester students will work in small groups on the critical steps to developing a complete evaluation plan of a public health program. In the Spring 2015 semester of COMHE750 (Community Health Assessment), students were asked to develop a program proposal for a community in New York City. This semester, students will be assigned to groups with a former student of COMHE750 so you can make use of their proposed program.

That said, each student will complete several individual assignments and group assignments that culminate in a complete evaluation plan. Please see below for an explanation of these assignments. Also note: All assignments must be posted to Blackboard by the due date - no paper or email versions accepted.

Individual assignments:
1. Human subjects training: Complete the CITI Social and Behavioral Training for Human Subjects Research. Course available at: *www.citiprogram.org*. If you have previously completed the training and your report is still valid (i.e., within 2 years), you only have to submit your proof of completion (i.e., you do not have to take the course over again). This assignment is graded as Pass/Fail.

2. IRB consent form development: An important stage of conducting research with human subjects is to obtain informed consent. Students will be responsible for designing an informed consent form to conduct evaluation research of their group's program. Detailed instructions on how to complete this assignment are posted on Blackboard.

3. Measure development: A data collection instrument can only be as good as the measures within it. Based on your group's conceptual framework, select one concept and describe in 1-page maximum how you plan to measure the concept quantitatively. You must cite the literature and any reliability or validity data on the measure. Each group member must select a different concept to measure.

4. Qualitative interview guide: Qualitative interviewing requires a trained interviewer *and* a valid interview guide. Select two (2) concepts to explore qualitatively (one can be the same concept you developed a measure for in #3 above) and develop a brief (i.e., 1-page maximum) qualitative interview guide following the guidelines in the Hennick et al. reading.

Group assignments:
1. Defining the problem, description of the program and conceptual framework: Using the program from the Spring 2015 COMHE750 class, write a 2-page maximum paper that briefly covers background on the public health problem being addressed (with respect to the particular community being addressed);

identifies the objectives of the program; briefly describes the program; and develops a conceptual framework that shows how the program is expected to achieve the objectives (the conceptual framework does not count toward the 2-page limit).

2. Process evaluation plan: Your group will propose a process evaluation plan of the program. You will be responsible for defining purpose and objectives of the process evaluation; proposing one quantitative data collection methodology to achieve the objectives; and proposing one qualitative data collection methodology to achieve the objectives. Examples of your data collection instruments must be included. 4-page maximum (instruments do not count toward 4-page limit). More detailed instructions are posted on Blackboard.

3. Summative evaluation plan: Your group will propose a summative evaluation plan of the program. You will be responsible for defining purpose and objectives of the summative evaluation; identifying indicators for outputs, initial outcomes and intermediate outcomes; proposing a study design; identifying threats to validity; and discussing advantages and disadvantages of the methodology. 4-page maximum. More detailed instructions are posted on Blackboard.

4. Oral report on evaluation plan: Each group will report back to the class on their evaluation plans. These oral reports will simulate a briefing to the community board where your program and evaluation take place. Powerpoint is not expected, but is permissible. Groups will have 15 minutes to present the following: review of the public health problem; the program description; the conceptual framework; the process evaluation plan; and the summative evaluation plan. The last 2 sessions of the course are dedicated to these report backs.

Grading

Evaluation criteria

Quizzes are multiple choice and short answer and are assessed for accuracy. Written assignments are assessed based on content areas within each assignment, as laid out in this syllabus or in additional resources provided by the instructor that will be posted on Blackboard. Oral communication assignments are assessed based on the grading rubric posted on Blackboard.

The relative weight of each course component is as follows:

Assessment	Weight
Attendance/participation	15%
Quiz 1 and 2	20%
IRB consent form	5%
Measure development	5%
Qualitative interview guide	5%
Defining problem, program description and conceptual framework (group-based)	10%
Process evaluation plan (group-based)	15%
Summative evaluation plan (group-based)	15%
Presentation of evaluation plan (group-based)	10%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Students are expected to arrive to class on time, to be prepared for class, and to actively participate in class discussions and activities. Frequent absences, persistent lateness, failure to participate in class discussions/activities, or evidence of lack of preparation will result in a poor class participation grade (15%). If a student needs to miss a class, it should be communicated to the instructor in advance. Students who miss more than 2 classes may be required to submit written assignments to reflect their understanding of content discussed at the missed classes. Students are responsible for class content and assignments, even if they miss a class.

Late/incomplete submission of assignments

Assignments are due at the beginning of class on the date indicated in the syllabus; two points will be deducted for each day an assignment is late. If a student anticipates the need to turn in work late, please

negotiate an acceptable submission plan with the instructor at least *24 hours in advance* of the established due date. In case of emergencies, contact the instructor immediately.

Make-ups, rewrites, and extra credit

There is no extra credit in this course. Make-ups on assignments will be at the discretion of the instructor and, if instituted, will apply to all students in the class equally.

Expectations of students

The classroom is a community. It is important that everyone demonstrate mutual respect for one another and for any course guests or members of the larger community with whom they come into contact. Please turn off or silence cell phones when entering class and avoid text messaging, crosstalk, etc. Use of laptops is permitted but not encouraged. Classroom engagement and active participation is expected and when there is a screen open in front of a student there are more opportunities for disengagement or multi-tasking that could be reflected in the participation grade. We will strive to create an atmosphere of mutual learning, where inquiry, critical thinking, reflection, and discussion are welcome, even when they are uncomfortable. Students should be fully prepared to actively participate in discussion. Questions of clarification are appropriate, but it is *dis*respectful to classmates who have completed the reading to bog the discussion down with questions that reflect lack of preparation. Students are responsible for regularly checking the course website and Hunter email for course-related correspondence.

Expectations for the instructor

The instructor will provide regular announcements, reminders and suggestions on the course website. She will respond to student emails within 36 hours Monday through Friday. Grading and feedback of assignments will be completed within 2 weeks of the due date and returned electronically via Blackboard or email. Communication about grades and progress in the course will be given throughout the semester. The instructor will listen to all requests for grade changes or appeals and will take action if deemed appropriate and necessary. The instructor's teaching style is very discussion-oriented. Do not expect Powerpoint lectures. Critical thinking and articulation of the material during class discussions is the goal.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

Please note: This schedule and assignments are subject to change. Additional readings and handouts may be provided, and session topics and activities may be altered if necessary. If students do not actively participate in class discussion, written weekly responses or in-class quizzes will be assigned.

Please refer to Hunter's current academic calendar for important dates: http://www.hunter.cuny.edu/onestop/repository/files/registrar/Academic%20Calendar%20Fall%202015%20thru%20Spring%202016%20-Repaired-FINAL.pdf

	Date	Topic	Readings	Assignments & Due Dates
1	Aug 27	ONLINE CLASS: Evaluation and ethics. NOTE: This class session does NOT meet in-person. It is an on-line session.	• Harris, Ch 1, An introduction to public and community health evaluation, 1-18 • Perrin, Ch 2, Ethics, 29-51. • The Belmont Report, available at http://www.hhs.gov/ohrp/humansubjects/guidance/belmont.html	• Individual assignment #1 due: Human subjects training; due by 11:59 on Aug 28 (Fri) • "Meet" with your assigned group via discussion, text, email by 11:59 on Aug 28 (Fri)
2	Sept 3	Evaluation and research; Conceptual models	• Earp JA, Ennett ST. Conceptual models for health education research and practice. *Health Education Research, 1991*; 6: 163-77. • Rossi, Ch1; and from Ch 2, Tailoring evaluations, 52-61. • Perrin, Ch 1, Purpose, 1-28. • CDC Self Study Guide - ftp://ftp.cdc.gov/pub/Publications/mmwr/rr/rr4811.pdf	• Individual assignment #2 due: Informed consent form
---	Sept 10	NO CLASS	• Classes follow a Monday schedule	
3	Sept 17	Describing the program; Evaluability assessment	• Rossi, Ch 5, Expressing and assessing program theory, 133-168. • Harris, Ch 5, Designing the evaluation: describing the program, 79-86. • Parra-Medina D, Taylor D, Valois R, Rousseau M, Vincent M, Reinnger B. The Program Plan Index: an evaluation tool for assessing the quality of adolescent pregnancy prevention program plans. *Health Promot Pract.* 2003; 4(4): 375-84.	• Group assignment #1 due: Defining the problem, describing the program and conceptual model
4	Sept 24	Planning and focusing the evaluation;	• Holden and Zimmerman, Ch 2, Evaluation planning here and now, 7-32.	• Quiz 1 opens online (inclusive of Sept 24)

		Engaging stakeholders	• Rossi, from Ch 2, Tailoring evaluations, 31-52; Ch 3, Identifying issues and formulating questions, 77-100. • Liket KC, Rey-Garcia M, Maas KEH. Why aren't evaluations working and what to do about it: A framework for negotiating meaningful evaluation for nonprofits. *Am J Eval. 2014;* 35(2): 171-188.	
5	Oct 1	Measurement concepts	• Perrin, from Ch 5, Reliability and validity, 109-128. • Perrin, from Ch 7, Elements of research, 171-180. • Perrin, from Ch 8, Surveys, 212-218.	• Quiz 1 closes
6	Oct 8	Measurement concepts (cont'd)	• Perrin, from Ch 5, Reliability and validity, 128-135. • Perrin, from Ch 7, Elements of research, 180-188. • Conron KJ, Landers SJ, Reisner SL, Sell RL. Sex and gender in the US health surveillance system: a call to action. *Am J Public Health*. 2014; 104(6):970-976. • Additional reading TBA. *Recommended reading* • Chen HT. The bottom-up approach to integrative validity: a new perspective for program evaluation. *Eval Prog Plann.* 2010; 33: 205-214.	• Individual assignment #3 due: Measure development
7	Oct 15	Qualitative interviewing	• Hennick M, Hutter I, Bailey A. Ch 6, In-depth interviews. In *Qualitative research methods*. Thousand Oaks, CA: Sage; 2011, 109-132. • CDC focus group guide: http://www.cdc.gov/nccdphp/dnpa/socialmarketing/training/pdf/focusgroupguidelines.pdf • Perrin, from Ch 6, Qualitative data, 145-163. • Tong A, Sainsbury P, Craig J. Consolidated criteria for reporting qualitative research (COREQ): a 32-item checklist for interviews and focus groups.	
8	Oct 22	Process evaluation	• Rossi, Ch 6, 169-201 • Mowbray CT, Holter MC, Teague GB, Bybe D. Fidelity criteria: development, measurement, and validation. *Am J Eval*. 2003; 24(3): 315-340. • Additional reading TBA.	• Individual assignment #4 due: Qualitative interview guide
9	Oct 29	Outcome, impact and efficiency evaluations	• Rossi, from Ch 7, Measuring and Monitoring Program Outcomes 203-231. • Rossi, from Ch 8, Assessing Program Impact, 233-238 • Rossi, Ch 11, Assessing Program Efficiency	• Group assignment #2 due: Process evaluation plan • Quiz 2 opens online (inclusive of Oct 29)

10	Nov 5	Outcome, impact and efficiency evaluations: Reading the literature	• Weitzman BC, Mijanovich T, Silver D, Brecher C. Finding the impact in a messy intervention: using an integrated design to evaluate a comprehensive citywide health initiative. *Am J Eval*. 2009; 30(4): 495-514. • Woods ER, Bhaumik U, Sommer SJ et al. Community asthma initiative: evaluation of a quality improvement program for comprehensive asthma care. *Pediatrics*. 2012; 129(3): 465-472.Somerset S, Markwell K. Impact of a school-based food garden on attitudes and identification skills regarding vegetables and fruit: a 12-month *intervention* trial. *Public Health Nutr*. 2009; 12(2): 214-221.	• Quiz 2 closes • In-class exercise: Identifying strengths and weaknesses in published studies
11	Nov 12	Experimental, non-experimental and quasi-experimental research design	• Rossi, from Ch 8, Randomized field experiments, 239-262. • Rossi, Ch 9, Assessing Program Impact, 265-300. • West, S.G. Duan, N., Pequegnat, W., et al. (2008). Alternatives to the randomized controlled trial. *American Journal of Public Health*, 98(8):1359–1366. • Additional reading TBA.	
12	Nov 19	Research designs: reading the literature	• Long JA, Jahnle EC, Richardson DM, Loewenstein G, Volpp KG. Peer mentoring and financial incentives to improve glucose control in African American veterans: a randomized trial. *Ann of Inter Med*. 2012; 156(6): 416-424. • Robitaille Y, Fournier M, Laforest S, Gauvin L, Filiatrault J, Corriveau H. Effect of a fall prevention program on balance maintenance using a quasi-experimental design in real-world settings. *J Aging Health*. 2012; 24(5): 827-845.	• Group assignment #3 due: Summative evaluation plan • In class exercise: identifying threats to validity
13	Dec 3	Analyzing program effects	• Rossi, Ch 10, Detecting, interpreting and analyzing program effects • Additional readings TBA.	• In class exercise: interpreting evaluation results
14	Dec 10	Evaluation plan reports	None	• Group assignment #4 due: Oral reports on evaluation plan (groups 1-5)
15	Dec 17	Evaluation plan reports	None	• Group assignment #4 due: Oral reports on evaluation plan (groups 6-10) • Group peer evaluations due by Dec 17, midnight

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
COMHE 77085: Qualitative Research Methods in Public Health
3 Credits
Fall 2015

Time and location	Silberman Building, Rm 318, Wednesday, 6:05-7:50pm
Instructor	Diana Romero, PhD, MA Associate Professor, Hunter College 2180 Third Ave, New York, NY 10035, Rm. 542 Office: 212-396-7743 diana.romero@hunter.cuny.edu (preferred contact)
Office Hours	By appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course provides students with a foundation in qualitative research methods, with a focus on their application to public health practice and research. It covers qualitative research design, data collection, analysis, writing for publication, and dissemination of findings. Students will develop a qualitative research project of interest or work on an instructor-assigned project, develop an appropriate study design, conduct primary data collection and analysis, and write a research report.
Course prerequisites	PH 750/751 and PH 752/753, or permission of instructor
Course format	Lecture format with active student participation
Required reading and resources	- Ritchie J, Lewis J, Nicholls CM, Ormston R. *Qualitative Research Practice: A Guide for Social Science Students and Researchers*. London: Sage; 2014. (ISBN: 978-1446209127) - Morgan DL. *Focus Groups as Qualitative Research*. 2nd ed. Thousand Oaks, CA: Sage; 1997. (ISBN: 978-0761903437) - Auerbach C, Silverstein LB. *Qualitative Data: An Introduction to Coding and Analysis*. New York: New York University Press; 2003. (ISBN: 978-0814706954) - Additional readings noted on the course Blackboard site
Suggested reading and resources	- Corbin JM, Strauss AL. *Basics of Qualitative Research: Techniques and Procedures for Developing Grounded Theory*. 3rd ed. Los Angeles, CA: Sage; 2008. (*or* new 4th edition, 2014) - Miles MB, Huberman AM, Saldada J. *Qualitative Data Analysis: A Methods Sourcebook*. 3rd ed. Thousand Oaks, CA: Sage; 2013.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Understand basic theories, concepts, models and methods from a range of core and related disciplines and apply them to the design of PH research, policy and practice	• Describe the strengths and limitations of 4 different approaches to qualitative research (focus groups, in-depth interviews, observational methods, content/document analysis) • Discuss the concepts of reliability and validity and ways in which they are assessed in qualitative research	• Reflexive memo • Research proposal • Class attendance and participation
Design and evaluate interventions to prevent or control urban PH programs	• Design a study on a public health topic of interest that uses one of the qualitative methods described below	• Research proposal • Class attendance and participation
Use qualitative and quantitative research methods to generate insight into community health issues.	• Collect and/or analyze qualitative data produced from focus group, in-depth interview, ethnographic or a document-based study design	• Data collection instrument • Code book/data display/analytic memo • Final paper
Collect, analyze and interpret PH data	• Specify a central research focus that can appropriately be addressed using qualitative methods, and for which data can be collected, analyzed, and written up by the end of the semester	• Reflexive memo • Quant-Qual question exercise • Data collection instrument • Code book/data display/analytic memo • Class attendance and participation
Apply ethical and social justice principles and standards	• Demonstrate knowledge of the principles of the ethical conduct of research with human subjects • Carry out qualitative data collection according to the principles referred to above	• CITI certificate • Research proposal • Final paper • Class attendance and participation
Communicate PH	• Develop an original final report and	• Final presentation

information verbally and in writing	slide presentation of a qualitative research project and present it to the class and instructor	• Final paper • Class attendance and participation

Course Assessments and Grading

Students' understanding of the course material will be evaluated through a combination of in-class activities and participation, written assignments, and presentations described below. the relative weight for each assignment is noted below. Additional details about the assignments are posted on the course Blackboard site.

Grading	
Required (cannot do class research project without this)	CITI Certificate: The CITI is an online training program (www.citiprogram.org) that provides certification for human subjects research. Students must complete the Basic Module by the second class session and upload their certificate to the Bb folder. Please do not leave this until the "last minute" as the Basic Module requires approximately 3-4 hours to complete. (Note: it is divided into several sections that can be done at different times.)
5%	Reflexive Memo: A 1-2 page memo in which you reflect on how your social, economic, gender, educational and other positions/identities may influence, constrain, and shape your research question and how these understandings, assumptions, and points of reference may inform your work as you collect and analyze data for your research project.
10%	Quantitative-Qualitative Questions Exercise: Identification and critique of two close-ended questions
Hypothetical Grade (for feedback)	Central Research Focus and Methods Proposal (draft): A short (3-4 pp) proposal of the public health research topic you would like to investigate, the qualitative method you will use, and why it is best suited for this research project.
15%	Research Proposal: Revised proposal and with logistical details and timeline added.
10%	Data Collection Guide/Instrument
15%	Code book, data display, *or* analytic memo: Submit only 1 of 3 of these "steps" in the qualitative analysis process. (Depends on where the student is in the process.)
10%	Final PowerPoint Presentation: In-class presentation of project (data collection, analysis, and results).
25%	Final Paper: A complete write-up of the research question, methods, and results of the final project.
10%	Class Attendance and Participation: This pertains to an expectation of perfect attendance and *active class participation*.
100%	

Assignments are to be submitted in class on the day that they are due, unless the instructor has set up a folder on Blackboard where the assignment can be submitted *before* the start of class.

Final grades are based on the sum of assignment scores as described above. There will be no opportunity to do additional work for extra credit.

Guidelines for Written Assignments: All papers should be typed, double-spaced, spell-checked and proofread. Please use 1-inch margins all around and 11- or 12-point font. For identification purposes, please include your name, title of the assignment, course, term, and date. Print copies should be submitted for all assignments unless otherwise instructed. Use only AMA style for citing references. You may consult this link at guidelines on how to cite using the AMA style: http://www.lib.jmu.edu/citation/amaguide.pdf.

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an “unofficial withdrawal” (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation
Students are expected to attend *every* class session and complete the readings *prior to* each of the class sessions so as to be able to participate fully during the class. Students should also be prepared to be selected at random to lead class discussions on assigned readings and other course materials. The instructor should be notified in person or by email if an absence is unavoidable; excessive lateness may be considered equivalent to absence from class. It is the student's responsibility to obtain missed class notes and related information from a colleague. Assignments must be received by the due dates regardless of class attendance.

Late/incomplete submission of assignments
Fully completed assignments are due on the date indicated in this syllabus. A *full grade* will be deducted for each week an assignment is late. In case of emergency, please contact the instructor.

Make-ups, rewrites, and extra credit
No make-ups, rewrites, or extra credit opportunities will be allowed. In some cases, the instructor *may* permit rewrites for feedback only (ie, not for grade reconsideration), primarily based on the instructor's availability and the point in the course.

Use of Blackboard (Bb)
All assignments and course documents will be posted on Blackboard. Bb announcements and/or email will used to communicate new information and/or changes. It is the student's responsibility to check Bb frequently for such announcements. In addition, students should be aware that emails sent by the instructor via Bb will be automatically sent to the email address in the Bb system.

Use of Qualitative Software
The instructor recommends using Dedoose (Dedoose.com) which comes with a free one-month trial period, which should be adequate for the course final project as long as the trial begins immediately before data analysis commences. (Use of the software can be continued at approx. $10/month should the student decide to use it beyond the course.)

Expectations of students
Throughout this course, teaching and learning will take place through interactive lecturing utilizing seminar-like discussion of course material, presentations from the instructor and guest lecturers, and class exercises. To effectively learn and master the course material requires a class-by-class sequential approach that builds on skills and concepts. Therefore, students are expected to be prepared for each class by carefully reading the texts and doing the assignments. Students should be "active learners" ready to pose questions to the faculty and their classmates, as well as respond to questions asked of them. Attendance at all classes is required; therefore, students should notify the instructor if they anticipate any absences.

Use of any electronic devices in class must be limited to accessing the course materials under discussion in that session and taking notes. Under no circumstances should these devices be used for communication with others *within or outside of the classroom*. Students are expected to

be fully engaged with and participating in the class; thus, use of any devices that distract the student(s), instructor(s), and/or guest(s) will be considered intrusive and in violation of expected standards of conduct in the classroom. As such, the student may be asked to discontinue use of the device.

Additional expectations are listed below:
- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Know how to use library resources and citation tools.
- Show respect to everyone in the course.
- Be fully prepared to actively participate in discussion.
- Complete assignments by the due date.
- Regularly check the course website and official university email for course correspondence.
- When in doubt, ask questions and clarify course assignments and expectations.

Expectations for the instructor

Email correspondence
The instructor will try to respond to emails within a 24-hour period during the Monday through Friday work week. Students should not wait until a Friday to send an email if a response is needed before the following Monday. The instructor may respond over the weekend but it is not guaranteed. Responses that take more than a day during the work week may be due to special circumstances, such as the instructor is attending an out-of-town conference, the student's query is of a complex nature that requires consultation with others/obtaining additional information, etc.

Additional expectations are listed below:
- Provide regular announcements, reminders, and suggestions on Bb and in class
- Provide detailed feedback to students on class assignments
- Communicate about grades and progress in the course to the class as a whole and to individual students, as appropriate

Accessibility
Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity
Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

This syllabus and schedule is a *guide* for the course and is subject to change, particularly given the advanced level of the course. Changes will be announced in class and/or will be posted on the course Blackboard site. Also please consult the current academic calendar for important dates (eg, holidays, course drop/withdrawal, etc).

Class /Date	Topic	Readings and Assignments
1 9/2/15	Course overview and introduction: Qualitative research and its methodological tools	Ritchie et al, Ch 1: The Foundations of Qualitative Research Auerbach & Silverstein, Ch 1: Introducing Qualitative Hypothesis-Generating Research Recommended: Peshkin, Alan. The goodness of qualitative research. *Educational Researcher.* 1993;22:23-29. Ragin CC, Nagel J, White P. *Workshop on Scientific Foundations of Qualitative Research (7/11-12/03*). Washington, DC, National Science Foundation, 2004. http://www.nsf.gov/pubs/2004/nsf04219/nsf04219.pdf **DUE**: *For discussion in class*, write a few sentences about a research idea/question that you think can be explored with a qualitative research method.
2 9/9/15	Qualitative Study Design I: Research Questions	Ritchie et al, Ch 2: The Applications of Qualitative Methods to Social Research Auerbach & Silverstein, Ch 2: Designing Hypothesis-Generating Research Auerbach & Silverstein, Ch 3: Qualitative and Quantitative Research as Complementary Strategies Watt D. On becoming a qualitative researcher: The value of reflexivity. *The Qualitative Report*. 2007;12(1):82-101 Recommended: Corbin & Strauss, Ch 2: Practical Considerations **DUE:** Reflexive Memo and CITI certification
3 9/16/15	Qualitative Study Design II: Sampling Strategies	Ritchie et al, Ch 3: Design Issues Ritchie et al, Ch 5: Designing and Selecting Samples

		Recommended: Small ML. 'How many cases do I need?' On science and the logic of case selection in field-based research. *Ethnography*. 2009; 10(1): 5-38. **DUE**: Quant-Qual Questions Exercise (student-pair reviews on Bb)
2/23	NO CLASS (Yom Kippur) **(Get going with Morgan book [FGs])**	
4 9/30/15	Introduction to Data Collection Methods and Asking Open-Ended Questions	Ritchie et al, Ch 6: Designing Fieldwork (IDIs and FGs) Recommended: Ulin, Robinson & Tolley, Ch 4: Collecting Qualitative Data **DUE**: Central research focus and methods proposal draft
5 10/7/15	Data Collection I: Focus Groups	Morgan DL. *Focus Groups as Qualitative Research*. 2nd ed. Thousand Oaks, CA: Sage; 1997. [the *complete* handbook] Romero D, Kwan A, Swearingen J, Nestler S, Cohen N. Impact of the closure of a large urban medical center: A qualitative assessment. *Journal of Community Health*. 2012;37:982-994. Recommended: Ritchie et al, Ch 8: Focus Groups Morgan DL. Reconsidering the role of interaction in analyzing and reportinging focus groups. *Qual Health Res.* 2010;20:718-722. Shelley D, Cantrell MJ, Moon-Howard J, Ramjohn DQ, Vandevanter N. Three approaches to qualitative content analysis. *Qualitative Health Research*. 2005;15:1277-1288. <u>Recommended</u>: Offen N, Smith EA, Malone RE. "Willful misconduct": how the US government prevented tobacco-disabled veterans from obtaining disability pensions. *Am J Public Health*. 2010;100:1166-73. Almeida-Filho N, Kawachi I, Filho AP, Dachs JN. Research on Health Inequalities in Latin America and the Caribbean: Bibliometric Analysis (1971-2000) and Descriptive Content Analysis (1971-1995). *Am J Public Health*. 2003;93:2037-2043. Gilmore A, Collin J, Townsend J. Transnational tobacco company influence on tax policy during privatization of a state monopoly: British American Tobacco and Uzbekistan. *Am J Public Health*. 2007;97(11):2001-9.

		DISCUSS: student review of data collection instruments
9 11/4/15	Qualitative Data Analysis I: Approaches & Techniques	Auerbach & Silverstein, Ch 4: Coding 1—The Basic Ideas Corbin & Strauss, Ch 6: Memos & Diagrams <u>Recommended</u>: Ritchie et al, Ch 10: Analysis: Principles and Processes
10 11/11/15	Qualitative Data Analysis II: From Data Reduction & Analysis to Results	Auerbach & Silverstein, Ch 5: Coding 2—The Mechanics *(Phase 1: Making the Text Manageable)* Auerbach & Silverstein, Ch 6: Coding 2—The Mechanics *(Phase 2: Hearing What Was Said)* Auerbach & Silverstein, Ch 7: Coding 2—The Mechanics *(Phase 3: Developing Theory)* <u>Recommended</u>: Ritchie et al, Ch 11: Analysis in Practice Miles, Huberman, Saldana Ch 11: Drawing and Verifying Conclusions, p. 275-322 **DUE**: Code book (***or*** 1 of 2 other options due next week)
11 11/18/15	Qualitative Data Analysis III: Writing	Ritchie et al, Ch 13: Writing Up Qualitative Research Miller DL, Creswell JW, Olander LS. Writing and retelling multiple ethnographic tales of a soup kitchen for the homeless. *Qualitative Inquiry.* 1998;4:469-491. [Ethnography; Writing <-> Interpretation; different yet non-contradictory findings] <u>Recommended</u>: Corbin & Strauss, Ch 13: Writing thesis, monographs, & giving talks, p. 275-295. Wolcott HF. *Writing Up Qualitative Research*. 3rd ed. Los Angeles: Sage; 2009. Ulin, Robinson & Tolley, Ch 7: Putting It Into Words: Reporting Qualitative Research Results **DUE**: Data display or analytic memo (***if*** did not submit codebook last week)

12 11/25/15	Generalization and Validity (a.k.a. Credibility, Truthfulness)	Auerbach & Silverstein, Ch 8: Convincing Other People: The Issues Formerly Known as Reliability, Validity and Generalizability Ritchie et al, Ch 12: Generalising from Qualitative Research Maxwell JA. Understanding and validity in qualitative research (Ch. 2). In Huberman AM, Miles MB, eds. *The Qualitative Researcher's Companion*. Thousand Oaks, CA: Sage; 2002.
13 12/2/15	Dissemination of Findings, Research Ethics, and Other Reflections on Qualitative Research	Ritchie et al, Ch 4: Ethical Considerations in Qualitative Research Baum F. Researching public health: behind the qualitative-quantitative methodological debate. *Soc Sci Med*. 1995;40:459-68. Newman KS. Qualitative research on the frontlines of controversy. *Soc Meth Res*. 2002; 31:123-130. <u>Recommended</u>: Ulin, Robinson & Tolley, Ch 8: Disseminating Qualitative Research Babbie E. Laud Humphreys and research ethics. *International Journal of Sociology and Social Policy*. 2004; 24: 12-19. Nardi PM. "The Breastplate of Righteousness": Twenty-five years after Laud Humphreys' tearoom trade: Impersonal sex in public places. *J Homosexuality*. 1995;30:1-9. Glesne C. But is it ethical? Learning to do it right. (Ch. 6). *Becoming Qualitative Researchers: An Introduction*. 3rd ed. Boston: Pearson, 2006.
14 12/9/15	Student Research Projects	**DUE:** Student Presentations (15 min)
15 12/16/15	Student Research Projects	**DUE:** Student Presentations (15 min) **FINAL PAPER DUE Mon, 12/21/15**

Last Updated September 2, 2015

Session	Due Date	Assignment
Session 1	9/2/15	- Assigned readings - Bring research idea to class
Session 2	9/9/15	- Assigned readings - Reflexive Memo and CITI certificate
Session 3	9/16/15	- Assigned readings - Quant-Qual questions exercise (student-pair reviews on Bb)
Session 4	9/30/15	- Assigned readings - Central Research Focus and Methods Proposal (draft)
Session 5	10/7/15	- Assigned readings
Session 6	10/14/15	- Assigned readings - Central Research Focus and Methods Proposal (revised)
Session 7	10/21/15	- Assigned readings - Data Collection Instrument (student-pair reviews on Bb)
Session 8	10/28/15	- Assigned readings - Discussion: student reviews of data collection instruments
Session 9	11/4/15	- Assigned readings
Session 10	11/11/15 (Choose **either** this assignment **or** 1 of the 2 for next week)	- Assigned readings - Code Book (code families and sub-code definitions developed *up to this point)*
Session 11	11/18/15	- Assigned readings - Data Display *or* Analytic Memo (types of data analysis processes, for where ever you are *at this point*)
Session 12	11/25/15	- Assigned readings
Session 13	12/2/15	- Assigned readings
Session 14	12/9/15	Final Project PowerPoint Presentations (15 min)
Session 15	12/16/15	Final Project PowerPoint Presentations (15 min) **FINAL PAPER DUE / /2015**

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
EOHS 70N02: Advanced Methods in Industrial Hygiene
4 Credits
Fall 2015

Time and location	Thursday 6:05PM - 9:45PM Silberman 318
Instructor	Dr. Brian Pavilonis, Ph.D. Silberman Room 721 212-396-7739 Bp305@hunter.cuny.edu (preferred method of contacting me)
Office hours	Monday and Wednesday 4:00P,M – 6:00 PM
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This advanced industrial hygiene course examines methods for assessing physical hazards and occupational controls of workplace hazards, including noise, radiation (ionizing and non-ionizing), vibration, thermal stress, and pressure. Students examine potential worker exposure to physical agents, assess exposure to physical agents, determine when physical agents may be hazardous to workers, and recommend strategies for controlling exposures, where necessary. The course also explores the fundamentals of design, operation and evaluation of air moving systems for local and dilution exhaust ventilation systems.
Course prerequisites	PH 75400, EOHS 70200 and EOHS 75700 or EOHS advisor approval.
Course format	Weekly in-class lecture and laboratory demonstrations
Required reading and resources	• Fundamentals of Industrial Hygiene, Author: Barbara Plog, Publisher: National Safety Council, Edition: 6th, Year Published: 2012 • Ventilation for Control of the Work Environment, Authors: William A. Burgess, Michael J. Ellenbecker, Robert D. Treitman, Edition: 2nd
Suggested reading and resources	Supplemental reading assignments will be posted on Blackboard or available online. It is the student's responsibility to keep track of supplemental reading assignments.

Last Updated August 6, 2015

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be assessed as part of the following course assignments:
1. Apply the core functions of PH practice (assessment, policy development, and assurance)	• Interpret and apply applicable occupational and environmental regulations in order to recognize, evaluate and control hazards in the workplace. • Apply course information, engineering design considerations and system performance factors to propose effective ventilation system designs to control specific airborne occupational exposure hazards.	All assignments Test 1 and 2
2. Understand basic theories, concepts, models and methods from a range of core and related disciplines and apply them to the design of PH research, policy, and practice.	• Describe the basic properties and health effects of physical hazards • Understand the scientific disciplines that contribute to the ability to recognize and control occupational exposures that may lead to work-related diseases.	Assignments 1-3; 6 Test 1 and 2
3. Use basic statistical and informatics techniques	• Develop an understanding of static, velocity, and total pressures and how they relate to ventilation system efficiency • Develop ability to recognize and correct ventilation system deficiencies based on design performance. • Understand and apply the basic principles of assessment and control of physical hazards in the workplace. • Apply industrial hygiene formulae used to quantify exposures to physical agents and effectiveness of control measures	All assignments Test 1 and 2
4. Explain key social, behavioral, biomedical and environmental determinants of and inequities in health and disease across the lifespan in urban settings	• Apply preventive control strategies that greatly reduce these workplace exposures and prevent associated occupational disease.	Assignments 4-6 Test 2
5. Design and evaluate interventions to prevent or control urban PH problems	• Describe the hierarchy of controls designed to protect workers, and provide examples of each level of control. • Understand work processes, tasks and exposure factors that contribute to airborne exposure risk for workers and apply ventilation-based control principles to reduce these exposure risks. • Identify ventilation system design and performance issues that enhance control of airborne contaminants. • Be familiar with recognized design and performance considerations for effective and efficient operation of local and general exhaust ventilation systems. • Understand the proper function and apply methods to evaluate the effectiveness of hoods, ducts, transitions and fans.	Assignments 4-6 Test 2
6. Describe the legal foundations of the US PH system and its interrelationships with other systems (e.g. health care, education, environmental protection)	• Interpret and apply applicable occupational and environmental regulations with regard to the need for hazard assessment and engineering controls. • Gain familiarity with workplace regulatory requirements, consensus standards, and the basis of occupational exposure standards.	All assignments Test 1 and 2

Last Updated August 6, 2015

EOHS Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be assessed as part of the following course assignments:
1. Identify and describe environmental and occupational sources of chemical, biological, physical and/or safety (CBPS) hazards.	• Understand work processes, tasks and exposure factors that contribute to occupational exposure and apply control principles to reduce these exposure risks.	Assignments 1-3; 6 Test 1 and 2
2. Predict and prevent health, safety and environmental risks from processes, work tasks, the built environment and other economic and/or social activities	• Describe the basic properties and health effects of physical hazards • Understand, and to the extent possible become familiar with examples of common industrial processes, operations and manufacturing techniques found in the US. • Understand work processes, tasks and exposure factors that contribute to exposure risk for workers and apply control principles to reduce these exposure risks. • Understand the scientific disciplines that contribute to the ability to recognize and control occupational diseases.	All assignments Test 1 and 2
3. Evaluate the human health risks from CBPS hazards using qualitative, quantitative and/or instrumental assessment methods	• Describe routes of entry to chemicals and exposure to physical agents in the occupational environment • Be familiar with recognized design and performance considerations for effective and efficient operation of local and general exhaust ventilation systems.	Assignments 1-3; 6 Test 1 and 2
4. Recommend appropriate engineering, personal protection or administrative controls and policies for CBPS hazards and evaluate their effectiveness.	• Describe the hierarchy of controls designed to protect workers, and provide examples of each level of control. • Apply knowledge gained during this course to design a basic local exhaust ventilation system. • Apply course information, engineering design and performance considerations to propose effective ventilation system designs to control specific airborne environmental and occupational exposure hazards.	Assignments 1-3; 6 Test 1 and 2

Course Assessments

Two, equally weighted, take home exams will be given. Exams are due on the date listed below. Exams should be written legibly with all calculations shown. Grading will be based on accuracy of the answer and problem solving. Exams can be scanned and submitted via email or handed in to the instructor.

Six, equally weighted, homework assignments will be given throughout the course. You may drop the lowest grade. It is due prior to the start of class. You must show all your work and write legibly in order to receive full credit. We will spend a significant portion of class time going over the solutions to problems and you will be called on in class to present answers.

Grading

Evaluation criteria

Describe the grading methodology that will be used to assess performance in the class. If a rubric is not used, what method will be used to evaluate graded assignments?

The relative weight of each course component is as follows:

Assessment	Weight
Homework Assignments	30%
Test #1	30%
Test #2	30%
Participation	10%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty

generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Class attendance will be taken every session. Students must sign in at the beginning of class. 10% of the final grade is class participation. It is your responsibility to sign in every class period.

Late/incomplete submission of assignments

Homework and exams handed in 24 hours after the due date will be given 75% credit. No credit will be given for work handed in after 24 hours.

Make-ups, rewrites, and extra credit

No make-ups, rewrites, or extra credit will be allowed in the course.

Expectations of students

Students are expected to come to class prepared to discuss the lesson and homework assignments.

Please silence your cell phones prior to class the start of class. If it is an emergency and you need to make a phone call please quickly and quietly leave the class. Please refrain

from texting and checking email while in class as this is disruptive to the instructor and fellow students. Everyone should be respectful of each other's opinions and questions

Expectations for the instructor

I am available for extra help outside of class. Students are encouraged to stop by my office for help with exams and homework assignments. The classroom is a place for discussion and I welcome students questions about the topic that will be covered in the course.

I am available by email at Bp305@hunter.cuny.edu during business hours to answer questions by email. Please do not abuse the email privilege. Consult the syllabus, blackboard, and other course materials first for answers to your questions. Allow 24 to 48 hours for an email response. I cannot answer email while teaching, in meetings, and while I am working on research. I am often not available by email after business hours, on weekends, and during holidays.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

Please note that schedule is subject to change throughout the semester. The "Last Updated" Date in the header of the syllabus is meant to reference the current version of the syllabus and therefore should be updated if a change in schedule is made.

Please refer to the current academic calendar (available at hyperlink below) for important dates (for example: holidays, course drop, course withdrawal).
http://www.hunter.cuny.edu/onestop/repository/files/registrar/Academic%20Calendar%20Fall%202015%20thru%20Spring%202016%20-Repaired-FINAL.pdf

Session Number	Date of Session	Topic	Assigned Readings	Assignments Due
1	27-Aug	Introduction to physical hazards/ Noise	Plog Chapter 4	
2	3-Sep	Noise	Plog Chapter 9	
	10-Sep	No Class		
3	17-Sep	Ionizing radiation	Plog Chapter 10	Assignment #1
4	24-Sep	Non-ionizing radiation	Plog Chapter 11	
5	1-Oct	Thermal stress	Plog Chapter 12	Assignment #2
6	8-Oct	Ergonomics/ Vibration	Plog Chapter 13	
7	15-Oct	No Class Take home Test		
8	22-Oct	Introduction to ventilation/ Principles of airflow	Burgess Chapter 1 and 2	Exam #1
9	29-Oct	Airflow measurements/ General exhaust ventilation	Burgess Chapter 3 and 4	Assignment #3
10	5-Nov	Local exhaust ventilation- hood design Last day to drop course	Burgess Chapter 5	Assignment #4
11	12-Nov	Chemical laboratory ventilation	Burgess Chapter 7	
12	19-Nov	Fan selection	Burgess Chapter 10	Assignment #5
	26-Nov	No Class		
13	3-Dec	Design of single hood systems	Burgess Chapter 8	
14	10-Dec	Design of multiple hood systems	Burgess Chapter 9	Assignment #6
15	17-Dec	No Class Take home Test		
	23-Dec	No Class Take home Test		Exam #2

Last Updated July 23, 2015

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
EOHS 70200 Introduction to Occupational Safety and Health
3 Credits
Fall 2015

Time and location	Silberman, Room 326, Tuesdays from 6:05 PM to 7:50 PM
Instructor	Grace Sembajwe, ScD, MSc Office: Room 527 (Silberman, 2180 3rd Ave.) Office Phone: (212)396-7735 Email: gsembajw@hunter.cuny.edu
Office hours	By appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Introduction to basic concepts and issues of occupational safety and health, including recognition and control of chemical and physical hazards, and the regulations governing these hazards.
Course prerequisites	N/A
Course format	Introduction to basic concepts and issues of occupational safety and health, including recognition and control of chemical and physical hazards, and the regulations governing these hazards.
Required reading and resources	Levy and Wegman, eds., Occupational and Environmental Health: Recognizing and Preventing Disease and Injury, Oxford 6th edition, 2011. ISBN-13: 9780195397888 $ $60.79. [earlier editions acceptable] Selected reading for assignment 2 (select one): Jimmy Breslin, The Short Sweet Dream of Eduardo Gutierrez, Three Rivers Press, 2003 or David Von Drehle, Triangle: The Fire That Changed America, Grove Press, 2003. Supplemental reading assignments will be posted on BlackBoard, available online, or by handouts. It is the student's responsibility to keep track of supplemental reading assignments.
Suggested reading	Plog, B. and Quinlan, P. (eds) Fundamentals of Industrial

and resources	Hygiene, 5th edition, National Safety Council. 2002. ISBN 9780879122164. $190. DiNardi, S. (ed.) The Occupational Environment—Its Evaluation, Control and Management 2nd edition. AIHA. 2003. ISBN 1931504431. Includes interactive CD, $125 AIHA non-member, $49 member. National Safety Council, Accident Prevention Manual, Engineering and Technology, 13th edition, NSC, 2009, ISBN: 9780879122812, $190. National Safety Council, Accident Prevention Manual, Administration and Programs, 13th edition, NSC, 2009, ISBN: 9780879122805, $190.

Last Updated July 23, 2015

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply the public health core functions of assessment, policy development and assurance	• Explain the significance of key events in the history of occupational health in the US and identify individuals who made noteworthy contributions	• Class discussion (sessions 1-4), Assignment 2, Term paper • Midterm and Final
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Explain the role and interrelationships between the scientific disciplines that contribute to the recognition and control of occupational diseases	• Class discussion (sessions 1-7, 9), Assignment 2, Term paper • Midterm and Final
Adhere to ethical and social justice principles and standards	• Explain the ethical dilemmas facing occupational health safety professionals in addressing the challenges facing immigrant workers	• Class discussion (sessions 1-4, 10-14), Assignment 2, Term paper • Midterm and Final
Interpret and analyze public health literature and apply evidence-based research	• Explain the origin, scientific basis, implementation, strengths and weaknesses of exposure criteria and standards, including occupational exposure limits, for priority hazards, such as noise, asbestos, silica, lead and mercury	• Class discussion (sessions 1-7, 9, 12-14), Assignment 2, Term paper • Midterm and Final
Apply basic statistical and informatics techniques	• Calculate and interpret basic measures of workplace injury, illness and mortality including incidence rates from BLS and other data systems • Analyze the uses and limitations of existing data systems for determining the burden of occupational injury and illness	• Class discussion (sessions 1-7), Assignment 2, Term paper • Midterm and Final

Explain how social, behavioral, biomedical and environmental determinants affect population health	• Explain the sources of inequality in occupational disease risk factors, exposures and outcomes and community and regulatory-based interventions for addressing them • Analyze the occupational health and safety challenges facing immigrant workers in the US and in NYC	• Class discussion (sessions 1-4, 10-14), Assignment 2, Term paper • Midterm and Final
Design and evaluate interventions to prevent or control public health problems	• Apply the hierarchy of controls designed to protect workers in specific work settings and analyze their respective strengths and weaknesses • Apply occupational safety and health regulations to reduce exposure risks arising from specific work processes • Assess the uses and limitations of Material Safety Data Sheets and the globally harmonized system of hazard communication.	• Class discussion (sessions 1-7, 9), Assignment 2, Term paper • Midterm and Final
Describe the legal foundations of the U.S. public health system and its interrelationships with other systems including health care, education and environmental protection	• Explain the basic legal infrastructure that exists for worker protection in the US, including worker's compensation, federal and state regulatory agencies and various consensus organizations • Evaluate the respective role that regulatory and non-regulatory organizations can play a role in monitoring and preventing occupational illness and injury • Explain key provisions of the major federal and state environmental and occupational health laws and regulations • Recommend appropriate legislative controls and updates to strengthen existing regulations	• Class discussion (sessions 1-7, 9-14), Assignment 2, Term paper • Midterm and Final

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Identify and describe environmental and occupational sources of chemical, biological, physical and/or safety (CBPS) hazards.	• Identify and classify the major chemical, biological, physical safety (CBPS) workplace hazards, and their sources • Explain the role and interrelationships between the scientific disciplines and professions that contribute to the recognition and control of occupational diseases.	• Class discussion (sessions 1-4, 9, 12, 13), Assignment 1 and 2, Term paper • Midterm and Final
Predict and prevent health, safety and environmental risks from processes, work tasks, the built environment and other economic and/or social activities	• Explain work flow processes that potentially contribute to chemical, biological, physical and safety exposures and hazards in key industries and work settings. • Develop work process flow charts for key industries.	• Class discussion (sessions 2, 5, 6, 7, 9-13), Assignment 1 and 2, Term paper • Midterm and Final
Evaluate the human health risks from CBPS hazards using qualitative, quantitative and/or instrumental assessment methods	• Describe routes of entry to chemicals and exposure to physical agents in the occupational environment	• Class discussion (sessions 2, 7, 9-13), Assignment 1 and 2, Term paper • Midterm and Final
Recommend appropriate engineering, personal protection or administrative controls and policies for CBPS hazards and evaluate their effectiveness.	• Apply the hierarchy of controls designed to protect workers, with specific examples of each level of control and analyze their respective strengths and weaknesses. • Interpret and apply occupational safety and health regulations to reduce exposure risks.	• Class discussion (sessions 1-4), Assignment 1 and 2, Term paper • Midterm and Final

Course Assessments

GRADING:
Attendance: 10
Midterm: 30
Final: 30
2 Assignments: 10 (5 points each)
Term Paper: 20

Attendance and participation: Students are expected to participate in online and in-class discussions.

Assignment 1 (overview)
Material Safety Data Sheet (MSDS) review (instructional handout to be posted on BB)
Are MSDSs informative, accurate and understandable? Students will work independently to select and review an MSDS for a commercial or retail chemical product (for example: gasoline, degreasing solvent, rust remover, graffiti remover, spray paint, oven cleaner, drain cleaner, and etc.) An instructional handout will be provided listing a series of questions the student will address in short answer format. The assignment will help students to identify the strengths and weaknesses of this chemical hazard information source and the impacts of a globally harmonized system on the MSDS process.

Assignment 2 (overview): Selected reading summary (instructional handout to be posted on BB)
Students will select one of the two books listed in the selected reading section above. An instructional handout will be provided that addresses safety issues and how they are described in the selected book. The student will answer a series of questions in short answer format.

Term Paper (Overview)
Students will work independently to research and prepare a paper of approximately 10 pages (double spaced with 1" margins). Select a particular occupational health or safety hazard and an industry where that hazard is found. You should aim to be as focused and specific as possible. The paper should address the following issues:

- Description of the hazard (chemical, physical properties, adverse health effects, toxicological and/or epidemiological information)
- Description of the industry and where the hazard exists in that industry
- Data showing the number of workers who are at risk and the number (or rate) of injuries or illnesses that are associated with the hazard
- The regulations and/or consensus organization recommendations pertaining to the hazard
- What, if any, improvements have been instituted, or can be instituted, to eliminate or mitigate the hazard.

- Include at least 5 different references, 3 from peer-reviewed journals.
- Internet citations are OK, but full web site address must be provided, and the site must be from a government agency or a university.
- Citations must follow the American Journal of Public Health style of papers. Refer to the Graduate Student Manual for additional information.
- Hardcopy of the paper is due in class December 11th, 2012.

Grading of the paper will be based on:

1. The presentation: did the paper follow the guidelines?
2. The cohesiveness of the argument: is there a logical flow to the paper, do the sections fit together, do the recommendations and conclusions follow from the information presented?
3. The extent to which the paper reflects an understanding of the material gleaned from the journals and other information sources.
4. Writing skills: grammar, spelling, punctuation (to the extent that they enhance or dampen understanding of the paper)

Goals: To introduce students to basic concepts and issues of occupational safety and health, including recognition and control of chemical and physical hazards and the regulations governing these hazards, within the larger context of work in the USA.

Grading

The relative weight of each course component is as follows:

Assessment	Weight
Attendance	10%
Midterm	30%
Final	30%
Assignments 1 and 2	10%
Term paper	20%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the

student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Students are expected to attend every class session and complete the readings prior to each of the class sessions so as to be able to participate fully during the class. The instructor should be notified by email or voicemail if an absence is unavoidable. It is the student's responsibility to obtain missed class notes and related information from a colleague. Assignments must be received by the due dates regardless of class attendance.

Late/incomplete submission of assignments

Assignments are due on the date indicated in this syllabus. A full grade will be deducted for each week an assignment is late. In case of emergency, please contact the instructor. Incomplete final grades for this course will NOT be granted unless the request is justified by a legitimate and documented emergency.

Make-ups, rewrites, and extra credit

There will be no opportunity to do additional work for extra credit.

Expectations of students

Class citizenship & rules of conduct
Cellphones and other electronic devices
Use of any electronic devices in class must be limited to accessing the course materials under discussion in that session and taking notes. Under no circumstances should these devices be used for communication with others within or outside of the classroom. Students are expected to be fully engaged with and participating in the class; thus, use of any devices that distract the student(s), instructor(s), and/or guest(s) will be considered intrusive and in violation of expected standards of conduct in the classroom. As such, the student may be asked to discontinue use of the device

Last Updated July 23, 2015

Expectations for the instructor

Email correspondence

The instructor will try to respond to emails within a 24-hour period during the standard Monday through Friday work week. Students should not wait until a Friday to send an email if a response is needed before the following Monday. The instructor may respond over the weekend but it is not guaranteed. Responses that take more than a day during the work week may be due to special circumstances, such as the instructor is attending an out-of-town conference, the student's query is of a complex nature that requires consultation with others/obtaining additional information, etc.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

Use of Blackboard
All assignments and course documents will be posted on Blackboard (Bb). Bb announcements and/or email will used to communicate new information and/or changes. It is the student's responsibility to check Bb frequently for such announcements.

Course/syllabus changes
This syllabus is a guide for the course and is subject to change. Changes will be announced in class and will be posted on the course Blackboard site.

Session	**Date**	**Topic**	**Reading**	**Assignment Due**
1	9/1	Introduction: The Historical Background The Social and Political Context The Occupational Health Professions	Reading: OEH ***6th edition Chap. 1***	
2	9/8	Recognition of Occupational Disease Toxicology and Epidemiology, Industrial Hygiene and Occupational Safety	Reading: OEH ***6th edition Chaps. 2,24,26,27***	

3	9/25 (Friday following a Tuesday schedule)	The Legal and Regulatory Framework: Worker's Compensation, Tort Litigation, Federal and State OSHA The OSHAct, NIOSH, Consensus Organizations Handout for Assignment 1: MSDS evaluation and review	Reading: OEH ***6th edition Chaps. 3, 4, 28, 30[pp. 611-620, 640-645, 660]*** OSH Act (available at www.osha.gov)	
4	9/29	Regulatory Framework (continued) Health and Safety Standards		**Topic selection for term paper due**

5	10/6	Criteria and Standards for selected substances: Fibrogenic dusts: Asbestos and silica	Reading: OEH ***6th edition Chap. 18*** NIOSH Criteria Documents (http://www.cdc.gov/niosh/critdoc2.html) OSHA Silica National Emphasis Program - 2008 OSHA Silica Special Emphasis Program - 1996 (see BlackBoard, "Bb" for additional links)	
6	10/13 **DISCUSS ONLINE**	Criteria and Standards of select substances: Heavy metals: lead and mercury	Reading: NIOSH Criteria Documents (see Bb for links)	**Assignment 1 Due:** MSDS evaluation and review
7	10/20	Criteria and Standards of select substances Organic solvents: MEK and methylene chloride Handout for assignment 2: Selected reading summary	Reading: NIOSH Criteria Documents (see Bb for links)	
8	10/27	**MIDTERM**		
9	11/3	Exam Review Physical hazards in the workplace: noise, heat stress, radiation	Reading: OEH ***6th edition Chap 12***	

10	11/10	Industry Safety and Health Profiles: Construction	Reading: OEH ***6th edition Chaps. 15, 36*** Construction Chartbook http://www.cpwr.com/rp-chartbook.html	
11	11/17	Industry Safety and Health Profiles: Health Care	Reading: OEH ***6th edition Chap 36***	
12	11/24	The Role of Labor Unions in Occupational Health	Reading: OEH ***6th edition Chaps. 32***	**Assignment 2 Due**: Selected reading summary
13	12/1	Emerging occupational groups and implications for safety and health: Immigrants Discussion: Triangle and Short Sweet Dreams	Reading: OEH ***6th edition Chap. 4***	
14	12/8	Safety and Health Programs: ANSI Z10, OHSAS 18001, OSHA VPP	Reading: ANSI Z10 and OHSAS 18001 summaries posted on BB	Term Paper Due
15	12/15	**FINAL EXAM**		

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

EOHS 70500 Environmental Chemistry

3 Credits - Fall 2015

Hunter College – City University of New York

Time and location	Thursday 8:00-9:45 pm, Room 324 Silberman
Instructor	Jack Caravanos, DrPH, CIH Professor, CUNY School of Public Health 2180 3rd Ave, Room 720, Phone 212-396-7780 jcaravan@hunter.cuny.edu
Office hours	Online and Thursday 4-6 pm in my office
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Basic review of inorganic and organic chemistry using environmental examples. Introduction of important chemistry principles as applied to air, water, soil, and industrial hygiene.
Course prerequisites	None
Course format	This is a lecture-based course presented in a 15-week format. All sessions are recorded and made available online through Blackboard.
Required Reading	• *Principles of Environmental Chemistry*, 2nd Edition, JE Girard, Jones and Bartlett, Sudbury, MA. Available at online. Most of the content of this text is found in the first edition of PEC. Students who purchase the first edition used will be allowed to use it, and instructed on the concordance of chapters and problems • *Quantitative Industrial Hygiene;* J. Caravanos*, ACGIH, Cinc. Ohio.* Available www.acgih.org
Suggested readings / resources	Posted online as needed.

ABET Program Objectives:

1. Learn about common industrial processes, operations and manufacturing techniques found in the US.
2. Develop ability to identify, describe qualitatively, and quantify agents, factors, and stressors generated by and/or associated with defined sources, unit operations, and/or processes.
3. Develop an understanding of the qualitative and quantitative aspects of exposure assessment, dose-response, and risk characterization based on applicable pathways and modes of entry.
4. Learn the fundamental aspects of safety and environmental health
5. Acquire the knowledge needed to attain recognized professional certification

MPH Competencies

6. Identify and classify chemical, biological and physical hazards.
7. Describe the migration of contaminants through various environmental compartments, such as air, water and soil, for purposes of determining the nature of the environmental health risk.
8. Identify and select the appropriate direct reading instruments and measurement units for the evaluation of chemical, biological and physical hazards in the workplace and urban environment.
9. Identify local and regulatory organizations that can play a role in environmental monitoring and disease prevention within communities and the workplace.

10. Use a computer spreadsheet program for data presentation and graphing.
11. Describe New York City's air quality, water quality, solid and hazardous waste management and occupational health programs

Specialization Competencies	**Course Learning Objectives**	**Assessment Methods**
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Identify and describe environmental and occupational sources of chemical, biological, physical and/or safety (CBPS) hazards.	Describe the sources, chemistry and material flow of the major environmental agents such as asbestos, heavy metals, petroleum hydrocarbons, PCB and common pesticides.	1. Hazard identification exercise following viewing of "monster crusher" video . 2. Online assessment video quiz (Lake Nyos) 3. Examination questions
Predict and prevent health, safety and environmental risks from processes, work tasks, the built environment and other economic and/or social activities	Describe the migration of contaminants through air, water and soil, for purposes of determining the nature of the environmental health risk.	1. Online assessment video quiz (Queens Aquifer Contamination Case Study) 2. Take home problem set 3. Examination questions
Evaluate the human health risks from CBPS hazards using qualitative, quantitative and/or instrumental assessment methods	Select and the appropriate measurement units for the evaluation of chemical, biological and physical hazards and interpret the health risks associated with levels found in the workplace and urban environment.	1. Online assessment video quiz (Minamata Case Study) 2. Case study – Urban Chromium Exposure 3. Examination questions

Course Assessments

There are 3 exams, weekly assignments and a final project.

Data Assignment:

On the first day of class you will be given an environmental topic to research. Each student must assemble tabular and graphical data on this topic and submit an interpretation through a narrated PowerPoint presentation. The format of the presentation should be 5 tables, figures, graphs with a written paragraph describing the findings. Grading will be based on format, quality of graphs and data representation, organization and effectiveness of presentation. Use PPTs "narration" feature to record your presentation. You will submit this through BB as either a narrated PPT or common video file (MP4, WMV or QuickTime)

Grading Criteria for Course

Exam 1,2,3	3	20%	60%
Assignments	10	2%	20%
Final Project	1	20%	20%
			100%

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation
This is a fully online course and attendance is not recorded. The synchronous (live) sessions are strongly recommended and students will be responsible for comments or notices made in these sessions. Each synchronous session is recorded for future viewing in the event you cannot attend the live sessions.

Late/incomplete submission of assignments
Late or incomplete assignments are accepted with penalty unless approved by instructor.

Make-ups, rewrites, and extra credit
There are no make-ups, rewrites, or extra credit allowed.

Expectations of students
- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Know how to use library resources and citation tools.
- Show respect to everyone in the course.
- Be fully prepared to actively participate in discussion and online forums.
- Complete all assignments by their assigned due date.
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted in the discussion board.
- Contact the professor directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.

Expectations for the instructor
- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during discussion
- Respond to student email within 24 hours
- Grading and feedback on assignments (when applicable) within 1 week after the due date.
- Communication about grades and progress in the course will be given through the course website.

Accessibility
Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

Refer to the current academic calendar for important dates.

Class	Date	Topic	Readings
1	Aug 27	Course Introduction / Basic Chemistry Principles and Terms; Env Units	PEC 1
2	Sept 3	Solubility - Henry's Law, Partition Coefficients, Solubility (online lesson - NO CLASS meeting)	PEC 1
3	Sept 17	Air Chemistry - Atmospheric chem, Greenhouse Gases, Ozone	PEC 2,3
4	Sept 24	Air Chemistry – photo oxidants, acid rain, Stoke's law	PEC 4, 5
5	Oct 1	**EXAMINATION #1 (online, no class meeting)**	
6	Oct 8	Industrial Hygiene Chemistry (conversions, Charles', Boyle's Law)	QIH
7	Oct 15	Industrial Hygiene Chem (analytical calculations; calculation of conversion factors)	QIH
8	Oct 22	Water Chem - Nitrogen, Phosphorus, BOD	PEC 7
9	Oct 29	Water Chem - Turbidity, Solids, Chlorine Chemistry	PEC 8
10	Nov 5	**EXAMINATION #2 (online, no class meeting)**	
11	Nov 12	Toxicological Chemistry - metals (Pb, Cd, Hg, Cr, As)	PEC 13
12	Nov 19	Toxicological Chemistry - pesticides, PCBs	PEC 14
13	Dec 3	Soil Chemistry / Petroleum Chemistry	PEC 17, 18
14	Dec 10	Hazardous Waste Chem - pyrolysis, waste treatment technologies	PEC
15	Dec 7	**EXAMINATION #3 (online, no class meeting)**	

Last Updated August 4, 2015

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
EOHS 745.00 Hazardous Materials & Waste Management
3 Credits
Fall 2015

Time and location	Wednesday, 6:05pm to 7:50pm, Silberman (2180 3rd Ave), Room 322
Instructor	Koshy Kayalikal Koshy, PhD Adjunct Assistant Professor, CUNY School of Public Health Phone 732-235-9459 koshyko@rutgers.edu (preferred contact) kkoshy@hunter.cuny.edu
Office hours	Wednesday 5:00PM to 6:00PM Silberman Library
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	A review of the sources, transportation and control of hazardous chemical wastes. Regulatory requirements, disposal methods and health effects will also be presented.
Course prerequisites	N/A
Course format	A review of the sources, transportation and control of hazardous chemical wastes. Regulatory requirements, disposal methods and health effects will also be presented.
Required reading and resources	See list
Suggested reading and resources	None

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to achieve increased competency in environmental and occupational health science.	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be assessed as part of the following course assignments:
1. Predict and prevent health, safety and environmental risks from processes, work tasks, environment and other economic and/or social activities.	• Identify and discuss the relevant aspects of hazardous materials management • Describe the regulatory role of the City and State in responding to a hazardous materials release incident • Recognize the principles of Superfund law and apply them to site cleanup and redevelopment. • Identify elements needed to create a site-specific Job Hazard Analysis (JHA) Checklist • Identify components of a site-specific Health and Safety Plan (HASP)	• Discussion Forum • Case Studies • Homework Assignment
2. Identify and describe environmental and occupational sources of chemical, biological, physical and/or safety (CBPS) hazards.	• Describe the root-causes of select chemical releases and identify federal legislation/enforcement actions to prevent similar future incidents. • Describe how the USEPA, USDOL-OSHA, and the USDOT collaborate to reduce impact of environmental incidents.	• Discussion Forum • Case Studies • Paper
3. Evaluate the human health risks from CBPS hazards using quantitative, qualitative and/or instrumental assessment methods.	• Identify the major elements of a Process Safety management (PSM) inspection • Describe the elements of an effective a Hazard Communication Program	• Discussion Forum • Case Studies • Assignment
4. Recommend appropriate engineering, personal protective or administrative controls and policies for CBPS hazards and evaluate effectiveness.	• Identify controls needed to reduce biological, chemical, and physical hazards at a worksite.	• Class project • Case Studies • Assignment

Required Reading:

1. Wardak, A., Gorman, M. E., Swami, N., & Rejeski, D. (2007). Environmental regulation of nanotechnology and the TSCA. *Technology and Society Magazine, IEEE*, *26*(2), 48-56.

2. Koch, L., & Ashford, N. A. (2006). Rethinking the role of information in chemicals policy: implications for TSCA and REACH. *Journal of Cleaner Production*, *14*(1), 31-46.

3. Bamberger, M., & Oswald, R. E. (2012). Impacts of gas drilling on human and animal health. *New solutions: A Journal of Environmental and Occupational Health Policy*, *22*(1), 51-77.

4. *Emergency Response Guidebook*. (2012). Neenah, WI: JJ Keller.

13. United States Department of Labor- Occupational Safety and Health Administration (2002). *Job Hazard Analysis*. Retrieved from https://www.osha.gov/Publications/osha3071.pdf?utm_source=rss&utm_medium=rss&utm_campaign=job-hazard-analysis-13

14. Ross, G. (2004). The public health implications of polychlorinated biphenyls (PCBs) in the environment. *Ecotoxicology and environmental safety*, *59*(3), 275-291.

Class Project:

Working in groups of 3 to 5, this assignment requires that you select an industry of your choice (eg, steel, paper, organic chemical, health care, etc.) for investigation. In 8-10 pages, describe their production and hazardous waste handling. Also, draw an accompanying schematic that shows the production and the points at which the waste are produced and where the waste goes, that is, how the waste is managed.

Prior to October 7, you must e-mail me your desired topic and your team mates (have one person send me the e-mail, copying the other team mates).

Class project is due on November 25. During week twelve, your group will give a short presentation on your findings.

The written report must include the following:

- Title page (include name, course information, date). The last names of the members MUST be printed in bold, 18 font type on the top right corner of the Cover (first) page.
- Table of Contents page (i.e. list title of paper, contents and tables and figures used in report). Paginate

- Tables, Figures, Illustrations etc. with a write-up for each on the same page using a portrait page setup. Write-up must address the Table/Figure above and provide an interpretation.
- Professional style reference list either at the bottom of each page or as a list at the end.
- Document must be one integrated electronic document. Cut and paste figures into a Word file and paginate as one document. The first T/F should be page one (hint: create a new section).
- Tables/Figures must proceed from general to specific and should temporal and spatial variables. Do not use all graphs or all figures (variety is desired).
- Cite all references using a professional style (i.e. APA or APHA style is strongly recommended)
- No plastic binders/covers; use plain white paper and stapled at the top.
- All pages, except schematics, should be in Portrait format (not landscape) and single spaced. Maximize graphical images.

The group presentation must include the following:

- Every member of the group should be involved in the oral presentation
- Must use electronic media (PowerPoint)
- Presentation should be well organized
- Be prepared to answer questions at the conclusion of the presentation

Presentation Grade:
75% written report
25% oral presentation

Course Assessments
Details about the assignments and grading criteria can be found on the course website

Case Studies: Students will review case studies

Discussion Forum: We will discuss the assigned learning resources. Students are expected to review the materials before class and participate in the discussion.

Class Project: Students will select an industry of their choice for investigation. Working in groups of 3 to 5, students will describe the production and hazardous waste handling in an 8-10 page paper and present their finding as a group presentation (see *class project*).

Exams: Retention and application of course materials are assessed through two exams, that are equally weighed.

Grading

Evaluation criteria
All assignments will be assessed based upon a rubric found on the course website. Specific information about grading criteria will be distributed with the assignment.

The relative weight of each course component is as follows:

Exam #1	25%
Exam #2	25%
Group Project and Presentation	30%
Homework Assignments	15%
Class Participation	5%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation
Expect to actively contribute to the discussion and complete and submit all assignments by posted due dates. Missed assignments or lack of discussion participation not only affect the individual student, but they also affect the class as a whole due to the high degree of interaction within the course.

Late/incomplete submission of assignments
Late or incomplete assignments are not accepted.

Make-ups, rewrites, and extra credit
There are no make-ups, rewrites, or extra credit allowed.

Expectations of students
- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Know how to use library resources and citation tools.
- Show respect to everyone in the course.

- Be fully prepared to actively participate in discussion.
- Complete all assignments by their assigned due date. No credit for work completed after the due date.
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Regularly check the course website and official university email for course correspondence.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted in the discussion board.
- Contact the professor directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.

Expectations for the instructor

- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during discussion
- Respond to student email within 24 hours.
- Grading and feedback on assignments within 1 week of the due date.
- Communication about grades and progress in the course will be given through the course website.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule
This schedule may change as the semester progresses. Refer to the current academic calendar for important dates.

Session	Date	Topic	Readings/Resources	Assessment
1	9/2	Course Overview Introduction to Hazardous Materials & Waste Management	5, 7	Discussion
2	9/9	What are hazardous materials (waste)?	1, 11	Discussion Case Study 1
3	9/16	Toxicity/Toxicology 9/16 - Last day to drop without a grade of "W"	2, 6	Discussion
4	9/30	RCRA	12, 14	Discussion
5	10/7	CERCLA and SARA	11	Discussion Case Study 2
6	10/14	USEPA/Enforcement of RCRA	Class hand-out	Discussion Case Study 3
7	10/21	Transportation of Hazardous Materials	4	Discussion Class Exercise
8	10/28	Exam #1		Exam
9	11/4	Process Safety Management (PSM) 11/9 - Last day to withdraw with a grade of 'W'	12	Case Study Case Study 4
10	11/11	Pollution Prevention (P2)	3,8, 9	Discussion Case Study 5
11	11/18	Industrial Hygiene /Worker Safety	13	Case Study 6 Class Exercise
12	11/25	Industrial Hygiene/Worker Safety	13	Case Study 6 Class Exercise
13	12/2	Remedial Techniques-Student Presentation	13	Student Presentations
14	12/9	Industrial Hygiene/Worker Safety	13	Case Study 6 Class Exercise
15	12/16	Exam #2		Exam

Last Updated July 23, 2015

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
EPI 75500 Epidemiology of Chronic Diseases
3 Credits
Fall 2015

Time and location	8:00-9:45pm Silberman, C05
Instructor	C Mary Schooling, PhD Email: mschooli@hunter.cuny.edu Phone: mschooli@hunter.cuny.edu
Office hours	Tuesday, 4-6pm Room 545, 2180 Third Avenue, New York or by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course provides students with epidemiological background information for the most common chronic disease conditions. In addition, the course provides students with hands on experience to characterize the frequency and impact of chronic diseases and their risk factors in New York City (NYC) using public data available through the Department of Health and Mental Hygiene.
Course prerequisites	PH 75000/PH 75100 and PH 75200/PH 75300
Course format	Lectures
Required reading and resources	
Suggested reading and resources	Please see course schedule for week by week readings

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply the core functions of PH practice (assessment, policy development, and assurance)	1. Describe the burden of chronic diseases, nationally and globally 2. Describe global policy action on chronic diseases 3. Describe issues with the assessment of chronic disease burden 4. Place chronic diseases within a temporal and geo-ethnic context	1. Reaction paper 1 2. Reaction paper 2 3. Reaction paper 1 4. Reaction papers 3, 4 and 5
Understand basic theories, concepts, models and methods from a range of core and related disciplines	1. Identify risk factors associated with specific chronic diseases 2. Describe the etiology of chronic diseases and identify any gaps	1. Reaction paper 6 2. Reaction paper 7
Interpret and apply the PH literature	1. Read and critique epidemiologic and other public health literature effectively 2. Draw appropriate inferences from epidemiologic data, using established principles and guidelines 3. Identify primary and secondary prevention strategies for these diseases.	1. Paper Introduction 2. Paper Discussion 3. Reaction papers 8, 9,10,11,12,13
Communicate PH information verbally and in writing	1. Summarize the evidence concerning a major modifiable risk factor for a key non-communicable disease	1. Paper Results

Course Assessments

This course will be assessed based on reaction papers (13), a paper, a presentation and participation. The reaction paper should synthesize and critically evaluate key theoretical, methodological and/or substantive contributions of the readings, along with a few questions for clarification and discussion. This may consist of identifying questions that the readings provoke; critiquing problematic assumptions, logic, and measurement; discussing theoretical and empirical advances; and considering ideas for future directions. Please reference all statements of fact. Please format as single-spaced, typed, 12-point Times Roman font with 1-inch margins. Each presentation should last about 10 minutes.

The paper will be a manuscript. Students will work on the sections of the manuscript in steps: (1) topic description (no more than 2 pages), (2) introduction (2 pages) (3) methods (3 pages) (4) results (no more than 5 pages) (5) Discussion (5 pages). Complete paper (no more than 15 pages, excluding references and tables). At each step, students will turn in to the instructor and their fellow students the written document to receive feedback. Students should be considerate in giving feedback to their colleagues, and can do so either orally or by writing comments. Please reference all statements of fact. Each section of the paper, as well as the final completed paper, will be assigned a numeric grade by the instructor. Late assignments will lose 5 points out of 100 for each day they are late (including weekends and holidays).

Grading

Evaluation criteria

In general reaction papers, the paper and the presentation will be evaluated according to their demonstration of a) grasp of the topic, b) identification of the key points, c) synthesis of the material, and d) explanation of the implications for practice. Participation will be evaluated according to contribution to the discussion.

Grading rubrics for the assessments

GRADING RUBRICS	(A+ to A-)	(B+ to B-)	(C+ to C)	(F)
Reaction papers, paper and presentation	Provides a comprehensive and critical synthesis of the topic with appropriate examples and discussion of their implications	Identifies the implications of the key points in the topic, provides some critical apprasial	Describes the main topic	Inability to identify and describe the main topic

The relative weight of each course component is as follows:

Assessment	Weight
Reaction papers 13	39%
Topic description	5%
Introduction	10%
Methods	10%
Results	10%
Discussion	10%
Presentation	15%
Participation	6%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

All members of the class are expected to actively participate in class activities and discussions, and to complete assigned reading prior to class. If you are going to be late or have to miss a class, please contact me via email as far in advance as possible.

Late/incomplete submission of assignments

All assignments must be submitted via blackboard by 4PM on the day of the class. It is expected that your writing will be of graduate-level quality, presented in a readable and consistent manner. Assignments handed in after the due date without prior permission may not be accepted. If you anticipate the need to turn in work late, please contact me to negotiate a mutually acceptable submission plan in advance of the assignment's due date. Please do not ask for an extension on the due date of the assignment.

Make-ups, rewrites, and extra credit

Rewrites are permitted for reaction papers.

Last Updated July 23, 2015

Expectations of students

Students are required to attend each class, as participation in the discussion is essential to understanding the existing evidence on the topic and drawing judgments. In the case of illness, students should email me the day of class. In the case of unavoidable absence (e.g. work related conference), students should email me one week prior to the class. Students should prepare adequately for class, and participate appropriately. Appropriate participation includes:

- Active listening
- Building on what others say
- Staying focused on the topic of the session
- Clarifying the assumptions underlying opinions/statements
- Using the readings and epidemiologic ideas to develop arguments
- Constructively challenging the ideas of others, rather than accepting statements that are inadequately supported
- Allowing others to request explanation when needed
- Coming prepared, rather than relying on the group to explain difficult topics

Expectations for the instructor

Students can expect the instructor to provide access to the week-by-week readings (on blackboard), to provide substantial background information at each session as powerpoints available shortly after each session, and to facilitate discussion. Students can expect reaction papers to be graded within 1 week and other assignments to be graded within 2 weeks.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

This schedule & assignments are subject to change throughout the semester. Additional readings and handouts may be provided, and session topics and activities may be altered if necessary. Opportunities for group work will be scheduled during some sessions.

Session	Date	Topic	Readings	Assignment Due
1	**27 Aug**	Global burden of disease	1. GBD 2013 Mortality and Causes of Death Collaborators. . Global, regional, and national age-sex specific all-cause and cause-specific mortality for 240 causes of death, 1990-2013: a systematic analysis for the Global Burden of Disease Study 2013. Lancet. 2015 Jan 10;385(9963):117-71 2. Global Burden of Disease Study 2013 Collaborators. CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
EPI 77005: Epidemiological Methods IV
Credits:3
Fall 2015

Time and location	6:30 – 8:30 pm, GC, Room 3317
Instructor	C Mary Schooling, PhD Email: mschooli@hunter.cuny.edu Phone: mschooli@hunter.cuny.edu
Office hours	Tuesday, 4-6pm Room 545, 2180 Third Avenue, New York or by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This seminar is intended to help students integrate the concepts and methods of epidemiologic research with specific inquiry directed at understanding and improving the health of urban populations. This seminar requires students to develop proposals for epidemiologic research, identify strategies for data analysis that incorporate the lessons learned in Epidemiology Methods courses, and to examine the application of those strategies to existing research. This course helps to "bring together" the epidemiology theory and methods that have been discussed throughout the rest of curriculum.
Course prerequisites	EPI 75000/77000 or PUBH 82200 (CUNY Graduate Center)
Course format	Lectures and seminar
Required reading and resources	Modern Epidemiology, Rothman, Lash & Greenland, Lippincott Williams & Wilkins J Pearl, Causality, Models, Reasoning, and Inference Cambridge University Press
Suggested reading and resources	Please see course schedule for week by week readings

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Select epidemiologic study designs, data collection techniques, and analytic approaches suitable for different scientific inquiries	1. Describe the strengths, weaknesses and inconsistencies of the prevailing methodological paradigm in epidemiology. a. Explain the role of risk factors in DAGs 2. Discuss the role of science in epidemiology 3. Distinguish between methods aimed at description, risk stratification and causal inference 4. Explain the value of representativeness for each question 5. Explain the difference between operationalizing a research question in existing data and designing a study to answer a particular research question	1. Reaction paper 1, 2 2. Reaction paper 2 3. Session 3 discussion, reaction paper 4 and practical 1 4. Reaction paper 3 5. Research proposal
Critically read and evaluate the strengths and limitations of epidemiologic literature from a methodologic perspective	6. Interpret a meta-analysis, explain the relevance to interpretation of a single study 7. Summarize and present data to peers 8. Identify possible reasons for conflicting results across published quantitative studies. 9. Place instrumental variable studies and natural experiments, including discontinuities, within the pyramid of evidence. Describe how to conduct and interpret such studies. 10. Recap on the biases to which traditional observational studies are open and explain the different ways of addressing them, such as propensity scores and inverse probability weighting 11. Determine what further work is needed to adequately answer a research question and make public health/health decisions.	6. Reaction paper 7. Presentation 1 and 2 8. Paper 1 9. Session 12 and Practical 2 10. Reaction paper 6 11. Reaction paper 8 12. Reaction paper 9 13. Research proposal
Identify key threats to validity (internal and external) within and across epidemiologic studies	12. Compare and contrast research findings, and make public health decisions based on available evidence, even if it is incomplete. 13. Compare and contrasts the use of experimental vs. observational study designs	14. Paper 2 15. Reaction paper 5
Use statistical software to collect, retrieve, analyze and summarize epidemiologic data	16. Interpret a marginal structural model 17. Explain the use of g-estimation	16. Reaction paper 8 17. Reaction paper 9

Course Assessments

This course will be assessed based on reaction papers (9), papers (2), practicals (2), a proposal and participation. The reaction paper should synthesize and critically evaluate key theoretical, methodological and/or substantive contributions of the readings, along with a few questions for clarification and discussion. This may consist of identifying questions that the readings provoke; critiquing problematic assumptions, logic, and measurement; discussing theoretical and empirical advances; and considering ideas for future directions. The papers should give a thorough exposition of the topic with particular attention to the interpretation of any findings and the implications for public health. The proposal should be in NIH format. Please reference all statements of fact. Please format as single-spaced, typed, 12-point Times Roman font with 1-inch margins. Expected length is 1-2 pages for reaction papers and 5-10 pages for papers and the proposal. Each presentation should last about 10 minutes.

Grading

Evaluation criteria

In general papers and presentation will be evaluated according to their demonstration of a) grasp of the topic, b) identification of the key points, c) synthesis of the material, and d) explanation of the implications for practice. Participation will be evaluated according to contribution to the discussion. Practicals will be evaluated against a standard answer.

Grading rubrics for the assessments

GRADING RUBRICS	(A+ to A-)	(B+ to B-)	(C+ to C)	(F)
Reaction papers, papers, presentations	Provides a comprehensive synthesis of the topic with appropriate examples and discussion of their implications for practice	Identifies the implications of the key points in the topic, provides some examples and relevance to practise	Describes the main concepts in the topic	Inability to identify and describe the main concepts

The relative weight of each course component is as follows:

Assessment	Weight
Reaction papers 9	27%
Practicals 2	15%
Presentation 2	10%
Papers 2	18%
Participation	5%
Proposal	20%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9

B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

All members of the class are expected to actively participate in class activities and discussions, and to complete assigned reading prior to class. If you are going to be late or have to miss a class, please contact me via email as far in advance as possible.

Late/incomplete submission of assignments

All assignments must be submitted to me via blackboard by 4PM on the day of the class. It is expected that your writing will be of graduate-level quality, presented in a readable and consistent manner: 1.5-spaced, typewritten, with one-inch margins all around and proofread. Assignments handed in after the due date without prior permission may not be accepted. If you anticipate the need to turn in work late, please contact me to negotiate a mutually acceptable submission plan in advance of the assignment's due date. Please do not ask for an extension on the due date of the assignment.

Make-ups, rewrites, and extra credit

Rewrites are permitted for reaction papers.

Expectations of students

Students are required to attend each class, as participation in the discussion is essential to understanding the existing evidence on the topic and drawing judgments. In the case of illness, students should email me the day of class. In the case of unavoidable absence (e.g. work related conference), students should email me one

week prior to the class. Students should prepare adequately for class, and participate appropriately. Appropriate participation includes:

- Active listening
- Building on what others say
- Staying focused on the topic of the session
- Clarifying the assumptions underlying opinions/statements
- Using the readings and epidemiologic ideas to develop arguments
- Constructively challenging the ideas of others, rather than accepting statements that are inadequately supported
- Allowing others to request explanation when needed
- Coming prepared, rather than relying on the group to explain difficult topics

Expectations for the instructor

Students can expect the instructor to provide access to the week-by-week readings (on blackboard), to provide substantial background information at each session (apart from practicals) as powerpoints available shortly after each session, and to facilitate discussion. Students can expect reaction papers to be graded within 1 week and other assignments to be graded within 2 weeks.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

This schedule & assignments are subject to change throughout the semester. Additional readings and handouts may be provided, and session topics and activities may be altered if necessary. Opportunities for group work will be scheduled during some sessions.

Session	Date	Topic	Readings	Assignment Due
1	**28 Aug**	Current paradigms in epidemiology – the dispute	1. Chapter 1, Modern Epidemiology, Rothman, Lash & Greenland 2. Chapter 1, Causality, Pearl 3. https://epiresearch.org/about-us/archives/video-archives-2/the-scientific-approach-to-causal-inference/ 4. Int J Epidemiol. 1975 Sep;4(3):159-68. Popper's philosophy for epidemiologists. Buck C. 5. Am J Epidemiol. 2012 Dec 15;176(12):1071-7. Stories from the evolution of guidelines for causal inference in epidemiologic associations: 1953-1965. Blackburn H, Labarthe D.	Reaction paper 1 Identify the major differences between the approach of Pearl compared with that of Rothman and Rubin
2	**1 Sept**	Current paradigms in epidemiology – the implications	1. Chapter 1, Modern Epidemiology, Rothman, Lash & Greenland 2. Chapter 1, Causality, Pearl **3.** Phillips CV, Goodman KJ. Causal criteria and counterfactuals; nothing more (or less) than scientific common sense. Emerg Themes Epidemiol. 2006 May 26;3:5. 4. Pearl J, On the consistency rule in causal inference: axiom, definition, assumption, or theorem? .Epidemiology. 2010 Nov;21(6):872-5. 5. Cole SR, Frangakis CE. The consistency statement in causal inference: a definition or an assumption? Epidemiology. 2009 Jan;20(1):3-5.	Reaction paper 2 Describe the implications of the differences between these approaches
3	**8 Sept**	Data generating models and DAGs	1. Chapter 1, Causality, Pearl 2. Series on representativeness in August 2013 IJE and responses in Jan 2014	Reaction paper 3 1. Give an example of a data generating model and explain how to test it 2. Explain how risk factors relate to DAGs 3. Explain when representativeness is required for testing a model
4	**29 Sept**	Model generation The problem of induction, does big data help?	1. Andrew Gelman, Guido Imbens, Why ask Why? Forward Causal Inference and Reverse Causal Questions, NBER Working Paper No. 19614, Issued in November 2013 The problem of induction, does big data help? 2. Jordan B.Genes and non-mendelian diseases: dealing with complexity. Perspect Biol Med. 2014 Winter;57(1):118-31.	Reaction paper 4. 1. What is the difference between causes of effects and effects of causes 2. How does big data help us address these questions
5	**6 Oct**	Model generation EWAS and GWAS	1. Patel CJ, Rehkopf DH, Leppert JT, Bortz WM, Cullen MR, Chertow GM, Ioannidis JP Systematic evaluation of environmental and behavioural factors associated with all-cause mortality in the United States National Health and Nutrition Examination Survey. Int J Epidemiol. 2013 Dec;42(6):1795-810 2. Patel CJ, Cullen MR, Ioannidis JP, Butte AJ. Int J Epidemiol. 2012 Jun;41(3):828-43.	Reaction paper 5 What can we learn from EWAS and GWAS?

			Systematic evaluation of environmental factors: persistent pollutants and nutrients correlated with serum lipid levels. 3. Int J Epidemiol. 2012 Jun;41(3):843-6.Commentary: a step towards more comprehensive analyses of life course effects of mixtures of environmental factors. Porta M, Gasull M, Pumarega J. 4. CUNY SCHOOL OF PUBLIC HEALTH

Brooklyn College

HNSC 7110X

FUNDAMENTALS OF SOCIAL AND BEHAVIORAL HEALTH

FALL 2015
3 credits

Catalogue description: This course provides a topical and theoretical survey of social and behavioral issues in public health

Course meets: Fully online

Instructor: Professor Michele Greene, DrPH

Email: MGGreene@brooklyn.cuny.edu

Phone: 718-951-5000 ext. 2756 Please do NOT leave voicemail.

Office: 4109 Ingersoll Hall (referred to by building code IH or N)

Office Hours at Brooklyn College: 7:30 - 9:00 AM, Tuesday and Thursday

10:45 AM – 1:00 PM Tuesday and Thursday*

*Please note that on some Tuesdays and Thursdays I may not be available during these office hours because of meetings. If you plan to come in, please arrange a specific appointment time via email.

Required books: NA

Required materials: Required readings and assigned materials are posted on Blackboard.

This is an asynchronous, fully online course. This means that, as with a traditional class, you are responsible for weekly readings and activities. Unlike a traditional class, you are expected to independently access and view PowerPoint presentations when available, and to participate in online Discussion Boards (DB), as well as to complete activities and take exams online.

It is **YOUR** responsibility to successfully log onto Blackboard and participate in the course throughout the semester. If you need assistance, Brooklyn College's Information Technology Systems (ITS) Help Desk can be accessed by calling 718-677-6180 (9am-5pm), emailing helpdesk@brooklyn.cuny.edu or visiting http://dewey.brooklyn.cuny.edu/resources/index.php?#computing

The online technical components of the class will NOT be managed by the course instructor.

BB refers to Blackboard.

DB refers to Discussion Board.

HNSC 7110X

Course Competencies and Objectives

Program Competencies	Course Learning Objectives	Sessions
This course will help you to achieve the following competencies, which are expected of MPH graduates	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be addressed as part of the following course assignments:
Apply the public health core functions of assessment, policy development and assurance	• Summarize the history and evolution of the field of social and behavioral health. • State the difference across primary, secondary and tertiary prevention. • Describe the role of social and community factors, including respect for individuals and communities, including sensitivity to cultural issues, in the onset and the development, implementation, and evaluation of public health strategies, programs, research, and policies as solutions of public health problems • Describe opportunities, challenges, methods of applying an evidence-based, systems approach to program planning, including the application of relevant social ecological models to public health.	• Discussion board leader • Discussion board participant • Research paper
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Identify basic theories, concepts and models from a range of social and behavioral disciplines that are used in public	• Discussion board leader • Discussion board participant • Research paper • Exams

	health research and practice. • Describe leading theories of individual, interpersonal, group, organizational, and community-level change. • Compare and contrast different models and theories, including the health belief model, social cognitive theory, community organizational theories, the socio-ecological model, and systems science, with regard to social and behavioral change. • Describe how health and disease are socially constructed. • Summarize basic principles and methods of effective health communication and social marketing to create social and behavioral change. • Summarize the theory of diffusion of innovation. • Justify the relevance of at least one theory from fields others than public health that may inform solutions for a public health problem.	
Adhere to ethical and social justice principles and standards	• Relate contemporary public health problems to power and resource distribution, equity, diversity, sustainability, and intended and unintended consequences of interventions.	•
Interpret and analyze public health literature and apply evidence-based research	• Conduct a systematic literature review of a public health issue using bibliographic databases, government statistics and other information available on the Internet • Conduct a comprehensive literature search and compile the results thereof on a given social and behavioral health issue.	• Discussion board leader • Discussion board participant • Research paper

	• Critique the merits and limitations of a scientific article with relevance to social and behavioral health.	
Communicate public health information through oral, written, digital and visual presentation	• Develop skills for writing research papers using a scholarly format by employing a critical review and synthesis of the literature on a selected public health topic • Produce scientific writings pertaining to social and behavioral issues in public health.	• Research paper • PowerPoint presentation
Explain how social, behavioral, biomedical and environmental determinants affect population health	• Analyze the impact of individual, organizational, community, national, and global trends and interdependencies including, but not limited to, major economic, political, and environmental forces, that shape the health of U.S. urban populations, contribute to public health related problems, and influence systems. • Identify basic social and behavioral theories, concepts, and models that explain differences in the distribution of health and illness in the United States (including multiple perspectives on the meaning of key social concepts such as race, class, ethnicity, gender, and disability) • Describe the role of poverty, discrimination, and stress in health and disease. • Illustrate how multilevel and systems-oriented interventions can influence individual and population health outcomes.	• Discussion board leader • Discussion board participant • Research paper • Exams

	• Illustrate different dimensions of social and health inequity and design solutions that may help to address inequity. • Summarize key features of a life course perspective on health. • Apply different levels of the socio-ecological model to issues such as obesity, mental health, and injury and violence.	
Design and evaluate interventions to prevent or control public health problems	•	•
Engage and collaborate with diverse groups	• Describe the strengths and limitations of social and behavior-based interventions and policies for improving the health of urban populations with an emphasis on reducing health disparities.	• Discussion board leader • Discussion board participant • Research paper
Apply a framework for the planning, implementation and evaluation of public health programs, policies and interventions	•	•

Course Expectations and Assessment

Online courses can be challenging to master in the beginning. As a first step, you MUST thoroughly review both the syllabus and the other materials available in the "Syllabus & Other Course Information" folder on BB.

Technical requirements

- Access to an Internet connection with high bandwidth for streaming video, Flash and audio
- Mozilla Firefox or Microsoft Internet Explorer Internet browsers preferred
- Microsoft Office applications (Word, Excel, PowerPoint), version 2010 or later
- You may NOT use a Smartphone, tablet or any other device other than a computer to complete activities such as DB posts or exams.

For technical assistance with BB, please contact Brooklyn College's Information Technology Systems (ITS) Help Desk at 718-677-6180 (9am-5pm) or email helpdesk@brooklyn.cuny.edu

For basic information on how to use BB, go to:
http://dewey.brooklyn.cuny.edu/resources/index.php?#computing

Student expectations

- Students are expected to thoroughly understand all requirements, components, and procedures of this online class by carefully reviewing the syllabus and asking questions.

- Students are expected to successfully navigate the various components of Blackboard, including the Discussion Boards (henceforth referred to as DB), assignments, and exams, by dedicating an adequate amount of time (well in advance of any deadlines) to exploring the site and accessing the help resources available to them.

- Students are expected to log onto the course BB site several times a week to read announcements, retrieve and view course materials, and participate in the Discussion Boards.

- Students are expected to ensure that they have reliable and timely access to an adequate Internet connection. In other words, if your home computer crashes or Internet access fails, you will be able to use a university computer or a friend's computer to access course materials, submit postings and assignments, and take exams by the stated deadline. "My computer or Internet crashed (or BB froze) so I couldn't post to the Discussion Board" is not an acceptable excuse.

Suggestions for a successful online experience

Time management is crucial in an online class. It is expected you complete all the assigned readings for each of the class sessions, and that you join each week's DB prepared to thoughtfully read, write, and learn.

Please note that this marks a significant difference from some face-to-face courses, where you might be able to fall behind on reading and catch up before exams or papers are due without your grade being affected. Staying on schedule by doing the reading will make the class more enjoyable for you, make for a better learning experience, make for livelier DBs, and improve your grade.

Assessment

The way you are assessed and graded for an online class does not differ greatly from a face-to-face class. Your grade is derived from six basic course components, which are listed below and described in the table that follows:

1.	Discussion Board (DB) leader	10 points
2.	DB participant (9 articles + review of at least 1 student PowerPoint presentation)	20 points
3.	Midterm exam	15 points
4.	Final exam	15 points
5.	Paper	30 points
6.	Presentation based on the paper	10 points

Component	% of Grade	What is it?	Where is it?	What else should I know?
1. Discussion Board leader	10%	• As the DB leader, you must post a substantive original comment of at least 250 words and raise one open-ended question by MONDAY at 11:59pm. The criteria for DB leader points are displayed below.	• See the heading for DB leader assignments on BB.	• Everyone will act as DB leader once. • The DB leader readings were randomly assigned by the instructor. • DB posts are formal written assignments for a graduate level course and will be graded as if you had handed in your writing on a piece of paper (e.g., in the form of an essay or research paper). • See the criteria for grading the DB leader below. • If it is impossible for you to be a DB leader on the assigned date, it is your responsibility to find a classmate to switch with you. The instructor must be informed in writing by both students that the change was made and it is acceptable to both of you. Please submit the change at least one week prior to the due date of any changes.

2. Discussion Board participant	20%	• You are responsible for commenting on 9 articles plus at least 1 student PowerPoint presentation. **You must choose at least one article each week**. Each post of yours is worth 2% of your final grade. • You must post a minimum 100-word response to the leader's post. This may be in multiple posts. • The criteria for the DB participant points are displayed below. • All comments are due by 11:59pm on the Sunday at the end of the session week.	• Each week's DB is located in that week's folder. The first DB is in Session 3.	• DB participant responses are formal comments appropriate for a graduate level class and will be graded as if you had submitted it in writing to the professor. • Make sure to identify which article/post you are commenting on. • See the criteria for grading the DB participant below.
3. Midterm exam	15%	• A midterm exam will be given about halfway through the semester. The exam is based on assigned readings and films, PowerPoints, and discussions. There are no exemptions from the midterm. • The exam will consist of multiple choice/true-false questions. It is timed.	• The midterm will take place on the week of the 8th session. The exam will be posted on BB.	• Further information about the exam will be posted. • The exam must be completed individually and without referring to notes or reading materials
4. Final exam	15%	• A final exam will be given at the end of the semester. The exam is based on assigned readings and films, PowerPoints, and discussions for the subjects covered after the midterm exam. There are no exemptions from the final exam. • The exam will consist of multiple choice/true-false questions. It is timed. • The final exam is not cumulative.	• The final exam will be posted below the "Course Sessions" area of BB in a folder labeled "Final Exam."	• Further information about the exam will be posted. • The exam must be completed individually and without referring to notes or reading materials

5. Library research paper	30%	• The purpose of the research paper is to give each student the opportunity to conduct an in-depth examination of the application of social theory and concepts to a health problem of interest. A list of possible topics is provided in the BB section on the research paper. • Papers are expected to be at least 12 pages (3,000 words) including references. In preparation, students will submit a proposed topic description early in the semester, and a detailed outline and bibliography later on. Each paper should have a brief abstract. • All papers must be typed, double-spaced, spell-checked and proofread. Use 1-inch margins all around and 12-point font. Please follow the APA format for citing references. A useful website for information on scholarly writing styles is: <http://owl.english.purdue.edu/owl/resource/560/01/> • You must submit an electronic copy through SafeAssign on Blackboard by the due date.	• Carefully review the section on the research paper that is listed as "Research Paper" on BB.	• The completed research paper must be submitted no later than 11:59PM on November 22, 2015. • NO LATE PAPERS WILL BE ACCEPTED.

6. Research paper presentation	10%	• Each student will prepare a PowerPoint presentation based on the research paper. The presentation should contain about 20 slides. Make sure to include an introduction, a full description of the main topic, a summary of the literature review and suggestions for future research in the area. • You may provide narration with the Powerpoint or notes on the bottom of the page to summarize the main points of the slide. If you are showing data on the slide, your commentary or notes should summarize the data for others.		• The PowerPoint presentation is due on 11/29/15. • NO LATE PRESENTATIONS WILL BE ACCEPTED.

IMPORTANT: LATE ASSIGNMENTS ARE NOT ACCEPTED. All DB posts must be posted in the appropriate place on BB and all exams completed by the date and time specified. **NO EXCEPTIONS.**

Discussion Board (DB) Guide for Leaders and Participants

Overview

Discussion boards are an integral part of this online course. You must post EVERY WEEK, either as a Discussion Board leader or in response to a leader's post, as a DB participant. Note that I will not be responding to every post of every thread, but I will be popping in to each DB periodically to spur conversation or give feedback.

Specific requirements

Post Requirements	Discussion Board Leader	Discussion Board Participant
Frequency	• Each student will be a DB leader once during the semester. • You must post on the date indicated in the syllabus.	• Each week there is a DB leader (9 weeks), you must select one article to post about. The last post will be a comment or response to at least one student PowerPoint presentation. • You must post by the date indicated in the syllabus.
Length and Content	• Your entry should be a minimum of 250 words (one typed page). • Discuss the main points from the specified readings. • Pose one open-ended question for participants to respond to. • The post must be free of spelling, grammatical, and punctuation errors. • You must substantively comment on at least 3 of the participants' responses.	• The post must respond to the open-ended question or to an issue raised by the DB leader. • You must post a minimum 100-word response to the leader's post. This may be in multiple posts • The post must be free of spelling, grammatical and punctuation errors.

For Full Credit	• The post was substantive and captured important points from the articles. • The open-ended question prompted a scholarly discussion of the issues. • The post was constructive and differences of opinion are expressed in a collegial manner. • The response to the participants' comments is on topic and appropriate.	• Post showed ample evidence of having completed the relevant readings, as well as evidence that the participant thought about colleague's post. • Post was constructive and differences of opinion are expressed in a collegial manner.

In addition, ALL posts should demonstrate:

Quality of Thinking: Develop, support, and convey clear, focused, and substantive ideas in ways appropriate to topic, context, audience, and purpose

Organization and Coherence: Organize writing in clear, coherent sequences, making connections and transitions among ideas, paragraphs, and sentences

Sentence Structure and Word Choice: Use and vary sentence structures and word choices to achieve clear and fluent writing

Editing: Edit for correct spelling, grammar, punctuation, capitalization, paragraph structure, sentence construction, formatting, and, when appropriate, citations

Use of Researched Information: Use, integrate, and cite researched information and evidence

Reflection: If appropriate, evaluate and articulate one's own point of view supported by research and logic

Remember: DB posts are formal written assignments for a graduate-level course and will be graded as if you had handed in your writing on a piece of paper (e.g., in the form of an essay or research paper).

READING/ASSIGNMENT SCHEDULE & CALENDAR

This schedule, including assigned readings and due dates, is **SUBJECT TO REVISION** throughout the semester.

DB leader reviews are due on the Monday of each week.

DB participants' comments are due on the Sunday of each week.

Session	Dates	Topics	Required Readings and Multimedia Materials	Activities due by 11:59pm on due date
#1	8/31-9/6	Overview and introduction to the course.	1. National Research Council & Institute of Medicine (2013). *US Health in International Perspective: Shorter Lives, Poorer Health.* Washington, DC: The National Academies Press. Read the Summary on pages 1-9 at: http://www.nap.edu/openbook.php?record_id=13497&page=1 2. Braveman P. (2014). What are health disparities and health equity? We need to be clear. *Public Health Reports* 129: 5-8 (supplement 2). 3. Bassett M. (2015). #BlackLivesMatter — A Challenge to the Medical and Public Health Communities. *New England Journal of Medicine* 372:1085-1087. ➢ Carefully read http://library.brooklyn.cuny.edu/resources/loop/research.php?s=250&c=948 The Health and Nutrition Science librarian has prepared this website to assist you in conducting research for your paper. Read the entire "Public Health Loop." ➢ Review PowerPoint posted for Session 1.	• Read all the articles for this week and view the websites specified by 9/6. • Read the entire syllabus. • Make sure you understand the technology involved for the course and if you do not, contact the resources specified. • Carefully review the information about the paper. Think about your paper topic. • Provide your brief intro on the Discussion Board. • Optional post to DB – Do you believe that health care is a right? Explain your answer.

#2	9/7-9/13	Introduction continued. Selected important concepts in social and behavioral sciences	1. Adler N & Stewart J. (2009). Reducing obesity: Motivating action while not blaming the victim. *The Milbank Quarterly* 87: 49-70. 2. Earnshaw V. et al. (2013). Stigma and racial/ethnic HIV disparities. *American Psychologist* 68: 225-236. 3. Grollman E. (2014). Multiple disadvantaged statuses and health: The role of multiple forms of discrimination. *Journal of Health and Social Behavior* 55: 3-19. Read only pp. 3-6; 14-16. 4. Hatzenbuehler M and Link B. (2014). Introduction to the special issue on structural stigma and health. *Social Science and Medicine* 103: 1-6. 5. Cooper et al. (2015). Calling for a bold new vision of health disparities intervention research. *American Journal of Public Health* 105 (supplement 3): s374-s376.	• Read all the articles assigned for this week by 9/13. • Submit the topic of your paper by 9/13. See the instructions under "Research Paper."

#3	9/14-9/20	Factors influencing health: Race and SES	1. Freiden TR (2010). A framework for public health action: The health impact pyramid. *American Journal of Public Health* 100: 590-595. 2. Braveman PA et al. (2011). Broadening the focus: The need to address the social determinants of health. *American Journal of Preventive Medicine* 40: S4-S18. 3. Satcher D & Higginbotham EJ (2008). The public health approach to eliminating disparities in health. *American Journal of Public Health* 98: 400-403. 4. Williams DR et al. (2010). Race, socioeconomic status, and health: Complexities, ongoing challenges, and research opportunities. *Annals of the NY Academy of Sciences* 1186: 69-101. 5. Braveman PA et al. (2011). The social determinants of health: Coming of age. *Annual Review of Public Health* 32: 381-398. 6. David R and Collins J (2014). Layers of inequality: Power, policy, and health. *American Journal of Public Health* 104: S8-S9. View the following film, "When the Bough Breaks" from *Unnatural Causes* (about 30 minutes) http://1660912-2.mediaspace.kaltura.com/media/Unnatural+CausesA+When+the+Bough+Breaks+%28Part+2%29/1_cutxz67l	• DB leaders for Session 3 post discussion and open-ended question based on this week's readings. DUE on 9/14/15. • DB participant responses DUE on 9/20/15. • Optional viewing Roberts, a legal scholar and author of *Fatal Invention: How Science, Politics, and Big Business Re-create Race in the Twenty-First Century*, examines the political and commercial incentives for continuing the categorization of people by race. http://www.pbs.org/wnet/tavissmiley/interviews/law-professor-author-dorothy-roberts/ • Optional webinar Naming and Addressing Racism: A Primer. Presented by the American Public Health Association, July 21, 2015. https://cc.readytalk.com/cc/playback/Playback.do?id=gj5zph If you view or listen to either of these optional talks, please comment on the DB for the week.

#4	9/21-9/27	Neighborhoods and health	1. Braveman PA et al. (2011). Neighborhoods and health. Robert Wood Johnson Foundation. 2. Diez Roux AV & Mair C (2010). Neighborhoods and health. *Annals of the NY Academy of Sciences* 1186: 125-145. View the following film, "Place Matters" from *Unnatural Causes* (about 30 minutes) http://1660912-2.mediaspace.kaltura.com/media/Unnatural+CausesA+Place+Matters+%28Part+5%29/1_z0na9s8b	• DB leaders for Session 4 post discussion and open-ended question based on this week's readings. DUE on 9/21/15. • DB participant responses DUE on 9/27/15.
#5	9/28-10/4	Work and health	1. Burgard SA & Lin KY (2013). Bad jobs, bad health? How work and working conditions contribute to health disparities. *American Behavioral Scientist* 57: 1105-1127.	• DB leader for Session 5 posts discussion and open-ended question based on this week's readings. DUE on 9/28/15. • DB participant responses DUE on 10/4/15.
#6	10/5-10/11	Health disparities: Gender and health	1. Rieker PP and Bird CE (2005). Rethinking gender differences in health: Why we need to integrate social and biological perspectives. *Journals of Gerontology* (Special Issue II) 60B: 40-47. 2. Rosenthal L. and Lobel M. (2011). Explaining racial disparities in adverse birth outcomes: Unique sources of stress for Black American women. *Social Science & Medicine* 72: 977-983. 3. Christopher G and Simpson P. (2014). Improving birth outcomes requires closing the racial gap. *American Journal of Public Health* 104: S10-S12.	• DB leaders for Session 6 post discussion and open-ended question based on this week's readings. DUE on 10/5/15. • DB participant responses DUE on 10/11/15.

#7	10/12-10/18	Health behaviors	1. National Cancer Institute (2005). Theory at a glance: A guide for health promotion practice. 2. Braveman P et al. (2011). What shapes health-related behavior? The role of social factors. Robert Wood Johnson Foundation. 3. Glanz K and Bishop DB (2010). The role of behavioral science theory in development and implementation of public health interventions. *Annual Review of Public Health* 31: 399-418.	• DB leaders for Session 7 post discussion and open-ended question based on this week's readings. DUE on 10/12/15. • DB participant responses DUE on 10/18/15. • Paper outline and references due on 10/18/15. • For further information on some of the theories, you may want to view: Health Belief Model https://www.youtube.com/watch?v=6SfTbTkEozA Theory of Planned Behavior https://www.youtube.com/watch?v=DFn-lOcpd8A Transtheoretical Model of Behavioral Change https://www.youtube.com/watch?v=oO80XyBDrl0

What is health communication and how does it affect the HIV/AIDS continuum of care. *Journal of Acquired Immune Deficiency Syndrome* 66 (suppl 3): S241-S249.	• DB leaders for Session 12 post discussion and open-ended question based on this week's readings. DUE on 11/16/15. • DB participant responses DUE on 11/22/15. • Paper due on 11/22/15.
#13	11/23-11/29	Student presentations	See the instructions on the "Research Paper section of BB for additional information.	• Due 11/29/15.
#14	11/30-12/6	Review, evaluations, discussion	Review the Powerpoint presentations and in the DB provide comments.	• Post comments on students' Powerpoint presentations on the DB by 12/6/15.
#15	12/7-12/13	Final exam	Further information will be provided.	• Date to be announced.

COURSE POLICIES

Attendance and class participation

This course is fully online and thus, there are no fixed meeting times. However, students are expected to fully participate on the DBs on BB and submit the assignments on the dates they are due. If you do not participate on the DB or submit your work on time, you will lose points from your final grade.

Class citizenship and rules of conduct

When communicating or completing assignments online via BB, pay attention to the following:

- Check before you post. Always check whether a similar question has been previously posted and answered on the DB.
- On DB, write in short paragraphs or use bullets to break down your ideas into smaller chunks of information. This will make your posts easier to read.
- Do not write in all uppercase. USING ALL CAPS MEANS YOU ARE SHOUTING.
- Do not use sarcasm as it often is interpreted as rude and hurtful.
- Do not edit or change someone else's message content. If you have something to add or change, add a follow-up message.
- Students in the class may come from different places around the world, so be respectful to diverse perspectives, cultures and languages.
- Be professional and engage with others respectfully.

Email correspondence

If you would like to contact me, I will respond to most questions via email. However, if you have a more substantive issue to address, please arrange to meet with me (in person or on the phone) during office hours.

When you email me, you can usually expect a response within 2 business days, sometimes sooner. Do not expect an immediate response.

Golden Rules for Email

- Keep in mind that I get many emails a day. ALWAYS put "HNSC 7110 - [Your name]" in the subject line so that I know who the message is from and what it is in regard to.
- You are expected to conduct yourself in a professional manner in all of your interpersonal interactions, including in email. Email is a formal means of communication in the context of school or work; please sign every message at the bottom, use polite language, capital letters, punctuation, greetings and salutations. Please avoid abbreviations, slang, and cuteness.

Other forms of communication

In person: My "live" office hours at Brooklyn College for Fall 2015 are Tuesday and Thursday, 7:30 AM – 9:00 AM and 10:45 AM – 1:00 PM. On occasion, because of meetings, I am not available at 10:45-1:00. You are welcome to drop by during office hours, but to avoid long waits and the possibility that I will not be present, please make an appointment for a specific time via email.

Phone: I can also make appointments to talk with students on phone during office hours.

Please make these appointments via email. I am rarely right in front of my Brooklyn College phone (unless we have scheduled a phone meeting), and I usually only pick up phone messages during office hours, so the phone is not the most efficient way to contact me, unless you want to let me know that you are running late for a face-to-face meeting.

Help with writing

If you require assistance to improve your writing skills, consider visiting the BC Learning Center. Information about the Learning Center is available at: http://lc.brooklyn.cuny.edu/. During some semesters, the Department of Health and Nutrition Sciences (HNSC) has a writing tutor available for HNSC students. At this time, as I am preparing this syllabus and course information, I do not know if/when a writing tutor will be available. I will inform you, should someone be assigned. .

INSTITUTIONAL POLICIES

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Graduate Bulletin and the Program Director for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Program Director in writing giving the factual reasons and basis for the complaint. A student who wishes to appeal a grade must initiate the process in the full semester following the one in which the contested grade was received. For further guidance, refer to the Graduate Bulletin.

Library Research Paper

The purpose of the research paper is to give each student the opportunity to conduct an in-depth examination of the application of social theory and concepts to a health problem of interest. A list of possible topics is provided. You may select one of these subjects or another topic of interest. This is a library research paper. You will not be conducting interviews or collecting your own survey data.

Make sure you carefully read http://library.brooklyn.cuny.edu/resources/loop/research.php?s=250&c=948 which was posted under the first session of the class. It is an excellent source for conducting library research in public health.

Papers are expected to be at least 12 pages (3,000 words) including references. In preparation, students will submit a proposed topic description early in the semester, and a detailed outline and bibliography later on.

Each paper should have an abstract. An abstract is a brief (about 100 words) statement of the objectives, findings and conclusions of the paper. It should be provided at the beginning of the paper. It does not count toward the 12 pages specified above.

Paper deadlines -

a. Proposed topic (about one typed page): September 13
b. Paper outline and references: October 18 or earlier [Do not provide a narrative of the topic; you are required to submit a formal outline.]
c. Final paper: November 22 or earlier. NO LATE PAPERS WILL BE ACCEPTED.

All papers must be typed, double-spaced, spell-checked, and proofread. Use 1-inch margins all around and 12-point font. Please follow the APA format for citing references.

To learn about plagiarism and how to properly cite sources go to: http://libguides.brooklyn.cuny.edu/c.php?g=225782&p=1496389

It is your responsibility to learn and properly use the APA format. Papers that do not meet these requirements will lose points.

You should search for the most recent academic and professional journal articles on the topic. Unless there is a seminal paper in the subject of your paper, as a rule, do not use references earlier than 2009.

Although you may use Internet sources from the CDC or the US Department of Health and Human Services, you may not use most other non-scholarly sources. If you are uncertain about what constitutes a scholarly source, you should contact a reference librarian in the BC library. Lee Ann Fullington is the specialist librarian for the Department of Health and Nutrition Sciences, although other reference librarians may assist you. Prof. Fullington may be contacted at LAFullington@brooklyn.cuny.edu

You must submit a final electronic copy through SafeAssign on Blackboard, which should be labeled as **FINAL VERSION**. Prior to when the paper is due, you will be able to submit earlier versions of the paper to SafeAssign to identify areas of possible plagiarism on the paper. The earlier versions will not be read by the instructor, but rather used by you as a tool to identify plagiarism. **The final version should also be submitted to me through email.**

Plagiarism of any kind – from the Internet, books, journals, another student's paper, etc. – results in an automatic grade of 0 for the assignment. It is your responsibility to understand what plagiarism is and how to avoid it.

Possible topics for the library research paper

It is important to select a specific topic. Please note the use of "or" in the topics below. You are not limited to these subjects. Select a topic that is of special interest or importance to you and within the subject area of this course. The course readings may also give you some ideas for possible paper topics.

- Stigma about mental illness or obesity or a specific sexually transmitted infection
- The effect of social support on recovery from major heart surgery or a mastectomy or another medical condition
- The effect of the media on adolescent use of alcohol or tobacco
- Factors that influence teens' drug use or contraceptive use. Focus on either young women or men
- Factors that influence health care providers' attitudes and behaviors toward LGBQ patients or obese patients or self-abusing patients or patients with a mental illness
- Stress and poor birth outcomes
- Problems in communication between low-English proficiency patients and their physicians
- The effect of religion on patients' choices about end-of-life care (select a specific religion)
- The social construction of a mental disorder or ADHD or autism
- The effect of immigration status on health
- The factors that influence teens' attitudes and perceptions of violence
- The factors that affect body image for young girls (select a specific racial-ethnic group)
- The effect of neighborhood on women's health status
- The psychological outcomes following mastectomy or coronary bypass surgery or another major health event
- The health impact of low health literacy
- Factors associated with low health literacy
- The intersection of race and stress
- The medicalization of childbirth or menopause
- The effect of neighborhood on obesity
- The role of corporations in influencing smoking or alcohol consumption or obesity

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Brooklyn College
HNSC 7141X Planning, Strategic Analysis, and Organizing of Health Care Services
3 Credits
Fall 2015

Time and location	4141 Ingersoll Hall Mon 6:30- 9.
Instructor	Sean J. Haley, Ph.D., MPH Best Contact: sjhaley@brooklyn.cuny.edu Office Telephone: (718) 951 – 5000 x2776
Office hours	4:30-6:00 Monday, 2:15-3:30 on Tuesdays, and by appointment. 4430 Ingersoll Hall
Course website	Provide the hyperlink to the CUNY Blackboard website or an alternative, instructor specific course website https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Dilemmas resulting from the practice of the health sciences including clinical care, public health practice, human subjects research, and the delivery of health services and the development of health policies. Conflicting needs and values of the practioners, clients, health care system, and communities. Critical evaluation of proposed solutions offered by the professions, government, communities. Case study evaluations. Examination of historic and contemporary cases.
Course prerequisites	Health and Nutrition Sciences 7140X
Course format	Seminar
Required reading and resources	Materials available on the course Blackboard site
Suggested reading and resources	Available on the course Blackboard site

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Demonstrate knowledge of political, economic and social context of health policies	• Explain the organization of health care • Describe the impact of costs on the health care system • Explain the principles of health service delivery • Investigate the impact of cost, care and delivery of health services through health reform • Differentiate the needs uninsured versus insured • Describe Medicaid, Medicare, and other public health insurance programs	1,2,3,4,5,6,7,8,9,10,12,13,14 Midterm. Final Exam. Case Studies
Examine, analyze and explain the intended and unintended consequences of national policies and reforms	• Identify potential implications of Medicare and Medicaid reform • Describe the health safety net • Describe the basics of primary care • Identify hospital organization models and strategies	1,2,3,4,5,6, 7, 8,9, 10,12,13,14 Case Studies
Discuss the policy process for improving the health status of populations	• Identify long term care needs and service delivery models • Describe the impact of health reform on long term care services • Describe the association of substance abuse and chronic disease • Explain the intersection of medical care and health reform on population health	1, 2,3,5,6,13,14 Midterm. Final Exam. Case Studies
Discuss the legal and ethical bases for public health and health services	• Describe the impact of health reform requirements on delivery systems in response	1,2,3,4,5,6,7,8,9,10,12,13,14 Midterm. Final Exam. Case

	to changing population needs	Studies
Demonstrate leadership skills for building partnerships	• Explain the challenges of health services management • Identify opportunities in health service management	Case studies
Apply principles of program planning, development, budgeting, management and evaluation in organizational and community initiatives	• Explain the basic principles of program planning and evaluation • Explain cost clusters • Identify constraints in cost clusters	3, 4, 5, 6, 7, 8, 9, 10 Midterm. Final Exam. Case Studies
Explain methods of ensuring community health safety and preparedness	• Explain the purpose of evidence based medicine and public health • Describe the principles and mission of public health research to improve the health and safety of the public	7,8,9,10 Case Studies, midterm and final
Apply systems thinking for resolving organizational problems	• Identify different source of public health data • Describe current trends and issues relating to health service management and health reform • Identify the information needs in health service delivery	Case studies

Course Assessments

Presentations: You are required to present two articles in front of the class using PowerPoint. The sign-up sheet will be distributed at the first class. Presentations should be emailed through Blackboard to Professor Haley by midnight the night before the class meeting. Presentations should take no longer than 10 minutes.

You will also be graded for your group presentation. Each group will present its case in front of the class. The presentation should take no longer than 15 minutes with 10 minutes for questions. A grading rubric and an example of a thorough presentation will be posted to Blackboard.

Case Study: The case studies are pulled from my own work experiences and will require you to synthesize course material. Reviewing material in the corresponding resource folders is highly recommended. It is unlikely that you will be able to develop a robust product without thoroughly consulting the literature. A rubric will be posted.

The case will be a team project. In forming your groups, be sure to balance talent with availability. All team members will receive the same grade –unless peer review forms offer compelling reasons for an adjustment.

- Once teams are formulated, a group folder will be created in Blackboard under groups. We will have 1 face to face meeting and one virtual meeting using the Blackboard collaborate feature. Please review operating requirements (see administration folder) and update necessary software in advance of scheduled meetings. The final document should look like a it is being submitted form a professional consultant organization.
- A electronic draft of the case report will be due on the same day as the presentation. The electronic version must be electronically submitted to your review team (with a cc to me) by the start of class. The review team (your peers) will have 5 days to return it to you with comments. See below.
- Resources: The following web site has a superb list of health care and health services resources. It is recommended that students review when preparing cases. http://www.lib.berkeley.edu/PUBL/HealthCare.html

Case study critiques for both the oral and written presentation will be graded. Please refer to the posted rubric.

- Critiques for oral presentations will be completed in class.
- Written critiques will be completed by each member of the review team using track changes. A summary letter, highlighting the strengths and challenges of the report, including recommendations, helpful citations, etc., must accompany the edited document and be submitted to the team and Dr. Haley no later than Friday at midnight following the draft due date. The review team will be assessed for the quality of their comments.

Mid term and final exams: Exams will be comprised of short answer, brief concept and essay questions. Exams will be closed book/notes.

- Recommendation: To prepare for exams, you are strongly encouraged to summarize each article. Recommended format:
    - Lead author, title, year
    - Major Findings
    - Major Relevance
    - Strengths/Weaknesses
    - Implications to quality, cost, and population health.

Class participation will be graded. Please see rubric. Class attendance will be taken at the beginning of class. Please arrive on time. Should you not be able to attend due to religious beliefs, I ask that you provide written (email) notice at least a week in advance.

Grading

Evaluation criteria

Rubrics for all assessments appear on Blackboard.

The relative weight of each course component is as follows:

Assessment	Weight
Midterm	30%
Final	30%
Case Study	20%
Article Presentations	5%
Case Study Critiques	5%
Case Study Presentation	5%
Class participation	5%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Graduate Bulletin and the Program Director for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Program Director in writing giving the factual reasons and basis for the complaint. A student who wishes to appeal a grade must initiate the process in the full semester following the one in which the contested grade was received. For further guidance, refer to the Graduate Bulletin.

Course Policies

Attendance and class participation

Attendance is required. Missing a class without an offic8ial excuse will result in a deduction. Showing up is necessary but active, critical participation is expected. Please see rubric.

Late/incomplete submission of assignments

Late assignments are due at the start of class. Late assignments will not be accepted. Case studies or presentations that are not professional in either appearance or content will be returned, ungraded.

Make-ups, rewrites, and extra credit

There are no makeup exams (unless you have a documented college-approved excuse. Please provide advance notice if you will miss an exam for such a reason). If you arrive late to an exam, you will have until the end of the allotted time period to finish (i.e., no

extra time will be granted). No students will be admitted for an exam after another student has completed/turned in an exam. Products that are returned without grades will be given a 5 point deduction and 1 week resubmission deadline. There is no extra credit.

Expectations of students

- Please read the material. The seminar discussion will fall flat if you do not fully engage the material.
- It is critical that your writing is clear and commensurate with professional level writing. The Library maintains a collection of links to sites that can assist you with proper citation format and paraphrasing and quoting other authors at http://library.brooklyn.cuny.edu Research & Writing Help. The Learning Center has writing tutors available to help you with your writing http://lc.brooklyn.cuny.edu/. Writing that is below professional standards will be returned.
- As a graduate student, you are expected to spend at least 3-5 hours per course credit, per week, doing course-related work. As this is a 3-credit class, you should anticipate spending 12-15 hours/week outside of class time doing work for this course. Please plan appropriately.
- You will be required to use your name@brooklyn.cuny.edu email address. This is provided free from the college. It is the only way you will be able to access blackboard (also a requirement) and course announcements. I use the emails listed on Blackboard frequently. It is **your** responsibility to resolve any password or access issues (for email and Blackboard) to assure that you receive those emails. Call ITS at 718-951-HELP.
- You will need regular access to the Internet in order to access your brooklyn.cuny.edu email address and Blackboard. All assignments will be distributed via Blackboard.

Expectations for the instructor

I will be available for office hours and by appointment as needed.

Accessibility

In order to receive disability-related academic accommodations, students must first register with the Center for Student Disability Services. Students who have a documented disability or suspect they may have a disability are invited to set up an appointment with the Director of the Center for Student Disability Services, Ms. Valerie Stewart-Lovell, at (718) 951-5538. If you have already registered with the Center for Student Disability Services, please provide your professor with the course accommodation form and discuss your specific accommodation with him/her.

Academic integrity

The faculty and administration of Brooklyn College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete text of the CUNY Policy on Academic Integrity and the Brooklyn College procedure for implementing the policy can be found at www.brooklyn.cuny.edu/bc/policies. If a faculty member suspects a violation of academic integrity and, upon investigation, confirms that violation, or if the student admits the violation, the faculty member MUST report the violation.

Course Schedule

Please note that the schedule is subject to change throughout the semester pending speaker availability and other influences. Notice of schedule changes will be sent through Blackboard. Please see: http://www.cuny.edu/academics/calendars/fall-2015.html for important dates (for example: holidays, course drop, course withdrawal).

August 31
Class 1: Introduction to Critical Issues in Health Care Services: Quality, Population Health and Costs
Class Objective:

1) To provide an overarching context to understand health system policies related to changes in the organization and delivery of health services, costs and care under Health Reform.

Grumbach, K. and Bodenheimer, T. (1995). The organization of health care. *JAMA*. 273(2):160-167.

Berwick, D.M., Nolan, T.W., and Whittington, J. (2008). The triple aim: care, health, and cost. *Health Affairs* 27:759–769.

Donabedian, A. (1988). The quality of care: How can it be assessed? *Jama, 260*(12), 1743-1748.

Navarro, V. (1993). Health Services Research: What is It? A Review of Health Services Research: An Anthology, Edited by KL White, J. Frenk, C. Ordoñez, JM Paganini, and B. Starfield, and Published by the Pan American Health Organization, 1992. *International Journal of Health Services, 23*(1), 1-13.

Berwick DM. (2002). A user's manual for the IOM's 'Quality Chasm's report. *Health Affairs.*21(3):80-90.

September 7 (College closed)

September 10 (Thursday –follows a Monday schedule)
Class 2: Population Health

Class Objective:
1) To better understand how public health, medical care and health reform intersect to improve population health.

Link, B. G., & Phelan, J. (1995). Social conditions as fundamental causes of disease. *Journal of health and social behavior*, 80-94.

Braveman, P., Egerter, S., & Williams, D. R. (2011). The social determinants of health: coming of age. *Annual review of public health, 32*, 381-398.

Soto, M. (2013). Population health in the affordable care act era. Retrieved August 24, 2013, from http://www.academyhealth.org/files/AH2013pophealth.pdf

Briss, P. A., Zaza, S., Pappaioanou, M., Fielding, J., Wright-De Agüero, L., Truman, B. I., ... & Harris, J. R. (2000). Developing an evidence-based guide to community preventive services' methods. *American Journal of Preventive Medicine, 18(1), 35-43.*

New York:
Boufford, J.I., Finkelstein, R., Garcia, A., (2012). Federal Health Care Reform in NYS: A Population Health Perspective. *New York State Health Foundation & The New York Academy of Medicine*. Pp 1-42.

September 14: No Class

September 21
Class 3: Access, Health Insurance, the Uninsured and Health Reform: The U.S. and New York State
Class Objectives:
1) To understand the traditionally uninsured and how their needs may differ from those that have been insured through employment, old age (Medicare) or extreme poverty (Medicaid) as they gain access to health coverage under Health Reform
2) To understand how delivery systems may change in response to Health Reform requirements and changing population needs.

Access:

Invited guest: Susan Moscou Ph.D., MPH, NP, Associate Professor, Mercy College

October 12: No Class

October 19
Class 6: Quality: What and How?
(Case A- detailed outline - due 10/18-group meeting on 10/26 @ 8:30)
Class Objective:

1) To understand the need to measure quality, how it is influenced and strengths and challenges of quality improvement strategies.

What is quality care:
Committee on Quality of Health Care in America, Institute of Medicine. (2001). Crossing the quality chasm: a new health system for the 21st century. 1-22.

Campbell, S. M., Roland, M. O., & Buetow, S. A. (2000). Defining quality of care. *Social Science & Medicine*, *51*(11), 1611-1625.

McGlynn, E.A., Asch,S.M., et al., (2003).The Quality of Health Care Delivered to Adults in the United States. *New England Journal of Medicine, 348:*2635-2645.

Sofaer, S., & Firminger, K. (2005). Patient perceptions of the quality of health services. *Annu. Rev. Public Health, 26*, 513-559.

How do we measure it:

McGlynn, E. A. (1997). Six challenges in measuring the quality of health care. *Health Affairs*, 16(3), 7-21.

Behn, R. D. (2003). Why measure performance? Different purposes require different measures. *Public Administration Review*, *63*(5), 586-606.

Jha, A. K., Orav, E. J., Dobson, A., Book, R. A., & Epstein, A. M. (2009). Measuring efficiency: the association of hospital costs and quality of care. *Health Affairs, 28*(3), 897-906.

Brand, C. A., Barker, A. L., Morello, R. T., Vitale, M. R., Evans, S. M., Scott, I. A., et al. (2012). A review of hospital characteristics associated with improved performance. *International Journal for Quality in Health Care, 24*(5), 483-494.

How do we improve it?

Beach, M. C., Gary, T. L., Price, E. G., Robinson, K., Gozu, A., Palacio, A., . . . Bass, E. B. (2006). Improving health care quality for racial/ethnic minorities: a systematic review of the best evidence regarding provider and organization interventions. *BMC Public Health, 6*(1), 104.

October 26
Class 7: Federally Qualified Health Centers (Review Medicare & Medicaid)
NOTE: Class may meet in Manhattan. Please plan accordingly.
(Case A- detailed outline - due 10/18. Group meeting @ 9:00 on 10/19)
Class Objective:

1) To Understand the Health Care Safety Net
2) To Anticipate Changes Medicare and Medicaid under Health Reform

What are federally qualified health centers:
HRSA: What is a health center? http://bphc.hrsa.gov/about
Health Resources and Services Administration. The Affordable Care Act and Health Centers. In. Rockville, MD: Department of Health and Human Services; 2012.

National Association of Community Health Centers Chart Book (2014) (Skim)

Goldman, L. E., Chu, P. W., Tran, H., Romano, M. J., & Stafford, R. S. (2012). Federally qualified health centers and private practice performance on ambulatory care measures. *American journal of preventive medicine, 43*(2), 142-149.

Shi, L., Tsai, J., Higgins, P.C., Lebrun, L.A., (2009). Racial/ethnic and socioeconomic disparities in access to care and quality of care for US health center patients compared with non-health center patients. *Journal of Ambulatory Care Management, 32*(4): 342 – 50.

Shi, L., & Stevens, G. D. (2007). The role of community health centers in delivering primary care to the underserved: experiences of the uninsured and Medicaid insured. *The Journal of Ambulatory Care Management*, *30*(2), 159-170.

Sasso, A. T. L., & Byck, G. R. (2010). Funding growth drives community health center services. *Health Affairs*, *29*(2), 289-296.

New York view:
Blavin F, Blumberg L, Buettgebs M. Estimated New York State Savings Under the Patient Protection and Affordable Care Act (ACA). In. Washington, DC: Urban Institute Health Policy Center; 2012.

Review:

The Henry J. Kaiser Family Foundation. (2013). Medicaid: A Primer. The Foundation. (skim)

Invited Guest: Diane Ferran MD, MPH Sr. Director, Clinical Quality Improvement Program, Community Health Center Association of New York State

November 2
Class 8: Evidence Based -
1) Class Objective: To understand what is meant by evidence based medicine and public health.

Please log onto: http://ebph.ihrp.uic.edu and read all 5 modules. Please take and submit Quiz 1 and Quiz 2 (on readings below) (electronically) before midnight on 11/17.

Scalise, D. (2004). Evidence Based Medicine. *Hospitals and Health Networks, 78*(12):33-37.

Eddy, D. M. (2005). Evidence-based medicine: a unified approach. *Health Affairs*, *24*(1), 9-17.

November 9
Class 9: Implementation Case study A draft and presentation due
Class Objective:
1) To understand key factors related to successful implementation.

Francke, A. L., Smit, M. C., de Veer, A. J., & Mistiaen, P. (2008). Factors influencing the implementation of clinical guidelines for health care professionals: a systematic meta-review. *BMC medical informatics and decision making, 8*(1), 38.

Powell, B. J., McMillen, J. C., Proctor, E. K., Carpenter, C. R., Griffey, R. T., Bunger, A. C., et al. (2012). A compilation of strategies for implementing clinical innovations in health and mental health. *Medical Care Research and Review, 69*(2), 123-157.

Fixsen, D. L., & Mental, L. d. l. P. F. (2005). *Implementation research: A synthesis of the literature*: Tampa, FL: National Implementation Research Network. (Skim)

November 16:
(Case B released)
Class 10: Midterm

November 23
Class 11: Management and Performance Improvement
Class Objective:
1) To understand health services management challenges and opportunities.

Management strategies:
Herzlinger, R. E. (2006). Why innovation in health care is so hard. *Harvard Business Review, 84*(5), 58.

Bohmer, R. M. J. (2010). Managing The New Primary Care: The New Skills That Will Be Needed. *Health Affairs, 29*(5): 1010-1014.

Hill, L. A. (2007). Becoming the boss. *Harvard Business Review, 85*(1), 48.

Strategies to improve performance:
Grol, R. & Grimshaw, J. (2003). From best evidence to best practice: effective implementation of change in patients' care. *The Lancet,* 362(9391): 1225-1230.

Fung, C. H., Lim, Y.-W., Mattke, S., Damberg, C., & Shekelle, P. G. (2008). Systematic review: the evidence that publishing patient care performance data improves quality of care. *Annals of Internal Medicine, 148*(2), 111-123.

Flodgren, G., Eccles, M. P., Shepperd, S., Scott, A., Parmelli, E., & Beyer, F. R. (2011). An overview of reviews evaluating the effectiveness of financial incentives in changing healthcare professional behaviours and patient outcomes. *Cochrane Database Syst Rev, 7*. (Summary Only)

Cassel, C. K., Conway, P. H., Delbanco, S. F., Jha, A. K., Saunders, R. S., & Lee, T. H. (2014). Getting more performance from performance measurement. *New England Journal of Medicine, 371*(23), 2145-2147.

Himmelstein, D. U., Ariely, D., & Woolhandler, S. (2014). Pay-for-Performance: Toxic to Quality? Insights from Behavioral Economics. *International Journal of Health Services, 44*(2), 203-214.

Reference only:
Walshe, K., & Rundall, T. G. (2001). Evidence-based Management: From Theory to Practice in Health Care. *Milbank Quarterly, 79*(3), 429-457.

November 30
Class 12: Electronic Health Systems
Class Objective:

1) To understand current data and information needs and issues facing health services management under health reform.

Why EHRs?
Blumenthal, D., & Tavenner, M. (2010). The "meaningful use" regulation for electronic health records. *New England Journal of Medicine*, *363*(6), 501-504.

Chen, C., Garrido, T., Chock, D., Okawa, G., & Liang, L. (2009). The Kaiser Permanente Electronic Health Record: transforming and streamlining modalities of care. *Health Affairs*, *28*(2), 323-333.

How perform:
Lau, F., Kuziemsky, C., Price, M., & Gardner, J. (2010). A review on systematic reviews of health information system studies. *Journal of the American Medical Informatics Association*, 17(6), 637-645.

Poissant, L., Pereira, J., Tamblyn, R., & Kawasumi, Y. (2005). The impact of electronic health records on time efficiency of physicians and nurses: a systematic review. *Journal of the American Medical Informatics Association*, *12*(5), 505-516.

Sidorov, J. (2006). It ain't necessarily so: the electronic health record and the unlikely prospect of reducing health care costs. *Health Affairs*, *25*(4), 1079-1085.

Romano, M. J., & Stafford, R. S. (2011). Electronic health records and clinical decision support systems: impact on national ambulatory care quality. *Archives of Internal Medicine, 171*(10), 897-903.

Han, Y. Y., Carcillo, J. A., Venkataraman, S. T., Clark, R. S., Watson, R. S., Nguyen, T. C., ... & Orr, R. A. (2005). Unexpected increased mortality after implementation of a commercially sold computerized physician order entry system. Pediatrics, 116(6), 1506-1512.

What needed:

Krist, A. H., Beasley, J. W., Crosson, J. C., Kibbe, D. C., Klinkman, M. S., Lehmann, C. U., . . . Pace, W. D. (2014). Electronic health record functionality needed to better support primary care. *Journal of the American Medical Informatics Association, 21*(5), 764-771.

Friedman, D. J., Parrish, R. G., & Ross, D. A. (2013). Electronic health records and US public health: current realities and future promise. *American journal of public health, 103*(9), 1560-1567.

December 7
Class 13: Parity Implications: Mental Health and Substance Abuse Treatment: Systems, Structures &Workforce
Class Objective:

1) To understand substance abuse in the context of chronic disease and the role of integration.

What is addiction and how is it treated:
McLellan, A. T., D. C. Lewis, et al. (2000). Drug dependence, a chronic medical illness: implications for treatment, insurance, and outcomes evaluation. *JAMA, 284*(13): 1689-1695.

NIDA. (2009). *Principles of Drug Addiction Treatment*. Washington, D.C.: U.S. Department of Health and Human Services.

Treatment capacity:
McLellan, A. T., D. Carise, et al. (2003). Can the national addiction treatment infrastructure support the public's demand or quality care? *Journal of Substance Abuse Treatment, 25*: 117-121.

Ryan, O., Murphy, D., Krom, L. (2012). *Vital Signs: Taking the Pulse of the Addiction Treatment Workforce, A National Report, Version 1.* Kansas City, MO: Addiction Technology Transfer Center National Office in residence at the University of Missouri-Kansas City. (Executive Summary only)

Health reform and integration:
Buck, J. A. (2011). The looming expansion and transformation of public substance abuse treatment under the affordable care act. *Health Affairs, 30*(8).

Mauer, B.(February, 2006) Behavioral health/Primary care integration: The four quadrant model and evidence-based practices. Rockville, MD: National Council for Community Behavioral Healthcare.

Crowley, R. A., & Kirschner, N. (2015). The Integration of Care for Mental Health, Substance Abuse, and Other Behavioral Health Conditions into Primary Care: An American College of Physicians Position Paper. *Annals of internal medicine*.

December 14
Class 14: Long Term Care Case study B and presentation due
Class objective:

1) To understand a variety of long term care needs and service delivery models
2) To understand the potential impact of health reform on long term care services

Background:
Feder, J., Komisar, H. L., & Niefeld, M. (2000). Long-term care in the United States: An overview. *Health Affairs*, *19*(3), 40-56.

Associated Press & NORC Center for Public Affairs Research. (2015). Long-term Care in America: American's outlook and planning for future care. Retrieved August 19, 2015, from http://www.longtermcarepoll.org/PDFs/LTC%202015/AP-NORC-Long-Term%20Care%20in%20America%202015_FINAL.pdf

Levine, S.A., Boal, J., Boling, P.A. (2003). Home care. *Journal American Medical Associatio,. 290* (9):1203-1207.

Gazelle, G. (2007) Understanding hospice --- An underutilized option for life's final chapter. *The New England Journal of Medicine 357*:321-324.

Strategies:
Bodenheimer, T. (1999). Long-term care for the frail elderly people – The On Lok model.
The New England Journal of Medicine, *341*(17):1324-1328.

Amaral, M. (2010). "Does substituting home care for institutional care lead to a reduction in Medicaid expenditures?" *Health Care Management Science,* 13(4): 319-333.

Miller, S. (2010). With health reform, long-term-care option becomes law.

New York view:
Samis, S., Detty, A., Birnbaum, M. (2012) Implementing Long-Term Care Reform in New York's Medicaid Program. Medicaid Institute; United Hospital Fund. Pp 1-27.

Invited guest: Joanne Kerwin Ph.D., MMHS, PT, Manager, Quality/Performance Improvement, CareGroup Home Care, Mt Auburn Hospital, Cambridge MA.

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Brooklyn College
HNSC 7144X Health Economics
3 Credits
Fall 2015

Time and location	Boylan Hall, Room 5143. Tuesdays, 6:30 PM- 8:10 PM
Instructor	Emanuel Thorne, PhD 718-951-5153 ethorne@brooklyn.cuny.edu
Office hours	Tuesdays: 4-6pm 501 Whitehead Hall
Course website	N/A
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Economic analysis of the structure, performance, and government policy in the health care sector of the economy. Demand and supply of health care services, the role of third party payers, and the public policy debate over government reform of the health care system. Microeconomic, econometric, and political philosophy concepts relevant to issues of justice in health care.
Course prerequisites	N/A
Course format	Seminar
Required reading and resources	• Phelps, Charles, Health Economics, Addison-Wesley, 5th Edition. • Rice, Thomas, The Economics of Health Reconsidered, 2015 • Supplemental Material from Rosen Public Finance • There will be additional material on Health Policy and the Affordable Care Act of 2010 and case studies in cost-benefit analysis, rationing of health care, and econometric methods – See Appendix
Suggested reading and resources	N/A

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Demonstrate knowledge of political, economic and social context of health policies	• Read, comprehend, and critique the literature in health economics • Analyze basic microeconomic models of household and firm behavior in health, medical care, and health insurance, and make connections across these models	Homework; Term paper; Final exam
Examine, analyze and explain the intended and unintended consequences of national policies and reforms	• Explain key incentives and tradeoffs driving behavior in health and health care • Identify effects of health care policies on households, firms, and other sectors of the economy • Analyze strengths and weaknesses of health care policies and reforms	Homework; Term paper; Final exam
Discuss the legal and ethical bases for public health and health services	• Describe tradeoffs associated with public health and health services policies • Critique strengths, limitations, and assumptions of public health and health services research and policy	Homework; Term paper; Final exam

Course Assessments

Graduate students will be required to deepen their understanding of the subject by submitting a term paper. Students are expected to prepare thoroughly for each session, to submit all written materials on time, to achieve graduate school quality standards, and to participate actively and constructively in class. Problems will be assigned as appropriate and each student is responsible for being able to solve them.

Grading

Evaluation criteria

Course grades will be based on class participation and home work (15%), Final Exam (50%), and a term paper (35%).

The relative weight of each course component is as follows:

Assessment	Weight
Class participation & homework	15%
Final exam	50%
Term paper	35%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an “unofficial withdrawal” (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion

of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Graduate Bulletin and the Program Director for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Program Director in writing giving the factual reasons and basis for the complaint. A student who wishes to appeal a grade must initiate the process in the full semester following the one in which the contested grade was received. For further guidance, refer to the Graduate Bulletin.

Course Policies

Attendance and class participation

Describe the policy for attendance and class participation.

Late/incomplete submission of assignments

Provide a statement about whether late or incomplete assignments are accepted and under what conditions.

Make-ups, rewrites, and extra credit

Provide a statement about whether make-ups, rewrites, or extra credit assignments are allowed and under what conditions.

Expectations of students

Students are expected to prepare thoroughly for each session, to submit all written materials on time, to achieve graduate school quality standards, and to participate actively and constructively in class. Problems will be assigned as appropriate and each student is responsible for being able to solve them.

Expectations for the instructor

Accessibility
In order to receive disability-related academic accommodations, students must first register with the Center for Student Disability Services. Students who have a documented disability or suspect they may have a disability are invited to set up an appointment with the Director of the Center for Student Disability Services,

Ms. Valerie Stewart-Lovell, at (718) 951-5538. If you have already registered with the Center for Student Disability Services, please provide your professor with the course accommodation form and discuss your specific accommodation with him/her.

Academic integrity
The faculty and administration of Brooklyn College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete text of the CUNY Policy on Academic Integrity and the Brooklyn College procedure for implementing the policy can be found at www.brooklyn.cuny.edu/bc/policies. If a faculty member suspects a violation of academic integrity and, upon investigation, confirms that violation, or if the student admits the violation, the faculty member MUST report the violation.

Course Schedule

Schedule is subject to change throughout the semester.

Week 1: Introduction to Health Economics
Phelps Ch 1

Week 2: Review of Economic Concepts and Statistical Analysis
Phelps Appendix, Econometrics Handout, and Phelps Chapter 2

Weeks 3-5: Production of Health & The Demand for Medical Services
Phelps Chapters 3-5

Week 6 -7: Economic Theory of Insurance
Phelps Chapter 10-11

Week 8: Role of Government in a Market Economy
Handout from Rosen

Week 9: Social Insurance: In Theory and Practice
Handouts Rosen (Public Finance) Chs 9 & 10

Week 10: Cost/Benefit Analysis: In Theory and as Applied to Health Care
Handout Rosen Ch 11

Week 11: Justice in Health Care
Rice, Chapter 9

Week 12: Health Care Policy I: Evaluation of Proposals for Reform
Handouts

Week 13: Health Care Policy II: International Comparisons
Read handouts

Week 14: Economics of Organ Transplantation
Thorne handout

Supplemental Reading List

Access to health care

Brooklyn College

HNSC 7163X: Conducting Community Needs and Strengths Assessments
3 credits
Fall 2015

Catalogue description	Introduction to community needs and strengths assessments. Identification, gathering, synthesis and presentation of population (neighborhood) specific data related to a public health issue or condition using technologically appropriate presentations. Analysis of multiple data sources including: U.S., Census, State, county, and neighborhood quantitative data as well as key informant interviews and focus groups.
Prerequisite	Nine credits of core courses in MPH or MA Community Health Education. Graduate students are welcomed and may be enrolled with the permission of the instructor.
Course meets	Tuesdays 6:30PM-9PM, Whitehead Hall 508
Instructor	Gordon Shen, PhD, SM Assistant Professor of Health Care Policy, Management, and Administration
Email	gshen@brooklyn.cuny.edu
Phone	(718) 951-5000 x2059
Office	Ingersoll Hall 0119
Office hours	Tuesdays, 9:00PM-10:00PM, or by appointment.
Required books	Petersen, Donna J., and Greg R. Alexander. *Needs Assessment in Public Health: A Practical Guide for Students and Professionals*. Springer Science & Business Media; 2001. ("PA") *This book is available as an electronic resource through the Brooklyn College library website.
Other required reading materials	See readings listed from p.9-p.14, articles posted on Blackboard (https://bbhosted.cuny.edu).
Recommended books	• Altschuld, James W., and David Devraj Kumar. *Needs Assessment: An Overview*. Sage Publications, 2009. ("AK") • Royse, David, Michele Staton-Tindall, Karen Badger, and J. Matthew Webster. *Needs Assessment*. Oxford University Press, 2009. ("RSBW")

Syllabus content

- **SCHOOL COMPETENCIES AND COURSE LEARNING OBJECTIVES**
- **COURSE POLICIES**

- **COURSE SCHEDULE**

COURSE OVERVIEW

Assessment is one of the three core functions of public health: assessment, assurance, and policy development. A needs/strength assessment is the beginning of a larger process of designing, implementing, and evaluating programs and policies. As such, this course is part of a trilogy of courses offered by the Health and Nutrition Sciences Department: program planning and evaluation. A needs/strength assessment is generally carried out to measure the gaps between current conditions and desired conditions. Needs/strength assessment is an end-driven effort in that data are collected to clarify, identify, and understand problems, then options are developed, and a subset of them are implemented involving the mobilization of finite resources to address said problems. The goal can be to improve the wellbeing of clients and their families, education and training of staff, organizations, or lay communities.

A community needs/strengths assessment is a culmination of gathering data and engaging the community on focused actions to achieve the goal of improving the population health status. A community needs/strengths assessment can have different starting points:

- Aimed to *discover* strengths and weaknesses within a focal community and develop solution;
- Seek to address an *already known problem*, possibly of unknown magnitude, facing the community;
- Needs of an organization already serving the community (e.g. domestic violence centers, community health clinics).

Regardless of the starting point, community needs/strength assessments are generally executed in the following manner: planning and organizing a needs/strength assessment, data collection, data analysis, and sharing the results with the community vis-à-vis a needs/strength assessment report. Stakeholders are to be involved throughout the needs/strength assessment process including: community leaders, local government, advocacy groups, consumer, or a combination of them so information can be gathered, vetted and findings can be quickly used.

This course is designed for students to develop skills measuring health problems in communities, planning for health services, and advocating or making decisions about the distribution of community health resources. This class will have more emphasis on practical skills than theory, but students will nonetheless become familiar with the theory related to ecologically valid, assets-based and needs-based community health assessments and how to translate them into everyday public health or healthcare practice. Finally, the course will explore the social justice issues around community partnership by capturing and framing health issues found in a given community. Outside of the classroom, students will have the opportunity to work with a community organization to apply the knowledge and skills acquired through this course. A team of students will be partnered with a community organization to develop a tailored plan to collect data, conduct analysis, and formulate recommendations for programs and practice.

SCHOOL OF PUBLIC HEALTH COMPETENCIES AND COURSE LEARNING OBJECTIVES

Competencies	Course Learning Objectives	Sessions and Assessments
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be addressed as part of the following course sessions and assessments:*
1. Apply approaches for improving the health status of populations, including a specific initiative for a target population.	• Describe leading interventions, policies, and/or theories that engender individual, organizational, and community-level change. • Weigh the strengths and limitations of social and behavior-based interventions, policies, and theories. • Develop strategies to reduce disparities in population health, as informed by evidence.	Sessions: Week 1, Week 2, Week 11 Assessment: Background section of work plan and needs/strength assessment report. Readings are curated so that theoretical and conceptual pieces are reinforced with case examples.
2. Apply principles of planning, development and practice of organizational and community initiatives that relate to program planning, policy formulation or research.	• Describe the purpose, process, and components of a needs assessment • Develop a needs assessment plan, which includes using a mix of epidemiological, social, qualitative, and/or quantitative methods to collect primary and/or secondary data, analyzing data, and coming up for recommendations based on the results • Assess strengths, weaknesses, opportunities and challenges of different strategies, programs, research, and policies currently in place to address salience public health problems in a focal community. • Identify basic social and behavioral theories, concepts, and logic models that explain differences in the distribution of health in the United States. • Practice ethics and respect when applying principles of public health policy and practice, especially when	Sessions: Week 1, Week 2 Assessment: Rationale section of work plan and needs/strength assessment report. Readings are curated so that theoretical and conceptual pieces are reinforced with case examples.

Competencies	Course Learning Objectives	Sessions and Assessments
	building consensus with community-based stakeholders.	
3. Use audience-appropriate written and oral communication to convey public health information.	• Assess available ways to disseminate the needs assessment proposal (at the beginning) and report (at the end) to the target audience(s). • Identify target audience(s) who can play a role in health promotion and disease prevention within a focal urban or rural community. • Describe their respective, possibly overlapping roles (e.g. education, health care, environmental protection, criminal justice, food and nutrition) in promoting health and preventing disease within the population.	Session: Week 12 Assessment: Present findings in writing, via the needs/strength assessment report, to inform the community. Oral communications of the same content is possible with permission of community-based partner organization.
4. Develop collaboratively public health programs and strategies responsive to the diverse cultural values and traditions of the communities being served.	• Define and describe different study designs. • Develop or enhance skills for problem solving, conflict-resolution, decision-making, and evaluation of public health issues. • Engage individual(s), organization(s), and community or communities in a participatory, collaborative fashion, thus bringing resources to bear on their problem(s). • Identify beliefs, assets, and needs at the individual(s), group(s), organization(s), community, and/or government(s) that inform public health interventions.	Sessions: Week 2, Week 12 Assessment: Consultations with both instructor and supervisor at the community-based organization before finalizing work plan, data collection, and needs/strength assessment report.
5. Differentiate among evaluation methods in relation to their strengths, limitations and appropriate uses.	• Evaluate the different research methods that could be used to address a specific public health problem. • Find relevant examples in the grey and/or peer-reviewed literature. • Select a method or use a mixture of methods to	Sessions: Week 3, Weeks 4-8, Week 9 Assessment: Choice of methods, sources, elements, and indicators as described in data collection plan. Students will be given the opportunity to design and implement an

Competencies	Course Learning Objectives	Sessions and Assessments
	answer the problem at hand, and give a justification to support decision.	assessment (e.g. interview, focus group) tool.
6. Analyze the effects of political, social and economic policies on public health systems at the local, state, national and international levels.	• Diagnose needs and strengths of a focal urban or rural community. • Describe pathways through which the environment one resides in affects health across the lifespan. • Identify major economic, political, and social forces –nationally or internationally- that shape the healthcare system and, in turn, population health status. • Analyze the impact of demographic characteristics (i.e. socioeconomic status, race and ethnicity, gender and sexual orientation) on need, supply, and demand for health services.	Sessions: Week 1, Week 11 Assessment: Description on contextual forces in work plan and needs/strength assessment report.

COURSE POLICIES

Assignments

Submission mode

Be sure to put a title, your name, and date at the top of each assignment. I expect assignments to be submitted electronically, specifically via Blackboard at the *beginning* of the day or relevant session. See guidelines for email correspondence in the next section.

Formatting

- Place title, name, and date (in that order) on the upper left corner of p.1
- Times New Roman or Garamond, 12pt font
- Single-spaced
- 1" margins all around
- Page numbers on the bottom right corner of each page
- References should appear as the last section in APA citation format (http://www.apastyle.org/), preferably with a section break inserted

Failure to format submissions according to the stated guidelines will result in an automatic half-grade reduction for the written assignment.

Communication*

Email Correspondence: The subject line of your email should be formatted as:

- For assignments: "HNSC 7163X – [the name of the assignment as it appears in this syllabus]."
- For all other matters: "HNSC 7163X – [purpose of the email, e.g. "Office Hours", "Appointment Request"]."

Failure to format emails according to the above guidelines might result in a delay. Please allow 24-48 hours for a response.

*Note that email is a *formal* means of communication with superiors and colleagues in the context of the university or place of employment. As such, get into the habit of reading your e-mail twice before send-off (or undo it as soon as a mistake is spotted), sign off every message, and always use polite language, capital letters where appropriate, punctuation marks, grammar, and syntax. E-mails should begin with greetings and end salutations. Please minimize the use of abbreviations and acronyms, and avoid using slang.

Academic Integrity*

The faculty and administration of Brooklyn College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete test of the CUNY Academic integrity Policy and the Brooklyn College Procedures for implementing the policy can be found at

http://www.brooklyn.cuny.edu/bc/policies. If a faculty member suspects a violation of academic integrity and, upon investigation, confirms that violation, or if the student admits the violation, the faculty member MUST report the violation. A copy of the Faculty Action Report is appended to this syllabus, which I WILL use to report ALL instances of cheating, plagiarizing, or any other type of academic dishonesty.

You should carefully and thoroughly read the section entitled "Academic Regulations and Procedures" in the Brooklyn College Graduate Bulletin (http://www.brooklyn.cuny.edu/web/off_registrar/141024_2014-15_Graduate_Bulletin.pdf) for a complete listing of academic regulations of the College.

*Note that all of the assignments due in this course are subject to screening through SafeAssign, an anti-plagiarism tool.

Assistance with research and writing

The library maintains a collection of website links within the Research & Writing Help section that can assist you with proper citation format and paraphrasing and quoting other authors: http://library.brooklyn.cuny.edu. The Learning Center has writing tutors available to help you with your writing: http://lc.brooklyn.cuny.edu

Accessibility

In order to receive disability-related academic accommodations, students must first be registered with the Center for Student Disability Services. Students who have a documented disability or suspect they may have a disability are invited to set up an appointment with Ms. Valerie Stewart-Lovell, Director of the Center for Student Disability Services, at 718-951-5538. If you have already registered with the Center for Student Disability Services, please provide me, your professor, with the course accommodation form and discuss your specific accommodation with me.

Class citizenship and Rules of Conduct

Attendance

- Students are expected to attend all class sessions. In cases of personal emergency or illness I, the professor, must be notified.
- See p. 46 of the Graduate Bulletin regarding non-attendance due to religious beliefs. I, as the professor, must be notified in advance.
- Assignments are based on lectures and activities, as well as course readings. If you are absent from class it is *your responsibility* to contact a classmate for notes and other materials you missed.
- A record of attendance will be maintained with attendance taken intermittently throughout the semester.
- Written assignments must be submitted *prior* to class. Absence from the session during which an assignment is due *does not* excuse or preclude you from turning in the assignment.

Lateness and Early Exits

- Please enter and exit the class with the least amount of disruption.

- You are expected to arrive on time for class. Tardiness (and absences) are disruptive to fellow students and your professor.
- Persistent tardiness and/or early exits will result in a grade reduction.

Other Classroom Etiquette

- Use of cell phones and other electronic media (e.g. video game consoles) is not permitted. Laptops or iPads that are used to take notes or making presentations are allowed; however, if your device is viewed as disruptive, you will be asked to put it away.
- Respect others and their opinions. Constructed a well-informed argument if you disagree.
- Be an avid participator in class discussions.

Grading

Grading for the course will be based on a scale, as opposed to a curve. Assignment due dates are noted in the course schedule section of this syllabus.

Students will be evaluated based on the following criteria:

Assignment	**Due date**	**Points**
Work plan	Sept. 15	15
Data collection plan (draft)	Oct. 1	10
Data collection plan (revised)	Oct. 27	15
Peer evaluation form (set 1)	Oct. 27	5
Needs/strength assessment report (draft)	Nov. 24	20
Needs/strength assessment report (revised)	Dec. 8	25
Peer evaluation form (set 2)	Dec. 8	5
In-class presentation	Dec. 8	5
Class participation		10
Total		**110**

Letter grading

The grading system (letter grad, quality points, percentage) for this course follows guidance in the Graduate Bulletin:

A+	4.0	97.5 - 100%	B+	3.3	87.5%-89.9%	C+	2.3	77.5%-79.9%
A	4.9	92.5 – 97.4%	B	3.0	82.5%-87.4%	C	2.0	70.0%-77.4%
A-	3.7	90 – 92.4%	B-	2.7	80.0%-82.4%	F	0	<70%

Extensions for assignments are not given unless planned with the professor *at least two weeks in advance* of the specified due date, otherwise the deadlines are firm and enforced by the date and time stamp on your email. Late or incomplete submission of assignments are not accepted. The

assignments come together as a gestalt, so missing any assignment would render your final product incomplete. No make-ups, rewrites, and extra credit.

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Graduate Bulletin and the Program Director for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Program Director in writing giving the factual reasons and basis for the complaint. A student who wishes to appeal a grade must initiate the process in the full semester following the one in which the contested grade was received. For further guidance, refer to the Graduate Bulletin.

COURSE SCHEDULE

Topic	Activities	Assignments
Week 1 – September 1		
Introduction	What is needs/strength assessment? • Needs and strength assessment overview: purpose, scope, and overview of conducting a community health assessment | Theories and logic models | Social justice, expectations of community partnerships, and ethics of assessment. • House-keeping: Review syllabus • The ways forward: create teams, and each team selects an organization and problem for assessment. *Work plan outline: roles, responsibilities, individual time commitment to team outside of the classroom, time frames for major activities of the assessment for the rest of the semester. Useful project management tools.	Schedule note: Sept. 2 is the last day to add a course.
Week 2 – September 8 (Meet in library Room 120)		
The makings of a work plan	What goes into a needs and strength assessment? Define the scope based on: a) Issue to be assessed, including community members and geographic area of impact → A problem statement substantiated by annotated literature search; b) Community agency's ("partner") vision, mission,	***Due on Sept. 15 via Blackboard: Semester work plan (will be returned to your team with comments by Sept. 21).*** Readings: PA Ch. 2, 8; Altschuld & Watkins, 2014; Wright et al., 1998 Optional readings: PA Ch. 1; RSBW Ch.1, 2

Topic	Activities	Assignments
	goals, and objectives (used to guide literature search); c) Strategy to marry (a) and (b); d) Information indicating assets, resources, conditions related to (c).	Reminder: Schedule a meeting with your organization during week 3, or week of September 20th to go over your work plan. Schedule notes: • No classes scheduled on Tuesday, Sept. 15 and Tuesday, Sept. 22. Our next meeting will be Friday, Sept. 25. • Sept. 15 is the last day to apply for Fall 2015 Graduation. • Sept. 16 is the last day to drop without a grade.
Week 3 – September 25 (Conversion day)		
Data Deep Dive	Data collection overview: • Prioritizing data collection needs according to what is essential to address key questions arising from the partner versus what is good to know for the scientific literature • Community scanning ("needs") vs. community mapping ("assets") • Mixed methods • Comparative advantage and resources required for each type of data collection • Community assessment that is cross-sectional versus longitudinal *Data collection plan's guidelines and worksheet.	Readings: PA Ch. 3, 5; Finifter et al., 2005; Murray & Graham, 1995; Sharpe et al., 2000 Optional readings: RSBW Ch. 3
Week 4 – September 29		

Topic	Activities	Assignments
		Due on Oct. 1 via Blackboard: Draft data collection plan (will be returned to your team with comments by Oct. 7).
Primary data – Part 1	Surveys	Readings: Williams & Wright, 1998 and pick <u>three</u> of the following: Mi et al., 2014; Coker et al., 2006; Hyun et al., 2006; Kenagy, 2005; Kwekkeboom, 2005; Jeal & Salisbury, 2004; MMWR, 2002; Barry et al., 2000; Zahner et al., 1992
Week 5 – October 6		
Primary data – Part 2	Interviews, photovoice, and focus groups	Readings: • Photovoice: Wang & Burris, 2007 and • Interview (pick <u>one</u>): Wongking et al., 2014; Ganz et al., 1987 and • Focus group (pick <u>one</u>): Anderson & Heyne, 2000; Tipping, 1998; Buttram, 1990 Optional readings: NYAM, 2014 and Frazer, ????; (both combined survey, interview and focus groups); Durham et al., 2014 and Wolin et al., 2012 (both interview-based); McClelland, 1994 (focus group)
Week 6 – October 13		
Primary data – Part 3	Community meetings and public forums	Readings: Kristjansson et al., 2015; Jordan et al., 1998; Lange, 1988
Week 7 – October 20 (Meet in library Room 120)		

Topic	Activities	Assignments
Secondary data – Part 1	Library Lab: Mapping and GIS: How it's used, when it's used, and relevant examples	Readings: Kazda et al., 2009; Scotch et al., 2006 and pick <u>two</u> of the following: Cardazone et al., 2014; Bazmore et al., 2010; Booza et al., 2010; Dulin et al., 2010; Geraghty et al., 2010; Holt et al., 2008; Hasan, 2005; Waring et al., 2005 Optional readings: MMWR, 1998 ***Reminder to teams: Schedule a meeting with your organization during week 8 or 9 to go over your data collection plan, and figure out logistics to collect data during the month of November.***
Week 8 – October 27 (Meet in library Room 120)		
Secondary data – Part 2	Library Lab: Public records, disease surveillance, public health and vital statistics, and archival data	***Due on Oct. 27 via Blackboard: Revised data collection plan and peer evaluation forms #1*** ****The revised data collection plan <u>must</u> include a revise and resubmit (R&R) table with three columns: commenter (instructor or supervisor), comment, and team response as reflected in revised data collection plan.*** Readings: UMSL MIMH, 2014; Bhatia & Seto, 2011; Asadi-Lari & Gray, 2005
Week 9 – November 3 (Meet in library Room 383)		
Data analysis	Library Lab: How to determine key findings? • Answer your key question(s) using descriptive and/or inferential statistics. • What are the limitations of the research methods you used?	Readings: RSBW Ch. 4; Greasley et al., 2007 Ch. 1; Lacy & Luff, 2001 Optional readings:

Topic	Activities	Assignments
	• Are the results generalizable to one community? *Key findings worksheet	• Qualitative data analysis: Bradley et al., 2007; Dey, 1993; Miles et al., 1985 • Quantitative data analysis: Visit UCLA IDRE website (http://www.ats.ucla.edu/stat/) for software and module relevant to your analysis Schedule notes: • Nov. 5 is Comprehensive Exams for Sabbath Observers • Nov. 7 is Comprehensive Exams • Nov. 9 is the last day to withdraw from a course with a W (non-penalty) grade.
Week 10 – November 10		
Needs assessment report	Needs assessment report: • Report findings; • Identify barriers to priority-setting; • Develop post-assessment plan • Adopt measures that can be adopted to help define and track post-assessment strategy; • Give recommendations for community action or incremental program-/project-/policy-specific improvement	Readings: PA Ch. 6, 7, 9; NYSDPH DSRIP, 2014 (slides, webinar optional) Optional readings: RSBW Ch. 5; HOPE SF, 2013; Marshall et al., 2000
Week 11 – November 17		
Context	Socio-political context, health equity	Readings: Carrillo et al., 2011; MMWR, 2006; Billings & Cowley, 1995; Donaldson & Mooney, 1991
Week 12 – November 24		

Topic	Activities	Assignments
Closing out	Disseminate findings with the community via community meetings, press releases, website, brochures, etc.. *Criteria for evaluating class presentations	***Due on Nov. 24 via Blackboard: Draft needs/strength assessment report (will be returned to your team with comments by Dec. 1).*** Readings: PA Ch. 4; Stevens & Gillam, 1998 Reminder to teams: Schedule a meeting with your organization after Thanksgiving break to share your findings and preliminary needs/strength assessment report.
Week 13 – December 1		
	Thanksgiving Holiday – No Classes	Schedule notes: • Dec. 2 is language exams • Dec. 7 is the last day to resolve Spring and Summer 2015 incomplete grade(s) (INC).
Week 14 – December 8		
	Class presentations* *Presentations will be reviewed for specificity, relevance, accuracy, usability, as well as coherence with needs/strength assessment report.	***Due on Dec. 8 via Blackboard: Revised needs/strength assessment report and peer evaluation forms #2*** ****The needs/strength assessment report must include a revise and resubmit (R&R) table with three columns: commenter (instructor or supervisor), comment, and team response as reflected in revised needs/strenght assessment report.***
December 15 (Reading Day) & December 22 (Final Examinations)		Schedule notes: • Dec. 23 is the last day to file for Maintenance of

Topic	Activities	Assignments
		Matriculation. • Jan. 4 is the last day to file approved thesis.

Appendix: Brooklyn College Faculty Action Report for Incidents of Academic Dishonesty

Print Form

BROOKLYN COLLEGE

Faculty Action Report Form for Incidents of Academic Dishonesty

If a faculty member, upon investigation, confirms that a suspected violation of the CUNY Policy on Academic Integrity has occurred and/or if the student admits to the violation, the faculty member **must** report the violation by completing and submitting a FAR Form.

The form should be forwarded to the appropriate Academic Integrity Official. For a violation in an undergraduate course send the form to Mr. Patrick Kavanagh (3208 Boylan Hall); for a violation in a graduate course send the form to Professor Philip Gallagher (3227 Boylan Hall).

A. Information about the Incident

B. Academic (Grade) Sanction

What academic sanction are you imposing?

☐ Failing Grade on Exam/Assignment ☐ Failing Grade for Course

☐ Other (please explain): _____

Did the student accept this sanction: ☐ Yes ☐ No, please explain: _____

_____

C. Disciplinary Complaint Option

Are you filing a disciplinary complaint with the Office of the Dean of Student Affairs for investigation and possible disciplinary charges?

☐ No

☐ Yes - Please be sure to enter a PEN grade for the course and to forward the *Disciplinary Complaint Form* and all supporting documentation to the Office of Student Affairs.

Instructor Signature _____ Date: ____ / ____ / ____

* Copies of all disciplinary forms are available for print-out at http://www.brooklyn.cuny.edu/bc/offices/studlife/ (under the category "Get It Right").

Revised 9/2007

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Brooklyn College
Department of Health and Nutrition Sciences

HNSC 7920X: Supervised Fieldwork in Public Health

3 Credits - Fall 2015

Time and location	Thursdays, 6:30-9:00 – Room 3424 Ingersoll Hall
Instructor	Bill Stackhouse, Ph.D. Adjunct Assistant Professor **Best to contact by email.** • Office: Ingersoll 4423 • Phone: 718.951.5000 x5026 (leave a message & you'll get a call or e-mail response) • E-mail: RWStackhouse@brooklyn.cuny.edu
Office hours	By appointment – before or after class.
Course website	https://bbhosted.cuny.edu/webapps/blackboard/
Support resources	For technical assistance, contact the Helpdesk. Academic support services writing skills assistance are available.
Course description	Students carry out 180 hours of supervised field work that is intended to bridge academic preparation and public health practice. Knowledge and skills from the core MPH and specialization courses are applied in a public health agency, community organization or other setting relevant to the student's academic background, specialization and career expectations. This is accomplished under the supervision and guidance of an experienced preceptor. Field-based hours are implemented with classroom and individual meetings along with online communication. Aside from deliverables required by the preceptor, the student develops a reflection paper, a self-evaluation and a capstone proposal.
Course prerequisites	Completion of at least 18 MPH credits that include Health and Nutrition Sciences 7120X, Health and Nutrition Sciences 7150X, and two courses in the student's area of specialization.
Course format	Supervised individual internship projects in a community program or health agency. Weekly seminars, except when noted in the posted schedule. NOTE: the Internship Manual for Fall 2015 is an official part of this syllabus.
Required reading	There is no required textbook. Weekly reading assignments

and resources	appear following the class schedule herein. Articles and other materials will be posted on BlackBoard.
Suggested reading and resources	Optional reading materials and learning resources will be posted to BlackBoard, particularly in relation to current newsworthy topics in public health.

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Apply the public health core functions of assessment, policy development and assurance	• Demonstrate (e.g. through the portfolio) the application of assessment, assurance and/or policy development during the fieldwork experience.	• Addressed in: Classes - 1,2,3,4,5, & internship placement • Assessed in: Learning objectives, Logic model, Gantt chart, all 3 reflection papers
2. Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Demonstrate through self-reflection activities the application of one or more core PH values or techniques through the fieldwork experience	• Addressed in: 1,2,3,4,5 & internship placement • Assessed by: Learning objectives, Logic model, Gantt chart, poster, all 3 reflection papers, poster presentation
3. Adhere to ethical and social justice principles and standards	• Apply ethnical principles to fieldwork placement, (e.g. human subjects' protection principles to the data collection). • Assess the degree to which the fieldwork placement agency adheres to ethical principles and standards	• Addressed in: 4 and internship placement • Assessed by: Reflection paper 1
4. Interpret and analyze public health literature and apply evidence-based research	• Demonstrate (e.g. through the portfolio) the application of findings from public health literature to the field work experience	• Addressed in: 1,2,3,4,5,6,7 & internship placement • Assessed by: Learning objectives, Logic model, Gantt chart, poster, all 3 reflection papers, poster presentation
5. Apply basic statistical and informatics techniques	• Participate, through the fieldwork experience, in using statistical and informatics techniques to support a public health program or policy in it's provision and effectiveness.	• Addressed in: Internship placement – when required in the internship setting and experience • Assessed by: poster presentation and poster
6. Communicate public health information through oral, written, digital and visual presentation	• Prepare written and oral progress and evaluation reports (e.g. the fieldwork project), using appropriate professional formats.	• Addressed in: 10, 11, 13, 14 & Class participation and internship placement • Assessed by: Learning objectives, Logic model, Gantt chart, abstract, all 3 reflection papers, poster presentation and poster
7. Explain how social, behavioral, biomedical and environmental determinants affect population health	• Apply the elements of social, behavioral, biomedical and environmental determinants of and inequities in health and disease to aspects of the provision of public health activities in the internship settings and activities.	• Addressed in: 2,3,4,6,9 & internship placement • Assessed by: Logic Model, reflection paper 1, poster presentation and poster

8. Design and evaluate interventions to prevent or control public health problems	• Participate, through the fieldwork experience, in developing, carrying or evaluating out a public health program, remediation measure or policy.	• Addressed in: Internship placement – when required in the internship setting and experience • Assessed by: Learning objectives, Logic model, Gantt chart, abstract, all 3 reflection papers, poster presentation and poster
9. Collect, analyze and interpret public health data	• Participate, through the fieldwork experience, in collecting, analyzing and interpreting public health data to support a public health program or policy in it's provision and effectiveness.	• Addressed in: Internship placement – when required in the internship setting and experience • Assessed by: poster presentation and poster
10. Engage and collaborate with diverse groups	• Identify different stakeholders and evaluate their roles on the fieldwork project.	• Addressed in: 2,4,5,7,& internship placement • Assessed by: summary paper, poster presentation and poste
11. Describe the legal foundations of the U.S. public health system and its interrelationships with other systems including health care, education and environmental protection	• Apply the elements of public health core elements, infrastructure, and delivery to aspects of the provision of public health activities in the internship settings and activities.	• Addressed in: 2,3 & internship placement • Assessed by: reflection paper 1
12. Apply a framework for the planning, implementation and evaluation of public health programs, policies and interventions	• Explain the difference between key planning constructs and demonstrate the ability to incorporate them in planning, implementing and evaluating the fieldwork project	• Addressed in: 1,2,3,4,10, & internship placement • Assessed by: Learning objectives, Logic model, Gantt chart, summary paper
13. Explain the context of public and private health-care systems in which health care and public health policy are made and healthcare is delivered	• Discuss how the agencies you worked with during your fieldwork experience deliver health care to the populations they serve.	• Addressed in: 2,3,6,7,9,10 & internship placement • Assessed by: Learning objectives, Logic model, Gantt chart, poster, all 3 reflection papers, summary paper, poster presentation and poster

Course Assessments

The following summary of course assignments & assessments will be presented by the five major required elements of the course work:

1. Field work/Internship
2. Attendance/participation
3. Reflection Papers
4. Supporting and Summary documents
   (Contract elements, learning objectives, Gantt, Logic Model, Summary)
5. Poster/Oral presentation

Additional detailed instructions regarding the arrangements for the internship and the assignments can be found in the Internship Handbook available at the BlackBoard.

All assignments are to be submitted electronically through BlackBoard.

1. Field Work/Internship:
   The internship grade will based on the quality of the contract elements that are submitted, field supervisor comments, assessment of the quality of your service and difficulty of the placement (midpoint and final reviews). **Students should have secured an internship before the first class. Failure to do so may compromise the delivery of timely products and course standing.**

   A. Contract elements include:
   (see class schedule below for due dates)

   - Student information form (available electronically on Blackboard)
   - Supervisor information form (available electronically on Blackboard)
   - Signed student/supervisor agreement form (submitted as a pdf of the signed copy of the last page of the manual)
   - *Approved learning objectives**
   - *Approved logic model** (see: http://www.wkkf.org/knowledge-center/resources/2006/02/WK-Kellogg-Foundation-Logic-Model-Development-Guide.aspx) (Also, use the sample format available on Blackboard)
   - *Approved Gantt chart** (Use the sample format available on Blackboard)
   - *Human Subjects Basic Course* – Complete the Human Subjects Basic Course at the Collaborative Institutional Training Initiative (CITI) online site: https://www.citiprogram.org/ In creating your individual user login account when asked for the institution indicate CUNY, then follow the prompts to set up your account. After establishing your account you will be able to complete the online course for free. Submit the PDF certificate confirming completion.

- Proof of professional liability insurance (for students not working within another office/department of their current employer). Students should research the best option. Look for student packages for 1 semester covering liability between $1m/$3m. Two possibilities are described in the Manual (note: these are not endorsements).
- *Abstract**. First draft. See manual.
  *Note-Professor will review one draft. The next & final iteration will be graded.

Contract elements not due within first three weeks include:

- *Final Abstract** see guidelines in the Manual. This must be submitted by the last class.
- Approved Inter-agency affiliation agreement. This is to be completed and executed before the end of the course. An electronic copy must be given to Barbara Allier, copy to Professor Stackhouse using Blackboard. (Template available at: http://web.cuny.edu/academics/info-central/wwww/affiliation-agreements.html)

B. Midpoint review. Described in detail in the Manual.

- Student mid-point self evaluation, signed by supervisor. (Available on Blackboard).

C. Final Evaluation. Described in the Manual.

- Student Fieldwork Site Evaluation Form (Available on Blackboard). To be submitted electronically to Barbara Allier, copy to Professor Stackhouse using Blackboard.
- Completed timesheets – MPH students must document completion of 180 hours. (Blank forms Available on Blackboard) – Multiple pages with a cover summary page should be scanned to one PDF document with signatures and submitted electronically to Professor Stackhouse using Blackboard.
- Field supervisor final evaluation of student (The final evaluation form will be emailed to the site supervisor by Professor Stackhouse one week before the end of classes and returned to Professor Stackhouse). Note, failure of the supervisor to return the completed evaluation before grades are due may result in a delay of grade submission.

D. Guidelines for all materials to be submitted in fulfillment of course requirements noted above.

  - In addition to the detailed instructions for materials found in the Fieldwork Handbook the following standards apply:
  - The Reflection Papers & the Summary Document should have a title, your name, the date submitted, and include an

introduction, body and conclusion. These documents should be paginated.
- As noted in the Handbook, any time a reference is made the APA reference format is required.
- **All materials submitted** are required to have a document name using the following naming convention (This holds for all types of saved electronic documents – MSWord, Excel, PDF, or any other):
    - Last name.First initial. document name.MM.DD.YR (sample below)
    - Smith.M.ReflectionPaper1.09.15.15

2. Attendance:
   Attendance is mandatory and absences will result in reduced credit unless excused before the class by email; please arrive on time and make sure that all cell phones are silenced.

3. Reflection papers:
   Purpose of each reflection paper is to structure and organize student's learning experience against stated learning objectives, to facilitate synthesis of field activities, and to facilitate integration of theory and practice. Each reflection paper must be submitted to Professor Stackhouse using Blackboard by the end of the day (11pm) on the due date. Late papers will not be accepted unless cleared with Professor Stackhouse in advance. Paper are: #1 – Core Functions of Public Health, #2 – Evidence Based Public Health, and #3 – Leadership VS Management. Please see the manual for further instructions.

4. Summary document/evaluation:
   This summary should be at least a five page overview that critically describes your internship responsibilities, and major findings. The summary should be more than a description of what you did, it should contain insights about unexpected learnings and looking back, what you might have done differently. To be clear, admitting that an internship was not perfect is not a weakness. Indeed, identifying potential areas for improvement (either your own or the organization's) is at the core of what the internship is meant to deliver. **If you have produced a report, document or other final product(s) during your work at the internship, it (they) should be referenced and attached as an appendix. The final document should include itemized references to your learning objectives and clearly identify progress made and challenges faced.**

5. Posters:

Posters & their presentation represent a public display of your internship. Detailed instructions for the poster format appear in the Manual. Samples of posters from previous classes will be available at the BlackBoard along with a blank format for your use. Arrangements will be made with the Brooklyn College Library to print the posters at a discounted price. Note: this must be a professional poster. Posters not meeting professional expectations will not earn a passing grade.

Grading

Evaluation criteria

All assessment elements will be assigned a percentage grade & the final grade will be based on the combined grades based on their percentage weights.

The relative weight of each course component is as follows:

Assessment	Weight
Field Work	30%
Attendance/Participation	10%
Three Reflection Papers	30%
Supporting & Summary Documents	20%
Poster and Oral Presentation	10%
FINAL GRADE	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an “unofficial withdrawal” (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Graduate Bulletin and the Program Director for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Program Director in writing giving the factual reasons and basis for the complaint. A student who wishes to appeal a grade must initiate the process in the full semester following the one in which the contested grade was received. For further guidance, refer to the Graduate Bulletin.

Course Policies

Attendance and class participation

Attendance is a significant requirement of the class & attendance will be taken at each session. Students are expected to have read the assignments prior to the class and come prepared for discussion of the materials in relation to the in class presentations by Professor Stackhouse.

Late/incomplete submission of assignments

Late or incomplete submission of assignments will be accepted if there is a specific advance approval given by Professor Stackhouse. Assignments submitted late without advance approval within one week of the due date will be accepted & graded and the grade will be dropped by 10 percentage points. Note – BlackBoard gives documentation of the date and time that assignments are submitted.

Make-ups, rewrites, and extra credit

Make-ups and rewrites are not allowed. However, it should be noted that for the "Contract Elements" a first draft is submitted & returned with detailed feedback. The final copies of these items submitted three weeks after the first draft will be graded. The class does not offer extra credit opportunities

Expectations of students

Students are expected to be in class on time & to be prepared by having read the assigned materials. Mobile devices should be silent. No texting during class is allowed. If a topic arises in class discussion that may benefit from an online search, this will be

acceptable. In general laptops, tablets & smart phones should only be used to view saved electronic copies of class materials. Students will respect each other & fully participate in class discussions.

Expectations for the instructor

Students can expect respectful and professional interaction by Professor Stackhouse. He will post the PowerPoint presentations planned for class sessions one day prior to the class. All class assignments will be reviewed and comments/feedback will be offered within the BlackBoard system in a timely manner. Detailed “track changes” edits and comments will be given to written materials submitted. These are given not to suggest edits or rewrites but to offer feedback to students in relation to ways to improve future assignments. Professor Stackhouse will check Brooklyn College email approximately 4x a week & respond as soon as he is able.

Accessibility

In order to receive disability-related academic accommodations, students must first register with the Center for Student Disability Services. Students who have a documented disability or suspect they may have a disability are invited to set up an appointment with the Director of the Center for Student Disability Services, Ms. Valerie Stewart-Lovell, at (718) 951-5538. If you have already registered with the Center for Student Disability Services, please provide your professor with the course accommodation form and discuss your specific accommodation with him/her.

Academic integrity

The faculty and administration of Brooklyn College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete text of the CUNY Policy on Academic Integrity and the Brooklyn College procedure for implementing the policy can be found at www.brooklyn.cuny.edu/bc/policies. If a faculty member suspects a violation of academic integrity and, upon investigation, confirms that violation, or if the student admits the violation, the faculty member MUST report the violation.

Course Schedule *(Schedule is subject to change)*

Class Meetings HNSC 7920 – Fall 2015 (Thursdays 6:30-9:00pm)

1 – Aug 27 Introduction to Class; expectations, role, planning for the internship

2 – Sept 3 Public Health Core Functions

X – Sept 10 (No Class) College on Monday Schedule

3 - Sept 17 Public Health Infrastructure and Delivery
(First draft of all "Contract Elements" - *due 9/16*- letter A)

4 – Sept 24 Ethics and Methods (including community-based participatory research & human subjects' protection principles in data collection)

5 – Oct 1 Evidence Based Public Health Education (Reflection Paper #1 - *due 9/30*: Core functions)

6 – Oct 8 Public Health in Practice I: An in-depth review of Health Education to address Asthma (Final drafts of "Contract Elements" - *due 10/7- except final abstract*)

7 – Oct 15 Challenges and Opportunities: Internship at the Midpoint (Reflection Paper # 2 - *due 10/14*: Evidence Based Public Health)

8 – Oct 22 No Class to be held - Individual appointment will be scheduled in the classroom with the Instructor and mid-point check in with your supervisor. All midpoint reviews should have been electronically submitted.

9 – Oct 29 Public Health in Practice II: An in-depth consideration of two current topics in health education: Lay Health Workers & Online Health Literacy

10 – Nov 5 Leadership vs. Management: "Getting from the dance floor to the balcony"

11 – Nov 12 Making Presentations and Resumes and professional development (Bring 2 hardcopies of your resume.)

12 – Nov 19 Organizational change (Reflection Paper # 3 - *due 11/18*: Leadership vs Management)

X – Nov 26 (No Class) College Closed – Thanksgiving Holiday

13 – Dec 3 Individual scheduled presentations of Internships, Posters (session I)

14 – Dec 10 Individual scheduled presentations of Internships, Posters (session II)
(Summary papers, final documents and revised Abstract - *due 12/9*)

15 – Dec 16 - 23 Final Exams Period

- September 2 - Last day to add a class
- September 17 - Course withdrawal period begins / November 7 – withdrawal period ends

Reading Assignments

Sept 3 - Public Health Core Functions:

Ford, E.W., W.J. Duncan, and P.M. Ginter, *Health departments' implementation of public health's core functions: an assessment of health impacts.* Public Health, 2005. **119**(1): p. 11-21.

Levi, J., Juliano, C., Richardson, M. *Financing Public Health: Diminished funding for core needs and state by state variation in support.* Journal of Public Health Management & Practice, March/April 2007. **13**(2): p 97-102.

Rothstein, M.A., *Rethinking the Meaning of Public Health.* Journal of Law, Medicine & Ethics, 2002. **30**(2): p. 144-149.

Sept 17 - Public Health Infrastructure and Delivery:

Baker, E.L., Jr. et al, *The Public Health Infrastructure and Our Nation's Health. Annual Review of Public Health*, 2005. **26**:p. 303-318.

Mays, Glen P. et al, *Public Health Delivery Systems- Evidence, Uncertainty, and Emerging Research Needs*. American Journal of Preventive Medicine, 2009. **36**(3), p. 256-265.

Mays, Glen P, D. Scutchfield, M.W. Bhandari, and S.A. Smith, *Understanding the Organization of Public Health Delivery Systems: An Empirical Typology*. The Milbank Quarterly, March 2010. **88**(1): p. 81-111.

Sept 24 - Ethics and Methods:

Stone, D., *Policy Paradox:* The Art of Political Decision Making. 1997, NYC: W.W. Norton & Company. Chapter 2.

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Brooklyn College
HNSC 7930X Research Seminar
3 Credits
Fall 2015

Time and location	4141 Ingersoll Hall, Thursday 6:30PM-9:00PM
Instructor	Professor Jerry Mirotznik, Ph.D., M.P.H. Email: Jerrym@brooklyn.cuny.edu (Best way to contact me). Phone: 718-951-5000, Ext. 2737 Office: 4110e Ingersoll Hall
Office hours	Tuesday, 2-3 p.m., Thursday 9-10 p.m., and by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Examination of the stages of the research process, highlighting selected research designs and data collection techniques. Application of the principles and methods of research to the critical analysis of the health and nutrition sciences literature.
Course prerequisites	Completion of two graduate courses in health and nutrition sciences, and a GPA of 3.00 (B) or better in graduate courses completed to date.
Course format	Lecture and discussion
Required reading and resources	Anol Bhattacherjee. *Social Science Research: Principles, Methods, and Practices* (2012). Textbooks Collection. Book 3. http://scholarcommons.usf.edu/oa_textbooks/3 Other required readings are accessible through the Blackboard course website

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply approaches for improving the health status of populations, including a specific initiative for a target population	• Explain the steps of the research process • Identify principles of ethics in research design • Explain the concepts of validity, reliability, construct operationalization • Differentiate sampling strategies • Explain and select appropriate research and experimental designs • Identify the principles and guidelines of survey design and measurement • Identify and analyze quantitative and qualitative data	• Exams • Term paper • Assignments • Class participation
Use audience-appropriate written and oral communication to convey public health information	• Communicate the results of research studies	• Exams • Term paper • Assignments • Class participation
Differentiate among evaluation methods in relation to their strengths, limitations and appropriate uses	• Identify the principles, concepts and method of evaluation	• Exams • Term paper • Assignments • Class participation

Course Assessments

The will be two tests, a midterm and a final exam. Very likely each will consist of short answer questions, i.e., multiple choice and true/false, definitions, fill-ins, and brief essays.

A number of questions will concern the critique of an excerpt from a research article, which will be handed out a week prior to the exam to give you an opportunity to read and review it.

The term paper, which should be between 12 and 15 double-spaced typed written pages, will involve using the Critical Outline handout to evaluate two published research articles addressing the same or related issues. The two articles should focus on a research topic that falls broadly within the parameters of Health Science. For instance, one might review articles aimed at explaining such health behaviors as smoking cessation, engaging in an exercise program or complying with a medication regimen. Alternatively, one might select articles that are focused on the health effects of racial, gender or class discrimination, or as a third example one might review some of the published research on stress and psychiatric illness. For the September 24th class, please provide me with copies of the two articles you would like to use for your term paper. I'll review your articles to make sure they are appropriate for the assignment and will provide you with good material for your term paper. The term paper will be due the day of the final examination. As such, there will be no opportunity to revise and resubmit it.

Students are required to complete the Collaborative Institutional Training Initiative program found at www.citiprogram.org. The CITI program is used by thousands of institutions and organizations worldwide for training and certification in the ethical standards required for the responsible conduct of research and for studies involving human subjects. All CUNY faculty members, postdoctoral scholars, graduate and undergraduate students involved in research are required to complete the CITI. This training is an essential part of any introduction to research class. Register as a new user. Scroll down the list of participating institutions and select "City University of New York." You are to complete the basic CITI course. Your learner group is "Graduate Student." Please note that there are multiple modules to the basic course which can take several hours to complete, so don't wait until the last minute to do this. Print your completion certificate and bring it to class on the due date indicated below.

There will be 4 additional assignments. These assignments will be based on readings and the class lectures and will provide you with an opportunity to apply the course material and to thereby enhance your understanding of that material. It will also enable me to obtain relatively quick feedback about what parts of the material may need additional discussion and review. The due date for each assignment is listed on the syllabus.

Typically final grades for this course have not been based on a curve. However, I am open to curving the grades if it is warranted.

Grading Criteria

Class participation grading rubric

Score	Active Listening	Preparation	Quality of contributions to class	Attendance
A	Actively and respectfully listens to peers and instructor; consistently engaged and focused	Clearly demonstrates that s/he has read/thought about the material	Comments and asks pertinent questions frequently. Expresses thoughts clearly	Arrives to class on time, does not have unexcused absences, and absent ≤ 2 times
B	Sometimes displays lack of interest; not entirely engaged throughout the session; occasionally checks non-course material during class time.	Sometimes arrives unprepared or with only superficial preparation.	Comments and questions sometimes advance the discussion, but sometimes do little to move it forward	Usually arrives to class on time; absent ≤ 2 times, but only sometimes informs instructors about unavoidable absences
C,D,F	Projects lack of interest during class; apparent visible clues that s/he is not listening to peers or instructor; frequently checks non-course material during class time.	Exhibits little evidence of having read or thought about assigned material	Thoughts are not expressed clearly; comments are often off topic; or student does not participate in class discussions	Arrives consistently late, and/or does not inform instructor about absences, or absent > 2 times.

Term paper and assignments grading rubric

Score	Criteria and Standard
A	An "A paper" will clearly, articulately, substantively, and fully address the central topics indicated in the instructions for the assignment. The paper's organization will be easy to follow. The author will demonstrate critical thinking through application, analysis, synthesis, and/or evaluation of information. There will be at most one or two composition mistakes. The author will use pertinent and specific examples to illustrate points.
B	A "B paper" will address the central topics but not as clearly, articulately, substantively, and/or as fully as an A paper. The paper's organization will be easy to follow. The author will demonstrate critical thinking through application, analysis, synthesis, and/or evaluation of information. There will be more than two but no more than five composition mistakes. The author will use pertinent and specific examples to illustrate points.
C	A "C paper" will address the central topics but less clearly, articulately, substantively, and/or as fully as a B paper. The paper's organization will be less easy to follow than a B paper. The author may demonstrate critical thinking but not consistently or persuasively. There will be six to ten composition mistakes. Pertinent and specific examples will be inconsistently used.
D	A "D paper" may identify the central topics but will not address them clearly, articulately, and/or fully. The paper will lack organization. There will be more than ten composition mistakes. The author will not demonstrate critical thinking. The content of the paper and examples used may or may not have anything substantively to do with the topic
F	Hopefully it never comes to this

The relative weight of each course component is as follows:

Assessment	Weight
Midterm Exam	25%
Final Exam	25%
Term Paper	25%
CITI Certificate	5%
Assignments	10%
Class Participation	10%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. (Please see list of important dates below.) Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Graduate Bulletin and the Program Director for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Program Director in writing giving the factual reasons and basis for the complaint. A student who wishes to appeal a grade must initiate the process in the full semester following the one in which the contested grade was received. For further guidance, refer to the Graduate Bulletin.

Course Policies

Regular attendance and active class participation are required to succeed in this course. Missing all or part of a class period will negatively impact on your understanding of the subject matter. Class will begin promptly to maximize our time together. Please arrive to

class on time. Arriving late might well disrupt the learning environment and your fellow students' understanding of the material. If you cannot attend a class or know in advance that you won't be able to get there on time, please let me know as early as possible by email.

Please note the state law regarding non-attendance because of religious beliefs (see p. 46 of the Graduate Studies Bulletin)

One impediment to class participation is the use of laptops and other electronic devices during class discussions and lecture. Not only do such devices disrupt the learning of your peers, but there is empirical research indicating that their use hinders your own learning and intellectual performance in the classroom. Therefore, use of such devices is banned during this course, unless prior permission is granted from the professor. For a further discussion of the reasons behind this decision, please see:

https://www.washingtonpost.com/posteverything/wp/2014/12/30/this-year-im-resolving-to-ban-laptops-from-my-classroom/

To limit disrupting the classroom environment please put all cell phones on vibrate and turn off audible ringers.

Please feel free to use email to ask questions about lectures, readings and assignments. When sending an email be sure to include "HNSC 7930 - [Your name]" in the subject line. Alternatively, substantive questions might be best addressed during office hours. I would strongly encourage you to make use of them.

A makeup test for the midterm examination will not be available, unless advanced notification of the absence is given or the absence was for a very good reason that can be supported with appropriate documentation, e.g., physician's note. Students who miss the final exam will need to petition the Graduate School to request a makeup. To maintain fairness among all students, rewrites or extra-credit assignments will not be allowed. Late submissions of assignments will result in a grade reduction for each week overdue.

Accessibility

In order to receive disability-related academic accommodations, students must first register with the Center for Student Disability Services. Students who have a documented disability or suspect they may have a disability are invited to set up an appointment with the Director of the Center for Student Disability Services, Ms. Valerie Stewart-Lovell, at (718) 951-5538. If you have already registered with the Center for Student Disability Services, please provide your professor with the course accommodation form and discuss your specific accommodation with him/her.

Academic integrity
The faculty and administration of Brooklyn College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete text of the CUNY Policy on Academic Integrity and the Brooklyn College procedure for implementing the policy can be found at www.brooklyn.cuny.edu/bc/policies. If a faculty member suspects a violation of academic integrity and, upon investigation, confirms that violation, or if the student admits the violation, the faculty member MUST report the violation.

Course Schedule

Please note that the schedule is subject to change throughout the semester.

Several important dates are listed below. Students should refer to the current academic calendar for the full list of dates.

Wednesday, September 2 Last day to add a course
Thursday, September 10 Conversion Day: Classes follow a Monday Schedule
Wednesday, September 16 Last day to drop a course without a grade
Friday, September 25 Conversion Day: Classes follow a Tuesday Schedule
Monday, November 9 Last day to withdraw from a course with a W (non-penalty) grade

Schedule

Week	Date	Topic	Readings and Assignment
1	August 27	Introduction to Research- The Nature of Scientific Inquiry	Textbook Chapter 1 R.W. Morrell, D.C. Park, D. P. Kidder, and M. Martin. (1997). Adherence to Antihypertensive Medications Across the Life Span. *The Gerontologist*, 37 (5): 609-619.
2	September 3	The Philosophy of Science and Causal Inference	Textbook Chapter 3, pp. 17-19 K.J. Rothman and S Greenland. (2005). Causation and Causal Inference in Epidemiology. *American Journal of Public Health,* 95 (S1): S144 –S150. Assignment #1 due
3	September 10	No Class (Monday Schedule)	
4	September 17	Research Ethics	Textbook Chapter 16 A.M. Brandt (1978). Racism and Research: The Case of the Tuskegee Syphilis Study. *The Hastings Center Report,* 8 (6): 21-29 CITI Completion Certificate due
5	September 24	Overview of the Research Process	Textbook Chapter 3, pp. 20-24 Two articles for Term Paper due Assignment #2 due

6	October 1	The Stage of the Conceptual Model: Formulating a Research Question	Textbook Chapters 2 and 4 J.A. Earp and S.T. Ennett (1991). Conceptual models for health education research and Practice. *Health Education Research*, 6 (2): 163-171. Y. Ben-Shlomo and D. Kuh. (2002). A life course approach to chronic disease epidemiology: conceptual models, empirical challenges and interdisciplinary perspectives. *International Journal of Epidemiology,* 31 (2):285-293.
7	October 8	The Stage of Empirical Methods: Nature of the Research Case	Textbook Chapter 5 G. Rose (1985). Sick Individuals and Sick Populations. *International Journal of Epidemiology*. 14 (1): 32-38. Assignment #3 due
8	October 15	Nature of the Research Case (continued): Sampling Strategies	Textbook Chapter 8
9	October 22	Midterm Exam	
10	October 29	Nature of the Research Properties: Conceptualization and Measurement of Variables	Textbook Chapter 6 J. M. Oakes & P.H. Rossi (2003). The measurement of SES in health research: current practice and steps toward a new approach. *Social Science & Medicine,* 56 (4): 769–784.
11	November 5	Nature of the Research Properties (continued): Quantitative and Qualitative Data; Levels of Measurement; Validity and Reliability	Textbook Chapters 7 and 12 K. Wright, S. Naar-King, P. Lam, T. Templin, and M. Frey (2007). Stigma Scale Revised: Reliability and Validity of a Brief Measure of Stigma For HIV + Youth. *Journal of Adolescent Health*, 40 (1): 96–98

12	November 12	Methods for Data Collection: Elements of Study Design - Cross-sectional vs Longitudinal; Available vs New Data; Reactive vs Non-reactive Methods, Experimental vs Observational Designs	Textbook Chapters 9 and 10 M. Sibicky and J F. Dovidio (1986). Stigma of Psychological Therapy: Stereotypes, Interpersonal Reactions, and the Self-Fulfilling Prophecy. *Journal of Counseling Psychology*, 33 (2): 148-154 M.M. Velasquez, K. Von Sternberg, D.H. Johnson, J.P. Carbonari, C. Green and J.T. Parsons (2009). Reducing Sexual Risk Behaviors and Alcohol Use Among HIV Positive Men Who Have Sex With Men: A Randomized Clinical Trial. *Journal of Consulting and Clinical Psychology,* 77 (4): 657–667. Assignment #4 due
13	November 19	Methods for Data Collection (continued): Elements of Study Design	D.S. Lauderdale (2006). Birth Outcomes for Arabic-Named Women in California before and after September 11. *Demography*, 43 (1): 185-201. J.W. Song, and K.C. Chung, (2010). Observational Studies: Cohort and Case-Control Studies. *Plastic Reconstructive Surgery*, 126 (6): 2234–2242. R. Doll and A. B. Hill (1956). Lung Cancer and Other Causes of death in Relation to Smoking. *British Medical Journal*, 5001 (2): 1071-1081.
14	November 26	Thanksgiving Holiday: College Closed	
15	December 3	Stage of Data Analysis and Interpretation: The Role of Descriptive and Inferential statistics	Textbook Chapter 14
16	December 10	Stage of Data Analysis and Interpretation (continued): Assessment of the Study Findings	Textbook Chapter 15
17	December 17	Final Examination	

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Brooklyn College
HNSC 7940X Research Seminar III
3 Credits
Fall 2015

Time and location	Room 4141 Ingersoll, Wednesday, 6:30-9:00 PM
Instructor	Ruth McChesney, PhD, MPH ruthmc@brooklyn.cuny.edu (718) 951-5000 Ext 2757
Office hours	Mondays, Wednesdays 4:30-5pm, Room 4200 Ingersoll
Course website	N/A
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Examination of quantitative and qualitative techniques appropriate for research in the health sciences. Class discussion of each student's effort in developing a master's paper.
Course prerequisites	Health and Nutrition Sciences 7930X and a GPA of 3.00 (B) or better in graduate courses completed to date.
Course format	Seminar
Required reading and resources	None required
Suggested reading and resources	Optional materials will be made available as part of the course

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*

Apply the public health core functions of assessment, policy development and assurance	• Construct a testable research question or practice problem, which
	  ○ can feasibly be addressed within a specified time period
	  ○ is of public health relevance
	  ○ when addressed will fill a knowledge gap
		Sept 16 assignment (essay on topic); Oct 7 assignment (first draft of introduction); Nov 18 assignment (first draft of issues and gaps); Dec 2 assignment (draft of research plan & draft of concluding comments); Dec 16 assignment (draft of full paper)

Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Place a research question or practice problem within a relevant conceptual framework and the broader public health context • Identify and apply relevant professional or scholarly methods to an investigation or practice problem, including use of a predefined protocol or research plan. • Plan the analysis, synthesis and write up of an investigation from inception to completion including scheduling of items on the critical path to completion	Oct 7 assignment (first draft of introduction); Dec 2 assignment (draft of research plan); Dec 2 assignment (draft of research plan & draft of concluding comments); Dec 16 assignment (draft of full paper)
Adhere to ethical and social justice principles and standards	• Analyze relevant ethical or social justices issues using widely recognized principles or standards. • Obtain IRB or IACCU approval or exemption if appropriate. • Conduct any public health investigations involving	Sept 16 assignment (essay on topic); Oct 7 assignment (first draft of introduction); Nov 18 assignment (first draft

	human subjects in accordance with OHRPP ethical performance standards, including maintenance of confidentiality and security.	of issues and gaps); Dec 2 assignment (draft of concluding comments); Dec 16 assignment (draft of full paper)
Interpret and analyze public health literature and apply evidence-based research	• Implement a structured search of the literature. • Summarize the literature to date, including quantitative associations and qualitative themes, on a specific topic taking into account levels of evidence • Identify weaknesses within existing literature, such as addressing the wrong question, lack of comparison groups, biases or limited generalizability	Sept 30 library session; Oct 14 assignment (first draft lit search); Oct 21 assignment (revised draft lit search); Oct 28 assignment (first draft of lit review); Nov 4 assignment (revised draft of lit review); Nov 18 assignment (first draft of issues and gaps); Dec 16 assignment (draft of full paper)

Course Assessments

Assessment will be based on class participation, the assignments, drafts of the paper, including the final paper.

Grading

Evaluation criteria

Students receive a letter grade for the course.

Assignments will be evaluated based on the following: (1) the assignment was submitted on time, 2) the prescribed format for the assignment was followed, 3) correct English composition was used, 4) identify feedback received and pinpoint how the feedback has been responded to, and 5) the demonstration of clarity of expression and engagement in critical thinking. Your understanding of the course material will also be evaluated through your completed first draft of the master's paper.

The relative weight of each course component is as follows:

Assessment	Weight
Drafts of sections of paper	30%
Final completed draft of paper	40%
Assignments	15%
Class Participation	15%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

As stated in the Brooklyn College Graduate Bulletin, students in the MPH program must receive a grade of B or better in HNSC 7940 and may take the course a maximum of two times; Note that there is no grade of D in any of the graduate programs at Brooklyn

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty

generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Students are encouraged to complete all work on time; if you don't finish this course before the start of the next semester, you will not be able to take the second half of the master's paper course in the following semester.

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Graduate Bulletin and the Program Director for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Program Director in writing giving the factual reasons and basis for the complaint. A student who wishes to appeal a grade must initiate the process in the full semester following the one in which the contested grade was received. For further guidance, refer to the Graduate Bulletin.

Course Policies

Attendance and class participation

The first 5 meetings for the course are class meetings. After October 7, individual meetings will be arranged, with class meetings only as appropriate.

Late/incomplete submission of assignments

Unless noted otherwise, written assignments must be successfully sent by email by the date and time indicated.

Make-ups, rewrites, and extra credit

No make-ups, rewrites, or extra credit assignments are allowed.

Expectations of students

Please see Appendices A and B

Expectations for the instructor

Please see Appendices A and B

Accessibility
In order to receive disability-related academic accommodations, students must first register with the Center for Student Disability Services. Students who have a documented disability or suspect they may have a disability are invited to set up an appointment with the Director of the Center for Student Disability Services, Ms. Valerie Stewart-Lovell, at (718) 951-5538. If you have already registered with the Center for Student Disability Services, please provide your professor with the course accommodation form and discuss your specific accommodation with him/her.

Academic integrity
The faculty and administration of Brooklyn College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete text of the CUNY Policy on Academic Integrity and the Brooklyn College procedure for implementing the policy can be found at www.brooklyn.cuny.edu/bc/policies. If a faculty member suspects a violation of academic integrity and, upon investigation, confirms that violation, or if the student admits the violation, the faculty member MUST report the violation.

Course Schedule

Note: The schedule is subject to change throughout the semester. The first 5 meetings for the course are class meetings. After October 7, individual meetings will be arranged, with class meetings only as appropriate.

September 2 Introduction to the course, review of the syllabus, discussion of expectations, overview of the structure, scope, and sections of the Master's paper, review of educational objectives indicating critical thinking, and engagement in material.

September 9 Writing as a process. Discussion of sections of the Master's paper.

September 16 Assignment due: 200-250 word essay on what you plan to study in your Master's paper, why it interests you, and how this topic holds importance for your field (Community Health or MPH). See the prescribed format for what you are to do in organizing the assignment. Also submit a copy by 4:00 PM September 16 in an email attachment.

September 23 No Class

September 30 Library resources. Meet at 6:30 PM in the Brooklyn College Library's Workshop Center, Room 148, on the 1st floor. Lee Ann Fullington, Health &

Environmental Sciences Librarian, (LAFullington@brooklyn.cuny.edu) will conduct this session. Come prepared to learn about library resources available to you.

October 7 Assignment due: the first draft of the Introduction section to your Master's paper (4-5 pages). Also submit a copy by 4:00 PM October 7 in an email attachment.

October 14 Assignment due: Submit by 4:00 PM on October 14 in an email attachment an electronic copy of your first search of the literature. Identify in an introductory paragraph or two the focus of your search as based on a summary of what you wrote for the previous class, including feedback received and your response to the feedback. Identify search strategies you used. Identify at least 15 sources of published material relevant to your focus. Provide for each source identified an annotation of the topic and how it suits your proposed paper. In the assignment, cite each source using correct APA format, and include a References section in which the sources are presented correctly in APA style. NOTE: in this assignment you primarily are providing an annotated list of sources that are relevant.

October 21 Assignment due: Submit by 4:00 PM on October 21 in an email attachment an electronic copy of a revised, expanded literature search. Follow the directions given for the assignment due October 14, and include at least 25 annotated sources this time.

October 28 Assignment due: Your first draft synthesizing the literature for your Master's paper. See the format to be followed. Also send by 4:00 PM a copy in an email attachment.

November 4 Assignment due: Your latest version of the literature review for your Master's paper. In a beginning statement given prior to the start of your literature review, identify the feedback you have received and how your latest version is a response to the feedback. Include the finished Introduction for your paper (4-5 pages). For the literature review, provide 10-15 double-spaced, typed pages analyzing and synthesizing the literature most relevant to your purposes. Follow the prescribed format. Also send by 4:00 PM a copy in an email attachment.

November 11 Work on writing the section of your paper identifying issues or gaps revealed in your literature review that need to be researched empirically.

November 18 Assignment due: The section on issues and gaps needing research attention (4-5 double-spaced, typed pages). Identify clearly what are the issues or gaps. Tell why they matter to your field. Link your statements to published literature that you cite. Include a list of References. Also send by 4:00 PM a copy in an email attachment.

November 25 Work on a plan of action to complete an empirical research study focused on the issues or gaps you have identified.

December 2 Assignment due: A draft of your research plan (2-3 pages double-spaced and typed) and a draft of your Concluding Comments (1-2 pages). Also send by 4:00 PM a copy in an email attachment.

December 9 Work on finishing the Master's paper in terms of these sections: Title page, Abstract, Introduction, Literature Review, Issues and Gaps Uncovered, Concluding Comments, and References. Include the research plan in an appendix.

December 16 Assignment due: In an email attachment, submit an electronic copy of the final version of your Master's paper with all sections noted above, including your revised draft of your research plan in an appendix.

Important dates for Fall 2015

The full Fall 2015 academic calendar can be found at:
http://www.brooklyn.cuny.edu/web/about/administration/enrollment/registrar/bulletins/spring15/calendar.php

Aug 27	First day of classes
Sept 5, 6	No classes scheduled
Sept 7	College Closed- Labor Day
Sept 10	Conversion day, classes follow Mon schedule
Sept 13-15, 22, 23	No classes scheduled
Sept 25	Conversion day, classes follow Tues schedule
Oct 12	College Closed - Columbus Day
Nov 9	Last day to withdraw from a class with a grade of "W
Nov 26, 27	College Closed - Thanksgiving holiday
Nov 28, 29	No classes scheduled - Thanksgiving recess
Dec 12	No classes scheduled
Dec 15	Reading Day
Dec 16-23	Final Examinations
Dec 24-25, 31	College Closed – Holidays observed

Appendix A: Discussion Format for Peer and Group Review of Assignments

Specifically, answer these questions about the assignment of each group member:

1. What are strengths of the student's assignment?
2. Did the student follow the format for the assignment?
3. How clear and detailed is the student's response to feedback?
4. What were areas of agreement with the analysis done by the student?
5. What were areas of disagreement about the analysis and how were these disagreements resolved?
6. What can be done to strengthen the student's assignment as a reliable and critical presentation of the material?

Reliable means dependable, trustworthy, consistent with the material; critical indicating serious analysis and evaluation of the material in light of other information, for instance, from other scholarly sources. See instructions in the syllabus for what the assignment should contain. You should take into account English composition issues, logic, trustworthy presentation of competing points of view, and persuasive use of sources to provide evidence to support assertions.

At the end of the discussion period, turn in the summary of discussion of the questions to the student. Use this sheet as your guide about the questions to address. Remember to give examples to illustrate your points when you answer the questions. Give examples to support your claim.

Take turns in each group meeting summarizing answers for the questions. Don't have the same person summarize the discussion for the entire meeting. Every group member must take part in recording the meeting.

Appendix B: Writing for this Class

Developing your writing in this course

- This is a graduate-level course. You are expected to submit graduate-level writing. This expectation means written work that follows the directions of the assignment, articulates original ideas and insights, and is free of excessive spelling, grammatical, and writing errors. Please see the sections, "Writing issues" and "Composition Mistakes" for more details.

- Apart from learning content, another goal of the course is to develop or strengthen skills that will help you be a better student and, ultimately, a better professional. These skills include: articulating your ideas in writing, collaborating with peers, engaging in a productive critique of your own writing, and offering constructive, critical feedback to peers.

Writing Issues

- Spelling, punctuation, grammar, and writing ALWAYS count. You must write in full, properly punctuated, sentences. Sentences must be actual sentences, rather than sentence fragments or run-on sentences. Paragraphs must contain thesis statements.

- Points will be automatically deducted from your grade if there are *excessive* and *serious* spelling, grammar, and/or writing issues.

- What counts as "excessive and serious"? This decision varies by assignment, but a general rule of thumb some persons follow is that the number of mistakes should not exceed the number of pages of that assignment. For example, if you are submitting a 5 page paper, any more than 5 errors will lead to a reduction in points earned. We will follow that general rule. However, as a hard fast rule, regardless of the length of the assignment, ten or more errors will mean all points are deducted for composition mistakes. Such carelessness will spill over into negative evaluations about the credibility of the assignment itself.

Use of correct English in papers

- Written English should be used correctly. Clarity of expression is marred by presentation mistakes. Papers with presentation mistakes – such as typos, poor organization, and run-on sentences -- lose credibility with readers. Obviously, content is crucial; poor presentation of good content makes for a bad report, however. Turn in credible reports. Be a credible writer.

- *Composition Mistakes.* Common composition mistakes can include run-on and incomplete sentences, incorrect spelling, and incorrect use of words.

- *Challenge yourself to be clear and specific.* Feedback**:** In papers written after the first assignment, you need to indicate in a beginning paragraph or two what feedback you have received and what you have done to incorporate feedback about improving your writing. There should be a clear sense of the specifics in the feedback and the specifics in your responses.

- For additional assistance with writing issues, contact the Brooklyn College Learning Center, which offers one-on-one tutoring, at 718-951-5821 or http://lc.brooklyn.cuny.edu

The citation style and formatting of papers in this course

- You must properly cite each data source, both in text and in a reference section at the end of the paper, per American Psychological Association (APA) style (6th edition, 2010). For students who use RefWorks, Endnote, or any other bibliographical/citation program, please note that it is your responsibility to double-check the output these programs produce, as you are ultimately liable for all of the work you submit.

- Unless otherwise specified, your papers should be typed, double spaced, with 1 inch margins and 12 point font. All pages must be numbered.

- Points will be automatically deducted from your grade if your assignment is not formatted as instructed. Here are a few examples:

- If your assignment has 1.5 spacing rather than double spacing

- If your margins are 1.25” and not 1”

- If your assignment is doesn’t have a bibliography or “works cited” section (and you were asked to create one)

- If your citations are not presented in APA format

Submission policy

- Unless noted otherwise, written assignments must be successfully sent by email by the date and time indicated.

Plagiarism

- All work must be properly cited. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. We may review strategies for avoiding plagiarism in this class; however it is ultimately your responsibility to know what is and is not plagiarism. Plagiarism is the act of presenting another person’s ideas, research, or writing as one’s own. Internet plagiarism includes

submitting downloaded papers or part of term papers, paraphrasing or copying information from the Internet without citing the source, and cutting and pasting from various sources without proper attribution. You are expected when you quote someone else to place the words in quotation marks, identify explicitly the source, and give the page number(s) for the quote. When you use someone else's ideas but paraphrase them, you are expected to identify explicitly the source of your information. If you plagiarize in this course, the consequences range from failure for the assignment to failure for the course. The complete text of the CUNY Academic Integrity Policy and the Brooklyn College procedure for implementing that policy can be found at this site: http://www.brooklyn.cuny.edu/bc/policies

COURSE SYLLABUS

Hunter College
HPM 75100: Public Health and Health Care Law
3 Credits
Fall 2015

Time and location	Thursdays, 6:05-7:50pm, Silberman (2180 3rd Ave,), Room SB 219
Instructor	Wilfredo Lopez, JD Adjunct Professor, CUNY School of Public Health, General Counsel Emeritus, New York City Department of Health and Board of Health Phone: 516-477-4520 (cell) wl455@hunter.cuny.edu (preferred contact)
Office hours	Thursdays, 5:00-6:00pm
Course website	Students log into the course website through their Blackboard portal: https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Reviews key areas of the legal process relevant to health care delivery and public health; analyzes major court decisions that have affected the field and selected federal, state and local statutes that affect public health and health care practice; acquaints students with the basics of legal research and legal reasoning as applied to public health and health care.
Course prerequisites	PH 75500, PH 75600 or with instructor's permission for those with at least one year of health care experience
Course format	This course is taught with a mix of online learning resources, discussion, collaborative exercises, self-assessment, and case studies. All materials are available on the course website. This is not a self-paced course; there are weekly deadlines for discussion and activities.

Required reading and resources	Text: Goodman, Hoffman, Lopez, Matthews, Rothstein & Foster: Law in Public Health Practice (Oxford University Press, Second Edition 2007). Comes in hardcover and is available electronically through the CUNY Libraries at: https://libsearch.cuny.edu/F/?func=item-global&doc_library=CUN01&doc_number=008323621&year=&volume=&sub_library=HC001
Suggested reading and resources	http://www.nyc.gov/html/doh/html/about/health-code.shtml http://www.nyc.gov/html/doh/html/about/notice.shtml http://www.nyc.gov/html/doh/html/about/public-meetings-archive.shtml

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply relevant theoretical/conceptual models and leadership principles to developing health policy and administrating health programs	• Articulate how law can assist public health professionals achieve public health goals • Access legal cases, statutes and regulations • Explain the importance of laws and policies that are practical, implementable and enforceable • Articulate basic constitutional, tort and regulatory principles	· Class Discussions · Case Critique · Religious Exemption Assignment · Paper
Identify and analyze the legal, economic, ethical and health bases and implications of public health policies that affect urban populations	· Describe the role of the legal system in public health, health policy and health care delivery · Recognize the difference between federal, state and local jurisdiction	· Class Discussions · Case Critique · BOH Meeting Summary · Paper
Apply strategies for advocating for effective public health policies and programs	• Identify and analyze legal issues and how they impact public health programs • Recognize the different roles of public health practitioners and public health attorneys	· Class Discussions · Case Critique · BOH Meeting Summary · Religious Exemption Assignment · Paper

Analyze and critically evaluate theoretical and conceptual models used to describe the U.S. health care system and the delivery of health care	· Recognize and describe the role of litigation on the U.S. health care system and on quality of care · Describe how health care facilities and professionals are licensed and regulated	• Class Discussions

Course Assessments

Class Discussions: Each week we will discuss the assigned reading material. Students will be expected to contribute to the discussions and express their views.

Board of Health (BOH) Meeting Summary: Students will view a videotaped NYC BOH meeting, summarize it, select a particular issue presented at the meeting and explain by posting a discussion of why they believe the position taken by the Department of Health and Mental Hygiene reflects a sound or unsound public policy.

Case Critique: Students will read the NY Court of Appeals decision in the NYC soda-portion cap case and a related law journal article, and write a short paper discussing the legal and policy issues raised and why they think the case was correctly or wrongly decided.

Religious Exemption Assignment: Students will write a short paper discussing the constitutional and policy aspects of religious exemptions to mandatory school vaccinations.

Paper: As a final exam students will write a paper setting forth a public health problem that they believe can and should be addressed by a federal, state or local statute or regulation, articulate the essential elements of such a law, and explain the scientific and policy rationale therefor.

Grading

<u>Evaluation criteria</u>

Assignments will be assessed based on a rubric found on the course website. Additional specific information about grading criteria will be distributed with the assignment. [Need to discuss further]

The relative weight of each course component is as follows:

Assessment	Weight
Class Discussions	20%
BOH Meeting Summary	15%
Case Critique	20%
Religious Exemption	20%
Final Paper	25%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Syllabus Change Policy

This syllabus is a guide for the course and is subject to change with advance notice. Changes to the syllabus will be announced in class and posted to Blackboard as an announcement.

Attendance and class participation

It is required that students come to all class sessions-- A sign in sheet will be distributed at each class. More than one absence will result in a penalty of 5 points from the final grade, with few exceptions and only if a reasonable excuse is documented.

Please call or email if there is a problem with attending or being late to a particular session, prior to the class.
It is expected that students will do the assigned readings prior to coming to class.
It is expected that students will participate in classes and ask questions on the material being presented in the course, and on any assignments that may seem unclear, prior to the work being submitted.

Late/incomplete submission of assignments

It is expected that students will hand in assignments on time, and if any brief extension is needed, permission will be sought in advance. Assignments more than a week late (even with permission) will not be accepted. Incomplete submission of assignments will not be accepted.

Make-ups, rewrites, and extra credit

There are no make-ups, rewrites or extra credit assignments allowed.

Expectations of students

Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
Know how to use library resources and citation tools.
Show respect to everyone in the course.
Be fully prepared to actively participate in discussion.
Complete all assignments by their assigned due date. No credit for work completed after the due date.
No credit for assignments suspected of plagiarism or cheating.
Be held accountable for all material assigned/covered in the course.
Regularly check the course website and official university email for course correspondence.
Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted in the discussion board.
Contact the professor directly with personal questions and concerns related to the course.
When in doubt, ask questions and clarify course assignments and expectations.
Cellphones are not allowed to be used in class. Computers, if any, are to be used only for taking notes.

Expectations for the instructor

Provide regular announcements, reminders, and suggestions on the course website.*
Monitor, ask follow-up questions, and answer questions presented during discussion.
Respond to student email within 48 hours Monday through Friday.
Grading and feedback on assignments within 1 week of the due date.

Communication about grades and progress in the course will be given through the course website.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule
This schedule may change as the semester progresses.
Refer to the current academic calendar for important dates.

Session 1: 8/27; Assessment: Discussion
Topic: Course Overview; Legal Underpinnings of Public Health/Federalism/Preemption

Readings/Resources:
Understanding litigation and how to read cases: "How to Brief a Case"
(http://www.lib.jjay.cuny.edu/research/brief.html)

Text pp. 25-44, 51-53, and 72-75.

US Constitution: 10th Amendment; Article VI, paragraph 2; Article I, Section 8, clauses 1 and 3. Access to the text of the U.S. Constitution:
(https://www.law.cornell.edu/constitution)

Session 2: 9/3; Assessment: Discussion
Topic: Public Health and the Judiciary; Accessing cases, laws and regulations online.

Readings/Resources:
Text pp. 89-109

Session 3: 9/17; Assessment: Discussion, BOH Meeting Summary Due
Topic: State Police Power/NYS and NYC Public Health Legal Structure

Readings/Resources:
Try to access and only skim the following laws and regulations. Specific provisions will be discussed in relation to jurisdiction and authority.

NYS Public Health Law Sections 200, 201, 206, 220, 225(5), 228, 230, 312, 1309, 2110 and 4104. (http://public.leginfo.state.ny.us/lawssrch.cgi?NVLWO:) - click on Laws, Laws of New York, then PBH.

NYS Sanitary Code [Title 10 of the New York Code of Rules and Regulations (NYCRR), Volume A] - only skim the table of contents for Parts 1 through 24.
(http://w3.health.state.ny.us/dbspace/NYCRR10.nsf/Full+Directory?OpenView)

NYC Charter Chapter 22, Sections 551, 553, 555, 556(c) & (d), 557, 558.

(http://public.leginfo.state.ny.us/lawssrch.cgi?NVLWO:) - click on Laws, Laws of New York, scroll down and click on NYC.

NYC Administrative Code, Title 17 - table of contents only. (http://public.leginfo.state.ny.us/lawssrch.cgi?NVLWO:) - click on Laws, Laws of New York, scroll down and click on ADC

NYC Health Code [Title 24 of the Rules of the City of New York (RCNY)] - table of contents only. (http://www.nyc.gov/html/doh/html/about/health-code.shtml)

Session 4: 9/24; Assessment: Discussion
Topic: Legal Counsel to Public Health Practitioners

Readings/Resources:
Text pp. 199-221

The NYC "Soda-Portion Cap" case, 23 N.Y.3d 681, 16 N.E.3rd 538, 922 N.Y.S.2d 480 (2014)

Harvard Law Review article re. "Soda-portion Cap" case. (http://harvardlawreview.org/2015/03/new-york-statewide-coalition-of-hispanic-chambers-of-commerce-v-new-york-city-department-of-health-and-mental-hygiene/)

Session 5: 10/1; Assessment: Discussion,
Topic: Surveillance and Epidemiologic Investigations

Readings/Resources:
Text pp. 229-235

NYC Health Code (Title 24 of the R.C.N.Y.) Sections 11.01, 11.03 (just skim the listed conditions, but read the text of subdivisions (a) through (e)), and 11.05, 11.10, 11.11, 11.13, 11.15, 11.17, 11.23, 13.01, 13.03(a) and (c). (http://www.nyc.gov/html/doh/html/about/health-code.shtml)

Session 6: 10/8; Assessment: Discussion, Case Critique Due
Topic: Environmental Health

Readings/Resources:
Text pp. 478-505

NYC Health Code [24 R.C.N.Y.] - Review Article Headings of Title IV (Environmental Sanitation), Articles 71 through 181. Read Sections 81.08 (trans fats) and 81.50 (calorie labeling). (http://www.nyc.gov/html/doh/html/about/health-code.shtml)

Session 7: 10/15; Assessment: Discussion
Topic: Basics of Health Care Law -- Why is Everyone Worried about Liability? (Guest Lecturer - Rose Gasner)

Readings/Resources:

General liability—Hall v. Hilbun, 466 So.2d 856 (Miss. 1985) Note: Read pp. 860-873, and 877-880. Helling v. Carey, 519 P.2d 981 (Wash. 1974).

Institutional liability—Annas GJ, The Patient's Right to Safety—Improving the Quality of Care Through Litigation Against Hospitals, New England Journal of Medicine,2006; 354: 2063-2066.

Contract law: Manny V. Central States, Southeast and Southwest Pension and Health and Welfare Funds, 2004 U.S. App. LEXIS (7th Cir. 2004). Lowell v . Drummond, Woodsum & MacMahon, 2004 U.S. Dist. LEXIS 13059 (D. Me. 2004).

Session 8: 10/22; Assessment: Discussion
Topic: Basics of Health Care Law Continued

Readings/Resources:

Regulating Hospitals and Clinics -- NYS Public Health Law Sections 2801, 2805, review the table of contents for Article 28.
(http://public.leginfo.state.ny.us/lawssrch.cgi?NVLWO:) - click on Laws, Laws of New York, then PBH.

Licensing Health Care professionals -- NYS Education Law Articles 130 (including Sub Articles), 131, 131-A, review the tables of content for these articles.
(http://public.leginfo.state.ny.us/lawssrch.cgi?NVLWO:) - click on Laws, Laws of New York, then EDN.

Session 9: 10/29; Assessment: Discussion
Topic: TB case study—individual rights vs. state power to control infectious disease

Readings/Resources:

Text pp. 208-210 (review again)

NYC Health Code [24 R.C.N.Y], Section 11.21
(http://www.nyc.gov/html/doh/html/about/health-code.shtml)

Gasner MR et al., "The Use of Legal Action in New York City to Ensure Treatment of Tuberculosis", New Eng. J Med 1999; Vol. 340 No. 5, pp. 359-366

Annas, GJ, "Control of Tuberculosis: The Law and the Public's Health", New Eng. J Med 1993; Vol. 328 No. 8, pp. 585-588.

Session 10: 11/5; Assessment: Discussion
Topic: Bloodborne and Sexually Transmitted Infections, HIV/AIDS, AIDS exceptionalism

Readings/Resources:

Text pp. 385-401

Bayer, R. Fairchild AL, “Changing the paradigm for HIV testing--the end of exceptionalism”, New Eng. J Med. 2006; Vol. 355 No.7, pp. 647-649.

NYS Public Health Law Sections 2130, 2133, 2134, 2781, 2782, 2785. (http://public.leginfo.state.ny.us/lawssrch.cgi?NVLWO:) - click on Laws, Laws of New York, then PBH.

Session 11: 11/12; Assessment: Discussion
Topic: Mandatory School Vaccination

Readings/Resources:
Text pp. 338-360

NYS Public Health Law Section 2164, Subdivisions (2)(a) (requirement) and (b) (booster), (7) (exclusion), (8) (medical exemption), (9) (religious exemption). (http://public.leginfo.state.ny.us/lawssrch.cgi?NVLWO:) - click on Laws, Laws of New York, then PBH.

Phillips v. City of New York, Second Circuit Court of Appeals (2015). (http://scholar.google.com/scholar_case?case=16052882547509686251&q=Phillips+v.+City+of+New+York&hl=en&as_sdt=3,33)

New California Statute Eliminating Religious Exemption. (http://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=201520160SB277)

Session 12: 11/19; Assessment: Discussion, Religious Exemption Assignment Due
Topic: Public Health Emergencies

Readings/Resources:
Text pp. 262-283

NYS Executive Law Sections 24 (1)(a)- (g) (proclamation of a local state of emergency), 25, 28 (state declaration of disaster emergency). (http://public.leginfo.state.ny.us/lawssrch.cgi?NVLWO:) - click on Laws, Laws of New York, then EXC.

NYC Health Code [24 R.C.N.Y.] Section 3.01(d). (http://www.nyc.gov/html/doh/html/about/health-code.shtml)

Wilfredo Lopez, Stacie P. Kershner, Matthew S. Penn, “EMAC Volunteers: Liability and Workers’ Compensation”, Biosecurity and Bioterrorism: Biodefense Strategy, Practice and Science, September, 2013, Vol. 11, No. 3: 217 - 225.

Session 13: 12/3; Assessment: Discussion
Topic: Tobacco Control

Readings/Resources
Text pp. 427-451

See summaries of the federal Family Smoking Prevention and Tobacco Control Act (FSPTCA aka Tobacco Control Act of 2009) at:
http://www.lung.org/stop-smoking/tobacco-control-advocacy/federal/fda-regulates-tobacco/what-fda-regulation-of.html
http://www.tobaccofreekids.org/what_we_do/federal_issues/fda/

Session 14: 12/10; Assessment: Discussion
Topic: Identifiable Health Information, Distinguishing Public Health Practice and Human Subjects Research

Readings/Resources
Text pp. 238-261

NYS Public Health Law Section 2441, subdivision 2. (http://public.leginfo.state.ny.us/lawssrch.cgi?NVLWO:) - click on Laws, Laws of New York, then PBH.

Session 15: 12/17; Assessment: Discussion, Final Paper Due
Topic: Vital Statistics

Readings/Resources:

Schwartz S, The U.S. Vital Statistics System: The Role of State and Local Health Departments, National Academies Press, 2009; 77-86.

Skim through NYC Health Code [24 R.C.N.Y.] Articles 201, 203, 205 and 207. We will discuss several provisions related to birth, death and terminations of pregnancy certificates, including Section 207.05(a)(5) regarding transgender birth certificates. (http://rules.cityofnewyork.us/codified-rules)

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
HPM 75300: Public Health Policy Analysis
3 Credits
Fall 2015

Time and location	SB 329, Thursday, 8-9:45pm
Instructor	Barbara BerneyBarbara Berney, PhD, MPH Associate Professor Office: SB 522 Email: bberneyh@gmail.com Phone: 212 396 7756 Best way to reach me is email. Put HPM753 in the subject line.
Office hours	Thursday 5-7 pm Room 522 Silberman and by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Examines common approaches and concepts of policy analysis for public health, including market efficiency and failures, cost-benefit analysis, problem and decision making analysis; describes critiques of such models with public health examples; focuses on the Health Impact Assessment as a method for analyzing costs and benefits of health and non-health policies.
Course prerequisites	PH 75600, PH 75500
Course format	This class is taught as a combination of lecture, small group work, and seminar format. It is expected that each student will be prepared for and actively participate in each class, both on-line and in-class. In general, there will be a lecture followed by a discussion of the reading. You should be prepared with questions about the reading. You should be prepared to start the discussion by outlining the reading and the issues raised. At the end of the discussion, you should be prepared to summarize the discussion, the implications of the readings and any unresolved issues. Students may be called on at any time to present or wrap up or at any point in the discussion.
Required reading	**Readings may change as the semester progresses:** **TEXTS:**

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply relevant theoretical/conceptual models and leadership principles to developing health policy and administrating health programs	• Identify theoretical models for understanding and analyzing policy formulation, implementation and outcomes	Assigned papers and class discussion
Identify and analyze the legal, economic, ethical and health bases and implications of public health policies that affect urban populations	• Use policy analysis tools to understand and assess the policy environment • Assess critiques of public analysis models	Assigned papers and class discussion of CBA, HIA, Stone, Oral Presentation
Apply strategies for advocating for effective public health policies and programs	• Write effective analyses of current public health issues	Assigned papers
Evaluate public health programs and health policies and apply evaluation results to their improvement	• Use policy analysis tools to understand assess the policy environment	• Assigned papers and class discussion and oral presentation
Identify non-public health policies and describe how they can mitigate or exacerbate health disparities and influence the health of urban populations	• Apply the framework and insights of the health impact assessment model to analyze health, healthcare and non-health policies that influence population health	• HIA paper and class discussion
Identify and discuss the partnership and collaborative skills needed to develop effective public health programs and policies	• Describe the benefits of multi-disciplinary and intersectoral approaches to health policy analysis	• Class discussion
Analyze and critically evaluate theoretical	• Explain the role of cost-benefit	• CBA paper and class

and conceptual models used to describe the U.S. health care system and the delivery of health care	analysis, cost-effectiveness analysis and health impact assessment in policy analysis	discussion

Course Assessments

Assessment will be based on student participation in the discussion board, student participation in class discussions and the following assignments:
ASSIGNMENTS

Class Discussion Board. Starting with Class 2, one student each week will be responsible for posting a current news article related to health policy to our discussion board on Blackboard. The article, along with a few comments or questions about why you found this issue particularly interesting, confusing or challenging, should be posted by Friday at midnight. The rest of the class will have until Tuesday at midnight to comment on the articles. We'll take no more than 5-10 minutes at the start of each class to discuss the articles and your comments.

Public Meetings: Due by the beginning of December 3rd class, posted to Blackboard. Over the course of the semester, students will attend a public meeting of their choice. This could be a meeting of the city council, a civic association, a community board, your local police precinct, or another health policy-related meeting that is open to the public. Write a one-page description of the meeting you attended, what policy-related issue was discussed, what data (if any) were presented, and your overall impression.
You can find more information at:

- NYC Public Hearings Calendar: http://rules.cityofnewyork.us/public-hearings-calendar
- Meetings of the City Council and its committees: council.nyc.gov/html/action/calendar.shtml
- NYC Civic Associations: www.nyc.gov/html/cau/html/involved/civic.shtml
- NYC Community Boards: www.nyc.gov/html/cau/html/cb/cb.shtml
- NYPD Bureau of Community Affairs: http://www.nyc.gov/html/nypd/html/community_affairs/community_affairs.shtml

Assignment 1: Due by Tuesday, September 16, posted to Blackboard. Find a recent article about a health problem from a newspaper, magazine, blog, or other news source. Write a 2-page paper examining how the story explains 1) what the problem is; 2) why it is a problem, 3) whose problem it is; and 4) what should or can be done about it. Think about: how did the news source choose to define this problem? Do you agree or disagree with the framing and potential solutions? Are there additional stakeholders who were not mentioned in the story? We will use these as the basis of our class discussion. Please use a different article from the one you brought in the first day of class. Please write an essay that address all these questions rather than a list of questions and answers.

Assignment 2 (Due Tuesday October 13):
You are Louis Bird, committee staff. Write a 2 page memo with your assessment of the findings from the GAO report and implications for committee action. What is your estimate of the impact of WIC of low birth weight, and what is the implication. Take the closing question in the case as your task.

Assignment 3 Due Oct 29:

Use the literature on using statins as a primary prevention for heart disease/cardio-vascular events to do a cost-effectiveness analysis of expanding the use of statins. You do not need to calculate the costs of side-effects or risks but you should discuss them. Use the following to do your analysis.

Objective: To estimate the effectiveness and cost-effectiveness of expanding use of statins to men with greater than 10% risk of a cardio-vascular event

Design: You choose

Data Sources: Published literature.
Target Population: You may limit your analysis to men of a certain age if you like.

Perspective: Societal.

Intervention: expand use of statins

Outcome Measures: you choose: must have a disease/event measure, a cost measure (e.g. $/QALY; $/event avoided; $/death avoided) and a cost effectiveness ratio. You might also consider comparing expanded use of statins with life-style interventions or at least explain how you could do this.

Results of Base-Case Analysis: Using statins in x% of population (describe population) will result in y change in cardio vascular events and a change of z QALYs over xx years at a cost of yy/QALY and zz/avoided event. Impact of giving statins to larger % of population

Limitations:

Conclusion:

Assignment 4: Due Nov5 . NO LATE ASSIGNMENTS ACCEPTED. You are on Gov Tom Wolf's staff:

- ***If your last name begins with A-G,*** Set up a Cost –Benefit analysis of HVHF in Pennsylvania. Provide a list of all the benefits, including to whom they accrue and how you would monetize them. Provide a list of all the costs, including to whom they would accrue and monetize them. Explain where the data will come from for determining costs and benefits and monetizing them. You may provide all this information in a chart. Explain in 2 pages or less, what issues you cannot or will not address in your cost-benefit analysis and discuss their importance.
- ***If your last name begins with H-R***, set up an HIA of HVHF in Pennsylvania. As you can see from the NAS report there are six steps to a Health Impact Assessment http://www.nap.edu/catalog.php?record_id=13229 . Look especially at the Scoping and Assessment portions as noted on page 7. In a flow chart (a neat hand drawn chart is fine) note how HVHF will have both beneficial and adverse health effects and enumerate each one of these. For each

of the sub-boxes on the chart, note how you would amplify benefits and mitigate risks. On a separate page briefly enumerate the stakeholders you would include. At the end of the two pages, you should offer a brief recommendation with the caveats and reasons (avoiding advocacy language).

- **DUE NOV 12: NO LATE ASSIGNMENTS ACCEPTED *If your last name begins with S-Z,*** using the papers posted by students last week, write a 2 page memo to the governor explaining why he should use HIA or Cost-Benefit analysis in deciding whether to allow HVHF in Pennsylvania. You may use charts or tables in addition to your 2 pages.

Assignment 5 and 6: Participate in a group project to design a strategy for achieving or opposing Adoption of Medicaid expansion in Tennessee. The strategy needs to address what the scope of the proposal will be, identification of supporters and opponents, messaging and framing approaches to promote or oppose the policy, and scope and focus of lobbying and/or building public support or opposition. Messaging and framing and coalition building are often linked. **Each group will make a presentation to the class as a pitch to a client by a campaign consultant on Nov 19**. Turn in your notes and presentation. **A paper describing the strategy will be submitted a week after the presentations Nov 26.**

Final Oral Presentation: Students will make a brief presentation (no more than 4 minutes) on a health policy issue of their choice. Your presentation should focus on persuading a stakeholder (an elected official, businessperson, philanthropist, etc.) to take interest in and act on a specific issue. Your stakeholder will want to know: Why should I care? What do I need to know? What are the memorable data? Will this make a difference and how will we know? You will need to be cogent and clear, with enough facts to be authentic and enough narrative to be interesting. We will provide more detailed guidelines later in the semester.

Grading

Evaluation criteria

Rubric for assignments posted to BB

The relative weight of each course component is as follows:

Assessment	Weight
Discussion Board	5%
Class Discussion	10%
public meeting write-up	10%
Paper 1: recent article	5%
Paper 2: WIC	10%
Paper 3: CB/CE	10%
Paper 4 HIA 1	10%

Paper 5 HIA 2	10%
Group proj Medicaid oral	10%
Medicaid paper	10%
Final oral presentation	10%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Attendance will be taken. Each student is expected to attend and actively participate in each class. One absence is allowed. Save it for when you need it. Each additional absence will result in a penalty of 10 points from the course grade, with almost no exceptions.

Class participation counts and will be taken into consideration in grading as follows: Exceptional participation – e.g., repeated discussion leadership, insight into the analytic issues in the cases – will, at the discretion of the professor, result in a half-letter grade increase in your final grade. Repeated, demonstrated failure to be prepared to participate in class will result in a half-letter grade decrease in the final grade.

Late/incomplete submission of assignments

Written assignments will not be accepted late.

Make-ups, rewrites, and extra credit

No make ups or extra credit. Any student who wishes to re-write a paper may. I will regrade it.

Expectations of students

Each student is expected to attend and actively participate in each class. You are expected to have read and thought about the readings and the cases before coming to class. You may be called on at any time to present or summarize a case or reading. It is also expected that you will listen to and think about what other students say in class and respond thoughtfully and respectfully. Please bring your experience into the class. It is what we have to offer each other. If you have questions about the readings, please post them on the board when you come in to class or post them on Blackboard before class. It is also expected that students will complete all written and oral presentation assignments and turn them in on time.

This course is delivered using the Blackboard course management system. In addition, students may be required to submit course assignments from time to time to the instructor electronically using Hunter or other CUNY e-mail. **An active Hunter or CUNY student e-mail user ID and password is required to log into both Blackboard and e-mail.** An active CUNY e-mail ID is required for non-Hunter students taking the class. Blackboard and Hunter/CUNY e-mail will be used for communicating with the instructor, for receiving some supplemental course materials, and for submitting assignments. It is the responsibility of the student to remain current on this system.

Expectations for the instructor

The instructor will introduce each topic and type of analysis and lead a discussion based on the readings and cases. Each student's papers will be graded and commented on and returned as promptly as possible. The instructor is available for discussion during office hours and by appointment.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

The schedule is subject to change throughout the semester.
Please check the the current academic calendar for important dates (for example: holidays, course drop, course withdrawal). Available at http://www.hunter.cuny.edu/onestop/repository/files/registrar/Academic%20Calendar%20Fall%202015%20thru%20Spring%202016%208-24-2015.pdf

TOPICS

Class 1: Thursday. August 27
Introduction

- Introductions
- Syllabus
- What is policy? What is policy analysis?
- *Assignment: read the newspaper/blog and find an example of policy analysis*

Class 2: Thursday. September 3
How Policy Works: The Policy Process, Policy Actors, and Strategic Intervention Points

- How is policy proposed, negotiated and implemented?
- Who are the official and unofficial actors?
- Limits of policy analysis

No class September 10

Class 3: Thursday September 17
What's the Problem? Problem Definition, Stakeholder Analysis, and Framing

- Problem Definition: What is the problem?
- Framing: Why is it a problem?
- Stakeholder Analysis: Whose problem is it?

Case: Philadelphia or Fracking

Class 4: Thursday. September 24
Policy Tools: What Can Government Do? The private sector?

- What policy levers can we use?
- Do, Regulate, Tax, Subsidize, or Educate?

Case: Philadelphia A

Class 5: Thursday. October 1
Putting the Problem in Context: Reviewing the Literature and Collecting Data

- Reviewing and critiquing the literature
- Identifying and using data
    - What are the relevant data?

- Where do you get the data
- What do you do with the data (analysis)
- What data can you trust?

Case: WIC

Class 6 (October 8), and Class 8 (October 22)
Cost-Benefit and Cost-Effectiveness Analysis: What are cost-benefit and cost-effectiveness analyses?

- Who pays, and who benefits?
- Ethics and equity
- How does the choice of analytic tool affect policy recommendations?
- How do you do a CBA

Case: PrEP

Class 7 (October 15) Guest lecture: Jack Needleman:
Tax incidence: Who pays

Case: Medicare Catastrophic: CBO report

Class 8 October 22 (Cost-Benefit and cost Effectiveness) see above

Class 9 (October 29) and 10 (November 5)
Health Impact Assessment:

- What is health impact assessment? What is "health in all policies"?
- Equity in health impact assessment
- Convening stakeholders and coalition building
- Making your case

Case: Fracking

Class 11: Thursday. November 12
What determines policy and where does analysis fit?

- Medicaid Expansion
  - What is the problem? What is at stake?
  - Role of values and ideology
  - Who pays? States, federal government, individuals, employers
  - Coverage: who should be covered
  - Role of the private sector

Case: Medicaid Expansion: Tennesee

Class 12: November 19
Telling the Story: Disseminating Findings/Advocacy/Unintended Consequences

- How do you communicate your findings?
- Who do you communicate them to?
- How do you use your findings to move policy forward?

Case: Medicaid expansion; fracking what do people value; where do they get their info from; whose info do you trust and why?

THANKSGIVING NOVEMBER 26: NO CLASS

Class 13 (December 3): wrap up and catch up

Class 14 (December 10): Student Presentations

Class 15 (December 17): Student Presentations

CLASS READINGS AND ASSIGNMENTS

Class 1, Thursday August 27: Introduction

Readings:

- **Kraft and Furlong**, *Public Policy: Politics, Analysis, and Alternatives.* Policy Analysis *(*Chapter 4)
- **Stone,** *Policy Paradox*, The Market and the Polis (Chapter 1); skim chapters on Symbols and Numbers

Assignment Due: Read a daily paper or blog if you prefer and find an article about health policy. Bring it to class. Identify 1)what policy it discusses; 2) whether it argues for or against the policy or just analyzes it; 3) who is making (or to make) the policy; 4) who are the stakeholders; 5)how is the policy analyzed: what data or information are presented and how are they used?

Class 2, Thursday. September 3: How Policy Works: The Policy Process, Policy Actors, and Strategic Intervention Points

Readings:

- Kraft and Furlong, Government Institutions and Policy Actors (Chapter 2); Understanding the Politics of Public Policy (Chapter 3)
- Stone, Interests (Chapter 10)
- Munger, Policy Analysis as a Profession and a Process (Chapter 1) and The Limits of Policy Analysis (Chapter 5)

Suggested, not required:

- Munger, Democracy and Government "Failure"

SEPTEMBER 10: CLASSES FOLLOW MONDAY SCHEDULE. NO POLICY ANALYSIS CLASS

Class 3: Thursday, September 17: What's the Problem? Problem Definition, Stakeholder Analysis, and Framing

Readings:

- Stone, Symbols (Chapter 7) and Causes (Chapter 9)

- Bardach, Defining the Problem (Step 1)
- Brugha, R., & Varvasovszky, Z. (2000). Stakeholder analysis: a review. Health policy and planning, 15(3), 239-246.
- Ryan, Charlotte. Prime Time Activism. Chapter 3, Getting Framed; Chapter 4, Framing Contests.
- Case Philadelphia Get from the Kennedy School of Government Website case 1649: Public Takes on Private: The Philadelphia Behavioral Health System

Suggested, not required:

- Dorfman, L., Wallack, L., & Woodruff, K. (2005). More than a message: Framing public health advocacy to change corporate practices. Health Education & Behavior, 32(3), 320-336.
- Berkeley Media Studies Group and the Praxis Project. Meta Messaging: Framing Your Case and Reinforcing Your Allies. January 2005. Available from: http://www.bmsg.org/resources/publications/meta-messaging-framing-your-case-and-reinforcing-your-allies.

Assignment 1: Due by Monday, September 15, posted to Blackboard. Find a recent article about a health problem from a newspaper, magazine, blog, or other news source. Write a 2-page paper examining how the story explains 1) what the problem is; 2) why it is a problem, 3) whose problem it is; and 4) what should or can be done about it. Think about: how did the news source choose to define this problem? Do you agree or disagree with the framing and potential solutions? Are there additional stakeholders who were not mentioned in the story? We will use these as the basis of our class discussion.

Class 4: Thursday. September 24: Policy Tools: What Can Government Do?

Readings:

- Kraft and Furlong, Public Problems and Policy Alternatives (Chapter 5)
- Stone, Decisions (Chapter 11)
- Bardach, Construct Alternatives , Select the Criteria, Project the Outcomes (Steps 3-5); review Appendix B, Things Governments Do
- Case: Philadelphia

Recommended (not required):

- Munger, Choice of Regulatory Form, Efficiency, Equity or Politics?

Class 5: Thursday, October 1: Putting the Problem in Context: Reviewing the Literature and Collecting Data

Readings:

- Needleman, Critiquing a Research Article
- Bardach, *The Eightfold Path*, Assembling Evidence (Part 2; also review Steps 2-4 in Part 1)
- Stone, Numbers (Chapter 8)
- Brandt AM. Inventing conflicts of interest: a history of tobacco industry tactics. Am J Public Health. 2012;102(1):63-71.

- Kuo, T., Jarosz, C. J., Simon, P., & Fielding, J. E. (2009). Menu labeling as a potential strategy for combating the obesity epidemic: a health impact assessment. American Journal of Public Health, 99(9), 1680.

Case:

KSG case 680: Conflicting Findings: Evaluating WIC

Assignment (Due Tuesday September 29 on Blackboard):

- You are Louis Bird, committee staff. Write a 2 page memo with your assessment of the findings from the GAO report and implications for committee action. What is your estimate of the impact of WIC of low birth weight, and what is the implication. Take the closing question in the case as your task.

Suggested readings (not required):

- For those with a limited background in statistics and regression, the Federal Judicial Center's Reference Mannual on Scientific Evidence has two useful chapters:
  - Reference Guide on Statistics
  - Reference Guide on Multiple Regression

    Available at: http://www.fjc.gov/library/fjc_catalog.nsf/autoframepage?openform&url=/library/fjc_catalog.nsf/bysubjectfrm?openform&category=Scientific+Evidence
- Martens, P (2012) The Right Kind of Evidence—Integrating, Measuring, and Making It Count in Health Equity Research *J Urban Health*. Dec 2012; 89(6): 925–936.
- Shermer, M. Baloney Detection kit (video). Available at: http://www.michaelshermer.com/2009/06/baloney-detection-kit/
- Asthana, S., & Halliday, J. (2006). Developing an evidence base for policies and interventions to address health inequalities: the analysis of "public health regimes". Milbank Quarterly, 84(3), 577-603.

Class 6, October 8: Cost-Benefit and Cost-Effectiveness Analysis

Readings:

- Munger, Cost-Benefit Analysis (Chapter 11)
- Cost Effectiveness Analysis: Introduction from CDC: http://www.cdc.gov/owcd/eet/costeffect2/fixed/1.html
- Primer on cost-effectiveness analysis: http://www.acponline.org/clinical_information/journals_publications/ecp/sepoct00/primer.htm
- Kelman, "Cost-Benefit Analysis: An Ethical Critique"

Additional resources: not required

- CBO on Prevention: https://www.cbo.gov/ftpdocs/104xx/doc10492/08-07-Prevention.pdf
- Trust for America's Health prevention report: http://healthyamericans.org/reports/prevention08/Prevention08.pdf
- Example of a cost-benefit analysis: Jeffrey Chow, Sarah Darley, and Ramanan Laxminarayan. Cost-effectiveness of Disease Interventions (Treating Vitamin A

Deficiency) in India Available at http://www.rff.org/Publications/Documents/RFF-DP-07-53.pdf

Class 7: Thursday, October 15: Guest Lecturer: Jack Needleman: Tax Incidence: Who Pays

Readings:

- **Web:** Stephen J. Entin, "Tax Incidence, Tax Burden, and Tax Shifting: Who Really Pays the Tax? pages 1-11. Availabe at: http://www.heritage.org/Research/Taxes/cda04-12.cfm
- McClellan and Skinner, Medicare Reform: Who Pays and Who Benefits, *Health Affairs* (1999), 18:1, 48-62. (available from the Hunter Library websiite)
- Congressional Budget Office, THE MEDICARE CATASTROPHIC COVERAGE ACT OF 1988: Staff Working Paper, October 1988

  Skim pages 1-6, read 7-21 focus on tables 9-11. Be prepared to discuss these questions:

  i. Is the proposed financing progressive, regressive or proportional?
  ii. What is the incidence of the premiums by income level (try graphing premiums against income)
  iii. Will some beneficiaries be asked to pay more than they currently pay for equivalent Medigap policies (may not be addressed in CBO report)
  iv. Is the incidence "fair"? Should high income Medicare beneficiaries subsidize low income beneficiaries?

Class 8, October 22: CBA :Case – Reducing HIV Infection through Pre-Exposure Prophylaxis (PrEP)

Readings:

- Juusola, J. L., Brandeau, M. L., Owens, D. K., & Bendavid, E. (2012). The cost-effectiveness of pre-exposure prophylaxis for HIV prevention in the United States in men who have sex with men. *Annals of internal medicine*, 156(8), 541-550.
- Paltiel, A. D., Freedberg, K. A., Scott, C. A., Schackman, B. R., Losina, E., Wang, B., ... & Walensky, R. P. (2009). HIV preexposure prophylaxis in the United States: impact on lifetime infection risk, clinical outcomes, and cost-effectiveness. *Clinical Infectious Diseases*, 48(6), 806-815.
- Vilensky, Truvada, the Drug in Cuomo's AIDS-Eradication Plan, Spurs Debate. *WSJ*. Available at: http://online.wsj.com/articles/truvada-the-drug-in-cuomos-aids-eradication-plan-spurs-debate-1405290287

- Suggested reading, not required:
  - Skim through these sites:
    - AVAC: http://www.avac.org/prevention-option/prep
    - PrEP Watch: http://www.prepwatch.org/
  - Murphy, Sex Without Fear, *New York Magazine*: http://nymag.com/news/features/truvada-hiv-2014-7/

Come to class prepared to argue for or against prescribing Truvada for PrEP, and for whom, using data.

Assignment Due November 5:

Use the literature on using statins as a primary prevention for heart disease/cardio-vascular events to do a cost-effectiveness analysis of expanding the use of statins. You do not need to calculate the costs of side-effects or risks but you should discuss them. Use the following to do your analysis.

Objective: To estimate the effectiveness and cost-effectiveness of expanding use of statins to men with greater than 10% risk of a cardio-vascular event

Design: You choose

Data Sources: Published literature.
Target Population: You may limit your analysis to men of a certain age if you like.

Perspective: Societal.

Intervention: expand use of statins

Outcome Measures: you choose: must have a disease/event measure, a cost measure (e.g. $/QALY; $/event avoided; $/death avoided) and a cost effectiveness ratio. You might also consider comparing expanded use of statins with life-style interventions or at least explain how you could do this.

Results of Base-Case Analysis: Using statins in x% of population (describe population) will result in y change in cardio vascular events and a change of z QALYs over xx years at a cost of yy/QALY and zz/avoided event. Impact of giving statins to larger % of population

Limitations:

Conclusion:

Class 9, October 29: Health Impact Assessment

Readings:

- Bhatia R. Health Impact Assessment: A Guide for Practice. Oakland, CA: Human Impact Partners, 2011. Available from: http://www.healthimpactproject.org/resources/document/Bhatia-2011_HIA-Guide-for-Practice.pdf.
- Cole B, Fielding J. 2007. Health impact assessment: A tool to help policy makers understand health beyond health care. Annual Reviews of Public Health. 28:393-412.
- Robert Wood Johnson Foundation, Do Health Impact Assessments Make a Difference? Available from: http://www.rwjf.org/en/research-publications/find-rwjf-research/2014/04/do-health-impact-assessments-make-a-difference-.html.

    - http://www.healthimpactproject.org/hia/case-studies
    - http://www.humanimpact.org/

- EPA. Study of the Potential Impacts of Hydraulic Fracturing on Drinking Water Resources: Progress Report at http://www2.epa.gov/hfstudy/study-potential-impacts-hydraulic-fracturing-drinking-water-resources-progress-report-0
    - Executive summary (PDF)
    - Introduction (PDF)
    - Overview of the Research Program (PDF)
    - Conducting High Quality Science (PDF)
    - Research Progress Summary and Next Step (PDF)
- NY State health Department. A Public Health Review of High Volume hydraulic fracturing for Shale Gas Development http://www.health.ny.gov/press/reports/docs/high_volume_hydraulic_fracturing.pdf

COME TO CLASS PREPARED TO DISCUSS:

A framing of the problem, using current and relevant data 2) Which stakeholders you will need to engage, 2) Potential health impacts (both positive and negative) and the stakeholders they will impact, 3) Potential data sources, 4) How you will distribute your findings, and to whom

Assignment: Due Nov 5. NO LATE ASSIGNMENTS ACCEPTED. You are on Gov Tom Wolf's staff:

- If your last name begins with A-G, Set up a Cost –Benefit analysis of HVHF in Pennsylvania. Provide a list of all the benefits, including to whom they accrue and how you would monetize them. Provide a list of all the costs, including to whom they would accrue and monetize them. Explain where the data will come from for determining costs and benefits and monetizing them. You may provide all this information in a chart. Explain in 2 pages or less, what issues you cannot or will not address in your cost-benefit analysis and discuss their importance.
- If your last name begins with H-R, set up an HIA of HVHF in Pennsylvania. As you can see from the NAS report there are six steps to a Health Impact Assessment http://www.nap.edu/catalog.php?record_id=13229 . Look especially at the Scoping and Assessment portions as noted on page 7. In a flow chart (a neat hand drawn chart is fine) note how HVHF will have both beneficial and adverse health effects and enumerate each one of these. For each of the sub-boxes on the chart, note how you would amplify benefits and mitigate risks. On a separate page briefly enumerate the stakeholders you would include. At the end of the two pages, you should offer a brief recommendation with the caveats and reasons (avoiding advocacy language).

Class 10, November 5: HIA Case - Fracking

Readings:

- NAS. Improving Health in the United States available for download at http://www.nap.edu/catalog.php?record_id=13229
- IOM (Institute of Medicine). 2013. Health impact assessment of shale gas extraction: Workshop summary. Washington, DC: The National Academies Press.
- Jacquelyn Pless. Natural Gas Development and Hydraulic Fracturing A Policymaker's Guide http://www.ncsl.org/documents/energy/frackingguide_060512.pdf
- NRDC. Fracking in PA at http://www.nrdc.org/energy/fracking-map/pa.asp

- David Biello. Fracking can be done safely but will it be? Scientific American at http://www.scientificamerican.com/article.cfm?id=can-fracking-be-done-without-impacting-water
- Kevin Begos. Pennsylvania Fracking Study Shows Chemicals Did Not Contaminate Water 07/19/13 at http://www.huffingtonpost.com/2013/07/19/pennsylvania-fracking-study_n_3622512.html
- Conventional Politics for Unconventional Drilling? Lessons from Pennsylvania's Early Move into Fracking Policy Development. By: Rabe, Barry G.; Borick, Christopher. Review of Policy Research. May2013, Vol. 30 Issue 3, p321-340. 20p. DOI: 10.1111/ropr.12018.
- *Halliburton Loophole* - The Institute for Energy and Environmental at http://energy.wilkes.edu/PDFFiles/Laws%20and%20Regulations/Halliburton%20Loophole%20Essay%20Final.pdf

Assignment DUE NOV 10: NO LATE ASSIGNMENTS ACCEPTED If your last name begins with S-Z, using the papers posted by students last week, write a 2 page memo to the governor explaining why he should use HIA or Cost-Benefit analysis in deciding whether to allow HVHF in Pennsylvania. You may use charts or tables in addition to your 2 pages.

Class 11, November 12: The Affordable Care Act: Expanding Medicaid

Readings:

- Kraft and Furlong, Health Care Policy (Chapter 8; if you have an earlier edition of this book, please review the 4th edition on reserve)
- Dorn, Holahan, Carroll, and McGrath. Medicaid Expansion Under the ACA: How States Analyze the Fiscal and Economic Tradeoffs. June 2013.
- National Conference of State Legislatures. Medicaid and the Affordable Care Act. June 2011. At http://www.ncsl.org/documents/health/HRMedicaid.pdf
- Analyzing the Impact of State Medicaid Expansion Decisions. Jul 17, 2013; Robin Rudowitz and Jessica Stephens at http://kff.org/medicaid/issue-brief/analyzing-the-impact-of-state-medicaid-expansion-decisions/
- Drew Gonshorowski. Medicaid Expansion Will Become More Costly to States at http://www.heritage.org/research/reports/2012/08/medicaid-expansion-will-become-more-costly-to-states
- Additional material available at Kaiser Family Foundation (go to kff.org and enter a search for Medicaid and ACA)

Suggested readings:

- Kaiser Family Foundation
- Summary of the Affordable Care Act: http://kff.org/health-reform/fact-sheet/summary-of-the-affordable-care-act/
- State Profiles: How Will the Uninsured Fare Under the Affordable Care Act? http://kff.org/state-profiles-uninsured-under-aca/
- Visualizing Health Policy: Understanding the Effect of Medicaid Expansion Decisions in the South: http://kff.org/infographic/visualizing-health-policy-understanding-the-effect-of-medicaid-expansion-decisions-in-the-south/

Assignment: Participate in a group project to design a strategy for achieving or opposing Adoption of Medicaid expansion in Tennessee. The strategy needs to address what the scope of the proposal will be, identification of supporters and opponents, messaging and framing approaches to promote or oppose the policy, and scope and focus of lobbying and/or building public support or opposition. Messaging and framing and coalition building are often linked. **Each group will make a presentation to the class as a pitch to a client by a campaign consultant on Nov 19.** Turn in your notes and presentation. **A paper describing the strategy will be submitted a week after the presentations Nov 26.**

Class 12, November 19: Disseminating Findings and Following Up/Unintended Consequences

Readings:

- Bardach, Project the Outcomes; Confront the Trade-offs (Steps 5 and 6)
- Take a look at two advocacy toolkits: Community Toolbox, University of Kansas Work Group for Community Health and Development: http://ctb.dept.ku.edu/en; The Health Advocacy Toolbox, Connecticut Health Policy Project, http://www.cthealthpolicy.org/toolbox/default.htm

Class 13 (December 3) wrap up and catch up
Assignment: (Public Meeting Assignment) due, posted to Blackboard by the beginning of class.

Class 14 (December 10) Student Presentations

Class 15 (December 17)Student Presentations

Last Updated August 17, 2015

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
NUTR 72000: Community Nutrition Education
3 Credits
Fall 2015

Time and location	TUESDAYS 5:25 TO 7:55 PM Silberman Building Room 217
Instructor	Assistant Professor, May May Leung, PhD, RD mm.leung@hunter.cuny.edu [best way to reach is via email] 212-396-7774 Teaching Assistants: Olivia Barata-Cavalcanti, MPH, MIA obaratacavalcanti@gradcenter.cuny.edu Rachel Taniey, MS, RD rtaniey@gradcenter.cuny.edu
Office hours	Tuesdays, 3:15 – 5:15 pm (appointment recommended)
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Nutrition programs and materials for health promotion in the community
Course prerequisites	N/A
Course format	Hybrid (lecture and online)
Required reading and resources	All required readings will be posted on Blackboard. Boyle MA, Holben DH. Community Nutrition in Action. 6th ed. Florence (KY): Cengage Learning; 2012. Retail price: $ 198.32 (Recommended)
Suggested reading and resources	**Food and Nutrition Information Center** http://fnic.nal.usda.gov **Healthy People 2020** http://www.healthypeople.gov/HP2020 **Academy of Nutrition and Dietetics** http://www.eatright.org

AND Foundation Knowledge and Skills: Learning Outcomes	**Course Learning Objectives**	**Assessment Methods**
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Demonstrate how to locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. (KR 1.1.a)	• Locate and synthesize empirical information about nutrition and health promotion strategies • Identify evidence-based health promotion strategies appropriate for a target population	• Discussion • Fact vs. Fiction: Nutrition Recommendation Presentation • Project Paper • Project Presentation
Demonstrate effective and professional oral and written communication and documentation and use of current information technologies when communicating with individuals, groups and the public. (KR 2.1.a)	• Identify effective methods of communicating evidence-based nutrition information for different populations • Adapt nutrition education materials for a target population using current information technologies	• Community Stakeholder Interview • Cultural Competency Education Material • Project Paper • Project Presentation
Apply knowledge of the role of environment, food and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups. (KR 3.2 a)	• Identify social and environmental determinants that contribute to community nutrition-related health outcomes • Discuss strategies that could effectively address the health needs of diverse populations	• Discussion • Food Stamp Challenge • Community Stakeholder Interview • Logic Model • Project Paper • Project Presentation
Develop an educational session or program/educational strategy for a target population. (KR 3.3.a)	• Identify cultural competency factors that should be considered in nutrition education materials and programs • Design a culturally-competent nutrition education program to promote health in a target population	• Community Stakeholder Interview • Logic Model • Cultural Competency Education Material • Project Paper • Project Presentation
Develop outcome measures, use informatics principles and technology to collect and analyze data for assessment and evaluate data to use in decision-making (KR 4.2.b)	• Identify current technology used for data collection and analysis • Outline appropriate measures to evaluate outcomes of a nutrition education program	• Logic Model • Project Paper • Project Presentation

Explain the impact of a public policy position on dietetics practice. (KR 4.3.a)	• Identify a public policy position relevant to dietetics practice. • Discuss how the public policy position could impact community-based dietetics practice.	• Discussion • Food Stamp Challenge

Accreditation Council for Education in Nutrition and Dietetics (ACEND) Core Knowledge Requirements

KRD 1.1: The curriculum must reflect the scientific basis of the dietetics profession and must include research methodology, interpretation of research literature and integration of research principles into evidence-based practice.
KRD 2.1: The curriculum must include opportunities to develop a variety of communication skills sufficient for entry into pre-professional practice.
KRD 3.2: The curriculum must include the role of environment, food, nutrition and lifestyle choices in health promotion and disease prevention.
KRD 3.3: The curriculum must include education and behavior change theories and techniques.
KRD 4.3: The curriculum must include the fundamentals of public policy, including the legislative and regulatory basis of dietetic practice.
KRD 5.3: The behavioral and social science foundation of the dietetics profession must be evident in the curriculum. Course content must include concepts of human behavior and diversity, such as psychology, sociology or anthropology.

Course Assessments

Your understanding of the course material will be evaluated through multiple assignments, an individual presentation, a final group paper and presentation, and class discussion/participation.

Below is a brief description of the course assessments. Details about the assignments and grading criteria will be available on the course website.

Food Stamp Challenge (40 points): For this experiential assignment, each student will develop a meal plan using the budget of an individual on "food stamps" (SNAP EBT card), then carry out the meal plan and reflect upon the experience.

Community Stakeholder Interview (40 points): Conduct a qualitative, in-depth interview (~15 - 20 minutes) with a community stakeholder to better understand the health problems/needs of his/her community and what nutrition education materials could be adapted for this specific community.

Logic Model (40 points): Develop a logic model for a program/intervention for a health problem in a specific population.

Fact vs. Fiction: Diets and Nutrition Recommendations (60 points): Select a current diet or nutrition recommendation. Describe it and summarize the current evidence-base, highlighting whether or not the literature supports or 'debunks' the diet/recommendation. This will be done in a 5-minute presentation to the class on your assigned date.

Cultural Competency Nutrition Education Material (40 points): Select a nutrition or physical activity education material (e.g., hand-out, website) that was developed for the lay population related to a public health nutrition issue. Based upon the information collected from your community stakeholder interview, tailor the education material to meet the needs of a specific population.

Nutrition Education Final Group Project (140 points): In a paper and presentation, your group will develop an evidence-based nutrition education program for a specific population/community.

Your final project and presentation should include the following sections:

- Background and Significance
- Description and Lesson Plan
- Evaluation
- Logic model of the proposed project
- Appendices

Class Participation: Discussion forums, in-class discussion, interactive communication and the attitude you display towards others will be a part of your final grade.

Grading

Evaluation criteria

All assignments will be assessed based upon a rubric. Specific information about grading criteria and rubric will be distributed with the assignment.

The relative weight of each course component is as follows:

Food Stamp Challenge	10%
Community Stakeholder Interview	10%
Logic Model	10%
Cultural Competency Material	10%
Fact vs. Fiction Presentation	15%
Final Group Project: Paper	30%
Final Group Project: Presentation	10%
Participation	5%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an “unofficial withdrawal” (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Expect to actively contribute to the discussion and complete and submit all assignments by posted due dates. Missed assignments or lack of discussion participation not only affect the individual student, but they also affect the class as a whole due to the high degree of interaction within the course. Interactive communication and the attitude you display towards others will be a part of your final grade (as class participation). Expect to attend each class on time, thus frequent days of lateness will also be marked and deducted as part of your final grade.

Absences due to religious holidays/beliefs: Each student who is absent from class because of his/her religious beliefs will be given an equivalent opportunity to make up examination or assignment that s/he may have missed. No student will be penalized for absence due to religious beliefs, and alternative means will be sought for satisfying the academic requirements involved. Please inform the course instructor ahead of time (at least one week prior to a scheduled absence) so that alternative options can be scheduled accordingly.

Late/incomplete submission of assignments

Five (5) percentage points will be deducted for each day after the due date an assignment is submitted. NO ASSIGNMENT WILL BE ACCEPTED AFTER A WEEK FROM THE DUE DATE.

Make-ups, rewrites, and extra credit

There are no make-ups, rewrites, or extra credit allowed.

Expectations of students

- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Know how to use library resources and citation tools.
- Show respect to everyone in the course.
- Be fully prepared to actively participate in discussion.
- Complete and upload all assignments by their assigned due date onto Blackboard. NO hard copy or emailed versions of assignments will be accepted.
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Regularly check the course website and official university email for course correspondence.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and may be posted on Blackboard.
- Contact the professor or TA directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.
- Turn off (or silence) all communication devices when entering the classroom.

Expectation for written assignments:

Students may work with their peers **for feedback and discussion** on assignments and the paper; however the final version of these assignments **must reflect independent work and be written in each student's own language**. When working on the assignments and paper, students need to follow these guidelines:

- Reference and identify all sources and quotations. If there is any doubt about proper procedures, students should consult the instructor.
- If another person's ideas are used or paraphrased acknowledge the source in a proper citation,
- If actual words or expressions of another person or source, including the Internet, are used, indicate such use by incorporation of quotation marks and a proper citation.
- Provide your own work, not someone else's. Examples of using someone else's work include: submitting essays or portions of essays written by other people as one's own; or collaborating with others on an assignment or examination without specific permission from the instructor to do so.
- Do not submit material prepared for one course to fulfill the requirements for this course.

Expectations for the instructors

- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during discussion
- Respond to student email within 24 to 48 hours Monday through Friday.

- Grading and feedback on assignments within 2 weeks of the due date.
- Communication about grades and progress in the course will be given through the course website.
- Answer any specific questions related to assignments prior to submission. However, to ensure fairness and feasibility for the class, instructor/TA's are NOT able to review and evaluate assignments prior to submission.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

This schedule may change as the semester progresses. Refer to the current academic calendar for important dates.

Session	Date	Topic	Readings	Assessment
1	Sep 1	Course Overview; Introduction to Community Nutrition	Chap. 1	Discussion
2	Sep 8	Diet-related Chronic Diseases; Food Insecurity; Dietary Guidelines	Chap. 10; Satia *Diet-related Disparities*	Discussion, FS Challenge
	Sep 15	NO CLASS *Note: Sept 16 - Last day to drop without a grade of "W"*		
	Sep 22	NO CLASS		
3	Sep 25	Community Engagement; Community Assessment Methods (online)	Articles re: *Community Engagement & CBPR*	Discussion, CS Interview
4	Sep 29	Library Session; Ethics **FS Challenge Assignment Due**	Chaps. 2 and 3	Discussion, Paper, Presentation
5	Oct 6	Community Nutrition Programs: Evidence-Based Decisions and Intervention Strategies; Planning **CS Interview Assignment Due**	Articles re: *Recommended Strategies*	Discussion, Paper, Presentation
6	Oct 13	Community Nutrition Programs: Implementation & Evaluation (online)	Articles re: *Implementation & Evaluation Planning*	Discussion, CS Interview, Logic Model, Paper, Presentation
7	Oct 20	Logic Models; Social Ecologic Model; Health Behavior Theories	Articles re: *Logic Models;* NCI's *Theory at a Glance- Part 2*	Discussion, Logic Model, Paper, Presentation
8	Oct 27	Principles of Nutrition Education (online)	Chap. 17	Discussion, CS Interview
9	Nov 3	Guest speaker (NYC DOHMH Center for Health Equity Nutrition Programs) *Note: Nov 9 - Last day to withdraw with a grade of 'W'* **Logic Model Assignment due**		Discussion

10	Nov 10	Evaluating Evidence for Nutrition Practice Recommendations: Fact vs. Fiction presentations		FF Presentation
11	Nov 17	Cultural Competency; Reaching low literacy populations	Chap. 16; CDC's *Simply Put: Creating easy to understand materials*	Discussion, CS Interview, CC Material, Paper, Presentation
12	Nov 24	Counseling for Dietetic Professionals (online)	Articles re: *Nutrition Counseling Skills*	Discussion
13	Dec 1	Community Nutrition & Health Promotion Research Projects; In-class Project Development time **CC Nutr Ed Assignment Due**		Discussion
14	Dec 8	GROUP PROJECT PRESENTATIONS		Presentation
15	Dec 15	FINAL PAPER DUE BY 5:30 PM		Paper

FS=Food Stamp, CS=Community Stakeholder, CC=Cultural Competency

Last Updated 11/8/16

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
PH 72200 Food Politics and Policy
3 Credits
Fall 2015

Time and location	Thursdays 6:05 PM – 7:50 PM and online Silberman 216 and online August 27, 2015 – December 23, 2015
Instructor	Nevin Cohen, Ph.D. Associate Professor, CUNY School of Public Health 55 West 125th Street, room 811 New York, NY 10027 212-646-8340 (T) 917-721-8037 (M) nevin.cohen@sph.cuny.edu (preferred contact)
Office hours	Wednesdays 3:00 to 6:00 or by appointment
Course website	https://canvas.instructure.com/courses/957342
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This policy course examines the influence of the food industry and government on the U.S. food system and the way we eat, and on efforts to prevent and treat chronic diet-related conditions, such as obesity.
Course prerequisites	30 completed credits + advisor + instructor permission
Course format	This is a hybrid course that meets in person 5 times during the semester; the remainder of the time the course is conducted online asynchronously through Canvas.
Required reading and resources	All readings listed in the course schedule will be available in PDF format on the course website. You may wish to have your own copy of the following texts, but that is optional: Neff, Roni, ed. *Introduction to the US Food System: Public Health, Environment, and Equity*. John Wiley & Sons, 2014. Wilde, Parke. *Food policy in the United States: An introduction*. Routledge, 2013.
Suggested reading and resources	A list of additional readings and resources will be posted to the course website.

Last Updated 11/8/16

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be assessed as part of the following course assignments:
Apply research methodology, interpretation of research literature and integration of research principles into evidence-based practice for public health nutrition	- Conduct research on food policy - Critically discuss the food policy literature - Analyze a food policy and write a policy brief offering evidence-based recommendations	-Discussion forum -Reading reflections -Policy briefs
Use social and behavioral theories to inform public health and nutrition research and practice.	-Analyze food policies through social and behavioral frameworks -Identify opportunities for policy interventions to influence nutrition and diet-related chronic diseases	-Discussion forum -Policy briefs
Discuss the role of government and organizational systems and policies that influence accessibility, adequacy and safety of the food supply system (production, processing, distribution, consumption), and the relationship of food, nutrition and lifestyle choices in health promotion and disease prevention	-Understand the effects of federal, state, and local policies on the food system, including the availability of healthy food -Assess the effects of policies on dietary choices, food practices, and health outcomes	-Discussion forum -Reading reflections -Policy briefs
Demonstrate effective oral and written communication and advocacy skills for public health nutrition	-Write a concise and compelling argument assessing a policy proposal and recommending a course of action - Present arguments in a concise narrated presentation.	-Policy briefs

Last Updated 11/8/16

Course Assessments

Discussion Fora: We will engage in two online discussions each week, beginning the second week of class. One will involve debating a current policy controversy addressed in the week's readings. The second will involve identifying and discussing policy innovations to address the week's topic. You will be expected to contribute information, insights, evidence-based argumentation, and reflect and respond to the ideas expressed by others. I will evaluate your contributions based on how well you integrate the readings and other published material into your comments, the logic of your arguments, how adequately you back up statements with evidence, and writing quality.

In-class Discussions: Since we meet in person only five times during the semester it is essential for you to attend these classes. Our in-class discussions will follow the same format as our online discussions, but because the conversations are in real time you must be prepared in real time to address the readings scheduled for that week. You will be evaluated on the quality of your engagement with colleagues.

Policy Briefs: You will prepare two 5-page policy briefs addressing a current food policy issue that affects the urban food environment. These can be evaluations of proposed policies, recommendations for new policies, or an analysis that sheds new light on existing policies and programs. These will be evaluated based on the quality of the evidence used to support your argument(s), the logic of the arguments, the analysis you provide, and the quality of the writing (including grammar, proper citations, etc.)

Grading

Evaluation criteria

Students who perform exceptionally in all aspects of the course will receive an "A." A grade of "B" will reflect adequate work. Any grade below a "B" will indicate that you should be performing better. All assignments must meet professional standards of analysis, presentation, and timeliness. Accurate spelling and grammar, and clear and concise writing, are critical. Assignments *will not be accepted after they are due* unless you have a compelling reason for being late (e.g., medical or family emergencies) and I agree to an alternative due date.

Evaluation criteria for written assignments:

A	The assignment is well-written, accurate, original, relevant, and teaches us something new. It adds substantial learning presence to the course and stimulates additional thought about the issue under discussion.
B	The assignment lacks at least one of the required qualities, but is generally above average in quality. It makes significant contribution to our understanding of the issue being discussed.
C	The assignment lacks two or more of the required qualities listed above. Comments are based on unsubstantiated personal opinion.
D	The assignment presents little or no new information.
F	The assignment adds no value to the discussion and lacks many of the required qualities.

The relative weight of each course component is:

	Weight
Discussion Forum – Policy Debate	20%
Discussion Forum – Policy Innovation	20%
In-class discussions	10%
Policy Brief #1	25%
Policy Brief #2	25%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation

You are required to attend every class that meets in person and to participate in every online discussion session. This is particularly important as we meet only once per week. As noted above, I expect active participation in both in-person and online discussions.

Late/incomplete submission of assignments

Late or incomplete assignments will not be accepted unless you are ill or have a family emergency. If you know you will not be able to meet a deadline contact me as soon as possible to discuss an alternate deadline.

Make-ups, rewrites, and extra credit

There are no make-ups for the online discussions. You will have an opportunity to re-write the two policy briefs based on my comments, and I will count only the final grade. There are no extra credit assignments.

Expectations of students

One of the biggest obstacles to successful learning is not allocating sufficient time to coursework. I realize that many of you are juggling multiple responsibilities, but I expect you to devote the effort required to read assigned material and learn the course content and to put effort into the online discussions and the policy briefs. I also expect you to be the consummate professionals that you are – showing respect and treating each other collegially in both in-person and online interactions. In your discussions with me, please be open and communicative – please tell me if the course is not meeting your expectations early on so that I can make adjustments. Whatever you do, please let me know if you are having trouble with any aspect of the course. Other expectations include the following:

- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and the academic calendar.
- Know how to use library resources and citation tools.
- Come to class and to the Canvas site fully prepared to actively participate in discussion.
- Complete all assignments by their assigned due date. No credit for work completed after the due date unless due to a medical or family emergency.
- No credit for assignments suspected of plagiarism. (and see the Academic Integrity section below for the additional consequences of plagiarism)
- Regularly check the course website and official university email for course correspondence. The readings and schedule are likely to change, and it is your responsibility to keep track of the schedule.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted on the discussion board.
- When in doubt, ask questions and clarify course assignments and expectations.

Expectations for the instructor

My goal is to make this course a valuable learning experience that is intellectually interesting and challenging and relevant to your professional and academic work. You can expect me to be prepared each week, to make myself as accessible as possible, to return your work promptly (usually within one week) with comments and suggestions, and to treat each of you with respect and collegiality. I have high expectations and strict standards, but I also try to be very reasonable if you express concerns or problems to me as they arise (and not at the end of the term). Specifically, I will try to:

- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during discussion
- Respond to student email within 24 hours Monday through Friday.
- Communicate about grades and progress in the course through the course website.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Last Updated 11/8/16

Course Schedule

This schedule is likely to change as the semester progresses. Please check the course website for updates, and ask if you are unsure about scheduled topics/readings or assignments. Also refer to the current academic calendar for important university-wide dates.

Session	Date	Topic	Readings/Resources	Assessment
I. Introduction to Food Politics and Policy				
1	8/27/15 In Person	Course Overview: The problems with our food system are well-known: food insecurity, ubiquity of unhealthy food, occupational hazards in the food industry, environmental damage, etc. This course explores the reasons why the food system has evolved the way it has, and the potential for public policy – at both the national and local levels -- to re-shape it to improve health, social justice and ecological well-being. In this first class we will introduce ourselves, review our expectations for the course, go over logistics, including the features of the online learning platform, and then discuss what we mean by a food *system*, and how looking at food as a system helps us to understand its multidimensionality and interconnectedness, which will lead to better policymaking.	Neff, Chapter 1 – Food systems -This introductory chapter of Neff's edited volume briefly discusses systems thinking and the elements of the food system. It also discusses the concept of "wicked problems," a framework very helpful in thinking about many different public health problems. Shannon KL, Kim BF, McKenzie SE, Lawrence RS. Food System Policy, Public Health, and Human Rights in the United States. *Annu Rev Public Health*. 2015;36(1):151-173. -This review article explains how policies structure the food system, and the consequences for health, a topic that we'll address in more depth throughout the semester.	-In-class discussions
2	9/3/15 In Person	Drivers of the food system - economics, policies, lobbyists, marketing: In this session we'll examine the different forces that shape food policies and thus the food system.	Neff, Chapters 7, 8, 10 -These chapters provide an overview of basic economic concepts that are important for understanding food policy; food policy development; and the role of marketing in both food economics and policy – as well as individual behavior. Wilde, Chapter 1 - This chapter reviews basic civics as it applies to food and also discusses the	-Discussion fora

			role of interest groups in shaping food policy Nestle, Chapter 4 -Nestle explains in more detail the role of industry lobbyists in shaping food policies. Moreland, Chapter 2 - This chapter by Professor Spark provides an overview of federal food policy and the structure of the food industry	
3	9/17/15 Online	Urban food policy: Many food advocates have argued that local governments may be better able to intervene in the food system through local policies and innovative programs. This class reviews why there has been a turn to the local and what local governments can do to affect a global socio-technical system like food.	- Morgan K. Nourishing the city: The rise of the urban food question in the Global North. Urban Stud. 2014. Kevin Morgan explains why food has become an urban issue and how cities have begun to address the consequences of the dominant food system. - Cohen N. Urban food systems strategies. Elgar Companion To Sustain Cities Strateg Methods Outlook . 2014:57-85. In this chapter I outline a number of ways in which cities in the US have begun to re-shape the food system through policies. - Libman K, Freudenberg N, Sanders D, Puoane T, Tsolekile L. The role of urban food policy in preventing diet-related non-communicable diseases in Cape Town and New York. Public Health. 2015;129(4):327-335. Kim Libman and colleagues discuss urban policies specifically addressing diet-related diseases. - Freudenberg N, Atkinson S. Getting food policy on the Mayoral table: a comparison of two election cycles in New York and London. *Public Health*. 2015;129(4):295-302. The question of the salience of food policy at the local level is critical. This article discusses how food gets on the political agenda. -Reeve B, Ashe M, Farias R, Gostin L. State and Municipal Innovations in Obesity Policy: Why Localities Remain a Necessary Laboratory for Innovation. *Am J Public Health*. 2015;105(3):442-450. One argument for focusing on urban policies is that cities are more nimble	-Discussion fora

			scales in which to develop, test, and improve food policies, as this article discusses.	
II. Reducing Food Insecurity				
4	9/24/15 Online	Federal food assistance programs: In the next several sessions we tackle the complex, interrelated issues of food insecurity, malnourishment, and poverty, and the various policies aimed at improving access to healthy food and improving nutrition and health.	- Neff, chapters 5 & 6 These chapters discuss ways to measure food insecurity and community food security, and various policies to make people and communities more food secure. - Pringle, chapter 6 This chapter provides a brief overview of the history of food stamps/SNAP and WIC. Read it before the Aussenberg report. - Aussenberg, RA & Colello, KJ. Domestic Food Assistance: Summary of Programs. Congressional Research Service. 2/4/15. This report summarizes the federal food assistance programs - Mercier S. Review of U. S. Nutrition Assistance Policy : Programs and Issues. 2012;(June) The Mercier report also reviews federal food assistance policies and programs, providing more detail and evidence of their effects. You can skim this report and refer back to it as a reference. - Fricke HE, Hughes a. G, Schober DJ, et al. An Examination of Organizational and Statewide Needs to Increase Supplemental Nutrition Assistance Program (SNAP) Participation. *J Hunger Environ Nutr*. 2015;10(2):271-283. - Dimitri C, Oberholtzer L, Nischan M. Reducing the Geographic and Financial Barriers to Food Access: Perceived Benefits of Farmers' Markets and Monetary Incentives. *J Hunger Environ Nutr*. 2013;8(4):429-444. These final two articles discuss local policy responses to the SNAP program – increasing participation in the program and increasing the use of SNAP for fresh fruits and vegetables sold through farmers markets.	-Discussion fora
5	10/1/15 In Person	School food and nutrition programs for children: School food is critical because it provides a large portion of the daily calories of many children, and the school food program is a	- Poppendieck, J. 2010. Free For All: Fixing School Food in America. Berkeley: UC Press. Chapters 2&3, pgs 46-110. Professor Poppendieck's chapters discuss the genesis and evolution of the school food program	-Discussion fora

		huge public food procurement program that can potentially be used to support regional food producers, change production methods, and improve public health.	- Wilde, Chapter 11 Wilde's chapter also discusses the Women Infants and Children (WIC) program. - Aussenberg, A. School Meals Programs and other USDA Child Nutrition Programs: A Primer. 2014. Congressional Research Service. Skim this and use it as a reference. Dinour LM. Conflict and Compromise in Public Health Policy: Analysis of Changes Made to Five Competitive Food Legislative Proposals Prior to Adoption. *Heal Educ Behav*. 2015;42(1 Suppl):76S - 86S. This article discusses the policy processes involved in addressing so-called competitive foods – vending machine snacks and other food sold during the school day. It's useful in understanding the kinds of political forces that move policy initiatives forward and inhibit them.	
6	10/8/15 Online	Improving the built food environment Policy Brief 1 Due	- Neff, Chapters 13, 14, and 17 These chapters explain how the food processing and distribution industries evolved to the concentrated, centralized system that we have today, and how this system affects local food environments. - Stanton R a. Food Retailers and Obesity. *Curr Obes Rep*. 2015;4:54-59. doi:10.1007/s13679-014-0137-4. The Stanton article explains how the economics and design of the modern supermarket contributes to obesity. - Lehmann et al. State-Level Interventions: Pennsylvania's Fresh Food Financing Initiative. In Morland Ch. 9 This chapter discusses an increasingly common policy approach to improve food access in low-income communities: financing and other incentives to get supermarket chains to open. - Libman K. Has New York City fallen into the local trap? *Public Health*. 2015;129(4):310-317. Libman's article questions whether a focus on local food environments detracts from a potentially more important focus on citywide interventions that would improve the food environment more broadly. - Elbel B, Moran A, Dixon LB, et al. Assessment of a government-subsidized	-Discussion fora -Policy Brief

			supermarket in a high-need area on household food availability and children's dietary intakes. *Public Health Nutr*. 2015:1-10. Elbel's recent study in the South Bronx calls into question the effectiveness of supermarket incentive programs in low-income communities. -Leib EM. All (Food) Politics is Local : Increasing Food Access through Local Government Action. *Harvard Law Policy Rev*. 2013;7:321. Leib's article summarizes a wide range of local policy interventions to improve food access. -Sacks R, Yi SS, Nonas C. Increasing Access to Fruits and Vegetables: Perspectives From the New York City Experience. *Am J Public Health*. 2015:e1-e9. This article reviews numerous NYC policies to increase access to fresh fruits and vegetables.	
III. Improving Nutrition and Food Quality				
7	10/15/15 Online	Obesity: One of the most politically salient food system issues over the past decade has been obesity and resulting NCDs. Many policies already examined in the course are designed to reduce obesity, but in this class we'll dive more deeply into how obesity has been defined, its role in shaping policy, and specific policy efforts to address it.	-Sisnowski J, Handsley E, Street JM. Regulatory approaches to obesity prevention: A systematic overview of current laws addressing diet-related risk factors in the European Union and the United States. *Health Policy (New York)*. 2015;119(6):720-731. This article discusses who is targeted for policy interventions and what categories of policies are used in the EU and US to reduce obesity. Bowen DJ, Barrington WE, Beresford S a. a. Identifying the Effects of Environmental and Policy Change Interventions on Healthy Eating. *Annu Rev Public Health*. 2015;36(1):289-306. doi:10.1146/annurev-publhealth-032013-182516. -Kersh R, Elbel B. PUBLIC POLICY & OBESITY: OVERVIEW AND UPDATE. *Wake For J Law Policy*. 2015;5:105-123. Kersh and Elbel discuss different types of policies that operate through different behavioral mechanisms at different scales to address obesity. -Berg, Chapter 5 Berg's chapter focuses on anti-obesity policies and politics during the Bloomberg administration in NYC.	-Discussion fora

8	10/22/15 Online	Dietary guidelines and nutritional standards	-Wilde Chapters 8 & 9 These chapters discuss the evolution of federal dietary guidelines and the regulation (or non-regulation) of nutritional labeling and nutritional claims. - Nestle Chapters 1-3 This section from Nestle's book explores the politics of dietary advice in the US. -Lederer A, Curtis CJ, Silver LD, Angell SY. Toward a healthier city: nutrition standards for New York City government. *Am J Prev Med*. 2014;46(4):423-428. -Tsui EK, Wurwarg J, Poppendieck J, Deutsch J, Freudenberg N. Institutional food as a lever for improving health in cities: the case of New York City. *Public Health*. 2015;129(4):303-309. These two articles discuss how NYC has used nutritional standards for the food it serves or controls to improve public health.	-Discussion fora
9	10/29/15 In Person	Food and beverage marketing and calorie labeling:	-Neff, Chapter 10 This chapter provides an overview of food and beverage marketing -Cheyne A, Mejia P, Nixon L, Dorfman L. Food and Beverage Marketing to Youth. *Curr Obes Rep*. 2014;3:440-450. This article specifically addresses food marketing to youth, particularly in communities of color. -Gregory, Christian A., Ilya Rahkovsky, and Tobenna D. Anekwe. *Consumers' Use of Nutrition Information When Eating Out,* EIB-127, U.S. Department of Agriculture, Economic Research Service, June 2014. -Rendell SL, Swencionis C. Point-of-Purchase Calorie Labeling Has Little Influence on Calories Ordered Regardless of Body Mass Index. *Curr Obes Rep*. 2014;3:368-375. The USDA report and the subsequent article discuss one type of informational regulation - the use of calorie labeling - to encourage consumers to reduce their calorie consumption.	-Discussion fora
10	11/5/15 Online	Food Safety: Food illnesses are a significant public health problem. This session reviews the food safety regulatory system and recent changes to make it more effective.	CRS – Primer and guidance for 114th congress	-Discussion fora

IV. Supporting Healthy Food Systems				
11	11/12/15 Online	Sustainable and Resilient Diets: The public health field has recently begun to focus on the relationship between our diets and global sustainability. The nexus between food and climate change, the water consumption of food production, and food waste have become particularly salient issues. This session discusses the notion of a sustainable diet, and how food policies might foster ecological sustainability.	-Neff Chapter 3 This chapter provides an overview of the relationship between food systems and the environment. -Scientific Report of the 2015 Dietary Guidelines Advisory Committee Part D. Chapter 5: Food Sustainability and Safety This year, for the first time, the US Dietary Guidelines were informed by an analysis of sustainability, as this chapter in the scientific report supporting the dietary guidelines discusses. -Berry EM, Dernini S, Burlingame B, Meybeck a, Conforti P. Food security and sustainability: can one exist without the other? *Public Heal Nutr*. 2015;(5):1-10. -Drewnowski A. Healthy diets for a healthy planet. *Am J Clin Nutr*. 2014;99(353410):1284-1285. -Lang T, Barling D. Nutrition and sustainability: an emerging food policy discourse. *Proc Nutr Soc*. 2013;72(1):1-12. These articles discuss the importance and value of integrating sustainability into our dietary policies and into the field of nutrition.	-Discussion fora
12	11/19/15 Online	Organic, local, healthy: Consumers tend to conflate these concepts, and in this class we will tease them out and learn whether, how and to what extent organic production methods or localized food systems contribute to (or detract from) environmental or occupational health, sound nutrition, and food security.	- Obach, Brian K. Organic Struggle: The Movement for Sustainable Agriculture in the United States. MIT Press, 2015. Chapters 3, 4, 5, 8 Obach's book discusses the history of the organic food movement and the creation of federal organic standards, an important context for discussing the role of organic food in health and sustainability. -Werkheiser I, Noll S. From Food Justice to a Tool of the Status Quo: Three Sub-movements Within Local Food. *J Agric Environ Ethics*. 2013. - Cleveland D a., Carruth A, Mazaroli DN. Operationalizing local food: goals, actions, and indicators for alternative food systems. *Agric Human Values*. 2014;32(2):281-297. - Born B, Purcell M. Avoiding the Local Trap: Scale and Food Systems in Planning Research. *J Plan Educ Res*. 2006;26(2):195-207. -Sonnino R. Escaping the Local Trap: Insights on Re-localization from School	-Discussion fora

			Food Reform. *J Environ Policy Plan*. 2010;12(1):23-40. These articles provide different perspectives on local food: the politics of local; the goals of local food systems; the trap we fall into when we embrace local; and the potential benefits of localizing food purchases.	
13	12/3/15 In Person	Guest Lecture TBA Policy Brief 2 Due	!	-Discussion fora -Policy Brief
14	12/10/15	Labor in the Food System: Food workers, from farm laborers to fast food restaurant staff to grocery deliverymen, face occupational hazards, low pay, exploitation, and limited potential for advancement. This final seminar session addresses the relationship between food labor and the current food system, the health risks to food workers, and opportunities to organize food laborers for better conditions.	- Myers JS, Sbicca J. Bridging good food and good jobs: From secession to confrontation within alternative food movement politics. *Geoforum*. This articles looks at the potential for alternative food movements to address labor issues. - Minkler M, Salvatore AL, Chang C, et al. Wage theft as a neglected public health problem: an overview and case study from San Francisco's Chinatown District. *Am J Public Health*. 2014;104(6):1010-1020. This article frame wage theft (and poverty wages) as a public health problem for food workers. -Bradie, Marnie. An Appetite for Justice: The Restaurant Opportunities Center of New York. In Milkman, R and Ott, E. New Labor in New York: Precarious Workers and the Future of the Labor Movement. This chapter describes ROC-NY, a new form of labor organization that has been organizing food workers for better wages and working conditions.	-Discussion fora

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
PH 73700: Supervised Fieldwork in Public Health
3 Credits
Fall 2015

Time and location	Mondays 8:00pm-9:45pm // Silberman, room 201 See **Schedule** below for details.	
Instructors	**Contact info**	**Office hours and location**
Janice Chisholm (HPM)	jc2898@columbia.edu	By appointment
Jennifer Brite (EPI/BIOS)	jenbrite@gmail.com	By appointment
Daliah Heller (COMHE)	daliah.heller@sph.cuny.edu	By appointment 55 West 125th St, rm 808
Brian Pavilonis (EOHS)	bp305@hunter.cuny.edu	By appointment Silberman, rm 721
Arlene Spark (NUTR)	aspark@hunter.cuny.edu	By appointment Silberman, rm 609
Course website	https://bbhosted.cuny.edu	
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.	
Course description	Students carry out 180 hours of supervised field work that is intended to bridge academic preparation and public health practice. Knowledge and skills from the core MPH and specialization courses are applied in a public health agency, community organization or other setting relevant to the student's academic background, specialization and career expectations. This is accomplished under the supervision and guidance of an experienced preceptor. Field-	

	based hours are implemented with classroom and individual meetings along with online communication. Aside from deliverables required by the preceptor, the student develops a reflection paper, a self-evaluation and a capstone proposal.
Course prerequisites	Completion of 18 credits toward the master's degree, including at least 3 required core courses (biostatistics, epidemiology, and the course most relevant to your specialization) and at least 2 courses in student's specialization.
Course format	The course is provided in a hybrid format – didactic sessions are provided online, including confirmatory participation quizzes, and face-to-face sessions are held for group meetings with faculty advisors and peers. Please see Schedule below for details.

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply the public health core functions of assessment, policy development and assurance	• Demonstrate (e.g. through the portfolio) the application of assessment, assurance and/or policy development during the fieldwork experience.	• Identify and assemble in the e-portfolio the product(s) of fieldwork project that exemplify the application of core public health functions in your work
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Demonstrate through self-reflection activities the application of one or more core public health values or techniques through the fieldwork experience	• Submit a "Reflections" paper on the fieldwork project and your perspective on public health practice
Adhere to ethical and social justice principles and standards	• Apply ethical principles to fieldwork placement, (e.g. human subjects' protection principles to the data collection). • Assess the degree to which the fieldwork placement agency adheres to ethical principles and standards	• Establish an approved protocol through CUNY IRB for human subjects' protection in your fieldwork project • Complete and submit the Student's Evaluation of Fieldwork Project Form
Interpret and analyze public health literature and apply evidence-based research	• Explore and become familiar with the public health literature databases and resources for organizing citations and sources	• Submit a rapid literature scan on your fieldwork topic

		• Submit a working bibliography on your fieldwork topic • Submit a literature review on your Capstone research question
Apply basic statistical and informatics techniques	• Review and identify appropriate quantitative methods and tools for measuring public health data	• OPTIONAL (Quantitative Studies Only). In your Capstone Proposal, describe the method(s) you've selected for measuring your data from the fieldwork project
Communicate public health information through oral, written, digital and visual presentation	• Prepare written and oral progress and evaluation reports (e.g. the fieldwork project), using appropriate professional formats.	• Submit via electronic forms two progress reports on the fieldwork placement project • Complete and submit the Student's Evaluation of Fieldwork Project Form
Explain how social, behavioral, biomedical and environmental determinants affect population health	• Discuss the relationship between social, behavioral, biomedical, and environmental elements and health outcomes	• Submit a "Reflections" paper on the fieldwork project and your perspective on public health practice
Design and evaluate interventions to prevent or control public health problems	• Develop and assess policies and activities that are responsive to public health problems	•

Collect, analyze and interpret public health data	• Apply data collection, analysis, and interpretation methods to public health data	• OPTIONAL (Quantitative Studies Only). In your Capstone Proposal, describe the method(s) you've selected for measuring your data from the fieldwork project
Engage and collaborate with diverse groups	• Identify different stakeholders and evaluate their roles on the fieldwork project.	• Complete and submit the Student's Evaluation of Fieldwork Project Form
Describe the legal foundations of the U.S. public health system and its interrelationships with other systems including health care, education and environmental protection	• Discuss the legal aspects of the US public health system and its inter-sectoral relationships with other public systems.	• Submit a "Reflections" paper on the fieldwork project and your perspective on public health practice
Apply a framework for the planning, implementation and evaluation of public health programs, policies and interventions	• Explain the difference between key planning constructs and demonstrate the ability to incorporate them in planning, implementing and evaluating the fieldwork project	• Complete and submit a Gantt chart describing the timeline for the fieldwork project • Design and submit a logic model describing the process for the research conducted via the fieldwork project
Explain the context of public and private health-care systems in which health care and public health policy are made and healthcare is delivered	• Discuss how the agencies you worked with during your fieldwork experience deliver health-related services to the populations they serve.	• Submit a "Reflections" paper on the fieldwork project and your perspective on public health practice

Course Assessments

The Supervised Fieldwork course is designed to guide students through the development, implementation, and completion of a research project on some aspect of public health practice at an approved placement site. Course assignments reflect the progressive activities involved in conducting the project, including design, planning and management, and implementation. This course process is intended to support the student's progress in the fieldwork project and to generate the elements of a resulting Capstone proposal or template paper for the student's culminating experience in the degree program. During the fieldwork period, students are expected to complete and submit two progress reports, and a final "reflections" paper on the experience. Both students and preceptors are required to complete evaluations of the fieldwork project upon its completion.

Grading

Evaluation criteria

Assignments and their relative weight toward your final grade in the course are listed below. The evaluation rubric which will be used to establish the grade for each assignment is available on the course Blackboard website under the section entitled My Assignments, along with instructions for that assignment. Items prefaced with an asterisk (*) will not have an evaluation rubric, and will be graded simply as complete (full points) or missing/incomplete (no points).

The relative weight of each course component is as follows:

Assessment	Weight
Rapid literature scan	10%
Working bibliography	5%
*IRB determination	5%
*Progress report #1	5%
Gantt chart	5%
Logic model	5%
*Progress report #2	5%
Literature review	15%
"Reflections" paper on fieldwork project	15%
Capstone proposal	20%
Class participation	10%
*Student Evaluation of Fieldwork Project Form	%
*Preceptor Evaluation of Fieldwork Project Form	%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

The final course grade will be determined using the performance assessment described above, and resulting in a Pass (70% or higher) or a Fail (less than 70%) grade.

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

While the program discourages students from taking Incompletes, under some circumstances, an Incomplete may be the only option for completing the Fieldwork Project.

A request for an Incomplete must be approved by the Faculty Advisor, and the incomplete grade must be resolved within the next two semesters.

Students with an Incomplete in this course, Fieldwork (PH 73700), are not eligible for enrollment into the Capstone course (PH 73800) until the Incomplete is resolved.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Because this is a hybrid course, students are expected to participate both online and in face-to-face meetings in class. Online participation is limited to two didactic sessions, and will be assessed with mini-quizzes to be completed at the end of each module in the session. Face-to-face participation will be assessed by faculty-administered attendance at the six class meetings.

Late/incomplete submission of assignments

Late assignments will not be accepted except in extenuating circumstances, with written approval by the student's faculty advisor. Incomplete assignments will be graded as such, unless the student is granted the opportunity to submit a rewrite by the faculty advisor, with written approval.

Make-ups, rewrites, and extra credit

Make-ups and extra credit assignments are not available for this course. In extenuating circumstances, the faculty advisor may allow a rewrite (or resubmission) of an Incomplete assignment, and must agree to this arrangement with written approval.

Expectations of students

Students are expected to submit Assignments on time, to participate respectfully in class and on the course Blackboard website, and to communicate with their Faculty Advisor on progress and problems related to the Fieldwork Project, as soon as issues arise.

Expectations for the instructor

Faculty Advisors will grade Assignments and post results within seven days of submission. Faculty Advisors will respond to all emails from students within 72 hours of receipt, and will arrange face-to-face meetings with students as requested, and with Preceptors, as necessary.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

This course schedule is subject to change.

For important dates, please refer to the current academic calendar.

Session # Mode Date	Topic	Assignment (Please submit all Assignments to your Faculty Advisor via email and via the Assignments section on the course Blackboard site.)
Session 1. **Face-to-face** August 31	Welcome and overview, Fieldwork connection to Capstone • Searching the literature: Initial Lit Scan • Developing a research question • IRB preparation and submission	By 8/31 • A fieldwork contract (Please bring your contract to class)
Session 2. **Face-to-face** September 10	Library session • Search tools • Reference management tools	**Meet in C Level at Silberman Room TBD**
Session 3. **Face-to-face** October 5	Meet in track-specific groups in class • Discuss research question and literature review development	By 10/4 • An IRB determination form (Please bring your completed form to class) • A brief literature scan • First midterm fieldwork status assessment survey

Session # Mode Date	Topic	Assignment (Please submit all Assignments to your Faculty Advisor via email and via the Assignments section on the course Blackboard site.)
Session 4. **Online** October 19 – October 25	• Project Management using Gantt Charts • Logic Models • Charts, Graphs and Figures for Projects	
Session 5. **Face-to-face** October 26	Meet in mixed (non-track-specific) groups in class • Discuss project management planning, processes, and implementation	By 10/25 • A project plan using a Gantt chart or similar timeline model • Project logic model (Please bring both documents to class)
Session 6. **Online** November 9 – November 15	Complete two out of three sections, most relevant to your Fieldwork Project - 1. Complete one of a) Quantitative Analysis – planning and preparation: data analysis and mini stats review b) Qualitative Studies – planning and analysis *2.* Capstone paper – planning and development	By 11/9 • Second midterm fieldwork status assessment survey • Preliminary working bibliography • Literature review
Session 7. **Face-to-face** November 16	Meet in track-specific groups in class • Peer review and discuss each other's Capstone paper proposals	By 11/15 • First draft of Capstone proposal (Please bring your first draft to class)

Session # Mode Date	**Topic**	**Assignment** **(Please submit all Assignments to your Faculty Advisor <u>via email and via the Assignments section on the course Blackboard site</u>.)**
Session 8. **Face-to-face** December 14	All-class meeting to review Fieldwork to Capstone requirements • Track-specific group meetings to finalize Fieldwork to Capstone processes	By 12/13 • A completed **Student's Evaluation of Fieldwork Experience Form** • A completed **Field Placement Supervisor's Evaluation Form (emailed from Placement Supervisor to Fieldwork faculty)** • A 'Reflections' document on Fieldwork for Student Portfolio • Capstone Proposal • Working bibliography
Optional. **Individual consultations** December 15-21	Student Faculty Consultations	**Note: Students should verify that all Assignments have been delivered or scheduled for delivery with Fieldwork faculty.**

CUNY SCHOOL OF PUBLIC HEALTH

HUNTER COLLEGE

COURSE SYLLABUS
PH 73800: Capstone
Fall 2015

Time & Location Mondays 6:05 – 7:50pm Silberman Auditorium (Rm 201)

Instructors	Email Addresses	Office Hours & Location
Janice Chisholm (HPM)	jc2898@columbia.edu	By appointment
Jennifer Brite, MPH (EPI/BIOS)	jenbrite@gmail.com	By appointment
Karyn Faber, EdD, MPH (COMHE)	kf206@hunter.cuny.edu	By appointment
Brian Pavilonis, PhD (EOHS)	bp305@hunter.cuny.edu	Monday and Wednesday 4:00PM – 6:00 PM Silberman, room 721
Arlene Spark, EdD, RD, FADA, FACN (NUTR)	aspark@hunter.cuny.edu	Mondays 4-5:30 PM and by appointment, Silberman, room 609

Course Bb site

Accessed via https://bbhosted.cuny.edu. User name and password are required.

Support resources

For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.

Course description

This course consists of a structured seminar aimed at allowing students to apply experiences gained during their graduate program and synthesize that knowledge and experience in the form of a major writing project. It is expected that students use a combination of synthesized evidence, theoretical models, and empirical research to answer a public health research question or practice problem using interdisciplinary perspectives.

Course prerequisites

Completion of at least 36 credits of coursework toward the Master of Public Health (MPH) or Master of Science degree, including at least one course in each of the 5 core areas of public health (biostatistics, epidemiology, social and behavioral sciences, public health policy and environmental health and safety); and at least 3 specialization courses.

Course format

This course is taught with a mix of online learning resources and in-class discussion. This is not a self-paced course; there are weekly deadlines for writing, discussion and revisions, and attendance at and participation in the final presentations of all capstone projects.

This course is designed for students writing Capstone Papers and for those with permission to write Master's Essays. The schedule of assignments and deadlines vary depending on the type of project. Students writing the Capstone Paper attend every class; students writing the Masters Essay may attend all classes, but they must attend classes with an asterisk (*) in the Course Schedule below.

Required reading and resources

NA

Suggested reading and resources

See readings starting on page 12

Core Competencies *This course will help you to:*	**Course Learning Objectives** *After successfully completing this course, you are expected to be able to:*	**Assessment methods** *Competencies and learning objectives will be assessed as part of the following course assignments:*

Apply the public health core functions of assessment, policy development and assurance	• Construct a testable research question or practice problem, which
	  ○ can feasibly be addressed within a specified time period
	  ○ is of public health relevance
	  ○ when addressed will fill a knowledge gap
		Week 6

Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Place a research question or practice problem within a relevant conceptual framework and the broader public health context • Identify and apply relevant professional or scholarly methods to an investigation or practice problem, including use of a predefined protocol or research plan. • Plan the analysis, synthesis and write up of an investigation from inception to completion including scheduling of items on the critical path to completion	Weeks 6,8,11,14-15
Adhere to ethical and social justice principles and standards	• Analyze relevant ethical or social justice issues using widely recognized principles or standards. • Obtain IRB or IACCU approval or exemption if appropriate. • Conduct any public health investigations involving human subjects in accordance with OHRPP ethical performance standards, including maintenance of confidentiality and security.	Week 2
Interpret and analyze public health literature and apply evidence-based research	• Implement a structured search of the literature. • Summarize the literature to date, including quantitative associations and qualitative themes, on a specific topic taking into account levels of evidence	Weeks 6,8,11,14-15

	• Identify weaknesses within existing literature, such as addressing the wrong question, lack of comparison groups, biases or limited generalizability	
Apply basic statistical and informatics techniques	• Generate summarized descriptive information from PH data, such as frequencies and cross-tabulations • Assess qualitative data according to accepted methods, such as componential analysis. • Identify the key findings of a study or practice experience. • Provide sources of information for all statements of fact in the draft through use of a citation manager • Present PH information in figures, tables and graphs, such that each figure/table/graph is interpretable, self-explanatory and can be read standalone	Weeks 2, 3, 5, 8, 11, 14-15
Communicate public health information through oral, written, digital and visual presentation	• Identify the interests of different stakeholders in the findings • Make an oral or poster presentation conveying key findings to a defined audience contextualized within current knowledge and interests of stakeholders, as well as with due acknowledgement of strengths and weakness of findings. • Write a document a public health problem such as a research report, program evaluation, analytic paper or policy analysis, using language appropriate for a professional public health audience.	Weeks 11-15
Explain how social, behavioral, biomedical and environmental determinants affect population health	• Identify and describe environmental, behavioral, interpersonal, social, economic, political or policy factors that affect the etiology, prevention or resolution of a selected public health problem	Weeks 11-15
Design and evaluate interventions to prevent or control public health problems	• Implement the analysis, synthesis and writing plan for the culminating writing experience according to a predefined plan • Discuss the implications of a study or evaluation to address the needs for future evaluation and research, or for the development and implementation of programs and policies.	Weeks 1-15
Collect, analyze and interpret public health data	• Synthesize findings within the context of existing knowledge with acknowledgement of the strengths, weaknesses of the findings and gaps in knowledge that remain, and the corresponding implications for interpretation • Identify issues with reliability and validity of findings and explain their likely implications. • Justify methods of measurement • Identify public health implications of an investigation	Weeks 3, 5, 8, 11-15
Apply a framework for the planning, implementation and evaluation of public health programs, policies and interventions.	• Generate logic models, theory of change diagrams, and Gantt Charts to implement and plan public health programs • Demonstrate program effectiveness through quantitative and qualitative measures	Weeks 1, 2, 4, 7

Course Assessments

The major deliverables for the course are the (a) written capstone project and the (b) accompanying oral *or* poster presentation. The written and oral or poster presentation are evaluated by two and five faculty members, respectively. The rubrics for grading each component are available on the course Bb site.

Grading

Evaluation criteria
Grading rubrics for each course component will be available on Bb
The relative weight of each course component is as follows:

Course component	**Weight**
Capstone paper or master's essay, plus letter of response to reviewers	75%
Oral presentation of capstone paper or master's essay	15%
Portfolio (required in order to earn a grade for the course)	5%
Attendance, Bb posts and participation	5%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	**Quality Points**	**Percentage**
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete
The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. If an incomplete grade is granted, the student negotiates and prepares a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact Professor Khursheed Navder, the Hunter Campus Director, in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation
Attendance is taken seriously and we do take attendance.

Late/incomplete submission of assignments
This course runs on a very tight, inflexible schedule. Late or incomplete assignments are seriously discouraged. Once a capstone student gets behind, it will be extraordinarily difficult to catch up and finish on time.

Rewrites, and extra credit
Rewrites are essential in this course! In fact, rewrites are an integral part of every serious writing endeavor. Extra credit is not available in this course.

Capstone handbook
The latest edition of the Capstone handbook is available on our course Bb site and at:
http://www.cuny.edu/site/sph/hunter-college/campus-resources/capstone.html

Statistical and IRB assistance
Jennifer Brite is available for statistical advice and help with SPSS software. Contact her by email to make an appointment. IRB assistance is available from your capstone faculty member.

Portfolio
Every MPH- and EOHS MS-degree student is required to prepare and maintain a professional portfolio. The portfolio describes relevant public health experiences and achievements during the course of the studies leading to the master's degree. The portfolio is submitted toward the end of the Capstone course and uploaded onto the FORMSTACK website. Detailed instructions for completing the portfolio are posted to the course website and also appear in the Capstone Handbook. *Submission of an acceptable portfolio is required for completion of this course and is a graduation requirement*. To access the site for depositing the *portfolio,* click on http://www.formstack.com/forms/?1143594-R3iqXqGNXR/. Or go to CUNY SPH page → Documents → CUNY SPH students → Hunter → Forms →Student e-Portfolio.

Expectations of the capstone faculty
- Provide regular announcements, reminders, and suggestions on the course website
- Respond to student email within 24 hours Monday through Friday.
- Provide feedback on assignments within 1 week of the due date.

Expectations of capstone students

- Arrive on time for class sessions and individual appointments, submit deliverables on time, participate in discussions.
- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Show respect to everyone in the course.
- Be held accountable for all material assigned/covered in the course.
- Regularly check the course website and official university email for course correspondence.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted in the discussion board.
- Contact your Capstone track faculty directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.

Skills the Capstone Faculty Expects of Capstone Students

Be able to prepare the following

- Written work that is free of plagiarism.
- Article summary
- Structured abstract
- Testable hypothesis
- Reference list using RefWorks, MS Word 2013, or other electronic citation software
- Annotated bibliography
- Literature review
- Legislation testimony
- Policy brief (1 page)
- Editorial
- Research report
- Op-ed essay

Be able to do the following

- Critically analyze public health documents, including peer-reviewed articles, grey literature, books, newspaper and magazine articles, blogs, texts produced by for-profit organizations, etc.
- Present your views clearly to a range of audiences
- Present both sides of controversial issues
- Copy edit an essay, which involves correcting spelling, punctuation, and grammar. It also includes suggesting the appropriate use of headings and subheadings, and ensuring that the required citation style is used. The task of the copy editor is to make the written work clear, correct, concise, comprehensible, and consistent.
- Develop a testable hypothesis
- Interpret statistical analyses and explain findings in narrative form
- Calculate & interpret descriptive statistics
- Calculate & interpret rates and proportions
- Calculate & interpret chi square and t-tests
- Construct & interpret tables & graphs
- Analyze and present quantitative data

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

CUNY academic calendar

Please refer to the academic calendar for important dates, such as holidays and the deadlines for dropping and withdrawing from a course. http://www.cuny.edu/academics/calendars/fall-2015.html

Course schedule and assignments

This class is designed for all Capstone Projects, both students writing Capstone Papers and for students writing Master's Essays. The schedule of assignments and deadlines vary depending on the type of project. Please review the tables on the next pages that clearly indicate when items are due depending on whether you have approval to work on a Master's Essay or Capstone Paper. This schedule may change as the semester progresses. Refer to the current academic calendar for important dates. **Be aware that we meet on Mondays, except September 10th, which is a Thursday.**

A.Capstone students write and submit their papers section-by-section. The faculty member makes suggestions, and the students makes revisions that are suggested. Email assignment to your capstone faculty member. When indicated, also post the assignment on Bb. All assignments are due the day before our class sessions (by 11:59 PM Sunday). Capstone students are required to attend all class sessions.

#	Date	Topic	Assignment All submissions to your capstone faculty member are via email. When indicated, also *post* on the Bb Discussion Board. Readings in the References section are optional, but *strongly recommended*. ^Applies to all students, including those doing Master's Essays.
1	8/31*	• Faculty introductions (AS) • Course overview (AS) • Working Bibliography/Template Paper (JC) • Outline, key sections of a paper (JC) • Creating an outline using Word – building your paper (JC) • Oral presentation or poster? (JC) • Gantt Chart Update (JC) • IRB Review (JB) • Portfolio assignment (AS)	Email & post: • ^Provisional **title** of capstone paper • Revised capstone **proposal** (from Fieldwork) • Working bibliography with ≥20 references with full abstracts (using citation software) and annotations of 10 selected papers for use in capstone paper Review: • 'The capstone paper as a whole' in the References section • MPH and MS portfolios in the References section of this syllabus and the Capstone Handbook Reading: 1-3, 5G
2	Thurs 9/10	• Methods – Procedures-Project (BP) • Methods – Qualitative Papers (KF) • Mini Stats Review and Data Analysis (JB) • Table Shells (planning results) (JB) *Sign-up for 1st individual student-faculty meeting*	Email: IRB determination, exemption, or approval (from Fieldwork) Email & post: • **Template paper** (with explanation for how the article will help you write your capstone paper. • **Outline** of your capstone paper (1-2 pp) using Word template • **Revised Gantt Chart** Reading: 5C [Week #1 assignment returned to you]
3	Week of 9/21	Meeting #1 w/capstone faculty member	Email & post: • **Methods** or **Process** section (1st draft) • **Tables, graphs**, and **figures** (1st drafts) [Weeks #1 & 2 assignment returned and discussed]

#	Date	Topic	Assignment All submissions to your capstone faculty member are via email. When indicated, also *post* on the Bb Discussion Board. Readings in the References section are optional, but *strongly recommended*. ^Applies to all students, including those doing Master's Essays.
4	9/28	• Results for Quantitative Analysis (JB) • Results for Qualitative Analysis (KF) • Results for Project Papers (BP)	Reading: 5D [Week #3 assignment returned]
5	10/5	• Introduction – Background, Significance, Literature review (JC) • Track Meetings *Sign-up for 2nd individual student-faculty meeting*	Email & post: • **Results** section (1st draft) • *Revisions* to previously submitted 1st drafts. Reading: 5G
6	Week of 10/19	Meeting #2 w/capstone faculty member	Email & post: • **Introduction** (1st draft): includes background, significance, literature review, agency background or setting, hypothesis) [Week #5 assignment returned]
7	10/26	• Discussion, Conclusions Recommendations (BP) • Abstract (BP)	Email & post: • **Discussion, conclusions** and **recommendations** (1st drafts)sections • **Structured abstract** Read : • "Explanation-Sources of Invalidity" and examine the two posted Sources of Invalidity Tables • 5A,C,E,F [Week #6 assignment returned]
8	11/2*	• How to structure and prepare your PowerPoint presentation (AS) • How to structure and prepare your Poster Presentation (AS) • Finalizing the portfolio (AS) • Track Meetings *Sign-up for 3rd individual student-faculty meeting*	^Notify: • Prof. Pavilonis and your capstone faculty of your choice to do a poster presentation or oral presentation. Email: • Completely assembled **1st complete draft** of paper for review by capstone faculty Review: • MPH and MS portfolios in the References section of this syllabus Read: • Instructions for preparing the portfolio at http://cuny.edu/site/sph/hunter-college/campus-resources/PortfolioInstructions.html/
9	Week of 11/9	Meeting #3 w/ capstone faculty member	Meet with capstone faculty member to discuss paper, presentation, and portfolio.
10	11/16*	• Student presentations (1)	Critiqued 1st draft of your paper returned & discussed

#	Date	Topic	Assignment All submissions to your capstone faculty member are via email. When indicated, also *post* on the Bb Discussion Board. Readings in the References section are optional, but *strongly recommended*. ^Applies to all students, including those doing Master's Essays.
11	11/23*	• Student presentations (2)	Email: **2nd draft of fully-assembled paper.** Your 2nd draft will be forwarded to a outside (2nd) reader
12	11/30*	• Student presentations (3)	^Email: • **Portfolio draft** (including up to 8 attachments) http://www.formstack.com/forms/?1143594-R3iqXqGNXR
13	12/7*	• Student presentations (4)	Critiqued 2nd draft of paper returned from capstone faculty member and external reviewer
14	12/14*	• Student presentations (5)	^Critiqued draft of portfolio returned from capstone faculty.
15	12/21*	• Student presentations (6)	^Upload on Formstack: • **Final portfolio** with up to 8 attachments http://www.formstack.com/forms/?1143594-R3iqXqGNXR and • **Final capstone paper or master's essay, response letter**, **PPT** (for oral presentation or poster), and **1-page summary** (of poster or oral) http://www.formstack.com/forms/?1084540-R3iqXqGNXR

NB: While the overall content of this course will be covered as outlined, the syllabus may change based on the need to adapt to student interests, feedback and expertise. Always check the Bb site for the most up-to-date information on course readings and assignments.

B.Master's essay students work with their first and second readers throughout the semester, and have 1st assignments that must be turned in to the capstone faculty member by the specified due date (see below). The schedule of submissions of paper drafts should be arranged with the first reader as early in the semester as possible. Master's essay students must attend class attend class sessions 8/31, 11/2, 11/16-12/21

Due date	**Assignment for master's essay students**
8/31	Email & post title of the master's essay and advise your Capstone faculty of your 1st & 2nd readers. Your capstone faculty member may serve as one of your readers.
Thurs 9/10	Email master's essay proposal to your readers. Your capstone faculty member and at least one other reader must approve the proposal.
9/21	Email and post approved proposal.
11/2	Notify Prof. Pavilonis and your capstone faculty of your choice to do a poster presentation or oral presentation.
11/30	Email portfolio draft (including up to 8 attachments). http://www.formstack.com/forms/?1143594-R3iqXqGNXR
12/14	Submit to capstone faculty member and reader/s the final copy of the master's essay and response letter
12/21	Upload on Formstack: • Final portfolio with up to 8 attachments http://www.formstack.com/forms/?1143594-R3iqXqGNXR and • Final master's essay, response letter, PPT (for oral presentation or poster), and 1-page summary (of poster or oral) http://www.formstack.com/forms/?1084540-R3iqXqGNXR

References, resources, and readings

WRITING THE CAPSTONE PAPER

1. Practical advice

For practical advice, look into the writing center at any major college or university, for example:

- Purdue Online Writing Lab (OWL). http://owl.english.purdue.edu/
- Hunter College Writing Center. http://rwc.hunter.cuny.edu/

2. Style

Unless indicated otherwise, papers submitted in PH 738: Capstone Seminar follow the style of the *American Journal of Public Health* (*AJPH*). The *AJPH* style is the same as that of the American Medical Association (AMA).

- *AJPH's* instructions for authors. http://ajph.aphapublications.org/userimages/ContentEditor/1318438422261/Instructions_for_Authors.pdf
- AMA Style Stat! For Research Papers. A quick reference to using the AMA style in college research papers. http://www.docstyles.com/library/amastat.pdf

3. Organization of the capstone paper

It is customary to organize the capstone paper using the IMRAD format: *Introduction, Method, Results And Discussion*. The IMRAD structure is not an arbitrary organization, but a direct reflection of the process of scientific discovery. AMA Stat! presents these variations on the IMRAD theme, which are also acceptable:

- For reports of original data: Context, Objective, Design, Setting, Population, Intervention(s), Main Outcome Measure(s), and Results.
- For a systematic literature review: Context, Objective, Data Sources, Study Selection, Data Extraction, Results, and Conclusions.

Please see the AMA Stat! website for detailed descriptions:
http://writingcenter.missouristate.edu/assets/WritingCenter/amastat.pdf

4. The capstone paper in general

- How to write all sections of a research paper Rice Univ: http://www.ruf.rice.edu/~bioslabs/resources_home.html
- Writing a research article: advice to beginners. http://intqhc.oxfordjournals.org/content/16/3/191.full/
- How to write a paper. Bates College: http://abacus.bates.edu/~ganderso/biology/resources/writing/HTWsections.html
- Writing research papers. Rice Univ: http://www.ruf.rice.edu/~bioslabs/tools/report/reportform.html
- Guide to writing a formal physics lab report [despite the title, this has relevance for all science writing]. Union College. http://www.union.edu/Resources/Academic/writing/Help/Faculty/Orzel/GuideToWritingLabReports.php

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
PH 75000: Fundamentals of Biostatistics
3 Credits
Fall 2015

Time and location	This is an online course. All class activities will take place on Blackboard. A week in this class starts on Monday and ends on Sunday. Weekly online real-time review sessions (via Blackboard Collaborate) are scheduled on Wednesdays and Thursdays 7.00-8.30PM.
Instructor	Lead instructors: • Katarzyna Wyka, PhD: kwyka@hunter.cuny.edu (response time 24-48 hours) • Hongbin Zhang, PhD: hongbin.zhang@sph.cuny.edu (response time 24-48 hours) Co-instructors: • Jonathon Rendina, PhD hrendina@hunter.cuny.edu (response time 24-48 hours) • Marcel Ramos, MPH Marcel.Ramos45@myhunter.cuny.edu (response time 24-48 hours) Note: Always include "PH750" in the subject line.

Office hours	• Katarzyna Wyka, PhD:
	  ○ Online: Mondays 4.30-6PM via Blackboard Collaborate
	  ○ In person: Mondays, 6.00-7PM (Silberman Building, Room 537) or by appointment
	• Hongbin Zhang, PhD:
	  ○ Online: Tuesdays 4.30-6PM via Blackboard Collaborate
	  ○ In person: Tuesdays, 6.00-7PM (55 W 125 Street, Room 806) or by appointment

Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Application and interpretation of basic descriptive and inferential statistical methods for the analysis of public health and other health-related data.
Course prerequisites	Elementary statistics or calculus or equivalent.
Course format	This is an online course. All class activities are online and include lectures and labs, real-time review sessions, quizzes, discussions, and a group project. This is not a self-paced course. It is extremely important that students devote 5-10 hours for the class on a weekly basis to keep up with class activities and interactions.
Required reading and resources	None

Suggested reading and resources	*OpenIntro Statistics: Third Edition*. CreateSpace Independent Publishing Platform. Diez, D. M., Barr, C. D., Cetinkaya-Rundel M. (2015). **ISBN-10:** 194345003X, **ISBN-13:** 978-1943450039 A digital version is available free at http://www.openintro.org/stat/textbook.php. A print version is available for $10.14 from amazon.com, linked to from the website above. *Statistics: The Art and Science of Learning from Data* Alan Agresti & Christine Franklin Pearson Prentice Hall, 2 edition (2009) ISBN 978-0-13-513199-2 Note: 3rd edition is available, but more expensive and not necessary We strongly suggest that you purchase student license for PASW(SPSS) to use the software at home. Information on obtaining it is on Blackboard. Note that almost all computers in the libraries and Public Computing Services (PCS) labs at the Silberman Building, Brookdale and at 68th Street have PASW(SPSS) software installed. In addition, the Hunter College library operates a laptop loan program: http://library.hunter.cuny.edu/services/laptoploan. Such laptops would also have PASW (SPSS) and Microsoft products installed.

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Explain the role and importance of bio-statistical analysis in public health research • Design an appropriate statistical analysis for a given public health research design • Recognize ethical principles and legal standards that should be followed in the collection, management and analysis of statistical data on human and non-human subjects	• Quizzes, final project, CITI training
Apply basic statistical and informatics techniques	• Perform statistical calculations using a statistical software package • Create graphics and visual representations of statistical data using a statistical software package • Apply appropriate statistical analysis techniques based on the size of the data	• SPSS/Excel exercise, final project
Communicate public health information through oral, written, digital and visual presentation	• Write the interpretation of results from statistical analysis • Create and present an oral presentation of statistical output	• Final project, final project presentation
Collect, analyze and interpret public health data	• Identify continuous, discrete, nominal and ordinal data • Summarize these data types using ◦ Bar charts, box plots, histograms, scatter plots ◦ measures of central tendency: mean, median, and mode of measures of spread: variance, interquartile range, range of frequency tables • Define and differentiate between precision and accuracy • Define and calculate marginal, joint and conditional probability • Use binomial distribution to calculate probabilities	• Quizzes, exams, final project

	associated with binary data • Convert count data to rates and proportions • Estimate centrality and variance of a sampling distribution from the population distribution using the Central Limit Theorem • Construct and interpret confidence intervals for population mean and population proportion • Population mean and population proportion • Large and small samples (using z and t sampling distributions) • Identify how changes in sample size, confidence level and other parameters affect the width of a confidence interval • Define null and alternative hypotheses for one-sided and two-sided inference • Perform inference tests for proportions using the normal approximation, for mean of a single sample, difference in means of two samples, and difference in means of paired samples • Use Z and t tables for hypothesis tests and constructing confidence intervals • Estimate the power of a t test • Calculate odds ratios, relative risks, and risk difference • Perform Pearson Chi-Square Test of Independence for r x c frequency tables • Perform and interpret one-way Analysis of Variance • Correct for multiple comparisons • Define type I and II error, power, and sample size and the relationships between them • Perform and interpret correlation and linear regression analysis	

Course Assessments

Your understanding of the course material will be evaluated through quizzes, two open book/notes exams, one group project, and class participation. For the best possible grade, you must demonstrate an understanding of covered concepts, as well as mastery of basic computer skills.

Class Quizzes: There are 13 online class quizzes corresponding to class materials. Deadlines for each quiz are posted in Class Schedule below (page 10) and within each class folder. All quizzes have a specific due date and answer keys will be posted 2 days after the deadline. You should post questions regarding quizzes in the Discussion Board (Q&A Forum). Check My Grades to view your grade and feedback.

Class Exams: There are two open book/notes non-cumulative exams. Class exams will be completed online via Blackboard. You will have one week to submit your exams. You are strongly encouraged to start working on your exam early in the week. Graded exams will be returned to students within 7 days. More information will be posted on Blackboard at the beginning of the exam week (9/28 & 11/16). Check My Grades to view your grade and feedback.

Group projects. You will be working in small groups (6 students). You will sign-up for a group during Week 3 (9/14-9/20) via Group Project Sign-up Sheet (located in Week 3 folder). Each group will chose a research topic and will prepare 1) a final report that will be submitted via Blackboard and 2) a PowerPoint presentation that will presented on 12/7 (6PM – 8.50PM) in real-time online presentations. Grading rubric is located in the Final Project tab. Project sections will be submitted throughout the semester (refer to Class Schedule on page 10). Project-related questions should be posted in the Discussion Board. Individual contributions will be evaluated using online peer-evaluations after each project section is submitted. All students who want a passing grade must complete the group project. Check My Grades to view your grade and feedback.

Class Participation: You are expected to participate in online class discussions via the Discussion Board. We will use the Discussion Board to clarify concepts covered in the class and answer questions pertaining to class material, quizzes and group projects. Each student is expected to contribute to the class by posting at least 5 questions/answers throughout the semester. Grading rubric is provided in the Discussion Board. Unprofessional and disrespectful posts will be removed and penalized. Check My Grades to view your grade and feedback.

Grading

Evaluation criteria

All assignments will be evaluated based upon rubrics found on the course website.

The relative weight of each course component is as follows:

Assessment	Weight
Quizzes	25%
Exams	25%
Group project	25%
Class participation	25%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual

reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

It is very important to keep connected and interact with class instructors and classmates throughout the semester. The majority of our communication will occur via Blackboard:

- Complete all weekly classwork in a timely manner
- Post class related questions on Discussion Board (Discussion Board > General Q&A)
- Interact with your classmates in the Student Lounge (Discussion Board > Student Lounge)
- In you would like to discuss a private matter email us directly

Online communication netiquette: All students are expected to follow rules of common courtesy in all online communication:

- Use a descriptive subject line that reflects the content of your message (e.g. “interpretation of p-value, class 7”; “hw1 question 3”). Write in short paragraphs and sign your message with your full name.
- Check the content of your message for grammatical and spelling errors. Do not write in UPPERCASE as this is often interpreted as shouting in text-based messages. You can use emotional symbols (e.g. :-)) to indicate the tone of your voice.

Late/incomplete submission of assignments

Late quizzes will be penalized by deducting 10% from the earned grade per day, with no credit after homework answer key is posted (end of Day 2). Late exams will not be accepted. Late group projects will not be accepted.

Make-ups, rewrites, and extra credit
There are no make-ups, rewrites, or extra credit allowed.

Expectations of students

This is not a self-paced course. Students are expected to:

- Check email and Blackboard announcements on **daily** basis
- Access course materials on **weekly** basis
- Complete and submit **weekly** quizzes
- Participate in **weekly** discussion board
- Complete and submit other assignments **as required**
- Check My Grades to monitor progress and received feedback on **weekly** basis

Last Updated August 16, 2015

Expectations for the instructor

- Provide regular announcements and reminders on the course website and via email
- Answer questions posted on Discussion Board within 24 hours
- Respond to student email within 24-48 hours Monday through Friday
- Grade and provide feedback on assignments within 1 week of the due date
- Communicate grades and progress through Blackboard (My Grades)

Accessibility
Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity
Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Last Updated August 16, 2015

Course Schedule

This schedule may change as the semester progresses. Refer to the current academic calendar for important dates.

Week	Topic	Reading	Assignment
0 8/27-8/30	**Getting started**	Syllabus	• Read syllabus • Complete quiz 0 (Syllabus quiz) • Introduce yourself on Blackboard • Read Online Student Resources • Run Blackboard Collaborate test • Read information about CITI training.
1 8/31-9/6	**Introduction** • Study designs & sampling • Types of data • Standardization (Age Adjustment)	Learning units 1 OpenS CH 1.1-1.5 AG CH 1	• Submit week 1 quiz • Complete SPSS/Excel exercise • Respond to Student introductions on Blackboard
2 9/7-9/13	**Data Summarization** • Tabular and graphical methods for describing data • Measuring center and spread	Learning units 2 OpenS CH 1.6-1.8 AG CH 2 & 3	• Submit week 2 quiz • Complete SPSS/Excel exercise
3 9/14-9/20	**The role of probability** • Conditional probability • Diagnostic testing 9/16 - Last day to drop without a grade of "W"	Learning units 3 OpenS CH 2 AG CH 4 & 5	• Submit week 3 quiz • Complete SPSS/Excel exercise • Sign up for Group Project
4 9/21-9/27	**Probability Distributions and applications** • The Normal distribution • The Binomial distribution	Learning units 4 OpenS CH 3 AG CH 6	• Submit week 4 quiz • Complete SPSS/Excel exercise • Choose topic for Group Project
5 9/28-10/4	**EXAM 1**		• Submit Exam 1 • Submit Group project: Section 1 & 2 • Submit peer-evaluations
6 10/5-10/11	**Sampling distributions** • Sampling distribution of the mean • Sampling distribution of a proportion	Learning units 6 OpenS CH 4.1&4.4 AG CH 7	• Submit class 6 quiz • Complete SPSS/Excel exercise

7 10/12- 10/18	**Estimation of Confidence Intervals** • Confidence intervals for a population mean • Confidence intervals for a population proportion	Learning units 7 OpenS CH 4.2 & 4.5 AG CH 8	• Submit week 7 quiz • Complete SPSS/Excel exercise
8 10/19- 10/25	**Hypothesis Testing** • Hypotheses & test procedures • One-sample tests for a population mean • One-sample tests a population proportion	Learning units 8 OpenS CH 4.3 & 5.1-5.2 & 6.1 AG CH 9	• Submit week 8 quiz • Complete SPSS/Excel exercise
9 10/26- 11/1	**Hypothesis Testing** • Two-sample tests for a population mean • Two-sample tests for a population proportion	Learning units 9 OpenS CH 5.3-5.4 & 6.2 AG CH 10	• Submit week 9 quiz • Complete SPSS/Excel exercise
10 11/2-11/8	**Hypothesis Testing** • One-way ANOVA • Power and sample size determination	Learning units 10 OpenS CH 5.5 AG CH 14	• Submit week 10 quiz • Complete SPSS/Excel exercise
11 11/9- 11/15	**Contingency Tables** • Odds Ratio/relative risk • Pearson's Chi-square/Fisher exact test 11/9 - Last day to withdraw with a grade of 'W'	Learning units 11 OpenS CH 6.4 AG CH 11	• Submit week 11 quiz • Complete SPSS/Excel exercise
12 11/16- 11/22	**EXAM 2**		• Submit Exam 2 • Submit Group project: Section 3 & 4 • Submit peer-evaluations
13 11/23- 11/29	**Simple Linear Regression** • Correlation • Simple linear regression	Learning units 13 OpenS CH 7.1-7.3 AG CH 12	• Submit week 13 quiz • Complete SPSS/Excel exercise
14 11/30- 12/6	**Multivariable Regression** • Multiple linear regression • Introduction to logistic regression	Learning units 14 OpenS CH 7.4 & 8 AG CH 13	• Submit week 14 quiz • Complete SPSS/Excel exercise
15 12/7 (6PM – 8.50PM)	**Final Project Presentations**		• Submit final Group project • Participate in online project presentations • Submit CITI training certificate to BB.

Note: OpenS=*OpenIntro Statistics* textbook, AG = Agresti & Franklin textbook

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
PH 75100: Principles of Biostatistics
3 Credits
Fall 2015

Time and location	***Lectures*** will be held on Mondays, 5-6 pm, led by Dr. Levi Waldron, in Silberman 217 and via our YouTube channel at http://tinyurl.com/ph751fall2015. ***Computer Lab Sessions*** led by Tony DeVito will be held on Mondays, 6:10-7:50 pm in Silberman C-09 (basement computer lab). Details for online attendance will be sent via Blackboard.
Instructor And Office Hours	Levi Waldron, PhD, levi.waldron@hunter.cuny.edu. Office Hours: schedule appointments at https://calendly.com/lwaldron. Tony Devito, MS, adevito@hunter.cuny.edu Office Hours: by appointment
Course website	Essential announcements will be made through Blackboard. Ongoing Q&A will be held through the course's Google Group; please sign up at https://groups.google.com/forum/#!forum/ph751fall2015 (email and web-only options available; you do not need a Google account).
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This is a first-level requirement for students specializing in EPI-BIOS, who will take subsequent intermediate and advanced level biostatistics courses. It will introduce students to the theoretical basis for and practical application of common statistical methods and principles used in public health.
Course prerequisites	Evidence of quantitative abilities, such as college-level algebra with a grade of B+ or better, GRE scores ≥550 and analytic scores ≥4.5. The course does not require calculus or linear algebra. Access to computers and basic computer skills are required for many course functions
Course format	The course is taught through lectures, computer exercises using data management and statistical packages and hand-calculations.
Required reading and resources	Diez, D. M. (2015). OpenIntro Statistics: Third Edition. CreateSpace Independent Publishing Platform. ISBN-10: 1478217200, ISBN-13: 978-1478217206

	A digital version is available free at http://www.openintro.org/stat/textbook.php. A print version is available for $8.17 from amazon.com. Note: please keep notes of anything that could be improved in this textbook. It is licensed under the Creative Commons, and Professor Waldron will make modifications to the book according to your suggestions. Students may use the software of their choice, however lab instruction will make use of PASW (SPSS) and occasionally Microsoft Excel. Students interested in learning a more extensive statistics package may consider using the free software R (http://www.cran.r-project.org, http://www.rstudio.com); Professor Waldron will support the use of R during lab sessions. You will also need to regularly access the class electronic Black Board (Bb) site for Assignments, Class Materials and updates. Thus, having a personal computer capable of doing these things is an important advantage in completing assignments and gaining a familiarity with the programs we will be using. Hunter College has a site license that enables students to obtain most software, including PASW (SPSS) at a significantly discounted price. Please check the ICIT site at: http://www.hunter.cuny.edu/icit/welcome/Student-Computing-Technology. If you find yourself deprived of such hardware or software, almost all of the computers in the libraries and Public Computing Services (PCS) labs at the Silberman Building, Brookdale and at 68th Street have these core programs installed. It will take some determination to take this route without being at a bit of a disadvantage but not impossible. In addition, the Hunter College library operates a laptop loan program: http://library.hunter.cuny.edu/services/laptoploan. Such laptops would also have PASW (SPSS) and Microsoft products installed.

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Design an appropriate statistical analysis for a given public health research design	• HW1-5, exams 1-2, final project
Apply basic statistical and informatics techniques	• Perform statistical calculations using a statistical software package • Create graphics and visual representations of statistical data using a statistical software package • Apply appropriate statistical analysis techniques based on the size of the data	• HW1-5, exams 1-2, final project
Communicate public health information through oral, written, digital and visual presentation	• Write the interpretation of results from statistical analysis • Create and present an oral presentation of statistical output	• final project
Collect, analyze and interpret public health data	• Identify continuous, discrete, nominal and ordinal data • Summarize these data types using • Bar charts, box plots, histograms, scatter plots • Measures of central tendency: mean, median, and mode of measures of spread: variance, interquartile range, range of frequency tables • Define and differentiate between precision and accuracy	• HW1-5, exams 1-2, final project

	• Define and calculate marginal, joint and conditional probability
	• Use binomial distribution to calculate probabilities associated with binary data
	• Convert count data to rates and proportions
	• Estimate centrality and variance of a sampling distribution from the population distribution using the Central Limit Theorem
	• Construct and interpret confidence intervals for:
	  ◦ Population mean and population proportion
	  ◦ Large and small samples (using z and t sampling distributions)
	• Identify how changes in sample size, confidence level and other parameters affect the width of a confidence interval
	• Define null and alternative hypotheses for one-sided and two-sided inference
	• Perform inference tests for proportions using the normal approximation, for mean of a single sample, difference in means of two samples, and difference in means of paired samples
	• Use Z and t tables for hypothesis tests and constructing confidence intervals
	• Estimate the power of a t test
	• Calculate odds ratios, relative risks, and risk difference
	• Perform Pearson Chi□Square Test of Independence for r x c frequency tables	

	• Perform and interpret one-way Analysis of Variance • Correct for multiple comparisons • Define type I and II error, power, and sample size and the relationships between them • Perform and interpret correlation and linear regression analysis	

Course Assessments

Your understanding of the course material will be evaluated through two open book/notes in-class exams, take-home homeworks and a final project. All students who want a passing grade must complete the final project and exams. For the best possible grade, you must demonstrate an understanding of basic concepts, as well as mastery of basic computer skills.

Grading

Evaluation criteria

The relative weight of each course component is as follows:

Assessment	Weight
Homeworks	30%
Exam 1	15%
Exam 2	15%
Final Project	30%
Class Participation	10%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an “unofficial withdrawal” (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Students can attend the class either in-person or online. In-class attendance is mandatory only for the first class meeting, exams, and poster presentation of the final project.

You are expected to access Blackboard or post to the Google Group regularly, which includes posting and responding to questions posted there. You are also required to actively participate in all activities related to the Final Project and poster presentations (for full details refer to the Final Project description located in Assignments section of Blackboard).

Late/incomplete submission of assignments

If you will not be able to attend a test due to special circumstances, inform us in advance to make alternative arrangements.

Make-ups, rewrites, and extra credit

All homeworks will have a specific due date and will be returned to students within 7 days. Late homeworks will be penalized by deducting 10% from the earned grade per day, with no credit after 5 days. Late submissions will not be accepted once homework answer key is posted. Late homework is vigorously discouraged - much of the coursework builds on material learned in previous sessions, putting students who fall behind on homework at a serious disadvantage.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Help with Research and Writing

The Hunter College Reading/Writing Center is a comprehensive service for the college community providing tutorial and computer-assisted instruction to students and technical support and development to faculty and staff. The center offers tutorial services to all registered students at the college and provides computer facilities for Hunter students, faculty, staff and alumni. Students may utilize the center on an individual basis during scheduled hours of operation or access the center's online tutorial service. The center also offers a series of workshops on various topics relating to academic reading and writing, computer applications and electronic communication. In addition, students may access the center's extensive online resource file of instructional handouts or use the center's library of textbooks and materials. For additional information concerning hours of operation and description of services, go to the Reading/Writing Center website: http://rwc.hunter.cuny.edu/.

Grade of Incomplete

Students wishing to request an Incomplete (IN) grade must do so in writing explaining the reasons, AND have AT LEAST a C average. For an IN grade to be changed to a letter grade, all missing course work must be completed within one year after the IN grade is entered. If not changed to a letter grade within one year, the IN grade will become permanent.

Grade Appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor regarding the accuracy of the grade received. This conference should be held within the first three weeks of the semester following receipt of the

grade. At this time, errors may be corrected. If the grade is not an error, the student and instructor must together review all class material pertinent to the grade. If the student is not satisfied, or the instructor does not confer with the student within the first three weeks of the semester, the student should promptly contact the department chair by submitting a written appeal, consisting of a statement giving the factual reasons and basis for the complaint. The student has the right to request in writing that the chair appoint a student as a member to the department/school Grade Appeals Committee. This appeal at the department/school level must be submitted within the first five weeks of the semester following receipt of the grade, in accordance with the "College-wide Grade Appeals Procedures" adopted by the Senate in fall 1985. Copies of this procedure may be obtained at http://www.hunter.cuny.edu/provost/repository/files/COLLEGE-WIDE%20GRADE%20APPEALS%20PROCEDURES%205-4-05.pdf/view.

Last day to drop the course:

- Last day to drop class with the grade of "W": November 9

Course Schedule

The course schedule is subject to change throughout the semester. The “Last Updated” Date in the header of this syllabus is indicates the version of the syllabus.

See the current academic calendar (link below) for important dates (for example: holidays, course drop, course withdrawal):

http://www.hunter.cuny.edu/onestop/repository/files/registrar/Academic%20Calendar%20Fall%202015%20thru%20Spring%202016%20-Repaired-FINAL.pdf

Consider listing key course withdrawal dates in the schedule.

Last Updated July 23, 2015

Session	Date	Topic	Suggested reading from OpenIntro Stat	Assignment
1	8/31 in-class attendance mandatory	Data Types and Presentation Introduction and outline Types of Data Observational and experimental studies Samples and populations	1.1-1.5	
2	9/10 Thursday No meeting 9/7 Labor Day	Data Summarization and Types of Studies Measuring center: mean, median, mode Measuring spread: variance, IQR Tabular and Graphical Methods for Describing Data	1.6-1.9	HW1 assigned covering 1, 2
holiday	9/14	Rosh Hashana – no class

8	11/9	Small sample estimation Student's t distribution for CI estimation and 1 and 2-sample hypothesis testing Comparing Two Means: Paired Samples Comparing Two Means: Independent Samples Comparing Two Proportions		
	11/16 in-class attendance mandatory	IN-CLASS EXAM IN C-09		covering classes 5-8
9	11/23	Power & Sample Size Estimation Concept of power & sample size estimation, calculation for 2 samples Analysis of Variance One Way Analysis of Variance Multiple Comparisons	5.2	HW5 assigned covering 9 Final project assigned
10	11/30	Contingency Tables Odds Ratio/relative risk Pearson's Chi-square/Fisher exact test	5.5	Final project Introduction due HW5 due
11	12/7	Linear Regression Correlation Simple linear regression	6.1-6.2	 Final project Results due
12	12/14	Extensions to linear regression: • logistic regression • multiple regression • non-parametric alternatives to correlation and 1-2 sample hypothesis tests		Final project Methods and Discussion due
	12/21 in-class attendance mandatory	Final Project Presentations – room 217		Final project: final submission due

Last Updated July 23, 2015

Statistical Notation

The following glossary of statistical notation is adapted from http://stattrek.com/statistics/notation.aspx, and will be used throughout the course.

Greek vs. Roman Letters

Like capital letters, Greek letters refer to population attributes. Their sample counterparts, however, are usually Roman letters. For example,

- μ refers to a population mean; and x, to a sample mean.
- σ refers to the standard deviation of a population; and s, to the standard deviation of a sample.

Population Parameters

By convention, specific symbols represent certain population parameters. For example,

- μ refers to a population mean.
- σ refers to the standard deviation of a population.
- σ^2 refers to the variance of a population.
- P refers to the proportion of population elements that have a particular attribute.
- Q refers to the proportion of population elements that *do not* have a particular attribute, so $Q = 1 - P$.
- ρ is the population correlation coefficient, based on all of the elements from a population.
- N is the number of elements in a population.

Sample Statistics

By convention, specific symbols represent certain sample statistics. For example,

- $\bar{x}$ refers to a sample mean.
- s refers to the standard deviation of a sample.
- s^2 refers to the variance of a sample.
- p refers to the proportion of sample elements that have a particular attribute.
- q refers to the proportion of sample elements that *do not* have a particular attribute, so $q = 1 - p$.
- r is the sample correlation coefficient, based on all of the elements from a sample.
- n is the number of elements in a sample.

Capitalization

In general, capital letters refer to population attributes (i.e., parameters); and lower-case letters refer to sample attributes (i.e., statistics). For example,

- *P* refers to a population proportion; and *p*, to a sample proportion.
- *X* refers to a set of population elements; and *x*, to a set of sample elements.
- *N* refers to population size and *n* refers to sample size.

Probability

- P(A) refers to the probability that event A will occur.
- P(A|B) refers to the conditional probability that event A occurs, given that event B has occurred.
- $P(A^c)$ refers to the probability of the complement of event A (not A).
- P(A ∩ B) refers to the probability of the intersection of events A and B (A *and* B occur).
- P(A ∪ B) refers to the probability of the union of events A and B (A *or* B occurs).

Counting

- n! refers to the factorial of n.

Hypothesis Testing

- H_0 refers to a null hypothesis.
- H_1 or H_a refers to an alternative hypothesis.
- α refers to the significance level, or probability of committing a Type I error.
- β refers to the probability of committing a Type II error.

Random Variables

- *Z* or *z* refers to a standardized score, also known as a z score.
- z_α refers to the standardized score that has a cumulative probability equal to 1 – α, where α is the type I error rate.
- t_α refers to the t score that has a cumulative probability equal to 1 - α.
- f_α refers to the f statistic that has a cumulative probability equal to 1 - α.
- $f_\alpha(v_1, v_2)$ is the f statistic with a cumulative probability of 1 - α, and v_1 and v_2 degrees of freedom.
- X^2 refers to a chi-square statistic.

Special Symbols

- Σ is the summation symbol, used to compute sums over a range of values.
- Σx or Σx_i refers to the sum of a set of *n* observations. Thus, $\Sigma x_i = \Sigma x = x_1 + x_2 + \ldots + x_n$.
- *sqrt* refers to the square root function, i.e., sqrt(4) = 2.
- Var(X) refers to the variance of the random variable X.
- SD(X) refers to the standard deviation of the random variable X.

- SE refers to the standard error of a statistic.
- ME refers to the margin of error.
- DF refers to the degrees of freedom.

Regression

- E(X) refers to the expected value of random variable X.
- B_0 is the intercept constant in a population regression line.
- B_1 is the regression coefficient (i.e., slope) in a population regression line.
- R^2 refers to the coefficient of determination.
- b_0 is the intercept constant in a sample regression line.
- b_1 refers to the regression coefficient in a sample regression line (i.e., the slope).
- s_{b1} refers to the refers to the standard error of the slope of a regression line.

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
PH 75200: Fundamentals of Epidemiology
3 Credits
Fall 2015

Time and location	This is a hybrid course which means the course will be taught partially online and partially in person. In-person sessions will be held Mondays from 5-7:50pm Silberman, Rm 328 (lecture) and Rm C05 (lab) Online sessions are not held live. Instead, they can be viewed on your own time via Adobe Connect. Please see additional details below. Also, consult the Course Schedule below for dates of online and in-person sessions.
Instructor	Sheng Li, PhD, MD, MPH — Rosann Costa, MA **Email** sheng.li@sph.cuny.edu — rc181@columbia.edu **Phone** 212-396-7746 (temp) — 212-305-9346 E-mail is the preferable method of contact for both instructors.
Office hours	Sheng Li Silberman, Rm 546 (temp) Mon, 2:30-4:30pm Rosann Costa Silberman Rm C05 or C08 Thurs, 9-10pm & Mon*, 8-9pm & by appointment If possible, please provide the instructor with advance notice that you wish to attend office hours. *after in-person sessions only
Course website	https://bbhosted.cuny.edu/
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Apply principles and methods of epidemiological analysis. Identify and interpret epidemiological data. Illustrate and investigate incidence, distribution, determinants, and control of disease.
Course prerequisites	N/A

Course format	▪ In-person sessions will typically begin with a lecture (approximately 1-2 hours), followed by a five minute break and then a practical hands-on SPSS exercise (approximately 1-1.5 hours). Any remaining time will be used for review and questions. ▪ Online sessions will involve viewing a recorded lecture/lab exercise via Adobe Connect from any location of your choosing on your own time. These sessions are NOT held live.
Required reading and resources	Gordis L. *Epidemiology*. 4th or 5th ed. Philadelphia, PA: Saunders Elsevier, 2009 or 2013. *(on reserve at the Silberman library)* Additional assigned articles will be posted on Blackboard. Required to subscribe by email to *Morbidity and Mortality Weekly Reports*, published by the CDC: http://www.cdc.gov/mmwr/ *(no fee)*
Suggested reading/ resources and hardware/software	Aschengrau A, Seage III GR. *Essentials of Epidemiology in Public Health*. 3rd ed. Sudbury, MA: Jones & Bartlett, 2014. Rothman K. *Epidemiology – An introduction.* New York, NY: Oxford University Press, 2002. *(Both of these texts are on reserve at the Silberman library)* SPSS will be used in class and will be required for parts of the three HW assignments. The Hunter College license covers only on-campus use. The SPSS software is available for student use in the library and in computer labs at multiple Hunter campuses. Students who wish to purchase a student copy of SPSS can do so at www.onthehub.com. *SPSS Statistics Base GradPack 23* for 6 months for Mac or Windows for approximately $40 will suffice for this course. Again, purchasing SPSS is NOT required for this course as long as you can regularly access the library and/or computer labs to complete the SPSS-related HW sections. You will NOT need to have SPSS on your personal computer in order to view the online SPSS lab exercises but you will definitely need SPSS access to complete the HWs. Aside from an internet connection, you will not need any special hardware/software to view the webcasts. You will click on a provided link and watch your screen/listen through your speakers/headphones as the instructor runs through a lecture/lab which can be paused, fast forwarded, rewound and saved for your viewing as often as you wish. You may want to bring a basic calculator with you to class. A calculator will be needed for the Final Exam and Quiz; cell phone calculators will NOT be permitted. The instructors recommend bringing a flash drive to save your in-class SPSS work, although these are not required.

Last Updated September 8, 2015

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply the public health core functions of assessment, policy development and assurance	• Describe in writing the purpose of surveillance and how surveillance is used in public health practice • Explain the difference between incidence and prevalence • Describe the process of identifying and testing potential targets of intervention and give examples of effective and ineffective public health interventions • Describe the process of identifying vulnerable sub-populations, and give examples • Describe under what conditions screening is appropriate	• HW 1-3 • Paper 1 • In-class quiz • Final exam
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Describe epidemiological studies, including observational, quasi-experimental and experimental studies • Differentiate between primary and secondary data collection and identify possible sources of secondary data • Explain the difference between correlation and causation; risk factors/predictors and causes • Describe the causal inferences which can be made from experimental, quasi-experimental and observational studies using published examples	• HW 1-3 • Critique • In-class quiz • Final exam

Last Updated September 8, 2015

Core Competencies	Course Learning Objectives	Assessment Methods
Adhere to ethical and social justice principles and standards	• Describe circumstances in which an experimental study would and would not be ethical • Describe major disparities in life expectancy nationally and globally	• Final exam
Interpret and analyze public health literature and apply evidence-based research	• Access and use published data to accurately describe in writing the health of populations and factors that affect health in terms of person, time and place characteristics • Distinguish between narrative and systematic reviews • Systematically review the literature on a specific topic using a PICO question	• Paper 1 • HW 1-3 • Final exam
Apply basic statistical and informatics techniques	• Explain in a few sentences the principle of screening • Define lead time and length bias and how these biases may impact screening program evaluation • Describe in a few short sentences sensitivity, specificity, positive predictive value and negative predict value of a screening test compared to a gold standard test • Calculate and interpret a mean, a proportion, a rate and an odds ratio, • Explain the difference between relative and absolute risk • Calculate age-standardized rates	• HW 1-3 • In-class quiz • Final exam

Core Competencies	Course Learning Objectives	Assessment Methods
Communicate public health information through oral, written, digital & visual presentation	• Describe the validity, utility and feasibility of tests used for screening and diagnosis of health conditions • Present visually information on key public health topics such as the major causes of death nationally and globally	• Paper 1 • HW 1-3 • Final exam
Design and evaluate interventions to prevent or control public health problems	• List the strengths and weaknesses of different techniques for evaluating interventions • List the strengths and weaknesses of different techniques for controlling public health problems	• HW 1-3 • Critique • Final exam
Collect, analyze and interpret public health data	• Explain how to choose and apply appropriate study designs to answer a research question • Explain the interpretation of different measures of population health, such as life expectancy, quality adjusted life years	• HW 1-3 • Paper 1 • Critique • Final exam

Course Assessments

Use of Blackboard (Bb)
No later than the first week of class, you must sign up for Blackboard to receive updates, in-class materials, recorded lectures, readings and assignments, as well as to submit your assignments. For instructions on registering for Bb, go to: http://bb.hunter.cuny.edu. Please make sure that you have access to Bb Hunter College.

If you encounter problems with Bb at any time throughout the semester, please immediately contact the Bb Helpdesk who have the expertise to assist you. The Bb contact information is (212) 650-3624 and studenthelpdesk@hunter.cuny.edu. *Instructors cannot assist students with Bb.*

Submission of assignments through Blackboard
In an attempt to save paper, homework and written assignments should be submitted electronically. Suggestions for other adjustments to the course to reduce environmental impact are always welcome. Be sure to check your Hunter email address and Blackboard regularly for class announcements and assignments.

Step-by-step instructions for uploading assignments onto Blackboard will be provided on each assignment. After uploading an assignment, the instructor recommends that you log out and then back in again to ensure your assignment has successfully posted to avoid receiving lateness point deductions. If Blackboard is down when attempting to upload an assignment, please email the assignment to the instructor by the due date/time. **PLEASE DO NOT FORGET TO INSERT YOUR NAME ON THE FIRST PAGE OF ALL ASSIGNMENTS.**

VERY IMPORTANT: BE SURE TO CHECK YOUR HUNTER EMAIL AND BLACKBOARD *AT LEAST ONCE DAILY* FOR CLASS ANNOUNCEMENTS AND ASSIGNMENTS. SINCE THE COURSE IS SCHEDULED TO BE HELD PARTIALLY ONLINE, MANY IMPORTANT ANNOUNCEMENTS WILL BE SENT VIA EMAIL. DURING THE FIRST WEEK OF THE SEMESTER, PLEASE CHECK THE EMAIL ADDRESS OF YOUR HUNTER ACCOUNT AND CONFIRM THAT YOU ARE ABLE TO RETRIEVE MESSAGES SENT TO THIS ACCOUNT. THE BLACKBOARD HELPDESK WILL BE GLAD TO HELP.

Homework assignments: There will be 3 graded homework assignments to complete over the semester which will be posted on Bb well in advance of the due date. Each assignment will include multiple choice, short answer and SPSS questions. The assignments are organized according to the class lecture schedule so you may work through the assignment over time, completing the applicable sections soon after each lecture rather than leaving the assignment to the last minute. The final homework grade will be based on the highest 2 grades of the 3 assignments ONLY if all 3 assignments have been fully completed (this includes the SPSS section) and submitted as described

above. **Again, the lowest HW will NOT be dropped unless each HW is fully completed and submitted by the due date, including each SPSS section of the HW.**

Descriptive epidemiology assignment: Conduct a literature search on one health condition of your choice and write a 3-4 page paper (double spaced, 12-point font, 1 inch margins) describing the epidemiology of this condition in terms of person, place and time. You must have at least 10 citations from the public health literature (peer-reviewed journals instead of websites). Please be sure to appropriately cite other people's work in AMA reference style.

An ungraded bibliography will be due several weeks prior to the paper. Although the bibliography will not be graded, it must be submitted in order to receive full credit for the paper. The bibliography will help ensure you are on the right track as MANY students fail to understand the unique nature of this assignment. Additional instructions on the requirements for this paper will be posted on Blackboard around the time of the first class session.

Quiz
You will have the first 20-30 minutes of the 10/19/15 class session to complete the in-class quiz which will consist of multiple choice and short answer questions in a format similar to the homework assignments. You are allowed to use a basic calculator (no cell phones) and you may bring **one page** of prepared notes (front and back on 8 1/2 x 11 inch paper). **The quiz is worth only 5% of your grade.** It is a chance for you and the instructors to assess your knowledge of the material covered thus far and to prepare for the final exam. Often, it will help students determine whether it would be wise to begin meeting with one of the instructors to clarify unclear concepts early in the semester. **There is no make-up for this quiz**

Critique: Choose one of two published papers and use a series of guiding questions (all posted on Blackboard) to develop a 3-5 page (double spaced, 12-point font, 1 inch margins) critical analysis of the paper you have chosen.

In-Class Exam: The final exam will take place in class on Dec. 21. You will have the entire class period to complete the exam. The exam will consist of multiple choice and short answer and SPSS questions in a form similar to the homework assignments. Since you will NOT have access to a computer for you run analyses in SPSS, the SPSS output will be provided for you to interpret. You are allowed to use a calculator (no cell phones) and you may bring 1 page of prepared notes (front and back on 8 &1/2 x 11 inch paper).

Online discussion/reflections: Participation in online discussions are part of your grade. Throughout the semester, Epi-related news articles/videos and questions of interest may be posted on Blackboard. Instructors will let you know when this material has been posted. Students will be expected to post their reactions/reflections on this

Blackboard discussion board using at least 3-5 complete sentences.

Help with research and writing

Hunter College's Reading/Writing Center is available to all students for guidance on paper writing (http://rwc.hunter.cuny.edu/). The Center is located on the 68th Street Campus in Thomas Hunter Hall Room 416, phone (212) 772-4212. Students may use this and other resources in preparing written assignments. Students should feel free to discuss their homework assignments with each other and to seek assistance from others in editing their papers to refine and clarify arguments. However, the final submitted work must be written by the student herself/himself; others may NOT contribute to the assignment by writing portions of it.

While students may ask peers for feedback on written assignments and brainstorm on solutions to the homework assignments, descriptive paper and critique paper; the final version of these assignments must reflect independent work and be written in each student's own language. ***In other words, no two homework assignments or papers should ever be similar to each other.***

When working on the assignments and paper, you will need to follow these guidelines:

- All sources must be referenced and quotations identified. If there is any doubt about proper procedures, students should consult the instructors.
- If you use or paraphrase another person's ideas, you must acknowledge the source in a proper citation.
- If you use the actual words or expressions of another person or source, including the Internet, you must indicate such use by incorporation of quotation marks and a proper citation.
- You are to provide your own work, not someone else's. Examples of using someone else's work include: submitting essays or portions of essays written by other people as one's own; or collaborating with others on an assignment or examination without specific permission from the faculty member to do so.
- Students may not submit material prepared for one course to fulfill the requirements for a second course without having received prior written permission from the instructors.

Grading

The relative weight of each course component is as follows:

Assessment	Weight
HW Assignments (2/3) (See above under HW Assignments)	25%
Descriptive Epi Assignment	20%
In-Class Quiz	5%
Critique Assignment	20%
In-Class Exam	25%
Online Discussions/In-class Participation	5%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Please check the Registrar's website for the most up-to-date information: http://www.hunter.cuny.edu/onestop/repository/files/registrar/Academic%20Calendar%20Fall%202015%20thru%20Spring%202016%208-20-2015.pdf

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

As described above, 5% of your grade will be based on attendance and class participation. We understand that students are not able to attend all classes and we will provide recorded lectures and labs when requested to help catch up with missed material. However, the class is designed to promote discussion in a face-to-face environment and to review the material covered during the online sessions, therefore we expect students to attend the in-person sessions. Class will begin promptly to maximize our time together. Please arrive to class on time and inform instructors of unavoidable absences. Mandatory class sessions are on the quiz and final exam dates listed below because there is no make-up quiz or final exam.

Late/incomplete submission of assignments

Homework assignments and papers are due electronically on Bb on the dates listed on the Course Schedule below. If Bb is down, email the assignments to both instructors (email addresses are listed above on Page 1) and then contact Bb for assistance. Late homework assignments will have 3 out of 100 points deducted per day (including weekends) and late papers will have 1.5 out of 50 points deducted per day (including weekends). Both HWs and papers will not be accepted more than 3 days late. A zero grade will be assigned to any HW or paper that misses the deadline and, to maintain fairness among your fellow classmates, this zero grade will NOT be dropped from your overall grade.

Make-ups, rewrites, and extra credit

No make-up tests will be given if you fail to attend the in-class quiz or final exam. To maintain fairness among all students, we do not offer any or extra credit assignments to make up for a low grade or any extensions for assignments.

Expectations of students

Attend and very carefully review lectures & labs, read textbook and any articles prior to class, participate during class discussions, seek help/ask questions early and often.

Expectations for the instructors

The instructors are available during office hours and by appointment to assist students with homework, course material, exam preparation and assignments throughout the semester. The preferred method of communication with the instructors is email. Since Instructors are generally teaching more than one course and receive many email messages, **please always put your name and course number into the email header.**

We will respond to emails within 24-48 hours, excluding weekends. Generally, we will return graded assignments with feedback within two weeks.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

The schedule is subject to change throughout the semester. The "Last Updated" Date in the header of the syllabus is meant to reference the current version of the syllabus and, therefore, should be updated if a change in schedule is made.

Please refer to the current academic calendar for important dates (holidays, course drop, withdrawal):

http://www.hunter.cuny.edu/onestop/repository/files/registrar/Academic%20Calendar%20Fall%202015%20thru%20Spring%202016%208-20-2015.pdf

Date	Topic	Exercises	Reading & Assignments[1]
Session 1 August 31, 2015 (IN PERSON)	Introduction to Epidemiology	SPSS Exercise: Introduction to database design	Gordis, Chapter 1
Sept. 7, 2015	**No Class - Labor Day**		
Session 2 THURSDAY, Sept 10, 2015 (ONLINE) (Classes follow Monday Schedule on Thursday but class will be posted online)	Measures of Disease Occurrence Surveillance <u>Study Designs:</u> Cross-sectional study designs	SPSS Exercise: Cross-sectional study data analysis	Gordis, Chapter 3

Date	Topic	Exercises & Due Dates	Readings and Assignments[1]
Sept. 14, 2015	**No Class – Rosh Hashanah**		
Session 3 Sept. 21, 2015 (IN PERSON)	Study designs: Cohort study design (prospective & retrospective)	SPSS Exercise: Cohort study data analysis	Gordis, Chapter 9 **DRAFT BIBLIOGRAPHY (FOR PAPER 1) DUE THURSDAY, 9/24/15 AT 11:30PM**
Session 4 Sept. 28, 2015 (ONLINE)	Study designs: Case-control study design	SPSS Exercise: Case-control study data analysis	Gordis, Chapter 10 **HW1 DUE THURSDAY, 10/1/15 AT 11:30PM**
Session 5 Oct. 5, 2015 (ONLINE)	Study designs: Clinical trials (RCTs)	SPSS Exercise: RCT data analysis	Gordis, Chapters 7 & 8
Oct. 12, 2015	**No Class - Columbus Day**		
Session 6 Oct. 19, 2015 (IN PERSON) **In-Class QUIZ Today**	**In-Class Quiz TODAY** Overall Review of Cohort, Case-Control and RCT Study Designs / Related SPSS Exercises Critical Review of Epidemiologic Medical Literature (using Kendzor et al 2010 article)		Kendzor DE, et al. Financial strain and smoking cessation among racially/ethnically diverse smokers. *Am J Pub Health*. 2010;100:702-6.

Last Updated September 8, 2015

Date	Topic	Exercises & Due Dates	Readings & Assignments[1]
Session 7 Oct 26, 2015 (ONLINE)	Ecological Study Design	SPSS Exercise: Ecological Study Design data analysis	Gordis, Chapters 4 & 6 **DESCRIPTIVE EPI PAPER DUE MON, OCT. 26, 2015 AT 11:30PM**
Session 8 Nov. 2, 2015 (ONLINE)	Hypothesis Testing	SPSS Exercise: Hypothesis Testing	Gordis, Chapters 11 & 12 Goodman S. A dirty dozen: twelve p-value misconceptions. *Semin Hematol*. 2008;45:136-40 (with erratum 2011:48:302. **HW2 DUE MONDAY, NOV. 2, 2015 AT 11:30PM**
Session 9 Nov. 9, 2015 (ONLINE)	Bias & confounding	SPSS Exercise: Assessing & removing confounding through stratified analysis & MH adjusted OR	Gordis, Chapter 13 & 15
Session 10 Nov 16, 2015 (IN PERSON)	Confounding, mediation & effect modification	SPSS Exercise: Assessing mediation & effect modification in stratified analysis	Aschengrau, Chapter 14: Critical Review of Epidemiologic Studies
Session 11 Nov. 23, 2015 (ONLINE)	Measurement: reliability, internal and external validity	SPSS Exercise: Reliability and validity	Gordis, Chapter 15 **HW3 DUE SUNDAY, NOV. 29, 2015 AT 11:30PM**
Session 12 Nov. 30, 2015 (ONLINE)	Causation and risk in epidemiology	Workshop: Assessing Causality	Gordis, Chapter 14
Session 13 Dec. 7, 2015 (ONLINE)	Infectious disease epidemiology Screening	SPSS: Outbreak Analysis Screening lab/paper and pencil exercise	Gordis, chapter 2, 5 & 18 **CRITIQUE DUE THURS, DEC. 10, 2015 AT 11:30PM**

Last Updated September 8, 2015

Date	Topic	Exercises & Due Dates	Readings and Assignments[1]
Session 14 Dec. 14, 2015 (IN PERSON)	Ethics in Research	**Exam Review**	Gordis, Chapter 20 Coughlin SS. Ethical issues in epidemiologic research and public health practice. *Emerg Themes in Epidemiol.*2006, 3:16, doi:10/1186/1742-7622-3-16.
Session 15 Dec. 21, 2015 (IN PERSON) **FINAL EXAM TODAY**	**IN - PERSON FINAL EXAM** **Bring basic calculator, pencils/pens and one 8 ½ x 11 page of notes (only notes allowed).**		

[1] You are expected to complete readings in Gordis before on- or off-campus session. Supplemental readings (in italics) are extra resources and entirely optional.[1] You are expected to complete readings in Gordis before on- or off-campus session. Homework and papers must be uploaded to Blackboard by due date and time as listed on this Course Schedule above.

[2] For exam, bring a basic calculator and one 8 & 1/2x11 page of notes (front and back).

Last Updated August 20, 2015

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
PH 75300: Principles of Epidemiology
3 Credits
Fall 2015

Time and location	Thursdays from 6:05-8:50 PM, Room 212 (lecture), then C08 (lab)
Instructors	**Heidi Jones, PhD MPH** — **Email** hjon@hunter.cuny.edu — **Phone** 212-396-7750 **Rosann Costa, MA** — rc181@columbia.edu — 212-305-9346 *e-mail is preferred method of correspondence for both instructors*
Office hours	Silberman, Room 526 Wed. 4:00-6:00 PM (except during Epi seminars) or by appointment Silberman, Room C08 Thurs, 9:00-10:00pm or by appointment
Course website	https://bbhosted.cuny.edu/webapps/blackboard/execute/announcement?method=search&context=course&course_id=_1154178_1&handle=cp_announcements&mode=cpview
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	A first-level requirement for students specializing in EPI-BIOS, who will take subsequent intermediate and advanced level epidemiology courses. It will introduce students to epidemiologic theory, principles, methods and measures commonly used in public health.
Course prerequisites	Pre-requisite or Co-requisite: PH 75100
Course format	In-person class; will generally follow the format: student questions/review *(10 minutes)*, new lecture *(60 minutes)*, break *(5 minutes)*, in-class laboratory exercise/group discussion *(90 minutes)*
Required reading and resources	Gordis L. *Epidemiology*. 4th or 5th ed. Philadelphia, PA: Saunders Elsevier, 2009 or 2013. *(on reserve at the Silberman library)* Additional assigned articles will be posted on Blackboard. Required to subscribe by email to *Morbidity and Mortality Weekly Reports*, published by the CDC: http://www.cdc.gov/mmwr/ *(no fee)*
Suggested reading and resources	Aschengrau A, Seage III GR. *Essentials of Epidemiology in Public Health*. 3rd ed. Sudbury, MA: Jones & Bartlett, 2014. Rothman K. *Epidemiology – An introduction.* New York, NY: Oxford University Press, 2002. *(Both of these texts are on reserve at the Silberman library)*

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply the public health core functions of assessment, policy development and assurance	• Describe in writing the purpose of surveillance and how surveillance is used in public health practice • Explain the difference between incidence and prevalence • Describe the process of identifying and testing potential targets of intervention and give examples of effective and ineffective public health interventions • Describe the process of identifying vulnerable sub-populations, and give examples • Describe under what conditions screening is appropriate	• Homework 1-3 • Descriptive epidemiology assignment • In-class quiz • Final exam
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Describe epidemiological studies, including observational, quasi- experimental and experimental studies • Differentiate between primary and secondary data collection and identify possible sources of secondary data • Explain the difference between correlation and causation; risk factors/predictors and	• Homework 1-3 • Critique • In-class quiz • Final exam

	causes • Describe the causal inferences which can be made from experimental, quasi-experimental and observational studies using published examples	
Adhere to ethical and social justice principles and standards	• Describe circumstances in which an experimental study would and would not be ethical • Describe major disparities in life expectancy nationally and globally	• Homework 3 • Final exam
Interpret and analyze public health literature and apply evidence-based research	• Access and use published data to accurately describe in writing the health of populations and factors that affect health in terms of person, time and place characteristics • Distinguish between narrative and systematic reviews • Systematically review the literature on a specific topic using a PICO question	• Descriptive epidemiology assignment • Homework 1-3 • Final exam
Apply basic statistical and informatics techniques	• Explain in a few sentences the principle of screening • Define lead time and length bias and how these biases may impact screening program evaluation • Describe in a few short sentences sensitivity, specificity, positive predictive value and negative predict value of a screening test compared to a gold standard test	• Homework 1-3 • In-class quiz • Final exam

	• Calculate and interpret a mean, a proportion, a rate and an odds ratio • Explain the difference between relative and absolute risk • Calculate age-standardized rates	
Communicate public health information through oral, written, digital and visual presentation	• Describe the validity, utility and feasibility of tests used for screening and diagnosis of health conditions • Present visually information on key public health topics such as the major causes of death nationally and globally	• Descriptive epidemiology assignment • Homework 1-3 • Final exam
Design and evaluate interventions to prevent or control public health problems	• List the strengths and weaknesses of different techniques for evaluating interventions • List the strengths and weaknesses of different techniques for controlling public health problems	• Homework 1-3 • Critique • Final exam
Collect, analyze and interpret public health data	• Explain how to choose and apply appropriate study designs to answer a research question • Explain the interpretation of different measures of population health, such as life expectancy, quality adjusted life years	• Homework 1-3 • Descriptive epidemiology assignment • Critique • Final exam

Course Assessments

Homework assignments

Each of the 3 homework assignments to complete over the semester will include multiple choice, short answer and SPSS questions. **The final homework grade will be based on the highest 2 grades of the 3 assignments ONLY if all 3 assignments have been fully completed and submitted by the due date, including the SPSS section.**

SPSS will be used in class and will be required for parts of each of the three homework assignments. The Hunter College license covers only on-campus use. The SPSS software is available for student use in the library and in computer labs at multiple Hunter campuses. Please be sure to look into the days and hours of access. Students who wish to purchase a student copy of SPSS can do so at www.onthehub.com. ***SPSS Statistics Base GradPack 23* for 6 months (Mac or Windows) for approximately $40 will suffice for this course. The exact link is:**
https://estore.onthehub.com/WebStore/OfferingsOfMajorVersionList.aspx?pmv=89cf975c-47c3-e411-940a-b8ca3a5db7a1&cmi_mnuMain=ed6ad73c-7bc7-e011-ae14-f04da23e67f6

Purchasing SPSS is NOT required for this course as long as you can regularly access the library and/or computer labs to complete the SPSS-related HW sections. You will NOT need to have SPSS on your personal computer in order to view the online SPSS lab exercise but you will definitely need SPSS access to complete the HWs.

Descriptive epidemiology assignment

Conduct a literature search on one health condition of your choice and write a 3-4 page paper (double spaced, 12-point font, 1 inch margins) describing the epidemiology of this condition in terms of person, place and time. You must include at least 10 citations from the public health literature (peer-reviewed journals).

An ungraded bibliography will be due three weeks prior to the paper on which the instructor will provide feedback. Although the bibliography will not be graded it must be submitted on the due date to avoid losing points on the paper. Additional instructions on the requirements for this paper will be posted on Blackboard. **Please note, we will use software to detect plagiarism (TurnItIn) to scan your paper**. Please be sure to appropriately write in your own words and cite the work of other authors.

In-Class Quiz

There is no opportunity for a make-up quiz. You will have the first 20 minutes of class to complete the quiz on the date listed on the Course Schedule below. It will consist of multiple-choice and short answer questions in a format similar to the homework assignments. You are allowed to use a calculator and you may bring **1 page** of prepared notes (front and back on 8 1/2 x 11 inch paper). **The quiz is worth only 5% of your grade.** It is a chance for you and the instructors to assess your knowledge of the material covered thus far and to prepare for the final exam. Often, it will help students determine whether it would be wise to begin meeting with an instructor to

clarify unclear concepts early on in the semester.

Critique
Choose one of two published papers posted on Blackboard. Use a series of guiding questions also posted on Blackboard to develop a 4-6 page (double spaced, 12-point font, 1 inch margins) critical analysis of the paper you have chosen.

Final in-class exam
There is no opportunity for a make-up final exam. You will have the entire class period to complete the in-class exam on the date listed on the Course Schedule below. The exam will consist of multiple-choice, short answer and SPSS interpretation questions in a form similar to the homework assignments. You are allowed to use a calculator (no cell phones) and **one page** of prepared notes (front and back on 8 1/2 x 11 inch paper).

Attendance and class participation
The reading assignments will help you master course materials and actively participate in class. As they are not long, **you are expected to complete all of the required reading assignments**; 5% of your grade will be based on your class participation and attendance as outlined in the following rubric:

Class participation grading rubric (5% of your grade, perfect score=12)*

	Strong work (3)	Needs development (2)	Unsatisfactory (1)
Active listening (3 points)	Actively and respectfully listens to peers and instructors; consistently engaged and focused.	Sometimes displays lack of interest; not entirely engaged throughout the session; occasionally checks email, instant/text messages or other non-course material during class time.	Projects lack of interest during class; apparent visible clues that s/he is not listening to peers or instructors; frequently checks email, instant/text messages or other non-course internet material during class time.
Preparation (3 points)	Arrives to class with questions about reading assignments; active involvement in the journal article breakout sessions, clearly demonstrating that s/he has read/thought about the material	Sometimes arrives unprepared or with only superficial preparation for the journal article breakout sessions	Exhibits little evidence of having read or thought about assigned material
Quality of contributions to class discussions (3 points)	Comments and asks pertinent questions frequently. Expresses thoughts clearly.	Comments and questions sometimes advance the discussion, but sometimes do little	Thoughts are not expressed clearly; comments are often off topic; or student does

		to move it forward	not participate in class discussions
Attendance (3 points)	Arrives to class on time, does not have unexcused absences, and absent ≤ 2 times	Usually arrives to class on time; absent ≤ 2 times, but only sometimes informs instructors about unavoidable absences.	Arrives consistently late, and/or does not inform instructors about absences, or absent > 2 times.

Grading

Evaluation criteria

Your understanding of the course material will be evaluated through three homework assignments, a descriptive epidemiology assignment, a critique, an in-class mid-semester quiz, an in-class final exam, and class participation/attendance. Rubrics will be used to grade the written assignments.

The relative weight of each course component is as follows:

Assessment	**Weight**
Homework assignments (2/3)[1]	25%
Descriptive epidemiology assignment	20%
Critique paper	20%
In-class quiz	5%
In-class final exam	25%
Class participation / attendance	5%
	100%

[1] We will take the average score of your top two scores on the homework assignments, provided you have submitted three **fully completed** assignments by the due date (including the SPSS portion). If you do not submit an assignmen, a grade of 0 will be included in the calculation for the average overall HW grade.

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

As described above, 5% of your grade will be based on attendance and class participation. We understand that students are not able to attend all classes and will record lectures and labs to help with catching up on missing material. However, the class is designed to promote discussion in a face-to-face environment; therefore we expect students to attend in person. Further, class will begin promptly to maximize our time together. Please arrive to class on time and inform instructors of unavoidable absences.

Late/incomplete submission of assignments

Homework assignments and papers are due electronically at 5:30 PM, prior to the beginning of class. Refer to the Course Schedule below for specific dates. Late homework assignments will have 4 out of 100 points deducted per day (including weekends) and late papers will have 2 out of 50 points deducted per day (including weekends). Both HWs and papers will not be accepted more than 3 days late (i.e. no later than end of day Sunday).

Make-ups, rewrites, and extra credit

No make-up tests will be given if you fail to attend the in-class quiz or final exam. To maintain fairness among all students, we do not offer any extra credit assignments to make up for a low grade. If you keep up with both the lectures and the labs, and ask questions, you will likely do very well in this course.

Expectations of students

Attend lectures & labs, read textbook and articles prior to class, participate during class discussions, seek help/ask questions early and often, provide the instructor with constructive feedback on course material and content, and have fun with the material.

Expectations for the instructors

We will respond to emails within 24-48 hours, excluding weekends. We will tailor the class to your needs and interests depending on the feedback we receive. Generally, we will return graded homework assignments and papers within two weeks, with the exception of the draft bibliography which will be returned with feedback within approximately one week.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructors know at the beginning of the semester if you require special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty. No submitted homework or paper should be similar to the homework or paper submitted by another student. Be sure to do your own work.

Course Schedule

Please note, while the overall content of this course will be covered as outlined, the syllabus may change based on the need to adapt to student interests, feedback and expertise. Always check the Blackboard site for the most up-to-date information on course readings and assignments.

	Date	Topic	Workshops/Exercises (Using calculator and SPSS)	Readings and Assignments
1	08/27/15	Introduction to epidemiology	Introduction to database design	Gordis, chapter 1
2	09/03/15	Measures of morbidity and mortality Study design: cross-sectional	Analyze and interpret cross-sectional study data	Gordis, chapter 3 & 4
	09/10/15	*No class – follows Monday schedule*		
3	09/17/15	Study design: cohort	Group discussion - critique Grodstein et al. paper Analyze and interpret cohort study data	Gordis, Chapter 9 Grodstein et al. A prospective, observational study of postmenopausal hormone therapy and primary prevention of CVD. *Ann Int Med*. 2000;133:933-41 **(with discussion questions)** **Bibliography for descriptive epidemiology assignment due at 5:30 PM**
4	09/24/15	Study design: case control	Group discussion - critique Windler et al. paper Analyze and interpret case control study data	Gordis, Chapter 10 Windler et al. Hormone replacement therapy and risk for CHD: data from the CORA study-a case-control study on women with incident CHD. *Maturitas* 2007;239-46. **(with discussion questions)** **HW 1 due at 5:30 PM**

	Date	Topic	Workshops/Exercises (Using calculator and SPSS)	Readings and Assignments
5	10/01/15	Surveillance, Age standardization Study designs: Ecological & Mendelian randomization	Direct age standardization Analyze and interpret ecological study data	Lee LM & Thacker SB. The cornerstone of public health practice: public health surveillance, 1961-2011. *MMWR*. 2011:15-21 Tu JV & DT Ko. Ecological studies and cardiovascular outcomes research. *Circulation*. 2008. 118:2588-93.
6	10/08/15	Study design: clinical trials	Group discussion - critique WHI paper Analyze and interpret clinical trial data	Gordis, Chapters 7 & 8 Women's Health Initiative (WHI). Effects of conjugated equine estrogen in postmenopausal women with hysterectomy: the Women's Health Initiative RCT. *JAMA.* 2004;291:1701-12. **(with discussion questions)** **Descriptive epidemiology assignment due at 5:30 PM**
7	10/15/15	**IN-CLASS QUIZ** Infectious disease epidemiology	Implementing an outbreak investigation	Gordis, chapter 2 Yeung SLA et al. Moderate alcohol use and cardiovascular disease from Mendelian Randomization. *PLoS One.* 8:e68054.
8	10/22/15	Critical reading of epidemiologic literature Hypothesis testing	Dissecting an article using Kendzor et al. article	Gordis, Chapters 11 & 12 Goodman S. A dirty dozen: twelve p-value misconceptions. *Semin Hematol*. 2008;45:136-40 (with erratum 2011:48:302. Kendzor DE, et al. Financial strain and smoking cessation among racially/ethnically diverse smokers. *Am J Pub Health*. 2010;100:702-6. **HW 2 due at 5:30 PM**
9	10/29/15	Selection bias, colliders & confounding	Stratified analysis to test for confounding (MH OR) and interpreting 95% CIs	Gordis, Chapter 13 & 15 Schooling et al. Selection bias in cohorts of cases. *Prev Med* 2013:247-8.

	Date	Topic	Workshops/Exercises (Using calculator and SPSS)	Readings and Assignments
10	11/05/15	Mediation & effect measure modification	Stratified analysis to test for mediation (MH OR) and effect modification (Breslow-Day test)	Aschengrau, Chapter 14: Critical Review of Epidemiologic Studies
11	11/12/15	Information bias: validity and reliability	Calculate validity (sensitivity/specificity) of a measure and reliability (kappa)	Gordis, Chapter 15
12	11/19/15	Screening	Assess how well a screening test performs	Gordis, Chapters 5 & 18 **HW 3 due at 5:30 PM**
	11/26/15	No class – Happy Thanksgiving!		
13	12/03/15	Causation	SPSS review	Gordis, Chapter 14 **Critique due at 5:30 PM**
14	12/10/15	Ethics	Exam review	Gordis, Chapter 20 Shaw DM. Beyond conflicts of interest: disclosing medical biases. *JAMA*. 2014:697-8.
15	12/17/15	**Final Exam** (in class) Bring calculator, pencil/pen and one 8 ½ x 11 page of notes (only notes allowed).		

For additional information on the academic calendar, please see:

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College

PH 754 Fundamentals of Environmental Health

3 Credits - Fall 2015

Time and location	Online asynchronous course. Lessons launched every Monday 9:00 am regardless of holidays
Instructor	Jack Caravanos, DrPH, CIH Professor, CUNY School of Public Health 2180 3rd Ave, Room 720 Phone 212-396-7780 jcaravan@hunter.cuny.edu
Office hours	Online and Thursday 4-6 pm in my office
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Survey of chemical, physical and biological factors influencing quality of ambient, workplace and home environments. Topics include: air and water pollution; radiation; hazardous substances; solid wastes; food protection; and natural and human-made disasters.
Course prerequisites	None
Course format	This course is taught completely online asynchronously with lessons launched weekly. Each lesson consists of 3-6 learning modules in video format. Interspersed between these videos are quizzes, assignments and readings. In addition, 6 synchronous evening sessions are scheduled. Synchronous meetings are recorded. This is not a self-paced course; there are weekly deadlines for discussion and activities.
Required Reading	• Our Global Environment: A Health Perspective, Anne Nadakavukaren, 7th Edition, Waveland Press, ISBN-13: 978-1577666868 (available online as hardcopy or eTextbook) • A Civil Action – Jonathan Harr, Vintage Press (non-fiction paperback available online)
Suggested reading and resources	Posted online as needed.

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply the public health core functions of assessment, policy development and assurance	• Describe approaches for identifying and assessing the human and ecological impacts of workplace, community, and residential environmental hazards	• Assignments, online quizzes and in section exam
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Explain the importance of working collaboratively with diverse communities, sectors, and constituencies in the development, implementation, and evaluation of workplace and environmental health programs and policies. • Describe the elements, appropriate use and limitations of key risk assessment, risk management and risk communication strategies	• Online quizzes and in section exam
Apply basic statistical and informatics techniques	• Use informatics techniques to retrieve, analyze and summarize environmental health data • Use spreadsheet applications to collect, conduct descriptive analyses, and graphically represent data	• Environmental data project, online assignments
Communicate public health information through oral, written, digital and visual presentation	• Construct a multimedia learning module on an environmental topic using published data	• Environmental data project
Explain how social, behavioral, biomedical and environmental determinants affect population health	• Understand the basic mechanisms of toxicity and pathobiology • Achieve a basic understanding of how genetic, physiologic, psychosocial factors influence susceptibility to adverse health outcomes following exposure to workplace, community, and residential environmental hazards • Identify the major types and sources of environmental agents that can impact health in workplace, urban community and residential settings. • Describe the pathways by which major environmental agents cause human exposure in workplace, urban community and residential settings. • Explain the reasons, sources, and impacts of inequitable distribution of environmental hazards	• Assignments, online quizzes and in section exam
Design and evaluate interventions to prevent or control public health problems	• Describe basic concepts and strategies for controlling environmental hazards in workplace, community, and residential settings and the advantages and limitations of	• Assignments, online quizzes
Describe the legal foundations of the U.S. public health system and its interrelationships with other systems including health care, education and environmental protection	• Identify the major provisions, accomplishments and limitations of key environmental and occupational regulatory programs, guidelines, and authorities at the federal, state and local level.	• Online quizzes and in section exam

Course Assessments

Details about the assignments can be found on the course website as lessons are presented. There are 3 exams based on 4-5 lessons and 6 quizzes based on short environmental presentations usually of historical value.

Environmental Data Project:

On the first day of class you will be given an environmental topic to research. Each student must assemble tabular and graphical data on this topic and submit an interpretation through a narrated PowerPoint presentation. The format of the presentation should be 5 tables, figures, graphs with a written paragraph describing the findings. Grading will be based on format, quality of graphs and data representation, organization and effectiveness of presentation. Use PPTs "narration" feature to record your presentation. You will submit this through BB as either a narrated PPT or common video file (MP4, WMV or QuickTime)

The assignment must include (in this order):

- Title Slide (include name, course information, date)
- Purpose/Objectives slide
- Table of Contents slide
- The 5 Tables, Figures, Illustrations etc
- Summary Slide
- Professional style reference list

The presentation must proceed from general to specific and should temporal and spatial variables. Do not use all graphs or all figures (variety is desired).

For example let's say your topic was "Environmental Asthma"; here are 5 appropriate tables/graphs:

1. Table of Environmental Asthma triggers
2. Figure of Asthma rates for entire US (color coded?)
3. Graph or table of Asthma rates in NYC by borough
4. Graph or table of Asthma rates in NYC by year (1990-2003)
5. Graph or table of Asthma rates in NYC by who is affected (gender, ethnicity, age)

Grading Criteria for Course

Exam 1,2,3	3	18%	54%
Quizzes 1-6	6	5%	30%
Data Assignment	1	10%	10%
In Line Assessments	12	0.5%	6%
			100%

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation
This is a fully online course and attendance is not recorded. The synchronous (live) sessions are strongly recommended and students will be responsible for comments or notices made in these sessions. Each synchronous session is recorded for future viewing in the event you cannot attend the live sessions.

Late/incomplete submission of assignments
Late or incomplete assignments are accepted with penalty unless approved by instructor.

Make-ups, rewrites, and extra credit
There are no make-ups, rewrites, or extra credit allowed.

Expectations of students
- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Know how to use library resources and citation tools.
- Show respect to everyone in the course.
- Be fully prepared to actively participate in discussion and online forums.
- Complete all assignments by their assigned due date (10% penalty per week late will be applied)
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted in the discussion board.
- Contact the professor directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.

Expectations for the instructor
- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during discussion
- Respond to student email within 24 hours
- Grading and feedback on assignments (when applicable) within 1 week after the due date.

Accessibility
Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity
Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule
Refer to the current academic calendar for important dates.

Class	Date	Topic	Readings
Pre		Understanding BB, Reviewing site Practice Quiz	BB Online Student Resources
1	Aug 31	Course Welcome / Introduction to Env Health / Environmental Controls	Chp 1, p2-5, Chp 2, p33-54, Box 1-4 www.epa.gov, www.cdc.gov/atsdr
2	Sept 7	Environmental Law / National Env Policy Act of 1969	Start reading "A Civil Action" www.epa.gov/lawsregs/
		Quiz: Lake Nyos (due by Exam 1)	
	Sept 10	Synchronous Meeting #1 10:00 – 10:30 pm	
3	Sept 14	Hazard Identification, Evaluation and Control	Chapter 7, p155-158
4	Sept 21	Environmental Toxicology / Public Health Biology / Human Disease	Chapters 6 & 7, Box 6-3 and 6-4 www.cdc.gov/atsdr, http://toxtown.nlm.nih.gov/
		Quiz: Minamata Disease (due by Exam 1)	
	Sept 24	Synchronous Meeting #2 10:00 – 10:30 pm	
5	Sept 28	**EXAMINATION #1**	Lessons 1-4, 2 quizzes & Civil Action p0-146

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
PH 754 Fundamentals of Environmental Health

3 Credits
Fall 2015

Time and location	Thursday 6:05- 7:55pm Silberman Building, Room 218
Instructor	Elizabeth Glass Geltman Associate Professor & Program Director, Environmental & Occupational Health Sciences 2180 Third Avenue, Office 524 Phone: 202-320-4520 Email: elizabeth.geltman@hunter.cuny.edu
Office hours	Thursdays** from 4-5:45pm (when school is in session) & by appointment. **Note: There are no walk-in office hours on "online" weeks, holidays or when school is not in session.
Course website	BlackBoard
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Survey of chemical, physical and biological factors influencing quality of ambient, workplace and home environments. Topics include: air and water pollution; radiation; hazardous substances; solid wastes; food protection; and natural and human-made disasters.
Course prerequisites	None
Course format	Traditional with web enhancements.
Required reading and resources	Friis, Robert H. Friis, **ESSENTIALS OF ENVIRONMENTAL HEALTH** (Jones & Bartlett Learning, 2nd ed. 2012). Materials Posted on BLackBoard.
Suggested reading and resources	None

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply the public health core functions of assessment, policy development and assurance	• Describe approaches for identifying and assessing the human and ecological impacts of workplace, community, and residential environmental hazards	• Group Research Modules • Class participation • Exam
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Explain the importance of working collaboratively with diverse communities, sectors, and constituencies in the development, implementation, and evaluation of workplace and environmental health programs and policies. • Describe the elements, appropriate use and limitations of key risk assessment, risk management and risk communication strategies	• Group Research Modules • Class participation
Apply basic statistical and informatics techniques	• Use informatics techniques to retrieve, analyze and summarize environmental health data • Use spreadsheet applications to collect, conduct descriptive analyses, and graphically represent data	• Internet assignments • Class participation
Communicate public health information through oral, written, digital and visual presentation	• Draft a white paper • Construct a website • Draft a blog entry or press release summarizing material in white paper • Draft a tweet summarizing material in white paper • Make a formal presentation on an environmental health topic using presentation software • Make informal presentations about current events concerning environmental health	• Group Research Modules • Current Events • Class participation • Exam
Explain how social, behavioral, biomedical and environmental	• Understand the basic mechanisms of toxicity and pathobiology	• Group Research Modules • Exam

determinants affect population health	• Achieve a basic understanding of how genetic, physiologic, psychosocial factors influence susceptibility to adverse health outcomes following exposure to workplace, community, and residential environmental hazards • Identify the major types and sources of environmental agents that can impact health in workplace, urban community and residential settings. • Describe the pathways by which major environmental agents cause human exposure in workplace, urban community and residential settings. • Explain the reasons, sources, and impacts of inequitable distribution of environmental hazards	• Class participation
Design and evaluate interventions to prevent or control public health problems	• Describe basic concepts and strategies for controlling environmental hazards in workplace, community, and residential settings and the advantages and limitations of	• Group Research Modules • Current Events • Class participation • Exam
Describe the legal foundations of the U.S. public health system and its interrelationships with other systems including health care, education and environmental protection	• Identify the major provisions, accomplishments and limitations of key environmental and occupational regulatory programs, guidelines, and authorities at the federal, state and local level.	• Group Research Modules • Class participation

Course Assessments
Your understanding of the course material will be evaluated through a series of 10 internet assignments, a series of 14 group research modules, class participation both in class and online on the discussion board and a final exam. Each are discussed in detail below.

Internet Database Assignments (Int)

20 points

There are a series of 10 brief internet related research assignments that are designed to: (1) improve your internet searching skills, (2) introduce you to important sites containing information on the internet; (3) allow you to identify and explore various databases and public sources of information valuable in the environmental and occupational health and (4) aid in your understanding of environmental health and environmental protection programs.

The assignments generally involve searching an environmental or public health web site for specific information. Once found, you must submit your answers in the space provided on BLACKBOARD.

Internet assignments are graded on a pass/fail scale using the following formula:

Pass (2 points)—on time & 75% or more correct & posted as instructed on BLACKBOARD

Low Pass (1 point)—no more than 3 days late or 25% to 75% correct & posted as instructed on BLACKBOARD

Fail (0 points) – not turned in, more than 3 days late, less than 25% correct or not posted as instructed on BLACKBOARD

Group Research Assignments (RM)

40 points

The group assignment requires students to work together through a series of research assignments culminating in both written work product and an oral presentation. The group assignments are designed to both refine research skills and allow students to explore one aspect of environmental and occupational health in depth. Although students will work together in groups through most of the modules, including the white paper. The press release and/or blog entry (and tweet) in GM12 will be done individually. Students will select one of the following groups:

- Group 1: Arsenic, inorganic
- Group 2: Chromium VI
- Group 3: Ethylbenzene
- Group 4: Napthalene
- Group 5: Phthalates
  - Butyl benzyl phthalate (BBP)
  - Dibutyl phthalate (DBP)
  - Diethyl phthalate (DEP)
  - Diisononyl phthalate (DINP)
- Group 6: Polychlorinated Biphenyls (PCBs)
- Group 7: Formaldehyde

Groups may have no less than 4 and no more than 6 students in each group.

*DUE DATES for research modules are based on class progress. Tentative due dates for all research modules are posted on this syllabus and on BLACKBOARD (in the Term Paper/ Group Research Modules tab), but may be changed based on class need. Due dates will not be changed to proceed the dates published below. All changes (in the form of extensions) will be announced in class and amended on BLACKBOARD.

Research Module (RM) #	**Description**	**Due Date**	**Rubric**	**Points** **40 Total**
RM1	Select a group Go to Group Module (GM) folder on BlackBoard (BB) and self enroll in one of the groups listed above. Hint: Click the links above to explore material provided by US EPA on the topics to help you decide. Complete the research software skills survey at https://www.surveymonkey.com/r/6WS7WGG	8/27/15		1
RM 2	Quick Literature Review: Use the Wiki form to conduct quick search of peer-reviewed health studies	9/3/15	Click this link and go to the RM Folder	1

	on your topic. The wiki will help your group keep track of searched when drafting group quick lit. The form requires group members to record: the database searched; the search term(s); the date the search was run; and the search results. Use the wiki to coordinate your group efforts during the week. Submit a list of peer-reviewed literature on your topic using this link.		for Quick Lit Rubric	
RM3	Summarize the problem: Go to the EPA IRIS website at http://www.epa.gov/iris/ and review the materials US EPA published concerning your topic. Next review the public comments in docket on http://regulations.gov, including: Scientific community; Industry; Academics; NGOs. Summarize the materials.	9/17/15	Click this link for Summary Rubric	1
RM4	Create a table identifying areas in need of research and or law/regulation, if any Use the wiki on the DB to list areas in need of further research and/or policy changes that protect health. This table should be used for group brainstorming; there are no right or wrong suggestions, but all should be thoughtful and realistic.	9/24/15	Click this link for Policy Rubric	1
RM5	Conduct an interview of an expert: Develop a set of questions prior to your interview and record those on the DB. Remember to request permission to record and use the interview from your	10/1/15	Click this link for Expert Interview Rubric	1

	interviewee.			
RM6	Identify data sets, if any, associated with your topic Post link(s) to the datasets on the wiki with a brief explanation of why the dataset is important/relevant.	10/8/15	Click this link for Expert Data Set Rubric	1
RM7	Write the white paper: The white paper must include the following sections: Introduction; Research methods; Discussion & analysis, including a summary of EPA published materials; Conclusions & policy recommendations; Works Cited Turn in draft white paper to peer reviewers pursuant to the list posted. For a list of tips on graduate writing click here or copy and past this link: https://www.brown.edu/about/administration/sheridan-center/teaching-learning/resources-students/scientific-writing-skills	10/15/15	Click this link for White Paper Rubric	1
RM8	First Peer Review Peer review the papers using the assessment form and grading rubric. Each group will be assigned to peer review the works of two other groups selected at random. So each student will peer review two papers. Students should *individually* peer review the two papers; as such, each group will have its white paper separately reviewed by 8 to 12 individuals.	10/22/15	Click this link and go to the RM Folder for Peer Review Rubric & Assessment Form	1
RM9	Create a webpage	10/29/15	Click this link and	8

	The web page must include: a home page with introduction; a reference list with hot links; a summary or recording of the expert interview; a summary of EPA published materials with hot links to relevant EPAIRIS pages/ documents; and the policy recommendations of your group. There are many free sites to build a website, including: https://wordpress.com/ http://www.wix.com/ http://www.weebly.com		go to the RM Folder for Webpage Rubric	
RM10	Create a 10 minute presentation All group members must participate. The presentation must include the following sections: Introduction; Research methods; Discussion & analysis, including a summary of EPA published materials; Conclusions & policy recommendation; Reference list	12/3/15 & 12/10/15	Click this link and go to the RM Folder for Presentation Rubric	8
RM11	Write a white paper: Final Paper: Make edits based on peer reviews.	11/12/15	Click this link and go to the RM Folder for White Paper Rubric	8
RM12	Write a press release or blog entry summarizing your study. Write sample tweet that could be used on https://twitter.com/ Once your group has completed its study you need to get the word out. Your final task is to compose a press release or blog entry (and a tweet) explaining	11/19/15	Click these links and go to the RM Folder for Blog, Press Release & Tweet	5

	your study and why it is important. Post your entry in the Group Module folder on BB.		Rubrics	
RM13	Create student aids Write an exam review sheet and an exam question(s). Bonus points for creating a set of flash cards on https://quizlet.com/class/1687605/ for your peers to use to study.	12/3/15	Click this link and go to the RM Folder for Review Sheet Rubric	2
RM14	Complete 2nd peer & self review	12/10/15	Click this link and go to the RM Folder for 2nd peer & self review Rubric	1

All assignments must be posted on BLACKBOARD with a paper confirmation copy turned in at the beginning of class. Each student should post a copy of the assignment but the group may turn in one paper confirmation copy. **No assignments will be accepted by email without prior written approval.** Attachments must be named according to the instructions below.

Naming files when turning in assignments

Many internet and group assignments will be turned in using a wiki, discussion board or by pasting the answer into a text box when submitting. In general, internet and group assignments should not be submitted as an attachment unless the instructions specifically request such.

For all assignments posted on BLACKBOARD as an attachment, the file must be named using the following formula:

PH754_F15_StudentLastName_StudentFirstName_Date_INT#

For all group assignments posted on BLACKBOARD as an attachment must be named using the following formula:

PH754_F15_Group#_ StudentLastName_StudentFirstName_Date_RM#

Assignments will not be graded for students or groups not naming files according to instructions.

Attendance, class participation (14pts) & current events (CEs) (6pts)

20 points

Class attendance is taken every day. Students must sign in at the beginning of class.

Students are expected to bring current event discussion items to class at least three times during the semester. Up to 2 points will be earned for each time the student presents a current event for up to 6 points. The current events should pertain to the topic scheduled for that evening.

Students must sign up for the three sessions by the second week of class. Students are expected to attend and lead the current events portion of the class on the date the student selects -- so select with care and notify the instructor in advance should plans change.

Students should post a link to the presented current event on the discussion board after class; thus, allowing interested students the ability to read the original article that prompted the discussion.

In addition, up to 14 points are awarded for class participation, which begins with attendance. Students who are not in attendance are, by definition, not participating on that day. Students are expected to read assignments prior to class and engage in discussion during class (whether or not the student signed up to report current events and “lead” the discussion that week).

Reading Assignments

Class lectures build on (but do not review) the reading. Students who do not keep up with the reading will be disadvantaged both in class and on the exam.

The relative weight of each course component is as follows:

Assessment	Weight
Research Modules	40%
Internet Assignments	20%
Class	20%

participation & Current Events	
Final Exam	20%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Lateness

Be respectful and enter the room quietly. Remember to sign the attendance sheet.

Late submission of assignments

All papers and assignments are due at the beginning of class at 6:00pm. Papers turned in after the beginning of class are considered late.

No papers or assignments will be accepted after the instructor has released answers and/or returned graded work to the class. Once work is returned to the class, the link to the assignment will expire on BLACKBOARD.

All papers must be turned in on BLACKBOARD, with a paper confirmation copy turned in at the beginning of class on the date due. Papers that are submitted without a paper confirmation copy or that are not also posted on BLACKBOARD are considered late unless prior written approval is received from the instructor. Each it is the responsibility of each student to post his or her own assignments on time, even when the assignment is done in a group.

No papers, internet assignments or other homework will be accepted by email unless prior written arrangements are made with the instructor. Attachments must be named according to the instructions stipulated in this syllabus.

Make-ups, rewrites, and extra credit

There are no make-ups, rewrites, or extra credit assignments in this course. Late assignments hold the entire class up and can delay return of graded assignments. Plan to do your best work and turn your work in on time.

Expectations of students

Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.

Know how to use library resources and citation tools.

Show respect to everyone in the course.

Be prepared to actively participate in class.

Turn work in on time at the beginning of class and on BLACKBOARD prior to the start of class.

Sign the attendance sheet at the beginning of class each week.

Respond to group members in a prompt and courteous manner.

Reframe from using electronic devices in class, including **mobile phones, tablets, and computers.** Students should be prepared to take notes using paper and pencil, unless special circumstances prevail and prior arrangements are made with the instructor. **Students violating this policy (including texting) will be asked to leave the classroom.** Class participation points will be deducted for students engaged in telephone or online activities during class.

Expectations for the instructor
Provide regular announcements, reminders, and suggestions on the course website.

Meet with students during office hours or by appointment.

Respond to email within 24 to 48 business hours.
Note: I am available by email at mailto:elizabeth.geltman@hunter.cuny.edu and by telephone at 202-320-4520 **during business hours** to answer questions. I am not available after 8pm weekdays, on weekends or on school holidays. Please do not abuse the email privilege. Consult the syllabus, BLACKBOARD, and other course materials first for answers to your questions.

Return graded work within 1 week after the due date or receipt by the student.

Accessibility
Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity
Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the

CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

This syllabus is a guide for the course and is subject to change with advance notice. Any changes in the course syllabus will be announced during class and will be posted as an announcement on Blackboard ("BB.") No changes will be made to the grading criteria.

Refer to the current academic calendar for important dates.

Week	Date	Topic	Reading	Assignments
1	8/27/15	Introduction to EOHS / Environmental History and Law	Friis, Essentials of Environmental Health, Chapters 1 & 4	RM1: Select a group Int1: Get to Know You Wiki

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
PH 75500.01: Fundamentals of Social and Behavioral Health (Hybrid)
3 Credits
Fall 2015

Time and location	Tuesdays, 8:00—9:50PM, Silberman 214
Instructor	Dr. Lynn Roberts, PhD Office: Silberman Room 530 e-mail: lroberts@hunter.cuny.edu (preferred contact) phone: (212) 396-7742
Office hours	Wednesdays 4-6 PM and by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course provides a topical and theoretical survey of social and behavioral issues in public health.
Course prerequisites	N/A
Course format	This course is taught in a HYBRID format with a mix of online learning resources, in class discussion, lecture, individual and collaborative exercises and assignments. All materials are available on the course website. This is not a self-paced course; there are weekly deadlines for discussion and activities.
Required reading and resources	Freudenberg N, Galea S and Vlahov D (eds.) Cities and the Health of the Public, Nashville, TN: Vanderbilt University Press, 2006, ISBN: 08265-1512-6.
Suggested reading and resources	Farley T, Cohen DA *Prescription for a Healthy Nation: A New Approach to Improving Our Lives by Fixing Our Everyday World*. Boston: Beacon Press, 2005. ISBN: 0-8070-2117-2

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply the public health core functions of assessment, policy development and assurance	• Summarize the history and evolution of the field of social and behavioral health. • State the difference across primary, secondary and tertiary prevention.	• Class discussion
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Compare and contrast different models and theories, including the health belief model, social cognitive theory, community organizational theories, the socio-ecological model, and systems science, with regard to social and behavioral change. • Describe how health and disease are socially constructed. • Summarize basic principles and methods of effective health communication and social marketing to create social and behavioral change. • Summarize the theory of diffusion of innovation. • Justify the relevance of at least one theory from fields others than public health that may inform solutions for a public health problem.	• Class discussion • Course Blog • Public Health Brief • Collaborative Public Health Lit Review
Adhere to ethical and social justice principles and standards	• Relate contemporary public health problems to power and resource distribution, equity, diversity, sustainability, and intended and unintended consequences of interventions.	• Class discussion • Course Blog
Interpret and analyze public health literature and apply evidence-based	• Conduct a comprehensive literature search and compile the results thereof on a given social and behavioral health issue. • Critique the merits and limitations of a scientific	• Public Health Brief • Collaborative Public Health Lit Review

research	article with relevance to social and behavioral health.	
Communicate public health information through oral, written, digital and visual presentation	• Produce scientific writings pertaining to social and behavioral issues in public health.	• Public Health Brief • R.O.A.D. Assignment • Collaborative Public Health Lit Review • Simulated Public Testimony
Explain how social, behavioral, biomedical and environmental determinants affect population health	• Describe the role of poverty, discrimination, and stress in health and disease. • Illustrate how multilevel and systems-oriented interventions can influence individual and population health outcomes. • Illustrate different dimensions of social and health inequity and design solutions that may help to address inequity. • Summarize key features of a life course perspective on health. • Apply different levels of the socio-ecological model to issues such as obesity, mental health, and injury and violence.	• Class Discussion • R.O.A.D. Assignment • Collaborative Public Health Lit Review • Simulated Public Testimony
Design and evaluate interventions to prevent or control public health problems.	• Describe the key assumptions, methods, and limitations of evaluation research • Review and analyze the impact of public health interventions as documented in the peer review literature.	• Class discussions • Collaborative Public Health Lit Review
Engage and collaborate with diverse groups	• Develop a work plan that demonstrates active and effective collaboration among team members with diverse backgrounds	• Collaborative Public Health Lit Review • Simulated Public Testimony • Peer Group Evaluation

Apply a framework for the planning, implementation and evaluation of public health programs, policies and interventions	• Delineate specific elements of socio-ecological, life course and/or social justice frameworks that can inform proposed solutions to public health problems	• Simulated Public Testimony • Collaborative Group Lit Review

Course Assessments

Explanation of Assignments Your understanding of the course material will be evaluated through the following:

1. Library Assignment (due to Prof John Pell on or before October 19)

The purpose of this assignment is to assist students in mastering information literacy research and citation skills, which will help them to identify appropriate resources for writing professional papers. The library assignment is mandatory for all students enrolled in the MPH program and currently taking PH 755. This assignment involves a two-step process:

All MPH students taking PH755 are advised to attend a 2.25-2.5 hour library workshop. The library session will provide students an opportunity to learn and practice the skills needed to complete the library assignment. Workshops will be offered during the dates and times listed below:

Room	Date	Time
SB C08	TUE 09/01/2015	05:45 PM - 08:00 PM
SB C08	WED 09/02/2015	03:45 PM - 06:00 PM
SB C08	THR 09/03/2015	03:45 PM - 06:00 PM
SB C08	TUE 09/08/2015	05:45 PM - 08:00 PM
SB C08	WED 09/09/2015	03:45 PM - 06:00 PM
SB C09	THR 09/10/2015	03:45 PM - 05:55 PM
SB C08	SAT 09/12/2015	09:30 AM - 12:00 PM
SB C08	SAT 09/19/2015	09:30 AM - 12:00 PM

You can sign up by sending an e-mail to Prof John Pell at jpell@hunter.cuny.edu. The Library Assignment, grading rubric and On Line tutorials are available at this link: http://libguides.library.hunter.cuny.edu/ph755. You are encouraged to sign-up early for a workshop and review this assignment prior to the start of the semester.

After attending the library sessions, students will complete a written library assignment. The satisfactory completion of this report will count for 10 percent of each student's grade for the PH 755 class. Professors John Pell and Stephanie Johnson will be the instructors in charge of the library sessions and will grade all assignments. Assignments should be submitted to John Pell via email at jpell@hunter.cuny.edu on or before **October 19**. Failure to submit the assignment on time will result in a grade of zero.

2. **Literature Review Paper: Analysis of an issue of public health significance (individual and group project)**

This assignment will consist of three steps:

a) *Public Health Brief: Individual assignment*, due **Sep 29**.

In this two-page assignment, students will state the significance of a topic of special interest to them that will also be related to a broader topic selected by their groups, particularly regarding its relevance from an urban health perspective. Please note that this is an individual assignment. Therefore, each student in each group has to submit two pages on their chosen topic of special interest. In this way, students will be working on one single topic during the semester, rather than on different ones. This individual assignment will help students practice their writing skills and clarify their own ideas about the subject of interest. In selecting your topic, ask yourself: Why am I interested in this topic? What would I like to find out about it? Why is this topic relevant from an urban public health perspective? Examples of Public Health Briefs will be provided in BlackBoard.

Students must include a minimum of three (3) references in the Public Health Brief and demonstrate a general understanding of the literature on the issue selected and justify its importance from an urban health perspective. All papers should be typed, double-spaced, spell-checked and proofread. Please use one inch margins all around and 12-point font. This assignment must be submitted via the SAFE ASSIGN feature in BlackBoard.

b) *Collaborative Public Health Literature Review, first version: Group assignment*, due on **Oct 20.**

In this group assignment, students will summarize and discuss key aspects related to a common research question derived from their selected public health issues as addressed in the literature. A review article consists of selecting a public health problem, reviewing what is currently known and what is still being asked about the problem in the scientific literature, including conflicting findings and gaps that may exist, and building an argument that will lead to a set of suggestions and recommendations. Students will write a critical summary of the key ideas, concepts and theories and properly cite each source.

A minimum of 10 references should be cited in this report, including both books and peer-reviewed articles. The structure of this review article should include at least the following components: (1) abstract; (2) introduction; (3) argument/subtopics; (4) discussion/concluding remarks; and (5) literature cited. Sample review articles are provided in BlackBoard – please refer to them prior to submitting your papers. Papers should be between 6 and 8 pages in length, not including abstract, references, tables or figures. Hard copies are not required for this assignment.

c) *Literature Review, final version: Group assignment*, due on **Dec 15.**

The final literature review will be an improved version of the first, which will take into account the instructor's suggestions as well as incorporate ongoing (i.e., updated) analysis of the existing literature on the subject selected. Students must also

incorporate the public health concepts discussed in the second half of the semester into the paper. Papers should be between **8 and 10 pages** in length, **not** including abstract, references, tables, or figures. **Electronic and hard copies are required for this assignment.**

3. Field Assignment

During Session #6 students will be required to complete a brief field-based assignment called the R.O.A.D. Assignment (Reflect, Observe, Analyze and Document). Details for this field assignment are available in BlackBoard (see Session #6) and documentation of the R.O.A.D assignment must be completed by **October 27**.

4. Oral Assignment

Simulated public testimonies (group project to be presented on **Dec 8 and Dec 15**)

Oral presentations will take the form of a **Simulated Public Testimony**. The goal of public testimony is to present evidence about a topic and deliver an argument for action, most often to influence policy decisions in question. Your group will present evidence on your group paper topic and provide arguments for public health action to address the problem.

Students will present as a group on the same day, but each group member will present and be graded separately. Each group member will present a 5-minute oral presentation; once all group members have presented the group will be allowed a 5-minute Q&A session. As in real public testimonies, presentations on individual sub-topics should be coordinated; although they are not always coordinated, they are much stronger when they are. Each group member should present a unique testimony and not repeat information that another group member discusses.

Students will be graded by both the instructor and their peers (students who are not presenting on that particular day will serve as panel members and be responsible for grading student performances and asking informed, constructive questions of the presenters).

Below are the main components of the presentation that each group should plan to address. It is not recommended that they do so, but students may use PowerPoint slides for their presentations. NOTE: If planning to use PowerPoint, students should load all group members' presentations into the same file so we can save time during the presentation.

Following is a suggestion for coordinating public testimonies:

(1) First group member starts with an issue introduction: This should be a brief summary of the issue addressed for your review paper which highlights the public health

relevance of the issue. Do not get bogged down with too many background details; assume we have basic knowledge of the gravity of most public health problems and how most diseases are transmitted (e.g., if your issue is HIV/AIDS, do not discuss basic ways HIV is transmitted unless it is especially important to your subtopics addressed).

(2) Next, group members discuss at least one main subtopic each, including review findings and implications: Describe the main subtopics/issues addressed in your paper. Include relevant evidence from your review and offer specific suggestions for implications, e.g., what are specific action steps you would recommend; provide any insight into interventions, policies or programs which could be implemented.

(3) The final group member finishes with a brief conclusion: Provide a brief, clear, concise concluding statement that summarizes the group's major argument for action.

Grading

Evaluation criteria

All assignments will be assessed based upon a rubric found on the course website. Specific information about grading criteria will be distributed with the assignment and made available in BlackBoard.

The relative weight of each course component is as follows:

Assessment	**Group/Individual**	**Due date(s)**	**Percent of Final Grade**
Class attendance and participation in class, including blog	Individual	All Sessions	20%
Public Health Brief	Individual	Sep 30	15%
Library Assignment	Individual	Oct 19	10%
Collaborative Public Health Review article, 1st version	Group	Oct 21	15%
ROAD Assignment	Individual	Oct 27	10%
Simulated Public Testimonies	Individual	Dec 9/16	10%
Collaborative Public Health Review article, Final version	Group	Dec 16	20%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9

B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Students are expected to attend class regularly and to be active, informed participants in all class discussions. This course maintains a blog via BlackBoard: all students are expected to write a minimum of one (1) blog entry over the course of the semester and to comment on the postings of others which will count toward their participation grade. The instructor may assign students as discussion leaders and will call on students in class to join discussions and exercises.

Late/incomplete submission of assignments

Late or incomplete assignments will not be accepted.

Make-ups, rewrites, and extra credit

There are no make-ups, rewrites, or extra credit allowed.

Expectations of students

- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Learn how to use library resources and citation tools.
- Show respect to everyone in the course.
- Be fully prepared to actively participate in discussion.
- Complete all assignments by their assigned due date. No credit for work completed after the due date.
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Regularly check the course website and official university email for course correspondence.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted in the discussion board.
- Contact professor directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.

Expectations for the instructor

- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during discussion
- Respond to student email within 24 hours Monday through Friday and within 48 hours on Saturday or Sunday.
- Grading and feedback on assignments within 1 week of the due date.
- Communication about grades and progress in the course will be given through the course website.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity
Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

This schedule may change as the semester progresses. Refer to the current academic calendar for important dates.

Session	Date	Topic	Readings and Assessments
1.	**9/1 (C)**	Introductions & Overview of Course: An urban public health framework	***Cities and the Health of the Public*** *[hereafter,* ***CHP]:*** Galea et al. – Chapter 1 Optional: ***Prescription for a Healthy Nation*** *[hereafter,* ***PHN****]:* Chapter 1
2.	**9/8 (C)**	Theoretical Foundations: The social determinants of disease	Galea et al (2011); Geronimus (2000); Link & Phelan (1995) Optional: ***PHN*** - Chapter 14
No Class Sep 15 and classes follow a Friday schedule on Sep 22			
3.	**9/25 (O) Friday**	Theory & Practice of Urban Public Health Research	***CHP:*** Galea & Schulz – Chapter 14; Schwartz & Carpenter (1999)
4.	**9/29 (C)**	Historical Perspectives on Urban Public Health	Alcabes (2009); ***CHP:*** Rosner- Chapter 7 Optional: ***PHN*** – Chapter 2 ***PUBLIC HEALTH BRIEF DUE***
5.	**10/6 (O)**	The Urban Physical Environment	***CHP:*** Klitzman- Chapter 4; Optional: ***PHN*** – Chapter 6 [Optional: Guest Lecture Sec 2 on 10/7]
6.	**10/13 (O)**	The Urban Social Environment	***CHP:*** Coutts & Kawachi - Chapter 3; Klinenberg (2001); Optional: ***PHN*** – Chapter 7
Library Assignment due October 19			
7.	**10/20 (C)**	Social Inequalities & Health	Dressler et al (2005); Erwin (2008); LaViest (2011); Williams & Collins (2001);

			Optional: ***PHN*** – Chapter 5 ***FIRST VERSION, LITERATURE REVIEW PAPER DUE***

8.	**10/27 (C)**	Impact of Urbanization Migration Suburbanization on Health	***CHP*** : Freudenberg et al - Chapter 2; ***CHP***: Frumkin - Chapter 8; ***CHP****:* Fullilove- Chapter 9; Fullilove 2001 Film Screening: *El Barrio Tours* with Andrew Padilla ***R.O.A.D. Assignment Due***
9.	**11/3 (O)**	Theoretical Foundations of Behavioral Health Intervention	Glanz & Bishop (2010) Optional: ***PHN*** – Chapters 3 & 4; Cohen at al (2000)
Special Note: Last Day to Drop Course with "W" is Nov 9			
10.	**11/10 (C)**	Global Perspectives	***CHP***: McGranahan & Satterthwaite - Chapter 10; Sontag (2012)
11.	**11/17 (O)**	Current Issues in Public Health	TBA
12.	**11/24 (C)**	Public Health Nutrition	***CHP:*** Yeh & Katz – Chapter 6; Dorfman & Wallack (2007); Nestle & Jacobson (2000) Optional**:** ***PHN*** – Chapters 5 & 10
13.	**12/1 (O)**	Public Health Interventions & Community Health Programs	***CHP*****:** Freudenberg – Chapter 15; Frieden et al (2005); Richie et al (2001); Shea et al (1996); Stokols (1996)
14.	**12/8 (C)**	Simulated Public Testimonies	IOM (2002)
15.	**12/15 (C)**	Simulated Public Testimonies Last Class/Dish2Pass	***CHP****:* Vlahov et al – Chapter 16 ***FINAL LITERATURE REVIEW PAPER DUE***

Please note: This schedule and assignments are subject to change. Additional readings and handouts may be provided. Check BlackBoard and e-mail regularly for any updates.

<u>Session 1</u>. Sep 1. (C) Introductions and Overview: An urban public health framework

Advance Assignment (Complete *prior* to first class): Create a student profile in BlackBoard. Guidance for doing so will be posted in BlackBoard.

Required reading:

Galea S, Freudenberg N, Vlahov D. A framework for the study of urban health. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006: 3-18 (Chapter 1).

Optional reading**:**

Farley T, Cohen DA. *Prescription for a Healthy Nation: A New Approach to Improving Our Lives by Fixing Our Everyday World*. Boston: Beacon Press; 2005: 3-20 (Chapter 1: The Wrong Remedy).

Session 2. Sep 8. (C) The social determinants of health and health disparities

Required readings:

Galea S, Tracy M, Hoggatt KJ, DiMaggio C, Karpati A. Estimated deaths attributable to social factors in the United States. *Am J Public Health*. 2011; 101: 1456-1465.

Geronimus AT. To mitigate, resist, or undo: Addressing structural influences on the health of urban populations. *American Journal of Public Health.* 2000; 90(6): 867-872.

Link BG, Phelan J. Social conditions as fundamental causes of disease. *Journal of Health and Social Behavior.* 1995; (Extra Issue): 80-94.

Optional reading:

Farley T, Cohen DA. *Prescription for a Healthy Nation: A New Approach to Improving Our Lives by Fixing Our Everyday World*. Boston: Beacon Press, 2005: 206-220 (Chapter 14: Unequal Afflictions).

Session 3. Sep 25. (O) Research on urban health: Theoretical & methodological foundations [Note: This is a Friday]

Required readings:

Galea S, Schulz A. Methodological considerations in the study of urban health: How do cities affect health? In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006: 277-293 (Chapter 14).

Schwartz S, Carpenter KM. The right answer for the wrong question: Consequences of type III error for public health research. *American Journal of Public Health*. 1999; 89(8): 1175-1180.

Session 4: Sep 29. (C) Historical perspectives on urban public health

Assignment due: Public Health Brief

Required readings:

Alcabes P. Introduction. The origins of dread. In: Dread: *How Fear and Fantasy Have Fueled Epidemics from the Black Death to Avian Flu.* Cambridge MA*:* Public Affairs, 2009: 1-4.

Rosner, D. Public health in U.S. cities: A historical perspective. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006: 129-142.

Optional reading**:**

Farley T, Cohen DA. *Prescription for a Healthy Nation: A New Approach to Improving Our Lives by Fixing Our Everyday World*. Boston: Beacon Press, 2005: 21-36 (Chapter 2: Greek Gods and American Myths).

Session 5: Oct 6. (O) The urban physical environment

Required readings:

Klitzman S, Matte TD, Kass DE. The urban physical environment and its effects on health. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006:61-84.

Optional readings:

Farley T, Cohen DA. *Prescription for a Healthy Nation: A New Approach to Improving Our Lives by Fixing Our Everyday World*. Boston: Beacon Press, 2005: 84-94 (Chapter 6: Sidewalks and Falling Children: Physical Structures).

Session 6. Oct 13. (O) The urban social environment

Required readings:

Coutts A, Kawachi I. The urban social environment and its effects on health. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006: 49-60.

Klinenberg E. Dying alone: The social production of urban isolation. *Ethnography.* 2001; 2(4): 501-531.

Optional reading:

Farley T, Cohen DA. *Prescription for a Healthy Nation: A New Approach to Improving Our Lives by Fixing Our Everyday World*. Boston: Beacon Press, 2005: 95-104 (Chapter 7: Playing by the Rules: Social Structures).

Library Assignment due October 19

Session 7. Oct 20. (C) Social inequalities and health

Assignment due*: *Collaborative public health literature review article, first draft

Required readings:

Dressler WW, Oths KS, Gravlee CC. Race and ethnicity in public health: Models to explain health disparities. *Annual Review of Anthropology*. 2005 (34): 231-252.

Erwin PC. Poverty in America: How public health practice can make a difference. *Am Jnl Public Health.* 2008; 98(9): 1570-1572.

LaVeist T, Pollack K, Thorpe R, Fesahazion, Gaskin D. Place, not race: Disparities dissipate in Southwest Baltimore when blacks and whites live under similar conditions. *Health Affairs* 2011; 30 (10): 1880-1887.

Williams DR and Collins C. Racial residential segregation: A fundamental cause of racial disparities in health. *Public Health Reports.* 2001; 116: 404-416.

Session 8. Oct 27. (C) The impact of urbanization, migration and suburbanization on health

Required readings:

Freudenberg N, Galea S, Vlahov D. Changing living conditions; changing health: U.S. cities since World War II. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006: 19-45.

Frumkin H. Cities, suburbs, and urban sprawl: Their impact on health. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006: 143-175.

Fullilove MT. Root shock: The consequences of African American dispossession. *Jnl of Urban Health*. 2001; 78 (1): 72-80.

Fullilove MT. Fifty ways to destroy a city: Undermining the social foundation of health. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006: 176-193.

Session 9: Nov 3. (0) Theoretical Foundations of Behavioral Health Interventions

Required readings:

Glanz K, Bishop DB. The role of behavioral science theory in development and implementation of public health interventions. *Ann Rev Public Health* 2010; 31: 399-418.

Optional readings:

Cohen DA, Scribner RA, Farley TA. A structural model of health behavior: A pragmatic approach to explain and influence health behaviors at the population level. *Prev Med* 2000; 30: 146-154.

Farley T, Cohen DA. *Prescription for a Healthy Nation: A New Approach to Improving Our Lives by Fixing Our Everyday World*. Boston: Beacon Press, 2005: 37-52 & 53-68 (Chapter 3: Humans Behaving Badly and Chapter 4: Bell Curves & Bad Apples).

Session 10. Nov 10. (O) Global perspectives on urban health

Required readings:

McGranahan G, Satterthwaite D. A developing world perspective: Health and deficiencies in provision for water and sanitation in urban areas of Africa, Asia, and Latin America and the Caribbean. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006:194-208.

Sontag D. In Haiti, global failures on a cholera epidemic. *New York Times*, March 31, 2012. [http://www.nytimes.com/2012/04/01/world/americas/haitis-cholera-outraced-the-experts-and-tainted-the-un.html?nl=todaysheadlines&emc=edit_th_20120401&_r=0].

Session 11. Nov 17. (O) Current issue in urban public health: TBA

Required readings: TBA

Session 12. Nov 24. (C) Urban public health nutrition

Required readings:

Dorfman L, Wallack L. Moving nutrition upstream: The case for reframing obesity. *Journal of Nutrition Education and Behavior.* 2007; 39: S45-S50.

Nestle M, Jacobson MF. Halting the obesity epidemic: A public health policy approach. *Public Health Reports*. 2000; 115(1): 12-24.

Yeh MC, Katz DL. Food, nutrition and the health of urban populations. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006:106-125.

Optional reading:

Farley T, Cohen DA. *Prescription for a Healthy Nation: A New Approach to Improving Our Lives by Fixing Our Everyday World*. Boston: Beacon Press, 2005: 71- 83 and 144-159 (Chapter 5: More is More/Accessibility and Chapter 10: Habits of the Heart).

Session 13. Dec 1. (O) Urban public health interventions and community health programs

Required readings:

Freudenberg, N. Interventions to improve urban health. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006:294-326.

Frieden TR, Mostashari F, Kerker BD, Miller N, Hajat A, Frankel M. Adult tobacco use levels after intensive control measures: New York City, 2002-2003. *Am Jnl Pub Health*. 2005; 95, 6: 1016-1023.

Richie B, Freudenberg N, Page J. Reintegrating women leaving jail into urban communities: A description of a model program. *Journal of Urban Health*. 2001; 78: 290-303.

Shea S, Basch CE, Wechsler H, Lantigua R. The Washington Heights-Inwood Healthy Heart Program: A 6-year report from the field. *Am Jnl Pub Health*. 1996; 86(2): 166-171.

Stokols D. Translating social ecological theory into guidelines for community health promotion. *American Journal of Health Promotion*. 1996; 10(4): 282-298.

Session 14. Dec 8. (C) Simulated Public Testimonies

Required readings:

Institute of Medicine. Who will keep the public healthy? Educating public health professionals for the 21st century. *Brief Report*. The National Academy of Sciences, 2000.

Optional reading:

Farley T, Cohen DA. *Prescription for a Healthy Nation: A New Approach to Improving Our Lives by Fixing Our Everyday World*. Boston: Beacon Press, 2005: 105-127 (Chapter 8: It's the Real Thing/Media).

Session 15. Dec 15. (C) Simulated Public Testimonies & Dish-to-Pass

Assignment due*: *Collaborative public health literature review article, final version

Required reading:

Vlahov D, Galea S, Freudenberg N. Creating healthier cities: Where do we go from here? In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006: 327-344.

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
PH 75500.02: Fundamentals of Social and Behavioral Health (TRADL)
3 Credits
Fall 2015

Time and location	Wednesdays 6:05 – 7:50 PM, Silberman 214
Instructor	Dr. Lynn Roberts, PhD Office: Silberman Room 530 e-mail: lroberts@hunter.cuny.edu (preferred contact) phone: (212) 396-7742
Office hours	Wednesdays 4-6 PM and by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course provides a topical and theoretical survey of social and behavioral issues in public health.
Course prerequisites	N/A
Course format	This course is taught in a TRADITIONAL format with a mix of online learning resources, in class discussion, lecture, individual and collaborative exercises and assignments. All materials are available on the course website. This is not a self-paced course; there are weekly deadlines for discussion and activities.
Required reading and resources	Freudenberg N, Galea S and Vlahov D (eds.) *Cities and the Health of the Public*, Nashville, TN: Vanderbilt University Press, 2006, ISBN: 08265-1512-6.
Suggested reading and resources	Farley T, Cohen DA *Prescription for a Healthy Nation: A New Approach to Improving Our Lives by Fixing Our Everyday World*. Boston: Beacon Press, 2005. ISBN: 0-8070-2117-2

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply the public health core functions of assessment, policy development and assurance	• Summarize the history and evolution of the field of social and behavioral health. • State the difference across primary, secondary and tertiary prevention.	• Class discussion
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Compare and contrast different models and theories, including the health belief model, social cognitive theory, community organizational theories, the socio-ecological model, and systems science, with regard to social and behavioral change. • Describe how health and disease are socially constructed. • Summarize basic principles and methods of effective health communication and social marketing to create social and behavioral change. • Summarize the theory of diffusion of innovation. • Justify the relevance of at least one theory from fields others than public health that may inform solutions for a public health problem.	• Class discussion • Course Blog • Public Health Brief • Collaborative Public Health Lit Review
Adhere to ethical and social justice principles and standards	• Relate contemporary public health problems to power and resource distribution, equity, diversity, sustainability, and intended and unintended consequences of interventions.	• Class discussion • Course Blog • CITI completion*
Interpret and analyze public health literature and apply evidence-based	• Conduct a comprehensive literature search and compile the results thereof on a given social and behavioral health issue. • Critique the merits and limitations of a scientific	• Public Health Brief • Collaborative Public Health Lit Review

research	article with relevance to social and behavioral health.	
Communicate public health information through oral, written, digital and visual presentation	• Produce scientific writings pertaining to social and behavioral issues in public health.	• Public Health Brief • R.O.A.D. Assignment • Collaborative Public Health Lit Review • Simulated Public Testimony
Explain how social, behavioral, biomedical and environmental determinants affect population health	• Describe the role of poverty, discrimination, and stress in health and disease. • Illustrate how multilevel and systems-oriented interventions can influence individual and population health outcomes. • Illustrate different dimensions of social and health inequity and design solutions that may help to address inequity. • Summarize key features of a life course perspective on health. • Apply different levels of the socio-ecological model to issues such as obesity, mental health, and injury and violence.	• Class Discussion • R.O.A.D. Assignment • Collaborative Public Health Lit Review • Simulated Public Testimony
Design and evaluate interventions to prevent or control public health problems.	• Describe the key assumptions, methods, and limitations of evaluation research. • Review and analyze the impact of public health interventions as documented in peer review literature.	• Class discussions • Collaborative Public Health Lit Review
Engage and collaborate with diverse groups	• Develop a work plan that demonstrates active and effective collaboration among team members with diverse backgrounds.	• Collaborative Public Health Lit Review • Simulated Public Testimony • Peer Group Evaluation

Apply a framework for the planning, implementation and evaluation of public health programs, policies and interventions	• Delineate specific elements of socio-ecological, life course and/or social justice frameworks that inform proposed solutions to public health problems.	• Simulated Public Testimony • Collaborative Group Lit Review

Course Assessments

Explanation of Assignments Your understanding of the course material will be evaluated through the following:

1. Library Assignment (due to Prof John Pell on or before October 19)

The purpose of this assignment is to assist students in mastering information literacy research and citation skills, which will help them to identify appropriate resources for writing professional papers. The library assignment is mandatory for all students enrolled in the MPH program and currently taking PH 755. This assignment involves a two-step process:

All MPH students taking PH755 are advised to attend a 2.25-2.5 hour library workshop. The library session will provide students an opportunity to learn and practice the skills needed to complete the library assignment. Workshops will be offered during the dates and times listed below:

Room	Date	Time
SB C08	TUE 09/01/2015	05:45 PM - 08:00 PM
SB C08	WED 09/02/2015	03:45 PM - 06:00 PM
SB C08	THR 09/03/2015	03:45 PM - 06:00 PM
SB C08	TUE 09/08/2015	05:45 PM - 08:00 PM
SB C08	WED 09/09/2015	03:45 PM - 06:00 PM
SB C09	THR 09/10/2015	03:45 PM - 05:55 PM
SB C08	SAT 09/12/2015	09:30 AM - 12:00 PM
SB C08	SAT 09/19/2015	09:30 AM - 12:00 PM

You can sign up by sending an e-mail to Prof John Pell at jpell@hunter.cuny.edu. The Library Assignment, grading rubric and On Line tutorials are available at this link: http://libguides.library.hunter.cuny.edu/ph755. You are encouraged to sign-up early for a workshop and review this assignment prior to the start of the semester.

After attending the library sessions, students will complete a written library assignment. The satisfactory completion of this report will count for 10 percent of each student's grade for the PH 755 class. Professors John Pell and Stephanie Johnson will be the instructors in charge of the library sessions and will grade all assignments. Assignments should be submitted to John Pell via email at jpell@hunter.cuny.edu on or before **October 19**. Failure to submit the assignment on time will result in a grade of zero.

2. **Literature Review Paper: Analysis of an issue of public health significance (individual and group project)**

This assignment will consist of three steps:

a) *Public Health Brief: Individual assignment*, due **Sep 30**.

In this two-page assignment, students will state the significance of a topic of special interest to them that will also be related to a broader topic selected by their groups, particularly regarding its relevance from an urban health perspective. Please note that this is an individual assignment. Therefore, each student in each group has to submit two pages on their chosen topic of special interest. In this way, students will be working on one single topic during the semester, rather than on different ones. This individual assignment will help students practice their writing skills and clarify their own ideas about the subject of interest. In selecting your topic, ask yourself: Why am I interested in this topic? What would I like to find out about it? Why is this topic relevant from an urban public health perspective? Examples of Public Health Briefs will be provided in BlackBoard.

Students must include a minimum of three (3) references in the Public Health Brief and demonstrate a general understanding of the literature on the issue selected and justify its importance from an urban health perspective. All papers should be typed, double-spaced, spell-checked and proofread. Please use one inch margins all around and 12-point font. This assignment must be submitted via the SAFE ASSIGN feature in BlackBoard.

b) *Collaborative Public Health Literature Review, first version: Group assignment*, due on **Oct 21.**

In this group assignment, students will summarize and discuss key aspects related to a common research question derived from their selected public health issues as addressed in the literature. A review article consists of selecting a public health problem, reviewing what is currently known and what is still being asked about the problem in the scientific literature, including conflicting findings and gaps that may exist, and building an argument that will lead to a set of suggestions and recommendations. Students will write a critical summary of the key ideas, concepts and theories and properly cite each source.

A minimum of 10 references should be cited in this report, including both books and peer-reviewed articles. The structure of this review article should include at least the following components: (1) abstract; (2) introduction; (3) argument/subtopics; (4) discussion/concluding remarks; and (5) literature cited. Sample review articles are provided in BlackBoard – please refer to them prior to submitting your papers. Papers should be between 6 and 8 pages in length, not including abstract, references, tables or figures. Hard copies are not required for this assignment.

c) *Literature Review, final version: Group assignment*, due on **Dec 16.**

The final literature review will be an improved version of the first, which will take into account the instructor's suggestions as well as incorporate ongoing (i.e., updated) analysis of the existing literature on the subject selected. Students must also

incorporate the public health concepts discussed in the second half of the semester into the paper. Papers should be between **8 and 10 pages** in length, **not** including abstract, references, tables, or figures. **Electronic and hard copies are required for this assignment.**

3. Field Assignment

In lieu of meeting in class for Session 6 (October 14), students will be required to complete a brief field-based assignment called the R.O.A.D. Assignment (Reflect, Observe, Analyze and Document). Details for this assignment are available in BlackBoard (see Session 6) and documentation of the R.O.A.D Assignment must be completed by **October 28**.

4. Oral Assignment

Simulated public testimonies (group project to be presented on **Dec 9 and Dec 16**)

Oral presentations will take the form of a **Simulated Public Testimony**. The goal of public testimony is to present evidence about a topic and deliver an argument for action, most often to influence policy decisions in question. Your group will present evidence on your group paper topic and provide arguments for public health action to address the problem.

Students will present as a group on the same day, but each group member will present and be graded separately. Each group member will present a 5-minute oral presentation; once all group members have presented the group will be allowed a 5-minute Q&A session. As in real public testimonies, presentations on individual sub-topics should be coordinated; although they are not always coordinated, they are much stronger when they are. Each group member should present a unique testimony and not repeat information that another group member discusses.

Students will be graded by both the instructor and their peers (students who are not presenting on that particular day will serve as panel members and be responsible for grading student performances and asking informed, constructive questions of the presenters).

Below are the main components of the presentation that each group should plan to address. It is not recommended that they do so, but students may use PowerPoint slides for their presentations. NOTE: If planning to use PowerPoint, students should load all group members' presentations into the same file so we can save time during the presentation.

Following is a suggestion for coordinating public testimonies:

(1) First group member starts with an issue introduction: This should be a brief summary of the issue addressed for your review paper which highlights the public health relevance of the issue. Do not get bogged down with too many background details; assume we have basic knowledge of the gravity of most public health problems and how most diseases are transmitted (e.g., if your issue is HIV/AIDS, do not discuss basic ways HIV is transmitted unless it is especially important to your subtopics addressed).

(2) Next, group members discuss at least one main subtopic each, including review findings and implications: Describe the main subtopics/issues addressed in your paper. Include relevant evidence from your review and offer specific suggestions for implications, e.g., what are specific action steps you would recommend; provide any insight into interventions, policies or programs which could be implemented.

(3) The final group member finishes with a brief conclusion: Provide a brief, clear, concise concluding statement that summarizes the group's major argument for action.

Grading

Evaluation criteria

All assignments will be assessed based upon a rubric found on the course website. Specific information about grading criteria will be distributed with the assignment and made available in BlackBoard.

The relative weight of each course component is as follows:

Assessment	**Group/Individual**	**Due date(s)**	**Percent of Final Grade**
Class attendance and participation in class, including blog	Individual	All Sessions	20%
Public Health Brief	Individual	Sep 30	15%
Library Assignment	Individual	Oct 19	10%
Collaborative Public Health Review article, 1st version	Group	Oct 21	15%
ROAD Assignment	Individual	Oct 28	10%
Simulated Public Testimonies	Individual	Dec 9/16	10%
Collaborative Public Health Review article, Final version	Group	Dec 16	20%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4

A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Students are expected to attend class regularly and to be active, informed participants in all class discussions. This course maintains a blog via BlackBoard: all students are expected to write a minimum of one (1) blog entry over the course of the semester and to comment on the postings of others which will count toward their participation grade. The instructor may assign students as discussion leaders and will call on students in class to join discussions and exercises.

Late/incomplete submission of assignments

Late or incomplete assignments will not be accepted.

Make-ups, rewrites, and extra credit

There are no make-ups, rewrites, or extra credit allowed.

Expectations of students

- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Learn how to use library resources and citation tools.
- Show respect to everyone in the course.
- Be fully prepared to actively participate in discussion.
- Complete all assignments by their assigned due date. No credit for work completed after the due date.
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Regularly check the course website and official university email for course correspondence.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted in the discussion board.
- Contact professor directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.

Expectations for the instructor

- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during discussion
- Respond to student email within 24 hours Monday through Friday and within 48 hours on Saturday or Sunday.
- Grading and feedback on assignments within 1 week of the due date.
- Communication about grades and progress in the course will be given through the course website.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room

1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

This schedule may change as the semester progresses. Refer to the current academic calendar for important dates.

Session	Date	Topic	Readings and Assessments
1.	**Sep 2**	Introductions & Overview of Course: An urban public health framework	***Cities and the Health of the Public*** *[hereafter,* ***CHP]:*** Galea et al. – Chapter 1 Optional: ***Prescription for a Healthy Nation*** *[hereafter,* ***PHN****]:* Chapter 1
2.	**Sep 9**	Theoretical Foundations: The social determinants of disease	Galea et al (2011); Geronimus (2000); Link & Phelan (1995); Optional: ***PHN*** - Chapter 14
3.	**Sep 16**	Theory & Practice of Urban Public Health Research	***CHP:*** Galea & Schulz – Chapter 14; Schwartz & Carpenter (1999)
No Class Sep 23 – Classes follow a Friday schedule			
4.	**Sep 30**	Historical Perspectives on Urban Public Health	Alcabes (2009); ***CHP:*** Rosner- Chapter 7 Optional: ***PHN*** – Chapter 2 ***PUBLIC HEALTH BRIEF DUE***
5.	**Oct 7**	The Urban Physical Environment	***CHP:*** Klitzman- Chapter 4 Optional: ***PHN*** – Chapter 6 [Guest Lecture: TBA]
6.	**Oct 14**	The Urban Social Environment – Field Day (No Class Session)	***CHP:*** Coutts & Kawachi - Chapter 3; Klinenberg (2001) Optional: ***PHN*** – Chapter 7

		Library Assignment due October 19	
7.	**Oct 21**	Social Inequalities & Health	Dressler et al (2005); Erwin (2008); LaViest (2011); Williams & Collins (2001) Optional: ***PHN*** – Chapter 5 ***FIRST VERSION, LITERATURE REVIEW PAPER DUE***

8.	**Oct 28**	Impact of Urbanization Migration Suburbanization on Health	***CHP*** : Freudenberg et al - Chapter 2; ***CHP***: Frumkin - Chapter 8; ***CHP****:* Fullilove- Chapter 9; Fullilove 2001 Film Screening: *El Barrio Tours* with Andrew Padilla ***R.O.A.D. Assignment Due***
9.	**Nov 4**	Theoretical Foundations of Behavioral Health Interventions	Glanz & Bishop (2010) Optional: ***PHN*** – Chapters 3 & 4; Cohen at al (2000)
		Special Note: Last Day to Drop Course with "W" is Nov 9	
10.	**Nov 11**	Global Perspectives	***CHP***: McGranahan & Satterthwaite - Chapter 10; Sontag (2012) [Guest Lecture: TBA]
11.	**Nov 18**	Current Issues in Urban Public Health	TBA
12.	**Nov 25**	Public Health Nutrition	***CHP:*** Yeh & Katz – Ch 6; Dorfman & Wallack (2007); Nestle & Jacobson (2000) Optional: ***PHN*** – Chapters 5 & 10
13.	**Dec 2**	Public Health Interventions & Community Health Programs	***CHP*****:** Freudenberg – Chapter 15; Frieden et al (2005); Richie et al (2001); Shea et al (1996); Stokols (1996)
14.	**Dec 9**	Simulated Public Testimonies	IOM (2002)
15.	**Dec 16**	Simulated Public Testimonies Last Class/Dish2Pass	***CHP****:* Vlahov et al – Chapter 16 ***FINAL LITERATURE REVIEW PAPER DUE***

Please note: This schedule and assignments are subject to change. Additional readings and handouts may be provided. Check BlackBoard and e-mail regularly for any updates.

Session 1. Sep 2. Introductions and Overview: An urban public health framework

Advance Assignment (Complete *prior* to first class): Create a student profile in BlackBoard. Guidance for doing so will be posted in BlackBoard.

Required reading:

Galea S, Freudenberg N, Vlahov D. A framework for the study of urban health. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006: 3-18 (Chapter 1).

Optional reading**:**

Farley T, Cohen DA. *Prescription for a Healthy Nation: A New Approach to Improving Our Lives by Fixing Our Everyday World*. Boston: Beacon Press; 2005: 3-20 (Chapter 1: The Wrong Remedy).

Session 2. Sep 9. The social determinants of health and health disparities

Required readings:

Galea S, Tracy M, Hoggatt KJ, DiMaggio C, Karpati A. Estimated deaths attributable to social factors in the United States. *Am J Public Health*. 2011; 101: 1456-1465.

Geronimus AT. To mitigate, resist, or undo: Addressing structural influences on the health of urban populations. *American Journal of Public Health.* 2000; 90(6): 867-872.

Link BG, Phelan J. Social conditions as fundamental causes of disease. *Journal of Health and Social Behavior.* 1995; (Extra Issue): 80-94.

Optional reading:

Farley T, Cohen DA. *Prescription for a Healthy Nation: A New Approach to Improving Our Lives by Fixing Our Everyday World*. Boston: Beacon Press, 2005: 206-220 (Chapter 14: Unequal Afflictions).

Session 3. Sep 16. Research on urban health: Theoretical & methodological foundations

Required readings:

Galea S, Schulz A. Methodological considerations in the study of urban health: How do cities

affect health? In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006: 277-293 (Chapter 14).

Schwartz S, Carpenter KM. The right answer for the wrong question: Consequences of type III error for public health research. *American Journal of Public Health*. 1999; 89(8): 1175-1180.

Session 4: Sep 30. Historical perspectives on urban public health

Assignment due: Public Health Brief

Required readings:

Alcabes P. Introduction. The origins of dread. In: Dread: *How Fear and Fantasy Have Fueled Epidemics from the Black Death to Avian Flu.* Cambridge MA*:* Public Affairs, 2009: 1-4.

Rosner, D. Public health in U.S. cities: A historical perspective. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006: 129-142.

Optional reading**:**

Farley T, Cohen DA. *Prescription for a Healthy Nation: A New Approach to Improving Our Lives by Fixing Our Everyday World*. Boston: Beacon Press, 2005: 21-36 (Chapter 2: Greek Gods and American Myths).

Session 5: Oct 7. The urban physical environment [Guest Lecture: TBA]

Required readings:

Klitzman S, Matte TD, Kass DE. The urban physical environment and its effects on health. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006:61-84.

Optional reading:

Farley T, Cohen DA. *Prescription for a Healthy Nation: A New Approach to Improving Our Lives by Fixing Our Everyday World*. Boston: Beacon Press, 2005: 84-94 (Chapter 6: Sidewalks and Falling Children: Physical Structures).

Library Assignment due October 19

Session 6. Oct 14. The urban social environment [No Class – Field Day]

Required readings:

Coutts A, Kawachi I. The urban social environment and its effects on health. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006: 49-60.

Klinenberg E. Dying alone: The social production of urban isolation. *Ethnography.* 2001; 2(4): 501-531.

Optional reading:

Farley T, Cohen DA. *Prescription for a Healthy Nation: A New Approach to Improving Our Lives by Fixing Our Everyday World*. Boston: Beacon Press, 2005: 95-104 (Chapter 7: Playing by the Rules: Social Structures).

Session 7. Oct 21. Social inequalities and health

Assignment due*: *Collaborative public health literature review article, first draft

Required readings:

Dressler WW, Oths KS, Gravlee CC. Race and ethnicity in public health: Models to explain health disparities. *Annual Review of Anthropology*. 2005 (34): 231-252.

Erwin PC. Poverty in America: How public health practice can make a difference. *Am Jnl Public Health.* 2008; 98(9): 1570-1572.

LaVeist T, Pollack K, Thorpe R, Fesahazion, Gaskin D. Place, not race: Disparities dissipate in Southwest Baltimore when blacks and whites live under similar conditions. *Health Affairs* 2011; 30 (10): 1880-1887.

Williams DR and Collins C. Racial residential segregation: A fundamental cause of racial disparities in health. *Public Health Reports.* 2001; 116: 404-416.

Session 8. Oct 28. The impact of urbanization, migration and suburbanization on health

Assignment due R.O.A.D. Assignment
Required readings:

Freudenberg N, Galea S, Vlahov D. Changing living conditions; changing health: U.S. cities since World War II. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the*

Health of the Public. Nashville, TN: Vanderbilt University Press; 2006: 19-45.

Frumkin H. Cities, suburbs, and urban sprawl: Their impact on health. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006: 143-175.

Fullilove MT. Root shock: The consequences of African American dispossession. *Jnl of Urban Health*. 2001; 78 (1): 72-80.

Fullilove MT. Fifty ways to destroy a city: Undermining the social foundation of health. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006: 176-193.

Session 9: Nov 4. Theoretical Foundations of Behavioral Health Interventions

Required readings:

Glanz K, Bishop DB. The role of behavioral science theory in development and implementation of public health interventions. *Ann Rev Public Health* 2010; 31: 399-418.

Optional readings:

Cohen DA, Scribner RA, Farley TA. A structural model of health behavior: A pragmatic approach to explain and influence health behaviors at the population level. *Prev Med* 2000; 30: 146-154.

Farley T, Cohen DA. *Prescription for a Healthy Nation: A New Approach to Improving Our Lives by Fixing Our Everyday World*. Boston: Beacon Press, 2005: 37-52 & 53-68 (Chapter 3: Humans Behaving Badly and Chapter 4: Bell Curves & Bad Apples).

Session 10. Nov 11. Global perspectives on urban health [Guest Lecure: TBA]

Required readings:

McGranahan G, Satterthwaite D. A developing world perspective: Health and deficiencies in provision for water and sanitation in urban areas of Africa, Asia, and Latin America and the Caribbean. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006:194-208.

Sontag D. In Haiti, global failures on a cholera epidemic. *New York Times*, March 31, 2012. [http://www.nytimes.com/2012/04/01/world/americas/haitis-cholera-outraced-the-experts-and-tainted-the-un.html?nl=todaysheadlines&emc=edit_th_20120401&_r=0].

Session 11. Nov 18. Current issue in urban public health: Legionnaires Outbreak in Bronx

Required readings: TBA

Session 12. Nov 25. Urban public health nutrition

Required readings:

Dorfman L, Wallack L. Moving nutrition upstream: The case for reframing obesity. *Journal of Nutrition Education and Behavior.* 2007; 39: S45-S50.

Nestle M, Jacobson MF. Halting the obesity epidemic: A public health policy approach. *Public Health Reports*. 2000; 115(1): 12-24.

Yeh MC, Katz DL. Food, nutrition and the health of urban populations. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006:106-125.

Optional reading:

Farley T, Cohen DA. *Prescription for a Healthy Nation: A New Approach to Improving Our Lives by Fixing Our Everyday World*. Boston: Beacon Press, 2005: 71- 83 and 144-159 (Chapter 5: More is More/Accessibility and Chapter 10: Habits of the Heart).

Session 13. Dec 2. Urban public health interventions and community health programs

Required readings:

Freudenberg, N. Interventions to improve urban health. In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006:294-326.

Frieden TR, Mostashari F, Kerker BD, Miller N, Hajat A, Frankel M. Adult tobacco use levels after intensive control measures: New York City, 2002-2003. *Am Jnl Pub Health*. 2005; 95, 6: 1016-1023.

Richie B, Freudenberg N, Page J. Reintegrating women leaving jail into urban communities: A description of a model program. *Journal of Urban Health*. 2001; 78: 290-303.

Shea S, Basch CE, Wechsler H, Lantigua R. The Washington Heights-Inwood Healthy Heart Program: A 6-year report from the field. *Am Jnl Pub Health*. 1996; 86(2): 166-171.

Stokols D. Translating social ecological theory into guidelines for community health promotion. *American Journal of Health Promotion*. 1996; 10(4): 282-298.

Session 14. Dec 9. Simulated Public Testimonies

Required readings:

Institute of Medicine. Who will keep the public healthy? Educating public health professionals for the 21st century. *Brief Report*. The National Academy of Sciences, 2000.

Optional reading:

Farley T, Cohen DA. *Prescription for a Healthy Nation: A New Approach to Improving Our Lives by Fixing Our Everyday World*. Boston: Beacon Press, 2005: 105-127 (Chapter 8: It's the Real Thing/Media).

Session 15. Dec 16. Simulated Public Testimonies & Dish-to-Pass

Assignment due*: *Collaborative public health literature review article, final version

Required reading:

Vlahov D, Galea S, Freudenberg N. Creating healthier cities: Where do we go from here? In: Freudenberg N, Galea S, Vlahov D, eds. *Cities and the Health of the Public*. Nashville, TN: Vanderbilt University Press; 2006: 327-344.

Last Updated September 21, 2015

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
PH 75500 – Fundamentals of Social and Behavioral Health
3 Credits
Fall 2015

Time and location	Fully online (i.e., no in-person meetings). Students are free to meet in small groups on their own or schedule meetings with instructors as needed.
Instructor	Terry Huang, PhD, MPH, CPH Professor, CUNY School of Public Health 55 W 125th Street – 806 Phone 646-664-8358 terry.huang@sph.cuny.edu (preferred contact) Co-Instructor: Margaret Wolff, MPH, DPH Candidate margaret.wolff@gmail.com
Office hours	By appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course provides a topical and theoretical survey of social and behavioral issues in public health.
Course prerequisites	N/A
Course format	This course is taught with a mix of online learning resources, discussion, collaborative exercises, self-assessment, and case studies. All materials are available on the course website. This is not a self-paced course; there are weekly deadlines for discussion and activities.
Required reading and resources	Coreil J, ed. Social and Behavioral Foundations of Public Health. 2nd Ed. Thousand Oaks, CA: Sage Publications, 2010. http://www.amazon.com/Social-Behavioral-Foundations-Public-Health/dp/1412957044 http://www.sagepub.com/textbooks/Book231717
Suggested reading and resources	None

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be assessed as part of the following course assignments:
1. Apply the public health core functions of assessment, policy development and assurance.	▪ Summarize the history and evolution of the field of social and behavioral health. ▪ State the difference across primary, secondary and tertiary prevention.	Quiz
2. Apply theories, concepts, models and methods to the design of public health research, policy, and practice.	▪ Compare and contrast different models and theories, including the health belief model, social cognitive theory, community organizational theories, the socio-ecological model, and systems science, with regard to social and behavioral change. ▪ Describe how health and disease are socially constructed. ▪ Summarize basic principles and methods of effective health communication and social marketing to create social and behavioral change. ▪ Summarize the theory of diffusion of innovation. ▪ Justify the relevance of at least one theory from fields others than public health that may inform solutions for a public health problem.	Discussion Boards, Review Paper, Presentation
3. Adhere to ethical and social justice principles and standards.	▪ Relate contemporary public health problems to power and resource distribution, equity, diversity, sustainability, and intended and unintended consequences of interventions.	Discussion Boards, Review Paper, Presentation
4. Interpret and analyze public health literature and apply evidence-based research.	▪ Conduct a comprehensive literature search and compile the results thereof on a given social and behavioral health issue. ▪ Critique the merits and limitations of a scientific article with relevance to social and behavioral health.	Review Paper, Presentation

5. Communicate public health information through oral, written, digital and visual presentation.	▪ Produce scientific writings pertaining to social and behavioral issues in public health. ▪ Translate research evidence into policy recommendations. ▪ Produce a short presentation to persuade the public and/or policymakers of the importance of addressing the social and behavioral dimensions of a public health problem.	Discussion Boards, Review Paper, Presentation
6. Explain how social, behavioral, biomedical and environmental determinants affect population health.	▪ Describe the role of poverty, discrimination, and stress in health and disease. ▪ Illustrate how multilevel and systems-oriented interventions can influence individual and population health outcomes. ▪ Illustrate different dimensions of social and health inequity and design solutions that may help to address inequity. ▪ Summarize key features of a life course perspective on health. ▪ Apply different levels of the socio-ecological model to issues such as obesity, mental health, and injury and violence.	Discussion Boards
7. Engage and collaborate with diverse groups.	▪ Develop a work plan that demonstrates active and effective collaboration among team members with diverse backgrounds. ▪ Summarize principles of community-based participatory research.	Review Paper, Presentation

Course Assessments
Details about the assignments and grading criteria can be found on the course website. Your understanding of the course material will be evaluated through seven online discussion boards and two group projects.

Online Self-Introduction (2 points)
In the spirit of collaboration and developing a classroom ambiance, during the first week of the course, you will post a short bio of yourself (250 words) along with a picture.

Quiz (4 points)
A short multiple-choice quiz will be made available on Blackboard to assess Competency #1 above.

Online Discussion Boards (24 points)
Seven online discussion boards will be posted/initiated by the instructor. Each discussion board will be open for two weeks and be worth 4 points. Each student is responsible for tracking the discussion boards regularly and providing meaningful comments that demonstrate applications/linkages to course concepts. When posting, please following the online etiquettes described below.

Grading for each student on each discussion board assignment will be (4 points per discussion board):

Participation – 1 point for one comment, 2 points for 2+ comments

Quality – (i.e., whether comments enrich the discussion and/or link to course concepts) – 2 points

Group Projects (70 points)
Students will be randomly assigned to small groups of five. Two (2) group assignments will be posted at the beginning of the semester, with different components of each group assignment becoming due throughout the semester (see schedule below for details). The first group project involves a review paper, sections of which will be due at different points in the course, allowing the instructor to provide feedback so that students can build on each successive piece of the paper. The second group project involves a multimedia presentation/exposé that illustrates one or more dimensions of social determinants of health. As part of each project, a collaborative work plan for each group will be submitted in advance (as a component of the grade) and each completed project must indicate the specific contribution of each student in the group. The work plan should detail the mode and frequency of communication; who is in charge of initiating communication, coordinate the group, and putting the final pieces of a project together; how tasks will be delegated to team members; and what strategies will be utilized to address conflict. This work plan needs to be electronically or digitally signed by each student to indicate the plan has the agreement of all group members. Each student's contribution to a group project will be assessed on a 5-point scale based on a standardized self and peer evaluation form. One person from each group must post the

project through the assignment link in Blackboard by the due date. Details for each group project are as follows:

Review Paper on Social Determinants of Health (45 points): The review paper will be 15 pages maximum (double-spaced, standard font 12, 1 inch margins on all sides). Tables, figures, and references do not count towards the page limit. Each group will submit the required components to the instructor via Blackboard. Grading for the paper will be divided into the following components:

Research Question and Bibliography (10 points)
Group Collaborative Work Plan (5 points)
Paper Outline (10 points)
Final Paper Including Policy Recommendations (15 points)
Contribution to Group Paper (Averaged between Self and Peer Report, 5 points)

Consider the following for your paper outline and final paper:
What is the problem?
What is the extent of this problem?
Whom does this problem affect?
What are the individual, social, environmental, and policy factors that contribute to this problem?
What has been done about this problem?
What seems to the most effective or most promising solution(s)? Do any of these solutions address the structures or feedbacks within the system that gives rise to the problem?
What are the research/policy implications?

Pecha Kucha Presentation (25 points): The presentation will use the format of Pecha Kucha (http://www.pechakucha.org), which entails 20 slides, 20 seconds each. This compels the presenter to be concise and learn to deliver a storyline in the most efficient and effective way possible. For such a presentation, you want to use your slides to project visuals as much as possible. It is difficult to go through a text-heavy slide in 20 seconds. Your presentation will be based on the same topic as your review paper. However, the angle you take to convey the ideas may be varied. For example, you may cut into the topic through a story or a case study. Or you may cut into the topic based on the results of a population survey that shed new light on the problem. Be creative as your develop the storyboard of your presentation. Be clear about what your top three take home messages are. To avoid recording challenges, prepare your slides in Powerpoint and write out your script (what you would say) in the Notes section under each slide. You WILL NOT be required to record your voice directly into the presentation.

Each group will post the Powerpoint presentation on Blackboard as a discussion thread, so that students from other groups can provide comments. Grading for the presentation will include:

- Group Collaborative Work Plan (5 points)

- Final Presentation (10 points)
- Contribution to Group Presentation (Averaged between Self and Peer Report, 5 points)
- Online Feedback on Other Groups' Presentations (5 points)

Grading

Evaluation criteria
All assignments will be assessed based upon a rubric found on the course website. Specific information about grading criteria will be distributed with the assignment.

The relative weight of each course component is as follows:

Assignment	Due	Format	Percentage
Self-Profile	9/6	Individual	**2**
Quiz	9/13	Individual	**4**
Discussion Boards 1-6	9/27 – 12/13	Individual	**24**
Review Paper (see below for parts)		Group	**45**
• *Research Question and Bibliography*	9/20		*(10)*
• *Work Plan*	10/4		*(5)*
• *Paper Outline*	10/18		*(10)*
• *Final Paper*	11/22		*(15)*
• *Self/Peer Evaluation*			*(5)*
Presentation	11/22	Group	**25**
• *Work Plan*	10/25		*(5)*
• *Final Presentation*	12/6		*(10)*
• *Self/Peer Evaluation*	12/6		*(5)*
• *Peer Feedback on Presentations*	12/13		*(5)*
TOTAL			**100**

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4

F	0	<70

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation
Expect to actively contribute to the discussion and complete and submit all assignments by posted due dates. Missed assignments or lack of discussion participation not only affect the individual student, but they also affect the class as a whole due to the high degree of interaction within the course. Grades for interactive communication are based on a rubric that includes the number, tone, and content of your contributions and the attitude you display towards others.

Late/incomplete submission of assignments
Late or incomplete assignments are not accepted.

Make-ups, rewrites, and extra credit
There are no make-ups, rewrites, or extra credit allowed.

Expectations of students

- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Know how to use library resources and citation tools.
- Show respect to everyone in the course.
- Be fully prepared to actively participate in discussion.
- Complete all assignments by their assigned due date. No credit for work completed after the due date.
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Regularly check the course website and official university email for course correspondence.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted in the discussion board.
- Contact the professor directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.

Expectations for the instructor

- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during discussion
- Respond to student email within 48 hours Monday through Friday.
- Grading and feedback on assignments within 1 week of the due date.
- Communication about grades and progress in the course will be given through the course website.

Class citizenship & rules of conduct: When communicating or completing your assignments online via Blackboard, pay attention to the following:

1. Check before you post. Always check whether a similar question that has been posted and answered on the discussion board to avoid duplicated messages and responses.
2. Use a descriptive subject line that reflects the content of your message. It makes the discussion/communication more efficient.
3. Write in short paragraphs or use bullets to break down your ideas into smaller chunks of information. This will make your postings easier to read. Avoid using more than 200 words per post.
4. Do not write in all uppercase. USING ALL CAPS MEANS YOU ARE SHOUTING although you may not mean it.
5. Avoid using sarcasm as it often is interpreted as rude and hurtful.
6. Do not edit or change message content when someone has already responded to you. If you have something to add or change, simply add a follow-up message.
7. People in this course may come from places around the world, so be respectful to diverse perspectives, cultures, and languages.
8. Be professional and engage with others respectfully.

Email correspondence: Email correspondence with instructors is preferred. Any problems you encounter during the course should be communicated to the instructors by email as soon as possible. We also welcome your email feedback on how we can improve your experience in the course. The instructors will generally respond to email within two business days.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule
This schedule may change as the semester progresses. Refer to the current academic calendar for important dates.

CUNY SCHOOL OF PUBLIC HEALTH

PH 75500.01 Urban Health & Society (HYBRID)
Wednesday 6:05-7:50 Silberman 218
Professor Christina Zarcadoolas, PhD

Fall 2015

I. Course Information

Catalogue description: Examines the impact of social, political & economic forces on the health of urban populations and describes roles for and history of public health professionals in promoting health of urban communities.

Course Meets: 6:05-7:50 PM in Room 218
See appended calendar for live classes, asynchronous online and synchronous online class meetings

Instructor: Christina Zarcadoolas, PhD
Email: czarcado@hunter.cuny.edu
Phone: 212-396-7745 (I rarely check messages left on the phone)
Office: My office - Room 537 Silberman Building
Office Hours: By appointment

Required Books:

Ehrenreich, Barbara (2001**)** *Nickel and Dimed: On Not Getting by In America.* NY: Holt.

Freudenberg N, Galea S and Vlahov D. (Eds.) *Cities and the Health of the Public*, Nashville, TN: Vanderbilt University Press, 2006. ISBN: 0-8265-1512-6.

All additional required readings will be posted in BlackBoard. These readings are listed under their respective classes in this syllabus.

II. Program Competencies & Course Objectives

Public Health Core	Course Learning Objectives	Sessions
Listed below are the social and behavioral- related core MPH competencies. This course will help you to:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be addressed as part of the following course sessions:
1. Apply the core functions of public health practice (assessment, policy development and assurance)	• Summarize the history and evolution of the field of social and behavioral health. • State the difference across primary, secondary and tertiary prevention.	Sessions 4, 8
2. Understand basic theories, concepts, models and methods from a range of core and related disciplines and apply them to the design of public health research, policy, and practice	• Compare and contrast different models and theories, including the health belief model, social cognitive theory, community organizational theories, the socio-ecological model, and systems science, with regard to social and behavioral change. • Describe how health and disease are socially constructed. • Summarize basic principles and methods of effective health communication and social marketing to create social and behavioral change. • Summarize the theory of diffusion of innovation. • Justify the relevance of at least one theory from fields others than public health that may inform solutions for a public health problem.	Sessions 2, 3, 8
3. Apply ethical and social justice principles and standards	• Relate contemporary public health problems to power and resource distribution, equity, diversity, sustainability, and intended and unintended consequences of interventions.	Sessions 2, 6 Ethnography Activity
4. Interpret and apply the public health literature	• Conduct a comprehensive literature search and compile the results thereof on a given social and behavioral health issue. • Critique the merits and limitations of a scientific article with relevance to social and behavioral health.	Public Health Brief Literature Review Library Workshop & Library Assignment

5. Communicate public health information verbally and in writing	• Produce scientific writings pertaining to social and behavioral issues in public health.	All assignments
6. Explain key social, behavioral, biomedical and environmental determinants of and inequities in health and disease across the lifespan in urban settings	• Describe the role of poverty, discrimination, and stress in health and disease. • Illustrate how multilevel and systems-oriented interventions can influence individual and population health outcomes. • Illustrate different dimensions of social and health inequity and design solutions that may help to address inequity. • Summarize key features of a life course perspective on health. • Apply different levels of the socio-ecological model to issues such as obesity, mental health, and injury and violence.	Sessions 2, 6
7. Collaboratively engage with diverse groups	• Develop a work plan that demonstrates active and effective collaboration among team members with diverse backgrounds. • Summarize principles of community-based participatory research.	Literature Review Simulated Public Testimony Sessions 3, 10

III. How I will evaluate students – explaining the graded assignments

I will evaluate your understanding and performance will be evaluated through the following:

1. Literature Review (Individual and then Group): Analysis of a contemporary issue of urban public health significance (counts for 2 grades)
2. In class oral participation and Blog posts – contributed throughout the semester
3. Library Assignment
4. Ethnographic Field Activity
5. Nickel and Dimed – in-class activity based on your reading of Ehrenreich's book
6. Final Exam
7. Simulated Public Testimony – last 2 classes of the semester

***1. Public Health Brief: Individual assignment*, due by 11:00 PM Wed. Sept 30 electronically – format specified below (Public Health Brief for Community)**

In this two-page (strict – I will not read beyond 2 page limit) assignment, students will clearly state the significance of an urban public health **topic of special interest to them** that may also be related to a broader topic selected by their group. Please note that this is an individual assignment. Therefore, each student in each group has to submit two pages on their **chosen topic of special interest**. In this way, students will be working on one single topic during the semester, rather than on different ones. This individual assignment will help students practice their writing skills and clarify their own ideas about the subject of interest. In selecting your topic, ask yourself: Why am I interested in this topic? What would I

like to find out about it? Why is this topic relevant from an urban public health perspective? **See the Assignments section of Black Board for further guidance on preparing a Community Public Health Brief**

Students must include a minimum of three (3) references in the Community Public Health Brief and demonstrate a general understanding of the literature on the issue selected and justify its importance from an urban public health perspective. All papers should be typed, double-spaced, spell-checked and proofread. Please use one inch margins all around and Arial 12-point font. A running header must appear on each page in the following format: (Last name- First Name Individual Health Brief (date). The file name must be in the following format: Last name – First Name –Individual Brief).
An electronic only copy of this assignment must be submitted by 11:00PM Tuesday Sept. 29th.

b) ***Group Public Health Literature Review - Group assignment*, due Dec. 13**

In this group assignment, students will summarize and discuss key aspects related to their selected (GROUP) urban public health issue as it has been addressed in the literature. A review article consists of:

- selecting a public health problem,
- reviewing what is currently known and what is still being asked about the problem in the scientific literature, including conflicting findings and gaps that may exist,
- building an argument that will lead to a set of suggestions and recommendations.

Students will write a critical summary of the key ideas, concepts and theories and properly cite each source.

A minimum of 7 references should be cited in this report, including both books and peer-reviewed articles, websites (including the proper citation form for citing web sites). The structure of this review article should include at least the following components:
1) abstract;
2) introduction;
(3) argument/subtopics;
(4) discussion/concluding remarks; and
(5) literature cited.
Papers should be between **7-8 pages/double spaced** in length, **not** including abstract, references, tables or figures. **Electronic submission is required for this assignment with proper header formatting and file name**.

2. **Course blog posts**: by class 2 we will collectively decide if we are going to use a class blog, or contribute to the Blog healthliteracylab.com. Your participation in class and on the blog will account for 20% of your final course grade. Over the course of the semester you will each be responsible for blog posts (comments) to the course blog. Blog posts on the course blog will essentially serve as reaction papers to breaking news, a topic or reading, or activity.
You will be responsible for posting a blog comment at least 8 times during the course.
Each of you will choose a blog nickname (pseudonym), which will allow for you to virtually anonymously post on assigned topics. ***Please make sure to email me your blog pseudonym so that I am able to identify who is writing which blog.***

Blog posts will be graded using a "check-minus," "check," or "check-plus" format Blog posts receiving a "check-minus" are those that appear to be written hastily, without much thought given to the course readings beyond a brief summary and without linking course readings or activities to your daily lives or the ways you have learned about course materials/activities in other settings. Blog posts receiving a "check" are those that respond or comment making use of something learned in this or other classes, but the poster does not expand much beyond a summary format. Blog posts receiving a "check-plus" are those that show a real effort and thoughtfulness, bringing in and referring to theory, models, other research, etc.

3. Library Assignment (due to Prof. Pell TBA)

The purpose of this assignment is to assist students in mastering information literacy research and citation skills, which will help them to identify appropriate resources for writing professional papers. The library assignment is mandatory for all students enrolled in the MPH program and currently taking PH 755. This assignment involves a two-step process:

a. Library Workshop: All MPH students taking PH755 should attend 1 mandatory library workshop. The library sessions will provide students an opportunity to learn and practice the skills needed to complete the library assignme.

Dates for Library Sessions:
SB C08 TUE 09/01/2015 05:45 PM - 08:00 PM
SB C08 WED 09/02/2015 03:45 PM - 06:00 PM
SB C08 THR 09/03/2015 03:45 PM - 06:00 PM
SB C08 TUE 09/08/2015 05:45 PM - 08:00 PM
SB C08 WED 09/09/2015 03:45 PM - 06:00 PM
SB C09 THR 09/10/2015 03:45 PM - 05:55 PM
SB C08 SAT 09/12/2015 09:30 AM - 12:00 PM
SB C08 SAT 09/19/2015 09:30 AM - 12:00 PM

Please use the tutorials posted on the site for the assignment:
http://libguides.library.hunter.cuny.edu/ph755

You can sign up for the workshop by e-mailing Prof John Pell at: jpell@hunter.cuny.edu.

It is recommended that students attend the library workshop, but if unable to do so, you can visit this link to access the on-line tutorials: http://libguides.library.hunter.cuny.edu/ph755

b. Library Assignment: After attending the library sessions, students will complete a written library assignment. The satisfactory completion of this report will count for 10 percent of each student's grade for the PH 755 class. Professors John Pell and Sarah Johnson will be the instructors in charge of the library session and will grade all assignments. Therefore, students' assignments must be submitted electronically to Professor Pell at jpell@hunter.cuny.edu (TBD). Please write "Library Assignment" in the subject heading of your email. Failure to submit the assignment on time will result in a grade of zero.

Professor Pell will be available to meet with students who require additional help to complete the report

satisfactorily. Please contact them directly if you have any questions about the assignment and/or if you want to set an appointment with either of them.

4. Ethnographic Activity: Due Week 4 (NOON). Each student will plan and conduct an observational/ethnographic activity. The activity should last anywhere from ½ hour to 1 hr. The goal of this activity is for you to:

- choose a location or situation that you believe may be give you some insight or understanding of an urban issues linked to health;
- allow you to observe/listen/and record (in some manner) what occurs;
- so that you can reflect on the activity after you leave the field;
- and present your activity and insights in written form (1 page essay) and in oral discussion in class

Due Class 4: Sept 30 NOON Submit electronically 1 page Arial 12/ 1.5 spacing / 1 inch margin. File Name: (Last name_ Ethnography). Emailed to me, czarcado@hunter.cuny.edu

5. Nickel and Dimed book reading activity.

6. Final Exam (take home, distributed **Class 11 Nov 18th due on Class 12 Nov 25**

For this assignment students will provide essay answers to two questions from a list of questions that will address the content of all previous class sessions. The list of questions will be made available on-line the week prior to the midterm exam's due date. Students may refer to any of the class readings, class discussions and additional references that may be suited to the topic under consideration. Critical analysis of the literature, as well as evidence of thorough knowledge of the subject matter, is expected. Students are required to work independently on this exam; this is not a group project. **This assignment must be submitted electronically on the due date of Nov 18**.

7. Simulated Public Health Testimony presented the last 2 class session Dec 3 & 10)

Oral presentations will take the form of a **Simulated Public Testimony**. The goal of a public testimony is to present evidence about a topic and deliver a cogent and convincing argument for action, most often to influence policy decisions in question. Your group will present evidence on your group paper topic and provide arguments for public health action to address the problem.

Students will present as a group on the same day, but each group member will present and be graded separately. Each group member will present a 5-minute oral presentation; once all group members have presented the group will be allowed a 5-minute Q&A session. As in real public testimonies, presentations on individual sub-topics should be coordinated; although they are not always coordinated, they are much stronger when they are. Each group member should present a unique testimony and not repeat information that another group member discusses.

Students will be graded by both the instructor and peers. Students who are not presenting will serve as panel members and be responsible for grading student testimonies and asking informed, constructive questions of the presenters.

Below are the main components of the presentation that each group should plan to address. It is not recommended that they do so, but students may use PowerPoint slides for their presentations. NOTE: If planning to use PowerPoint, students should load all group members' presentations into the same file so we can save time during the presentation.

Following is a suggestion for coordinating public testimonies:

(1) First group member starts with an issue introduction: This should be a brief summary of the issue addressed for your review article which highlights the public health relevance of the issue. Do not get bogged down with too many background details; assume we have basic knowledge of the gravity of most public health problems and how most diseases are transmitted (unless it is unusual or exotic).

(2) Next, group members discuss at least one main subtopic each, including review findings and implications: Describe the main subtopics/issues addressed in your paper. Include relevant evidence from your review and offer specific suggestions for implications, e.g., what are specific action steps you would recommend; provide any insight into interventions, policies or programs which could be implemented.

(3) The final group member finishes with a brief conclusion: Provide a brief, clear, concise concluding statement that summarizes the group's major argument for action.

IV. Grading Policy and Due Dates

Assignment	Group/Individual	Due date(s)	Percent of Final Grade
Class attendance and participation in class & blog	Individual	All Sessions	20%
Individual Lit Review	Individual	Class 3 Sept 16	5%
Group Lit Review	Group	Class 13 Dec 2	10%
Library Assignment	Individual		10%
Urban Ethnography Assignment	Individual		5%
Nickel & Dimed Activity	Individual		5%
Simulated Public Testimony – (oral presentation)	Individual		20%
Group Public Health Review Article	Group		25%

The grading scale is as follows:

A+	97.5%-100%		**B-**	80.0 – 82.4%
A	92.5 – 97.4%		**C+**	77.5 – 79.9%
A-	90.0 – 92.4%		**C**	72.5 – 77.4%
B+	87.5 – 89.9%		**C-**	70.0 – 72.4%
B	82.5 – 87.4%		**F**	0.0 – 69.9%

V. Course Policies

Attendance and class participation: Regular attendance and active, informed participation in class and on-line discussions and exercises based on a critical reading of the assigned articles and text is required. The instructor may distribute short assignments before sessions to guide students; students are strongly encouraged to refer to these assignments when doing weekly required readings. The instructor will also incorporate several in-class or on-line exercises and all students are expected to participate. Some in-class exercises will be collected. Students must also participate in the BlackBoard blog for this course.

Enrollment in BlackBoard: All students must enroll in BlackBoard. BlackBoard will be used on a routine basis as a learning tool to distribute course materials, on-line lectures, as well as to facilitate communication with the instructor and classmates.

Lateness and absence: Timely arrival in class is expected. Please inform me in advance if you anticipate being late or absent. Students are responsible for class content and assignments even if they miss a class. Excessive lateness and absences will be noted and reflected in your final grade.

Assigned readings: Please complete all readings for each class so that you can make the most out of the lecture and discussion.

Guidelines for written assignments: Learning to express ideas in a clear and concise way requires practice; therefore, this course will provide students with diverse written assignments during the term. Start working on papers early and seek feedback from your instructor throughout the process.

Unless otherwise stated by me, all assignments will be submitted electronically. All papers MUST adhere to the following format. If the submissions are not correctly formatted I will not accept them ad this may cause you to receive a late grade.

All papers must be typed double-spaced (at times I ask for other spacing), using Arial 12 font and 1 inch margins throughout. You should have a running header at the top of each page that includes your full name (for individual assignments/ assignment name/ date and page #). The FILE name must include your name and abbreviated title for the assignment. Warning: I am a stickler about these things!

Use only AMA (American Medical Association) style for citing references. You may consult this link at the *American Journal of Public Health* website for AMA guidelines: http://www.ajph.org/misc/ama_references.shtml.

Due dates and completion of assignments: Assignments are due at the beginning of class on the date indicated in the syllabus, unless I state otherwise in BB; two points will be deducted for each day an

assignment is late. If you anticipates the need to turn in work late, please negotiate an acceptable submission plan with the instructor in advance of the established due date. In case of emergencies, please contact the instructor immediately.

Classroom community, culture & conduct: Our classroom and on-line presence is a community. Respectful interaction with classmates, the instructor and guests is expected at all times. Public health deals with controversial issues from multiple perspectives and consideration of these issues may cause disagreements among us or may evoke strong personal feelings, depending on our individual experiences, histories, identities and worldviews. Therefore, in all of interactions and communications, it is important that students strive to demonstrate mutual respect for one another and for any course guests and members of the community with whom they come into contact.

Email correspondence: Direct any inquiries to me via my Hunter email czarcado@hunter.cuny.edu You can expect a response within 8-10 hours Mon–Fri and a bit longer on a weekend or during holiday breaks.

VI. Institutional Policies

Accessibility: Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also included students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. The Office of Disabled Students is located in Student Services, 1128 East Building, 68th Street Campus, (212) 772-4857/TTY (212) 650-3230. For more information visit: http://www.hunter.cuny.edu/studentservices/access). If a student has special accommodations that are necessary for class sessions, exams or presentations, please let the instructor know at the beginning of the semester.

Academic Integrity: Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. For more information, visit: http://www.hunter.cuny.edu/studentservices/advising/policies-sub/policies-academic-integrity .

Help with research and writing: Feedback will be given on the quality of all written assignments. If you require further assistance with improving your writing skills, consider visiting the Student Reading and Writing Center on the main campus. For more information, visit http://rwc.hunter.cuny.edu/ . Hunter has three types of grades of withdrawal: W, WA, and WU. There may be serious academic and financial consequences associated with course withdrawal. Discuss your situation with an Advisor in the Office of Student Services, 1119 East Building or in the Office of Financial Aid, Room 241 North Building. http://www.hunter.cuny.edu/studentservices/advising/policies-sub/policies-course-withdrawal.

Grade of Incomplete: Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an INCOMPLETE is at the discretion of the instructor. Only students averaging C or above in the course are eligible to request an incomplete course grade. According to Hunter regulations, there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. The student will not be permitted to register for classes in the upcoming semester unless this contract is on file in the UPH office and the instructor advises the Program Director when INC has been resolved.

Grade appeals: When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. Please consult with the instructor within the first three weeks of the following semester. If the student is still not satisfied, s/he should promptly contact the department chair in writing giving the factual reasons and basis for the complaint. Students have the right to request in writing that the chair appoint a student as a member to the department/school Grade Appeals Committee. This appeal at the department/school level must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, please refer to the "College-wide Grade Appeals Procedures" adopted by the Senate in fall 1985. Copies of this procedure may be obtained in the Senate Office, the Office of Student Services, or departmental offices. For more information, visit: h**ttp://www.hunter.cuny.edu/studentservices/advising/policies-sub/policies-academic-appeals.**

VII. Course Schedule at a Glance

COURSE AT A GLANCE

NOTE: THIS IS NOT THE DEFINITIVE CONTENT FOR THIS COURSE. IT'S A "SKETCH IN TIME". THE WEEK BY WEEK (IN COURSE MATERIAL) ON BLACKBOARD IS THE ONE AND ONLY RELIABLE SOURCE OF CONTENT.

Session	Date	Topic	Readings and Assignments
1.	**Sept 2** (Class 1) Live	Introductions & Overview of Course: An Urban Public Health Framework Many people in concentrated space: what results Urban Public Health Professionals	**Required reading:** ***Cities and the Health of the Public : Freudenberg, Galea, Vlahov [hereafter, CHP]:*** **Chapter 1** **Plato – Poli excerpt** **Weber, Max. 1969[1921]. "The Nature of the City." Pg. 23-46** **Fine, David. 2000. "Endings and Beginnings: Surviving Apocalypse."** Homework due next week **1. Choose Your Profile/Avatar** **2. Be prepared to discuss a health issues facing NYC** (see BB for specifics)
2.	**Sept 9** (Class) Live	**Theoretical Foundations** **The Social Determinants of Health and Disease** Social Inequalities & Health Inro) Your Avatar – class discussion	**Required readings:** **CHP Chp 3 - Coutts A, Kawachi I. The urban social environment and its effects on health. CHP** **Chp. 9 M. Fullilove Fifty Ways to Destroy a City.** **Geronimus (2000);** **Link & Phelan (1995);** **Galea et al., (2011)** **Cohen 2000 – Broken Windows** Browse: CDC, WHO, US News and Reports, websites Homework: Choose you Public Health Brief Topic Due Class 3.
3.	**Sept 16** (Online-Asynchronous)	**Historical Perspectives on Urban Public Health:** Problems, Research	**Individual Literature Review Due** **Required readings:** **(In CHP) - Chp 7 Rosner, D. Public health in U.S. cities: A historical perspective. 129-142.** **CHP - Chp 14. Methodological Consideration**

		Intro to methods of study	**Galea S, Schulz A.** **Alcabes (2009)** **Krieger, N. Theories for social epidemiology in the 21st century: An ecosocial perspective. *International Journ Epidemiology*. 2001; 30: 669-677.** Broad Street Pump; Optional: Browse CDC Timeline – on website: **HW for next week:** Plan and conduct your urban ethnography activity See Syllabus for specific direction
	Sept 23	NO CLASSES	
4.	**SEPT 30** (Class 4)	Urban Public Health has been Studied: Research Theories & Models Quantitative & Qualitative Study: Where does Journalism fit in?	**Urban Ethnography due today NOON. (see syllabus for direction)** **Required readings:** **Chp 14 Galea S, Schulz A.** **Methodological considerations in the study of urban health.** ***CHP*: Freudenberg – Chapter 15;** **Dresser, Race & Ethnicity** **Students will announce their plan for ethnography act in class.** Optional readings: Morgan, DF. Educating public health professionals for the 21st century. *Brief Report*. The National Academy of Sciences, 2002.** **Stokols D. Translating social ecological theory into guidelines for community health promotion. *American Journal of Health Promotion*. 1996; 10(4): 282-298.**
12	**Nov 25** (Class 12)	The Future Global Perspectives	**Final Exam Due Today** **Required readings**

	(online asynchronous)	Course Review	***CHP*: McGranahan & Satterthwaite - Chapter 10; CHP Chp. 14, Galea.** ***CHP:* Vlahov et al – Chapter 16** **What will happen when Harlem Becomes White?** **IOM 2002**
13	**Dec 3** (Class)	Simulated Public Testimonies	**All Groups Final Health Literature Review Due**
14	**Dec 10** (Class)	Simulated Public Testimonies	

Readings and Assignments may change however you will be given ample warning that they have.

Last Updated Sept. 10, 2015

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS
Hunter College
PH 75600: Fundamentals of Health Policy & Management
3 Credits
Fall 2015

Time and location	Fully Online. The course opens on August 27th.
Instructor	Stacey B. Plichta, ScD, CPH. Professor, Hunter College Office: 2180 Third Ave, NY, NY 10035, room 550 Phone: 212-396-7755; 973-873-3789 E-mail: splichta@hunter.cuny.edu (preferred contact)
Office hours	Wednesday 1PM-3PM. Evening and virtual hours by appointment
Course website	Students log into the course website through their Blackboard portal: https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Examination of the organization, delivery and financing of health care in the United States as it pertains to the health policy-making process, including the organization of the agencies and personnel constituting the health care system, and analysis of government structure, laws, and regulations. Theoretical concepts, practice, and implementation of health programs in organized settings, including the planning, administration, management, evaluation, and policy analysis of public health agencies and private sector managed care.
Course prerequisites	N/A
Course format	This is a fully online course that is taught with a mix of online learning resources, narrated lectures, discussion boards, collaborative exercises and individual exercises. All materials are available on the course website. This is not a self-paced course; there are weekly deadlines for discussion and activities.
Required reading and resources	Shi L, Singh DA. (2014). Delivering Health Care in America: A systems approach (enhanced 6th edition). Sudbury, MA: Jones & Bartlett Publishers. Reid TR. (2009). The Healing of America: A Global Quest for Better, Cheaper, and Fairer Health Care. Penguin Press. McDonough JE (2012). Inside National Health Reform. California/Milbank Books on Health and the Public. Scutchfield DF, Keck CW, Mays G (eds). Principles of Public Health Practice (3rd ed). Clifton Park, NY:Thompson/Delmar Learning, 2009 *(specific chapters are on reserve in the public health/social work library)*
Suggested reading and resources	Suggested articles are posted to Blackboard in each class folder.

Last Updated Sept. 10, 2015

Core Competencies	**Course Learning Objectives**	**Assessment Methods**
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Course assignments:*
Apply the public health core functions of assessment, policy development and assurance	• Assess the effects of political, social and economic policies on public health systems and the health of urban population's terms of effectiveness, efficiency and equity. • Discuss political and economic feasibility issues related to health policy • Analyze the impact that current health care policy changes brought by the Affordable Care Act is likely to have on access to health care and the health of the U.S. population.	Discussion boards Op-Ed Piece
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Describe evidence-based approaches in the development and evaluation of public health policies and interventions • Discuss the function and role of management and the organizational structure of public health organizations • Explain quality and performance improvement concepts employed in public health organizations • Discuss models of leadership and management that are relevant to public health and health care delivery in the U.S.	Quizzes Discussion boards
Adhere to ethical and social justice principles and standards	• Explain the difference between health care systems based on market justice and those based on social justice through a comparison of the U.S. healthcare system to global health systems.	Quizzes Discussion boards Comparative health center visit
Interpret and analyze public health literature and apply evidence-based research	• Prepare documents for use in legislative testimony.	Congressional Testimony
Communicate public health information through oral, written, digital and visual presentation	• Communicate the impact of current and potential policies to the lay public, advocacy groups and policy professionals.	Discussion boards Op-Ed Piece Blog Postings
Explain how social, behavioral, biomedical and environmental determinants affect population health	• Describe the demographic composition, health status and health care utilization patterns of the U.S. population. • Assess the main components of the organization, financing and delivery of health services and public health in the U.S. in terms of quality, prevention, access, cost, equity and effectiveness. • Analyze the impact of individual, organizational, community, national and global trends and interdependencies on public health related problems and health disparities	Quizzes Congressional testimony
Engage and collaborate with diverse groups	• Explain how professional ethics and practices relate to equity and accountability in diverse community settings.	Discussion boards Blog postings
Describe the legal foundations of the U.S. public health system and its interrelationships with other systems including health care, education and environmental protection	• Describe the legal foundation of public health and the public health policy process, including the role of each level and branch of government in assuring the health of the public. • Assess the main components of, and issues related to, the organization, financing and delivery of health services and public health in the US in terms of equity, access cost and effectiveness.	Quizzes
Apply a framework for the planning, implementation and evaluation of public health programs, policies and interventions	• Describe health policy formulation, implementation and modification using the Longest model as a framework • Investigate the role of major stakeholders including non-profit and community-based organizations in the policy process and their impact on public health	Quizzes Congressional testimony
Explain the context of public and private health-care systems in which health care and public health policy are made and healthcare is delivered	• Explain the basic organization, financing and delivery of health services in the U.S. • Discuss the impact of a lack of access to health care for both individuals and society • Specify the role of public health and other governmental agencies in providing access to care for the U.S. population	Quizzes Congressional Testimony

Course Assessments

Quizzes

There will be on-line multiple choice quizzes that correspond to the readings and the lectures. These will be taken on Blackboard and must be completed in one session (e.g. once you open the quiz, you must complete it). Only one attempt will be allowed. Each quiz will be located in the class folder related to the quiz.

Class Participation and Group Discussion Boards

This class is on-line and has extensive discussion boards (which take the place of in class discussions). It is expected that the student will fully participate in the on-line portion of the course through their group discussion board and through the general class discussion board.

Op-Ed Piece

Working alone, each student will write a 500 word essay suitable for submission to a local newspaper. Students will read and respond to each other's Op-Ed pieces on Blackboard. An Op- Ed essay (those found opposite the editorial page in most newspapers) gives a point of view on an issue of importance. Detailed instructions are in the Assignment section of Blackboard.

Comparative health center visit/write up

Go to two places that deliver health care, one public **AND** one private. Spend an hour or more in each, and fill out the forms given out in class, one form for each visit. Students will post to the Discussion Board one or two paragraphs about the most important differences you observed in the public and private facilities you observed. Your observation forms are due to the instructor via e-mail **(a scanned PDF of your handwritten notes is fine).** Detailed instructions are in the Assignment section of Blackboard.

Blog Postings

You will be directed to three specific health care blogs. You will choose one post from each of them to read and to respond to. You do not actually have to post on the blog (but you can if you want to). Your group will have a group blog. You will post a short (3-5 sentence) summary of the posts you read and your response to each blog post. Each of your responses must be 1-2 paragraphs long (no longer, no shorter) and must state an opinion. You must clearly agree or disagree with the blog, but you must state your reasons why. Spelling and grammar count. Detailed instructions are in the Assignment section of Blackboard.

Congressional Testimony Assignment

Congressional hearings are the principal method by which governmental committees collect and analyze information in the early stages of legislative policymaking. At some point in your career, you may become so proficient in your chosen area of public health that you are asked to be an expert witness at a legislative congressional hearing. Each student group will prepare a short (7-9 page) testimony outlining a position on a given topic. Student groups will also create a one page 'summary of points' page for the other groups to be posted to Blackboard. Detailed instructions are in the Assignment section of Blackboard

Extra Credit Book Review

Students wishing to earn extra credit in the course can choose a book from the list provided and write a 3-5 page review of the book (double spaced, 12pt font, 1" margins) that focuses on how the book has increased their knowledge of public health. You may propose another book, as long as you have not already read the book. The booklist is on Blackboard.

Grading

Evaluation criteria

The quizzes are objective multiple choice tests.

The written activities will be graded with a rubric. You can find the rubric for each assignment on Blackboard.

The relative weight of each course component is as follows:

Weekly quizzes	30%
Participation and group discussion boards	15%
Op-Ed piece	10%
Comparative health center visit/write up	10%
Blog Postings (3)	15%
Congressional Testimony Assignment	20%
Total	**100**
Extra Credit: Book Report	2%
Posting to a health care blog online	1%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Syllabus Change Policy

This syllabus is a guide for the course and is subject to change with advance notice. Changes to the syllabus will be announced in class and posted to Blackboard as an announcement.

Course Communication and Assignment Submission

This course is delivered using the Blackboard course management system. In addition, students may be required to submit course assignments from time to time to the instructor using Hunter e-mail. An active Hunter student e-mail user ID and password is required to log into both systems. An active CUNY e-mail ID is required for non-Hunter students taking the class. It is the responsibility of the student to remain current on this system.

Attendance and class participation

Class attendance in an online class is assessed by participation in the class discussion boards. Class participation is graded (15% of final grade). As such, students should read the subject material prior to participating in their group discussion board. Students are expected to post their work to their group discussion board, read the work of other students and make substantive comments.

Late/incomplete submission of assignments

This is an online course, but it is a paced course. This means that the course assignments have hard deadlines which need to be met in order for you to go forward. The deadlines will come quickly. It is really important to meet these deadlines, as the course is designed so that your fellow students are depending on you to participate. Please note that in an online course, it is almost impossible to give extensions for most assignments. Most missed assignments (such as quizzes and discussion boards) will simply result in a grade of '0'. The larger assignments, such as the OpEd and the Congressional Testimony, will lose 5 points per day of lateness.

Make-ups, rewrites, and extra credit

There are no make-ups or rewrites allowed. There is an extra credit book report opportunity open to all students.

Expectations of students

- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Know how to use library resources and citation tools.
- Show respect to everyone in the course.
- Be fully prepared to actively participate in discussion boards.
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Regularly check the course website and official university email for course correspondence.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted in the discussion board.
- Contact the professor directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.

Expectations of the Instructor

- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during discussion
- Respond to student email within 48 hours Monday through Friday. E-mail received on Friday will be responded to on Monday.
- Grading and feedback on assignments within 2 weeks of the due date.
- Communication about grades and progress in the course will be given through the course website.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

PH756: Public Health Policy & Management

Hunter College: Fall 2015 (Schedule is subject to change throughout the semester. Last Updated August 24, 2015)

Date class materials will post	Topics	Materials to Read/View/Listen for the class (also check class folder on Blackboard)	Assignments Associated with this Class Module
Class 1 8/31	**Overview of Health and Use of Healthcare in the U.S.** Scanning the Environment	**READ** Shi & Singh: Chapter 1 and 2 Reid TR. (2009). The Healing of America: A Global Quest for Better, Cheaper, and Fairer Health Care. Penguin Press (start reading) View materials in Blackboard Class 1 Folder	Quiz 1 by 11:59PM on 9/13. Introduce yourself on the group discussion board by **11:59PM on 9/4** OpEd Assignment: Choose an issue. Write a one-page overview of why your chosen OpEd issue is a problem (1-2 paragraphs) AND describe how you will 'scan the environment' about this issue (1-2 paragraphs). Post to Blackboard on the group discussion board by 11:59PM on 9/13. Read and comment on the posts of your fellow group members.
No Class Labor Day 9/7	**NO CLASS**		
Class 2 9/14	**Global Models of Healthcare Delivery**	**READ** Reid TR. (2009). The Healing of America: A Global Quest for Better, Cheaper, and Fairer Health Care. Penguin Press (finish reading) View materials in Blackboard Class 2 Folder	Quiz 2 by 11:59PM on 9/20. OpEd Assignment: E-mail draft copy of Op-Ed to instructor by 11:59PM on 9/21
Class 3 9/21	**Health Care Policy** PPACA aka ObamaCare	**READ** Shi & Singh: Chapter 3 McDonough JE (2012). Inside National Health Reform. California/Milbank Books on Health and the Public. Pp103-286 View materials in Blackboard Class 3 Folder	Quiz 3 by 11:59PM on 9/27 Moderated group discussion (9-21 to 9-27): Respond to the group discussion board question by **11:59PM on 9/24**. Comment on your fellow member's postings by 9/27 at 11:59PM.
Class 4 9/28	**Health Care Delivery** Overview of Model Financing and Payment Private Insurance	**READ** Shi and Singh: Chapter 4, Chapter 6 (p195-213) View materials in Blackboard Class 4 Folder	Quiz 4 by 11:59PM on 10/4 OpEd Assignment: Post final copy of Op-Ed to your group discussion board by 11:59PM on 10/4
Class 5 10/5	**Health Care Delivery** Financing and Payment Public Health Insurance Medicaid, Medicare, SCHIP, VA hospitals & clinics	**READ** Text Shi and Singh: Chapter 6 (p214-237) View materials in Blackboard Class 5 Folder	Quiz 5 by 11:59PM on 10/18 Comment on other OpEds in your group by 11:59PM on 10/18

MPH HPM SPECIALIZATION

CUNY SCHOOL OF PUBLIC HEALTH

Hunter College
PH 77049: Advanced Health Economics
79579
Fall 2015
3 credits

Catalogue description	This course will focus on economic issues of particular importance to those interested in health care management, especially organizational and labor economics. Topics covered will include competition and consolidation in health care markets, adverse selection and moral hazard, provider agency, and labor market effects of health insurance.
Course meets	Tuesday, 6:05-7:50 pm, Silberman 212
Instructor	Alexis Pozen, Ph.D.
Email	alexis.pozen@sph.cuny.edu
Phone	646-664-8361
Office	55 W 125th St, 8th Floor
Office hours	By appointment
Required materials	Readings are available [online] through the CUNY library and will be posted on Blackboard.
Recommended books	For those seriously interested in health economics: Culyer AJ, Newhouse JP. Handbook of Health Economics, Vol 1A. and 1B Elsevier, 2000.

Course Policies

Grading

		Dates
20%	Group presentation	10/13; 10/20
30%	Individual paper critique 1	11/17
30%	Individual paper critique 2	12/14
20%	Class participation	
100%		

Attendance and class participation

As class discussion will be key to learning in this course, attendance is required. Please notify me at least one week in advance if you will not be able to attend class. Your meaningful participation will contribute not only to your own understanding of the material, but to others' as well. Please come to class having done readings and ready to ask and answer questions.

Late submission of assignments

Late assignments will be marked down a half letter grade (or 5 percentage points) for every day late.

Class citizenship & rules of conduct

Please come to class on time, and let me know in advance if you need to come late or leave early. I don't mind if you use laptops in class, but please limit use to note-taking to avoid distracting others. Remember to turn off your cell phones.

Email correspondence

Feel free to email me any time at alexis.pozen@sph.cuny.edu with any questions or concerns about the course, related material, the program, research, etc., and I will get back to you as soon as possible. Remember, office hours are by appointment, and I encourage meetings!

Institutional policies

Accessibility

Special accommodations for students with disabilities are available through the campus disability services offices. Please contact them, and they will inform me of the appropriate accommodations to make. More information about campus disability services is available here: http://www.cuny.edu/about/administration/offices/sa/services/disabilities/student-info.html

Academic integrity

"The Graduate Center of the City University of New York is committed to the highest standards of academic honesty. Acts of academic dishonesty include—but are not limited to—plagiarism (in drafts, outlines, and examinations, as well as final papers), cheating, bribery, academic fraud, sabotage of research materials, the sale of academic papers, and the falsification of records. An individual who engages in these or related activities or who knowingly aids another who engages in them is acting in an academically dishonest manner and will be subject to disciplinary action in accordance with the bylaws and procedures of the Graduate Center and of the Board of Trustees of the City University of New York.

"Each member of the academic community is expected to give full, fair, and formal credit to any and all sources that have contributed to the formulation of ideas, methods, interpretations, and

findings. The absence of such formal credit is an affirmation representing that the work is fully the writer's. The term "sources" includes, but is not limited to, published or unpublished materials, lectures and lecture notes, computer programs, mathematical and other symbolic formulations, course papers, examinations, theses, dissertations, and comments offered in class or informal discussions, and includes electronic media. The representation that such work of another person is the writer's own is plagiarism.

"Care must be taken to document the source of any ideas or arguments. If the actual words of a source are used, they must appear within quotation marks. In cases that are unclear, it is the responsibility of the writer to take due care to avoid plagiarism.

"The source should be cited whenever:

(a) a text is quoted verbatim

(b) data gathered by another are presented in diagrams or tables

(c) the results of a study done by another are used

(d) the work or intellectual effort of another is paraphrased by the writer

"Because the intent to deceive is not a necessary element in plagiarism, careful note taking and record keeping are essential in order to avoid unintentional plagiarism."

Source: CUNY Graduate Center Student Handbook, 2014-15, Available at: http://www.gc.cuny.edu/CUNY_GC/media/CUNY-Graduate-Center/PDF/Publications/Student_Handbook_web.pdf

Academic dishonesty will be treated on a case-by-case basis. Penalties may include imposing a failing grade on the assignment, imposing a failing grade in the course, or termination from the program.

Grade of incomplete

It is my policy to not give a grade of incomplete. You are expected to complete all assignments on time, with exception of grave emergency, as noted above under assignments. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

SCHEDULE

Session	Date	Topic	Readings and Assignments
1	9/1	Econ and health econ refresher	Arrow K. Uncertainty and the welfare economics of medical care. American Economic Review 1963; 53(5): 941-973. American Economic Review 1963; 53(5): 941-973. Difficult reading, but a classic! If you haven't read this paper by the first class, be sure to catch up in the first week or two as we will be constantly referencing it.
2	9/8	Adverse selection	Newhouse JP. Reimbursing health plans and health providers: efficiency in production versus

			selection. Journal of Economic Literature 1996; 34: 1236-63. Cutler DM and Reber S. Paying for health insurance: the tradeoff between competition and adverse selection. Quarterly Journal of Economics 1998; 113: 433-66. Brush up on Arrow, esp. pp. 945-46; 963-64
3	9/15	NO CLASS	
4	9/25	FRIDAY CLASS – no class 9/22 Moral hazard - demand	***Group presentation assigned*** Pauly MV. The economics of moral hazard: comment. American Economic Reivew 1968: 58; 3: 531-7. Arrow KJ. The economics of moral hazard: further comment. American Economic Review 1968; 58: 537-9. Manning WG, Newhouse WP, Duan N, et al. Health insurance and the demand for medical care: evidence from a randomized experiment. The American Economic Review 1987;

			77: 251-277. Brush up on Arrow, esp. pp. 945-46; 961-62
5	9/29	Moral hazard - supply	Gruber J, Owings M. Physician financial incentives and cesarian section delivery. RAND Journal of Economics 1996; 27(1): 99-123. Brush up on Arrow, esp. pp. 949-54; 955-58; 965-67
6	10/6	Health and the labor market	Summers LH. Some simple economics of mandated benefits. The American Economic Review 1989; 79: 177-83. Gruber J. The incidence of mandated maternity benefits. American Economic Review 1994; 622-41.
7	10/13	Presentations	
8	10/20	Presentations	
9	10/27	The role of non-profits in health care	***Individual paper critique 1 assigned*** Frank RG, Salkever DS. Nonprofit Organizations in the health sector. Journal of Economic Perspectives 1994; 8(4): 129-144. Dafny L, Ramanarayanan S. Does it matter if your health insurer is for-profit? Effects of ownership on premiums, insurance coverage, and medical spending. NBER Working Paper No. 18286. November 2013. Horwitz JR, Nichols A. What do nonprofits

			maximize? Nonprofit hospital service provision and market ownership mix. NBER Working Paper No. 13246. July 2007.
10	11/3	Horizontal consolidation and competition	Baker LC. Measuring competition in health care markets. Health Services Research 2001; 36: 223-251. Kessler DP, McClellan MB. Is hospital competition socially wasteful? Quarterly Journal of Economics 2000; 115: 577-615. A very difficult paper, but another classic!
11	11/10	Monopsony power: insurers as double-edged competition swords	Pauly MV. Managed care, market power, and monopsony. Health Services Research 1998; 33(5): 1439-1460. Moriya AS, Vogt WB, Gaynor M. Hospital prices and market structure in the hospital and insurance industries. Health Economics, Policy, and Law 2010; 5(4): 459-79. Trish EE, Herring BJ. How do health insurer market concentration and bargaining power with hospitals affect health insurance premiums? Journal of Health

			Economics 2015; 42: 104-114.
12	11/17	Vertical consolidation	***Individual paper critique 1 due; individual paper critique 2 assigned*** Williamson OE. The vertical integration of production: market failure considerations. American Economic Review 1971; 61(2): 112-23. Ciliberto F, Dranove D. The effect of physician-hospital affiliations on hospital prices in California. Journal of Health Economics 2006; 25: 29-38. Frakt AB, Pizer SD, Feldman R. Plan-provider integration, premiums, and quality in the Medicare Advantage market. Health Services Research 2013; 48: 1996-2013.
13	11/24	Econ in health policy: legalizing vices	Manning WG, Keeler EB, Newhouse JP, Sloss EM, Wasserman J. The taxes of sin: do smokers and drinkers pay their way? JAMA 1989; 261: 1604-1609 Anderson DM, Hansen B, Rees DI. Medical marijuana laws, traffic fatalities, and alcohol consumption. Journal of Law and Economics 2013; 56: 333-69. DiNardo J, Lemieux T. Alcohol, marijuana, and American youth: the unintended consequences of government regulation.

			Journal of Health Economics 2000; 20: 991-1010.
14	12/1	Econ in health policy: recessions and health	Modrek S, Stuckler D, McKee M, Cullen MR, Basu S. A review of health consequences of recessions internationally and a synthesis of the U.S. response during the great recession. Public Health Reviews 2013; 35(1). Epub ahead of print. Ruhm CJ. Recessions, healthy no more? Journal of Health Economics 2015; 42: 17-28.
15	12/8	Econ in health policy: does prevention save money?	***Individual paper critique 2 due*** Grosse SD, Teutsch SM, Haddix AC. Lessons from cost-effectiveness research for United States public health policy. Annual Review of Public Health 2007; 28: 365-91. McClellan M, Rivlin AM. Improving health while reducing cost growth: what is possible? Brookings, 2014. Cohen JT, Neumann PJ, The cost savings and cost-effectiveness of clinical preventive care. Robert Wood Johnson Foundation, 2009.

Health Policy and Management Specialization Competencies	Course Learning Objectives	Assessments
This course will help you achieve increased competency in health policy and management. By the time you graduate, you should be able to:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be addressed with the following assessments
Apply economic concepts and theories to the analysis of health care policy and management issues that inform decision-making and policy development	Analyze basic microeconomic models of household and organizational behavior in health, medical care, and health insurance, and make connections across these models	Students will collaborate in presenting a critique of a health economics paper and individually critique papers in health economics papers; policy relevance in these assignments must be addressed
Apply relevant theoretical/conceptual models and leadership principles to developing health policy and administrating health programs Evaluate public health programs and health policies and apply evaluation results to their improvement	Use microeconomics as a framework for decisionmaking in health policy Understand strengths and weaknesses of health care policies and reforms, and identify potential unintended effects on various populations and sectors of the economy	In the critiques described above, the pros and cons of economic policies will be evaluated, including economic tradeoffs and feasibility
Identify non-public health policies and describe how they can mitigate or exacerbate health disparities and influence the health of urban populations Identify and analyze the legal, economic, ethical and health bases and implications of public health policies that affect urban populations	Identify how non-health policies might affect health, medical care, or health insurance; and how health policies might affect non-health sectors, such as transportation, the environment, housing and employment	In the critiques described above, the intersectoral effects of economic policies will be evaluated, including effects on education, transportation, and so on, as well and legal and ethical implications
Analyze and critically evaluate theoretical and conceptual models used to describe the U.S. health care system and the delivery of health care	Critique strengths, limitations, and assumptions of health economics and policy literature Understand key incentives and tradeoffs involved in individual and organizational decisionmaking in health and health care; and how those tradeoffs and cognitive mistakes drive behavior	The critiques will highlight the basis of economics, the tradeoffs and incentives faced in patient and provider choice, and in behavioral mistakes driving these incentives.

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Lehman College
PHE 600: Biostatistics in Public Health
3 Credits
Fall 2015

Time and location	Wednesday, 6:00 pm – 8:40 pm, 125 Carmen Hall
Instructor	Dr. Glen Johnson, Associate Professor **glen.johnson@lehman.cuny.edu** (preferred communication method)
Office hours	Wednesday 3:30-5:00 pm, Thursday noon-1:30 pm, or by appointment, in 413 Gillet Hall
Course website	See "2015 Fall Term Biostatistics in Public Health PHE 600 XW81" at https://bbhosted.cuny.edu
Support resources	Lehman College has two tutoring centers on campus. The **Academic Center for Excellence (ACE)** provides appointment-based and drop-in tutoring in the humanities, social sciences and writing, as well as general writing skills. The **Science Learning Center (SLC)** provides drop-in tutoring for natural and computer science courses. To obtain more information about the ACE and SLC, please visit their website at http://www.lehman.edu/issp, or please call the ACE at 718-960-8175, and the SLC at 718-960-7707.
Course description	Application and interpretation of basic descriptive and inferential statistical methods in the analysis of public health data.
Course prerequisites	N/A
Course format	Lecture, computer lab, in-class assignments and homework
Required reading and resources	Gerstman, B.B. *Basic Biostatistics: Statistics for Public Health Practice*. 2015. Jones & Bartlett. Boston, MA.
Suggested reading and resources	• Rosner, B. Fundamentals of Biostatistics, 7th Edition. 2011. Cengage. ISBN-10: 0538733497 • https://www.khanacademy.org/math/probability • Search for more online sites

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Design an appropriate statistical analysis for a given public health research design	• Term Paper • Exam 2 • Final Exam
Apply basic statistical and informatics techniques	• Perform statistical calculations using a statistical software package • Create graphics and visual representations of statistical data using a statistical software package • Apply appropriate statistical analysis techniques based on the size of the data	• Term Paper • Exam 1 and 2 • Final Exam
Communicate public health information through oral, written, digital and visual presentation	• Write the interpretation of results from statistical analysis • Create and present an oral presentation of statistical output	• Term Paper
Collect, analyze and interpret public health data	• Identify continuous, discrete, nominal and ordinal data • Summarize these data types using • Bar charts, box plots, histograms, scatter plots • Measures of central tendency: mean, median, and mode of measures of spread: variance, interquartile range, range of frequency tables • Define and differentiate between precision and accuracy • Define and calculate marginal, joint and conditional probability • Use binomial distribution to calculate probabilities associated with binary data	• Exam 1 and 2 • Final Exam • Term Paper

	• Convert count data to rates and proportions • Estimate centrality and variance of a sampling distribution from the population distribution using the Central Limit Theorem • Construct and interpret confidence intervals for: • Population mean and population proportion • Large and small samples (using z and t sampling distributions) • Identify how changes in sample size, confidence level and other parameters affect the width of a confidence interval • Define null and alternative hypotheses for one-sided and two-sided inference • Perform inference tests for proportions using the normal approximation, for mean of a single sample, difference in means of two samples, and difference in means of paired samples • Use Z and t tables for hypothesis tests and constructing confidence intervals • Estimate the power of a t test • Calculate odds ratios, relative risks, and risk difference • Perform Pearson Chi-Square Test of Independence for r x c frequency tables • Perform and interpret one-way Analysis of Variance • Correct for multiple comparisons • Define type I and II error, power, and sample size and the relationships between them • Perform and interpret correlation and linear regression analysis	

Course Assessments
Understanding of the course material will be evaluated through:

Assignments. Selected problems at the end of each assigned chapter should be completed. Any supplemental problems assigned by the instructor also need to be completed. Homework counts toward your grade (15%) and if you are unable to do the homework you will have difficulty completing the midterms and final exam. A term project will also be assigned, which counts as 15% of your grade. The assignments component of the course has a total value of 30%.

Exams. The two exams (20% each) and the final (25%) exam are based on information from assigned readings, lecture materials and homework. There will be no re-takes or additional work for failed exams. There will be no make-up dates for tests, except in case of emergency supported by written documentation. All exams will be open-book. The final will be cumulative.

Class attendance. Students are required to attend class and participate in class discussions, counting for 5% of the grade. Attendance will be taken at the beginning of each class.

Grading
The relative weight of each course component is as follows:

Assessment	*Weight*
Assignments	30%
Mid-Term Exams (2)	40%
Class participation and Attendance	5%
Final exam	25%
	100%

The grading system for the course follows guidance in the Graduate Bulletin:

Percentage	Letter Grade	Quality Points
94-100	A	4.0
90-93	A-	3.7
87-89	B+	3.3
84-86	B	3.0
80-83	B-	2.7
77-79	C+	2.3
70-76	C	2.0
69 and below	F, WU	0

Withdrawal

The grade of W (withdrawal without penalty) is assigned only when a graduate student *officially* withdraws from a course. Students must complete the withdrawal process themselves, since the procedure requires a signature. No faculty member or program adviser can withdraw a student from a course. When students withdraw without completing the withdrawal procedure, the grade of WU is assigned for the course. This grade counts as a failure in computing the cumulative Grade Point Average. Graduate students should refer to the Graduate Bulletin and academic calendar for more information.

Grade of incomplete

The grade of INC (incomplete coursework) is awarded only when the course requirement has not been completed for good and sufficient reasons and when there is a reasonable expectation that the student can successfully complete the requirements of the course. For an instructor to grant an INC, the student must have met the instructor's attendance requirements in the course and have a passing semester average. An INC grade that has not been made up will change to a FIN grade (failure to complete coursework), remains permanently on the record, and counts as an F in computing the Grade Point Average. Refer to the Graduate Bulletin for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Program Director in writing, giving the factual reasons and basis for the complaint. A student who wishes to appeal a grade must initiate the process in the full semester following the one in which the contested grade was received. For further guidance, refer to the Graduate Bulletin.

Course Policies

Attendance and class participation

Students are expected to attend classes regularly, and instructors are required to record attendance for grading and counseling purposes. Individual instructors, as well as departments or degree programs, may establish specific attendance requirements. Instructors have the right to weigh attendance and class participation in determining grades. It is the student's responsibility to ascertain the effect attendance may have on their grade in a course. Students receiving financial aid must be certified as attending classes regularly for continuing eligibility.

Academic Integrity

While you are encouraged to discuss ideas with each other to facilitate your learning experiences, the work that is turned in must be your own. For example, allowing someone to copy your work, passing or sharing your answers to others, and/or doing work for others (including computer assignments) are examples of violations of Academic Integrity. For more information please visit and read the University of California Davis website (http://sja.ucdavis.edu/academic-integrity.html) or visit the Center for Academic Integrity at Clemson University (http://www.academicintegrity.org) for a detailed description of academic integrity. One of the more common and more

destructive breaches of academic integrity is plagiarism. Visit the Plagiarism.org Learning Center (http://www.plagiarism.org) for more information on how to avoid plagiarism. The concerns and guidelines provided in these websites will be seriously applied in this course. The complete text of the CUNY Academic Integrity policy can be found at this site:
http://web.cuny.edu/academics/info-central/policies/academic-integrity.pdf

Accessibility

In compliance with the American Disability Act of 1990 (ADA) and with Section 504 of the Rehabilitation Act of 1973, Lehman College is committed to ensuring educational parity and accommodations for all students with documented disabilities and/or medical conditions. It is recommended that all students with documented disabilities (Emotional, Medical, Physical and/ or Learning) consult the Office of Special Student Services in the Division of Student Affairs. The Office of Special Student Services is located in Shuster Hall, Room 238, Tel. (718) 960-8441, TTY (718) 960-8931.

Syllabus Modification

The instructor may modify the syllabus and study plan.

Course Schedule

Session	Date	Topic	Readings and Assignments
1	09/02/15	• Types of data • Basic study designs • Data presentation	Gerstman: Chapters 1 (p. 1-14), 2 (p. 21-41) and 3 (p. 43-68) Exercises: 1.1-1.8, 1.10-1.11, 2.1, 2.5, 3.5
2	09/09/15	• Numerical summary measures • Introduction to term project	Gerstman: Chapter 4 (p. 77-99) Exercises: 4.1-4.14
3	09/16/15	• Introduction to Probability • Binomial distribution	Gerstman: Chapters 5 (p. 105-128) & 6 (p. 133-141) Exercises: 5.1-5.7, 5.8 (a & b), 5.10-5.12, 6.1-6.5, 6.7, 6.8
	09/23/15	**No Class**	
4	09/30/15	• Normal distribution • Introduction to statistical inference	Gerstman: Chapters 7 (p. 147-163) & 8 (p. 175-190) Exercises: 7.1-7.10, 8.1, 8.3, 8.5, 8.6, 8.7, 8.9
5	10/07/15	**Exam 1 – in class**	
6	10/14/15	Introduction to hypothesis testing and confidence intervals	Gerstman: Chapters 9 and 10 Exercises: 9.1-9.13, 10.1-10.9
7	10/21/15	• Inference about a mean • Comparing two means	Gerstman: Chapter 11 and 12 Exercises: 11.1-11.7, 11.11, 11.12, 11.13a, 11.14-11.18, 12.1-12.3, 12.6, 12.19, 12.20
8	10/28/15	One-way ANOVA	Gerstman: Chapter 13 (p. 295-316) Exercises: 13.1-13.6
9	11/04/15	**Exam 2 – in class**	
10	11/11/15	Inference about a proportion	Gerstman: Chapter 16 Exercises: 16.1-16.5, 16.9-16.10, 16.19, 16.20, 16.24
11	11/18/15	Comparing two proportions & Contingency tables	Gerstman: Chapters 17 (p. 423-437) & 18 (p. 459-482) Exercises: 17.1, 17.2, 17.3 (a, b), 17.4, 17.5, 17.7(a), 17.8, 18.3, 18.4, 18.6, 18.9 (a), 18.10
12	11/25/15	Correlation & Linear Regression	Gerstman: Chapter 14 (p. 333-465) Exercises: 14.1 (a,b) and 14.3 (a,b,c)
13	12/02/15	Reading a Journal Article	Assigned Readings **Term projects due**
14	12/09/15	Review and Practice	
15	12/16/15	**Final Exam**	

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Lehman College
PHE 700: History and Philosophy of Public Health
3 Credits
Fall 2015

Time and location	Mondays, 6-8:40pm Lehman College, location TBA
Instructor	Emma K. Tsui, PhD, MPH emma.tsui@lehman.cuny.edu (preferred mode of communication) 347-577-4038 Gillet Hall, Room 422D
Office hours	Mondays 4:30-5:30pm and Thursdays 3:30-5:30pm (walk-in) and other times by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available. Lehman's Academic Center for Excellence (ACE) provides appointment-based and drop-in tutoring and general writing and academic skills workshops. To obtain more information about the ACE, please visit http://www.lehman.edu/issp or call the ACE at 718-960-8175.
Course description	Examination of historical development and philosophical concepts underlying the practice of public health; social, political, and institutional forces shaping public health policy and the commitment to monitor, protect, and promote the public's health; emphasis on the relationship between public health knowledge, values, and actions.
Course prerequisites	N/A
Course format	In-person lecture and discussion-based sessions
Required reading and resources	Hives of Sickness: Public Health and Epidemics in New York City. Edited by David Rosner (New Brunswick, N.J.: Rutgers University Press, 1995). Price: $30.29, Amazon Available on reserve at the Leonard Lief Library Institute of Medicine. The Future of the Public's Health in the 21st Century. Free download at: http://www.iom.edu/Reports/2002/The-Future-of-the-Publics-Health-in-the-21st-Century.aspx Other articles as assigned under "Schedule".
Suggested reading and resources	See listing under "Schedule"

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Communicate public health information through oral, written, digital and visual presentation	• Summarize a peer-reviewed journal article • Synthesize peer-reviewed journal articles on a specific topic • Trace and discuss the historical development, themes and ongoing controversies in the field of public health	All assessment methods
Collect, analyze and interpret public health data	• Use electronic databases to gather public health information	Journal article summaries, annotated bibliography, and synthesis paper
Interpret and analyze public health literature and apply evidence-based research	• Summarize a peer-reviewed journal article • Synthesize peer-reviewed journal articles on a specific topic	Journal article summaries, annotated bibliography, and synthesis paper

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*

Analyze critical health inequalities confronting urban populations by social and economic determinants such as race, ethnicity, income and neighborhood	• Trace and discuss the historical development, themes and ongoing controversies in the field of public health	Participation in class discussions
Identify aspects of public health ethics and values of social justice that affect public health practice and decision-making	• Define, understand and discuss the philosophical orientation of public health • Trace and discuss the historical development, themes and ongoing controversies in the field of public health	Participation in class discussions, presentation on a historical figure
Synthesize theories, methods and practice of public health to address income inequities within communities	• Trace and discuss the historical development, themes and ongoing controversies in the field of public health	Participation in class discussions, synthesis paper

Course Assessments
The following assignments are meant to give you a chance to practice and develop expertise in skills that are fundamental to the forms of public health research and writing that you will be doing throughout the MPH program. These include: 1) understanding and summarizing the key points of public health journal articles, 2) searching the public health literature to find articles on a given topic, and 3) synthesizing what you've learned from those articles. These are critical skills for succeeding in the program and as a public health professional. We have designed these assignments to be clear, manageable, and short. This means we expect that all of your work will be thoughtful and of the highest quality.

Journal Article Summaries (2)
You will practice reading an assigned journal article, summarizing and writing up its key points, using the guidelines and practices discussed in class. You will receive feedback from your first journal article summary and you are expected to put this feedback to use when writing your second journal article summary.

Annotated Bibliography
For this assignment, you will conduct a search of the literature on one of three topics. You will receive guidance from our health sciences librarian on how to effectively search the scientific literature. Using the articles you find that are most closely related to your topic, you will construct an annotated bibliography of at least 6 articles. This is an extremely small bibliography and the goal is to choose high-quality, well-targeted articles that can be synthesized into a short paper on your chosen topic.

Synthesis Paper
In a paper of 400-800 words, **synthesize** what you learned about your topic. Doing well on this assignment requires that you integrate findings from all of your sources and that you do not merely report findings of different studies sequentially. If you find that any articles from your bibliography cannot be synthesized comfortably into your paper, then you can replace them with more suitable articles.

Presentation on a PH historical figure/topic
You will give a presentation of 5-10 minutes on a public health historical figure/topic, using the rubric presented in class for guidance.

Grading
Evaluation criteria
Grading rubrics will be provided via the course website for course assignments.

The relative weight of each course component is as follows:

Assessment	Weight
Participation in class discussions/attendance	15%
Journal Article Summaries (2)	25%

Annotated Bibliography	25%
Synthesis Paper	25%
Presentation on a PH historical figure	10%
	100%

The grading system for the course follows guidance given by the Lehman College Department of Health Sciences:

Letter Grade	Points
A	93-100%
A-	90-92%
B+	87-89%
B	83-86%
B-	80-82%
C+	77-79%
C	73-76%
C-	70-72%
F	< 70%

Withdrawal

The grade of W (withdrawal without penalty) is assigned only when a graduate student *officially* withdraws from a course. Students must complete the withdrawal process themselves, since the procedure requires a signature. No faculty member or program adviser can withdraw a student from a course. When students withdraw without completing the withdrawal procedure, the grade of WU is assigned for the course. This grade counts as a failure in computing the cumulative Grade Point Average. Graduate students should refer to the Graduate Bulletin and academic calendar for more information.

Grade of incomplete

The grade of INC (incomplete coursework) is awarded only when the course requirement has not been completed for good and sufficient reasons and when there is a reasonable expectation that the student can successfully complete the requirements of the course. For an instructor to grant an INC, the student must have met the instructor's attendance requirements in the course and have a passing semester average. An INC grade that has not been made up will change to a FIN grade (failure to complete coursework), remains permanently on the record, and counts as an F in computing the Grade Point Average. Refer to the Graduate Bulletin for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Program Director in writing giving the factual reasons and basis for the complaint. A student who wishes to appeal a grade must initiate the process in the full

semester following the one in which the contested grade was received. For further guidance, refer to the Graduate Bulletin.

Course Policies

Attendance and class participation

All members of the class are expected to actively participate in class lectures, activities, and discussions, and to complete assigned reading **and other assigned activities** prior to class. Attendance means more than just showing up; it means doing the reading and, more importantly, actively engaging with the ideas and issues brought up in the reading and in class. Your comments, questions and opinions are essential ingredients for making this course a challenging and rewarding experience for your classmates as well as for yourself, and it is expected that you come prepared to make this contribution. If you are going to be late or have to miss a class, please contact me via email as far in advance as possible. Points may be deducted for absences, tardiness, or leaving class early.

Late/incomplete submission of assignments

I expect that all assignments that are not to be completed in class will be submitted to me via email or Blackboard by midnight on the due date (usually the night before a class session). Assignments submitted after the due date will have half a letter grade deducted for each day that the assignment is late, except in cases of significant medical issues or other serious situations.

Make-ups, rewrites, and extra credit

Make-up assignments will not be allowed in this course, nor will rewrites. Extra credit assignments may be made available to students as opportunities during the semester present themselves.

Expectations of students

I expect the classroom to serve as a space of respect and collaborative learning and that the course assignments will help you to develop specific skills. To that end, I expect that:

- you will arrive on time and stay for the entire class
- you will not use cell phones during class, except during breaks
- you will visit our Blackboard site frequently, as that will be our primary way of communicating with one another outside of class. Class announcements and supplemental materials will be posted there frequently. Course announcements will also be sent out using the Lehman e-mail system. If you have any questions about your Lehman email address or your password, or if you have any problems accessing the site, please call the computer helpdesk at 718-960-1111.
- your writing for assignments will be of high quality, presented in a readable and consistent manner: double-spaced, typewritten, with one-inch margins all around, and **proofread**.

Expectations for the instructor

- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during in-class discussions
- Respond to student email within 24 hours Monday through Friday.
- Grading and feedback on assignments within 2 weeks of the due date.

Accessibility

Lehman College is committed to providing access to all programs and curricula to all students. Students with disabilities who may need classroom accommodations are encouraged to register with the Office of Student Disability Services. For more information, please contact the Office of Student Disability Services, Shuster Hall, Room 238, at 718-960-8441.

Academic integrity

The faculty and administration of Lehman College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete text of the CUNY Policy on Academic Integrity and the Lehman College procedure for implementing the policy can be found in the Graduate Bulletin.

Course Schedule

Please note that the schedule and assignments listed below are subject to change. Additional readings and handouts may be provided, and session topics and activities may be altered if necessary. Opportunities for group/individual work may be scheduled during some sessions. All readings that are not part of the required text will be available via Blackboard. For important dates (e.g., course drop and withdrawal), please refer to Lehman's graduate academic calendar: http://www.lehman.edu/registrar/calendars.php.

	Date	**Topic**	**Readings and Assignments** (Required unless labeled "recommended")
1	8/31	Introduction to the course	• P.H.101: Chap. 1 Public Health: The Population Health Approach • 10 Public Health Achievements, United States, 1900-1999 • 10 Public Health Achievements, United States, 2000-2010 *Recommended* • Glass, et al. "Causal Inference in Public Health," Annu. Rev. Public Health (2013). 34:61-75.
	9/7	**No class (Labor Day)**	

2	9/10	Health equity & inequity	• IOM Report: Chap. 1 pp. 19-45 • Phelan, J. Link, B, and Tehranifar, P. "Social Conditions as Fundamental Causes of Health Inequalities: Theory, Evidence, & Policy Implications," Journal of Health and Social Behavior (2010): 41S S28-S40. *Recommended* • Raphael, Dennis. "Public policies & the problematic USA population health profile". Health Policy. 84 (2007): 101-111. • Marmot, M.G. "Inequalities in Health," New England Journal of Medicine (12 July 2001): 134-136.
	9/14	**No class**	
3	9/21	Changing patterns of health and illness (*1918 Influenza* video)	• Rothstein, William G. "Trends in Mortality in the Twentieth Century," reprinted in Lee and Estes, The Nation's Health, 7th ed. pp. 11-30. • "Achievements in Public Health, 1900-1999: Control of Infectious Diseases," Lee and Estes, The Nation's Health, 7th ed. pp. 31-37. *Recommended* • Schroeder, SA. "We can do better – improving the health of the American people." NEJM. 2007; 35: 1221-8. (Blackboard) **Journal article summary #1 due by midnight on September 20th**
4	9/28	How to search for articles	Meet in Library Lobby **Complete online library assignment**
5	10/5	Location as a social determinant of health I: Urban health then and now	• IOM Report: Chap. 2, pp. 46-95 • Hives of Sickness: Intro pp.1-21: and Condran, "Changing Patterns of Epidemic Disease in New York City", pp. 27-41
	10/12	**No class (Columbus Day)**	
6	10/19	Responding to epidemics (*Typhoid Mary* video)	• Hives: Leavitt, "Be Safe. Be Sure" New York City's Experience with Epidemic Smallpox", pp. 93-114. • Hives: Rogers, "A Disease of Cleanliness:

			Polio in New York City, 1900-1990", pp. 115-130. **Journal article summary #2 due by midnight on October 18th**
7	10/26	Whose view matters? Community perspectives on public health problems	• IOM Report, Chap. 4, pp. 178-211 • Barbara Israel et.al. "Review of Community-based Research: Assessing Partnership Approaches to Improve Public Health", Annual Review of Public Health, 1998, 19(1):173-203.
8	11/2	Race as a social determinant of health: The Case of Tuskegee (*Deadly Deception* film)	• Allan Brandt, "Racism and Research: The Case of the Tuskegee Syphilis Study: The Hastings Center Report, Dec. 1978, 8(6):21-29. • Hives: Kraut, "Plagues and Prejudice: Nativism's Construction of Disease in Nineteenth- and Twentieth-Century New York City", pp. 65-90.
9	11/9	Public health & political activism: The Case of HIV/AIDS	• Hives: Ronald Bayer, "The Dependent Center: The First Decade of the AIDS Epidemic in New York City", pp. 131-150. • Allan Brandt "AIDS in Historical Perspective: Four Lessons from the History of Sexually Transmitted Diseases" American Journal of Public Health, 1988, 78(4): 367-371.
10	11/16	Location as a social determinant of health II: Public health & housing (film *Unnatural Causes: Place Matters)*	• Hives: Blackmar, "Accountability for Public Health: Regulating the Housing Market in Nineteenth-Century New York City, pp. 42-64. **Annotated bibliography due by midnight on November 15th**
11	11/23	The relationship of public health to health care	• IOM Report: Chap. 5, pp. 212-26 • Gostin, Lawrence O. and Madison Powers." What Does Social Justice Require for the Public's Health? Public Health Ethics and Policy Imperatives". Health Affairs. 25(4): 1055-1060. July/August 2006

12	11/30	Public health & corporate power	• Gerald Markowitz and David Rosner,"The Limits of Thresholds: Silica and the Politics of Science 1935-1990" American Journal of Public Health, February 1995, 85(2):253-262. • Read one article from Corporations and Health Watch: http://corporationsandhealth.org/
13	12/7	Public health & globalization	• McMichael AJ, Beaglehole R. "The changing global context of public health." The Lancet. 2000, 356: 495-499. • Leonard L. "Working 'off the record': polio eradication and state immunity in Chad." Critical Public Health. 2011, 21(3): 257-271.
14	12/14	Public health ethics, values and human rights	• Bayer, Ronald; Fairchild, Amy L. "The Genesis of Public Health Ethics", Bioethics, Nov 2004, 18(6):473-492; • Paul Farmer, "Pathologies of Power: Rethinking Health and Human Rights", American Journal of Public Health, 1999, 89(10):1486-96;
15			**Synthesis paper due by midnight on December 18th**

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Lehman College
PHE 702: Environmental Health
3 Credits
Fall 2015

Time and location	Gillet Hall, Room 311, Tuesdays, 6:00-8:40
Instructor	Andrew Maroko, PhD. Gillet Hall, 323 Andrew.Maroko@lehman.cuny.edu [best way to contact me] 718-960-1830
Office hours	Mondays 3:00p-5:00p and by appointment. Please email first.
Course website	This course uses Blackboard. https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Impact of human activities on environmental quality and human health; effect of environment on health and disease; examination of ecological principles, environmental health assessment, health policy/law and environmental justice; human population dynamics; and types and sources of pollutants and approaches to prevention and control. Environmental disease monitoring and health risk assessment are examined using GISc.
Course prerequisites	N/A
Course format	Lecture
Required reading and resources	"Essentials of Environmental Health,2nd ed." by Robert Friis, 2010, Jones and Bartlett Publishers, Sudbury, MA Additional Articles TBA
Suggested reading and resources	"Geographies of Health: An Introduction (2nd ed.)," by Anthony Gatrell and Susan Elliot, 2009, Wiley-Blackwell. "Environmental Health: From Global to Local," by Howard Frumkin, (Editor), 2005, Jossey-Bass. "GIS for the Urban Environment," by Juliana Maantay and John Ziegler, 2006, ESRI Press, Redlands, Ca "GIS and Public Health," by Ellen Cromley and Sara McLafferty, 2002, Guilford Press, New York, NY "Cartographies of Disease: Maps, Mapping, and Medicine," by Tom Koch, 2005, ESRI Press, Redlands, CA "The Ghost Map: The Story of London's Most Terrifying Epidemic—and How it Changed Science, Cities, and the Modern World" by Steven Johnson, 2006, Riverhead Books, Penguin Group(USA) Inc, New York, NY.

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply the public health core functions of assessment, policy development and assurance	• Describe approaches for identifying and assessing the human and ecological impacts of workplace, community, and residential environmental hazards	• Midterm and Final Exam • Assignments 2-6 • Quizzes 1-9
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Explain the importance of working collaboratively with diverse communities, sectors, and constituencies in the development, implementation, and evaluation of workplace and environmental health programs and policies. • Describe the elements, appropriate use and limitations of key risk assessment, risk management and risk communication strategies	• Midterm Exam • Quizzes 2, 3, 5, 6 • Assignments 4, 5
Apply basic statistical and informatics techniques	• Use informatics techniques to retrieve, analyze and summarize environmental health data • Use spreadsheet applications to collect, conduct descriptive analyses, and graphically represent data	• Midterm and Final Exam • Assignments 1-3, 6 • Quizzes 1, 2
Communicate public health information through oral, written, digital and visual presentation	•	• Assignments 2-6
Explain how social, behavioral, biomedical and environmental determinants affect population health	• Understand the basic mechanisms of toxicity and pathobiology • Achieve a basic understanding of how genetic, physiologic, psychosocial factors influence susceptibility to adverse health outcomes following exposure to workplace, community,	• Midterm and Final Exam • Assignments 2-6 • Quizzes 1-9

	and residential environmental hazards • Identify the major types and sources of environmental agents that can impact health in workplace, urban community and residential settings. • Describe the pathways by which major environmental agents cause human exposure in workplace, urban community and residential settings. • Explain the reasons, sources, and impacts of inequitable distribution of environmental hazards	
Design and evaluate interventions to prevent or control public health problems	• Describe basic concepts and strategies for controlling environmental hazards in workplace, community, and residential settings and the advantages and limitations of	• Midterm and Final Exam • Quizzes 3-9
Describe the legal foundations of the U.S. public health system and its interrelationships with other systems including health care, education and environmental protection	• Identify the major provisions, accomplishments and limitations of key environmental and occupational regulatory programs, guidelines, and authorities at the federal, state and local level.	• Midterm and Final Exam • Quizzes 3, 9

Course Assessments

Your understanding of the course material will be evaluated through assignments (6), quizzes (9), midterm exam, final exam, and in-class discussion and participation.

Grading

Evaluation criteria: Grades will not be curved, there will be no extra credit and no grades will be dropped.

Class Participation: Class participation includes engagement in discussions and answering of questions during lecture. Lateness and absence will count against this grade. Class participation accounts for 10% of the final grade.

Assignments: Assignments (6) consist of in-class and take-home work. They include data compilation and analysis using Excel, internet-based research, and short essays. All sources must be properly cited using in-text citation (name and date in the body of the text) followed by a list of sources in a references section at the end (APA format is preferred).
Assignments will receive the following possible grade:

Full Credit (FC):	100%
Full Credit Minus (FC-):	90%
Partial Credit (PC):	75%
Partial Credit Minus (PC-):	50%
No Credit (NC):	0%

All assignments must be submitted via Blackboard (or emailed to me if Blackboard is down) before lecture on the due date to receive credit. Written assignments must be saved as a word document (.DOC or .DOCX). 1" margins, 1.5 spacing, and 10-12 point fonts are preferred. The documents must be saved as *LastName_FirstName_AssignmentName* (e.g. Smith_Joe_Assignment1.doc). If using email, the email containing the file should be titled using the course number (e.g. PHE 702) followed by the student name and assignment name (e.g. PHE702, Joe Smith, Assignment 1).
Assignments comprise 20% of the final grade.

Quizzes: Short online quizzes (9) will be delivered through and taken on blackboard. Most, but not all, weeks will have a quiz. They are to be taken independently although students are welcome to use their books, notes, or other resources. The quizzes must be completed before the next lecture. No late submissions will be accepted.

Midterm: The midterm will cover sessions 1-7, which includes all readings, assignments, quizzes, and lectures. It is composed of short answer and multiple choice questions and is worth 25% of the final grade.

Final: The final exam will cover sessions 9-14 (readings, assignments, quizzes, and lectures). It is composed of short answer and multiple choice questions and is worth 25% of the final grade.

The relative weight of each course component is as follows:

Assessment	Weight
Participation / Attendance	10%
Assignments	20%
Quizzes	20%
Midterm Exam	25%
Final Exam	25%
TOTAL	*100%*

The grading system for the course follows guidance in the Graduate Bulletin:

Letter Grade	Quality Points
A	4.0
A-	3.7
B+	3.3
B	3.0
B-	2.7
C+	2.3
C	2.0
F, WU	0

Letter Grade	Numeric Grade
A	93-100%
A-	90-92%
B+	87-89%
B	83-86%
B-	80-82%
C+	77-79%
C	70-76%
F	< 70%

Withdrawal

The grade of W (withdrawal without penalty) is assigned only when a graduate student *officially* withdraws from a course. Students must complete the withdrawal process themselves, since the procedure requires a signature. No faculty member or program adviser can withdraw a student from a course. When students withdraw without completing the withdrawal procedure, the grade of WU is assigned for the course. This grade counts as a failure in computing the cumulative Grade Point Average. Graduate students should refer to the Graduate Bulletin and academic calendar for more information.

Grade of incomplete

The grade of INC (incomplete coursework) is awarded only when the course requirement has not been completed for good and sufficient reasons and when there is a reasonable expectation that the student can successfully complete the requirements of the course. For an instructor to grant an INC, the student must have met the instructor's attendance requirements in the course and have a passing semester average. An INC grade that has not been made up will change to a FIN grade (failure to complete coursework), remains permanently on the record, and counts as an F in computing the Grade Point Average. Refer to the Graduate Bulletin for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Program Director in writing giving the factual reasons and basis for the complaint. A student who wishes to appeal a grade must initiate the process in the full semester following the one in which the contested grade was received. For further guidance, refer to the Graduate Bulletin.

Course Policies

Attendance and class participation
Lateness or absence will count against your class participation grade unless there is an emergency or it is cleared with the professor in a timely fashion before class. If you miss a session, it is your responsibility to check with your classmates for notes and other course materials.

Late/incomplete submission of assignments
Late assignments/quizzes/exams will generally not be accepted unless it is cleared with the professor well before the due date. Under special circumstances, unexcused late assignments may be accepted (at the professor's discretion) but one full letter grade will be subtracted. If there is a medical reason for lateness, please supply documentation.

Make-ups, rewrites, and extra credit
There is no extra credit or re-writes in this course. Make-ups may be permitted if a late/incomplete assignment as described above is granted.

Expectations of students
Blackboard will be used to distribute and update assignments, readings, and other course materials. It is the student's responsibility to check it regularly.
The use of cell phones and other similar devices are not permitted during class.
Since some lectures may take place in a computer lab, the following additional rules apply:
- Monitors must be turned off during lectures
- No drinking or eating of any kind in the lab
- No printing of any materials without permission from the instructor or the lab manager
Students are expected to reply to emails (using their blackboard email address) promptly (e.g., within two business days) with proper academic writing style.

Expectations for the instructor
Students can expect the instructor to reply to emails promptly (within 2 business days). If you do not receive a reply within that time frame, please email again.
Assignments will be graded in as timely a fashion as possible, generally within 2 weeks of the due date. If you are granted a late assignment, this turn-around time does not apply.

Accessibility
Lehman College is committed to providing access to all programs and curricula to all students. Students with disabilities who may need classroom accommodations are encouraged to register with the Office of Student Disability Services. For more information, please contact the Office of Student Disability Services, Shuster Hall, Room 238, at 718-960-8441.

Academic integrity
The faculty and administration of Lehman College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete text of the CUNY Policy on Academic Integrity and the Lehman College procedure for implementing the policy can be found in the Graduate Bulletin.

The Academic Center for Excellence (ACE) and the Science Learning Center (SLC):
Lehman College has two tutoring centers on campus. The ACE provides appointment-based and drop-in tutoring in the humanities, social sciences and writing, as well as general writing skills. The SLC provides drop-in tutoring for natural and computer science courses. To obtain more information about the ACE and SLC, please visit their website at http://www.lehman.edu/issp, or please call the ACE at 718-960-8175, and the SLC at 718-960-7707.

Course Schedule

- Schedule, readings, assignments, and quizzes are subject to change
- Readings are to be done *before* the class in which they are discussed
- Assignments and quizzes are due *before* the *next* session
- See the Lehman academic calendar for important dates

Session	Date	Topic	Chapter Readings	Assignments/Quizzes
1	9/1	Introduction to the Course; Review of EH Principles and GISc in public health research.		A1: Excel Basics (due 9/8)
2	9/8	Environmental Epidemiology	Friis, Chapters 1 and 2; Gatrell Chapter 1*	A2: Population Q1: Lecture 2 (due 9/25)
3	**9/25**	Environmental Toxicology	Friis, Chapter 3; Koch, Chapters 1 and excerpts of 11 (handout)	A3: Odds Ratios Q2: Lecture 3 (due 9/29)
4	9/29	Environmental Policy and Regulation / Place Matters	Friis, Chapter 4; Gatrell Chapter 2*; Maantay article (Glasgow)*	Q3: Lecture 4 (due 10/6)
5	10/6	Zoonotic and Vector-Borne Diseases	Friis, Chapter 5; Gatrell Chapter 3*	Q4: Lecture5 (due 10/13)
6	10/13	Toxic Metals and Elements	Friis, Chapter 6	A4: Toxicology Q5: Lecture6 (due 10/20)
7	10/20	Pesticides and Other Organic Chemicals	Friis, Chapter 7	--
8	10/27	**Midterm Exam**	--	--
9	**11/3**	Ionizing and Nonioninzing Radiation (no in-class meeting - APHA)	Friis, Chapter 8	Q6: Lecture9 (due 11/10)
10	11/10	Water Quality	Friis, Chapter 9; Gatrell Chapter 8*	Q7: Lecture10 (due 11/17)
11	11/17	Air Quality I	Maantay article (Bronx)*; Friis, Chapter 10	A5: Global Warming
12	11/24	Air Quality II	--	A6: PM2.5 Collection Q8: Lecture12 (due 12/1)
13	12/1	Food Safety	Friis, Chapter 11	Q9: Lecture13 (due 12/8)
14	12/8	Solid and Liquid Wastes; Course Review for Exam	Friis, Chapter 12	--
15	12/22	**Final Exam**	--	--

Last Updated July 23, 2015

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Lehman College
PHE 704: Environmental Health GISc Lab
1 Credit
Fall 2015

Time and location	Gillet Hall, Room 322 (GISc Lab) 8:50 – 9:30
Instructor	Andrew Maroko, PhD. Gillet Hall, 323 Andrew.Maroko@lehman.cuny.edu [best way to contact me] 718-960-1830
Office hours	Mondays 3:00p-5:00p and by appointment. Please email first.
Course website	This course uses Blackboard. https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Application of GISc to examine and analyze environmental health, population, and natural and built environmental data for planning and research.
Course Co-requisites	Co-requisite: PHE 702
Course format	Lecture and GISc Lab exercises
Required reading and resources	Lab instructions and readings provided by instructor via blackboard
Suggested reading and resources	"GIS for the Urban Environment," by Juliana Maantay and John Ziegler, 2006, ESRI Press, Redlands, Ca "GIS and Public Health," by Ellen Cromley and Sara McLafferty, 2002, Guilford Press, New York, NY "GIS Tutorial" by Wilpen Gorr and Kristen Kurland, 2008, ESRI Press, Redlands, CA "Cartographies of Disease: Maps, Mapping, and Medicine," by Tom Koch, 2005, ESRI Press, Redlands, CA

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments*:
Apply the public health core functions of assessment, policy development and assurance	• Use GISc as an approach for identifying and assessing (1) the human and ecological impacts of environmental hazards, (2) the geography of disease, and (3) the association between health and socio-demographics	Labs 2, 3, 7, 8
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Identify the elements, appropriate use and limitations of key risk assessment, risk management and risk communication strategies	Labs 7-9
Apply basic statistical and informatics techniques	• Use informatics techniques to retrieve, analyze and summarize health data • Use spreadsheet applications to collect and graphically represent data	Labs 1-9
Explain how social, behavioral, biomedical and environmental determinants affect population health	• Explore and assess cartographically and geo-statistically the inequitable distribution of environmental hazards.	Labs 2-4

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments*:
Synthesize theories, methods, and practice of public health GISc	• Conduct simple spatial analyses and visualizations of health data	Labs 2-9
Interpret and analyze cartographic information	• Create and interpret simple cartographic products.	Labs 1-9
Analyze geographic health data in terms of spatial distribution and associations with other variables	• Utilize simple GI Science techniques such as buffering to examine health data	Labs 7-9
Understand, identify, estimate, and analyze environmental exposures and their impacts on urban public health	• Use simple buffers and co-location to identify potential environmental exposures and correlate them to specific health outcomes.	Labs 7-9
Effectively communicate public health information through oral, written and visual presentations	• Create simple maps to display environmental health data	Labs 1-9

Course Assessments

Your understanding of the course material will be evaluated through lab assignments and in-class discussion and participation.

Grading

Evaluation criteria
Labs will be evaluated based on a rubric (see blackboard). Grades will not be curved, there will be no extra credit and no grades will be dropped.

The relative weight of each course component is as follows:

Assessment	Weight
Participation/ Attendance	10%
Lab Assignments	90%
TOTAL	100%

The grading system for the course follows guidance in the Graduate Bulletin:

Letter Grade	Quality Points
A	4.0
A-	3.7
B+	3.3
B	3.0
B-	2.7
C+	2.3
C	2.0
F, WU	0

Letter Grade	Numeric Grade
A	93-100%
A-	90-92%
B+	87-89%
B	83-86%
B-	80-82%
C+	77-79%
C	70-76%
F	< 70%

Withdrawal
The grade of W (withdrawal without penalty) is assigned only when a graduate student *officially* withdraws from a course. Students must complete the withdrawal process themselves, since the procedure requires a signature. No faculty member or program adviser can withdraw a student from a course. When students withdraw without completing the withdrawal procedure, the grade of WU is assigned for the course. This grade counts as a failure in computing the cumulative Grade Point Average. Graduate students should refer to the Graduate Bulletin and academic calendar for more information.

Grade of incomplete
The grade of INC (incomplete coursework) is awarded only when the course requirement has not been completed for good and sufficient reasons and when there is

a reasonable expectation that the student can successfully complete the requirements of the course. For an instructor to grant an INC, the student must have met the instructor's attendance requirements in the course and have a passing semester average. An INC grade that has not been made up will change to a FIN grade (failure to complete coursework), remains permanently on the record, and counts as an F in computing the Grade Point Average. Refer to the Graduate Bulletin for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Program Director in writing giving the factual reasons and basis for the complaint. A student who wishes to appeal a grade must initiate the process in the full semester following the one in which the contested grade was received. For further guidance, refer to the Graduate Bulletin.

Course Policies

Attendance and class participation
Lateness or absence will count against your class participation grade unless there is an emergency or it is cleared with the professor in a timely fashion before class. If you miss a session, it is your responsibility to check with your classmates for notes and other course materials.

Late/incomplete submission of assignments
Late assignments/quizzes/exams will generally not be accepted unless it is cleared with the professor well before the due date. Under special circumstances, unexcused late assignments may be accepted (at the professor's discretion) but one full letter grade will be subtracted. If there is a medical reason for lateness, please supply documentation.

Make-ups, rewrites, and extra credit
There is no extra credit or re-writes in this course. Make-ups may be permitted if a late/incomplete assignment as described above is granted.

Expectations of students
Blackboard will be used to distribute and update assignments and other course materials. It is the student's responsibility to check it regularly.
The use of cell phones and other similar devices are not permitted during class.
Since the class takes place in the GISc computer lab, the following additional rules apply:
- Monitors must be turned off during lectures
- No drinking or eating of any kind in the lab
- No printing of any materials without permission from the instructor or the lab manager
Students are expected to reply to emails (using their blackboard email address) promptly (e.g., within two business days) with proper academic writing style.

Expectations for the instructor

Students can expect the instructor to reply to emails promptly (within 2 business days). If you do not receive a reply within that time frame, please email again.
Assignments will be graded in as timely a fashion as possible, generally within 2 weeks of the due date. If you are granted a late assignment, this turn-around time does not apply.

Accessibility

Lehman College is committed to providing access to all programs and curricula to all students. Students with disabilities who may need classroom accommodations are encouraged to register with the Office of Student Disability Services. For more information, please contact the Office of Student Disability Services, Shuster Hall, Room 238, at 718-960-8441.

Academic integrity

The faculty and administration of Lehman College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete text of the CUNY Policy on Academic Integrity and the Lehman College procedure for implementing the policy can be found in the Graduate Bulletin.

Course Schedule

- Schedule, readings, assignments, and quizzes are subject to change
- All lab assignments are due BEFORE the next one begins (e.g. lab 1 is due before class on 9/8)
- See the Lehman academic calendar for important dates

Session	Date	Topic	Lab Assignment
1	9/1	Introduction to GISc	**Lab1:** GISc demo lab and handout (Maantay)
2	9/8	Thematic mapping	**Lab2:** Dot Density Maps with Health Data
3	**9/25**	Data classification	**Lab3:** Choropleth Maps with Health Data
4	9/29	Creating layouts	**Reading:** Maroko's map layout tips **Lab4:** Creating a Map Layout – Health and Poverty
5	10/6	Acquiring health data and census data from the internet	**Lab 5:** Downloading Health and Demographic Data
6	10/13	Spatialization of attribute data	**Lab 6:** Spatializing Tabular Data
7	10/20	…	Continue Lab 6
8	10/27	Proximity analysis	**Lab 7:** Simple Geoprocessing
9	**11/3**	… (no in-class meeting - APHA), the lab may remain open, please check website.	Continue Lab 7
10	11/10	Environmental justice analysis with GISc	**Lab8:** Layout of Environmental variables Influencing Blood Lead Levels
11	11/17	…	Continue Lab 8
12	11/24	Environmental health analysis with GISc	**Lab9:** Blood Lead Level Report
13	12/1	…	Continue Lab 9
14	12/8	…	**Lab 9 Due**
15	12/22	No Final	**--**

Last Updated July 23, 2015

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Lehman College
PHE 705: Principles of GISc for Public Health
3 Credits
Fall 2015

Time and location	Gillet Hall, 311 (lecture) and 322 (lab); Monday, 6:00pm – 9:30pm
Instructor	Andrew Maroko, PhD., Gillet Hall, 323 Andrew.Maroko@lehman.cuny.edu [best way to contact me] 718-960-1830
Office hours	Mondays 3:00p-5:00p and by appointment. Please email first.
Course website	This course uses Blackboard. https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	The use of Geographic Information Systems relating to public health in the teaching of social, earth, and life sciences. Demographic studies and graphic presentation of demographic analysis. The use of modern mapping techniques in studies of the Earth Environment with emphasis on environmental health and environmental justice.
Course prerequisites	N/A
Course format	Lecture and lab
Required reading and resources	***GIS for the Urban Environment,*** by Juliana Maantay and John Ziegler, 2006, Environmental Systems Research Institute Press, Redlands, CA. ISBN-10: 1589480821; ISBN-13: 978-1589480827 This book is currently out of print but can be found used through online sources. A free PDF version will be provided to you (via blackboard) courtesy of the author. Additional readings will be provided via blackboard. A USB drive is highly recommended for this course.
Suggested reading and resources	BERRY, Joseph, ***Spatial Reasoning for Effective GIS***, 1995, John Wiley and Sons, NY, NY CAMPBELL, John, ***Map Use and Analysis,*** 2001, McGraw Hill, New York, NY DENT, Borden, ***Cartography: Thematic Map Design***, 1999, William C. Brown Publishers/McGraw-Hill, New York, NY DORLING, Daniel, and FAIRBAIRN, David, ***Mapping: Ways of Representing the World***, 1997, Addison Wesley Longman, Ltd., Harlow, UK ISAAKS, Edward, and SRIVATAVA, R. M., ***An Introduction to Applied Geostatistics***, 1989, Oxford University Press, Oxford, UK KAISER, Ward, and WOOD, Denis, ***Seeing Through Maps: The Power of Images to Shape Our World View***, 2001, ODT, Inc., Amherst, MA MONMONIER, Mark, ***How to Lie With Maps,*** 1991, Univesity of Chicago Press, Chiacago, IL PICKLES, John, ***Ground Truth: The Social Implications of Geographic Information Systems***, 1995, The Guilford Press, New York, NY WOOD, Denis, ***The Power of Maps***, 1992, The Guilford Press, New York, NY

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments*:
Apply the public health core functions of assessment, policy development and assurance	• Apply basic GIS functions to assess public health issues	• Labs 2-9 • Final Exam
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Identify GIS methods used for public health research	• Labs 2-4, 6-10 • Final Exam • Written Assignments 1-4
Apply basic statistical and informatics techniques	• Utilize simple statistics to assess public health data and create simple cartographic representations	• Labs 8-10 • Final Exam
Explain how social, behavioral, biomedical and environmental determinants affect population health	• Use GIS to examine relationships between environmental exposure and health outcomes	• Labs 5-9 • Final Exam

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Synthesize theories, methods, empirical literature and practice of public health GISc	• Conduct simple spatial analyses of health data • Review peer-review articles concerning GISc	• Labs 2-9 • Written Assignments 1-4
Analyze geographic health data and cartographic information in terms of spatial distribution and associations with other variables	• Utilize geocoding, buffering, and other basic GISc functions to analyze health data • Create and interpret simple	• Labs 1-10 • Final Exam

	cartographic products	
Identify, estimate, and analyze environmental exposure and their impacts on urban public health and social inequality	• Utilize distance-based techniques to identify environmental exposures in an urban environment • Construct geographic buffers and other basic GIS techniques to identify environmental justice issues • Compute differences in exposures based on socio-demographics	• Labs 5-10 • Final Exam
Communicate public health geographic information through oral, written and visual presentations	• Create simple cartographic products to present public health GIS information • Create map layouts and other cartographic products suitable for publication	• Labs 1-10 • Oral Presentations

Course Assessments

Your understanding of the course material will be evaluated through class discussions, written assignments, oral presentations, lab assignments, and a final exam.

Grading

Evaluation criteria: Grades will not be curved, there will be no extra credit and no grades will be dropped. Rubrics can be seen on Blackboard.

Class Participation: Class participation includes engagement in discussions and answering of questions during lecture. Lateness and absence will count against this grade. Class participation accounts for 10% of the final grade.

GIS Lab Assignments: Labs will be done both during scheduled lab time (usually the second 2 hours of the class), in the lab during non-class hours (provided the lab is available – a schedule will be provided), or at home (provided the student has the ability to install the provided software). Students who do not work in the lab during the scheduled class time will not get support from the instructor or the lab tutor. Labs account for 40% of the final grade. A USB drive is highly recommended.

Written Assignments: There are four written assignments, two which are from the Maantay book (written assignments 1 and 2 in the syllabus) and two which are summaries of journal articles (article summary 1 and 2). All sources must be properly cited using in-text citation (name and date in the body of the text) followed by a list of sources in a “references” section at the end (APA format is preferred). Written assignments account for 20% of the final grade

Turning in Assignments: All assignments (written and lab) must be submitted electronically before lecture on the due date to receive credit. Written assignments must be saved as a word document (.DOC or .DOCX) and be saved as *LastName_FirstName_AssignmentName* (e.g. Smith_Joe_Assignment1.docx). I prefer 1” margins, 1.5 spacing, 12-point fonts,. Lab assignments must either be saved as a word document, as a PDF, or as a JPG (unless another format is specified). Assignments should be submitted through Blackboard. If Blackboard is down, email the file(s) titling the message with the class (e.g., PHE 705) followed by the student name and assignment name (e.g. PHE 705, Joe Smith, WA1).

Presentations: Graduate students are expected to make a presentation of one of their written assignments (WA1 or WA2, not the article summaries). Although using PowerPoint is not required, it is encouraged if appropriate. Presentations must be short, concise, and complete. They account for 5% of the final grade.

Final: The in-class final exam will cover the entire course (readings, assignments, labs, and lectures). It has two main sections. The written part is composed of multiple choice, short answer, and essay questions and the GIS practical part is composed of a "real world" GIS problem for you to solve (essentially a lab without instructions). The final is worth 35% of the final grade.

The relative weight of each course component is as follows:

Assessment	Weight
Class Participation and Attendance	10%
GISc Lab Assignments	40%
Written Assignments	20%
Oral Presentations	5%
Final Exam	25%
	100%

The grading system for the course follows guidance in the Graduate Bulletin:

Letter Grade	Quality Points
A	4.0
A-	3.7
B+	3.3
B	3.0
B-	2.7
C+	2.3
C	2.0
F, WU	0

Letter Grade	Numeric Grade
A	93-100%
A-	90-92%
B+	87-89%
B	83-86%
B-	80-82%
C+	77-79%
C	70-76%
F	< 70%

Withdrawal

The grade of W (withdrawal without penalty) is assigned only when a graduate student *officially* withdraws from a course. Students must complete the withdrawal process themselves, since the procedure requires a signature. No faculty member or program adviser can withdraw a student from a course. When students withdraw without completing the withdrawal procedure, the grade of WU is assigned for the course. This grade counts as a failure in computing the cumulative Grade Point Average. Graduate students should refer to the Graduate Bulletin and academic calendar for more information.

Grade of incomplete

The grade of INC (incomplete coursework) is awarded only when the course requirement has not been completed for good and sufficient reasons and when there is a reasonable expectation that the student can successfully complete the requirements of the course. For an instructor to grant an INC, the student must have met the instructor's attendance requirements in the course and have a passing semester average. An INC grade that has not been made up will change to a FIN grade (failure to

complete coursework), remains permanently on the record, and counts as an F in computing the Grade Point Average. Refer to the Graduate Bulletin for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Program Director in writing giving the factual reasons and basis for the complaint. A student who wishes to appeal a grade must initiate the process in the full semester following the one in which the contested grade was received. For further guidance, refer to the Graduate Bulletin.

Course Policies

Attendance and class participation
Lateness or absence will count against your class participation grade unless there is an emergency or it is cleared with the professor in a timely fashion before class. If you miss a session, it is your responsibility to check with your classmates for notes and other course materials.

Late/incomplete submission of assignments
Late assignments will generally not be accepted unless it is cleared with the professor well before the due date. Under special circumstances, unexcused late assignments may be accepted (at the professor's discretion) but one full letter grade will be subtracted. If there is a medical reason for lateness, please supply documentation.

Make-ups, rewrites, and extra credit
There is no extra credit or re-writes in this course. Make-ups may be permitted if a late/incomplete assignment as described above is granted.

Expectations of students
Blackboard will be used to distribute and update assignments, readings, and other course materials. It is the student's responsibility to check it regularly.
The use of cell phones and other similar devices are not permitted during class.
Since some lectures may take place in a computer lab, the following additional rules apply:
- Monitors must be turned off during lectures
- No drinking or eating of any kind in the lab
- No printing of any materials without permission from the instructor or the lab manager
Students are expected to reply to emails (using their blackboard email address) promptly (e.g., within two business days) with proper academic writing style.

Expectations for the instructor
Students can expect the instructor to reply to emails promptly (within 2 business days). If you do not receive a reply within that time frame, please email again.
Assignments will be graded in as timely a fashion as possible, generally within 2 weeks of the due date. If you are granted a late assignment, this turn-around time does not apply.

Accessibility
Lehman College is committed to providing access to all programs and curricula to all students. Students with disabilities who may need classroom accommodations are encouraged to register with the Office of Student Disability Services. For more information, please contact the Office of Student Disability Services, Shuster Hall, Room 238, at 718-960-8441.

Academic integrity
The faculty and administration of Lehman College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete text of the CUNY Policy on Academic Integrity and the Lehman College procedure for implementing the policy can be found in the Graduate Bulletin.

The Academic Center for Excellence (ACE) and the Science Learning Center (SLC):
Lehman College has two tutoring centers on campus. The ACE provides appointment-based and drop-in tutoring in the humanities, social sciences and writing, as well as general writing skills. The SLC provides drop-in tutoring for natural and computer science courses. To obtain more information about the ACE and SLC, please visit their website at http://www.lehman.edu/issp, or please call the ACE at 718-960-8175, and the SLC at 718-960-7707.

Course Schedule

Readings are to be done before the class in which they are listed (e.g., chapters 1&2 in Maantay must be read prior to class 2). See the Lehman academic calendar for important dates.

Class	Date	Lecture Topic	Reading	Lab Assignment	Written Assignment
1	8/31	Introduction to the Principles of GIS	--	Lab01: Exploring Basic GIS Functionality (nothing to hand in)	--
2	**9/10**	Modeling Spatial Data and Basic Mapping Concepts	Maantay, CH 1 and 2	Lab02: Thematic Mapping - Creating a Dot Density Map (screen capture due class 3)	WA1: Report on GIS Projects on the Internet (same as written exercise 1 in Maantay, pages 20-22; Due Class 4)
3	**9/21**	Thematic Mapping	Maantay, CH 3;	Lab03: Thematic Mapping – Creating a Choropleth Map (screen capture, due class 4); **Lab02 due**	--
4	9/28	Data Classification Methods and Data Exploration	Maantay, CH 4	Lab04: Integrating Graphs and Maps, and Creating a Map Layout (due class 5); **Lab03 due**	**WA1 due**
5	10/5	Data Visualization and Map Design	Maantay, CH 5	Continue Lab04	--
6	**10/19**	Data Sources **Presentation of WA1**	Maantay, CH 6;	Lab05: Attribute Database from an Internet Source (nothing to turn in) **Lab04 due**	WA2: Designing a GIS Project to Solve Real-World Problems in the News (Same as written exercise 9 in Maantay; Due Class 13)
7	10/26	Mapping Databases; & Guest Lecture	Maantay, CH 7; journal article*	Lab06: Geocoding and Labeling (due class 9)	Article Summary 1 (due class 9)
8	**11/2**	(no in-class meeting – APHA)	Maantay, CH 8	Continue Lab06	
9	11/9	Attribute Data Management; Class critique of Lab 5; Guest Lecture (TBD)	journal article*	Lab07: Relational Databases (due class 10); **Lab06 due**	**Article Summary 1 due**; Article Summary 2 (due class 11)
10	11/16	Methods of Spatial Data Analysis (1)	Maantay, CH 9	Lab08: Buffers and Proximity Analysis (due class 11); **Lab07 due**	--
11	11/23	GIS Project Development and Institutional Issues / Spatial Data Analysis (2)	Maantay, CH 10	Lab09: Geoprocessing Operations and Joining tables (due class 13); **Lab08 due**	**Article Summary 2 due**
12	11/30	Ethical Issues in GIS	Maantay, CH 11	Continue Lab09; "practice" GIS practical	--
13	12/7	**Presentation of WA2;** Course Review	--	Lab10: Areal Weighting and Spatial Selection Comparison **Lab09 due**	**WA2 due**
14	12/14	Course Review / **GIS Practical Final**	--	**Lab10 due**	--

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS
Lehman College
PHE 710: Applications of Research Methods in Public Health

3 Credits
Fall 2015

Time and location	Monday 6 to 8:40 PM Carman 125
Instructor	Professor Luisa N. Borrell, D.D.S, Ph.D. Email: Luisa.Borrell@lehman.cuny.edu (best way for contact) Phone: 718- 960-8549 Office: Gillet 336
Office hours	By appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Principles of statistical and other research methods applied to design of public health studies; analysis, interpretation, and reporting of epidemiological data to public health professionals and lay audiences.
Course prerequisites	PHE 600 and PHE 606
Course format	Lecture and lab
Required reading and resources	LG Portney and MP Watkins. *Foundations of Clinical Research, Applications to Practice*. 3rd Edition. F.A. Davis Company 2015 or Prentice Hall, 2008. R Cody. *SAS statistics by example. SAS* Institute Inc. 2011.
Suggested reading and resources	**General:** Moyses Szklo and F. Javier Nieto. *Epidemiology beyond the Basics*. 3rd Edition. Jones and Bartlett, 2012. ***From Association to Causation:*** *Bradford Hill 1965's Article: The Environment and Disease-Association or Causation?* http://www.pubmedcentral.nih.gov/picrender.fcgi?artid=1898525&blobtype=pdf **Linear Regression:** *Influence of birth weight on white blood cell count in biracial (black-white) children, adolescents and young adults: The Bogalusa Heart Study. Wei Chen et al.* American Journal of Epidemiology *2009; 159: 214-218.* *http://aje.oxfordjournals.org/content/169/2/214.full.pdf+html* **Logistic Regression**: Ovarian cancer risk factors in African-American and white women. Patricia G. Moorman et al. *American Journal of Epidemiology* 2009; 170:598-606. http://aje.oxfordjournals.org/content/170/5/598.full.pdf+html

Last Updated July 23, 2015

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments*:
Communicate public health information through oral, written, digital and visual presentation	• Identify and combine epidemiological concepts and appropriate statistical methods to answer research questions and test hypotheses	• Exams, lab assignments (see below) and class participation
Collect, analyze and interpret public health data	• Present and interpret epidemiologic data for both descriptive and analytical epidemiological studies	• Exams, lab assignments (see below) and class participation
Interpret and analyze public health literature and apply evidence-based research	• Summarize and display data in both tabular and narrative form, similar to the Results section of a public health manuscript	• Exams, lab assignments (see below) and class participation

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments*:
Analyze critical health inequalities confronting urban populations by social and economic determinants such as race, ethnicity, income and neighborhood	• Formulate epidemiological problems as research questions and testable hypotheses	• Exams, lab assignments (see below) and class participation
Synthesize theories, methods and practice of public health to address income inequities within communities	• Critique and understand the tradeoff made in the methods used in published epidemiologic studies • Illustrate the use of SAS to perform basic and inferential statistics	• Exams, lab assignments (see below) and class participation

Course Assessments
Each class session will consist of a lecture and a lab practicum. Each lecture will include an explanation of the research questions, the appropriate tests to be used for each hypothesis, and a discussion of SAS outputs. During the laboratory session, students will be expected to answer research questions and test hypotheses using a public dataset. There will be four labs to assess the knowledge obtained through class lecture, lab and assigned readings. Finally, there will be two class sessions for discussion of journal articles relevant to the epidemiologic study designs covered during the Epidemiology Core course.

Grading
Your understanding of the course material will be evaluated by the following:

Assignments and Grading:

Attendance	10%
Participation in class discussion based on readings	10%
Lab assignments (4 @ 7.5 points each)	30%
Midterm Exam (20 points)	20%
Final Exam (30 points)	30%
Total	100%

The grading system for the course follows guidance in the Graduate Bulletin:

Letter Grade	Points	Quality Points
A	93-100	4.0
A-	90-92	3.7
B+	87-89	3.3
B	83-86	3.0
B-	80-82	2.7
C+	77-79	2.3
C	73-76	2.0
C-	70-72	1.7
F, WU	<=69	0

Withdrawal
The grade of W (withdrawal without penalty) is assigned only when a graduate student *officially* withdraws from a course. Students must complete the withdrawal process themselves, since the procedure requires a signature. No faculty member or program adviser can withdraw a student from a course. When students withdraw without completing the withdrawal procedure, the grade of WU is assigned for the course. This grade counts as a failure in computing the cumulative Grade Point Average. Graduate students should refer to the Graduate Bulletin and academic calendar for more information.

Grade of incomplete
The grade of INC (incomplete coursework) is awarded only when the course requirement has not been completed for good and sufficient reasons and when there is a reasonable expectation that the student can successfully complete the requirements of the course. For an instructor to grant an INC, the student must have met the instructor's attendance requirements in the course and have a passing semester average. An INC grade that has not been made up will change to a FIN grade (failure to complete coursework), remains permanently on the record, and counts as an F in computing the Grade Point Average. Refer to the Graduate Bulletin for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Program Director in writing giving the factual reasons and basis for the complaint. A student who wishes to appeal a grade must initiate the process in the full semester following the one in which the contested grade was received. For further guidance, refer to the Graduate Bulletin.

Course Policies

Attendance and class participation
Attendance and class participation are part of your grade. Students are expected to attend classes regularly, and instructors are required to record attendance for grading and counseling purposes. Individual instructors, as well as departments or degree programs, may establish specific attendance requirements. Instructors have the right to weigh attendance and class participation in determining grades. It is the student's responsibility to ascertain the effect attendance may have on the grade in a course. Students receiving financial aid must be certified as attending classes regularly for continuing eligibility.

Late submission of assignments
Late submission assignment would be penalized with a 1 for each day late. However, once the answer key is posted, the assignment would be worth a 0.

Make-ups, rewrites, and extra credit
There is not make up or rewrites for the lab assignments as the answer key are posted the day after the due date by 5PM.

Expectations of students
Students are expected to come to class on time. In addtion, they would not be allowed to use cell phone or do e-mails during class.

Expectations for the instructor
The instructor would be available face to face or by e-mail to answer any question or clarify any issues students may have on any aspects of the course.

Accessibility

Lehman College is committed to providing access to all programs and curricula to all students. Students with disabilities who may need classroom accommodations are encouraged to register with the Office of Student Disability Services. For more information, please contact the Office of Student Disability Services, Shuster Hall, Room 238, at 718-960-8441.

Academic integrity

The faculty and administration of Lehman College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete text of the CUNY Policy on Academic Integrity and the Lehman College procedure for implementing the policy can be found in the Graduate Bulletin.

Course Schedule – Update 08/10/15
**Please note that the schedule is subject to change throughout the semester.

Session	Date	Topic	Readings and Assignments
1	08/31	**I. Introduction, Course Guidelines & Needs Assessment** Review of basic epidemiology concepts and statistical methods Key Themes: Where we were and where are we going from here? Cross-sectional, case-control and longitudinal studies, rate, ratio, proportion, prevalence, incidence, odds ratio, risk ratio, rate ratio, attributable risk, attributable risk percent, sample, population, mean, median, mode, variance, standard deviation, range, IQR and confidence intervals. Lab: Data management: reading in raw data; importing *.xls and *.dbf files; creating permanent datasets; recoding variables, and creating codebooks	Gross Portney & Watkins: Chapte 28 (659-671), 13 (277-290) and 17 (385-400) Cody Chapter 1
2	09/07	**Labor Day**	No class
3	09/10	**II. From the Research Question to the Hypothesis:** Introduction to readily available national datasets, Sampling Methods & Descriptive Statistics Key Themes: Samples and Populations: Similarities and Differences Advantages and disadvantages of different sampling methods Describing and summarizing data for a population/sample Lab: Data management: cleaning the variables, creating new variables; DATA steps and PROC steps to obtain descriptive statistics for continuous and categorical variables	NHANES design and methodology (Check the bookmark for Sample Design and Analysis Guidelines-Specifically check pages 20-22 in the document). The website for the manual is: http://www.cdc.gov/nchs/data/series/sr_01/sr01_032.pdf Gross Portney & Watkins: Chapter 8 (143-157) Cody Chapters 2 (19-33), 3 (pages 41-48, 52-55) and 5 (Pages 74-78)

4	09/14	**Rosh Hashanah**	No class
5	09/21	**III. Measurement Issues and Hypothesis Testing** From the research question to the variables: Can you answer the question with data available? Learning how research questions are answered through hypotheses testing. Key Theme: Research question versus hypothesis: their relationship and differences. Describing variables: How do you compare groups? Lab: Group comparisons: Estimation, t-test, ANOVA and chi-square statistic **Assignment 1 Due**	Gross Portney & Watkins: Chapters 7 (121-136), 18 (405-424; 426-429), 19 (433-445) and 20 (451-458) Journal Article: Wei Chen et al. (2009) -- Introduction Cody Chapters 5, 6, 7 (pages 91-102) and 10 (163-171, 175, 178-182)
6	09/28	**IV. Bringing it all together: Descriptive and inferential statistics for continuous and categorical variables**	Readings assigned on 9/14 and 9/21
7	10/05	**Review** **Assignment 2 Due**	
8	10/12	**Columbus Day**	No class
9	10/19	**Midterm**	
10	10/26	**V. The Central Epidemiologic Constructs: Exposures and Outcomes** When the outcome is continuous Key Themes: Exposures, outcomes and covariates: How were they collected? How many levels do they have? What is the nature of the data? Why do we care about the above? Continuous Variables: Looking at Association. Lab: Correlation and simple linear regression	Gross Portney & Watkins: Chapters 4, 23 (523-537) and 24 (539-547; 551-554) Journal Article: Wei Chen et al. (2009) —Materials and Methods Cody Chapters 8 (111-125) and 9 (135-137, 153-155)
10	11/02	**VI. When the Box Does Not Fit: Dealing with Continuous Constructs and How Do We Get Causes from Correlations? Part I** Key Themes: How do you describe an association	Bradford Hill 1965's Article: The Environment and Disease-Association or Causation? Gross Portney & Watkins: Chapters 24 (547-551) and 29

		between X and Y when they are continuous in the presence of other covariates? From association to causation: the caveats Conditions necessary to rule causation over association. Lab: Regression diagnostics and multiple linear regression	(687-691, 694-696) Journal Article: Wei Chen et al. (2009)—Materials and Methods Recommended Reading: Szklo & Nieto: Chapter 5 (153-177) Cody Chapters 8 (111-125) and 9 (135-137, 153-155)
11	11/09	**VII. When the Box Does Not Fit: Dealing with Continuous Constructs and How Do We Get Causes from Correlations? Part II** Key Themes: Is there a true association between X and Y after controlling for a third variables? Lab: Multiple linear regression & confounder	Gross Portney & Watkins: Chapters 24 (547-551) and 29 (687-691) Journal Article: Wei Chen et al. (2009)—Materials and Methods Recommend reading: Szklo & Nieto: Chapter 5 (153-177) Cody Chapters 8 (111-125, 129-132) and 9 (135-137, 153-155)
12	11/16	**Journal Club – Linear regression** **Room TBA** **Assignment 3 Due**	Influence of birth weight on white blood cell count in biracial (black-white) children, adolescents and young adults: The Bogalusa Heart Study. Wei Chen et al. American Journal of Epidemiology 2009; 159: 214-218.
13	11/23	**VIII. Analysis of Frequencies – Measures of Association I** Key Themes: The yes/no or 0/1 values of a variable or perhaps the 1/2/3 or more values of a variable The advantages and disadvantages Association and causation revisited What other methods can we use to evaluate association between categorical variables? Lab: Chi-square of independence, CMH **,** Fisher, OR, PR, RR and CI, Trend test, McNemar's test, test of Homogeneity, Breslow Day test and introduction to Logistic regression	Gross Portney & Watkins: Chapters 25 (569-571 up to Goodness of Fit; 575-581) and 29 (694-702) Journal Article: Patricia G. Moorman et al. (2009) – Introduction & Materials and Methods Cody Chapters 10 (163-171, 175 mid page topic, 178-182) and 11 (183-191, 193-204)

14	11/30	**XI. Analysis of Frequencies – When dealing with more than 2 covariates II** Key Themes: How do we evaluate association whether 1) there is a true association or not and 2) whether the association differs by a third variable? What do we do when there are more than two covariates (or three or four variables)? Lab: Multiple logistic regression with continuous and categorical variables	Recommended Reading: Szklo & Nieto : Chapters 6 (185-196 up to section 6.4, 207-211 up to section 6.8) and 7 (242-266 up to section 7.4.4) Cody Chapter 11 (183-191, 193-204)
15	12/07	**Journal Club – Logistic regression** **Room TBA** **Assignment 4 Due**	Ovarian cancer risk factors in African-American and white women. Patricia G. Moorman et al. American Journal of Epidemiology 2009; 170: 598-606.
16	12/14	**Review** Where we started and where we are now	
17	12/21	**Final Exam**	

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Lehman College
PHE 715: Planning and Evaluation of Community-Based Public Health Programs
3 Credits
Fall 2015

Time and location	Thursdays, 6-8:40pm Lehman College, location TBA
Instructor	Emma K. Tsui, PhD, MPH emma.tsui@lehman.cuny.edu (preferred mode of communication) 347-577-4038 Gillet Hall, Room 422D
Office hours	Mondays 4:30-5:30pm and Thursdays 3:30-5:30pm (walk-in) and other times by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available. Lehman's Academic Center for Excellence (ACE) provides appointment-based and drop-in tutoring and general writing and academic skills workshops. To obtain more information about the ACE, please visit http://www.lehman.edu/issp or call the ACE at 718-960-8175.
Course description	Fundamental approaches and methods for planning and evaluating public health programs. Application of theory and the empirical literature as a means of developing skills in evidence-based public health practice.
Course prerequisites	N/A
Course format	In-person lecture and discussion-based sessions
Required reading and resources	Issel LM. Health Program Planning and Evaluation: A Practical, Systematic Approach for Community Health. Boston: Jones and Bartlett Publishers, 3rd edition, 2014. Price: $81.83, Amazon Available on reserve at the Leonard Lief Library Other articles as assigned under "Schedule".
Suggested reading and resources	N/A

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments*:
Communicate public health information through oral, written, digital and visual presentation	• Prepare and deliver a professional presentation describing a program and evaluation plan • Prepare elements of a written program and evaluation plan	Assignments 1-5
Interpret and analyze public health literature and apply evidence-based research	• Identify evidence-based or promising interventions for addressing a particular public health issue in a target population	Assignments 1 and 5

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Identify aspects of public health ethics and values of social justice that affect public health practice and decision-making	• Articulate potential ethical issues in designing and conducting program planning and evaluation activities • Demonstrate an understanding of the power dynamics involved in community collaboration and participatory research, the importance of these dynamics, and ways of addressing them	Class participation, midterm

Assess the health needs and issues confronting communities	• Apply a community-based participatory framework to addressing health issues confronting communities	Class participation, midterm
Synthesize theories, methods and practice of public health to address income inequities within communities	• Understand the role of theory and appropriately apply theories and models in program planning and evaluation • Develop a plan for an evidence-based public health program • Write program objectives that are clear, specific and measurable • Develop program theories and logic models for public health programs • Design data collection techniques for program evaluation	Assignments 1-5, class participation, midterm

Course Assessments
Your understanding of the course material will be evaluated through participation in class discussions, your engagement and performance during in-class assignments and activities, a midterm exam, two written assignments that serve as elements of the final evaluation plan, your response to critique and comments on written assignments, and your final paper and presentation.

There will be one midterm exam in this course, which will include multiple choice, true/false, and short answer questions, among other question types. For the remaining assignments, you will be considering, writing, and/or speaking about a single public health program of your choice. Before choosing a program, please make sure that you can complete all of these assignments using this program. You should be able to relatively easily identify: 1) the target health condition(s) or behavior, 2) the target population, 3) the setting of the intervention or program, and 4) the program activities or intervention strategies. In my experience, the best projects are often the ones that are simplest (involving no more than one or two types of intervention activities) and that offer the most detail in terms of location and program activities.

A note on attendance and participation: Because these assignments build on one another, fastidious attendance and engaged participation in the course are of utmost importance. These also comprise a substantial portion of your grade—10%—so please come to each class prepared to participate fully.

Assignment 1: Program Description & Rationale
Length: 4-6 pages doubled-spaced
For this assignment, you will briefly describe your program (2-4 paragraphs) including 1) the target health condition(s) or behavior, 2) the target population, 3) the setting of the intervention or program, and 4) the program activities or intervention strategies. You will then provide a compelling rationale for your program addressing the question of what evidence there is that this program is likely to be effective. Please use at least 5-10 references to peer-reviewed or other appropriate literature to articulate your rationale.

Assignment 2: Program Objectives (in class)
For this assignment, you will write 3-5 specific, measurable, achievable, realistic, and time-bound program objectives for your program in class. You will get feedback from class members and from me on these objectives in class, and you will then revise and finalize them for your final paper, due at the end of the course.

Assignment 3: Program Evaluation Survey
In this assignment, you will design a short survey that will help to evaluate your program objectives. You should begin with a short description of how you will sample survey respondents, how the survey will be administered (in person, over the phone, via email/Internet), and why. You should collect relevant demographic information and include 5-10 well-designed questions related to your objectives.

Assignment 4: Program Presentation
In the final sessions of the course, each student will give a 10-minute presentation on their program. A grading rubric providing guidance on content and style will be distributed in advance of the presentations.

Assignment 5: Final Program Elements Paper
Please include the following:

1) Description of your program and rationale (revised from Assignment 1)
2) Program objectives (revised from Assignment 2)
3) Program evaluation survey (revised from Assignment 3)
4) Discussion of key stakeholders and how you will communicate your evaluation findings
5) You may include a logic model for your program for extra credit.

Grading
Evaluation criteria
Grading rubrics will be provided via the course website for course assignments.

The relative weight of each course component is as follows:

Assessment	Weight
Class attendance & participation	10%
Program description & rationale	10%
Midterm exam	30%
Program evaluation survey	10%
Final presentation	10%
Final paper	30%
	100%

!
The grading system for the course follows guidance given by the Lehman College Department of Health Sciences:

Letter Grade	Points
A	93-100%
A-	90-92%
B+	87-89%
B	83-86%
B-	80-82%
C+	77-79%
C	73-76%
C-	70-72%
F	< 70%

Withdrawal
The grade of W (withdrawal without penalty) is assigned only when a graduate student *officially* withdraws from a course. Students must complete the withdrawal process themselves, since the procedure requires a signature. No faculty member or program adviser can withdraw a student from a course. When students withdraw without completing the withdrawal procedure, the grade of WU is assigned for the course. This grade counts as a failure in computing the cumulative Grade Point Average. Graduate students should refer to the Graduate Bulletin and academic calendar for more information.

Grade of incomplete
The grade of INC (incomplete coursework) is awarded only when the course requirement has not been completed for good and sufficient reasons and when there is a reasonable expectation that the student can successfully complete the requirements of the course. For an instructor to grant an INC, the student must have met the instructor's attendance requirements in the course and have a passing semester average. An INC grade that has not been made up will change to a FIN grade (failure to complete coursework), remains permanently on the record, and counts as an F in computing the Grade Point Average. Refer to the Graduate Bulletin for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Program Director in writing giving the factual reasons and basis for the complaint. A student who wishes to appeal a grade must initiate the process in the full semester following the one in which the contested grade was received. For further guidance, refer to the Graduate Bulletin.

Course Policies
Attendance and class participation
All members of the class are expected to actively participate in class lectures, activities, and discussions, and to complete assigned reading **and other assigned activities** prior to class. Attendance means more than just showing up; it means doing the reading and, more importantly, actively engaging with the ideas and issues brought up in the reading and in class. Your comments, questions and opinions are essential ingredients for making this course a challenging and rewarding experience for your classmates as well as for yourself, and it is expected that you come prepared to make this contribution. If you are going to be late or have to miss a class, please contact me via email as far in advance as possible. Points may be deducted for absences, tardiness, or leaving class early.

Late/incomplete submission of assignments
I expect that all assignments that are not to be completed in class will be submitted to me via email or Blackboard by midnight on the due date (usually the night before a

class session). Assignments submitted after the due date will have half a letter grade deducted for each day that the assignment is late, except in cases of significant medical issues or other serious situations.

Make-ups, rewrites, and extra credit

Make-up assignments will not be allowed in this course, nor will rewrites. Extra credit assignments may be made available to students as opportunities during the semester present themselves.

Expectations of students

I expect the classroom to serve as a space of respect and collaborative learning and that the course assignments will help you to develop specific skills. To that end, I expect that:

- you will arrive on time and stay for the entire class
- you will not use cell phones during class, except during breaks
- you will visit our Blackboard site frequently, as that will be our primary way of communicating with one another outside of class. Class announcements and supplemental materials will be posted there frequently. Course announcements will also be sent out using the Lehman e-mail system. If you have any questions about your Lehman email address or your password, or if you have any problems accessing the site, please call the computer helpdesk at 718-960-1111.
- your writing for assignments will be of high quality, presented in a readable and consistent manner: double-spaced, typewritten, with one-inch margins all around, and **proofread**.

Expectations for the instructor

- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during in-class discussions
- Respond to student email within 24 hours Monday through Friday.
- Grading and feedback on assignments within 2 weeks of the due date.

Accessibility

Lehman College is committed to providing access to all programs and curricula to all students. Students with disabilities who may need classroom accommodations are encouraged to register with the Office of Student Disability Services. For more information, please contact the Office of Student Disability Services, Shuster Hall, Room 238, at 718-960-8441.

Academic integrity

The faculty and administration of Lehman College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete text of the CUNY Policy on Academic Integrity and the Lehman College procedure for implementing the policy can be found in the Graduate Bulletin.

Course Schedule
Please note that the schedule and assignments listed below are subject to change. Additional readings and handouts may be provided, and session topics and activities may be altered if necessary. All readings that are not part of the required text will be available via Blackboard. For important dates (e.g., course drop and withdrawal), please refer to Lehman's graduate academic calendar: http://www.lehman.edu/registrar/calendars.php.

	Date	Topic	Readings & Assignments
1	August 27th	Introduction to the Course	Readings: Gawande, 2013; Interview with Michael Quinn Patton
2	September 3rd	Foundations & Design of a Planning Process	Readings: Issel, Ch. 2-3; Ostrovsky & Katz, 2011
	September 10th	No class (classes follow a Monday schedule)	
3	September 17th	Developing & Using a Program Theory	Readings: Issel, Ch. 6; Bartholomew et al., 2006; Wall et al., 2009
4	September 24th	Intervention Design In-Class Assignment: **Writing Program Objectives**	Readings: Issel, Ch. 7 (only p.215-226 required) and Ch. 8 **Program description & rationale due on September 23rd at midnight**
5	October 1st	Process Evaluation Guest speaker: Sara Flowers on evidence-informed interventions	Readings: Issel, Ch. 10
6	October 8th	Effect Evaluation	Readings: Issel, Ch. 12 and p. 393-406 of Ch. 13 plus assigned research design section
7	October 15th	**Midterm Exam**	

8	October 22nd	Designing Surveys for Program Evaluation	Readings: Issel, Ch. 14
9	October 29th	Qualitative Research Methods for Planning & Evaluation	Readings: Issel, Ch. 16; Reisinger, 2004; Tinmouth et al., 2011
10	November 5th	Logic Models In-Class Activity: Developing a Logic Model	Readings: Kellogg, Chs. 1-2; Children's Aid Society Go!Healthy Program Evaluation, p.1-4 **Program evaluation survey due on November 4th at midnight**
11	November 12th	Program Budgeting Guest speaker: Kimberly Seals Allers on community-partnered intervention development	Readings: Issel, Ch. 9, up to p. 298
12	November 19th	Ethics, Sustainability, and Communicating Evaluation Findings	Readings: Issel, Ch. 17; Scheirer, 2005; Torres et al., 2004
	November 26th	No class (Thanksgiving)	
13	December 3rd	**Final Presentations**	
14	December 10th	**Final Presentations**	
15			**Final paper due on December 16th at midnight**

CUNY SCHOOL OF PUBLIC HEALTH

Course Syllabus
Lehman College
PHE 724/PH72600/HNSC 7310/PUBH 87100: Maternal and Child Health: A lifecourse perspective
Fall 2015

Course description	Examination of the social determinants of and inequities in maternal and child health from a life course perspective
Course format	Hybrid: class will meet in-person six times during semester
Course meets	Graduate Center, Room 3209, Tuesday 6:30-8:30
Instructor	Mary Huynh, PhD
Email	mary.huynh@lehman.cuny.edu [Email is the best way to reach me]
Office hours	By appointment
Required books	None
Recommended books	None
Reserve material	None

Other required materials All required readings will be posted in Blackboard.

Assessment
Your understanding of the course material will be evaluated through reaction papers, discussion board participation, a final project, and in-class participation/attendance.

Description of course grade components:

In-class Participation/Attendance: This class is being taught as a seminar and workshop. Therefore students are expected to attend class in order to participate in discussions and provide comments and suggestions to their fellow students on their work. Students are expected to reflect.

Discussion Board Participation: On days, when the format of the class is online, students are expected to participate via the discussion board to address questions and reflect on the readings.

Written Assignments: Students will write 3 one-page reaction/discussion papers, along with a few questions for clarification and discussion. Your reaction paper should synthesize and critically evaluate key theoretical, methodological and/or substantive contributions of the readings. This may consist of identifying questions that the readings provoke; critiquing problematic assumptions, logic, and measurement; discussing theoretical and empirical advances; and considering ideas for future directions. Late response papers will not be evaluated. The reflections are due by email to mary.huynh@lehman.cuny.edu by 12 noon the day of class. When referring to a specific article in the reflection, please use the author-date style. Format: single-spaced, typed, 12-point Times Roman font with 1-inch margins.

The end product of the class project will be a brief proposal/grant application. Late assignments will be penalized for each day they are late (including weekends and holidays).

Grading

20%	Online Discussion Board Participation
30%	Reaction Papers
40%	Brief Proposal
10%	In-class Participation/Attendance
100%	

The following grading scheme will be applied:

Letter Grade	**Points**	**Quality Points**
A	93-100	4.0
A-	90-92	3.7
B+	87-89	3.3
B	83-86	3.0
B-	80-82	2.7
C+	77-79	2.3
C	73-76	2.0
C-	70-72	1.7
F, WU	<69	0

Course Policies

Attendance and class participation
Students are expected to attend classes when indicated on the syllabus, and instructors are required to record attendance for grading and counseling purposes. Individual instructors, as well as departments or degree programs, may establish specific attendance requirements. Instructors have the right to weigh attendance and class participation in determining grades. It is the student's responsibility to ascertain the effect attendance may have on their grade in a course. Students receiving financial aid must be certified as attending classes regularly for continuing eligibility.

Lateness and absences
Students are expected to be in class on time. Students should not be absent from class unless an emergency should occur. Documentation of medical emergencies will be required.

Late submission of assignments
Assignments submitted late will be penalized for every day late.

Class citizenship & rules of conduct
Cellphones should be set to silent and students must refrain from texting in class.

Students must be respectful of each other. Students should be diplomatic in giving feedback to

their colleagues.

Email correspondence
Email is the preferred form of communication. Students should use their CUNY email account or forward CUNY email to their personal account. Emails sent to the professor should be sent from the CUNY account.

Institutional policies

Honor code
While you are encouraged to discuss ideas with each other to facilitate your learning experiences, the work that is turned in must be your own. For example, allowing someone to copy your work, passing or sharing your answers to others, and/or doing work for others (including computer assignments) are examples of violations of Academic Integrity. For more information please visit and read the University of California Davis website (http://sja.ucdavis.edu/academic-integrity.html) or visit the Center for Academic Integrity at Clemson University (http://www.academicintegrity.org) for a detailed description of academic integrity. One of the more common and more destructive breaches of academic integrity is plagiarism. Visit the Plagiarism.org Learning Center (http://www.plagiarism.org) for more information on how to avoid plagiarism. The concerns and guidelines provided in these websites will be seriously applied in this course. The complete text of the CUNY Academic Integrity policy can be found at this site:
http://www.cuny.edu/about/administration/offices/la/Academic_Integrity_Policy.pdf/.

Disability Act
In compliance with the American Disability Act of 1990 (ADA) and with Section 504 of the Rehabilitation Act of 1973, Lehman College is committed to ensuring educational parity and accommodations for all students with documented disabilities and/or medical conditions. It is recommended that all students with documented disabilities (Emotional, Medical, Physical and/ or Learning) consult the Office of Special Student Services in the Division of Student Affairs. The Office of Special Student Services is located in Shuster Hall, Room 238, Tel. (718) 960-8441, TTY (718) 960-8931.

The Academic Center for Excellence (ACE) and the Science Learning Center (SLC)
Lehman College has two tutoring centers on campus. The ACE provides appointment-based and drop-in tutoring in the humanities, social sciences and writing, as well as general writing skills. The SLC provides drop-in tutoring for natural and computer science courses. To obtain more information about the ACE and SLC, please visit their website at http://www.lehman.edu/issp, or please call the ACE at 718-960-8175, and the SLC at 718-960-7707.

Last day to drop the course with the grade of "W" is Nov 9, 2015.

Grade of incomplete
The grade of INC is awarded only when the course requirement has not been completed for good and sufficient reasons and when there is a reasonable expectation that the student can successfully complete the requirements of the course. The INC grade covers any failure to

complete all requirements for a course, such as submitting a paper or taking a final examination. For an instructor to grant an INC, the student must have met the instructor's attendance requirements in the course and have a passing semester average.

A graduate student who receives a grade of INC (incomplete coursework) has a maximum of one year from the time the INC was entered on the transcript to collaborate with the instructor and complete the work. An INC grade entered in a fall semester, for example, must be completed before the end of the next fall semester. An INC grade that has not been made up within one year will change to a FIN grade (failure to complete coursework), remains permanently on the record, and counts as an F in computing the Grade Point Average.

A graduate student who receives a failing grade as a result of a FIN has the option to retake that course at Lehman College and have the FIN grade calculation excluded from the GPA if a grade of C or higher is earned. The original FIN grade remains on the transcript with an indication that the course grade is not included in the computation of the GPA.

A graduate student will receive a stop, issued by the Office of Graduate Studies, that will prevent registration for insufficient progress towards degree completion if two or more INC and FIN grades are acquired. Stops are removed once the student satisfies incomplete coursework.

INC grades cannot be made up after the student graduates (see also "Graduation Procedure").

http://www.lehman.edu/graduate-bulletin/4771.htm

Grade appeals

A graduate student dissatisfied with his/her course grade should first discuss the situation with the instructor who assigned the grade. If the student is still not satisfied that the grade is fair, he/she should then consult the Graduate Program Adviser for the department in which the course was offered. The Graduate Program Adviser will then attempt to resolve the disagreement.

If the student is still dissatisfied, or if the program adviser was the instructor who assigned the grade originally, the student should appeal in writing to the department chair. If the chair is the instructor of the course in question, the senior member of the department Personnel and Budget Committee will act for the chair.

The chair will appoint a Graduate Grade Appeal Committee consisting of three faculty members from the department, all of whom have taught graduate courses. The Graduate Program Adviser may not serve on this committee.

The committee will examine all materials relevant to the appeal, submitted by both the instructor and the student, and will prepare a written report of its findings, either sustaining the original grade or recommending a change. The chair will notify the student, the instructor, and the Office of Graduate Studies of the Committee's decision. If the Committee recommends a grade change, the chair will forward that recommendation (A-1) with the decision.

Grade appeals must be initiated in the semester following the entry of a permanent grade, and no grades can be changed after the date of graduation. The decision of the Graduate Grade Appeal Committee is binding on all parties.

http://www.lehman.edu/graduate-bulletin/4779.htm

Schedule

Session	Date	Topic	Assignments	Format
1	9/1	Course Outline and Introduction		Online
2	9/8	What is a life course approach and why do we study it?	Epi Assignment Due	In-class
3	9/25	Causality	Reaction Paper Due	Online
4	9/29	Types of Data used for Life course approach		In-class
5	10/6	Study Designs and Life course Approach	Reaction Paper Due	Online
6	10/13	Confounding and Life course		Online
7	10/20	Mediators and life course	Reaction Paper Due	In-class
8	10/27	Effect Modifiers and life course		Online
9	11/3	Statistical Analysis and life course		Online
10	11/10	Racial/Ethnic Disparities and life course approach		In-class
11	11/17	Hispanic paradox and life course approach	Draft of grant due	Online
12	11/24	Mental Health and life course approach		In-class
13	12/1	Prevention and the life course approach	Peer-review of grants	Online
14	12/8	Policy Implications	Peer-review of grants	In-class
15	12/15	Grant Due		

Program Competencies	Course Learning goals	Relevant Sessions
This course will help you to achieve the following competencies, which are expected of MPH graduates in Epidemiology	After successfully completing this course, you are expected to be able to:	
1. Apply the core functions of PH practice (assessment, policy development, and assurance)	• Analyze the impact of early programming, cumulative stress, and gene-environment interaction on public health related problems and systems.	1-3
2. Understand basic theories, concepts, models and methods from a range of core and related disciplines and apply them to the design of PH research, policy, and practice	• Identify and understand life course theory and its concepts that explain differences in the health and illness	1-3
3. Apply ethical and social justice principles and standards	• Describe the elements of the life course theory that apply to disparities in health outcomes	10-14
4. Interpret and apply the PH literature	• Retrieve relevant materials, summarize and identify a topic for further exploration over the semester. • Find conflicting interpretations of the same phenomenon and use examples to support your case.	2-5 7-13
5. Communicate PH information verbally and in writing	• Synthesize public health information verbally and in writing	3-14
6. Explain key social, behavioral, biomedical and environmental determinants of and inequities in health and disease across the lifespan in urban settings	• Describe specific pathways by which urban living affects health across the lifespan. • Identify major economic, political, and environmental forces that shape the health of U.S. populations.	1-5
7. Design and evaluate interventions to prevent or control urban PH problems	• Identify current research utilizing the life course perspective	13, 14

Last Updated July 23, 2015

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS
Lehman College
PHE 790: Public Health Practice Capstone Seminar
3 Credits
Fall 2015

Time and location	Wednesday 6:00-8:40PM Room GI 429
Instructor	Professor Luisa N. Borrell, D.D.S, Ph.D. Email: Luisa.Borrell@lehman.cuny.edu (best way for contact) Phone: 718- 960-8549 Office: Gillet 336
Office hours	By appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Examination of academic, community, government, and private sector public health partnerships from an interdisciplinary perspective, culminating in a seminar project
Course prerequisites	PHE 770
Course format	Seminar
Required reading and resources	Not applicable
Suggested reading and resources	Readings on writing scientific papers would be provided throughout the course as needed.

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*

Apply the public health core functions of assessment, policy development and assurance	• Construct a testable research question or practice problem, which
	  ○ can feasibly be addressed within a specified time period
	  ○ is of public health relevance
	  ○ when addressed will fill a knowledge gap
		• Capstone project

Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Place a research question or practice problem within a relevant conceptual framework and the broader public health context • Identify and apply relevant professional or scholarly methods to an investigation or practice problem, including use of a predefined protocol or research plan. • Plan the analysis, synthesis and write up of an investigation from inception to completion including scheduling of items on the critical path to completion	• Capstone project
Adhere to ethical and social justice principles and standards	• Analyze relevant ethical or social justices issues using widely recognized principles or standards. • Obtain IRB or IACCU approval or exemption if appropriate. • Conduct any public health investigations involving human subjects in accordance with OHRPP ethical performance standards, including maintenance of confidentiality and security.	• Capstone project
Interpret and analyze public health literature and apply evidence-	• Implement a structured search of the literature. • Summarize the literature to date, including quantitative	• Capstone project

based research	associations and qualitative themes, on a specific topic taking into account levels of evidence • Identify weaknesses within existing literature, such as addressing the wrong question, lack of comparison groups, biases or limited generalizability	
Apply basic statistical and informatics techniques	• Generate summarized descriptive information from PH data, such as frequencies and cross-tabulations • Assess qualitative data according to accepted methods, such as componential analysis. • Identify the key findings of a study or practice experience. • Provide sources of information for all statements of fact in the draft through use of a citation manager • Present PH information in figures, tables and graphs, such that each figure/table/graph is interpretable, self-explanatory and can be read standalone	• Capstone project
Communicate public health information through oral, written, digital and visual presentation	• Identify the interests of different stakeholders in the findings • Make an oral or poster presentation conveying key findings to a defined audience contextualized within current knowledge and interests of stakeholders, as well as with due acknowledgement of strengths and weakness of findings. • Write a document a public health problem such as a research report, program evaluation, analytic paper or policy analysis, using language appropriate for a professional public health audience.	• Capstone project
Explain how social, behavioral, biomedical and environmental determinants affect population health	•	

Design and evaluate interventions to prevent or control public health problems	• Implement the analysis, synthesis and writing plan for the culminating writing experience according to a predefined plan • Discuss the implications of a study or evaluation to address the needs for future evaluation and research, or for the development and implementation of programs and policies.	• Capstone project
Collect, analyze and interpret public health data	• Synthesize findings within the context of existing knowledge with acknowledgement of the strengths, weaknesses of the findings and gaps in knowledge that remain, and the corresponding implications for interpretation • Identify issues with reliability and validity of findings and explain their likely implications. • Justify methods of measurement • Identify public health implications of an investigation	• Capstone project and poster presentation
Engage and collaborate with diverse groups	•	• Capstone project and poster presentation
Describe the legal foundations of the U.S. public health system and its interrelationships with other systems including health care, education and environmental protection	•	• Capstone project
Apply a framework for the planning, implementation and evaluation of public health programs, policies and interventions	•	• Capstone project
Explain the context of public and	•	• Capstone project

private health-care systems in which health care and public health policy are made and healthcare is delivered		

Course Assessments

Student grades will be based on:

a) Poster presentation (40%): Students are expected to present their project to students and faculty in the Department and to answer questions on their project.
b) Capstone Project (60%): Students will be expected to complete their project and format it for submission to the Library Thesis Archives. Please visit the Library Master's Theses Database Digital Depository for submission instructions http://www.lehman.cuny.edu/library/master-thesis-database.php

Grading

Evaluation criteria

The relative weight of each course component is as follows:

Assessment	Weight
Poster presentation	40%
Capstone Project	60%
	100%

The grading system for the course follows guidance in the Graduate Bulletin:

Letter Grade	Points	Quality Points
A	93-100	4.0
A-	90-92	3.7
B+	87-89	3.3
B	83-86	3.0
B-	80-82	2.7
C+	77-79	2.3
C	73-76	2.0
C-	70-72	1.7
F, WU	<=69	0

Withdrawal

The grade of W (withdrawal without penalty) is assigned only when a graduate student *officially* withdraws from a course. Students must complete the withdrawal process themselves, since the procedure requires a signature. No faculty member or program adviser can withdraw a student from a course. When students withdraw without completing the withdrawal procedure, the grade of WU is assigned for the course. This grade counts as a failure in computing the cumulative Grade Point Average. Graduate students should refer to the Graduate Bulletin and academic calendar for more information.

Grade of incomplete
The grade of INC (incomplete coursework) is awarded only when the course requirement has not been completed for good and sufficient reasons and when there is a reasonable expectation that the student can successfully complete the requirements of the course. For an instructor to grant an INC, the student must have met the instructor's attendance requirements in the course and have a passing semester average. An INC grade that has not been made up will change to a FIN grade (failure to complete coursework), remains permanently on the record, and counts as an F in computing the Grade Point Average. Refer to the Graduate Bulletin for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Program Director in writing giving the factual reasons and basis for the complaint. A student who wishes to appeal a grade must initiate the process in the full semester following the one in which the contested grade was received. For further guidance, refer to the Graduate Bulletin.

Course Policies

Attendance and class participation

Students are expected to attend classes regularly, and instructors are required to record attendance for grading and counseling purposes. Individual instructors, as well as departments or degree programs, may establish specific attendance requirements. Instructors have the right to weigh attendance and class participation in determining grades. It is the student's responsibility to ascertain the effect attendance may have on the grade in a course. Students receiving financial aid must be certified as attending classes regularly for continuing eligibility.

Late/incomplete submission of assignments

Late submission assignment would be impact your final grade.

Make-ups, rewrites, and extra credit

There is not make up or rewrites for the draft submission assignments.

Expectations of students
Students are expected to come to class on time. In addtion, they would not be allowed to use cell phone or do e-mails during class.

Expectations for the instructor
The instructor would be available face to face or by e-mail to answer any question or clarify any issues students may have on any aspects of the course.

Accessibility

Lehman College is committed to providing access to all programs and curricula to all students. Students with disabilities who may need classroom accommodations are encouraged to register with the Office of Student Disability Services. For more information, please contact the Office of Student Disability Services, Shuster Hall, Room 238, at 718-960-8441.

Academic integrity

The faculty and administration of Lehman College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete text of the CUNY Policy on Academic Integrity and the Lehman College procedure for implementing the policy can be found in the Graduate Bulletin.

Course Schedule– Update 08/10/15

**Please note that the schedule is subject to change throughout the semester.

Session	Date	Topic	Assignment*
1	09/02	Overview of course and Students' Project	
2	09/09	Class meeting – Introduction & Methods	
3	09/16	Class meeting – Results & Discussion	
4	09/23	Yom Kippur – No class	**Outline Draft due @ Midnight**
5	09/30	No class meeting	
6	10/07	Meeting as needed	
7	10/14	Meeting as needed – Individual meetings	**First Paper Draft due @ Midnight**
8	10/21	Class meeting – Poster Presentation	
9	10/28	Meeting as needed– Individual meetings	
10	11/04	Class Meeting	**Full Paper Draft due @ Midnight**
11	11/11	Meeting as needed– Individual meetings	**Poster Draft due @ Midnight**
12	11/18	Class Meeting	
13	11/25	Meeting as needed– Individual meetings	**Final Poster Draft due @ Midnight**
14	12/02	Meeting as needed– Individual meetings	**Please note poster must be ready for print by 9AM on Monday December 7th**
15	12/09	Poster Presentations	
16	12/16	Final Paper due @ 5PM	

*Please be aware that you will get comments within 7 to 10 days on your drafts via e-mail using the track changes tool on MS Word.

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Lehman College
PHE 791: Workshop in GISc Research for Public Health
4 Credits
Fall 2015

Time and location	Hybrid, with at least four in-person meetings from 9:30 AM – noon on Thursdays, 322 Gillet Hall (GISc lab)
Instructor	Dr. Glen Johnson, Associate Professor **glen.johnson@lehman.cuny.edu** (preferred communication method)
Office hours	Wednesday 3:30-5:00 pm, Thursday noon-1:30 pm, or by appointment, in 413 Gillet Hall
Course website	See "2015 Fall Term PHE 791 0" at https://bbhosted.cuny.edu
Support resources	Lehman College has two tutoring centers on campus. The **Academic Center for Excellence (ACE)** provides appointment-based and drop-in tutoring in the humanities, social sciences and writing, as well as general writing skills. The **Science Learning Center (SLC)** provides drop-in tutoring for natural and computer science courses. To obtain more information about the ACE and SLC, please visit their website at http://www.lehman.edu/issp, or please call the ACE at 718-960-8175, and the SLC at 718-960-7707.
Course description	An advanced examination of mapping and of new computer-aided technologies in the natural and social sciences, including research design and methodology and designing and conducting an independent GIS public health research project, conforming to generally acceptable professional geographical practices and techniques, under the supervision of faculty.
Course prerequisites	PHE 706 or departmental permission
Course format	Hybrid, online communication and monthly in-person meetings
Required reading and resources	▪ *"An Introduction to Scientific Research Methods in Geography*," by D. Montello and P. Sutton, Sage Publications, 2006. (Available at Lehman College Bookstore)

	▪ "*Research Design and Proposal Writing in Spatial Science*," by J. Gatrell, G. Bierly, and R. Jensen, Springer Publications. (Available on Blackboard)

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Express theoretical foundations of Geographic Information Science (GISc), cartography, and geography in general • Integrate spatial analysis and GISc applications in an interdisciplinary manner, incorporating information and research questions from other fields, such as public health	Final project presentation and report
Apply basic statistical and informatics techniques	• Design, implement, and present a substantive research project using GISc as the organizing framework	Final project presentation and report
Adhere to ethical and social justice principles and standards	•	Final project presentation and report
Interpret and analyze public health literature and apply evidence-based research	• Perform a comprehensive literature review of a public health research topic that requires GISc as part of a solution.	Final project presentation and report
Apply basic statistical and informatics techniques	• Acquire, process and analyze data, including accurate mapping and geo-spatial analyses	Final project presentation and report
Communicate public health information through oral, written, digital and visual presentation	• Design and create accurate, meaningful and unbiased maps and cartographic products that are easily understood by the target audience	Final project presentation and report
Explain how social, behavioral, biomedical and environmental determinants affect population health	• Identify associations between determinants and health outcomes at the level of individuals and communities	Final project presentation and report

Design and evaluate interventions to prevent or control public health problems	•	Final project presentation and report
Collect, analyze and interpret public health data	• Interpret, acquire, manage, analyze, display, and synthesize geospatial data, using both quantitative and qualitative methods	Final project presentation and report
Engage and collaborate with diverse groups	•	Final project presentation and report
Describe the legal foundations of the U.S. public health system and its interrelationships with other systems including health care, education and environmental protection	•	Final project presentation and report
Apply a framework for the planning, implementation and evaluation of public health programs, policies and interventions	•	Final project presentation and report
Explain the context of public and private health-care systems in which health care and public health policy are made and healthcare is delivered	•	Final project presentation and report

Course Assessments
Understanding of the course material will be evaluated through a series of deliverable products, leading to a final report and presentation:

Grading
The relative weight of each course component is as follows:

Assessment	*Weight*
Submission and in-class presentation of Interim Deliverables in Weeks 5 and 9	30%
Successful completion of research project by Week 13, with PowerPoint oral presentation of project in Week 13	30%
Preparation and submission of written report and poster illustrating your project by Week 15	40%
	100%

The grading system for the course follows guidance in the Graduate Bulletin:

Percentage	Letter Grade	Quality Points
94-100	A	4.0
90-93	A-	3.7
87-89	B+	3.3
84-86	B	3.0
80-83	B-	2.7
77-79	C+	2.3
70-76	C	2.0
69 and below	F, WU	0

Withdrawal
The grade of W (withdrawal without penalty) is assigned only when a graduate student *officially* withdraws from a course. Students must complete the withdrawal process themselves, since the procedure requires a signature. No faculty member or program adviser can withdraw a student from a course. When students withdraw without completing the withdrawal procedure, the grade of WU is assigned for the course. This grade counts as a failure in computing the cumulative Grade Point Average. Graduate students should refer to the Graduate Bulletin and academic calendar for more information.

Grade of incomplete
The grade of INC (incomplete coursework) is awarded only when the course requirement has not been completed for good and sufficient reasons and when there is a reasonable expectation that the student can successfully complete the requirements

of the course. For an instructor to grant an INC, the student must have met the instructor's attendance requirements in the course and have a passing semester average. An INC grade that has not been made up will change to a FIN grade (failure to complete coursework), remains permanently on the record, and counts as an F in computing the Grade Point Average. Refer to the Graduate Bulletin for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Program Director in writing, giving the factual reasons and basis for the complaint. A student who wishes to appeal a grade must initiate the process in the full semester following the one in which the contested grade was received. For further guidance, refer to the Graduate Bulletin.

Course Policies

Attendance and class participation

Students are expected to attend classes regularly, and instructors are required to record attendance for grading and counseling purposes. Individual instructors, as well as departments or degree programs, may establish specific attendance requirements. Instructors have the right to weigh attendance and class participation in determining grades. It is the student's responsibility to ascertain the effect attendance may have on their grade in a course. Students receiving financial aid must be certified as attending classes regularly for continuing eligibility.

Academic Integrity

While you are encouraged to discuss ideas with each other to facilitate your learning experiences, the work that is turned in must be your own. For example, allowing someone to copy your work, passing or sharing your answers to others, and/or doing work for others (including computer assignments) are examples of violations of Academic Integrity. For more information please visit and read the University of California Davis website (http://sja.ucdavis.edu/academic-integrity.html) or visit the Center for Academic Integrity at Clemson University (http://www.academicintegrity.org) for a detailed description of academic integrity. One of the more common and more destructive breaches of academic integrity is plagiarism. Visit the Plagiarism.org Learning Center (http://www.plagiarism.org) for more information on how to avoid plagiarism. The concerns and guidelines provided in these websites will be seriously applied in this course. The complete text of the CUNY Academic Integrity policy can be found at this site:
http://web.cuny.edu/academics/info-central/policies/academic-integrity.pdf

Accessibility

In compliance with the American Disability Act of 1990 (ADA) and with Section 504 of the Rehabilitation Act of 1973, Lehman College is committed to ensuring educational parity and accommodations for all students with documented disabilities and/or medical conditions. It is recommended that all students with documented disabilities (Emotional, Medical, Physical and/ or Learning) consult the Office of Special Student Services in the

Division of Student Affairs. The Office of Special Student Services is located in Shuster Hall, Room 238, Tel. (718) 960-8441, TTY (718) 960-8931.

Syllabus Modification
The instructor may modify the syllabus and study plan.

Course Schedule

Week 1 – Meet to discuss course requirements, reading materials, and preliminary research concepts

Weeks 1-4:
- Read: Montello and Sutton, Chapter 1 - Introduction: A Scientific Approach to Geography; Chapter 2 - Fundamental Research Concepts; Chapter 3 - Data Collection in Geography: Overview; Chapter 9 - Statistical Data Analysis; Read: Gatrell et al, Chapter 1 - Spatial Science and its Traditions; Chapter 2 - Literature Reviews; Chapter 3 - Research Questions; Chapter 4 - Data and Methods in Spatial Science.
- Select research topic, and conduct literature review on topic, examine other research on topic;
- Prepare written Initial Research Design, including hypothesis or questions to be answered;
- Conduct a Preliminary Data Needs Assessment and Data Acquisition;

Week 5 – Presentation of Preliminary Research Design and literature review

WEEK 5 DELIVERABLES:
- Short (one-pager) description of your narrowed-down project, including one or more laser-sharp, pin-pointed research questions;
- List of data sets needed, including data sources and status of acquisition for each data set;
- Flow Chart of project design (GIS analysis portion of project only);
- Be prepared to discuss your research design and literature review.

Weeks 5-8:
- Read: Chapter 10 - Data Display: Tables, Graphs, Maps, Visualizations; Chapter 11 - Reliability and Validity; Chapter 12 - Geographic Information Techniques in Research
- Refine research methodology;
- Capture and input necessary data;
- Preliminary data analysis;

Week 9 – Interim Progress Report on research projects

WEEK 9 DELIVERABLES:
- At least one preliminary Map Layout and one-pager on Preliminary findings.

Weeks 9-12:
- Read: Chapter 13 - Scientific Communication in Geography; Chapter 14 - Ethics in Scientific Research;
- Analysis of data;
- Map and charts production;
- Prepare draft findings;
- Prepare Power Point or Prezi presentation of project background, methods, analysis, and conclusions.

Week 13 – Presentation of Research Results

WEEK 13 DELIVERABLES:
- Oral Presentation of Project, via PowerPoint slides, Prezi, or other mode.

Week 13-15:
- Prepare final maps and charts and written report of findings;
- Prepare large-format PowerPoint slide of poster of project.

Week 15 – Final Project Due (all materials to be submitted no later than December 17, 2015)

WEEK 15 DELIVERABLES:
- Final Project Report;
- PowerPoint Slide of Large-format Poster of Project.
- Final PowerPoint Presentation of Project.

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS
PUBH 800 and PH 770.77
Cities, Society and Health
3 Credits
Fall 2015

Time and location	Mondays 6:30 –8:25 pm, Room 3310 at the Graduate Center, 365 Fifth Avenue
Instructor	Nicholas Freudenberg, DrPH Room 3317. Tel: 212-396-7738 Email: nfreuden@hunter.cuny.edu
Office hours	Office Hours: Mondays 5-6:15 pm or by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course presents an ecological, multilevel approach to the study of urban health and brings together public health and social science disciplines to examine the impact of city living on population health. Its focus is on the social determinants of health in US urban populations in the post-World War II period and on the causes of persistent health inequalities in US and other cities. It is required for all DPH students
Course prerequisites	None for DPH students, Instructor's Permission for 770.77
Course format	This course is taught with a mix of online learning resources, in class lectures and discussions, collaborative exercises and written assignments.
Required reading and resources	See weekly reading assignments below
Suggested reading and resources	See suggested readings for each week, suggested books and suggested readings on health impact assessment at the end of this syllabus

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to achieve the following DPH competencies:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be assessed as part of the following course assignments:
1. Describe the role of social, political, biological, economic, historical, behavioral and environmental factors in health and disease in urban settings and identify opportunities for interventions to improve population health at individual, community, city and policy levels 2. Explain the mechanisms and pathways by which urban conditions affect health and the roles of various urban systems in promoting health and preventing disease; 3. Explain the value and limitations of multilevel, ecological models in the study of urban health and apply such models to the investigation of specific health problems. 4. Apply concepts, theories and methods from two or more disciplines to the study of urban health	1. Describe the various pathways and mechanisms by which city living and urban social conditions affect health; 2. Identify major social, economic, political and environmental forces that have shaped the health of U.S. urban populations in the past several decades; 3. Discuss the impact of major global, national and local trends on the health of urban populations in high, middle and low income nations; 4. Describe a framework for understanding the determinants of differences in health between and within urban and non-urban populations; 5. Explain the roles of public health professionals and social science researchers in studying and taking action to improve the health of urban populations. 6. Describe the role of various municipal systems (e.g., educational, health care, public health, environmental protection, criminal justice, food and nutrition, social services) in promoting health and preventing disease. 7. Apply the method of health impact assessment to study of urban health 8. Identify your strengths and weaknesses in writing for the professions	**1. Class Participation (Individual, 10%):** Students are expected to attend class regularly, participate actively, complete and be prepared to discuss with insight readings and other assignments. There will also be 2-3 short Blackboard assignments on class readings that contribute to this portion. **2. Blackboard Assignments (10%):** Each student is expected to post 2 short essays on Blackboard (Bb), described below. 3. **Meetings with instructor (5%):** Each student is expected to schedule at least one individual meeting with an instructor to get feedback on writing. 4. **Critical Book Review (Individual, 5%):** Due first class session. See pp.11-12 for details. 5. **Paper (Group and Individual, 65%):** The main assignment for the course is a 4-part paper; each component is due as specified below. Each of the 3 first papers are 15% of the grade; the final paper is 20%. The final, revised paper includes the 3 initial components along with additional components. The combined paper is due at the end of the semester. 6. **Final Paper Presentation (5%)** Participate in an interactive presentation of final project, format to be discussed.

The grading system for the course is as follows:

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITYfor Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Assignments

1. *Scoping review*. Identify, define and describe a specific social process that contributes to one or more adverse health conditions or health inequities in NYC or some other specified urban area. Your 6-7 page typed double spaced paper (text, images and references don't count towards limit) should explain and to the extent possible quantify the public health significance of the problem(s), summarize what is and is not known about the causal pathways by which the social process contributes to the health condition(s) or disparities, and identify 1-2 policy questions facing New York or another city that your overall health impact assessment seeks to answer. This and all future papers should use the Index Medicus (*JAMA, NEJM, AJPH*) style of references. Due October 19.
2. *Health impact assessment*. Based on first paper on social processes, select a specific policy or organizational practice that contributes to adverse health conditions or health inequalities in a specific urban setting. Summarize available evidence on the origins of the policy or practice. Your summary should include perspectives from at least three disciplines or sectors. Critically review evidence on the health impact of this policy or practice, summarizing what is known about adverse impact. Identify gaps in our understanding of impact and propose at least 2-3 specific research strategies or data sources to fill these gaps. Due Nov 9
3. *Recommendations for action*. Propose one or two specific changes in organizational practices or policy that would mitigate or prevent the adverse health consequences. Critically analyze the evidence that supports these recommendations. Analyze the economic and political obstacles that those seeking to implement your recommendations might encounter and suggest strategies to overcome these obstacles. Due Nov 23.
4. *Issue Brief*. Write a 4 page Issue Brief that summarizes the three papers for policy makers and advocates. Due Dec 14.

Oral reports on project on Dec 14 and 21

The table below gives some examples of the types of topics for each of the papers. These are meant to be illustrative, not limiting.

Social Process	***Policies***	***Social Practices***	***Possible Health Impact***
"the means by which certain patterns of social organization are created or maintained"; the cumulative policies, practices and methods of allocation that maintain the status quo in a specified domain	Laws or court decisions that mandate allocation of resources or services to achieve specified end	Implementation, enforcement, and informal actions that organizations take to implement written and unwritten policies	Specific population health outcomes for which specified policies or social practices play a causal role
A food production system that makes highly processed foods more affordable and available to low income populations	Federal subsidies for corn, sugar and soy; Tax deduction for all food marketing expenses	Implementation of school food programs; targeted marketing of unhealthy food to Blacks and Latinos	Changes in prevalence or incidence of obesity or Type 2 diabetes
A housing market that cannot provide adequate affordable or safe housing for some	Federal support for low income housing, mortgage	Setting definition of affordable housing too high for many low	Declines in federal support for low income housing

populations	guarantees for middle class home owners	income people to afford; redlining to keep neighborhoods segregated by race	contribute to homelessness and its adverse physical and mental health consequences.
An educational system that allocates resources and sorts students by class and race	Funding education through local property taxes , zero tolerance disciplinary policies	Implementation of disciplinary policies in ways that push out students of color	Higher lifetime premature mortality and preventable illness for those who do not graduate high school
Criminal justice policies that reinforce and maintain inequalities in health and employment and other opportunities	Three strikes and you're out, stop and frisk	Few community reentry services, differential policing practices in Black and Latino communities	Untreated mental illness and substance use problems

Summary of Topics

Session	Date	Topic	Assignments due
Session 1.	Aug 31	**Cities and Health: An Overview**	Critical book review
Session 2.	Sept 10 class meets om Thurs	**Health Impact Assessment: A method for assessing influences on health?**	Topic for social process paper BB assignment 1
Session 3.	Sept 21	**Compared to what: Historical perspectives**	
Session 4.	Sept 28	**Compared to what: Developing world perspectives**	
Session 5.	Oct 5	**?**	
	Oct 12	**No class, America discovers Columbus**	
Session 6.	Oct 19	**Race, racism and the health of cities**	Paper 1 due
Session 7.	Oct 26	**Urban governance and health**	
Session 8.	Nov 2	**How housing and the built environment influence health**	
Session 9.	Nov 9	**Urban Food Systems: Who eats what?**	Paper 2 due
Session 10.	Nov 16	**?**	BB Assignment 2 due
Session 11.	Nov 23	**Changing people, communities, policies or structures? Intervening at multiple levels to improve health**	Paper 3 due
Session 12.	Nov 30	**Advancing health equity: what strategies work?**	
Session 13.	Dec 7	**Intersectoral action for health**	
Session 14.	Dec 14	**Towards an Urban Health Agenda** **Student reports**	Paper 4 due and Oral Report due
Session 15.	Dec 21	**Student reports**	

Overview of Assignments

Blackboard Assignments: By September 10, post on Discussion Board 1 an image of yourself and a two paragraph profile that summarizes what you *already know* about urban health and related topics that may benefits your classmates and *what you need to know* to achieve your professional objectives. By November 16, post on Discussion Board 2 an image or short video(you can use a link) that shows some dimension of urban health or urban life that is important to you and two paragraphs explaining its importance to you and your professional or personal goals for making changes in this area in the next 10 years.

The main assignment for this course is a four-part paper, each component due as specified and a fifth final revised paper including all prior parts due at the end of the semester. You can complete the first *three* papers with one other student; the final two assignments are completed separately by each student.

Class Presentation (5%). Each student will give a 5 minute presentation (timing strictly enforced) on their policy report using no more than 20 slides. For information on the PechaKucha method, on which this assignment is based, visit:
http://www.pechakucha.org/

Note on assigned readings:

Where possible we have chosen readings that are available online and have included links that worked as of July 2014. These links often break or are changed. Please do not contact me if the link doesn't work—use Google or other search engines to find a working link or look in the online GC library collection. Being able to find resources is an important skill for public health researchers and your occasional frustrations in finding what you need will eventually lead to good skills in retrieving needed evidence. Articles not available on line are posted in the course Bb website. Make sure you learn how to use Blackboard after you have registered for the Fall semester. More information at:
https://bbhosted.cuny.edu/webapps/portal/frameset.jsp?tab_tab_group_id=_96_1

CUNY-Graduate Center Policies

INC Grades. To resolve incomplete grades, students must fulfill their obligations within one calendar year after completion of the course. After one year, an incomplete ("INC") will automatically be transformed into an "INC'' (permanent incomplete); extensions will be granted only in exceptional circumstances upon written application and with the permission of the faculty member, the Executive Officer, and the Vice President for Student Affairs. Permanent incompletes will accrue no credit. Incomplete grades cannot be changed to letter grades after a student has been advanced to candidacy and has been moved to Level III. Students with more than two incomplete courses will be brought to the attention of their Executive Officer to determine whether or not they are making satisfactory progress. Students will not normally be regarded as making satisfactory progress toward their degrees if they have more than two INCs on their records. (Please refer to "Standards for Retention,", and to page 63 in the Graduate Center handbook.) Students should be aware that continued registration and most financial aid awards are conditional upon satisfactory progress. Students should also note that credits for which they have an INC as of the end of the third week of classes of a given semester are not counted toward advancement to the next level for that semester.

HONOR CODE & ACADEMIC INTEGRITY

While you are encouraged to discuss ideas with each other to facilitate your learning experiences, the work that is turned in must be your own. For example, allowing someone to copy your work, passing or sharing your answers to others, and/or doing work for others (including computer assignments) are examples of violations of Academic Integrity. For more information please visit and read the University of California Davis website (http://sja.ucdavis.edu/academic-integrity.html) or visit the Center for Academic Integrity at Clemson University (http://www.academicintegrity.org) for a detailed description of

academic integrity. One of the more common and destructive breaches of academic integrity is plagiarism. Visit the Plagiarism.org Learning Center (http://www.plagiarism.org) for more information on how to avoid plagiarism. The concerns and guidelines provided in these websites will be seriously applied in this course.

INFORMATION ABOUT ACCESS TO THE OFFICE OF DISABLED STUDENTS
Among other responsibilities, the CUNY Graduate Center Vice President for Student Affairs has overall responsibility for Student Disability Services and is the 504/ADA Coordinator.

Required Summer Reading for Cities, Society and Health

Please select one of the following books to read before classes begin on August 31st. Most are available on Amazon, at large book stores, online, by e-device and in some major libraries. Please bring the critical review to submit at the first session of class as a two page essay (typed, single spaced, 1" margins, 12 point font) that briefly summarizes and critiques the book and discusses how the book deepens your understanding of how city living affects health.

.

Books (choose one)

Anderson, Elijah. The Cosmopolitan Canopy: Race and Civility in Everyday Life. Norton, 2012.
From Booklist. Cosmopolitan canopies are those spaces in urban environments that offer a break from the tensions of chafing racial and economic differences, a place for diverse peoples to assemble and rub elbows. Sociologist and folk ethnographer Anderson offers a rich narrative of such spaces in Philadelphia, including Reading Terminal Market and Rittenhouse Square. Anderson details the give-and-take of public interaction in urban settings, much of it dictated by race and class. He observes how close and far away people sit, whether they greet each other, how deep or long their interactions are, and whether they break or reinforce barriers. He also chronicles the daily shifting of space used by the homeless, workers, residents, and commuters as they encounter, interact, and evade. Anderson's observations are keen but not distant as he offers journal pages and interviews, showing his own full engagement in interactions with a cross section of Philadelphians.

Barber, Benjamin. If Mayors Ruled the World. Yale University Press, 2013.
Barber cites the unique qualities cities worldwide share: pragmatism, civic trust, participation, indifference to borders and sovereignty, and a democratic penchant for networking, creativity, innovation, and cooperation. He demonstrates how city mayors, singly and jointly, are responding to transnational problems more effectively than nation-states mired in ideological infighting and sovereign rivalries. Featuring profiles of a dozen mayors around the world—Barber makes a persuasive case that the city is democracy's best hope in a globalizing world, and great mayors are already proving that this is so.

Brash, Julian. Bloomberg's New York Class and Governance in the Luxury City. University of Georgia Press, 2011.
New York Mayor Michael Bloomberg claims to run the city like a business. In *Bloomberg's New York*, Julian Brash applies methods from anthropology, geography, and other social science disciplines to examine what that means. He describes the mayor's attitude toward governance as the Bloomberg Way—a philosophy that

holds up the mayor as CEO, government as a private corporation, desirable residents and businesses as customers and clients, and the city itself as a product to be branded and marketed as a luxury good.

Conn, Steven Americans Against the City: Anti-Urbanism in the Twentieth Century. Oxford University Press, 2014.
Conn explores the anti-urban impulse across the 20th century, examining how the ideas born of it have shaped both the places in which Americans live and work, and the anti-government politics so strong today. Beginning in the booming industrial cities of the Progressive era at the turn of the 20th century, where debate surrounding these questions first arose, Conn examines the progression of anti-urban movements.

Fainstein, Susan. The Just City. Cornell University Press, 2010. In this book, Susan Fainstein draws together her conceptual work over the past twenty years on the just city and her empirical work on urban development projects in major Western cities. Her commitment to social justice shines through this work, and she provides a challenging approach to evaluating urban development projects from this perspective. The result is a valuable contribution to planning theory and to the evaluation of urban policy.

Glaeser, Edward. Triumph of the City: How Our Greatest Invention Makes Us Richer, Smarter, Greener, Healthier, and Happier, 2011. From Booklist. Glaeser's academic specialty, urban economics, informs his survey of how cities around the world thrive and wither. Using a range of expository forms-- history, biography, economic research, and personal story—he defines what makes a city successful. That changes through time, and a flourishing Industrial Age model may not work in the service-age economy, as rust-belt towns like Detroit have learned. One thing constantly attracts people to one city rather than another: how much housing construction is permitted. Other features of metropolises--their incidences of poverty and crime, traffic congestion, quality of schools, and cultural amenities-- also figure in Glaeser's analysis. Whatever the city under discussion, Mumbai or Woodlands, Texas, Glaeser is discerning and independent; for example, he believes that historic preservation isn't an unalloyed good and that bigger, denser cities militate against global warming.

Katz, Bruce and Bradley, Jennifer. The Metropolitan Revolution: How Cities and Metros Are Fixing Our Broken Politics and Fragile Economy. Brookings, 2013. Across the US, cities and metropolitan areas are facing huge economic and competitive challenges that Washington won't, or can't, solve. The good news is that networks of metropolitan leaders – mayors, business and labor leaders, educators, and philanthropists – are stepping up and powering the nation forward. These state and local leaders are doing the hard work to grow more jobs and make their communities more prosperous, and they're investing in infrastructure, making manufacturing a priority, and equipping workers with the skills they need.

Landale, Nancy S. McHale, Susan, Booth, Allan. Authors & Editor. Growing Up Hispanic: Health and Development of Children of Immigrants. The Urban Institute, 2010. Hispanic children of immigrants are a diverse and fast-growing population in the United States. Growing Up Hispanic explores the challenging environment in which these children are raised--high poverty rates, low academic achievement, limited access to health and social services, negative sentiments about immigrant families, and uncertain political and legal support--and examines how neighborhood, family, school, and community affect their development and well-being. A bold policy agenda can improve these children's lives and help them thrive. Here, diverse scholars examine the social ecologies, how families influence children's adaptation to new environments, the effects of education policies on school experiences, and the roles of health care policies and social services in well-being.

Meleis, Afaf Ibrahim ; Birch, Eugenie L., Wachter, (Susan M. (Editors). Women's Health and the World's Cities University of Pennsylvania Press, 2013.. Growing urbanization affects women and men in fundamentally different ways, but the relationship between gender and city environments has been ignored or misunderstood. Women and men play different roles, frequent different public areas, and face different health risks. Women suffer disproportionately from disease, injury, and violence because their access to resources is often more limited than that of their male counterparts. Yet, when women are healthy and safe,

so are their families and communities. Urban policy makers and public health professionals need to understand how conditions in densely populated places can help or harm the well-being of women in order to serve this large segment of humanity.

Perlman, Janice. Favela: Four Decades of Living on the Edge in Rio de Janeiro. Oxford University Press, 2010.
An exhaustive study of life in the 1,020 favelas—squatter settlements in Rio de Janeiro—in this sequel to her 1976 book, *The Myth of Marginality*. Here she attempts to find and reinterview her subjects as well as their children and grandchildren. Her authoritative account based on interviews with almost 2,500 people (some of whom she has known for 40 years) blends detailed personal testimonies with ethnography and insightful analyses of the urbanization of poverty, the implications of public policy and the drug trade. Her measured approach is all the more compelling because as she investigates the deprivation and danger faced by favela dwellers—19% of the city's population—she also conveys a deep understanding that favelas are not merely despair-filled slums but communities, and many residents have remained there by choice. She is also insightful about the limitations of her own research and the conclusions that can be drawn from it, making her arguments all the more meaningful.

Sze, Julie. Noxious New York: The Racial Politics of Urban Health and Environmental Justice. MIT Pres, 2006. Racial minority and low-income communities often suffer disproportionate effects of urban environmental problems. Environmental justice advocates argue that these communities are on the front lines of environmental and health risks. In Noxious New York, Julie Sze analyzes the culture, politics, and history of environmental justice activism in New York City within the larger context of privatization, deregulation, and globalization. She tracks urban planning and environmental health activism in four gritty New York neighborhoods: Brooklyn's Sunset Park and Williamsburg sections, West Harlem, and the South Bronx

Russell, James S. The Agile City: Building Well-being and Wealth in an Era of Climate Change. Island Press.*The Agile City* engages the fundamental question: what to do about global warming? Journalist and urban analyst James S. Russell argues that we'll more quickly slow global warming-and blunt its effects-by retrofitting cities, suburbs, and towns. *The Agile City* shows that change undertaken at the building and community level can reach carbon-reduction goals rapidly. Intelligently designing our towns could reduce marathon commutes and child chauffeuring to a few miles or eliminate it entirely. Agility, Russell argues, also means learning to adapt to the effects of climate change, which means redesigning the obsolete ways real estate is financed; housing subsidies are distributed; transportation is provided; and water is obtained, distributed and disposed of. These engines of growth have become increasingly more dysfunctional both economically and environmentally. *The Agile City* highlights tactics that create multiplier effects, which means that ecologically driven change can shore-up economic opportunity, can make more productive workplaces, and can help revive neglected communities.

Saunders, Douglas. Arrival City, Pantheon. From Publishers Weekly. In a globe-trotting narrative alive with on-the-ground reportage, journalist Saunders offers a cautionary but essentially optimistic perspective on global urbanization. He concentrates on the slums and satellite communities that act as portals from villages to cities and, in turn, revitalize village economies. Policy makers misunderstand at their peril these "arrival cities"—London's heavily Bangladeshi Tower Hamlets, Brazil's favelas, China's Shenzhen. Citing the statistical relationship between urbanization and falling poverty rates, as well as historical precedents like Paris ("the first great arrival city of the modern world"), Saunders insists urban migration means improvement overall, and that the arrival city serves as a springboard for the integration of new populations. While the picture of urbanization veers from gloomier forecasts by analysts like Mike Davis (Planet of Slums), it does so by eschewing direct questioning of the global economic system driving much of this migration. Saunders's narrative, however, does plead for rational and humane planning within global capitalism to ensure that arrival cities fulfill their purpose and achieve their potential.

Verner, Dorte. Reducing Poverty, Protecting Livelihoods, and Building Assets in a Changing Climate: Social Implications of Climate Change for Latin America and the Caribbean. World Bank, 2010. Climate change is the defining development challenge of our time. More than a global environmental issue, climate change and variability threaten to reverse recent progress in poverty reduction and economic growth. Both now and over the long run, climate change and variability threatens human and social development by restricting the fulfillment of human potential and by disempowering people and communities in reducing their livelihoods options. Communities across Latin America and the Caribbean are already experiencing adverse consequences from climate change and variability.

Academic integrity

The Graduate Center regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the CUNY Policy on Academic Integrity and other sourcesfor definitions and examples of academic dishonesty.

DPH HPM SPECIALIZATION

CUNY SCHOOL OF PUBLIC HEALTH

The Graduate Center
PUBH 805: Quantitative Research Methods with Applications to Urban Public Health
28952
Fall 2015
3 credits

"Nullius in verba" ("On the word of no one")
-Motto of the Royal Society

"Well, first came an action, and then a reaction
But you can't switch 'em 'round for your own satisfaction
Well, you burnt my house down, then got mad at my reaction."
-The White Stripes, *Effect and Cause*

Catalogue description	This course will introduce students to quantitative research methods in urban public health. It follows introductory biostatistics and epidemiology courses. Course objectives include understanding the fundamentals of causality and study design. We will learn about the assumptions and interpretation of linear and logistic regression, experiments and quasi-experiments, and complex surveys and questionnaire design. Topics subsumed in these areas include dummy variables, instrumental variables, interaction terms (effect modification), fixed effects, and weighting and stratification. The focus will be on interpretation and critique of methods in health services research.
Course meets	Wednesday, 6:30-8:30 pm, Graduate Center 6495
Instructor	Alexis Pozen, Ph.D.
Email	alexis.pozen@sph.cuny.edu
Phone	646-664-8361
Office	55 W 125th St, 8th Floor
Office hours	By appointment
Required materials	Readings are available [online] through the CUNY library and will be posted on Blackboard.
Recommended books	Woolridge, JM. Introductory econometrics: a modern approach. 5th edition. Cengage, 2012. Angrist JD, Pischke, J-S. Mostly harmless econometrics: an empiricist's companion. 1st edition, Princeton University Press, 2009.

Course Policies

Grading

		Dates
10%	Problem Set 1	10/7
10%	Problem Set 2	10/28
10%	Problem Set 3	11/18
10%	Problem Set 4	12/9
25%	Midterm – in class	10/21
25%	Final (non-cumulative) – in class	12/9
10%	Class participation	
100%		

Assignments and exams
Problem sets will be graded out of 10 points each (10 percent of your grade each) and will be a mix of quantitative problems and literature critiques. You may work together with others in the class, but answers must be your own. Exams will be in class and will each count for 25 points each (25 percent of your grade each). They will be closed book. The final will *not* be cumulative.

Attendance and class participation
As class discussion will be key to learning in this course, attendance is required. Please notify me at least one week in advance if you will not be able to attend class. Your meaningful participation will contribute not only to your own understanding of the material, but to others' as well. Please come to class having done readings and ready to ask and answer questions.

Late submission of assignments
Late assignments will be marked down a half letter grade (or 5 percentage points) for every day late.

Class citizenship & rules of conduct
Please come to class on time, and let me know in advance if you need to come late or leave early. I don't mind if you use laptops in class, but please limit use to note-taking to avoid distracting others. Remember to turn off your cell phones.

Email correspondence
Feel free to email me any time at alexis.pozen@sph.cuny.edu with any questions or concerns about the course, related material, the program, research, etc., and I will get back to you as soon as possible. Remember, office hours are by appointment, and I encourage meetings!

Institutional policies

Accessibility
Special accommodations for students with disabilities are available through the campus disability services offices. Please contact them, and they will inform me of the appropriate accommodations to make. More information about campus disability services is available here: http://www.cuny.edu/about/administration/offices/sa/services/disabilities/student-info.html

Academic integrity

"The Graduate Center of the City University of New York is committed to the highest standards of academic honesty. Acts of academic dishonesty include—but are not limited to—plagiarism (in drafts, outlines, and examinations, as well as final papers), cheating, bribery, academic fraud, sabotage of research materials, the sale of academic papers, and the falsification of records. An individual who engages in these or related activities or who knowingly aids another who engages in them is acting in an academically dishonest manner and will be subject to disciplinary action in accordance with the bylaws and procedures of the Graduate Center and of the Board of Trustees of the City University of New York.

"Each member of the academic community is expected to give full, fair, and formal credit to any and all sources that have contributed to the formulation of ideas, methods, interpretations, and findings. The absence of such formal credit is an affirmation representing that the work is fully the writer's. The term "sources" includes, but is not limited to, published or unpublished materials, lectures and lecture notes, computer programs, mathematical and other symbolic formulations, course papers, examinations, theses, dissertations, and comments offered in class or informal discussions, and includes electronic media. The representation that such work of another person is the writer's own is plagiarism.

"Care must be taken to document the source of any ideas or arguments. If the actual words of a source are used, they must appear within quotation marks. In cases that are unclear, it is the responsibility of the writer to take due care to avoid plagiarism.

"The source should be cited whenever:

(a) a text is quoted verbatim

(b) data gathered by another are presented in diagrams or tables

(c) the results of a study done by another are used

(d) the work or intellectual effort of another is paraphrased by the writer

"Because the intent to deceive is not a necessary element in plagiarism, careful note taking and record keeping are essential in order to avoid unintentional plagiarism."

Source: CUNY Graduate Center Student Handbook, 2014-15, Available at: http://www.gc.cuny.edu/CUNY_GC/media/CUNY-Graduate-Center/PDF/Publications/Student_Handbook_web.pdf

Academic dishonesty will be treated on a case-by-case basis. Penalties may include imposing a failing grade on the assignment, imposing a failing grade in the course, or termination from the program.

Last day to drop the course with the grade of "W"

See the CUNY academic calendar for the date this semester.

Grade of incomplete

It is my policy to not give a grade of incomplete. You are expected to complete all assignments on time, with exception of grave emergency, as noted above under assignments.

SCHEDULE

Session	Date	Topic	Readings and Assignments
1	9/2	Intro to quantitative methods -Course logistics -All about causality! -Types of data, types of studies	Glass, TA, et al. Causal inference in public health. Annual Review of Public Health 2013; 34: 61-75.
2	9/9	Research design -Causality -Experiments -Natural and quasi-experiments -Internal and external validity -Econometric fixes	Manning WG, Newhouse WP, Duan N, et al. Health insurance and the demand for medical care: evidence from a randomized experiment. The American Economic Review 1987; 77: 251-277.
3	9/16	Ordinary least squares (OLS) regression, bivariate -Assumptions and properties -Regression equation – all the ways you can possibly say "regressor" -How to choose variables to put into a regression -Interpreting coefficients -When to choose OLS -Modeling non-linear relationships with OLS	*Problem set 1 distributed* Fletcher JM, McLaughlin SM. Neighborhood factors during adolescence: modest effects on cardiovascular risk, small impact on obesity and depression. Health Affairs 2015; 34(9): 1472-79.
4	9/23	NO CLASS	
5	9/30	Ordinary least squares (OLS) regression, multivariate -Multiple regression versus bivariate regression (versus RCT) -How to choose variables to put into a regression; how to choose what to leave out -Omitted variable bias multicollinearity -R-squared, adjusted R-squared	Roebuck MC, Dougherty JS, Kaestner R, Miller LM. Increased use of prescription drugs reduces medical costs in Medicaid populations. Health Affairs 2015; 34(9): 1586-93.

6	10/7	Hypothesis Testing -Type I and II errors, false negatives and positives, sensitivity and specificity -T-test, confidence intervals, p-values -F-test -Significance and power	*Problem set 1 due* *Problem set 2 distributed* Very short: SPRINT Study press release, September 11, 2005. http://www.nhlbi.nih.gov/news/press-releases/2015/landmark-nih-study-shows-intensive-blood-pressure-management-may-save-lives
7	10/14	Functional Form -Log, quadratic, interaction terms -Rescaled variables Midterm review	Hunt KJ, Alanis MC, Johnson ER, et al. Maternal pre-pregnancy weight and gestational weight gain and their association with birthweight with a focus on racial differences. Maternal and Child Health Journal 2013; 17(1): 85-94.
8	10/21	MIDTERM – IN CLASS	
9	10/28	Midterm debrief Dummy variables -Ordinal variables Measurement error -Independent variable versus dependent variable measurement error Heteroskedasticity	*Problem set 2 due* *Problem set 3 distributed* Hart JE, Liao X, Hong B, et al. The association of long-term exposure of $PM_{2.5}$ on all-cause mortality in the Nurses' Health Study and the impact of measurement error correction. Environmental Health 2015; 14: 38-46
10	11/4	Qualitative dependent variables -Linear probability model -Logit -Probit	Chen J, Fang H, Rizzo JA. Physician-patient language concordance and malpractice concerns. Medical Care 2011; 49: 1040-44.

11	11/11	Quasi-experiments 1 -Differences-in-differences -Fixed and random effects (hierarchical modeling)	Levine PB, Trainor AB, Zimmerman DJ. The effect of Medicaid abortion funding restrictions on abortions, pregnancies and births. Journal of Health Economics 1996; 15(5): 555-578.
12	11/18	Quasi-experiments 2 -Instrumental variables -Regression discontinuity (if time) -Matching/propensity scores	*Problem set 3 due* *Problem set 4 distributed* Anderson ML, Matsa DA. Are restaurants really supersizing America? American Economic Journal: Applied Economics 2011; 3: 152-188. Long S, Dahlen H. Expanding coverage to low-income childless adults in Massachusetts: implications for national health reform. Health Services Research 2014; 49(S2): 2129-46.
13	11/25	Complex surveys -Questionnaire design -Sampling -Weighting and stratification	
14	12/2	Meta-analyses and systematic reviews Final exam review	
15	12/9	FINAL EXAM (non-cumulative) – IN CLASS	*Problem set 4 due*

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

The Graduate Center
PUBH 807 Practicum Project
3 Credits
Fall 2015

Time and location	This course will not meet.
Instructor	Daliah Heller, PhD MPH daliah.heller@sph.cuny.edu
Office hours	By appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	The DPH Practicum Project is a planned, supervised and evaluated experience that allows students to apply the knowledge and skills that they have acquired through learning experiences in a practice setting. The DPH Practicum Project requires 180 practicum hours that can be completed in a range of organizations across New York City or elsewhere. Students must document how the 180 practicum hours are spent. The student must complete a detailed learning plan, a summary report (that includes objectives), a self-evaluation, and a final report.
Course prerequisites	PUBH 800, PUBH 801
Course format	The pedagogical component of this course will be administered online, including all assignments. The student will meet individually with the Course Instructor at least twice during the semester (Practicum Project period).
Required reading and resources	N.a.
Suggested reading and resources	N.a.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Identify, develop, evaluate and recommend policy and programmatic interventions to improve population health at individual, community, government and country levels based on empirical evidence of social, political, cultural, biological, economic, historical, behavioral, environmental, and global factors in health and disease.	Apply public health knowledge and skills to design, implement monitor, and assess health-related interventions.	• Learning Plan • Progress Report • Final Report
Assess the mechanisms and pathways by which factors influence individual and population health.		
Synthesize and apply methods, theories and data from multiple disciplines to understand and solve population health issues.	Demonstrate the application of cross-disciplinary methods, theories, and data in public health practice.	• Final Report
Generate, translate, communicate, and disseminate population health evidence to diverse audiences	Present and discuss public health research and practice in diverse settings and audiences.	• Final Report • Project-related products • Self-reflection paper
Demonstrate leadership skills to facilitate the goals of population health research and practice.		
Design and deliver innovative educational experiences that promote learning about population health in academic and practice-based settings	Apply public health research and practice innovation to a wide array of settings and situations	• Learning Plan
Implement professional and organizational ethical guidelines in population health research and practice.	Thoroughly articulate and address ethical issues in public health research and practice.	• Self-reflection paper

Secure resources to conduct population health research and practice	Identify sources of funding and material support for public health research and practice.	• Self-reflection paper

Course Assessments

Over the course of the semester, the student is required to submit four assessments: a detailed Learning Plan, a Progress Report, a Final Report, and a Self-Evaluation paper. Though not graded, the Project Preceptor must also complete and submit a Student Evaluation Report at the end of the Project.

Grading

Evaluation criteria

Student progress in the Practicum will be measured with the documents submitted over the course of the semester. A rubric is posted with each Assignment on the Blackboard course website, detailing the measures by which it will be assessed.

The relative weight of each course component is as follows:

Assessment	Weight
Learning Plan	15%
Progress Report	10%
Final Report	60%
Preceptor Evaluation	Not graded
Self-Evaluation	15%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

The final course grade will be determined using the performance assessment described above, and resulting in a Pass (70% or higher) or a Fail (less than 70%) grade.

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course.

Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

While the program discourages students from taking Incompletes, under some circumstances, an Incomplete may be the only option for completing the Practicum Project. **A request for an Incomplete must be approved by the Course Instructor, and the incomplete grade must be resolved by the end of the subsequent semester.**

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation

No class will be given for this course. Students must submit Assignments to the course Blackboard site by the deadline posted. Students will be required to meet with the Course Instructor at least twice during the semester.

Late/incomplete submission of assignments

Late assignments will not be accepted unless approved by the Course Instructor, and with sufficient documentation describing the reason for lateness.

Make-ups, rewrites, and extra credit

No make-ups, rewrites, or assignments for extra credit will be offered.

Expectations of students

Students are expected to submit Assignments on time, to participate respectfully on the course Blackboard website, and to communicate with the Course Instructor on progress and problems related to the Practicum Project, as soon as issues arise.

Expectations for the instructor

The Course Instructor will grade Assignments and post results within five days of submission. The Course Instructor will respond to all emails from students within 48 hours of receipt, and will arrange face-to-face meetings with students as requested, and with Preceptors, as necessary.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule

This course schedule is subject to change.

For important dates in the semester process, please refer to the current academic calendar.

Session	Date	Topic	Assignment
1	August 31	Introduction and review of Practicum Project expectations	ONLINE PARTICIPATION: Students must log on to the Blackboard course, and on the Discussion topic provided, create a new thread introducing themselves and providing a 2-3 sentence description of their Practicum Project. Students must comment on at least one other student's posting. **DUE: By September 6**
2	August 31 thru September 10	Individual meeting with Course Instructor	IN-PERSON MEETING: Schedule and meet with Course Instructor to review Practicum Project work-plan and discuss detailed Learning Plan.
3	September 10	Learning Plan assignment	ASSIGNMENT SUBMISSION: **DUE: By September 14** Prepare a detailed Learning Plan for your Practicum Project, and submit to Blackboard
4	October 5	Progress Report assignment	ASSIGNMENT SUBMISSION: **DUE: By October 14** Prepare a progress report on your Practicum Project work to date, and submit to Blackboard and to your Practicum Sponsor.
5	November 30 thru December 12	Individual meeting with Course Instructor	IN-PERSON MEETING: Schedule and meet with Course Instructor to review Practicum Project progress and discuss plans for Final Report.

6	December 14	Final Report assignment	ASSIGNMENT SUBMISSION: **DUE: By December 14** Submit a comprehensive final report on your Practicum Project, demonstrating how the Project objectives were achieved. Submit via Blackboard, and include any attachments produced for the Project.
7	December 14	Practicum Sponsor evaluation of student	EVALUATION SUBMISSION (not graded): **DUE: By December 18** Practicum Sponsor must email a completed, co-signed evaluation form to Course Instructor. *Student should also upload the completed evaluation form to the Final Report submission on Blackboard.
8	December 14	Self-evaluation	ASSIGNMENT SUBMISSION: **DUE: By December 21** Via Blackboard, submit a final self-evaluation of your work on the Practicum Project.

`

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

The Graduate Center
PUBH 811: Social and Behavioral Dimensions of Health: Theory and Methods
3 Credits
Fall 2015

Time and location	Graduate Center, Room 3207 Thursdays, 6:30-8:30
Instructor	Betty Wolder Levin, PhD Professor, Health and Nutrition Sciences, Brooklyn College Public Health, Graduate Center CSH, CUNY School of Public Brooklyn College: (718) 951-5000, x2744 DPH Program Office: (212) 817-7986 BWLevin@Brooklyn.cuny.edu e-mail is the best way to reach me Please put PUBH 811 at the beginning of the subject line
Office hours	Brooklyn College, Tuesdays, 4:30 to 6:00, 4111 Ingersoll Hall Graduate Center, Thursdays, 4:30 to 6:00, 3317 DPH Office You are encouraged to set up appointments for longer meetings
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course prepares students to understand the impact of social structures and social environments on health and health behavior. Using an interdisciplinary approach, the course examines the contributions of sociology, anthropology, economics, psychology, history and political science to the study of health and health behavior.
Course prerequisites	A strong background in Public Health and Socials Science and plans to do research using social science theory and methods is advised.
Course format	The course will primarily be conducted as a seminar with presentations and engaged discussion among the instructor, students and guest speakers
Required and suggested readings and resources	All required and most recommended readings will be posted on Blackboard. See list below

`

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Draw on social science and behavioral theories to analyze the impact of class, race, ethnicity, gender, disability and sexual orientation on the health of individuals and communities	Apply concepts, theories, data and methods from the social and behavioral sciences to critically analyze health issues at multiple levels of analysis. Compare and contrast multiple perspectives social factors such as class, race, ethnicity, gender, disability and sexual orientation and their implications for the study of the health	Discussion and writing assignments (especially week 2 and the term paper). Discussion and writing assignments (especially weeks 3-5)
Assess community needs, assets and capacity to promote health	Employ social science theories and methods to assess community needs, assets and capacities	Discussions and writing assignments (especially weeks 6-7)
Apply quantitative and qualitative or, when appropriate, mixed methods to community health research and evaluation	Compare and contrast the contributions of quantitative, qualitative, and mixed methods to the study of public health issues	Discussions and writing assignments (especially weeks 3, 8, and13-15)
Investigate through multidisciplinary methods the potential implications and impact of policies and politics in health, education, justice, housing, welfare, child and family services and other sectors on individual and community health	Utilize research drawn from multiple social science disciplines to analyze the effects of policies and politics in multiple sections on individual and population health.	Discussion and writing assignments, (especially weeks 8-9)
Develop and teach educational curricula on community health using theories and methods from the social sciences and public health disciplines		Serving as a resource person and weeks 13-14.

`

`

Course Assessments

Students' understanding of the course material will be evaluated through class participation, discussion posts, group work, a reflection paper, and a term paper.

Description of Assignments and Grade Calculation

1. **Class Participation and posts to the discussion board (25 points):** Students are expected to have read assigned reading before each class and be active participants in all sessions.

   Students will post comments, questions, and thoughts related to the readings / class / topic on the discussion board for at least six weeks of the semester. Discussion posts much be submitted by 9 PM the night before class to count toward the six weeks of required posts. In addition to the required posts, you are encouraged to post responses to other students posts, or make additional comments on topics after class discussion or later in the semester.

2. **Group Work (10 points):** Each student will sign up for two classes for which he/she will be a member of a "**resource group**" (one with and one without a guest speaker). The members of the resource group will work together to raise questions and lead critical class discussion on assigned readings and present additional material for further though.

   Presentations *should not* just summarize the required readings. Groups may describe material in optional readings or additional material from other classes, your work, case examples, or other material from the scholarly or gray literature. For classes without guest speakers, formal presentations by *all* group members together should be relatively short (e.g., 15 – 30 minutes) and are intended to generate discussion. You *may* use power points or other audio-visuals, but you do not have to do so. For weeks with guest speakers, there are no formal presentations by group members. Both during the weeks with and without guest speakers, resource group members are expected to add additional thoughts and generate additional questions during class discussions.

3. **Reflection Papers (15 points):** Each student will write a 3-6 page paper. The reflection paper should critically discuss the applicability of ideas from the course readings, as well as other sources, on a topic that is different from your term paper topic. The papers may expand on a discussion post or class discussion. It should be presented a short, scholarly paper and demonstrate your ability to use a standard citation style such at the AAA, AMA (APHA) or APA format.

4. **Term Paper (50 points):** The purpose of the term paper is to give each student the opportunity to conduct an in-depth examination of the application of social theory and concepts to a public health problem of interest. For example, a term

`

paper could analyze ways in which different conceptualizations of race and ethnicity are used in the research literature on obesity, or compare different disciplinary approaches or different level of analysis for the understanding of disparities in rates of a diseases in different populations, or could discuss differences in the framing of a public health problem by different stakeholders..

Term papers are expected to be at least 15 pages (3,750 words) including references. In preparation, students will submit a proposed topic description early in the semester, and a proposal (including an abstract, a detailed outline and an annotated bibliography) later on. These first two submissions will not be graded. Based on these materials, students will prepare a first submission of the term paper, which will be graded. Based on comments from the instructor and further analysis, students will submit a final version of the term paper. The term paper should have a one page executive summary or abstract.

a. **Topic paper (2-3 pages): Sept. 17th**
b. **Paper proposal (abstract, outline and references): Oct. 22nd**
c. **1st version of term paper (25 pts): Nov. 25 (on Blackboard)**
d. **Final version of term paper (25 pts): December 17th**

We will workshop the papers briefly in class during the semester and students will also briefly present their work and we will further workshop papers on Dec. 3rd and 10th between the first and final draft. You are encouraged to meet with the instructor to discuss your papers and share your work with other students in order to help you develop your ideas during the course of the semester.

Requirements for Written Assignments**:**
All papers must be typed, double-spaced, spell-checked and proofread. Please follow a standard scholarly citation format used for public health articles for citing references, such as one used for the publications of the APHA, AMA or APA (see their journals' "instructions for authors"). A useful website with information on scholarly writing styles is the OWL website from Purdue University::
<http://owl.english.purdue.edu/owl/resource/560/01/>

Please submit hard and electronic copies of all assignments through Blackboard unless otherwise noted. All assignments must be submitted on the respective due dates.

Grading

Evaluation criteria
Students will be evaluated based on the quality (rather than the quantity) of their contributions to discussion posts and on class discussions to demonstrate understanding of social science and public health concepts and issues. Written assignments will be judged both on the ability to demonstrate understanding and utilize social science and public health theory and methods to contribute to the understanding

`

of public health problems, as well as the ability to present ideas in a scholarly manner (appropriate use of citations, writing style, etc.).

The relative weight of each course component is as follows:

Assessment	Weight
Class participation and discussion posts	25%
Class presentations and group work	10%
Reflection paper	15%
Term paper	50%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

`

Course Policies

Attendance and class participation
Students are expected to attend class regularly; you must be present to participate in class so excessive absences will result in a lower grade for class participation. You are responsible for material that you missed if you are absent; it is your responsibility to obtain class notes from another student, not the instructor.

Late/incomplete submission of assignments
Late submission of work may result in a lower grade; initial discussion posts much be posted by 9 PM the night before class to receive credit.

Make-ups, rewrites, and extra credit
Students will submit an initial draft of the term paper by Nov. 25th; students will be able to rewrite the term paper after receiving comments from the professor and members of the class. Students who receive a grade below B may re-write their reflection paper. There are no opportunities for extra credit assignments.

Enrollment in Blackboard
Blackboard will be used on a routine basis as a learning tool and to facilitate communication with both the instructor and classmates. Assigned readings will be posted on blackboard; some additional readings will also be posted. Please use an e-mail address that you check often for Blackboard.

Expectations of students
Please turn off cell phones and do not check e-mail, messages or other electronic media during class except for emergency situations. Computer use during class is only acceptable if it is directly linked to the current class discussion (e.g., finding data or a citation to contribute to a class discussion).

Expectations for the instructor
Students can expect the instructor to give clear descriptions of expectations for assignments; please ask questions if you are unsure of what to do! Student can also expect the instructor to try to return material promptly. Efforts will be made to return written work within one week and answer e-mails within two days.

Accessibility
Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

`

Academic integrity
CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule

The following schedule lists expected dates for topics and readings; however, it is subject to change throughout the semester. Additional reading will likely be posted and the dates of sessions may change. Not all readings are required.

Please check the Blackboard site during the week before class to see if there are changes in topic as well as required and recommended readings. Changes will also be sent to the e-mail associated with your Blackboard site. Please check those sources regularly. Major changes will be noted on a revised syllabus, posted on Blackboard (check date in header).

Schedule of classes and assignments

1. 8/27 Introduction to the course
2. 9/3 Introduction to the Use of Social Theory in Public Health

   9/10 NO THURSDAY CLASSES
3. 9/17 Gender – Biological and Social Perspectives
   Guest speaker: Dr. Spring Cooper

   Term Paper Topic Due
4. 9/24 Race and Ethnicity
5. 10/1 Class and Intersectionality
6. 10/8 Health Promotion: Individual Behavioral Focus

   Reflection Paper Due
7. 10/15 Health Promotion: Group and Policy Focus

`

8.	10/22	Bioethics, Social Justice and Human Rights Perspectives: "Guest speaker": Betty Wolder Levin, PhD **Term Paper Proposal Due**
9.	10/29	Political Science Perspectives Guest Speaker: Jane Levitt, PhD
10.	11/5	Sociological Perspectives Guest Speaker: Barbara Katz Rothman, PhD
11.	11/12	Anthropological Perspectives Guest Speaker: Anahi Viladrich, PhD
12.	11/19	Preliminary Workshopping of term papers
	11/25	**First Draft of Term Paper Due on Blackboard**
	11/26	NO CLASS – THANKSGIVING
13.	12/3	**Student Presentations/Workshopping of Term Papers**
14.	12/10	**Student Presentations/Workshopping of Term Papers**
15.	12/17	Last Class – Final Thoughts and Celebration **Final Draft of Term Paper Due**

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

The Graduate Center
PUBH 814 - Food Politics and Policy
3 Credits
Fall 2015

Time and location	Thursdays 6:05 PM – 7:50 PM and online Silberman 216 and online August 27, 2015 – December 23, 2015
Instructor	Nevin Cohen, Ph.D. Associate Professor, CUNY School of Public Health 55 West 125th Street, room 811 New York, NY 10027 212-646-8340 (T) 917-721-8037 (M) nevin.cohen@sph.cuny.edu (preferred contact)
Office hours	Wednesdays 3:00 to 6:00 or by appointment
Course website	https://canvas.instructure.com/courses/957342
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This is a policy course that examines the effects of the food industry and government on diet-related disease, and on health promotion and disease prevention. Most readings have a strong political content. Central themes include: government action versus individual liberty, the contradictions of government support and opposition to certain policies, the role of litigation, and the importance of institutions (e.g., bureaucracy, Congress, the media).
Course prerequisites	30 completed credits + advisor + instructor permission
Course format	This is a hybrid course that meets in person 5 times during the semester; the remainder of the time the course is conducted online asynchronously through Canvas.
Required reading and resources	All readings listed in the course schedule will be available in PDF format on the course website. You may wish to have your own copy of the following texts, but that is optional: Neff, Roni, ed. *Introduction to the US Food System: Public Health, Environment, and Equity*. John Wiley & Sons, 2014. Wilde, Parke. *Food policy in the United States: An introduction*. Routledge, 2013.
Suggested reading and resources	A list of additional readings and resources will be posted to the course website.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be assessed as part of the following course assignments:
Identify, develop, evaluate and recommend policy and programmatic interventions to improve population health at individual, community, government and country levels based on empirical evidence of social, political, cultural, biological, economic, historical, behavioral, environmental, and global factors in health and disease.	- Conduct research on food policy and health - Critically discuss the food policy literature - Analyze food policies and write policy briefs offering evidence-based recommendations	-Discussion forum -Reading reflections -Policy briefs
Assess the mechanisms and pathways by which factors influence individual and population health.	-Analyze food policies through social and behavioral frameworks -Identify opportunities for policy interventions to influence nutrition and diet-related chronic diseases	-Discussion forum -Policy briefs
Synthesize and apply methods, theories and data from multiple disciplines to understand and solve population health issues.	-Understand the effects of federal, state, and local policies on the food system, including the availability of healthy food -Assess the effects of policies on dietary choices, food practices, and health outcomes	-Discussion forum -Reading reflections -Policy briefs

Course Assessments

Discussion Fora: We will engage in two online discussions each week, beginning the second week of class. One will involve debating a current policy controversy addressed in the week's readings. The second will involve identifying and discussing policy innovations to address the week's topic. You will be expected to contribute information, insights, evidence-based argumentation, and reflect and respond to the ideas expressed by others. I will evaluate your contributions based on how well you integrate the readings and other published material into your comments, the logic of your arguments, how adequately you back up statements with evidence, and writing quality.

In-class Discussions: Since we meet in person only five times during the semester it is essential for you to attend these classes. Our in-class discussions will follow the same format as our online discussions, but because the conversations are in real time you must be prepared in real time to address the readings scheduled for that week. You will be evaluated on the quality of your engagement with colleagues.

Policy Briefs: You will prepare two 5-page policy briefs addressing a current food policy issue that affects the urban food environment. These can be evaluations of proposed policies, recommendations for new policies, or an analysis that sheds new light on existing policies and programs. These will be evaluated based on the quality of the evidence used to support your argument(s), the logic of the arguments, the analysis you provide, and the quality of the writing (including grammar, proper citations, etc.)

Grading

Evaluation criteria

Students who perform exceptionally in all aspects of the course will receive an "A." A grade of "B" will reflect adequate work. Any grade below a "B" will indicate that you should be performing better. All assignments must meet professional standards of analysis, presentation, and timeliness. Accurate spelling and grammar, and clear and concise writing, are critical. Assignments *will not be accepted after they are due* unless you have a compelling reason for being late (e.g., medical or family emergencies) and I agree to an alternative due date.

Evaluation criteria for written assignments:

A	The assignment is well-written, accurate, original, relevant, and teaches us something new. It adds substantial learning presence to the course and stimulates additional thought about the issue under discussion.
B	The assignment lacks at least one of the required qualities, but is generally above average in quality. It makes significant contribution to our understanding of the issue being discussed.
C	The assignment lacks two or more of the required qualities listed above. Comments are based on unsubstantiated personal opinion.
D	The assignment presents little or no new information.
F	The assignment adds no value to the discussion and lacks many of the required qualities.

The relative weight of each course component is:

	Weight
Discussion Forum – Policy Debate	20%
Discussion Forum – Policy Innovation	20%
In-class discussions	10%
Policy Brief #1	25%
Policy Brief #2	25%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation

You are required to attend every class that meets in person and to participate in every online discussion session. This is particularly important as we meet only once per week. As noted above, I expect active participation in both in-person and online discussions.

Late/incomplete submission of assignments

Late or incomplete assignments will not be accepted unless you are ill or have a family emergency. If you know you will not be able to meet a deadline contact me as soon as possible to discuss an alternate deadline.

Make-ups, rewrites, and extra credit

There are no make-ups for the online discussions. You will have an opportunity to re-write the two policy briefs based on my comments, and I will count only the final grade. There are no extra credit assignments.

Expectations of students

One of the biggest obstacles to successful learning is not allocating sufficient time to coursework. I realize that many of you are juggling multiple responsibilities, but I expect you to devote the effort required to read assigned material and learn the course content and to put effort into the online discussions and the policy briefs. I also expect you to be the consummate professionals that you are – showing respect and treating each other collegially in both in-person and online interactions. In your discussions with me, please be open and communicative – please tell me if the course is not meeting your expectations early on so that I can make adjustments. Whatever you do, please let me know if you are having trouble with any aspect of the course. Other expectations include the following:

- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and the academic calendar.
- Know how to use library resources and citation tools.
- Come to class and to the Canvas site fully prepared to actively participate in discussion.
- Complete all assignments by their assigned due date. No credit for work completed after the due date unless due to a medical or family emergency.
- No credit for assignments suspected of plagiarism. (and see the Academic Integrity section below for the additional consequences of plagiarism)
- Regularly check the course website and official university email for course correspondence. The readings and schedule are likely to change, and it is your responsibility to keep track of the schedule.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted on the discussion board.
- When in doubt, ask questions and clarify course assignments and expectations.

Expectations for the instructor

My goal is to make this course a valuable learning experience that is intellectually interesting and challenging and relevant to your professional and academic work. You can expect me to be prepared each week, to make myself as accessible as possible, to return your work promptly (usually within one week) with comments and suggestions, and to treat each of you with respect and collegiality. I have high expectations and strict standards, but I also try to be very reasonable if you express concerns or problems to me as they arise (and not at the end of the term). Specifically, I will try to:

- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during discussion
- Respond to student email within 24 hours Monday through Friday.
- Communicate about grades and progress in the course through the course website.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Last Updated 11/8/16

Course Schedule

This schedule is likely to change as the semester progresses. Please check the course website for updates, and ask if you are unsure about scheduled topics/readings or assignments. Also refer to the current academic calendar for important university-wide dates.

Session	Date	Topic	Readings/Resources	Assessment
I. Introduction to Food Politics and Policy				
1	8/27/15 In Person	Course Overview: The problems with our food system are well-known: food insecurity, ubiquity of unhealthy food, occupational hazards in the food industry, environmental damage, etc. This course explores the reasons why the food system has evolved the way it has, and the potential for public policy – at both the national and local levels -- to re-shape it to improve health, social justice and ecological well-being. In this first class we will introduce ourselves, review our expectations for the course, go over logistics, including the features of the online learning platform, and then discuss what we mean by a food *system*, and how looking at food as a system helps us to understand its multidimensionality and interconnectedness, which will lead to better policymaking.	Neff, Chapter 1 – Food systems -This introductory chapter of Neff's edited volume briefly discusses systems thinking and the elements of the food system. It also discusses the concept of "wicked problems," a framework very helpful in thinking about many different public health problems. Shannon KL, Kim BF, McKenzie SE, Lawrence RS. Food System Policy, Public Health, and Human Rights in the United States. *Annu Rev Public Health*. 2015;36(1):151-173. -This review article explains how policies structure the food system, and the consequences for health, a topic that we'll address in more depth throughout the semester.	-In-class discussions
2	9/3/15 In Person	Drivers of the food system - economics, policies, lobbyists, marketing: In this session we'll examine the different forces that shape food policies and thus the food system.	Neff, Chapters 7, 8, 10 -These chapters provide an overview of basic economic concepts that are important for understanding food policy; food policy development; and the role of marketing in both food economics and policy – as well as individual behavior. Wilde, Chapter 1 - This chapter reviews basic civics as it applies to food and also discusses the	-Discussion fora

			role of interest groups in shaping food policy Nestle, Chapter 4 -Nestle explains in more detail the role of industry lobbyists in shaping food policies. Moreland, Chapter 2 - This chapter by Professor Spark provides an overview of federal food policy and the structure of the food industry	
3	9/17/15 Online	Urban food policy: Many food advocates have argued that local governments may be better able to intervene in the food system through local policies and innovative programs. This class reviews why there has been a turn to the local and what local governments can do to affect a global socio-technical system like food.	- Morgan K. Nourishing the city: The rise of the urban food question in the Global North. Urban Stud. 2014. Kevin Morgan explains why food has become an urban issue and how cities have begun to address the consequences of the dominant food system. - Cohen N. Urban food systems strategies. Elgar Companion To Sustain Cities Strateg Methods Outlook . 2014:57-85. In this chapter I outline a number of ways in which cities in the US have begun to re-shape the food system through policies. - Libman K, Freudenberg N, Sanders D, Puoane T, Tsolekile L. The role of urban food policy in preventing diet-related non-communicable diseases in Cape Town and New York. Public Health. 2015;129(4):327-335. Kim Libman and colleagues discuss urban policies specifically addressing diet-related diseases. - Freudenberg N, Atkinson S. Getting food policy on the Mayoral table: a comparison of two election cycles in New York and London. *Public Health*. 2015;129(4):295-302. The question of the salience of food policy at the local level is critical. This article discusses how food gets on the political agenda. -Reeve B, Ashe M, Farias R, Gostin L. State and Municipal Innovations in Obesity Policy: Why Localities Remain a Necessary Laboratory for Innovation. *Am J Public Health*. 2015;105(3):442-450. One argument for focusing on urban policies is that cities are more nimble	-Discussion fora

			scales in which to develop, test, and improve food policies, as this article discusses.	
II. Reducing Food Insecurity				
4	9/24/15 Online	Federal food assistance programs: In the next several sessions we tackle the complex, interrelated issues of food insecurity, malnourishment, and poverty, and the various policies aimed at improving access to healthy food and improving nutrition and health.	- Neff, chapters 5 & 6 These chapters discuss ways to measure food insecurity and community food security, and various policies to make people and communities more food secure. - Pringle, chapter 6 This chapter provides a brief overview of the history of food stamps/SNAP and WIC. Read it before the Aussenberg report. - Aussenberg, RA & Colello, KJ. Domestic Food Assistance: Summary of Programs. Congressional Research Service. 2/4/15. This report summarizes the federal food assistance programs - Mercier S. Review of U. S. Nutrition Assistance Policy : Programs and Issues. 2012;(June) The Mercier report also reviews federal food assistance policies and programs, providing more detail and evidence of their effects. You can skim this report and refer back to it as a reference. - Fricke HE, Hughes a. G, Schober DJ, et al. An Examination of Organizational and Statewide Needs to Increase Supplemental Nutrition Assistance Program (SNAP) Participation. *J Hunger Environ Nutr*. 2015;10(2):271-283. - Dimitri C, Oberholtzer L, Nischan M. Reducing the Geographic and Financial Barriers to Food Access: Perceived Benefits of Farmers' Markets and Monetary Incentives. *J Hunger Environ Nutr*. 2013;8(4):429-444. These final two articles discuss local policy responses to the SNAP program – increasing participation in the program and increasing the use of SNAP for fresh fruits and vegetables sold through farmers markets.	-Discussion fora
5	10/1/15 In Person	School food and nutrition programs for children: School food is critical because it provides a large portion of the daily calories of many children, and the school food program is a	- Poppendieck, J. 2010. Free For All: Fixing School Food in America. Berkeley: UC Press. Chapters 2&3, pgs 46-110. Professor Poppendieck's chapters discuss the genesis and evolution of the school food program	-Discussion fora

		huge public food procurement program that can potentially be used to support regional food producers, change production methods, and improve public health.	- Wilde, Chapter 11 Wilde's chapter also discusses the Women Infants and Children (WIC) program. - Aussenberg, A. School Meals Programs and other USDA Child Nutrition Programs: A Primer. 2014. Congressional Research Service. Skim this and use it as a reference. Dinour LM. Conflict and Compromise in Public Health Policy: Analysis of Changes Made to Five Competitive Food Legislative Proposals Prior to Adoption. *Heal Educ Behav*. 2015;42(1 Suppl):76S - 86S. This article discusses the policy processes involved in addressing so-called competitive foods – vending machine snacks and other food sold during the school day. It's useful in understanding the kinds of political forces that move policy initiatives forward and inhibit them.	
6	10/8/15 Online	Improving the built food environment Policy Brief 1 Due	- Neff, Chapters 13, 14, and 17 These chapters explain how the food processing and distribution industries evolved to the concentrated, centralized system that we have today, and how this system affects local food environments. - Stanton R a. Food Retailers and Obesity. *Curr Obes Rep*. 2015;4:54-59. doi:10.1007/s13679-014-0137-4. The Stanton article explains how the economics and design of the modern supermarket contributes to obesity. - Lehmann et al. State-Level Interventions: Pennsylvania's Fresh Food Financing Initiative. In Morland Ch. 9 This chapter discusses an increasingly common policy approach to improve food access in low-income communities: financing and other incentives to get supermarket chains to open. - Libman K. Has New York City fallen into the local trap? *Public Health*. 2015;129(4):310-317. Libman's article questions whether a focus on local food environments detracts from a potentially more important focus on citywide interventions that would improve the food environment more broadly. - Elbel B, Moran A, Dixon LB, et al. Assessment of a government-subsidized	-Discussion fora -Policy Brief

			supermarket in a high-need area on household food availability and children's dietary intakes. *Public Health Nutr*. 2015:1-10. Elbel's recent study in the South Bronx calls into question the effectiveness of supermarket incentive programs in low-income communities. -Leib EM. All (Food) Politics is Local : Increasing Food Access through Local Government Action. *Harvard Law Policy Rev*. 2013;7:321. Leib's article summarizes a wide range of local policy interventions to improve food access. -Sacks R, Yi SS, Nonas C. Increasing Access to Fruits and Vegetables: Perspectives From the New York City Experience. *Am J Public Health*. 2015:e1-e9. This article reviews numerous NYC policies to increase access to fresh fruits and vegetables.	
III. Improving Nutrition and Food Quality				
7	10/15/15 Online	Obesity: One of the most politically salient food system issues over the past decade has been obesity and resulting NCDs. Many policies already examined in the course are designed to reduce obesity, but in this class we'll dive more deeply into how obesity has been defined, its role in shaping policy, and specific policy efforts to address it.	-Sisnowski J, Handsley E, Street JM. Regulatory approaches to obesity prevention: A systematic overview of current laws addressing diet-related risk factors in the European Union and the United States. *Health Policy (New York)*. 2015;119(6):720-731. This article discusses who is targeted for policy interventions and what categories of policies are used in the EU and US to reduce obesity. -Bowen DJ, Barrington WE, Beresford S a. a. Identifying the Effects of Environmental and Policy Change Interventions on Healthy Eating. *Annu Rev Public Health*. 2015;36(1):289-306. doi:10.1146/annurev-publhealth-032013-182516. -Kersh R, Elbel B. PUBLIC POLICY & OBESITY: OVERVIEW AND UPDATE. *Wake For J Law Policy*. 2015;5:105-123. Kersh and Elbel discuss different types of policies that operate through different behavioral mechanisms at different scales to address obesity. -Berg, Chapter 5 Berg's chapter focuses on anti-obesity policies and politics during the Bloomberg administration in NYC.	-Discussion fora

8	10/22/15 Online	Dietary guidelines and nutritional standards	-Wilde Chapters 8 & 9 These chapters discuss the evolution of federal dietary guidelines and the regulation (or non-regulation) of nutritional labeling and nutritional claims. - Nestle Chapters 1-3 This section from Nestle's book explores the politics of dietary advice in the US. -Lederer A, Curtis CJ, Silver LD, Angell SY. Toward a healthier city: nutrition standards for New York City government. *Am J Prev Med*. 2014;46(4):423-428. -Tsui EK, Wurwarg J, Poppendieck J, Deutsch J, Freudenberg N. Institutional food as a lever for improving health in cities: the case of New York City. *Public Health*. 2015;129(4):303-309. These two articles discuss how NYC has used nutritional standards for the food it serves or controls to improve public health.	-Discussion fora
9	10/29/15 In Person	Food and beverage marketing and calorie labeling:	-Neff, Chapter 10 This chapter provides an overview of food and beverage marketing -Cheyne A, Mejia P, Nixon L, Dorfman L. Food and Beverage Marketing to Youth. *Curr Obes Rep*. 2014;3:440-450. This article specifically addresses food marketing to youth, particularly in communities of color. -Gregory, Christian A., Ilya Rahkovsky, and Tobenna D. Anekwe. *Consumers' Use of Nutrition Information When Eating Out,* EIB-127, U.S. Department of Agriculture, Economic Research Service, June 2014. -Rendell SL, Swencionis C. Point-of-Purchase Calorie Labeling Has Little Influence on Calories Ordered Regardless of Body Mass Index. *Curr Obes Rep*. 2014;3:368-375. The USDA report and the subsequent article discuss one type of informational regulation - the use of calorie labeling - to encourage consumers to reduce their calorie consumption.	-Discussion fora
10	11/5/15 Online	Food Safety: Food illnesses are a significant public health problem. This session reviews the food safety regulatory system and recent changes to make it more effective.	CRS – Primer and guidance for 114th congress	-Discussion fora

IV. Supporting Healthy Food Systems				
11	11/12/15 Online	Sustainable and Resilient Diets: The public health field has recently begun to focus on the relationship between our diets and global sustainability. The nexus between food and climate change, the water consumption of food production, and food waste have become particularly salient issues. This session discusses the notion of a sustainable diet, and how food policies might foster ecological sustainability.	-Neff Chapter 3 This chapter provides an overview of the relationship between food systems and the environment. -Scientific Report of the 2015 Dietary Guidelines Advisory Committee Part D. Chapter 5: Food Sustainability and Safety This year, for the first time, the US Dietary Guidelines were informed by an analysis of sustainability, as this chapter in the scientific report supporting the dietary guidelines discusses. -Berry EM, Dernini S, Burlingame B, Meybeck a, Conforti P. Food security and sustainability: can one exist without the other? *Public Heal Nutr*. 2015;(5):1-10. -Drewnowski A. Healthy diets for a healthy planet. *Am J Clin Nutr*. 2014;99(353410):1284-1285. -Lang T, Barling D. Nutrition and sustainability: an emerging food policy discourse. *Proc Nutr Soc*. 2013;72(1):1-12. These articles discuss the importance and value of integrating sustainability into our dietary policies and into the field of nutrition.	-Discussion fora
12	11/19/15 Online	Organic, local, healthy: Consumers tend to conflate these concepts, and in this class we will tease them out and learn whether, how and to what extent organic production methods or localized food systems contribute to (or detract from) environmental or occupational health, sound nutrition, and food security.	- Obach, Brian K. Organic Struggle: The Movement for Sustainable Agriculture in the United States. MIT Press, 2015. Chapters 3, 4, 5, 8 Obach's book discusses the history of the organic food movement and the creation of federal organic standards, an important context for discussing the role of organic food in health and sustainability. -Werkheiser I, Noll S. From Food Justice to a Tool of the Status Quo: Three Sub-movements Within Local Food. *J Agric Environ Ethics*. 2013. - Cleveland D a., Carruth A, Mazaroli DN. Operationalizing local food: goals, actions, and indicators for alternative food systems. *Agric Human Values*. 2014;32(2):281-297. - Born B, Purcell M. CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

The Graduate Center
PUBH 816: Evaluation of Public Health Programs and Policies
3 Credits (2 hours)
Fall 2015

Time and location	Tuesday, 4:15-6:15pm Graduate Center, Room 7314
Instructor	Nicholas A. Grosskopf, EdD, MCHES Associate Professor, York College and The Graduate Center Telephone: 718.262.5117 (Office @ York) 718.262.2053 (*Urban*Health Lab @ York) Email: ngrosskopf@gc.cuny.edu (the best way to reach me)
Office hours	On the York College Campus: • Monday, 12:30-2:30pm (HP-208) • Tuesday, by appointment • Wednesday, 4:30-5:30pm (Office Hours held in the *Urban*Health Lab [AC-3E07A]) • Thursday, by appointment Other times by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Prepares students to design evaluations of public health programs and policies; uses systems approach to identify key constituencies and tasks in evaluation; students design an evaluation of an existing program or policy.
Course prerequisites	While no current prerequisites exist, many students find it helpful to have taken a course in program planning/intervention development (e.g., PUBH 810).
Course format	This course uses a systems approach to research and evaluation. Thus major evaluation questions are: 1) How are program or policy goals defined; 2) By and for whom, and 3) What resources and feedback mechanisms are necessary to guarantee understanding, attainment of desired goals and further inquiry. This course emphasizes the validity of inference (that is, drawing reasonable conclusions) from data and the social consequences of making correct and incorrect inferences in research. The course prepares students to plan evaluation studies by providing a grounding in research design. Finally, the same standards are applied to the course as would be to any program to be evaluated—thus, the class will spend some time defining who the "client or consumer" for this

	course is, and ensuring "client or consumer" satisfaction. This is a "hands on," "how to" course that combines overviews of issues and techniques with exposure to excellent examples and practice. The course format uses an integrative approach. Class sessions will consist of lectures, small group seminars, case study activities, small group activities, guest speakers, etc.
Required reading and resources	Required Text: Rossi, P.H., Lipsey, M.W. & Freeman, H.E. (2004). *Evaluation: A systematic approach* (7th Edition). Thousand Oaks, CA: Sage.
Suggested reading and resources	**Recommended Reading**: ***Approaches to Evaluation and Evaluation Design*** Cook, T.D. & Campbell, D.T. (1979). *Quasi-experimentation: Design and analysis issues for field settings*. Boston: Houghton Mifflin. Herman, J.L., Morris, L.L., & Fitz-Gibbon, C.T. (1987). *Evaluator's handbook*. Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Draw on social science and behavioral theories to analyze the impact of class, race, ethnicity, gender, disability and sexual orientation on the health of individuals and communities	• Describe methods for engaging key constituencies in planning, implementing and presenting findings of evaluation studies	• Response Paper #1 • Critical Discussion Leader
2. Assess community needs, assets and capacity to promote health	• Design and implement systematic evaluations of various types of public health interventions including programs and policies	• Evaluation Plan • Evaluation Outcomes
3. Apply quantitative and qualitative or, when appropriate, mixed methods to community health research and evaluation	• Design and implement systematic evaluations of various types of public health interventions including programs and policies	• Weekly Participation • Integrated Evaluation Report • Critical Discussion Leader • Response Paper #2
4. Investigate through multidisciplinary methods the potential implications and impact of policies and politics in health, education, justice, housing, welfare, child and family services and other sectors on individual and community health	• Identify common methodological, organizational and logistic obstacles to effective evaluation and describe strategies for overcoming these obstacles • Develop strategies for finding resources needed for evaluation of public health programs and policies •	• Weekly Participation • Response Paper #1 • Integrated Evaluation Report
5. Develop and teach educational curricula on community health using theories and methods from the social sciences and public health disciplines	• Design and implement systematic evaluations of various types of public health interventions	• Response Paper #3

	including programs and policies	

Course Assessments

Participation & Professionalism: Your participation in class activities and discussions is expected throughout the semester. Class sessions will consist mainly of interactive discussions, team activities, guest speakers and the occasional lecture. Your instructor has the perspective that all classes are essentially intercultural encounters, among people in the class, between the reader and the author, and that we are all learning how to learn from one another.

Participation & Professionalism is worth **10%**.

Critical Discussion (Seminar) Leader: Each student will be required to lead a minimum of two critical discussions on supplemental articles/papers during at least two class sessions (30-45 minutes each). Seminar Leaders should post 3-5 critical discussion questions to our Blackboard Discussion Board Forum at least 3 days before the scheduled class sessions for peer review. Students may work in teams at the discretion of the instructor.

The Critical Discussion (Seminar) Leader Assignment (total) is worth **20%**.

Response Papers: Over the course of the semester we will be reading about and discussing different aspects of the evaluation and research process. Students will be required to develop several short papers (2-4 pages) in response to common questions, problems and dilemmas encountered in the field. These areas will include: 1) Ethics in Evaluation (including CITI Certificate); 2) Differing Perspectives on the Role of Evaluation; and 3) Analyzing and Critiquing Evaluation Reports.

The Response Papers (total) are worth **15%**.

Evaluation Plan, Outcomes & Integrated Report: Following the steps of the Herman et al. handbook and CDC recommendations/guidelines, each student will execute a professional level evaluation plan and description of outcomes (2 parts) using an existing health program or policy rooted in one of the focus areas of the NYC "Take Care" 2016 Preliminary Plan (http://www.nyc.gov/html/doh/html/about/tcny.shtml). *It is strongly recommended that students choose a program/policy with which they are not closely involved*. The evaluation plan will be written prospectively (such as a grant proposal) while the description of outcomes will be written retrospectively (such as a published article). At the conclusion of the course, students will be required to submit one integrated evaluation report, which combines elements of both documents and would be appropriate for dissemination to stakeholders (more below).

Students will demonstrate a "systems" and systematic approach by explicating program/policy theory, uncovering program questions, identifying stakeholders for the problem solution and, therefore, for the evaluation; focus on the problem that has the highest health implications and is amenable to change (most important and most changeable); select design, sampling, data collection, and measurement techniques

likely to lead to an interpretable and meaningful result; incorporate likely competing hypotheses in the design and measurement plan; create an analytic plan for the data; draw conclusions and make recommendations likely to improve the program or policy and the health of those it serves; include a logic model for the program/policy and evaluation; and have a recommendation for sustainability of effects if effects are found.

Each component of the plan and description of outcomes will be constructed and submitted for instructor feedback sequentially over the course of the semester. At the end of the semester each student will submit a completed evaluation report (culmination of all written components, including conclusions and recommendations), similar to what may be submitted by a professional evaluation consultant to a host agency/organization (15-20 pages). Students will also give a brief (10-15 minute) oral presentation of their completed plan (tailoring the dissemination to a specific group of stakeholders). The page lengths listed next to each component are recommendations. **Refer to each assignment's rubric for a detailed description of criteria (the criteria listed below are just a summary).**

The Evaluation Plan, Outcomes & Integrated Report (total) is worth **55%**.

Evaluation Plan Components (written prospectively) ***(20%)***:

1. Background (3-4 pages) **(5%)**
    a. Description of the Public Health Problem
    b. Identification of the Host/Sponsoring Agency or Organization
    c. Description & Rationale of the Program/Policy
    d. Program/Policy Logic Model & Timeline
2. Description of the Planned Evaluation (4-5 pages) **(15%)**
    a. Purpose(s) of the Evaluation
    b. Proposed Engagement of Stakeholders
    c. Proposed Evaluation Design
    d. Proposed Data Analysis Plan
    e. Proposed Evaluation Budget

*Evaluation Outcome Components (written retrospectively) (****15%****)*:

1. Identification and Description of Key Results or Findings (hypothetical (2-3 pages) **(5%)**
2. Discussion of Key Results/Findings, Conclusions & Recommendations (5-7 pages) **(10%)**

*Integrated Evaluation Report Components (written retrospectively) (15-20 pages total, excluding appendices) (****20%****):*

I. Abstract/Executive Summary
II. Background Information about the Program/Policy
III. Description of the Evaluation

IV. Evaluation Results/Findings
V. Discussion of Results/Findings
VI. Conclusions & Recommendations
VII. Appendices
    a. Program/Policy Staffing
    b. Program/Policy Timeline
    c. Evaluation Measures (instrumentation, protocols, etc.)
    d. Evaluation Matrix/Flowchart (evaluation questions, program/policy objectives, measures, data collection techniques, data utilization, etc.)
    e. Program/Policy Activities/Initiatives/Materials
    f. Evaluation Budget
    g. Program Logic Model

Grading

Evaluation criteria

Most assignments will be evaluated using holistic grading rubrics that will be posted to our Blackboard course site. Students are encouraged to use the criteria on the rubrics in helping construct their assignments (e.g., headings/sections, sub-sections, etc.).

The relative weight of each course component is as follows:

Assessment	Weight
Participation & Professionalism	10%
Critical Discussion Leader	20%
Evaluation Plan Component #1: Background	5%
Evaluation Plan Component #1: Description	15%
Evaluation Outcomes Component #1: Results/Findings	5%
Evaluation Outcomes Component #2: Discussion, Conclusions & Recommendations	10%
Response Paper #1	5%
Response Paper #2	5%
Response Paper #3	5%
Integrated Evaluation Report	20%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78

C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation

Students are expected to attend class regularly and participate. Because this is a "hands on" course, class participation is a very important part of the learning process in this course. Although not explicitly graded, you will be evaluated on the QUALITY of your contributions and insights. Quality comments possess one or more of the following properties:

- Offers a different and unique, but relevant, perspective;
- Contributes to moving the discussion and analysis forward;
- Builds on other comments;
- Transcends the "I feel" syndrome. That is, it includes some evidence, argumentation, or recognition of inherent tradeoffs. In other words, the comment demonstrates some reflective thinking.

If a student expects to miss a class (or be late), the instructor should be notified as soon as possible.

Late/incomplete submission of assignments

Late assignments may not be eligible for full credit at the discretion of the instructor.

Make-ups, rewrites, and extra credit
Students may elect to submit a rewritten assignment at the discretion of the instructor. No extra credit will be given in this course.

Expectations of students

Because this is a graduate level course, students are expected to contribute to class discussions, activities, assignments, etc. as public health professionals. A few expectations include:

- Arriving to class on time
- Reading assigned course material
- Submitting course assignments on time via Blackboard
- Being attentive and engaged in class discussions and activities
- Seeking help when appropriate
- Using AMA Style for all submitted course assignments

Expectations for the instructor

As the instructor and facilitator of the course, you can expect the following from me:

- To start and end class on time
- To reply to e-mails within 24 hours on weekdays and 48 hours on weekends
- To facilitate class discussions, activities, etc. that are reflective of advanced public health research and practice
- To assign course assessments that adequately cover the material and meets the learning objectives of the course while adhering to the time expectations for a 3-credit graduate course
- To serve as a colleague and mentor for DPH/SPH program questions, concerns, etc.

Accessibility
Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity
CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule

Our course schedule is subject to change throughout the semester. The "Last Updated" date in the header of the syllabus is meant to reference the current version of the syllabus. Any updated syllabi will be uploaded to Blackboard.

Please refer to the official Graduate Center academic calendar for important dates. It can be found here: http://www.gc.cuny.edu/CUNY_GC/media/CUNY-Graduate-Center/PDF/Registrar/Fall-2015-Academic-CalendarRev.pdf?ext=.pdf

Last Updated September 2, 2015

Session & Date	Topics/Activities	Required & Recommended Reading(s)	Due/Present
Session 1 September 1st	1) Introduction to the Course, Policies & Expectations 2) Systems Thinking & Public Health 3) Program/Policy Evaluation vs. Research 4) Standards of Evaluation: Utility, Feasibility, Propriety & Accuracy 5) Identifying a Public Health Program/Policy to Evaluate 6) Identifying Stakeholders (Clients or Consumers of Evaluation)	1) Rossi, et al., Chapter 1 2) CDC. (1999). Framework for Evaluation in Public Health. *MMWR, 48*(RR11), 1-40. 3) Roux, A. V. D. (2011). Complex systems thinking and current impasses in health disparities research. *American Journal of Public Health*, *101*(9), 1627-1634. 4) Leischow, S. J., & Milstein, B. (2006). Systems thinking and modeling for public health practice. *American Journal of Public Health*, *96*(3), 403-404.	
Session 2 September 8th	1) Formative vs. Summative Evaluation (Evaluation Approach): Purposes, Benefits, Expectations 2) Determining the Program/Policy's Development/Phase (Generalized Planning Model) 3) Program/Policy Goals & SMART Objectives 4) Envisioning the Evaluation Plan 5) Engaging Stakeholders in the Evaluation Process & CBPR 6) Efficacy vs. Effectiveness; Evidence-Based vs. Evidence-Informed	1) Rossi et al., Chapter 2 2) Herman et al., Introduction & Chapter 1 3) Pettman, T. L., Armstrong, R., Doyle, J., Burford, B., Anderson, L. M., Hillgrove, T., & Waters, E. (2012). Strengthening evaluation to capture the breadth of public health practice: ideal vs. real. *Journal of Public Health*, *34*(1), 151-155. 4) Gilliam, A., Davis, D., Barrington, T., Lacson, R., Uhl, G., & Phoenix, U. (2002). The value of engaging stakeholders in planning and implementing evaluations. *AIDS Education and Prevention*, *14*(3 Supplement), 5-17. 5) March of Dimes. (2005). SMART Objectives Worksheet. http://www.marchofdimes.org/chapterassets/files/SMART_objectives.pdf 6) Nevo, I., & Slonim-Nevo, V. (2011). The myth of evidence-based practice: Towards evidence-informed practice. *British Journal of Social Work*, bcq149. 7) Kirkhart, K. E. (2010). Eyes on the prize: Multicultural validity and evaluation theory. *American Journal of Evaluation*, *31*(3), 400-413.	
September 15th	**NO CLASSES SCHEDULED**	**NO CLASSES SCHEDULED**	**NO CLASSES SCHEDULED**

September 22nd	**NO CLASSES SCHEDULED**	**NO CLASSES SCHEDULED**	**NO CLASSES SCHEDULED**
Session 3 September 25th **NOTE: CLASS IS ON A FRIDAY**	1) Describing the Program/Policy: Logic & Conceptual Models 2) Focusing the Evaluation & Developing Evaluation Questions/Evaluation Framework 3) Ethics in Evaluation 4) Funding Meaningful Evaluations	1) Rossi et al., Chapters 3-5 2) Teti, M., Murray, C., Johnson, L., & Binson, D. (2012). Photovoice as a community-based participatory research method among women living with HIV/AIDS: Ethical opportunities and challenges. *Journal of Empirical Research on Human Research Ethics*, *7*(4), 34-43. 3) Gondolf, E. W. (2000). Human subject issues in batterer program evaluation. *Journal of Aggression, Maltreatment & Trauma*, *4*(1), 273-297.	1) Program/Policy Evaluation "Good Fit" Checklist (no credit)
Session 4 September 29th	1) More on Formative vs. Summative Evaluation: Process & Outcome M&E 2) Evaluation Focus: Strengths, Weaknesses & Matching the Design to Program/Policy Theory, Goals & Objectives 3) Critical Discussion Leader(s): Madeline	1) Rossi et al., Chapters 6 & 7 2) Herman et al., Chapter 2 3) Moore, G., Audrey, S., Barker, M., Bond, L., Bonell, C., Cooper, C., & Baird, J. (2014). Process evaluation in complex public health intervention studies: the need for guidance. *Journal of Epidemiology and Community Health*, *68*(2), 101-102. 4) Neiger, B. L., Thackeray, R., Burton, S. H., Giraud-Carrier, C. G., & Fagen, M. C. (2013). Evaluating social media's capacity to develop engaged audiences in health promotion settings use of Twitter metrics as a case study. *Health Promotion Practice*, *14*(2), 157-162. 5) National Cancer Institute, N.I.H./U.S.D.H.H. (2005). Theory at a glance: a guide for health promotion practice. 6) Branscum, P., Sharma, M., Wang, L. L., Wilson, B., & Rojas-Guyler, L. (2013). A process evaluation of a social cognitive theory–based childhood obesity prevention intervention: The comics for health program. *Health Promotion Practice*, *14*(2), 189-198. 7) May, P. A., Serna, P., Hurt, L., & DeBruyn, L. M. (2005). Outcome evaluation of a public health approach to suicide prevention in an American Indian	1) Response Paper #1

		tribal nation. *American Journal of Public Health*, *95*(7), 1238.	
Session 5 **October 6th**	1) Evaluation Design & Assessing Impact: RCTs, Quasi-Experimental, Observational/Non-Experimental & Other Possible Designs 2) Qualitative, Quantitative, Mixed & Multi-Methods in Evaluation Design: Concepts, Constructs, Variables & Operationalization 3) Critical Discussion Leader(s): 4) Peer Feedback:	1) Rossi et al., Chapters 8 & 9 2) Herman et al., Chapters 3 & 4 3) Cousens, S., Hargreaves, J., Bonell, C., Armstrong, B., Thomas, J., Kirkwood, B. R., & Hayes, R. (2009). Alternatives to randomisation in the evaluation of public-health interventions: statistical analysis and causal inference. *Journal of Epidemiology and Community Health*, *65*(7), 576-581. 4) Bonell, C. P., Hargreaves, J., Cousens, S., Ross, D., Hayes, R., Petticrew, M., & Kirkwood, B. R. (2011). Alternatives to randomisation in the evaluation of public health interventions: design challenges and solutions. *Journal of Epidemiology and Community Health*, *65*(7), 582-587. 5) Moore, L., & Moore, G. F. (2011). Public health evaluation: which designs work, for whom and under what circumstances?. *Journal of Epidemiology and Community Health*, *65*(7), 596-597. 6) Robinson, B. B. E., Uhl, G., Miner, M., Bockting, W. O., Scheltema, K. E., Rosser, B. S., & Westover, B. (2002). Evaluation of a sexual health approach to prevent HIV among low income, urban, primarily African American women: results of a randomized controlled trial. *AIDS Education and Prevention*, *14*(3 Supplement), 81-96. 7) Bonell, C., Fletcher, A., Morton, M., Lorenc, T., & Moore, L. December 15th	1) Student Reports/Presentations		1) Integrated Evaluation Report

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

The Graduate Center
PUBH 820 Epidemiologic Methods I: Research Design and Interface
Cross Listed with EPI750 (see syllabus for that course)
3 Credits
Fall 2015

Time and location	Tuesdays 6:30-8:30pm at The Graduate Center (365 5th Avenue) room 6418
Instructor	**Name** Elizabeth Kelvin, PhD, MPH **Title** Assistant Professor **Email** ekelvin@hunter.cuny.edu **Phone** 212-396-7751 **Office** 2180 Third Avenue (119th Street), room 543 Email is the preferred methods of communication
Office hours	Wednesdays 5:00pm – 6:30pm and by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course provides an intermediate-level understanding of the design and conduct of epidemiologic studies, including causal inference, measurement, major study designs, threats to validity, and their application to public health issues. The class includes lectures on research methods, hands-on data analysis exercises, discussions about determining causation through epidemiological research.
Course prerequisites	PH 75100, PH 75300 or equivalent introductory epidemiology and biostatistics courses
Course format	Each class will begin with a lecture. Most classes will then have either a computer-based exercise or a class discussion of the reading assignments following the lecture.
Required reading and resources	• Aschengrau A & Seage GR. Essentials of Epidemiology in Public Health, 3rd edition, Jones and Bartlett publishers, 2014. • Additional assigned readings listed below (pages 11-16) are available blackboard.
Suggested reading and resources	• Susser E, Schwartz S, Morabia A, & Bromet EJ. Psychiatric Epidemiology, 1st edition, Oxford University Press, 2006. • SPSS is suggested but not required. If you decide to purchase a license, be sure that it allows you to open large datasets (which will be necessary in some classes), write syntax, and run various forms of regression including Cox proportional hazards models. Student packages may not provide all the features needed for this class. The software is available for student use outside of class at the Hunter and Graduate Center computer labs and to GC students via

	the intranet. Note that GC students may not have access to the Hunter computer labs.

DPH Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Identify, develop, evaluate and recommend policy and programmatic interventions to improve population health at individual, community, government and country levels based on empirical evidence of social, political, cultural, biological, economic, historical, behavioral, environmental, and global factors in health and disease.	• Be able to recognize study design, study population, main research objectives, analytic methods used, main findings and implications of epidemiologic articles • Discuss strengths and weaknesses of epidemiologic articles in terms of research question, design, data collection, analysis and interpretation • Discuss policy implications of epidemiological research	• Written assignment • Class computer labs • Computer assignments • Class exams • Class discussion
Design and conduct etiological, intervention, policy, implementation science and other empirical studies that contribute to new knowledge about population health	• Choose and apply appropriate study designs to answer different research questions, taking scientific merits, feasibility, cost, and logistics in account • Construct analytic plans appropriate to datasets and research questions provided • Apply descriptive statistics to characterize the distribution of health conditions • Set up regression models (linear, logistic, Cox) that are suitable for the data and research question.	• Written assignment • Class computer labs • Computer assignments • Class exams • Class discussion

	• Apply and interpret regression model parameters and draw conclusions about hypotheses • Calculate an odds ratio, risk ratio and rate ratio by hand and using statistical software	
Synthesize and apply methods, theories and data from multiple disciplines to understand and solve population health issues.	• Discuss the strengths and limitations of systematic literature reviews and meta-analysis	• Class exams • Class discussion
Generate, translate, communicate, and disseminate population health evidence to diverse audiences	• Present analytic results in table and text format.	• Class computer labs • Computer assignments • Class exams

Course Assessments
Your understanding of the course material will be evaluated through class discussion and computer lab participation, 3 computer assignments, one written assignment and two exams.

Grading
The course grade will be calculated based on (1) class participation, (2) a written assignment, (3) three graded computer assignments (4) a midterm exam and (5) a final exam.

1. Class Participation: Students are expected to prepare for the class in advance by doing the reading and thinking about the discussion topic before class. Attendance and active participation in the discussions are expected and will be calculated as part of the course grade. Students may miss two classes with no impact on their participation grade.

2. Written Assignment: Students are asked to write a position paper discussing assessment of causation in epidemiology. The purpose of the position paper is to help students organize their thoughts on a topic of importance in epidemiology and develop an informed argument to support their ideas. Each paper should begin with a clear statement of the student's position, or thesis, followed by a structured argument supporting that thesis, describing and discussing the limitations of the counter-arguments. The paper should be no more than 5 pages long, double spaced, 12-point font with 1 inch margins. The paper will be assigned a numeric grade based on how well the student supports his/her thesis using the class readings. Late assignments will lose 5 points out of 100 for each day they are late (including weekends and holidays).

Students may discuss their papers with each other but must turn in their own, independently conceptualized and written assignment and are asked to ***not*** share their draft papers with others. Sources, including readings assigned for this class, must be appropriately cited and referenced (please use AMA citation format or that used by *Epidemiology*). Citation software is available for free from the university (http://library.gc.cuny.edu/sp/subjects/Citation%20Guides) and it is expected (i.e. required) that students will use citation software.

PAPER TOPIC: Is it possible to prove causation in epidemiology? Your paper should include a discussion about what we mean by a cause in epidemiology (definition), how we conceptualize causes and try to identify them in epidemiology, with specific reference to the thinking behind the RCT, cohort and case control study designs, and the limitations of epidemiology in identifying causes? – Due December 2

Grading Rubric for Written Assignment	
Criterion	% of assignment grade
Position stated clearly upfront	20%
Evidence provided to support thesis and well organized into a structured argument	30%
Conclusion supported by the evidence	20%
Writing clear, organized and grammatically correct	20%
Citations correctly identified	10%
GRADE	100%

3. Computer Assignments: Students will be asked to submit three computer assignments (see schedule below). If time permits, students may begin exercises during class and then complete and format the document to include appropriate interpretation, tables, and syntax on their own. The final document should include the SPSS tables (only the pertinent tables) and text to answer each question in the main document and the comprehensive syntax used for all analyses in an appendix pasted at the end of the word document. Students may discuss their assignments with each other but must turn in their own, independently analyzed and written assignment. Late assignments will lose 5 points out of 100 for each day they are late (including weekends and holidays).

4. Midterm Exam: Students will have a take home midterm exam to complete in 1 week, consisting of short answer questions about topics covered during class lectures and in readings. Students must work independently and not discuss the exam with

classmates. The exam should be typed double spaced with 12-point font and 1 inch margins and should be e-mailed to the instructor by 8:30pm on the due date. Late midterms will lose 10 points out of 100 for each day they are late (including weekends and holidays).

5. Final Exam: The final exam will be a take-home computer assignment involving statistical analysis in SPSS of an analytic question, and students are expected to analyze the provided data, interpret findings in the context of the literature, and draw conclusions. The exam must be completed independently and students may not discuss the exam with classmates. Students will be given the questions 1 week before the exam is due. The final exam should be typed double spaced with 12-point font and 1 inch margins and should be turned in at the beginning of class or e-mailed before the class begins. Late finals will lose 10 points out of 100 for each day they are late (including weekends and holidays).

The relative weight of each course component is as follows:

Assessment	Weight
Class participation	5%
Written assignment	20%
3 Computer assignments	25%
Midterm exam	25%
Final exam	20%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation

Students are expected to prepare for the class in advance by doing the reading and thinking about the discussion topic before class. Attendance and active participation in the discussions are expected and will be calculated as part of the course grade. Students may miss two classes with no impact on their participation grade.

Late/incomplete submission of assignments
See assignment specific rules under the Grading section above.

Make-ups, rewrites, and extra credit
Make-ups, rewrites, and extra credit assignments are not allowed.

Expectations of students
- You must sign up for Blackboard so that you can obtain course readings, updates and lecture notes and other handouts. For instructions on registering for a portal account in order to access Blackboard, go to: https://portal.cuny.edu/portal/site/cuny/index.jsp?epi-content=LOGIN.
- For this course we will be using the blackboard site for PUBH820, so the EPI750 students should make sure they can access that course.
- Please forward your CUNY e-mail to your most frequently checked e-mail address. Check your e-mail regularly so that you can receive emergency communications and periodic updates about the class.
- You are expected to complete readings and written assignments prior to class.

- SPSS version 22 or 23 will be used during most classes and is used for some assignments. The CUNY license covers only on-campus use. The software is available for student use in the CUNY School of Public Health at Hunter College and the Graduate Center computer labs outside of class hours. For Graduate Center students, the software is also available in computer labs and via the intranet.
- Students might want to bring a thumb-drive to class when computer exercises are planned to save their work. Alternately they can e-mail the documents created in class to themselves for archiving.
- If you do not have SPSS on your home computer, you will need to export the SPSS syntax and output to PDF or paste it into a word document in order to access it on your home computer. If you use a MAC, PDFing the documents may make it easier to open them on your computer.
- Student assignments should be turned-in on paper at the beginning of class. However, if a student will not be able to attend a class, assignments can be e-mailed to the instructor before the class begins (e.g. before 6:30pm the day of the class) to receive credit. The instructor will reply when a document is received, so if a reply is not received by the student within a few hours he/she should contact the instructor to be sure that the assignment was sent correctly. Students should save their sent email as a record demonstrating that they turned the assignment in on time in case the email is not received by the instructor.

Expectations for the instructor

- Power Point lecture slides will be available for download on Blackboard prior to class.
- The instructor is available during office hours and by appointment to assist students with assignments, course material, and exam preparation. The preferred method of communication with the instructor is e-mail. Please schedule appointments in advance.
- Emails will be answered within 3 business days. If a student has not heard back within that time period, s/he may want to send the email again. Emails will not be answered after business hours, during weekends or holidays.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on

Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule

- Please note that the schedule is subject to change throughout the semester. The "Last Updated" Date in the header of the syllabus is meant to reference the current version of the syllabus and therefore should be updated if a change in schedule is made.
- Students should access the current academic calendar for important dates (for example: holidays, course drop, course withdrawal):
  - For the Graduate Center please see: http://www.gc.cuny.edu/CUNY_GC/media/CUNY-Graduate-Center/PDF/Registrar/Fall-2015-Academic-CalendarRev.pdf?ext=.pdf
  - For Hunter College please see: http://www.hunter.cuny.edu/onestop/repository/files/registrar/Academic%20Calendar%20Fall%202015%20thru%20Spring%202016%205-27-15.pdf

EPI750 & PH820 Course Schedule			
Date of class	**Lecturer**	**Topic**	**Assignments**
September 1, 2015	Kelvin	1. Introduction, basic study design & statistics review	
September 8, 2015	Kelvin	2. Review common measures of effect & Data Analysis*	
September 25, 2015 (Friday)	Kelvin	3. Causal inference in epidemiology	
September 29, 2015	Kelvin	4. Causal inference in epidemiology	*Computer assignment 1: measures of effect exercise due
October 6, 2015	Kelvin	5. Longitudinal studies (cohort & clinical trials) 1	
October 13, 2015	Kelvin	6. Longitudinal studies (cohort & clinical trials) 2*	
October 20, 2015	Kelvin	7. Case control studies 1	*Computer assignment 2 on longitudinal studies due

October 27, 2015	Kelvin	8. Case control studies 2*	
November 3, 2015	Kelvin	9. Ecological studies & meta analyses	*Computer assignment 3 on case control studies due
November 10, 2015	Kelvin	10. Internal validity: bias and confounding*	
November 17, 2015		11. NO CLASS MEETING	Take home midterm exam due
November 24, 2015	Kelvin	12. External validity & effect measure modification/interaction*	
December 1, 2015	Kelvin	13. Measurement of exposure & mediation	Writing assignment due
December 8, 2015	Kelvin	14. Validity and reliability of variables	
December 15. 2015	Kelvin	15. Infectious diseases & independence	Take home final exam due

* Indicates that the SPSS exercise from this class is to be turned-in for grading on the specified date

READING ASSIGNMENTS: (Readings should be completed before the lecture)

CLASS 1 (September 1, 2015): Introduction, basic study design & statistics review

Discussion topic: Why are epidemiologic findings so easily misinterpreted? Is public skepticism warranted? To what extent is it our responsibility to make sure our science findings are properly communicated within public domains?

Assigned Readings: None

CLASS 2 (September 8, 2015): Review common measures of effect & Data analysis

Discussion Topic: What are some of the measures of effect or association that are commonly used in Epidemiology? Are there questions of interest better answered by certain measures of effect than by others?

Assignment: Computer assignment 1 - measures of effect exercise & data analysis. **Due October 6, 2015.**

Assigned Readings:

1) Aschengrau text Ch. 2 & 3.
2) Northridge ME. Annotation: public health methods—Attributable risk as a link between causality and public health action. *American Journal of Public Health* 1995; 85:1202-1204.
3) Morabia A. The Essential Tension Between Absolute and Relative Causality *American Journal of Public Health* 2001; 91(3): 335-336
4) Davies HT, Crombie IK, Tavakoli M. When can odds ratios mislead? British Medical Journal 1998; 316: 989-991.

Recommended readings:

1) Zhang J, Yu KF. What's the relative risk? A method of correcting the odds ratio in cohort studies of common outcomes. *JAMA* 1998; 280: 1690-1691.
2) Schwartz LM, Woloshin S, Dvorin EL, Welch HG. Ratio measures in leading medical journals: structured review of accessibility of underlying absolute risks. BMJ 2006; 333(7581):1248.
3) Stevens J, Cai J, Juhaeri, Thun MJ, Williamson DF, Wood JL. Consequences of the use of different measures of effect to determine the impact of age on the association between obesity and mortality. Am J Epidemiology 1999; 150(4): 399-407.
4) LeardMann CA, Powell TM, Smith TC, Bell MR, Smith B, Boyko EJ, Hooper TI, Gackstetter GD, Ghamsary M, Hoge CW. Risk factors associated with suicide in current and former US Military personnel. JAMA 2013; 310(5): 496-506.

CLASSES 3 & 4 (September 25 & September 29, 2015): Causal inference in epidemiology

Discussion topic: One of the primary purposes of epidemiology is to identify causes of health outcomes. What is a “cause”? How do we identify causes in epidemiology? What are some of the limitations of current epidemiological methods in identifying causes?

Assigned Readings:

1) Aschengrau text Ch.15.
2) Susser text pp. 33-52.

3) Greenland S, Pearl J, Robins, JM. Causal Diagrams for Epidemiologic Research. (1999) Epidemiology; 10(1): 37-48.
4) M Parascandola, D L Weed. (2001) Causation in epidemiology. *J Epidemiol Community Health* 2001;**55**:905–912.
5) Kaufman JS and Poole C. Looking back on "Causal thinking in the health sciences". Annual Review of Public Health 2000; 21: 101-119.
6) Hill AB. The environment and disease: Association or Causation? *Proceedings of the Royal Society of Medicine* 1965; 295-300.
7) Kreiger N. Epidemiology and the Web of Causation: Has anyone seen the spider? *Social Science and Medicine* 1994; 39:887-903.
8) McMichael AJ. Prisoners of the proximate: Loosening the constraints on epidemiology in an age of change. *American Journal of Epidemiology* 1999; 149:887-897.

Recommended readings

1) Taubes G. Epidemiology faces its limits. *Science* 1995; 269(5221):164-169.
2) Susser M, Susser E. Choosing a future for epidemiology: I. eras and paradigms. *American Journal of Public Health* 1996; 86 (5):668-673.
3) Susser M, Susser E. Choosing a future for epidemiology: II. From black box to Chinese boxes and eco-epidemiology. *American Journal of Public Health* 1996; 86 (5):674-677.
4) Feinstein AR. Scientific standards in epidemiologic studies of the menace of daily life. Science 1998; 242: 1257-1263.
5) Schwartz S, Susser E. What can epidemiology accomplish? *International Journal of Epidemiology* 2006; 35(3):587-590.
6) J Pearl. Introduction to Causal Inference – partial article. Int J Biostats 2010; 6: 1-11.

CLASSES 5 & 6 (October 6 & 13, 2015): Longitudinal studies (cohort & clinical trials)

Discussion Topic: What are the strengths and weaknesses of the various longitudinal study designs in assessing causality in general and relative to each other? Where do "natural experiments" fall in the hierarchy of longitudinal study designs?

Assignment: Computer assignment 2 - longitudinal studies. **Due October 27, 2015.**

Assigned Readings:

1) Aschengrau text Ch. 6, 7 & 8
2) Susser text pp. 129-137.
3) Hernan MA. A definition of the causal effect for epidemiologic research. J Epidemiol and Community Health 2004; 58: 265-271.

4) Benson K. Hartz AJ. A comparison of observational studies and randomized, controlled trials. *New England Journal of Medicine 2000*; 342(25):1878-1886.
5) Writing group for the Women's Health Initiative Investigators. Risk and benefits of estrogen plus progestin in healthy postmenopausal women. *JAMA 2002*; 288:321-333.
6) Pedersen AT, Ottesen B. Issues to debate on the Women's Health Initiative (WHI) study. Epidemiology or randomized clinical trials--time out for hormone replacement therapy studies? *Human Reproduction 2003*; 18(11):2241-2244.
7) Berkman LF. Seeing the forest and the trees – from observation to experiments in social epidemiology. Epidemiologic reviews 2004; 26(2): 2-6.
8) Lipsitch M, Tchetgen E, Cohen T. Negative controls: a tool for detecting confounding and bias in observational studies. Epidemiology 2000: 21(3): 383-8.

Recommended readings:

1) Susser E, Hoek HW, Brown A. Neurodevelopmental disorders after prenatal famine: The story of the Dutch Famine Study. *American Journal of Epidemiology 1998*; 147:213-216.
2) Cummins S, Petticrew M, Higgins C, Findlay A. Sparks L. Large scale food retailing as an intervention for diet and health: quasi-experimental evaluation of a natural experiment. *Journal of Epidemiology and Community Health 2005*; 59(12):1035-1040.
3)

CLASSES 7 & 8 (October 20 & 27, 2015): Case control studies

Assignment: Computer assignment 3 - case control studies. **Due November 10, 2015.**

Assigned Readings:

1) Aschengrau text Ch. 9.
2) Susser text pp. 212-225.
3) Morabia A. Case control studies in clinical research: Mechanisms and prevention of selection bias. *Preventive Medicine 1997*; 26:674-677.
4) Bloom MS, Schisterman EF, Hediger ML. Selecting controls is not selecting "normals": design and analysis issues for studying etiology of polycystic ovary syndrome. Fertility & Sterility 2006; 86: 1-12.
5) Susser ES, Schaefer CA, Brown AS, Begg MD, Wyatt RJ. The design of the prenatal determinants of schizophrenia study. *Schizophrenia Bulletin 2000*; 26:257-273.
6) Brown AS, Begg MD, Gravenstein S, Schaefer CA, Wyatt RJ, Bresnahan M, Babulas VP, Susser ES. Serologic evidence of prenatal influenza in the etiology of schizophrenia. *Archives of General Psychiatry 2004*; 61(8):774-780.

CLASS 9 (November 3, 2015): Ecological studies & meta analyses

Discussion Topic: What are the main criticisms of ecologic and meta-analyses study designs, and do you think that these criticisms are warranted? Are these two study designs really worse than the other types of observational studies (cross sectional, cohort, case control, etc.) commonly used in epidemiology? Are they always just a poor substitute for other observational study designs?

Assigned Readings:

1) Aschengrau text Ch. 6
2) Rose, G. Sick individuals and sick populations. Int J Epidemiology 2001; 30: 427-432.
3) Pearce N. The ecological fallacy strikes back. *J Epidemiol Community Health* 2000;**54**:326–327.
4) Schwartz, S. The fallacy of the ecological fallacy: the potential misuse of a concept and the consequences. American Journal of Public Health 1994; 84(5): 819-824.
5) Rosenthal R and DiMatteo MR. META-ANALYSIS: Recent Developments in Quantitative Methods for Literature Reviews. Annu. Rev. Psychol. 2001. 52:59–82.

Recommended readings

1) Shapiro, S. Meta-analysis/Shmeta-analysis. Am Journal of Epidemiology 1994; 140(9):771-778.
2) Petitti, DB. Of babies and bathwater. American Journal of Epidemiology 1994; 140(9): 779-782.
3) Greenland, S. Can meta analysis be salvaged? Am Journal of Epidemiology 1994; 140(9): 783-787.

CLASS 10 (November 10, 2015): Internal validity: bias and confounding

Discussion Topic: A study has internal validity when the measure of effect found in that study is the true, correct measure of effect. What are the major factors that threaten internal validity in epidemiology? How can these factors be addressed to improve internal validity when analyzing your data? What are some of the things you need to consider when trying to maximize internal validity during data analysis?

Assigned Readings:

1) Aschengrau text Ch. 10, 11 & 12.
2) Susser text pp. 138-150.

3) Copeland KT, Checkoway H, McMichael AJ & Holbrook RH. Bias due to misclassification in the estimation of relative risk. American Journal of Epidemiology 1977, 105(5): 488-495.
4) Christenfeld JS, Sloan RP, Carroll D & Greenland S. Risk factors, confounding, and the illusion of statistical control. Psychosometric Medicine 2004, 66: 868-875.
5) Brenner H & Blettner M. Controlling for continuous confounders in epidemiologic research. Epidemiology 1997, 8(4): 429-434.

CLASS 11 (November 17, 2015) NO CLASS MEETING

Assignment: **Take Home Midterm Due**

CLASS 12 (November 25, 2015): External validity & effect measure modification

Assignment: Computer assignment 4 - effect modification.

Discussion Topic: What is effect measure modification? What role does the specific measure of effect used (risk difference, risk ratio, odds ratio, etc.) play in assessing and interpreting effect modification in epidemiologic data? What are the implications of effect modification for epidemiology and public health?

Assigned readings:

1) Aschengrau text Ch. 13
2) Susser text pp. 319-328.
3) Morabia A., Ten Have T, & Landis JR. (1997) Interaction fallacy. J Clin Epidemiology. 50: 809-812.
4) Morabia A. (2007) Epidemiologic interactions, complexity, and the lonesome death of Max von Pettenkofer. American Journal of Epidemiology. 166(11): 1233-1238.

Recommended readings:

1) Oppenheimer GM & Susser E. (2007) Invited commentary: the context and challenge of von Pettenkofer's contributions to epidemiology. American Journal of Epidemiology. 166(11): 1239-1241.
2) Morabia A. (2007) Morabia responds to "context and challenge of von Pettenkofer's contribution to epidemiology. American Journal of Epidemiology. 166(11): 1242-1243.

CLASS 13 (December 1, 2015): Measurement of exposure & mediation

Discussion Topic: What does the term "mediation" refer to? How does this concept fit into Rothman's conceptual scheme of causation with its INUS causes, if at all? What are some of the issues around identifying mediation in epidemiology as discussed by Terry & Rundle?

Writing Assignment (paper): Is it possible to prove causation in epidemiology? Your paper should include a discussion about what we mean by a cause in epidemiology, how we try to identify causes in epidemiology, with specific reference to the thinking behind the RCT, cohort and case control study designs, and the limitations of epidemiology in identifying causes? – **Due December 2, 2014.**

Assigned Readings:

1) Aschengrau text Ch. 15.
2) Rothman KJ. (1995) Causes. American Journal of Epidemiology, 141(2): 90-95.
3) Hafeman DM, Schwartz S. (2008) Opening the Black Box: a motivation for the assessment of mediation. International Journal of Epidemiology, 38:838–845.
4) Terry MB, Neugut AI, Schwartz S, Susser E. (2000) Risk factors for a causal intermediate and an endpoint: reconciling differences. American Journal of Epidemiology, 151(4): 339-345.

CLASS 14 (December 8, 2015): Validity and reliability of variables

Discussion Topic: What do we mean by validity and reliability as it refers to the measurement of a variable (exposure, outcome, confounder, mediator, or effect modifier)? Why are these two concepts important in assessing causality in epidemiology? What methods can we use to evaluate whether a measurement is valid and reliable and what are some of the weaknesses of these methods?

Assigned Readings:

1) Wu AW, Dave NB, Dierner-West M, Sorensen S, Huang I-C, Rivecki DA. (2004)Measuring validity of self-reported symptoms among people with HIV. AIDS Care, 16(7): 876-881.
2) Kleinman RE, Murphy M, Wieneke KM, Desmond MS, Schiff A, Gapinski JA. (2007) Use of a single-question screening tool to detect hunger in families attending a neighborhood health center. Ambulatory Pediatrics, 7(4): 278-284.

Class 15 (December 15, 2015): Infectious diseases & independence

Discussion Topic: Halloran discusses how infectious diseases are "dependent happenings." What does she mean by this and why is this important in investigating potential causes and protective factors for infectious diseases? According to Halloran, how do infectious diseases differ from non-infectious diseases with regard to dependency of events? Do you agree with her that non-infectious diseases are independent?

Assignment: Take home final exam due

Assigned Readings:

1) Halloran ME. Overview of Vaccine Field Studies: Types of Effects and Designs. *Journal of Biopharmaceutical Statistics*, 2006; 16: 415–427.

Recommended readings

1) Halloran ME Struchiner CJ &. Study designs for dependent happenings. *Epidemiology 1991*; 2(5): 331-338.

2) Halloran ME & Struchiner CJ. Causal inference in infectious diseases. *Epidemiology 1995*; 6(2): 142-151.

NOTE: Additional readings may be assigned throughout the semester.

Last Updated August 27, 2015

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

The Graduate Center
PUBH 821: Epidemiologic Methods II: Study Design and Analysis
3 Credits
Fall 2015

Time and location	Silberman Building, Room 329, Tuesdays 6:05-7:50 PM (except during computer lab sessions, room C08)
Instructor	Assistant Professor, Heidi Jones, PhD MPH Email: hjon@hunter.cuny.edu Phone: 212-396-7750 *Email is the preferred method of communication.*
Office hours	Silberman Building, Room 526 Wednesdays from 4:00-6:00 PM (except during monthly epidemiology seminar) or by appointment
Course website	https://bbhosted.cuny.edu/webapps/blackboard/execute/announcement?method=search&context=course&course_id=_1153017_1&handle=cp_announcements&mode=cpview
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Through lectures and problem-solving workshops, this course broadens the approach to epidemiologic methods, incorporating principles from Methods I into the design and conduct of studies and analysis of epidemiologic data. It consists of lectures and problem-solving workshops.
Course prerequisites	PUBH 820 or equivalent or permission of track coordinator
Course format	While the format for each session will vary, generally we will use the following format: • student questions / review (10 minutes) • lecture (45 minutes) • group work (discussion of articles /in-class exercises - 30 minutes) review of key take home messages (15 minutes)
Required reading and resources	Szklo M, Nieto FJ. *Epidemiology: Beyond the Basics*. 3rd ed. Burlington, MA: Jones and Bartlett Learning, LLC; 2014.*(on reserve at Silberman library)* Additional assigned articles will be available on Bb.
Suggested reading and resources	Rothman KJ, Greenland S, Lash TL. *Modern Epidemiology.* 3rd ed. Philadelphia, PA: Lippincott Williams & Wilkins; 2008. *(on reserve)* Elliott RJ, Morrell CH. *Learning SAS in the Computer Lab*. 3rd ed. Pacific Grove, CA: Duxbury Press; 2009. *(on reserve)*

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Operationalize studies of the complex interactions between multiple determinants of population health in a variety of settings, exploiting the differences between settings as a source of insight	• Use directed acyclic graphs to identify confounders and colliders • Identify whether specific research questions require representative samples • Assess public health studies against recognized guidelines • Define a cause, explain the strengths and weaknesses of thinking about causality in terms of Rothman's pies, exchangeability or directed acyclic graphs • Explain the difference between a causal factor and a risk factor • Draw directed acyclic graphs showing how loss to follow-up, missing data and misclassification may result in colliding. • Draw the directed acyclic graph for a control exposure and give an example • Compare the causal inferences which can be made from an RCT, an instrumental variable analysis, a cohort study, a case-control study and a cross-sectional study • List all the considerations that affect generalizability of an RCT • Describe key applications of instrumental variable analysis, and key factors which might affect its internal validity	• Homeworks 1-4 • In-class Midterm • Worksheets • Take home final

	• Explain the difference between risk stratification and causal analysis in terms of application and approach	
Design and implement research projects that • Quantify health and the burden of disease in populations • Perform surveys and risk factor analyses • Apply causal inference to study design, study implementation and data analysis; • Identify vulnerable populations and their attributes; apply rigorous methods to examine and monitor health disparities. • Identify effective interventions to improve population health equitably • Evaluate the effectiveness of interventions designed to improve population health • Give appropriate attention to the potential for bias, as well as exposure and outcome measurement issues.	• Define a cause, explain the strengths and weaknesses of thinking about causality in terms of Rothman's pies, exchangeability or directed acyclic graphs • Explain the difference between a causal factor and a risk factor • Draw directed acyclic graphs showing how loss to follow-up, missing data and misclassification may result in colliding. • Draw the directed acyclic graph for a control exposure and give an example • Compare the causal inferences which can be made from an RCT, an instrumental variable analysis, a cohort study, a case-control study and a cross-sectional study • List all the considerations that affect generalizability of an RCT • Describe key applications of instrumental variable analysis, and key factors which might affect its internal validity • Explain the difference between risk stratification and causal analysis in terms of application and approach • Classify biases into structural types and explain how each type of bias may affect an RCT, an instrumental variable analysis, a cohort study, a case-control study and a cross-sectional study	• Homeworks 1-4 • In-class Midterm • Worksheets • Critique • Take home final

Conceptual Framework

The overarching conceptual framework for this course centers on the counterfactual definition of a cause, specifically how this definition is incorporated into observational study design, analysis and interpretation of results, and ultimately our ability to make causal inference.

Course Assessments

Your understanding of the course material will be evaluated through four homework assignments using SAS statistical software (based on in-class laboratory exercises), an in-class midterm, a take home final exam, nine worksheets based on the readings and class participation

Homework: There will be 4 homework assignments based on the in-class SAS exercises for which you will need to analyze data and interpret findings in SAS, and that comprise 30% of your grade.

Exams: There will be an in-class, closed book midterm with short answer questions and hand calculations. There will also be a cumulative take home exam, which will include short answer questions, reviewing a published article, and analyzing and interpreting data in SAS.

Worksheets: There will be 9 worksheets with practice calculations and/or short answer responses to the readings. These worksheets will help to focus your reading of the material and prepare you for class discussions. They will be graded as credit/no credit for completion, and comprise 5% of your grades.

Critique: You will be assigned an article for which you will need to write a 2-3 page critique, highlighting the strengths and limitations of the study design, data analysis and conclusions.

Attendance and class participation: The reading assignments will help you master course materials and actively participate in class; 5% of your grade will be based on your class participation and attendance.

Grading

Evaluation criteria

Homework assignments and exams will be graded based on the extent to which the answers are correct. The worksheets will be graded as credit/no credit. I will use the following rubric for class participation:

Class participation grading rubric (5% of your grade, perfect score=20)*

	Strong work (4-5)	Needs development (2-3)	Unsatisfactory (0-1)
Active listening (5 points)	Actively and respectfully listens to peers and instructors	Sometimes displays lack of interest in comments of others, occasionally 'tunes out'	Projects lack of interest or disrespect for others, checks email, instant messages / text messages, non-course internet material during class time
Preparation (5 points)	Arrives fully prepared with all assignments and reading completed, arrives to class with questions	Sometimes arrives unprepared or with only superficial preparation	Exhibits little evidence of having read or thought about assigned material
Quality of contributions to class discussions (5 points)	Comments and questions frequently help move seminar discussion forward	Comments and questions sometimes advance the discussion, but sometimes do little to move it forward	Comments do not advance the conversation or are actively harmful to it, or student does not participate in class discussions
Attendance (5 points)	Arrives to class on time, does not have unexcused absences	Usually arrives to class on time, informs instructor about unavoidable absences	Arrives consistently late, does not inform instructor about absences

* adapted from: http://www46.homepage.villanova.edu/john.immerwahr/TP101/EvDay/discussion%20rubric.pdf. Accessed on July 21, 2010

The relative weight of each course component is as follows:

Assessment	Weight
Homework assignments (average score)	25%
Midterm (in-class)	25%
Final exam (take home)	30%
Article critique	10%
Worksheets	5%
Class participation	5%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation

Class will begin promptly to maximize our time together. Please arrive to class on time, and be prepared to contribute to class discussion. The lectures will be video-taped and made available on Blackboard for excused absences. Please note that group discussions and laboratory exercises will not be taped. Participation and in-class attendance are worth 5% of your grade.

Late/incomplete submission of assignments

Homework assignments are due electronically at 6 PM, prior to the beginning of class. The final exam is due at midnight. **Late assignments will receive 4 points (out of**

100) deducted for every day late and NO assignments will be accepted more than 3 days late (i.e. later than 6 PM on Friday).

Make-ups, rewrites, and extra credit
There will be not be a make-up exam for the in-class midterm. Depending on how the class performs on the midterm, there may be an opportunity for extra credit for this exam; there will not be any other opportunities for extra credit or rewrites.

Expectations of students
Attend lectures & labs, read textbook and articles prior to class, participate during class discussions, seek help/ask questions early and often, provide the instructor with constructive feedback on course material and content, and, hopefully, have fun with the material.

Expectations for the instructor
I will respond to emails within 24-48 hours, excluding weekends. I will tailor the class to your needs and interests depending on the feedback I receive. Generally, I will return graded homework assignments within two weeks (will return them within one week, when possible).

Accessibility
Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity
CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

"Green" policies
In an attempt to save paper, homework assignments and the take home final exam will be submitted electronically and will be returned electronically, with comments in track changes. Suggestions for other adjustments to the course to reduce environmental impact are always welcome. Be sure to check your Hunter or Graduate Center email address regularly for class announcements and assignments.

Use of Blackboard

You must sign up for Blackboard to receive course readings, updates and obtain lecture notes and other handouts. For instructions on registering for Blackboard, go to: http://bb.hunter.cuny.edu. Please make sure that you have access to Blackboard through Hunter.

Acknowledgements

This syllabus builds upon courses given by Drs. Sharon Schwartz and Mary Beth Terry, professors in epidemiology at the Mailman School of Public Health at Columbia, and Dr. Luisa Borrell at the CUNY School of Public Health at Lehman College. Additionally, I would like to acknowledge Dr. Mary Schooling at the CUNY School of Public Health at Hunter College, who also teaches this course and has made improvements and adjustments in previous semesters.

Course Schedule

Please note, while the overall content of this course will be covered as outlined, the syllabus may change based on the need to adapt to student interests, feedback and expertise. Always check the Blackboard site for the most up-to-date information on course readings and assignments.

Theme		Date	Topic	Readings and Assignments
Main association between exposure and outcome and causal inference	1	09/01/15	Causation and causal inference	• Rothman, Greenland & Lash, Chapter 2, Causation and causal inference • Broadbent A. Causation and models of disease in epidemiology. *Stud Hist Philos Biol Biomed Sci*. 2009;40:302-11.
	2	09/08/15	RCT and cohort designs; age, period cohort analyses	• Szklo & Nieto, Chapter 1 • Schultz et al. CONSORT 2010 Statement: updated guidelines for reporting parallel group randomized trials. *BMJ*. 2010;340:c332. • Keyes KK et al. What is a cohort effect? Comparison of three statistical methods for modeling cohort effects in obesity prevalence in the United States, 1971-2006. *Soc Sci Med.* 2010;70:1100-8. • **Worksheet 1 due at 6 PM**
		09/15/15 & 09/22/15	No class scheduled	
	3	09/29/15	**Lab 1:** Introduction to SAS, measures of frequency, association and non-parametric survival analysis	• Szklo & Nieto, Chapter 2 & 3 • **Worksheet 2 due at 6 PM** • ***Note: Class will be in Room C08***
	4	10/06/15	Case control studies and sampling design and methods	• Abelson, *Statistics as Principled Argument.* Hillsdale, NJ: Lawrence Erlbaum Associates; 1995, Chapter 1, Making claims with statistics. • Walker. Reporting the results of epidemiologic studies. *Am J Public Health*. 1986:76:556-8. • Outlaw et al. Using motivational interviewing in HIV field outreach with young African American men who have sex with men: A randomized clinical trial. *Am J Public Health*. 2010:100:S146-51 • **Worksheet 3 due at 6 PM**
	5	10/13/15	**Lab 2:** Sample size and power in SAS	• Kelsey, Whittemore, Evans & Thompson. *Methods in Observational Epidemiology*. New York, NY: Oxford University Press, 1996, Chapter 12, Methods of sampling and estimation of sample size.

Theme		Date	Topic	Readings and Assignments
				• Braitman. Confidence intervals extract clinically useful information from data. *Ann Intern Med*. 1988:108:296-8 • Rothman. Significance questing. *Ann Intern Med.* 1986:445-7. • Nuzzo.Statistical errors.*Nature.2014:506:150-2* • **Homework 1 due at 6 PM** • ***Note: Class will be in Room C08***
Threats to internal validity / alternative explanations	6	10/20/15	Selection and information bias	• Szklo & Nieto Chapter 4, • Gradus et al. Acute stress reaction and completed suicide. *Int J Epidemiol* 2010:doi.10.1093/ije/dyq112:1-7 • **Worksheet 4 due at 6 PM**
	7	10/27/15	Confounding	• Szklo & Nieto Chapter 5, • Greenland & Robins. Identifiability, exchangeability, and epidemiological confounding. *Int J Epidemiol* 1986;15:413-9. • Maldonado & Greenland. Estimating causal effects. *Int J Epidemiol* 2002;31-422-29. • **Homework 2 due at 6 PM** • **Worksheet 5: Bring to class 5 sample midterm questions on index cards (with answers on the back)**
	8	11/03/15	MIDTERM	
Strengthening causal inference and hypotheses / causal partners and causal mechanisms	9	11/10/15	Effect measure modification & mediation	• Szklo & Nieto Chapter 6 & App. C, • Hafeman & Schwartz. Opening the black box: a motivation for the assessment of mediation. *Int J Epidemiol.* 2009;38:838-45. • Knol et al. When one depends on the other: reporting of interaction in case-control and cohort studies. *Epidemiology*. 2009:20:161-66 • Suzuki, Yamamoto & Tsuda. Identification of operating medication and mechanism in the sufficient-component cause framework. *Eur J Epidemiol* 2011:26:347-57. • Van der Weele. Subtleties of explanatory language: what is meant by “mediation”? *Eur J Epidemiol.* 2011;26:343-6. <u>Optional:</u> • Kaufman. Interaction reaction. *Epidemiology*. 2009:20:159-60

Theme		Date	Topic	Readings and Assignments
				• **Worksheet 6 due at 6 PM** • **Critique due at 6 PM**
	10	11/17/15	**Lab 3**: Data analysis for confounding, mediation and effect measure modification	• Ahlbom A, Alfredsson L. Interaction: a word with two meanings creates confusion. *Eur J Epidemiol*. 2005;20:563-4 • Andersson T et al. Calculating measures of biological interaction. *Eur J Epidemiol.* 2005;20:575-9. • Karp. Getting started with proc logistic. *SUGI* Paper 26. <u>Optional:</u> • Szklo & Nieto chapter 7 • **Worksheet 7 due at 6 PM** • ***Note: Class will be in Room C08***
	11	11/24/15	**Lab 4:** Cox proportional hazards model, adjusted SEs using SUDAAN	• Szklo & Nieto Chapter 7 • Smith et al. Survival analysis using cox proportional hazards modeling for single and multiple event time data. *SUGI* Paper 28 <u>Optional:</u> • Clark et al. Survival analysis Part 1: basic concepts and first analyses. *Brit J Cancer* 2003;89:232-8. • Bradburn et al. Survial analysis Part 2: multivariate data analysis – an introduction to concepts and methods *Brit J Cancer* 2003;89:431-6 • ***Note: Class will be in Room C08***
	12	12/01/15	Directed Acyclic Graphs (lab) **Worksheet 8 in class**	• Hernán et al. Causal knowledge as a prerequisite for confounding evaluation: an application to birth defects epidemiology. *Am J Epidemiol*. 2002;155:177-84. • Shrier et al. Reducing bias through directed acyclic graphs. *BMC Med Res Meth.* 2008;doi:10.1186/1471-2288-8-70. • Yang et al. Serum folate and cancer mortality among US adults: findings from the NHANES. *Cancer Epidemiol Biomarkers Prev* 2009;18:1439-47. • **Homework 3 due at 6 PM** • ***Note: Class will be in Room C08***
	13	12/08/15	Instrumental variables	• Rassen et al. Instrumental variables I: instrumental variables exploit natural variation

Theme		Date	Topic	Readings and Assignments
				in nonexperimental data to estimate causal relationships. J *Clin Epidemiol*. 2009:62:1226-32 • Glymour et al Does childhood schooling affect old age memory or mental status? Using state schooling laws as natural experiments. *J Epidemiol Community Health.* 2008;62:532-7. • Wong et al. Estimating influenza vaccine effectiveness in community-dwelling elderly patients using the instrumental variable analysis method. *Arch Intern Med*. 2012;172:484-91 • Voight et al. Plasma HDL cholesterol and risk of myocardial infarction: a mendelian randomization study. *Lancet*. 2012:380:572-80. <u>Optional:</u> • Rassen et al. Instrumental variables II: instrumental variable application-in 25 variations, the physician preference generally was strong and reduced covariate imbalance. *J Clin Epidemiol* 2009:62:1233-41. • **Worksheet 9 due at 6 PM** • **Homework 4 due on 5/11 at 11:59 PM**
	14	12/15/15	Final review	Come prepared to ask questions
	15	12/22/15	No class	Take home FINAL DUE at midnight

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

The Graduate Center
PUBH 823: Epidemiologic Methods IV: Seminar in Applications of Epidemiologic Methods

3 Credits
Fall 2015

Time and location	6:30 – 8:30 pm, GC, Room 3317
Instructor	C Mary Schooling, PhD Email: mschooli@hunter.cuny.edu Phone: mschooli@hunter.cuny.edu
Office hours	Tuesday, 4-6pm Room 545, 2180 Third Avenue, New York or by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This seminar is intended to help students integrate the concepts and methods of epidemiologic research with specific inquiry directed at understanding and improving the health of urban populations. This seminar requires students to develop proposals for epidemiologic research, identify strategies for data analysis that incorporate the lessons learned in Epidemiology Methods courses, and to examine the application of those strategies to existing research. This course helps to "bring together" the epidemiology theory and methods that have been discussed throughout the rest of curriculum to the particular exigencies of public health research.
Course prerequisites	PUBH 82200
Course format	Lectures and seminar
Required reading and resources	Modern Epidemiology, Rothman, Lash & Greenland, Lippincott Williams & Wilkins J Pearl, Causality, Models, Reasoning, and Inference Cambridge University Press
Suggested reading and resources	Please see course schedule for week by week readings

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Design and implement research projects that: a. Quantify health and the burden of disease in populations b. Perform surveys and risk factor analyses c. Apply causal inference to study design, study implementation and data analysis; d. Identify vulnerable populations and their attributes; apply rigorous methods to examine and monitor health disparities. e. Identify effective interventions to improve population health equitably f. Evaluate the effectiveness of interventions designed to improve population health g. Give appropriate attention to the potential for bias, as well as exposure and outcome measurement issues.	1. Describe the strengths, weaknesses and inconsistencies of the prevailing methodological paradigm in epidemiology. a. Explain the role of risk factors in DAGs 2. Discuss the role of science in epidemiology 3. Distinguish between methods aimed at description, risk stratification and causal inference 4. Explain the value of representativeness for each question 5. Identify possible reasons for conflicting results across published quantitative studies. 6. Compare and contrast research findings, and make public health decisions based on available evidence, even if it is incomplete. 7. Determine what further work is needed to adequately answer research question and make public health/health decisions. 8. Explain the difference between operationalizing a research question in existing data and designing a study to answer a particular research question 9. Interpret a meta-analysis, explain the relevance to interpretation of a single study 10. Compare and contrasts the use of experimental vs. observational study designs 11. Summarize and present data to peers 12. Place instrumental variable studies and natural experiments, including discontinuities, within the pyramid of evidence. Describe how to conduct and interpret such studies. 13. Recap on the biases to which traditional observational studies are open and explain the different ways of addressing them, such as propensity scores and inverse probability weighting 14. Interpret a marginal structural model 15. Explain the use of g-estimation	1. Reaction paper 1, 2 2. Reaction paper 2 3. Session 3 discussion, reaction paper 4 and practical 1 4. Reaction paper 3 5. Paper 1 6. Paper 2 7. Research proposal 8. Research proposal 9. Reaction paper 7 10. Reaction paper 5 11. Presentation 1 and 2 12. Session 12 and Practical 2 13. Reaction paper 6 14. Reaction paper 8 15. Reaction paper 9

Course Assessments

This course will be assessed based on reaction papers (9), papers (2), practicals (2), a proposal and participation. The reaction paper should synthesize and critically evaluate key theoretical, methodological and/or substantive contributions of the readings, along with a few questions for clarification and discussion. This may consist of identifying questions that the readings provoke; critiquing problematic assumptions, logic, and measurement; discussing theoretical and empirical advances; and considering ideas for future directions. The papers should give a thorough exposition of the topic with particular attention to the interpretation of any findings and the implications for public health. The proposal should be in NIH format. Please reference all statements of fact. Please format as single-spaced, typed, 12-point Times Roman font with 1-inch margins. Expected length is 1-2 pages for reaction papers and 5-10 pages for papers and the proposal. Each presentation should last about 10 minutes.

Grading

In general papers and presentation will be evaluated according to their demonstration of a) grasp of the topic, b) identification of the key points, c) synthesis of the material, and d) explanation of the implications for practice. Participation will be evaluated according to contribution to the discussion. Practicals will be evaluated against a standard answer.

Grading rubrics for the assessments

GRADING RUBRICS	(A+ to A-)	(B+ to B-)	(C+ to C)	(F)
Reaction papers, papers, presentations	Provides a comprehensive synthesis of the topic with appropriate examples and discussion of their implications for practice	Identifies the implications of the key points in the topic, provides some examples and relevance to practise	Describes the main concepts in the topic	Inability to identify and describe the main concepts

The relative weight of each course component is as follows:

Assessment	Weight
Reaction papers 9	27%
Practicals 2	15%
Presentation 2	10%
Papers 2	18%
Participation	5%
Proposal	20%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation
All members of the class are expected to actively participate in class activities and discussions, and to complete assigned reading prior to class. If you are going to be late or have to miss a class, please contact me via email as far in advance as possible.

Late/incomplete submission of assignments
All assignments must be submitted to me via blackboard by 4PM on the day of the class. It is expected that your writing will be of graduate-level quality, presented in a readable and consistent manner: 1.5-spaced, typewritten, with one-inch margins all around and proofread. Assignments handed in after the due date without prior permission may not be accepted. If you anticipate the need to turn in work late, please contact me to negotiate a mutually acceptable submission plan in advance of the assignment's due date. Please do not ask for an extension on the due date of the assignment.

Make-ups, rewrites, and extra credit
Rewrites are permitted for reaction papers.

Expectations of students
Students are required to attend each class, as participation in the discussion is essential to understanding the existing evidence on the topic and drawing judgments. In the case of illness, students should email me the day of class. In the case of unavoidable absence (e.g. work related conference), students should email me one week prior to the class. Students should prepare adequately for class, and participate appropriately. Appropriate participation includes:

- Active listening
- Building on what others say
- Staying focused on the topic of the session
- Clarifying the assumptions underlying opinions/statements
- Using the readings and epidemiologic ideas to develop arguments
- Constructively challenging the ideas of others, rather than accepting statements that are inadequately supported
- Allowing others to request explanation when needed
- Coming prepared, rather than relying on the group to explain difficult topics

Last Updated July 23, 2015

Expectations for the instructor

Students can expect the instructor to provide access to the week-by-week readings (on blackboard), to provide substantial background information at each session (apart from practicals) as powerpoints available shortly after each session, and to facilitate discussion. Students can expect reaction papers to be graded within 1 week and other assignments to be graded within 2 weeks.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Last Updated July 23, 2015

Course Schedule

This schedule & assignments are subject to change throughout the semester. Additional readings and handouts may be provided, and session topics and activities may be altered if necessary. Opportunities for group work will be scheduled during some sessions.

Session	Date	Topic	Readings	Assignment Due
1	**28 Aug**	Current paradigms in epidemiology – the dispute	1. Chapter 1, Modern Epidemiology, Rothman, Lash & Greenland 2. Chapter 1, Causality, Pearl 3. https://epiresearch.org/about-us/archives/video-archives-2/the-scientific-approach-to-causal-inference/ 4. Int J Epidemiol. 1975 Sep;4(3):159-68. Popper's philosophy for epidemiologists. Buck C. 5. Am J Epidemiol. 2012 Dec 15;176(12):1071-7. Stories from the evolution of guidelines for causal inference in epidemiologic associations: 1953-1965. Blackburn H, Labarthe D.	Reaction paper 1 Identify the major differences between the approach of Pearl compared with that of Rothman and Rubin
2	**1 Sept**	Current paradigms in epidemiology – the implications	1. Chapter 1, Modern Epidemiology, Rothman, Lash & Greenland 2. Chapter 1, Causality, Pearl **3.** Phillips CV, Goodman KJ. Causal criteria and counterfactuals; nothing more (or less) than scientific common sense. Emerg Themes Epidemiol. 2006 May 26;3:5. 4. Pearl J, On the consistency rule in causal inference: axiom, definition, assumption, or theorem? .Epidemiology. 2010 Nov;21(6):872-5. 5. Cole SR, Frangakis CE. The consistency statement in causal inference: a definition or an assumption? Epidemiology. 2009 Jan;20(1):3-5.	Reaction paper 2 Describe the implications of the differences between these approaches
3	**8 Sept**	Data generating models and DAGs	1. Chapter 1, Causality, Pearl 2. Series on representativeness in August 2013 IJE and responses in Jan 2014	Reaction paper 3 1. Give an example of a data generating model and explain how to test it 2. Explain how risk factors relate to DAGs 3. Explain when representativeness is required for testing a model
4	**29 Sept**	Model generation The problem of induction, does big data help?	1. Andrew Gelman, Guido Imbens, Why ask Why? Forward Causal Inference and Reverse Causal Questions, NBER Working Paper No. 19614, Issued in November 2013 The problem of induction, does big data help? 2. Jordan B.Genes and non-mendelian diseases: dealing with complexity. Perspect Biol Med. 2014 Winter;57(1):118-31.	Reaction paper 4. 1. What is the difference between causes of effects and effects of causes 2. How does big data help us address these questions
5	**6 Oct**	Model generation EWAS and GWAS	1. Patel CJ, Rehkopf DH, Leppert JT, Bortz WM, Cullen MR, Chertow GM, Ioannidis JP Systematic evaluation of environmental and behavioural factors associated with all-cause mortality in the United States National Health and Nutrition Examination Survey. Int J Epidemiol. 2013 Dec;42(6):1795-810	Reaction paper 5 What can we learn from EWAS and GWAS?

			2. Patel CJ, Cullen MR, Ioannidis JP, Butte AJ. Int J Epidemiol. 2012 Jun;41(3):828-43. Systematic evaluation of environmental factors: persistent pollutants and nutrients correlated with serum lipid levels. 3. Int J Epidemiol. 2012 Jun;41(3):843-6.Commentary: a step towards more comprehensive analyses of life course effects of mixtures of environmental factors. Porta M, Gasull M, Pumarega J. 4. Pendergrass SA, Verma A, Okula A, Hall MA, Crawford DC, Ritchie MD. Phenome-Wide Association Studies: Embracing Complexity for Discovery. Hum Hered. 2015;79(3-4):111-23.	
6	**13 Oct**	EWAS practical		Prepare data for use in practical
7	**20 Oct**	BMI and mortality	1. Association of all-cause mortality with overweight and obesity using standard body mass index categories: a systematic review and meta-analysis. Flegal KM, Kit BK, Orpana H, Graubard BI.JAMA. 2013 Jan 2;309(1):71-82 2. Obesity, physical activity, and mortality in a prospective chinese elderly cohort. Schooling CM, Lam TH, Li ZB, Ho SY, Chan WM, Ho KS, Tham MK, Cowling BJ, Leung GM. Arch Intern Med. 2006 Jul 24;166(14):1498-504. 3. Flegal KM et al.Reverse causation and illness-related weight loss in observational studies of body weight and mortality. Am J Epidemiology 2011;173(1):1-9. 4. Cooper RS. Which factors confound or modify the relationship between body weight and mortality? Int J Obesity 2008; 32:S47-S51. 5. Zajacova A et al. Overweight adults have the lowest mortality: do they have the best health? Am J Epidemiology 2011;173:430-437. 6. Alley DE et al. Changes in weight at the end of life: characterizing weight loss by time to death in a cohort study of older men. Am J Epidemiology 2010;172:558-565. 7. BMJ. 2009 Dec 22;339:b5043. The association between BMI and mortality using offspring BMI as an indicator of own BMI: large intergenerational mortality study. Davey Smith G, Sterne JA, Fraser A, Tynelius P, Lawlor DA, Rasmussen F. **8.** Flanders WD, Eldridge RC, McClellan W. Epidemiology. 2014 Sep;25(5):762-4. A nearly unavoidable mechanism for collider bias with index-event studies.	Practical results 1 (EWAS) Paper 1: BMI and mortality
8	**27 Oct**	Causal inference from observational evidence	1. Tatsioni A, Bonitsis NG, Ioannidis JP. Persistence of contradicted claims in the literature ***JAMA***. 2007 Dec 5;298(21):2517-26.. 2. Benson K., Hartz A.J. A comparison of observational studies and randomized, controlled trials. ***N Engl J Med*** 2000; **342**:1878-1886. 3. Concato J., Shah N., Horwitz R.I. CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

The Graduate Center
PUBH 825: Applied Biostatistics II
3 Credits
Fall 2015

Time and location	Silberman room C-06
Instructor	Levi Waldron, B.Sc., M.Sc., Ph.D. Best way to contact: levi.waldron@hunter.cuny.edu
Office hours	By appointment (www.calendly.com/lwaldron to schedule an appointment.)
Course website	https://bbhosted.cuny.edu/webapps/blackboard/execute/launcher?type=Course&id=_1185885_1&url=
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course is designed to expand on the biostatistical methods covered in Applied Biostatistics I to deepen the analytic repertoire of students with respect to regression modeling through the introduction of loglinear and generalized linear models including Poisson and Negative Binomial regressions as well as introduce techniques for analysis of longitudinal data including random and mixed effect models, and survival analysis.
Course prerequisites	PUBH 82400
Course format	Hybrid: all classes available in person or online.
Required reading and resources	none
Suggested reading and resources	Vittinghoff E, Glidden DV, Shiboski SC, McCulloch CE. Regression Methods in Biostatistics: Linear, Logistic, Survival, and Repeated Measures Models (Statistics for Biology and Health). Springer; 2005.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Determine the influence of social, cultural, historical, behavioral and biological factors in population health.	• Describe the assumptions necessary for statistical inference in generalized linear models, especially for regression models and models of count data • Describe the assumptions necessary for statistical inference in a repeated measures setting, both for traditional methods as well as random and mixed effects models • Recognize inherent limitations in both the data under study as well as the statistical method used to analyze the data	• Assignments 1-4
3. Design and implement research projects that a. Quantify health and the burden of disease in populations b. Perform surveys and risk factor analyses c. Apply causal inference to study design, study implementation and data analysis; d. Identify vulnerable populations and their attributes; apply rigorous methods to examine and monitor health disparities. e. Identify effective interventions to improve population health	• Explain censoring and recognize when it is appropriate to utilize Survival Analysis methods • Recognize connection and difference between Poisson and Negative Binomial regressions • Apply random and mixed effects models to account for within and between subject correlations. • Identify potential for over-fitting, develop and assess regression models in such situations appropriately. • Apply and interpret Poisson and Negative Binomial regression models, Cox	• Assignments 1-4 • Oral presentation of one assignment

equitably f. Evaluate the effectiveness of interventions designed to improve population health g. Give appropriate attention to the potential for bias, as well as exposure and outcome measurement issues.	Proportional Hazard models, Linear Mixed Effects models, and Penalized Regression • Assess model fit and modifying the models as well as finding alternatives when appropriate • Interpret computer output from Poisson and Negative Binomial regression models, Proportional Hazard models and Linear Mixed Effects models • Orally present your findings clearly and effectively • Incorporate feedback into improved data analysis report after in class “peer review” • Produce concise, readable, and cohesive data analysis reports • Create appropriate tables and figures that adequately convey the key points of statistical analysis	

Course Assessments

Your understanding of the course material will be evaluated through a total of four (4) data analysis reports. Each student will be expected to present draft results in class and actively participate in the constructive critique/review of the work of his/her peers. You will have the chance to revise and resubmit each report after the first round of critique/review. This will give you the chance to deepen your analysis and bolster your mastery of the statistical methods.

Grading

Evaluation criteria

Rubrics provided with each assignment. Participation is based on handing in a rough draft of each assignment on time, effort put into presentation, and feedback provided through discussion forums and during presentations.

The relative weight of each course component is as follows:

Assessment	Weight
Assignment 1	20%
Assignment 2	20%
Assignment 3	20%
Assignment 4	20%
Participation	20%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty

generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation

Participation will be assessed based on your project presentation, and ongoing participation in class and / or online discussion. You are required to be in class on the first day and on the one when you are presenting.

Late/incomplete submission of assignments

All projects will have a specific due date and will be returned to students within 7 days. Late homeworks will be penalized by deducting 10% from the earned grade per day, with no credit after 5 days unless prior arrangements for extenuating circumstances are made.

Make-ups, rewrites, and extra credit

Make-up assignments will be provided only under exceptional circumstances. In this case, the final grade will be the average of grades for the original and make-up assignments.

Expectations of students

Students are expected to attend every class either online or in person, and to attend in person on the day they are presenting. It is encouraged for students to help each other in figuring out how to do assignments, and to share pieces of code, however the work you hand in must be primarily your own, and any borrowed code must be attributed to its author. Students are expected to participate in class discussions or online discussions, whether attending online or in person.

Expectations for the instructor

The instructor will be available for help through the online discussion forum, and by appointment (www.calendly.com/lwaldron to book an appointment). Appointments may be in person in room 538 of the Silberman building, by phone, or by Skype/Hangout. Students can expect an welcoming and respectful learning environment.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule

The following schedule is subject to change (last updated: August 31, 2015).

For key dates regarding withdrawals etc, see:
http://www.cuny.edu/academics/calendars/fall-2015.html

Session	Date	Topic	Suggested reading
1	9/2 in-class attendance mandatory	**Introduction** • Review of syllabus • Review of linear and logistic regression • Introduction to R (time permitting)	4.1 - 4.6 5.1 – 5.3
2	9/9	**Generalized linear model (GLM)** • Analysis of variance and deviance table • Residual analysis • Multicollinearity	4.7 5.4 – 5.6
3	9/16	**Report 1: First Submission + Presentations and Critique**	
4	9/30	**Loglinear Models** • Analysis of multi-way contingency tables • Poisson regression for count data • Loglinear models as special case GLM **Report 1: Final Resubmission**	8.1-8.3
5	10/7	**Loglinear Models** • Negative Binomial regression for count data • Residual analysis and model diagnostics	4.2
6	**10/14**	**Report 2: First Submission + Presentations and Critique**	
7	10/21	**Basic Methods for Survival Analysis** • Life tables • Kaplan-Meier curves • Log-rank test **Report 2: Final Resubmission**	3.5, 6.1
8	10/28	**Cox Proportional Hazards Model** • Model specification • Residual Analysis	6.2, 6.4
9	11/4	**Extending the Cox Regression Model** • Stratification • Time-varying covariates • C-statistic for evaluating survival models	6.3
10	11/11	**Report 3: First Submission + Presentations and Critique**	
11	11/18	**Longitudinal Data** • Basic methods for longitudinal data • Covariance structures	7.1-7.5

		• Linear Mixed Effects Models • Variance components • Random intercept models **Report 3: Final Resubmission**	
12	11/25	**Multilevel/Hierarchical Modeling** • Random effects models • Extensions	handouts
13	12/2	**Advanced model assessment** • Cross-validation • ROC plots • Alternative measures of goodness of fit	handouts
14	12/9	**Report 4: First Submission + Presentations and Critique**	
15	12/23	**Regression with many variables** • Exploratory methods • Bias-variance tradeoff • Over-fitting • Penalized likelihood regression **Report 4: Final Resubmission**	handouts

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

The Graduate Center
PUBH 830: Emerging Issues in Environmental and Occupational Health
3 Credits
Fall 2015

Time and location	Class meets from 4:15-6:15 pm, Room 4433, CUNY Graduate Center, 365 5th Avenue, New York, NY
Instructor	Prof Jean Grassman, MS, PhD, CPH grassman@brooklyn.cuny.edu 718-951-5000 x2752; 646-594-0476
Office hours	Wednesdays 3:30-4 pm; 6:30-7 pm or by appointment
Course website	**Fall 2015 Emerging issues in EOH PUBH 83000 28948 (Graduate Center)** Log into Blackboard at https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course examines the impact of macro-level trends – such as corporate globalization, immigration patterns, and technological development – on the urban physical environment. It focuses on the relationship between the urban infrastructure (e.g., housing, transportation, sewage and waste disposal) and environmental media (e.g., air quality, water quality and land use). This course also examines the impact of macro-level trends on occupational health and safety conditions, focusing on such issues as outsourcing of manufacturing jobs to developing nations, the rise in the service and informal economies, immigrant labor, de-unionization, the new working class and the loss of the safety net. It examines the effectiveness of current policies in addressing these problems. Through focused readings and in-depth examination of case studies, students develop the tools for analyzing how macro-social trends affect the urban physical environment, workplaces and health. Teams of students then analyze an environmental and occupational issue, illustrate how it affects urban communities, and develop solutions to reduce Environmental and Occupational Health burdens.
Course prerequisites	N/A
Course format	The course holds weekly face to face meetings. The first three sessions will be face to face lecture/discussions. Subsequent sessions will consist of an hour of lectures given by either by guest speakers or student presentations (weeks 4, 10, and 15) followed by

	a one hour analysis discussion.
Required reading and resources	Weekly readings are available on Blackboard
Suggested reading and resources	Howard Frumkin *Environmental Health: From Global to Local. 2nd Edition.* Jossey-Bass; (February 8, 2010) ISBN-10: 0470404876; ISBN-13: 978-0470404874. Barry S. Levy, David H. Wegman, Sherry L. Baron, Rosemary K. Sokas. *Occupational and Environmental Health: Recognizing and Preventing Disease and Injury. 6th Edition.* Oxford. ISBN-10: 01295397886 ISBN-13: 978-019539788

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Assess and analyze the influence of infrastructure (e.g., transportation, water supply and waste disposal systems and the built environment), global influences (e.g. climate change, energy use), and macro-social trends (e.g., affecting labor practices, immigration, and regulatory oversight) in creating or mitigating environmental and occupational health hazards.	Identify and assess physical, organizational, and global sources of emerging EOH problems. Identify technical and political strategies which are needed to address these emerging hazards.	• AM5, AM7, AM8 • AM5, AM8
2. Identify and quantify the toxicological, physical, behavioral and susceptibility factors contributing to environmentally and occupationally-related illness and how these factors interact within the environment.	Identify and assess the manner in which emerging environmental and occupational problems affect health	• AM5, AM7, AM8
3. Explain the impact of occupational and environmental hazards in a manner appropriate to the target audience including students and professionals and	Communicate orally to a variety of audiences. Communicate in writing to a variety of audiences Gain competence in understanding the range of concerns encompassed by EOH	• AM5; AM8 • AM6; AM9 • AM1-9
7. Demonstrate the leadership and teamwork skills appropriate for working with students, health professionals and regulators in developing strategies for controlling occupational and environmental hazards	Develop leadership, collaborative, and teamwork skills.	• AM7

Course Assessments
All written assignments of the course should be submitted via Blackboard. Presentations will take place during the scheduled class hours.

AM1. & AM2. Preliminary speaker topic summary
Beginning in October, we will be covering about 10 emerging issue topics presented by EOH specialists. You will select two of them as subjects of brief written summaries (1-2 pages) on the state of knowledge on the topic. Additional guidelines will be distributed in September.

- The summaries will be due on the day of the presentation (October- December)
- Each of the 2 assignments is worth 5%

AM3. & AM4.Post presentation speaker summary
The post presentation topic summary covers the main points presented by the speaker and identifies gaps and strengths in their presentation. These summaries will form the basis of discussion in the "recap" taking place the week after the presentation. Additional guidelines will be distributed in September. The post presentation topic summary will be due by class time the week after the presentation (or when the class next meets).

- The summaries will be due one week after the day of the presentation (October-December)
- Each of the 2 assignments is worth 5%

AM5. Emerging issue brief in your area of expertise
An emerging issue that is not sufficiently recognized or understood as an environmental health problem in your area of expertise will form the basis for a written scientific brief. A brief is a "concise statement or summary" that can be used to quickly familiarize others with the essential elements of a problem. In this instance, the others are your classmates.

The text of your brief should be at least two but no more than three double-spaced pages plus an additional page for references. The brief should identify the emerging issue, state how it relates to your area of EOH expertise, justify why it can be considered an important emerging issue, summarize what is known and not known about its' potential impact on human health, suggest how it might be evaluated to determine whether there is a need for further action. Suggest one key source of information on the topic.The brief you submit will be posted in the Week 4 folder on Blackboard.

- Submit your topic and 1-2 key references by September 23
- Submit written brief by October 7
- Worth 10%

AM6. Emerging issue class presentation on topic in your area of expertise
You'll prepare a 15 minute presentation on your selected emerging issue that parallels the structure of the brief. The structure of your allotted 15 minutes should include a 10

minute talk and 5 minutes of structured questions. The time limit of 15 minutes for the presentation will be strictly enforced.

You should support your talk with images/text from either Powerpoint or Prezi. Understand that the projected images/text should highlight and expand the impact of your presentation and not simply substitute for notes. The presentation will be graded for the accuracy of content, organization, and effectiveness in conveying the topic. The presentation will be posted in the Week 4 folder on Blackboard.

- Class presentation on September 30
- Worth 10%

AM7. Group presentation on an emerging EOH issue
Students will divide into three groups and asked to mutually select an emerging issue. The chosen issue should clearly fall within one of the following areas: Toxicology, Occupational Health, Environmental health, Global OEH. The presentation should include the following: clearly describe the emerging issue, how it was identified, who it affects, why it is important, and address possible responses. Each team member should participate in delivering the presentation to the class. Presentations should not exceed 15 minutes.

- Submit topic by October 21
- Class presentation on November 4
- Worth 20%

AM8. Emerging issues term paper outside area of expertise
You will be writing a 10-15 page paper on an under-recognized (*aka* new, overlooked or underappreciated) aspect of an emerging environmental or occupational health issue. You should choose a topic that is outside your area of expertise. In addition, it should include one of the following features:

- recent occurrence;
- more widespread distribution than previously recognized;
- health effects that are different or more severe than previously recognized;
- previously unrecognized vulnerable populations.

Examples of emerging issues will be provided but keep in mind you'll need to support the under-recognized aspect of your chosen topic. As an example, childhood exposure to lead is acknowledged to have an adverse on children's cognition and would not be considered an appropriate basis for your paper. In contrast, the relationship between body burden of lead and declining cognitive function in aging women would be acceptable as an under-recognized emerging issue. Additional details on the paper will be distributed on Blackboard by Week 5 of the class.

- Topic proposal due with 1-2 key references by November 25 (1 page)
- Draft paper due by December 2 (option for revision)
- Final paper due by December 16
- Worth 25%

AM9. Emerging issue presentation outside area of expertise
For the last class, your presentation on your chosen emerging issue topic will take the form of a TED talk. The presentation should be no longer than 12 minutes. The last slide should pose a question that stimulates discussion and be based on a key uncertainty about the emerging issue. Additional details on the presentation will be distributed on Blackboard by Week 5 of the class.

TED talks on how to do TED talks:
https://unknowntoexpert.com/public-speaking/top-5-tedtalks-give-great-ted-talk/

- Class presentation on December 16
- Worth 15%

Grading

Evaluation criteria

The course grade will be based on the 9 assessments listed below. A written description of each assessment is available on Blackboard. A grading rubric will be provided 2-3 weeks in advance for each type of assessment.

Assessment	Weight:
AM1. & AM2. Preliminary speaker topic summary (n=2; 5% each)	10%
AM3. & AM4. Post presentation speaker summary (n=2; 5% each)	10%
AM5. Emerging issue brief in area of expertise	10%
AM6. Emerging issue class presentation in area of expertise	10%
AM7. Group presentation on an emerging EOH issue	20%
AM8. Emerging issues term paper outside area of expertise	25%
AM9. Emerging issue presentation outside area of expertise	15%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation
Success in the course depends on preparation, participation, and engagement. Students should attend class, do the readings, be prepared to initiate and participate in class discussions, prepare oral presentations, collaborate with other students, and submit assignments by their due date.

Since there are only 15 sessions in the semester, timely and regular attendance is essential. If you anticipate missing a class, please let the instructor know ahead of time so that accommodations may be made.

Unless stated otherwise, required and recommended readings will be posted on Blackboard (except for the recommended Frumkin text). For course discussion purposes, you may also be asked to bring paper copies of your assignments to class.

Late/incomplete submission of assignments
Assignments are due by class time on the day indicated in section on grading policies. Assignments should be submitted electronically to Blackboard

Upon request, written assignments, except for Draft 1 of the final term paper, can be granted an extension of 1 week. Draft 1 of the final term paper needs to be submitted on the scheduled date so that the final version of the term paper can be completed by the end of the semester.

Make-ups, rewrites, and extra credit

A revision option has been built into the assignment for the semester term paper. Note that the opportunity for revision is contingent upon submission of the term paper by the due date; no extension will be given.

The three class presentations need to be delivered to class on the scheduled day. Due to the schedule of the course, there will be no opportunity for make up.

This course does not include extra credit assignments.

Expectations of students

Students are expected to do the readings, assignments, attend class, and participate in class discussions.

Expectations for the instructor

The instructor will be available for consultation in room 3317 during office hours. Instructor will respond to emails within 24 hours. Required readings will be made available at least one week prior to class.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule
The course schedule shown below is subject to change throughout the semester. Note that the header of the syllabus provides the version date. Please check your version date to ensure that we are using the most recent version.

The Graduate Center Academic Calendar can be accessed at http://www.gc.cuny.edu/Public-Programming/Calendar/Academic-Calendar-2015-16
The deadline is dropping courses is September 16.

Conceptually, emerging issues will be broken into four areas:
- Toxicology
- Occupational exposure&health (OE&H)
- Environmental exposure&health (EE&H)
- Global OEH (Global)

Overview of class sessions (subject to revision)

Session	Date	Area	Topic • Speaker(s)	Assignment Due
1	9/2	Introduction	Introduction-What constitutes an emerging issue? • Grassman	
2	9/9	Toxicology	Biological response to toxicants • Grassman	
3	9/16	Toxicology	Determinants and modifiers of exposure • Grassman	
	9/23		No class	AM5 topic/refs
4	9/30	Varied	Emerging issues in area of expertise • PH830 students	AM5, AM6
5	10/7	EE&H	Geogenic Arsenic in Private Well Water: A Global Perspective • Prof Yan Zheng, CUNY SPH; Queens College, Center for the Biology of Natural Systems, Graduate Center	AM1
6	10/14	OE&H/EE&H	OEH and social disparities • Prof. Sherry Baron, CUNY SPH, Queens College, Center for the Biology of Natural Systems	AM1-3
7	10/21	OE&H	Documentation of emerged Issues for chemical hazard risk assessment in occupational and community settings: Particulate Pollution, Silica, Asbestos, and Pesticides • Prof Franklin Mirer, CUNY SPH; Hunter	AM1-4, AM7 topic

			College, Graduate Center	
8	10/28	EE&H/ OE&H	Corporate influence on environmental & occupational health policy Prof Gerald Markowitz, CUNY SPH; John Jay College; Graduate Center	AM1-4,
9	11/4	EE&H/ OE&H	*(Surveillance of workers for chronic illness)* • Prof Steven Markowitz, CUNY SPH; Queens College, Barry Commoner Center for Health and the Environment, Graduate Center	AM1-4, AM7
10	11/11	EE&H	*(Regulatory policy for hydraulic fracturing)* • Prof. Liz Geltman, CUNY SPH; Hunter College, Graduate Center • Emerging Issues Group Presentations	AM1-4
11	11/18	OE&H	TBA • Prof Lew Pepper, Queens College, Barry Commoner Center for Health and the Environment, Graduate Center	AM1-4
		Global	*(Assessment of hazardous waste sites around the globe)* • Prof Jack Caravanos, Hunter College	
12	11/25	EE&H	GIS in environmental health • Prof Andrew Maroko, CUNY SPH; Lehman College, Graduate Center	AM1-4, AM8 proposal
13	12/2	EE&H/OE&H	Social context in exposure assessment • Prof Grace Sembajwe, CUNY SPH; Hunter College, Graduate Center	AM1-4; AM8 draft (optional)
14	12/9	OE&H	Occupational exposure to cooking fume • Prof. Brian Pavilonis, CUNY SPH, Hunter College	AM1-4
15	12/16	Varies	Emerging Issues 2015 (outside your area of expertise) • PH830 student presentations	AM4, AM8 final, AM9

DPH HPM SPECIALIZATION

CUNY SCHOOL OF PUBLIC HEALTH

Graduate Center

PUBH 840: Seminar in Health Policy and Management

Fall 2015

3 credits

Catalogue description	The objective of the course is to understand patterns in the organization, financing, and delivery of health care, and their relationship to population-based health outcomes, through an integrated exploration of research from the various disciplines informing the health policy and management fields. With an emphasis on the development of critical thinking skills, students are introduced to multidisciplinary models from the social sciences as conceptual sources for health policy and management research. The course adapts an interdisciplinary approach to the examination of important topics in urban public health management and policy, such as the relationship between health systems and the urban-based health economy, and the interface between managerial functions and health policy analysis in addressing health status and outcomes disparities.
Pre-requisites	N/A
Course meets	Graduate Center Room 3310A, Tues 4:15-6:15pm
Instructors	Betsy Eastwood, Ph.D.; Alexis Pozen, Ph.D.
Email	eastwood@brooklyn.cuny.edu; alexis.pozen@sph.cuny.edu
Phone	718-951-5000 x2755 (Betsy); 646-664-8361 (Alexis)
Office	5129 Ingersoll Hall, Brooklyn College (Betsy); 555 W 57th St, Room 1145 (Alexis)
Office hours	By appointment
Required books	Oberlander, J. *The political life of Medicare.* Chicago: U Chicago Press, 2003 McDonough, J. *Inside National Health Reform.* New York: Milbank, 2011 Starr, P. *Remedy and Reaction: The Peculiar American Struggle for Health Care Reform.* New Haven: Yale, 2011 Engel, J. *Poor People's Medicine: Medicaid and American Charity Care since 1965.* Durham, NC: Duke U Press, 2006. Cutler, DM. *Your Money or your life: strong medicine for America's health care system.* New York: Oxford University Press, 2004.
Recommended books	Starr, P. *The social transformation of American medicine*. New York: Basic Books, 1984
	Other readings will be posted on Blackboard or for Web based readings, via link to the URL. PL111-148, the Patient Protection and Affordable Care Act of 2010, is on Blackboard following the weekly session material.

Assessment

Your understanding of the course material will be evaluated through class participation, in class presentations, and papers

Assignment 1 will be a class presentation regarding a contemporary debate around one of the major titles of the PPACA (PL111-148)

Assignment 2 will be a policy analysis of new structures created by the ACA and their progress to date (e.g., accountable care organizations, insurance exchanges, patient-centered medical homes)

Assignment 3 will be an op-ed piece on the policy topic of your choice. Each of these will be the sources for class discussion and debate

Course policies

40%	Assignment 2	11/18
20%	Assignment 3	12/9
20%	Class participation	
100%		

Attendance, class participation, lateness and absences

Students are expected to make arrangements to attend each class on time. Absences must be excused beforehand by one of us. Likewise, this is a seminar, and you should come prepared to participate in an informed and meaningful way.

Late submission of assignments

All students in the School of Public Health are very busy. Both to be equitable and to encourage professionalism in meeting deadlines, points will be deducted for each day that an assignment is late. The only exception is if the student has communicated with us ahead of time and if we have approved an extension. Personal illness and severe family problems are usual given positive consideration as reasons for lateness. The press of work in your job or other courses usually is not. Given the wide range of communication options available, there are few if any situations in which it would be impossible for a student to communicate with us in advance.

Class citizenship & rules of conduct

Please turn your cell phones off prior to class. If you have an emergency which warrants your being available to persons outside the class, such as a family emergency, please let us know at the beginning of class. Then, turn your cell phone to silent mode and leave class if you need to take a call. If you bring a laptop/tablet to class with you, please use it ONLY to take notes.

Email correspondence

We ask that when you write to either of us, you include a full descriptive subject line for your emails, since we have an enormous volume of email correspondence each day. We will return your email, generally within one day.

Institutional policies

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Competency	Course Learning Objectives	Assessment Method
Assess and analyze the impact of public policy interventions within the various domains of public health, the theoretical motivations for undertaking them, the influence of the political, bureaucratic, and social environmental in which policy decisions are made, the consequences of such decisions.	*Explicate ways politics influence the management of health care organizations and how management of health care organizations affects politics*	Discussion, analysis of a Title in the PPACA
Understand and analyze the policy environment for healthcare organizations.	*Utilize and synthesize current policy analytic data to explain current policy circumstances*	Discussion
For healthcare and public health organizations, discuss how each of the following affect organizational behavior and service delivery: organizational structure, motivation and incentives, individual and group behavior, group decision making, quality measurement and improvement, and organizational relations with their environments. Develop interventions to change at least 3 of the above to improve health care and public health service delivery and health outcomes.	*Locate and critically evaluate historical policies and law and apply them to current reform schemes*	Discussion Paper assignment 2
Understand and appropriately apply analytical strategies used in health policy research, such as costing analysis, cost effectiveness and cost benefit analysis	*Determine factors that have contributed to the political success or failure of previous attempts at health reform*	Discussion Assignment 1 and 2
Develop familiarity with and critically analyze federal, state, and municipal laws/regulations and their historical context as relevant to public health management and policy decisions	*Evaluate using stakeholder analysis how Congress able to pass such a large and controversial piece of legislation as the ACA*	Discussion Assignment 1
Formulate alternative options for resolving problems in health policy or management, evaluate their economic, practical, ethical, legal,	Used disciplinary perspectives in HPM – political science, sociology, economics, and/or history to refine policy analysis	Discussion Assignment 2

administrative, and technical feasibility and recommend preferred options based on and supported by your analysis		

Schedule of Sessions

	Date	Topic	Readings and Assignments
1	9/2	Course overview, student and instructor introductions *What is health services research? How do politics influence the management of health care organizations, and how does the management of health care organizations affect politics?*	Burton L. Introduction to health services research. Available at: http://ocw.jhsph.edu/courses/hsre/PDFs/HSRE_lect1_burton.pdf
2	9/9	Medicare *Why is it important to know the history of the passage of Medicare? What can we learn about broader health policy from Medicare reform efforts?*	Oberlander J. (2003) *The Political Life of Medicare.* (Chs 2-3); MEDPAC 2014 Report to the Congress, Chs 1-2
3	9/16	Medicaid/SCHIP *Why was Medicaid structurally and financially different from Medicare? How can Medicaid reform be meaningfully accomplished?*	Engel J. (2006) *Poor People's Medicine* (Chs 1-7)
4	9/23	Health reform (a political history) *What factors have contributed to the political success or failure of previous attempts at health reform?*	Starr P. (2011) *Remedy and Reaction;* skim Chs 1-2, read Chs 3-7
5	9/30	Health reform (ACA) *How was Congress able to pass such a large and controversial piece of legislation as the ACA?*	McDonough J. (2011) *Inside National Health Reform* (Part II; skip Titles VIII-X)
6	10/7	Disciplinary perspectives in HPM – political science, sociology, economics, history *How do different disciplines inform the questions raised in health services research and health policy research?*	Glied S. Mandates and the affordability of health care. Inquiry 2009; 46(2): 203-214. McGuire, T, Newhouse, JP, and Sinaiko, AD. An economic history of Medicare Part C. *Milbank Quarterly*. 2011 89(2): 289-332. Oberlander J. *The Political Life of Medicare* (Chs 6-7))
7	10/14	Assignment 1 – Student presentations	

8	10/21	Patient-centered medical homes *What capabilities predict success for patient-centered medical homes?*	Burke G. Advancing patient-centered medical homes in New York. United Hospital Fund 2013. Alidina S, Schneider EC, Singer SJ. Structural capabilities in small and medium-sized patient-centered medical homes. American Journal of Managed Care 2014; 20(9), e265-e277.
9	10/28	Health insurance exchanges *How might the governance of health insurance exchanges affect their performance?*	Families USA. Implementing health insurance exchanges: options for governance and oversight. April 2011. Kaiser Family Foundation. State health insurance marketplace governance. Available at: http://kff.org/health-reform/state-indicator/health-insurance-exchange-governance/ (browse) Kaiser Family Foundation. State decisions for creating health insurance marketplaces, 2014. Available at: http://kff.org/health-reform/state-indicator/state-decisions-for-creating-health-insurance-marketplaces/ (browse)
10	11/4	Accountable care organizations *What are the goals of an accountable care organization, and which organizations are best prepared to meet those goals?*	Burke G. Moving toward accountable care in New York. United Hospital Fund 2013. Fisher ES, Shortell SM, Kreindler SA et al. A framework for evaluating the formation, implementation, and performance of accountable care organizations. Health Affairs 2012; 31(11): 2368-2378. Scheffler RM, Shortell SM, Wilensky GR. Accountable care organizations and antitrust. JAMA 2012; 308(4): 338-339.
11	11/11	Provider competition and consolidation *In light of what you know about ACOs, what are the pros and cons of the consolidation of health care organizations? From the organization's perspective, what factors are necessary for a successful merger?*	Capps C, Dranove D. Hospital consolidation and negotiated PPO prices. Health Affairs 2004; 23(2): 175-181. CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

The Graduate Center
PUBH 851: Topics in Public Health: Chronic Disease
3 Credits
Fall 2015

Time and location	8:00-9:45pm Silberman, C05
Instructor	C Mary Schooling, PhD Email: mschooli@hunter.cuny.edu Phone: mschooli@hunter.cuny.edu
Office hours	Tuesday, 4-6pm Room 545, 2180 Third Avenue, New York or by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Chronic disease epidemiology describes and quantifies how different diseases affect population health. This course is designed to provide an overview of the prevalence, incidence and risk factors for major chronic diseases, knowledge about selected chronic diseases, their epidemiology, prevention and control. Readings will address the empirical patterns, prevailing theories and controversies regarding the etiology of chronic diseases, as well as addressing interventions or policies that may be applied to address chronic diseases and improve population health.
Course prerequisites	N/A
Course format	Lectures
Required reading and resources	Please see course schedule for week by week readings
Suggested reading and resources	

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Determine the influence of social, cultural, historical, behavioral and biological factors in population health.	1. Describe the burden of chronic diseases, nationally and globally 2. Describe global policy action on chronic diseases 3. Describe issues with the assessment of chronic disease burden 4. Place chronic diseases within a temporal and geo-ethnic context	1. Reaction paper 1 2. Reaction paper 2 3. Reaction paper 1 4. Reaction papers 3, 4 and 5
Design and implement research projects that: a. Quantify health and the burden of disease in populations b. Perform surveys and risk factor analyses c. Apply causal inference to study design, study implementation and data analysis; d. Identify vulnerable populations and their attributes; apply rigorous methods to examine and monitor health disparities. e. Identify effective interventions to improve population health equitably f. Evaluate the effectiveness of interventions designed to improve population health g. Give appropriate attention to the potential for bias, as well as exposure and outcome measurement issues.	1. Identify risk factors associated with specific chronic diseases 2. Describe the etiology of chronic diseases and identify any gaps 3. Read and critique epidemiologic and other public health literature effectively 4. Draw appropriate inferences from epidemiologic data, using established principles and guidelines 5. Identify primary and secondary prevention strategies for these diseases.	1. Reaction paper 6 2. Reaction paper 7 3. Paper Introduction 4. Paper Discussion 5. Reaction papers 8, 9,10,11,12,13
Operationalize studies of the complex interactions between multiple determinants of population health in a variety of settings, exploiting the differences between settings as a source of insight	I. Summarize the evidence concerning a major modifiable risk factor for a key non-communicable disease, and address gaps in the evidence	1. Paper Results 2. Grant proposal

Course Assessments

This course will be assessed based on reaction papers (13), a paper, a presentation, a grant proposal and participation. The reaction paper should synthesize and critically evaluate key theoretical, methodological and/or substantive contributions of the readings, along with a few questions for clarification and discussion. This may consist of identifying questions that the readings provoke; critiquing problematic assumptions, logic, and measurement; discussing theoretical and empirical advances; and considering ideas for future directions. Please reference all statements of fact. Please format as single-spaced, typed, 12-point Times Roman font with 1-inch margins. Each presentation should last about 10 minutes.

The paper will be a manuscript. Students will work on the sections of the manuscript in steps: (1) topic description (no more than 2 pages), (2) introduction (2 pages) (3) methods (3 pages) (4) results (no more than 5 pages) (5) Discussion (5 pages). Complete paper (no more than 15 pages, excluding references and tables). At each step, students will turn in to the instructor and their fellow students the written document to receive feedback. Students should be considerate in giving feedback to their colleagues, and can do so either orally or by writing comments. The grant proposal will be in the format of an NIH proposal for an R03. Please reference all statements of fact. Each section of the paper and the proposal, as well as the final completed paper, will be assigned a numeric grade by the instructor. Late assignments will lose 5 points out of 100 for each day they are late (including weekends and holidays).

Grading

Evaluation criteria

Evaluation criteria

In general reaction papers, the paper and the presentation will be evaluated according to their demonstration of a) grasp of the topic, b) identification of the key points, c) synthesis of the material, and d) explanation of the implications for practice. Participation will be evaluated according to contribution to the discussion.

Grading rubrics for the assessments

GRADING RUBRICS	(A+ to A-)	(B+ to B-)	(C+ to C)	(F)
Reaction papers, paper and presentation	Provides a comprehensive and critical synthesis of the topic with appropriate examples and discussion of their implications	Identifies the implications of the key points in the topic, provides some critical apprasial	Describes the main topic	Inability to identify and describe the main topic

The relative weight of each course component is as follows:

Assessment	Weight
Reaction papers 13	39%
Topic description	5%
Introduction	5%
Methods	10%
Results	5%
Discussion	5%
Proposal	15%
Presentation	15%

Participation	6%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation
All members of the class are expected to actively participate in class activities and discussions, and to complete assigned reading prior to class. If you are going to be late or have to miss a class, please contact me via email as far in advance as possible.

Late/incomplete submission of assignments
All assignments must be submitted via blackboard by 4PM on the day of the class. It is expected that your writing will be of graduate-level quality, presented in a readable and consistent manner. Assignments handed in after the due date without prior permission may not be accepted. If you anticipate the need to turn in work late, please contact me to negotiate a mutually acceptable submission plan in advance of the assignment's due date. Please do not ask for an extension on the due date of the assignment.

Make-ups, rewrites, and extra credit
Rewrites are permitted for reaction papers.

Expectations of students

Students are required to attend each class, as participation in the discussion is essential to understanding the existing evidence on the topic and drawing judgments. In the case of illness, students should email me the day of class. In the case of unavoidable absence (e.g. work related conference), students should email me one week prior to the class. Students should prepare adequately for class, and participate appropriately. Appropriate participation includes:

- Active listening
- Building on what others say
- Staying focused on the topic of the session
- Clarifying the assumptions underlying opinions/statements
- Using the readings and epidemiologic ideas to develop arguments
- Constructively challenging the ideas of others, rather than accepting statements that are inadequately supported
- Allowing others to request explanation when needed
- Coming prepared, rather than relying on the group to explain difficult topics

Expectations for the instructor

Students can expect the instructor to provide access to the week-by-week readings (on blackboard), to provide substantial background information at each session as powerpoints available shortly after each session, and to facilitate discussion. Students can expect reaction papers to be graded within 1 week and other assignments to be graded within 2 weeks.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule

This schedule & assignments are subject to change throughout the semester. Additional readings and handouts may be provided, and session topics and activities may be altered if necessary. Opportunities for group work will be scheduled during some sessions.

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

The Graduate Center
PUBH 890 Advanced Research Seminar I
3 Credits
Fall 2015

Time and location	Monday 4:15PM to 6:15PM, Room 3207
Instructor	Grace Sembajwe, ScD, MS David Bimbi, PhD, MPhil, MA Email gsembajw@hunter.cuny.edu dbimbi@lagcc.cuny.edu Phone: 212-396-7735 (GS) Office Silberman Bldg, Hunter College, CUNY School of Public Health 2180 Third Ave @ 119th St, Rm. 527 (GS)
Office hours	By appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Students develop specific research questions pertaining to potential areas of interest for their doctoral dissertations and prepare a proposal that specifies a research question, a public health rationale for the study and an appropriate research design and methods. Students will be expected to complete a literature review and design a study, which may later lead to a dissertation proposal.
Course prerequisites	PUBH 800, PUBH 801
Course format	This course is intended to provide doctoral students in public health with exposure to in-depth, critical examination and consideration of qualitative and quantitative research methods, study designs and analyses in applied contexts. It is conducted in a seminar format, including guest speakers presenting their research with particular emphasis on the methodological approaches utilized. Students consider specific research ideas pertaining to potential areas of interest for their doctoral dissertations. They prepare a proposal that specifies a research question, a public health rationale for the study based on a comprehensive literature review,

	and an appropriate study design/methodology for the potential research. This may subsequently inform development of the dissertation proposal in PUBH891.
Required reading and resources	Firebaugh G. Seven Rules for Social Research. Princeton, NJ: Princeton University Press; 2008 Luker K. Salsa Dancing Into the Social Sciences. Cambridge, MA: Harvard University Press; 2008 Readings from the literature, noted on the syllabus (below) on Blackboard and/or on reserve
Suggested reading and resources	Remler DK, Van Ryzin GG. Research Methods in Practice: Strategies for Description and Causation (2nd ed). Thousand Oaks, CA: Sage Publications; 2014. Texts available in the Library's Reserve Reading Room or online

Last Updated July 23, 2015

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Design and conduct etiological, intervention, policy, implementation science and other empirical studies that contribute to new knowledge about population health	Critically analyze research studies utilizing qualitative, quantitative, and mixed methods.	1, 3, 6, 8, Methods Critiques 13, 14, Research Idea Project
Synthesize and apply methods, theories and data from multiple disciplines to understand and solve population health issues.	Define different types of research methods and designs and understand the epistemological basis for their use.	3, 4, 6, 7, 9, 11, Research Idea Project
Generate, translate, communicate, and disseminate population health evidence to diverse audiences	Explain the relative strengths and weaknesses of different methods and designs in order to choose a method best suited to addressing specific research questions.	2, 3, 4, 6, 7, 9, Methods Critiques, Research Idea Project
Demonstrate leadership skills to facilitate the goals of population health research and practice.	Identify specific threats to validity that pertain to different research designs, how a researcher may go about minimizing those threats, and the potential impact on the conclusions drawn from a study with such limitations.	4, 6, 7, Research Idea Project
Design and deliver innovative educational experiences that promote learning about population health in academic and practice-based settings.	Provide an informed, methodological critique of actual public health and social research projects, including soundness of research design (strengths and weaknesses) and implications of conclusions drawn from the analyses. Understand the concepts of reliability and validity and ways in which they are assessed.	4, 6, Methods Critiques 3, 5, 6, 8, 12, 13, 14 Methods Critiques, Research Idea Project

Course Assessments

Students' understanding of the course material will be evaluated through a combination of in-class activities and participation, written assignments, and presentations described below..

Grading

Evaluation criteria

Grading

20%	Methods Critique (due before the class following the presentation): - Written critique of methods-related aspects of **2** guest researcher presentations (Mary Schooling; Christian Grov)
20%	Class Discussion Leaders (~2/class): - Students selected at random each class lead discussion of the readings for that week (strongly suggested that all students come to each class with notes from the readings to assist with the discussion)
	Research Idea Development Project (50% total):
30%	- Written proposal (final draft)
20%	- Class presentation of research idea (10% for *own* presentation and 10% for peer-review forms for *all other* student presentations)
10%	Class Participation: - Pertains to expectation of perfect attendance and active class participation that is indicative of having completed the readings in advance of each class session
100%	

Assignments should be submitted on Blackboard before the start of class on the day that they are due. Final grades are based on the sum of assignment scores as described above. There will be no opportunity to do additional work for extra credit.

Graduate Center Grade Policy
A (plus or minus) - Excellent
B (plus or minus) - Good
C (plus or minus) - Fair (lowest passing mark)
F - Failure
W - Withdrew without academic penalty. This is a student-initiated grade, which may be requested from the 4th through the 10th week of the semester. Under no circumstances can a student withdraw and receive a "W" grade after the 10th week of the semester

without the written permission of the course instructor and the Executive Officer, and the approval of the Vice President for Student Affairs. This grade carries tuition liability.

The relative weight of each course component is as follows:

Assessment	Weight
Methods Critique	20%
Class Discussion Leader	20%
Written Proposal	30%
Class Presentation	20%
Class Participation	10%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation

Students are expected to attend every class session (including Grand Rounds) and complete the readings prior to each of the class sessions so as to be able to participate fully during the class. The instructors should be notified by email or voicemail if an absence is unavoidable; excessive lateness may be considered equivalent to absence from class. It is the student's responsibility to obtain missed class notes and related information from a colleague. Assignments must be received by the due dates regardless of class attendance.

Late/incomplete submission of assignments

Assignments are due on the date indicated in this syllabus. A full grade will be deducted for each week an assignment is late. In case of emergency, please contact the instructor. Incomplete final grades for this course will NOT be granted unless the request is justified by a legitimate and documented emergency.

Make-ups, rewrites, and extra credit

There will be no opportunity to do additional work for extra credit.

Expectations of students

Class citizenship & rules of conduct
Cellphones and other electronic devices
Use of any electronic devices in class must be limited to accessing the course materials under discussion in that session and taking notes. Under no circumstances should these devices be used for communication with others within or outside of the classroom. Students are expected to be fully engaged with and participating in the class; thus, use of any devices that distract the student(s), instructor(s), and/or guest(s) will be considered intrusive and in violation of expected standards of conduct in the classroom. As such, the student may be asked to discontinue use of the device.

Expectations for the instructor

Email correspondence
The instructors will try to respond to emails within a 24-hour period during the standard Monday through Friday work week. Students should not wait until a Friday to send an email if a response is needed before the following Monday. The instructors may respond over the weekend but it is not guaranteed. Responses that take more than a day during the work week may be due to special circumstances, such as the instructor

is attending an out-of-town conference, the student's query is of a complex nature that requires consultation with others/obtaining additional information, etc.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule

Use of Blackboard
All assignments and course documents will be posted on Blackboard (Bb). Bb announcements and/or email will used to communicate new information and/or changes. It is the student's responsibility to check Bb frequently for such announcements.

Course/syllabus changes
This syllabus is a guide for the course and is subject to change, particularly given the advanced-level and seminar nature of the course. Changes will be announced in class and/or will be posted on the course Blackboard site.

Week	Date	Topic	Assigned readings	Graded assessments due
1	8/31	Grand Rounds	http://www.gc.cuny.edu/Page-Elements/Academics-Research-Centers-Initiatives/Doctoral-Programs/Public-Health-%28DPH%29/Program-Events	
2	9/10 (Thursday following Monday schedule)	Course overview and introduction: 'Deep thinking' about the research endeavor	Luker: Ch. 1 and 2 – What's it all about?	A paragraph describing a topic of interest for possible dissertation research
3	9/21	Beyond Specifying Hypotheses	Firebaugh: Ch. 1: The possibility of surprise	
4	9/28	It's Not Just a 'Quant' or 'Qual' Study Guest: David Bimbi	Luker: Ch. 3 and 4: Cannonical social science; What is this a case of? Firebaugh: Ch. 2: Differences that make a difference Guest readings TBD	
5	10/5	Grand Rounds	http://www.gc.cuny.edu/Page-Elements/Academics-Research-Centers-Initiatives/Doctoral-Programs/Public-Health-%28DPH%29/Program-Events	
6	10/19	Components of Study Design: I	Firebaugh: Ch. 3: Build in Reality Checks Luker: Ch. 6: Sampling, Operationalization and	DUE: 2-3 page "research idea" document (statement of problem/issue; research question(s);

		Guest: Mary Schooling	Generalization Recommended: Small M. How many cases do I need? On science and the logic of case selection in field-based research. Ethnography. 2009;10:5-38. Guest readings TBD	description of most appropriate study design/methodology)
7	10/26	Components of Study Design: II	Firebaugh: Ch. 4: Replicate Hoppe A, Heaney CA, Fujishiro K, Gong F, Baron S. Psychosocial work characteristics of personal care and service occupations: A process for developing meaningful measures for a multiethnic workforce. Ethnicity and Health. 2014;3:1-19. Optional: Luker: Ch. 5: Reviewing the literature	
8	11/2	Grand Rounds	http://www.gc.cuny.edu/Page-Elements/Academics-Research-Centers-Initiatives/Doctoral-Programs/Public-Health-%28DPH%29/Program-Events	Due: Critique 1 (Mary Schooling)

11	11/23	Discussion on methods vis-à-vis research	Firebaugh: Ch. 7: Method as servant, not master	Due: Critique 2 (Christian Grov)
12	11/30	Student		SUBMIT: Peer-review

		research proposal presentations		form for each presenter
13	12/8	Student research proposal presentations		SUBMIT: Peer-review form for each presenter
14	12/14	Grand Rounds	http://www.gc.cuny.edu/Page-Elements/Academics-Research-Centers-Initiatives/Doctoral-Programs/Public-Health-%28DPH%29/Program-Events	
15	12/21			DUE: "Research Idea" Project (final draft)

Institutional Policies

Help with research and writing
Librarians at the CUNY GC Mina Rees Library are available to help students with using research databases and citation software in person or remotely by phone, chat or email. Contact information can be found on the library's research website at: http://library.gc.cuny.edu/research-help/

The GC Wellness Center provides academic consultation services to help keep students on track with their academic work by working on the obstacles to progress and developing strategies to overcome them. More information can be found on the GC Wellness Center's website at: http://www.gc.cuny.edu/Prospective-Current-Students/Student-Life/Health-Wellness/Counseling-Services/Academic-Health

Last day to drop the course with the grade of "W": November 19, 2015
http://www.gc.cuny.edu/Public-Programming/Calendar/Academic-Calendar-2015-16/Detail?id=29019

Grade of Incomplete (INC) and Graduate Center Policies
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergency. Only students averaging a C or above in the course are eligible to request an incomplete course grade. According to Graduate Center policy updated 7/11/2011, to resolve incomplete grades, students must fulfill their obligations within one calendar year after the INC grade is assigned. After one year, an incomplete grade (''INC'') will become a permanent incomplete. Extensions will be granted only in exceptional circumstances upon written application and with the permission of the faculty member, the Executive Officer, and the Vice President for Student Affairs. Permanent incompletes will accrue no credit. Students with more than two incomplete courses will be brought to the attention of their Executive Officer to determine whether or not they are making satisfactory progress. Students will not normally be regarded as

making satisfactory progress toward their degrees if they have more than two “INC”s on their records. Students should be aware that continued registration and most financial aid awards are conditional upon satisfactory progress. Students should also note that credits for which they have an “INC” as of the end of the third week of classes of a given semester are not counted toward advancement to the next level for that semester.

Grade appeals

The doctoral faculty as a whole and, more specifically, the faculty of a doctoral program are responsible for determining the requirements and standards of performance for courses and for qualifying examinations. A course instructor retains considerable discretion in these matters. The instructor is under obligation, however, to ensure that the course syllabus is consonant with the goals of the curriculum of the degree program. The expected level of performance in a given course shall reflect levels of difficulty relevant to the educational objective of the program. In addition, the instructor has an obligation to students to make clear the basis of evaluation (e.g., reading assignments, papers, contributions to seminar discussions, experimental work) at the start of each course so that students are not surprised by unexpected or untimely demands. Grades on examinations or for work in a course are the responsibility of the instructor. Specific information pertaining to the procedures for an official grade appeal through the GC can be found in the GC student handbook at: http://www.gc.cuny.edu/CUNY_GC/media/CUNY-Graduate-Center/PDF/Publications/Student_Handbook_web.pdf?ext=.pdf Refer students to the current academic calendar for important dates (for example: holidays, course drop, course withdrawal). Provide a hyperlink to the current academic calendar.

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

The Graduate Center
PUBH 891 Advanced Research Seminar II
3 Credits
Fall 2015

Time and location	4:15-16:15 GC Room 6114
Instructor	Professor Mimi Fahs, PhD, MPH Email: mfahs@hunter.cuny.edu Phone: 212 396-7758 Office: Silberman Building Room 541 (2180 Third Ave (at 119th Street), NY, NY 10035
Office hours	Wednesdays 4-6 and by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Guides advanced students in the completion of their dissertation proposal and, if needed, Institutional Review Board (IRB) application for dissertation research. Faculty assist students to refine the research design, to fully develop appropriate research methods and analytic strategies and to provide protection for human subjects in their dissertation research. In order to take PUBH 891 Research Seminar II, students need to have defended the Second Exam or with permission of the instructor, have the Second Exam defense scheduled within the first two weeks of the semester. Students must successfully defend the Second Exam to continue the course.
Course prerequisites	All coursework; Successful defense of the Second Exam
Course format	Seminar
Required reading and resources	Macrina, Francis L. *Scientific Integrity*. ASM Press. 2005 Kuhn, Thomas. *The Structure of Scientific Revolutions.* U of Chicago Press. 2012 (4th edition)
Suggested reading and resources	2 Completed Dissertations in the student's subject or methods area

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Assess the mechanisms and pathways by which factors influence individual and population health.	• Describe specific research questions to be answered in the proposal;	• Participation in class discussions based on assignments
Design and conduct etiological, intervention, policy, implementation science and other empirical studies that contribute to new knowledge about population health	• Define Specific Aims	• Oral presentations
Synthesize and apply methods, theories and data from multiple disciplines to understand and solve population health issues.	• Engage faculty in a dissertation committee	• Written assignments
Generate, translate, communicate, and disseminate population health evidence to diverse audiences	• Identify data sources and explain methods proposed to answer these questions;	• Final draft dissertation proposal
Implement professional and organizational ethical guidelines in population health research and practice.	• Assess the strengths and weaknesses of these methods;	•
Secure resources to conduct population health research and practice	• Describe obstacles likely to be encountered in a dissertation project and propose strategies to overcome these obstacles;	•
	• Prepare a written draft dissertation proposal and present orally.	•

Course Assessments

Participation in class discussion based on assignments (This includes written assignments throughout the semester)	30%
Complete draft dissertation proposal	70%

Grading

Evaluation criteria

The relative weight of each course component is as follows:

Assessment	Weight
Specific Aims	10%
Conceptual Framework	10%
Analytic Methods	10%
Draft Dissertation Proposal	70%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation

Attendance and class participation are required. Expect to actively contribute to the discussion and complete and submit all assignments by posted due dates. Missed assignments or lack of discussion participation not only affect the individual student, but they also affect the class as a whole due to the high degree of interaction within the course.

Late/incomplete submission of assignments

Acceptance of late/incomplete assignments due to unavoidable delays in research progress must be pre-approved by the instructor.

Make-ups, rewrites, and extra credit

The nature of this seminar requires numerous rewrites as the student progresses toward a defendable proposal, with full committee engagement.

Expectations of students

- Be familiar with Graduate Center and DPH program requirements including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Know how to use GC library resources, including dissertation searches, and citation managers
- Show respect to everyone in the course.
- Be fully prepared to actively participate in discussion.
- Complete all assignments by their assigned due date.
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Regularly check the course website and official university email for course correspondence.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted in the discussion board.
- Contact the professor directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.

- Develop and maintain contact with dissertation committee sponsor – and individual committee members as advised by sponsor.

Expectations for the instructor

- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during discussion
- Respond to student email within 24 hours Monday through Friday.
- Grading and feedback on assignments within 1 week of the due date.
- Individual sessions with the instructor to overcome perceived barriers to dissertation proposal progress
- Communication about progress in the course will be given through the course website.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule

This schedule may change as the semester progresses. Refer to the current academic calendar for important dates.

Session	Date	Topic	Readings and Assignments
1	Aug 31	**DPH GRAND ROUNDS**	Dr. Lyndon Haviland "Dangerous Beliefs: Public Health & Preparations for a Revolution"
	Sept 7	**NO CLASS – Labor Day**	
2	**Sept 10** **(Mon Classes Meet Thursday)**	Course Overview- Dissertation proposal components	Moving from Second Exam Committee to Dissertation Committee formation Students brief presentation of their topic (5 minutes).
	Sept 14	**NO CLASS (Rosh Hashana)**	
3	Sept 21	Critical Review of NIH Proposal	Sample NIH Proposal Student review and critiques of specific aims: how did the proposal address these?
4	Sept 28	**NO CLASS**	Visit library and pick two dissertations with similar topic to

			student's topic Begin drafting specific aims
5	Oct 5	**GRAND ROUNDS**	Debrework Zewdie, PhD "Leadership in Public Health: From AIDS to Universal Health Coverage"
	Oct 12	**NO CLASS (Columbus Day)**	
6	Oct 19	Development of Research Questions - Hypotheses - Specific Aims	Summary of strengths and limitations of similar dissertations - organization, clarity of aims, contribution to existing literature, whether the aims/questions were answered, etc. Class discussion
7	Oct 26	Student presentations- Specific Aims	Brief PPT for discussion Student Dissertation Committee Progress Reports ***Draft Specific Aims Due***
8	Nov 2	**GRAND ROUNDS**	TBA
9	Nov 9	Students' overview of research questions, data,	Student presentations – In-class

		methods and possible challenges for proposed study	discussion Student Dissertation Committee Progress Reports (cont.) ***Revised Specific Aims Due***
10	Nov 16	Theory and Conceptual Framework -	Student brief PPT presentations - linking specific aims and methods through a guiding theory and conceptual framework Student Dissertation Committee Progress Reports ***Draft Conceptual Framework Due***
11	Nov 23	Finish Conceptual Framework – Begin Methods Discussion	Data base and variables presentation Analytic methods Dissertation Committee reports (cont.)
12	Nov 30	Methods Discussion – (cont)	***Draft Methods Due***

13	Dec 7	Student Presentations	**Brief overview of each section of the Dissertation Proposal, including Schedule for Completion**
14	Dec 14	**GRAND ROUNDS**	**20 min PPT**
15	Dec 21	Student Presentations	***Full Draft of Dissertation Proposal Due***

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

The Graduate Center
PUBH 893: Leadership & Organizational Change Seminar
3 Credits
Fall 2015

Time and location	Mondays 6:30 PM – 8:30 PM GC – 365 5th Avenue room 3207 August 27, 2015 – December 23, 2015
Instructor	Nevin Cohen, Ph.D. Associate Professor, CUNY School of Public Health 55 West 125th Street, room 811 New York, NY 10027 212-646-8340 (T) 917-721-8037 (M) nevin.cohen@sph.cuny.edu (preferred contact)
Office hours	Wednesdays 3:00 to 6:00 or by appointment
Website	https://canvas.instructure.com/courses/957345
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	The Public Health Leadership Seminar introduces students to theories and models of leadership and organizational change and helps students to analyze their roles in fostering leadership in public health. Using a case study approach, students analyze successful and unsuccessful examples of public health leadership and organizational change.
Prerequisites	PUBH 800, PUBH 801
Course format	In-class seminar with guest lectures and some online discussions.
Required reading and resources	The seminar discussions will be based on weekly journal articles and book chapters. See course schedule and website for the complete reading list. All readings will be available on the course website. We will read portions of the following books, which will be available in PDF form on the course website: Werhane, Patricia H., and Mollie Painter-Morland. *Leadership, gender, and organization*. Springer Netherlands, 2011; Kellerman, Barbara. *The end of leadership*. HarperBusiness, 2012 (ISBN: 0062069160); Western, Simon. *Leadership: A critical text*. SAGE, 2013 (ISBN: 1446269906); Uhl-Bien, Mary, and Sonia Ospina. *Advancing relational leadership research: A dialogue among perspectives*. Information Age Publishing. 2012. (ISBN: 1617359211)
Suggested reading and resources	Optional readings are listed on the course website.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Identify, develop, evaluate and recommend policy and programmatic interventions to improve population health at individual, community, government and country levels based on empirical evidence of social, political, cultural, biological, economic, historical, behavioral, environmental, and global factors in health and disease.	• Critically discuss the leadership literature • Apply leadership theories to the design, implementation and evaluation of public health interventions • Understand the process of organizational change through a leadership framework • Analyze health policies and programs through the lens of organizational leadership	• In-class and online discussions • Reading reflections • Preparation of a public health leadership case study
Assess the mechanisms and pathways by which factors influence individual and population health.	• Assess organizational and community leadership as a factor in individual and population health outcomes	• In-class and online discussions • Reading reflections • Preparation of a public health leadership case study
Demonstrate leadership skills to facilitate the goals of population health research and practice.	• Apply leadership theories to one's own research and practice. • Foster leadership among colleagues, staff and community members	• In-class and online discussions • Reading reflections • Leadership of class discussions • Preparation of a public health leadership case study
Design and deliver innovative educational experiences that promote learning about population health in academic and practice-based settings	• Integrate concepts of leadership into courses, workshops, training sessions and other teaching activities	• In-class and online discussions • Leadership of class discussion
Implement professional and organizational ethical guidelines in population health research and practice	• Understand the ethical dimensions of organizational leadership research and practice, including the assumptions underlying conventional and critical leadership methodologies	• Preparation of a public health leadership case study. • Reading reflections
Secure resources to conduct population health research and practice	• Apply leadership concepts to the design and implementation of public health research and interventions	• In-class and online discussion • Preparation of a public health leadership case study

Course Assessments

Details about the assignments and grading criteria can be found on the course website.

Course participation: This is a seminar-style course, which requires your active participation in class (and in online discussions). In each class session we will discuss the assigned readings and connect them to previous readings in this course, other public health literature, and to your professional and academic experiences. I generally rate participation categorically (high, medium, low, none).
Leadership of class discussion: At the beginning of the semester, students will select particular topics/readings and will be responsible for actively leading the discussion during the session in which those readings are discussed. This is graded pass/fail.
Reading reflections: You will post brief analyses, observations, questions, critiques, and reflections on the week's readings. The goal is to provide another opportunity besides our in-class discussions to share your thoughts about the readings and the underlying concepts covered in the articles and chapters and for me to get a sense of your interpretation of the material we're covering (and to respond to points and queries). What I'm looking for is not a précis of the reading, but rather your own reactions and interpretations. I generally rate participation categorically (high, medium, low, none).
Leadership case study: We will individually (and if desired, collaboratively) prepare a collection of concise, well-researched and written case studies of innovative and alternative forms of public health leadership in New York City. The cases will analyze individuals and groups that might otherwise not be visible in the conventional leadership literature. Examples might include social change organizations working to address environmental health issues, urban farmers promoting nutrition, immigrant organizations seeking to increase access to healthcare, or public agency officials attempting to change organizational culture. The most successful case studies will engage the critical leadership literature and illustrate how leadership emerges among different groups, in response to different public health challenges, and through different mechanisms. I welcome the opportunity to work beyond the end of the semester with students interested in turning their paper into a publishable journal article.

Grading

<u>Evaluation criteria</u>
Students who perform exceptionally in all aspects of the course will receive an "A." A grade of "B" will reflect adequate work. Any grade below a "B" will indicate that you should be performing better. All assignments must meet professional standards of analysis, presentation, and timeliness. Accurate spelling and grammar, and clear and concise writing, are critical. Assignments *will not be accepted after they are due* unless you have a compelling reason for being late (e.g., medical or family emergencies) and I agree to an alternative due date. The relative weight of each course component is as follows:

Assessment	Weight
Course Participation	20%
Leadership of discussion	5%
Reading reflections	15%
Leadership case study	60%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation
You are required to attend every class that meets in person and to participate in every online discussion session. This is particularly important as we meet only once per week. As noted above, I expect active participation in class discussions.

Late/incomplete submission of assignments
Late or incomplete assignments will not be accepted unless you are ill or have a family emergency. If you know you will not be able to meet a deadline contact me as soon as possible to discuss an alternate deadline.

Make-ups, rewrites, and extra credit
The case study will be submitted in segments, as outlined in the course schedule. Each submission will be returned with comments and suggestions, and if these are addressed in the final submission your final grade will reflect your efforts at revising the paper throughout the semester. I do not offer extra credit assignments.

Expectations of students

One of the biggest obstacles to successful learning is not allocating sufficient time to coursework. I realize that D.Ph. students are juggling multiple responsibilities, but I expect you to devote the time and energy required to learn the course material and to do a good job on the course paper. I also expect you to be the consummate professionals that you are – showing respect and treating each other collegially. In your interactions with me, please be open and communicative – please tell me if the course is not meeting your expectations so that I can make adjustments. Whatever you do, please let me know if you are having trouble with the course. Other expectations include the following:

- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and the academic calendar.
- Know how to use library resources and citation tools.
- Come to class fully prepared to actively participate in discussion.
- Complete all assignments by their assigned due date. No credit for work completed after the due date unless due to a medical or family emergency.
- No credit for assignments suspected of plagiarism. (and see the Academic Integrity section below for the additional consequences of plagiarism)
- Regularly check the course website and official university email for course correspondence. The readings and schedule are likely to change, and it is your responsibility to keep track.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted in the discussion board.
- When in doubt, ask questions and clarify course assignments and expectations.

Expectations for the instructor

My goal is to make this course a valuable learning experience that is intellectually interesting and challenging and relevant to your professional and academic work. You can expect me to be prepared each week, to make myself as accessible as possible, to return your work promptly (usually within one week) with comments and suggestions, and to treat each of you with respect and collegiality. I have high expectations and strict standards, but I also try to be very reasonable if you express concerns or problems to me as they arise (and not at the end of the term). Specifically, I will try to:

- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during discussion
- Respond to student email within 24 hours Monday through Friday.
- Communicate about grades and progress in the course through the course website.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule
This schedule is likely to change as the semester progresses. Please check the course website for updates, and ask if you are unsure about scheduled topics/readings or assignments. Also refer to the current academic calendar for important university-wide dates.

Session	Date	Topic	Readings/Resources	Assessment
1	8/31/15	**Course Overview:** This course critically assesses the notion of leadership and leadership studies and considers alternative frameworks for analyzing strategies to achieve organizational goals. Kellerman's book discusses changes in politics, culture, the economy and technology that challenge conventional theories of leadership. While Kellerman is a professor at the Kennedy School, her book is written for a general audience and can be read rather quickly. I'd like you to read it *prior* to the first class, if at all possible, so that we have a context within which to discuss the frameworks we plan to use throughout the semester.	Kellerman, B. (2012). The end of leadership. HarperBusiness.	-Course participation -Reading reflections
	9/7/15	Labor Day – No classes		
2	9/10/15 (classes follow Monday Schedule)	**Introduction to Leadership:** One concept critical to the distinction between leadership and management is the "wicked problem," which describes the types of problems that public health practitioners typically deal with. I've assigned Rittel and Webber's classic article in which they coin the term, along with other readings that begin to sort out what leadership means and	- Rittel HWJ, Webber MM. Dilemmas in a General Theory of Planning. Policy Sci. 1973;4(2):155-169. - Western, S. (2013). *Leadership: A critical text*. Sage. Chapter 2. - Beinecke RH. Leadership for Wicked Problems. 2009;14(1):1-17. - Grint K. Wicked problems and clumsy solutions : the role of leadership. 2010:1-16. *Due: Name and brief description of proposed*	-Course participation -Reading reflections

		why it is important to those of us interested in social change.	*leadership case*	
	9/14/15	Rosh Hashanah – No Classes		
3	9/21/15 Note: This class will be conducted online.	**Beyond the Heroic**: Much of the conventional literature on leadership focuses on the traits of people (often individuals) who influence other followers. This not only fails to reflect actual organizational processes but can disempower those not typically thought of as leaders. This week's readings introduce more recent theories of leadership, framing it as a complex interrelationship among individuals, or individuals and organizations, interacting to achieve change. The readings are part of an edited volume on gender and leadership, and as we'll discuss, these critical leadership theories help us to understand how leadership research can better address issues of structural power dynamics.	Werhane Chapters 4-9	-Course participation -Reading reflections
4	9/28/15	**Followership and Leadership:** Although leaders need followers, the leadership literature has only recently focused on the co-creation of these two roles. The article by Uhl-Bien reviews the literature on followership and discusses two theoretical frameworks for understanding how followers (and thus leaders) are constituted:	-Uhl-Bien M, Riggio RE, Lowe KB, Carsten MK. Followership theory: A review and research agenda. Leadership Q. 2014;25(1):83-104. *Due: Case study outline and draft summary of organization*	-Course participation -Reading reflections -Leadership case study

		one based on the interactions among leaders and followers, and an one that suggests leaders and followers construct their roles based on the organizational contexts in which they exist.		
5	10/5/15	**Distributed and Resistance Leadership:** The followership literature still gives short shrift to those entitites that contribute to the goals of an organization. A distributed leadership approach analyzes the networks of influence that move organizations in particular directions. The Zoller, Fairhurst article discusses how leadership can mobilize resistance within organizations.	-Gronn P. Distributed leadership as a unit of analysis. Leadersh Q. 2002;13(4):423-451. -Hoppe B, Reinelt C. Social network analysis and the evaluation of leadership networks. Leadersh Q. 2010;21(4):600-619. -Tourish D. Leadership, more or less? A processual, communication perspective on the role of agency in leadership theory. Leadership. 2014;10(1):79-98. -Zoller HM, Fairhurst GT. Resistance leadership: The overlooked potential in critical organization and leadership studies. Hum Relations. 2007;60(9):1331-1360.	-Course participation -Reading reflections
	10/12/15	Columbus Day – No Classes		
6	10/19/15	**Leadership as Practice:** Leadership is forged through the everyday social practices that occur within organizations, according to the articles assigned this week. A practice perspective suggests the need to focus on the often overlooked day-to-day activities that shape the direction of an organization and help to construct organizational leadership. The Ospina et al. chapter also illustrates	Carroll B, Levy L, Richmond D. Leadership as Practice: Challenging the Competency Paradigm. Leadership. 2008;4(4):363-379. Ospina et al., Social Change Leadership as Relational Leadership. In Uhl-Bien and Ospina (eds.), Advancing Relational Leadership Research	-Course participation -Reading reflections

		methods for leadership research on social change organizations.		
7	10/26/15	**Integrative Leadership:** One of the challenges public health practitioners face is developing successful cross-sector and interdisciplinary collaborations to solve wicked problems. This chapter discusses a framework for forming and evaluating partnerships and the role of leadership in their success.	Crosby and Bryson, Integrative Leadership and Policy Change: A Hybrid Relational View, chapter 10 in Uhl-Bien and Ospina. *Due: Literature review and revised case profile*	-Course participation -Reading reflections -Leadership case study
8	11/2/15	**Leadership and diversity:** Public health professionals must lead organizations and networks that are demographically diverse. These readings address this issue from various perspectives. Fletcher discusses power and gender in the analysis of leadership. Rosener discusses leadership differences between women and men. Offermann addresses leadership of diverse organizations. The chapter by McCartney profiles the development of leadership among young girls in Chicago.	-Fletcher JK. The paradox of postheroic leadership: An essay on gender, power, and transformational change. Leadersh Q. 2004;15(5):647-661. -Offermann, Relational Leadership: Creating Effective Leadership with Diverse Staff. Chapter 12 in Uhl-Bien and Ospina -McCartney, K. Every Girl is a Leader. Chapter 13 in Werhane and Painter-Morland. -Rosener, J. B. Ways Women Lead. Chapter 3 in Werhane and Painter-Morland.	-Course participation -Reading reflections
9	11/9/15	**Social Change Leadership:** These readings (adding to the previous Ospina et al chapter) discuss the role of leaders in social change networks – in this case, addressing two critical public health issues: food and physical activity and HIV/AIDS. The Folta article uses an	-Folta SC, Seguin R a, Ackerman J, Nelson ME. A qualitative study of leadership characteristics among women who catalyze positive community change. *BMC Public Health*. 2012;12(1):383. -Trapence G, Collins C, Avrett S, et al. From personal survival to public health: Community	-Course participation -Reading reflections

		entity perspective to examine the leadership traits of women community leaders and the Trapence et al. article discuss networks of community leaders.	leadership by men who have sex with men in the response to HIV. *Lancet*. 2012;380(9839):400-410.	
10	11/16/15	**Enhancing Community Leadership through CBPR:** Information and analytical capabilities often enable academics to lead and/or control. The two articles this week address the role of researchers in buildng and supporting leadership within communities through community based participatory research.	-Farquhar S a., Michael YL, Wiggins N. Building on leadership and social capital to create change in 2 urban communities. Am J Public Health. 2005;95(4):596-601. -Freudenberg N, Pastor M, Israel B. Strengthening community capacity to participate in making decisions to reduce disproportionate environmental exposures. Am J Public Health. 2011;101(SUPPL. 1):123-131.	-Course participation -Reading reflections
11	11/23/15	**Guest Speaker TBA**	*Due: First complete draft of leadership case study*	-Course participation -Reading reflections -Leadership case study

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

The Graduate Center
PUBH 898 Dissertation Seminar
0 Credits
Fall 2015

Time and location	Graduate Center, Skylight Room (365 Fifth Ave) August 31 (Grand Rounds) – 4:15 – 6:15p October 5 (Grand Rounds) - 4:15 – 6:15p November 2 (Grand Rounds) - 4:15 – 6:15p December 14 (Grand Rounds) - 4:15 – 6:15p
Instructor	Terry Huang, PhD, MPH, CPH Professor of Community Health Terry.huang@sph.cuny.edu Jim Stimpson, PhD Professor of Health Policy & Associate Dean, Academic Affairs Jim.stimpson@sph.cuny.edu Michele Kiely, PhD Professor of Epidemiology & Associate Dean, Research Michele.kiely@sph.cuny.edu 55 W. 125 Street New York, NY 10027 Email is best way to contact instructors.
Office hours	Email for individual appointments.
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This is a non-credit required course that students must take every semester they are enrolled in PUBH 89901, 02, 03 and 04 or PUBH 900.The dissertation seminar meets four times a semester and serves as a workshop in which students attend Public Health Grand Rounds, present and discuss their dissertation research, and review aspects of each other's work (peer review).
Course prerequisites	N/A
Course format	Grand Rounds and Seminars
Required	None

reading and resources	
Suggested reading and resources	None

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Design and conduct etiological, intervention, policy, implementation science and other empirical studies that contribute to new knowledge about population health	• Explain the use of appropriate study designs to answer different research questions	• Grand rounds attendance • Class discussion •
Synthesize and apply methods, theories and data from multiple disciplines to understand and solve population health issues.	• Describe how theories, methods and/or data from diverse disciplines can be applied to your research question(s) • Demonstrate progressive depth in your research thinking	• Class discussion • Story boards
Generate, translate, communicate, and disseminate population health evidence to diverse audiences	• Present your research in a clear and methodical manner	• Research briefs • Written and oral presentation of research
Design and deliver innovative educational experiences that promote learning about population health in academic and practice-based settings .	• Offer constructive feedback to peers on their research progress	• Peer review

Course Assessments

This course is non-credit. However, students will be given feedback by instructors on their performance accordining to their attendance, performance during class, and timely feedback on peer reviews.

Grading

Evaluation criteria
Pass/Fail

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete
N/A

Grade appeals
N/A

Course Policies

Attendance and class participation
This is a required course for all DPH students during their dissertation stage. Attendance at Grand Rounds and Seminars is mandatory. Excuses are accepted only in extrenuous circumstances on a case-by-case basis.

Late/incomplete submission of assignments
N/A

Make-ups, rewrites, and extra credit
N/A

Expectations of students
Students are expected to attend all sessions, participate fully and actively, and comply with all requirements pertaining to written, oral, and peer review coursework.

Expectations for the instructor
Instructors will assist students on their research development in groups during class and, as needed, one-on-one outside class. Email communication with instructors is preferred outside class. Instructors will respond within two business days upon receipt of any email inquiry.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule

Session	Dates	Topics	Assignments Due
1	Aug. 31	Overview and Introduction to the Course Public Health Career Outside Academia Special Speaker: Lyndon Haviland, DrPH Lyndon Haviland & Company	N/A
2	Oct. 5	Grand Rounds (TBA) Research Progress Updates	Story Boards
4	Nov. 2	Grand Rounds (TBA) Research Progress Updates	Research Brief (specific aims) Presentations
6	Dec. 14	Grand Rounds (TBA) Research Progress Updates	Peer Review Presentations

Last Updated August 27, 2015

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

The Graduate Center
PUBH 82400: Applied Biostatistics I
3 Credits
Fall 2015

Time and location	Wednesday, 6:05-7:50 pm, Silberman (2180 3rd Ave), Room C08
Instructor	Shiro Horiuchi, PhD Professor, CUNY School of Public Health 2180 3rd Ave, Room 521 Phone 212-396-7749 Shiro.Horiuchi@hunter.cuny.edu (preferred contact)
Office hours	Wednesday 4:00 – 5:30pm or by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	For public health professionals to be effective, they must be able to ensure that policies and interventions are evidence-based. Epidemiologists design studies to determine which policies and interventions are most effective in promoting healthy individuals, families and societies. Biostatistics provides epidemiologists with the necessary tool kit to appropriately analyze public health data. The emphasis of this class is on acquiring a set of foundational tools in regression models to apply to public health research questions and data. Topics include simple and multiple linear regression, logistic regression, ordinal and polytomous regression and model building techniques including assessing for multi-collinearity, effect measure modification, non-linearity and model fit statistics.
Course prerequisites	Introductory statistics course
Course format	This course is taught with a combination of lectures and in-class computer exercises using SPSS (for linear regression), SAS (for logistic regression) and Excel (for basic statistical analysis). All materials are available on the course website.
Required reading and resources	Ford AC, et al. 2005. *American Journal of Epidemiology* 162:454-460. Hall SL, Greendale GA, 1998. *Calcified Tissue International* 63:183-189. Simanek AM, Dowd JB, Aiello AE. 2009. *International Journal of Epidemiology* 38:775-787.

	Wisborg K, et al. 2001. *American Journal of Epidemiology* 154:322-327.
Suggested reading and resources	Fox J. *Applied Regression Analysis and Generalized Linear Models. Third Edition*. Sage Publications; 2015. ISBN-10: 1452205663, ISBN-13: 978-1452205663. (Second Edition is also all right.)

Proposed revisions to DPH Epidemiology Competencies **All graduates of the EPI track will be able to:**	**Course Learning Objectives**	**Assessment Methods**
Epidemiologic methods		
1. Determine the influence of social, cultural, historical, behavioral and biological factors in population health.	• Interpret results of linear regression and logistic regression analyses; assess the extent to which the results support the initially proposed hypothesis; evaluate the predictive accuracy and reliability of the results; and examine if the results are consistent with the statistical assumptions of the methods and models* * "Linear regression and logistic regression" in this table include both simple regression (one independent variable) and multiple regression (two or more independent variables)	• Mid-term and Final Examinations • Homework 1 & 2 • Research Notes 1 & 2
2. Operationalize studies of the complex interactions between multiple determinants of population health in a variety of settings, exploiting the differences between settings as a source of insight 3. Design and implement research projects that a. Quantify health and the burden of disease in populations b. Perform surveys and risk factor analyses c. Apply causal inference to study design, study implementation and data analysis; d. Identify vulnerable populations and their attributes; apply rigorous methods to examine and monitor health disparities. e. Identify effective interventions to improve population health equitably f. Evaluate the effectiveness of interventions designed to improve population health	• Describe and explain the model equations, assumptions and estimation procedures of linear regression and logistic regression*	• Mid-term and Final Examinations • Homework 1 & 2

g. Give appropriate attention to the potential for bias, as well as exposure and outcome measurement issues.		
Epidemiologic content		
4. Demonstrate mastery of causal inference and apply these techniques to scientific questions relevant to at least two current public health issues or population groups that are relevant to the student's substantive content interests 5. Identify and apply appropriate biostatistical approaches to analyses that address epidemiological questions in public health research and practice.	• Identify if linear regression or logistic regression is a suitable tool for investigating the research question with the given data, and assess its advantages and limitations*	• Mid-term and Final Examinations • Homework 1 & 2 • Research Notes 1 & 2
	• Set up linear regression and logistic regression models that are suitable for the data and research question*	• Mid-term and Final Examinations • Homework 1 & 2 • Research Notes 1 & 2
	• Run at least one of widely used statistical software packages to conduct linear regression and logistic regression*	• In-class Computer Exercises • Research Notes 1 & 2
Teaching and consultation		
6. Present empiric findings persuasively to a wide array of audiences (oral and written); 7. Work with colleagues to translate epidemiologic findings into practicable interventions; 8. Teaching epidemiologic methods to students, more junior colleagues or to others in public health	• Write scientific reports of linear regression and logistic regression analyses, with properly formatted and labeled tables and figures*	• Research Notes 1 & 2
	• Orally present results of linear regression and logistic regression analyses*	• Research Notes 1 & 2
	• Correctly summarize results of linear regression and logistic regression analyses in published	• Research Notes 1 & 2

	literature, and critically evaluate statistical aspects of the research*	

Course Assessments

Descriptions on details about the assignments and grading criteria will be shown on the course website

Mid-term Examination: Students will take an in-class examination, about 50~60 minutes long, solving technical and computational problems that are mostly related to linear regression analysis.

Final Examination: Students will take an in-class examination, about 100 minutes long, solving technical and computational problems that are mostly related to logistic regression analysis.

Homework 1: Students will solve a set of technical and computational problems that are mostly related to linear regression analysis and submit the answers.

Homework 2: Students will solve a set of technical and computational problems that are mostly related to logistic regression analysis and submit the answers.

Research Note 1: A subset of data from a health survey will be provided. Each student will develop a hypothesis that could be investigated with the data, analyze the data using linear regression, and write a research report.

Research Note 2: A subset of data from a health survey will be provided. Each student will develop a hypothesis that could be investigated with the data, analyze the data using logistic regression, and write a research report.

In-class Computer Exercises: During the last 20~40 minutes of most classes, students will do computer exercises using computer terminals in C08, and upload their output files onto the assigned location of Discussion Board of the course website or submit them to the instructor by email after the class. The output files may be edited to remove results with errors.

Class Participation: Students should actively participate in the classes by asking questions to the instructor and orally responding to questions from the instructor during the lecture and in-class exercise.

Grading

Evaluation criteria

Evaluation criteria for research notes are described in the assignment instructions, which will be posted on the course website. In-class examinations are assessed primarily with respect to the accuracy of answers and the appropriateness of the approach adopted to solve the problems. In-class computer exercises and homework 1

and 2 are assessed primarily according to whether a sufficient amount of effort has been made. Class participation is assessed in terms of the quality and frequency of questions and replies.

The relative weight of each course component is as follows:

Assessment	Weight
Mid-term in-class examination	20%
Final in-class examination	25%
Research note 1	20%
Research Note 2	25%
Homework 1	2.5%
Homework 2	2.5%
In-class exercise and class participation	5%
	100%

The grading system for the course is as follows:

Letter Grade	Quality Points	Percentage
A+	4.0	97.0 - 100
A	4.0	93.0 - 96.9
A-	3.7	90.0 - 92.9
B+	3.3	87.0 - 89.9
B	3.0	83.0 - 86.9
B-	2.7	80.0 - 82.9
C+	2.3	77.0 - 79.9
C	2.0	70.0 - 76.9
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons

and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation

Attendance is required. No student will get a full point for "in-class exercise and class participation" if s/he misses more than 3 classes or the number of in-class exercise outputs that are not submitted in time is 3 or more.

Late/incomplete submission of assignments

Late/incomplete submission of Research Notes is not accepted. Late submission of Homework is not accepted. In-class exercise outputs are accepted if they are submitted by the end of the class or within 4 days after the class.

Make-ups, rewrites, and extra credit

With permission of the instructor, students may be allowed to resubmit research notes, homework assignments, and in-class computer exercise outputs before the due date.

Expectations of students

- Be familiar with Graduate Center's academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Know how to use library resources and citation tools.
- Show respect to everyone in the course.
- Classes are offered in a computer laboratory. During the class, NEVER do any email work or website browsing unrelated to the class.
- Complete all assignments by their assigned due date.
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Regularly check the course website and official university email for course correspondence.
- There is no group discussion in this course, but students are expected to participate actively in the classes, by asking scientific and technical questions to the instructor if there are any unclear issues, and by responding to questions from the instructor.
- Contact the professor directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.
- Because in-class exercise outputs and homework assignments 1 and 2 are not returned with corrections or comments, students are expected to compare their

outputs and answers with the model scripts/outputs and answer keys that will be posted on the course website.

Expectations for the instructor

- Provide course materials (including presentation files, data files, computer programs, assignment instructions, copies of or links to articles in the required reading list), regular announcements, reminders, suggestions on the course website.
- Answer questions asked by students during the class.
- Respond to students' email inquiries within 2 days.
- Provide students with individualized in-person instructions during their office-hour visits.
- Communication about grades and progress in the course will be given through the course website.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule

This schedule may change as the semester progresses. Refer to the current academic calendar for important dates.

Session	Date	Topic	Readings/Resources	Assessment
1	9/2	Introduction to multiple linear regression 1: Basic models and partial regression coefficients (Part 1)	JF 5	ICE
2	9/9	Introduction to multiple linear regression 1: Basic models and partial regression coefficients (Part 2)	JF 5; HG	ICE
	9/16	9/16 - Last day to drop without a grade of "W"		
3	9/16	Introduction to multiple linear regression 2: Categorical independent variables	JF 7.1-2	ICE
	9/23	No class		
4	9/30	Introduction to multiple linear regression 3: Ordinary least squares and R^2	JF 5	ICE
5	10/7	Introduction to multiple linear regression 4: Statistical inference.	JF 6.1-2	ICE Homework 1 assigned
6	10/14	Issues in regression analyses 1: Examination of hypotheses on causal relationships I. Explanation of RN1. HW1 answers	JF 6.3 & 1.2	Homework 1 due Research Note 1 assigned
7	10/21	Issues in regression analyses 2: Nonlinearity (Mid-term in-class examination)	JF 12.3	Mid-term in-class examination
8	10/28	Introduction to logistic regression 1: Basic models	JF 14.1	ICE
9	11/4	Introduction to logistic regression 2: Adjusted odds ratio	JF 14.1; AF; KW	ICE Research Note 1 due
	11/9	Last day to withdraw with a grade of 'W'		
10	11/11	Issues in regression analyses 3: Interaction	JF 7.3	ICE
11	11/18	Introduction to logistic regression 3: Maximum likelihood estimation.	JF 14.1.4-5	
12	11/25	Issues in regression analyses 4: Examination of hypotheses on causal relationships II.	SDA	ICE Homework 2 assigned

				Research Note 2 assigned
13	12/2	Introduction to logistic regression 4: Ordinal and polytomous logistic regression.	JF 14.2	ICE Homework 2 due
14	12/9	(Final in-class examination)		Final in-class examination
15	12/16	Issues in regression analyses 5: Multi-collinearity, stepwise regression, partial and part correlation	JF 13	ICE
	12/20			Research Note 2 due

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
EPI 75000: Epidemiological Methods I: Study Research Design
3 Credits
Fall 2015

Time and location	Tuesdays 6:30-8:30pm at The Graduate Center (365 5th Avenue) room 6418
Instructor	**Name** Elizabeth Kelvin, PhD, MPH **Title** Assistant Professor **Email** ekelvin@hunter.cuny.edu **Phone** 212-396-7751 **Office** 2180 Third Avenue (119th Street), room 543 Email is the preferred methods of communication
Office hours	Wednesdays 5:00pm – 6:30pm and by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course will provide an in depth understanding of the design and conduct of epidemiological studies, including causal inferences, measurement, major study designs, threats to validity, and urban public health applications. Examples will be based on the health of New York City residents.
Course prerequisites	PH 75100, PH 75300 or equivalent
Course format	Each class will begin with a lecture. Most classes will then have either a computer-based exercise or a class discussion of the reading assignments following the lecture.
Required reading and resources	• Aschengrau A & Seage GR. Essentials of Epidemiology in Public Health, 3rd edition, Jones and Bartlett publishers, 2014. • Additional assigned readings listed below (pages 11-16) are available blackboard.
Suggested reading and resources	• Susser E, Schwartz S, Morabia A, & Bromet EJ. Psychiatric Epidemiology, 1st edition, Oxford University Press, 2006. • SPSS is suggested but not required. If you decide to purchase a license, be sure that it allows you to open large datasets (which will be necessary in some classes), write syntax, and run various forms of regression including Cox proportional hazards models. Student packages may not provide all the features needed for this class. The software is available for student use outside of class at the Hunter and Graduate Center computer labs and to GC students via the intranet. Note that Hunter students may not have access to the GC computer lab and GC students may not have access to the Hunter computer labs.

Epidemiology-track Competencies	***Course Learning Objectives***	***Assessment Methods***
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Identify key sources of data for epidemiologic purposes	• Be familiar with some publicly available population-based health • Identify benefits and limitations of using publicly available data	• Class computer labs • Computer assignments • Class exams
Use measures of disease frequency and association to appropriately describe the distribution and determinants of disease, and appropriately characterize statistical uncertainty around such estimates	• Apply descriptive statistics to characterize the distribution of health conditions • Test hypotheses regarding associations between health and domains of risk (environmental, demographic, behavioral, biological, social and economic) • Use confidence intervals and p-values to draw conclusions regarding statistical uncertainty	• Class computer labs • Computer assignments • Class exams
Critically read and evaluate the strengths and limitations of epidemiologic literature from a methodologic perspective	• Be able to recognize study design, study population, main research objectives, analytic methods used, main findings and implications of epidemiologic articles • Discuss strengths and weaknesses of epidemiologic articles in terms of research question, design, data collection, analysis and interpretation	• Written assignment • Class computer labs • Computer assignments • Class exams • Class discussion
Select epidemiologic study designs, data collection techniques, and analytic approaches suitable for different scientific inquiries	• Choose and apply appropriate study designs to answer different research questions, taking scientific merits, feasibility, cost, and logistics in account • Construct analytic plans appropriate to datasets and research questions provided	• Written assignment • Class computer labs • Computer assignments • Class exams • Class discussion

Identify key threats to validity (internal and external) within and across epidemiologic studies	• Be familiar with random error and understand approaches to reduce it • Recognize potential biases and identify methods to avoid bias or assess impact • Evaluate potential confounders and adjust for them when necessary • Assess reliability of measures • Communicate the limitations of specific research projects	• Written assignment • Class computer labs • Computer assignments • Class exams • Class discussion
Use statistical software to collect, retrieve, analyze and summarize epidemiologic data	• Use SPSS software to describe epidemiologic data, assess relationships among variables, and answer research questions	• Class computer labs • Computer assignments • Class exams

Biostatistics-track Competencies	**Course Learning Objectives**	**Assessment Methods**
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Describe assumptions, procedures, strengths and limitations of statistical methods that are used in public health research	• Describe and explain the model equations, assumptions and estimation procedures of linear regression, logistic regression, and Cox proportional hazards models including both simple regression (one independent variable) and multiple regression (two or more independent variables). • List inherent limitations in both the data under study as well as the statistical method used to analyze the data	• Class computer labs • Computer assignments • Class exams
Select statistical methods that are suitable for different purposes of analysis and different types of data	• Apply descriptive statistics to characterize the distribution of health conditions • Test hypotheses regarding	• Class computer labs • Computer

	associations between health and domains of risk (environmental, demographic, behavioral, biological, social and economic) using the appropriate form of regression (linear, logistic or Cos proportional hazards) given the data and research question. • Use confidence intervals and p-values to draw conclusions regarding statistical uncertainty	assignments • Class exams
Apply statistical methods correctly in public health research	• Set up regression models (linear, logistic, Cox) that are suitable for the data and research question. • Apply and interpret regression model parameters and draw conclusions about hypotheses • Calculate an odds ratio, risk ratio and rate ratio by hand and using statistical software	• Class computer labs • Computer assignments • Class exams
Use information technology and computer software effectively for collection, management, analysis and presentation of public health data	• Use SPSS software to describe epidemiologic data, assess relationships among variables, and answer research questions	• Class computer labs • Computer assignments • Class exams
Accurately describe computer outputs of those analyses and appropriately interpret the statistical results	• Interpret results of descriptive analysis and regression models; assess whether the results refute the initially proposed hypothesis; evaluate the reliability and validity of the data (Kappa, Cronbach's alpha); and examine if the results are consistent with the statistical assumptions of the methods and models. • Interpret computer output and critically evaluate statistical aspects of the research.	• Class computer labs • Computer assignments • Class exams
Summarize correctly and critically evaluate statistical analyses in published literature	• Be able to recognize study design, study population, main research objectives, analytic methods used, main findings and implications of	• Written assignment • Class computer

	epidemiologic articles • Discuss strengths and weaknesses of epidemiologic articles in terms of research question, design, data collection, analysis and interpretation • Consider alternate approaches to answer the same research questions	labs • Computer assignments • Class exams • Class discussion

Course Assessments
Your understanding of the course material will be evaluated through class discussion and computer lab participation, 3 computer assignments, one written assignment and two exams.

Grading
The course grade will be calculated based on (1) class participation, (2) a written assignment, (3) three graded computer assignments (4) a midterm exam and (5) a final exam.

1. Class Participation: Students are expected to prepare for the class in advance by doing the reading and thinking about the discussion topic before class. Attendance and active participation in the discussions are expected and will be calculated as part of the course grade. Students may miss two classes with no impact on their participation grade.

2. Written Assignment: Students are asked to write a position paper discussing assessment of causation in epidemiology. The purpose of the position paper is to help students organize their thoughts on a topic of importance in epidemiology and develop an informed argument to support their ideas. Each paper should begin with a clear statement of the student's position, or thesis, followed by a structured argument supporting that thesis, describing and discussing the limitations of the counter-arguments. The paper should be no more than 5 pages long, double spaced, 12-point font with 1 inch margins. The paper will be assigned a numeric grade based on how well the student supports his/her thesis using the class readings. Late assignments will lose 5 points out of 100 for each day they are late (including weekends and holidays).

Students may discuss their papers with each other but must turn in their own, independently conceptualized and written assignment and are asked ***to not*** share their draft papers with others. Sources, including readings assigned for this class, must be appropriately cited and referenced (please use AMA citation format or that used by *Epidemiology*). Citation software, such as endnote, is available for free from the university (Graduate Center http://library.gc.cuny.edu/sp/subjects/Citation%20Guides, Hunter: http://library.hunter.cuny.edu/services/endnote) and it is expected (i.e. required) that students will use citation software.

PAPER TOPIC: Is it possible to prove causation in epidemiology? Your paper should include a discussion about what we mean by a cause in epidemiology (definition), how we conceptualize causes and try to identify them in epidemiology, with specific reference to the thinking behind the RCT, cohort and case control study designs, and the limitations of epidemiology in identifying causes? – Due December 2

Grading Rubric for Written Assignment	
Criterion	% of assignment grade
Position stated clearly upfront	20%
Evidence provided to support thesis and well organized into a structured argument	30%
Conclusion supported by the evidence	20%
Writing clear, organized and grammatically correct	20%
Citations correctly identified	10%
GRADE	100%

3. Computer Assignments: Students will be asked to submit three computer assignments (see schedule below). If time permits, students may begin exercises during class and then complete and format the document to include appropriate interpretation, tables, and syntax on their own. The final document should include the SPSS tables (only the pertinent tables) and text to answer each question in the main document and the comprehensive syntax used for all analyses in an appendix pasted at the end of the word document. Students may discuss their assignments with each other but must turn in their own, independently analyzed and written assignment. Late assignments will lose 5 points out of 100 for each day they are late (including weekends and holidays).

4. Midterm Exam: Students will have a take home midterm exam to complete in 1 week, consisting of short answer questions about topics covered during class lectures and in readings. Students must work independently and not discuss the exam with classmates. The exam should be typed double spaced with 12-point font and 1 inch margins and should be e-mailed to the instructor by 8:30pm on the due date. Late midterms will lose 10 points out of 100 for each day they are late (including weekends and holidays).

5. Final Exam: The final exam will be a take-home computer assignment involving statistical analysis in SPSS of an analytic question, and students are expected to analyze the provided data, interpret findings in the context of the literature, and draw

conclusions. The exam must be completed independently and students may not discuss the exam with classmates. Students will be given the questions 1 week before the exam is due. The final exam should be typed double spaced with 12-point font and 1 inch margins and should be turned in at the beginning of class or e-mailed before the class begins. Late finals will lose 10 points out of 100 for each day they are late (including weekends and holidays).

The relative weight of each course component is as follows:

Assessment	Weight
Class participation	5%
Written assignment	20%
3 Computer assignments	25%
Midterm exam	25%
Final exam	20%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an “unofficial withdrawal” (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract

with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Students are expected to prepare for the class in advance by doing the reading and thinking about the discussion topic before class. Attendance and active participation in the discussions are expected and will be calculated as part of the course grade. Students may miss two classes with no impact on their participation grade.
Late/incomplete submission of assignments

See assignment specific rules under the Grading section above.

Make-ups, rewrites, and extra credit

Make-ups, rewrites, and extra credit assignments are not allowed.

Expectations of students

- You must sign up for Blackboard so that you can obtain course readings, updates and lecture notes and other handouts. For instructions on registering for a portal account in order to access Blackboard, go to: https://portal.cuny.edu/portal/site/cuny/index.jsp?epi-content=LOGIN.
- For this course we will be using the blackboard site for PH820, so the EPI750 students should make sure they can access that course.
- Please forward your CUNY e-mail to your most frequently checked e-mail address. Check your e-mail regularly so that you can receive emergency communications and periodic updates about the class.
- You are expected to complete readings and written assignments prior to class.
- SPSS version 18.0 or 19.0 will be used during most classes and is used for some assignments. The CUNY license covers only on-campus use. The software is available for student use in the CUNY School of Public Health at Hunter College and the Graduate Center computer labs outside of class hours. For Graduate Center students, the software is also available in computer labs and via the intranet.

- Students might want to bring a thumb-drive to class when computer exercises are planned to save their work. Alternately they can e-mail the documents created in class to themselves for archiving.
- If you do not have SPSS on your home computer, you will need to export the SPSS syntax and output to PDF or paste it into a word document in order to access it on your home computer. If you use a MAC, PDFing the documents may make it easier to open them on your computer.
- Student assignments should be turned-in on paper at the beginning of class. However, if a student will not be able to attend a class, assignments can be e-mailed to the instructor before the class begins (e.g. before 6:30pm the day of the class) to receive credit. The instructor will reply when a document is received, so if a reply is not received by the student within a few hours he/she should contact the instructor to be sure that the assignment was sent correctly. Students should save their sent email as a record demonstrating that they turned the assignment in on time in case the email is not received by the instructor.

Expectations for the instructor

- Power Point lecture slides will be available for download on Blackboard prior to class.
- The instructor is available during office hours and by appointment to assist students with assignments, course material, and exam preparation. The preferred method of communication with the instructor is e-mail. Please schedule appointments in advance.
- Emails will be answered within 3 business days. If a student has not heard back within that time period, s/he may want to send the email again. Emails will not be answered after business hours, during weekends or holidays.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the

CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

- Please note that the schedule is subject to change throughout the semester. The "Last Updated" Date in the header of the syllabus is meant to reference the current version of the syllabus and therefore should be updated if a change in schedule is made.
- Students should access the current academic calendar for important dates (for example: holidays, course drop, course withdrawal):
  - For the Graduate Center please see: http://www.gc.cuny.edu/CUNY_GC/media/CUNY-Graduate-Center/PDF/Registrar/Fall-2015-Academic-CalendarRev.pdf?ext=.pdf
  - For Hunter College please see: http://www.hunter.cuny.edu/onestop/repository/files/registrar/Academic%20Calendar%20Fall%202015%20thru%20Spring%202016%205-27-15.pdf

EPI750 & PH820 Course Schedule			
Date of class	**Lecturer**	**Topic**	**Assignments**
September 1, 2015	Kelvin	1. Introduction, basic study design & statistics review	
September 8, 2015	Kelvin	2. Review common measures of effect & Data Analysis*	
September 25, 2015 (Friday)	Kelvin	3. Causal inference in epidemiology 1	
September 29, 2015	Kelvin	4. Causal inference in epidemiology 2	*Computer assignment 1: measures of effect exercise due
October 6, 2015	Kelvin	5. Longitudinal studies (cohort & clinical trials) 1	
October 13, 2015	Kelvin	6. Longitudinal studies (cohort & clinical trials) 2*	
October 20, 2015	Kelvin	7. Case control studies 1	*Computer assignment 2 on longitudinal studies due
October 27, 2015	Kelvin	8. Case control studies 2*	
November 3, 2015	Kelvin	9. Ecological studies & meta analyses	*Computer assignment 3 on case control studies due
November 10, 2015	Kelvin	10. Internal validity: bias and confounding*	
November 17, 2015		11. NO CLASS MEETING	Take home midterm exam due
November 24,	Kelvin	12. External validity & effect	

2015		measure modification/interaction*	
December 1, 2015	Kelvin	13. Measurement of exposure & mediation	Writing assignment due
December 8, 2015	Kelvin	14. Validity and reliability of variables	
December 15. 2015	Kelvin	15. Infectious diseases & independence	Take home final exam due

* Indicates that the SPSS exercise from this class is to be turned-in for grading on the specified date

READING ASSIGNMENTS: (Readings should be completed before the lecture)

CLASS 1 (September 1, 2015): Introduction, basic study design & statistics review
Discussion topic: Why are epidemiologic findings so easily misinterpreted? Is public skepticism warranted? To what extent is it our responsibility to make sure our science findings are properly communicated within public domains?
Assigned Readings: None

CLASS 2 (September 8, 2015): Review common measures of effect & Data analysis
Discussion Topic: What are some of the measures of effect or association that are commonly used in Epidemiology? Are there questions of interest better answered by certain measures of effect than by others?
Assignment: Computer assignment 1 - measures of effect exercise & data analysis.
Due October 6, 2015.
Assigned Readings:

1) Aschengrau text Ch. 2 & 3.
2) Northridge ME. Annotation: public health methods—Attributable risk as a link between causality and public health action. *American Journal of Public Health* 1995; 85:1202-1204.
3) Morabia A. The Essential Tension Between Absolute and Relative Causality *American Journal of Public Health* 2001; 91(3): 335-336
4) Davies HT, Crombie IK, Tavakoli M. When can odds ratios mislead? British Medical Journal 1998; 316: 989-991.

Recommended readings:

1) Zhang J, Yu KF. What's the relative risk? A method of correcting the odds ratio in cohort studies of common outcomes. *JAMA* 1998; 280: 1690-1691.
2) Schwartz LM, Woloshin S, Dvorin EL, Welch HG. Ratio measures in leading medical journals: structured review of accessibility of underlying absolute risks. BMJ 2006; 333(7581):1248.
3) Stevens J, Cai J, Juhaeri, Thun MJ, Williamson DF, Wood JL. Consequences of the use of different measures of effect to determine the impact of age on the association between obesity and mortality. Am J Epidemiology 1999; 150(4): 399-407.

4) LeardMann CA, Powell TM, Smith TC, Bell MR, Smith B, Boyko EJ, Hooper TI, Gackstetter GD, Ghamsary M, Hoge CW. Risk factors associated with suicide in current and former US Military personnel. JAMA 2013; 310(5): 496-506.

CLASSES 3 & 4 (September 25 & September 29, 2015): Causal inference in epidemiology

Discussion topic: One of the primary purposes of epidemiology is to identify causes of health outcomes. What is a "cause"? How do we identify causes in epidemiology? What are some of the limitations of current epidemiological methods in identifying causes?

Assigned Readings:

1) Aschengrau text Ch.15.
2) Susser text pp. 33-52.
3) Greenland S, Pearl J, Robins, JM. Causal Diagrams for Epidemiologic Research. (1999) Epidemiology; 10(1): 37-48.
4) M Parascandola, D L Weed. (2001) Causation in epidemiology. *J Epidemiol Community Health* 2001;**55**:905–912.
5) Kaufman JS and Poole C. Looking back on "Causal thinking in the health sciences". Annual Review of Public Health 2000; 21: 101-119.
6) Hill AB. The environment and disease: Association or Causation? *Proceedings of the Royal Society of Medicine* 1965; 295-300.
7) Kreiger N. Epidemiology and the Web of Causation: Has anyone seen the spider? *Social Science and Medicine* 1994; 39:887-903.
8) McMichael AJ. Prisoners of the proximate: Loosening the constraints on epidemiology in an age of change. *American Journal of Epidemiology* 1999; 149:887-897.

Recommended readings

1) Taubes G. Epidemiology faces its limits. *Science* 1995; 269(5221):164-169.
2) Susser M, Susser E. Choosing a future for epidemiology: I. eras and paradigms. *American Journal of Public Health* 1996; 86 (5):668-673.
3) Susser M, Susser E. Choosing a future for epidemiology: II. From black box to Chinese boxes and eco-epidemiology. *American Journal of Public Health* 1996; 86 (5):674-677.
4) Feinstein AR. Scientific standards in epidemiologic studies of the menace of daily life. Science 1998; 242: 1257-1263.
5) Schwartz S, Susser E. What can epidemiology accomplish? *International Journal of Epidemiology* 2006; 35(3):587-590.
6) J Pearl. Introduction to Causal Inference – partial article. Int J Biostats 2010; 6: 1-11.

CLASSES 5 & 6 (October 6 & 13, 2015): Longitudinal studies (cohort & clinical trials)

Discussion Topic: What are the strengths and weaknesses of the various longitudinal study designs in assessing causality in general and relative to each other? Where do "natural experiments" fall in the hierarchy of longitudinal study designs?
Assignment: Computer assignment 2 - longitudinal studies. **Due October 27, 2015.**
Assigned Readings:

1) Aschengrau text Ch. 6, 7 & 8
2) Susser text pp. 129-137.
3) Hernan MA. A definition of the causal effect for epidemiologic research. J Epidemiol and Community Health 2004; 58: 265-271.
4) Benson K. Hartz AJ. A comparison of observational studies and randomized, controlled trials. *New England Journal of Medicine 2000*; 342(25):1878-1886.
5) Writing group for the Women's Health Initiative Investigators. Risk and benefits of estrogen plus progestin in healthy postmenopausal women. *JAMA 2002*; 288:321-333.
6) Pedersen AT, Ottesen B. Issues to debate on the Women's Health Initiative (WHI) study. Epidemiology or randomized clinical trials--time out for hormone replacement therapy studies? *Human Reproduction 2003*; 18(11):2241-2244.
7) Berkman LF. Seeing the forest and the trees – from observation to experiments in social epidemiology. Epidemiologic reviews 2004; 26(2): 2-6.
8) Lipsitch M, Tchetgen E, Cohen T. Negative controls: a tool for detecting confounding and bias in observational studies. Epidemiology 2000: 21(3): 383-8.

Recommended readings:

1) Susser E, Hoek HW, Brown A. Neurodevelopmental disorders after prenatal famine: The story of the Dutch Famine Study. *American Journal of Epidemiology 1998*; 147:213-216.
2) Cummins S, Petticrew M, Higgins C, Findlay A. Sparks L. Large scale food retailing as an intervention for diet and health: quasi-experimental evaluation of a natural experiment. *Journal of Epidemiology and Community Health 2005*; 59(12):1035-1040.
3)

CLASSES 7 & 8 (October 20 & 27, 2015): Case control studies
Assignment: Computer assignment 3 - case control studies. **Due November 10, 2015.**
Assigned Readings:

1) Aschengrau text Ch. 9.
2) Susser text pp. 212-225.
3) Morabia A. Case control studies in clinical research: Mechanisms and prevention of selection bias. *Preventive Medicine 1997*; 26:674-677.
4) Bloom MS, Schisterman EF, Hediger ML. Selecting controls is not selecting "normals": design and analysis issues for studying etiology of polycystic ovary syndrome. Fertility & Sterility 2006; 86: 1-12.
5) Susser ES, Schaefer CA, Brown AS, Begg MD, Wyatt RJ. The design of the prenatal determinants of schizophrenia study. *Schizophrenia Bulletin 2000*; 26:257-273.

6) Brown AS, Begg MD, Gravenstein S, Schaefer CA, Wyatt RJ, Bresnahan M, Babulas VP, Susser ES. Serologic evidence of prenatal influenza in the etiology of schizophrenia. *Archives of General Psychiatry 2004*; 61(8):774-780.

CLASS 9 (November 3, 2015): Ecological studies & meta analyses
Discussion Topic: What are the main criticisms of ecologic and meta-analyses study designs, and do you think that these criticisms are warranted? Are these two study designs really worse than the other types of observational studies (cross sectional, cohort, case control, etc) commonly used in epidemiology? Are they always just a poor substitute for other observational study designs?
Assigned Readings:

1) Aschengrau text Ch. 6
2) Rose, G. Sick individuals and sick populations. Int J Epidemiology 2001; 30: 427-432.
3) Pearce N. The ecological fallacy strikes back. *J Epidemiol Community Health* 2000;**54**:326–327.
4) Schwartz, S. The fallacy of the ecological fallacy: the potential misuse of a concept and the consequences. American Journal of Public Health 1994; 84(5): 819-824.
5) Rosenthal R and DiMatteo MR. META-ANALYSIS: Recent Developments in Quantitative Methods for Literature Reviews. Annu. Rev. Psychol. 2001. 52:59–82.

Recommended readings

1) Shapiro, S. Meta-analysis/Shmeta-analysis. Am Journal of Epidemiology 1994; 140(9):771-778.
2) Petitti, DB. Of babies and bathwater. American Journal of Epidemiology 1994; 140(9): 779-782.
3) Greenland, S. Can meta analysis be salvaged? Am Journal of Epidemiology 1994; 140(9): 783-787.

CLASS 10 (November 10, 2015): Internal validity: bias and confounding
Discussion Topic: A study has internal validity when the measure of effect found in that study is the true, correct measure of effect. What are the major factors that threaten internal validity in epidemiology? How can these factors be addressed to improve internal validity when analyzing your data? What are some of the things you need to consider when trying to maximize internal validity during data analysis?
Assigned Readings:

1) Aschengrau text Ch. 10, 11 & 12.
2) Susser text pp. 138-150.
3) Copeland KT, Checkoway H, McMichael AJ & Holbrook RH. Bias due to misclassification in the estimation of relative risk. American Journal of Epidemiology 1977, 105(5): 488-495.
4) Christenfeld JS, Sloan RP, Carroll D & Greenland S. Risk factors, confounding, and the illusion of statistical control. Psychosometric Medicine 2004, 66: 868-875.

5) Brenner H & Blettner M. Controlling for continuous confounders in epidemiologic research. Epidemiology 1997, 8(4): 429-434.

CLASS 11 (November 17, 2015) NO CLASS MEETING
Assignment: **Take Home Midterm Due**

CLASS 12 (November 25, 2015): External validity & effect measure modification
Assignment: Computer assignment 4 - effect modification.
Discussion Topic: What is effect measure modification? What role does the specific measure of effect used (risk difference, risk ratio, odds ratio, etc) play in assessing and interpreting effect modification in epidemiologic data? What are the implications of effect modification for epidemiology and public health?
Assigned readings:
1) Aschengrau text Ch. 13
2) Susser text pp. 319-328.
3) Morabia A., Ten Have T, & Landis JR. (1997) Interaction fallacy. J Clin Epidemiology. 50: 809-812.
4) Morabia A. (2007) Epidemiologic interactions, complexity, and the lonesome death of Max von Pettenkofer. American Journal of Epidemiology. 166(11): 1233-1238.

Recommended readings:
1) Oppenheimer GM & Susser E. (2007) Invited commentary: the context and challenge of von Pettenkofer's contributions to epidemiology. American Journal of Epidemiology. 166(11): 1239-1241.
2) Morabia A. (2007) Morabia responds to "context and challenge of von Pettenkofer's contribution to epidemiology. American Journal of Epidemiology. 166(11): 1242-1243.

CLASS 13 (December 1, 2015): Measurement of exposure & mediation
Discussion Topic: What does the term "mediation" refer to? How does this concept fit into Rothman's conceptual scheme of causation with its INUS causes, if at all? What are some of the issues around identifying mediation in epidemiology as discussed by Terry & Rundle?
Writing Assignment (paper): Is it possible to prove causation in epidemiology? Your paper should include a discussion about what we mean by a cause in epidemiology, how we try to identify causes in epidemiology, with specific reference to the thinking behind the RCT, cohort and case control study designs, and the limitations of epidemiology in identifying causes? – **Due December 2, 2014.**
Assigned Readings:
1) Aschengrau text Ch. 15.
2) Rothman KJ. (1995) Causes. American Journal of Epidemiology, 141(2): 90-95.
3) Hafeman DM, Schwartz S. (2008) Opening the Black Box: a motivation for the assessment of mediation. International Journal of Epidemiology, 38:838–845.

4) Terry MB, Neugut AI, Schwartz S, Susser E. (2000) Risk factors for a causal intermediate and an endpoint: reconciling differences. American Journal of Epidemiology, 151(4): 339-345.

CLASS 14 (December 8, 2015): Validity and reliability of variables
Discussion Topic: What do we mean by validity and reliability as it refers to the measurement of a variable (exposure, outcome, confounder, mediator, or effect modifier)? Why are these two concepts important in assessing causality in epidemiology? What methods can we use to evaluate whether a measurement is valid and reliable and what are some of the weaknesses of these methods?
Assigned Readings:

1) Wu AW, Dave NB, Dierner-West M, Sorensen S, Huang I-C, Rivecki DA. (2004)Measuring validity of self-reported symptoms among people with HIV. AIDS Care, 16(7): 876-881.
2) Kleinman RE, Murphy M, Wieneke KM, Desmond MS, Schiff A, Gapinski JA. (2007) Use of a single-question screening tool to detect hunger in families attending a neighborhood health center. Ambulatory Pediatrics, 7(4): 278-284.

Class 15 (December 15, 2015): Infectious diseases & independence
Discussion Topic: Halloran discusses how infectious diseases are "dependent happenings." What does she mean by this and why is this important in investigating potential causes and protective factors for infectious diseases? According to Halloran, how do infectious diseases differ from non-infectious diseases with regard to dependency of events? Do you agree with her that non-infectious diseases are independent?
Assignment: Take home final exam due
Assigned Readings:

1) Halloran ME. Overview of Vaccine Field Studies: Types of Effects and Designs. *Journal of Biopharmaceutical Statistics*, 2006; 16: 415–427.

Recommended readings

1) Halloran ME Struchiner CJ &. Study designs for dependent happenings. *Epidemiology 1991*; 2(5): 331-338.
2) Halloran ME & Struchiner CJ. Causal inference in infectious diseases. *Epidemiology 1995*; 6(2): 142-151.

NOTE: Additional readings may be assigned throughout the semester.

Last Updated August 27, 2015

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
EPI 75100: Epidemiological Methods II:
Survey and Research Methods
3 Credits
Fall 2015

Time and location	Silberman Building, Room 329, Tuesdays 6:05-7:50 PM (except during computer lab sessions, room C08)
Instructor	Assistant Professor, Heidi Jones, PhD MPH Email: hjon@hunter.cuny.edu Phone: 212-396-7750 *Email is the preferred method of communication.*
Office hours	Silberman Building, Room 526 Wednesdays from 4:00-6:00 PM (except during monthly epidemiology seminar) or by appointment
Course website	https://bbhosted.cuny.edu/webapps/blackboard/execute/announcement?method=search&context=course&course_id=_1153017_1&handle=cp_announcements&mode=cpview
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course will provide students with an understanding of the methods used to test research hypotheses; tools for selecting statistical tests appropriate for the particular study design and research hypotheses; and an ability to recognize the importance and impact of threat to validity such as confounding and bias. This course will also cover survey methods used in epidemiologic research.
Course prerequisites	EPI 75000
Course format	While the format for each session will vary, generally we will use the following format: • student questions / review (10 minutes) • lecture (45 minutes) • group work (discussion of articles /in-class exercises - 30 minutes) • review of key take home messages (15 minutes)
Required reading and resources	Szklo M, Nieto FJ. *Epidemiology: Beyond the Basics*. 3rd ed. Burlington, MA: Jones and Bartlett Learning, LLC; 2014.*(on reserve at Silberman library)* Additional assigned articles will be available on Bb.
Suggested reading and resources	Rothman KJ, Greenland S, Lash TL. *Modern Epidemiology.* 3rd ed. Philadelphia, PA: Lippincott Williams & Wilkins; 2008. *(on reserve)* Elliott RJ, Morrell CH. *Learning SAS in the Computer Lab*. 3rd ed. Pacific Grove, CA: Duxbury Press; 2009. *(on reserve)*

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Identify key sources of data for epidemiologic purposes	• List major publicly available US datasets • Compare the merits of answering a research question by re-use of existing information or designing a new study.	• Worksheets • In-class Midterm • Take home final
Use measures of disease frequency and association to appropriately describe the distribution and determinants of disease, and appropriately characterize statistical uncertainty around such estimates	• Explain the intrinsic relationships between common measures of association, such as odds ratio, risk ratio and rate ratio • Calculate effect measure modification on the additive and multiplicative scale • Compare the interpretation of effect measure modification on the additive and multiplicative scale • Explain the difference between age, period and cohort effects • Explain how statistical adjustment works • Calculate an adjusted odds ratio by hand • Assess mediation, explain the limitations of mediation analysis	• Homeworks 1-4 • In-class Midterm • Worksheets • Take home final
Critically read and evaluate the strengths and limitations of epidemiologic literature from a methodologic perspective	• Use directed acyclic graphs to identify confounders and colliders • Identify whether specific research questions require representative samples	• Homeworks 1-4 • In-class Midterm • Worksheets • Take home final

	• Assess public health studies against recognized guidelines	
Select epidemiologic study designs, data collection techniques, and analytic approaches suitable for different scientific inquiries	• Define a cause, explain the strengths and weaknesses of thinking about causality in terms of Rothman's pies, exchangeability or directed acyclic graphs • Explain the difference between a causal factor and a risk factor • Draw directed acyclic graphs showing how loss to follow-up, missing data and misclassification may result in colliding. • Draw the directed acyclic graph for a control exposure and give an example • Compare the causal inferences which can be made from an RCT, an instrumental variable analysis, a cohort study, a case-control study and a cross-sectional study • List all the considerations that affect generalizability of an RCT • Describe key applications of instrumental variable analysis, and key factors which might affect its internal validity • Explain the difference between risk stratification and causal analysis in terms of application and approach	• Homeworks 1-4 • In-class Midterm • Worksheets • Take home final
Identify key threats to validity (internal and external) within and across epidemiologic studies	• Classify biases into structural types and explain how each type of bias may affect an RCT, an instrumental variable	• Homeworks 1-4 • In-class Midterm • Worksheets

	analysis, a cohort study, a case-control study and a cross-sectional study • Calculate the effect of misclassification on measures of association using the concept of sensitivity and specificity • Identify the uses of propensity scores	• Take home final
Use statistical software to collect, retrieve, analyze and summarize epidemiologic data	• Draw a Kaplan Meier plot by hand and using SAS • Calculate an adjusted odds ratio and an adjusted hazard ratio using SAS for a major US survey • Identify the assumptions of Cox proportional hazards regression and interpret a hazard ratio in SAS • Calculate a sample size for a comparison of means and a comparison of proportions in SAS	• Homeworks 1-4 • In-class Midterm • Worksheets • Take home final

Conceptual Framework
The overarching conceptual framework for this course centers on the counterfactual definition of a cause, specifically how this definition is incorporated into observational study design, analysis and interpretation of results, and ultimately our ability to make causal inference.

Course Assessments
Your understanding of the course material will be evaluated through four homework assignments using SAS statistical software (based on in-class laboratory exercises), an in-class midterm, a take home final exam, nine worksheets based on the readings and class participation

Homework: There will be 4 homework assignments based on the in-class SAS exercises for which you will need to analyze data and interpret findings in SAS, and that comprise 30% of your grade.

Exams: There will be an in-class, closed book midterm with short answer questions and hand calculations. There will also be a cumulative take home exam, which will include short answer questions, reviewing a published article, and analyzing and interpreting data in SAS.

Worksheets: There will be 9 worksheets with practice calculations and/or short answer responses to the readings. These worksheets will help to focus your reading of the material and prepare you for class discussions. They will be graded as credit/no credit for completion, and comprise 5% of your grades.

Attendance and class participation: The reading assignments will help you master course materials and actively participate in class; 5% of your grade will be based on your class participation and attendance.

Grading

Evaluation criteria
Homework assignments and exams will be graded based on the extent to which the answers are correct. The worksheets will be graded as credit/no credit. I will use the following rubric for class participation:

Class participation grading rubric (5% of your grade, perfect score=20)*

	Strong work (4-5)	Needs development (2-3)	Unsatisfactory (0-1)
Active listening (5 points)	Actively and respectfully listens to peers and instructors	Sometimes displays lack of interest in comments of others, occasionally 'tunes out'	Projects lack of interest or disrespect for others, checks email, instant messages / text messages, non-course internet material during class time
Preparation (5 points)	Arrives fully prepared with all assignments and reading completed, arrives to class with questions	Sometimes arrives unprepared or with only superficial preparation	Exhibits little evidence of having read or thought about assigned material
Quality of contributions to class discussions (5 points)	Comments and questions frequently help move seminar discussion forward	Comments and questions sometimes advance the discussion, but sometimes do little to move it forward	Comments do not advance the conversation or are actively harmful to it, or student does not participate in class discussions
Attendance (5 points)	Arrives to class on time, does not have unexcused absences	Usually arrives to class on time, informs instructor about unavoidable absences	Arrives consistently late, does not inform instructor about absences

* adapted from: http://www46.homepage.villanova.edu/john.immerwahr/TP101/EvDay/discussion%20rubric.pdf. Accessed on July 21, 2010

The relative weight of each course component is as follows:

Assessment	Weight
Homework assignments (average score)	30%
Midterm (in-class)	30%
Final exam (take home)	30%
Worksheets	5%
Class participation	5%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Class will begin promptly to maximize our time together. Please arrive to class on time, and be prepared to contribute to class discussion. The lectures will be video-taped and made available on Blackboard for excused absences. Please note that group discussions and laboratory exercises will not be taped. Participation and in-class attendance are worth 5% of your grade.

Late/incomplete submission of assignments
Homework assignments are due electronically at 6 PM, prior to the beginning of class. The final exam is due at midnight. **Late assignments will receive 4 points (out of 100) deducted for every day late and NO assignments will be accepted more than 3 days late (i.e. later than 6 PM on Friday).**

Make-ups, rewrites, and extra credit
There will be not be a make-up exam for the in-class midterm. Depending on how the class performs on the midterm, there may be an opportunity for extra credit for this exam; there will not be any other opportunities for extra credit or rewrites.

Expectations of students
Attend lectures & labs, read textbook and articles prior to class, participate during class discussions, seek help/ask questions early and often, provide the instructor with constructive feedback on course material and content, and, hopefully, have fun with the material.

Expectations for the instructor
I will respond to emails within 24-48 hours, excluding weekends. I will tailor the class to your needs and interests depending on the feedback I receive. Generally, I will return graded homework assignments within two weeks (will return them within one week, when possible).

Accessibility
Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity
Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

"Green" policies

In an attempt to save paper, homework assignments and the take home final exam will be submitted electronically and will be returned electronically, with comments in track changes. Suggestions for other adjustments to the course to reduce environmental impact are always welcome. Be sure to check your Hunter or Graduate Center email address regularly for class announcements and assignments.

Use of Blackboard

You must sign up for Blackboard to receive course readings, updates and obtain lecture notes and other handouts. For instructions on registering for Blackboard, go to: http://bb.hunter.cuny.edu. Please make sure that you have access to Blackboard through Hunter.

Acknowledgements

This syllabus builds upon courses given by Drs. Sharon Schwartz and Mary Beth Terry, professors in epidemiology at the Mailman School of Public Health at Columbia, and Dr. Luisa Borrell at the CUNY School of Public Health at Lehman College. Additionally, I would like to acknowledge Dr. Mary Schooling at the CUNY School of Public Health at Hunter College, who also teaches this course and has made improvements and adjustments in previous semesters.

Course Schedule

Please note, while the overall content of this course will be covered as outlined, the syllabus may change based on the need to adapt to student interests, feedback and expertise. Always check the Blackboard site for the most up-to-date information on course readings and assignments.

Theme		Date	Topic	Readings and Assignments
Main association between exposure and outcome and causal inference	1	09/01/15	Causation and causal inference	• Rothman, Greenland & Lash, Chapter 2, Causation and causal inference • Broadbent A. Causation and models of disease in epidemiology. *Stud Hist Philos Biol Biomed Sci*. 2009;40:302-11.
	2	09/08/15	RCT and cohort designs; age, period cohort analyses	• Szklo & Nieto, Chapter 1 • Schultz et al. CONSORT 2010 Statement: updated guidelines for reporting parallel group randomized trials. *BMJ*. 2010;340:c332. • Keyes KK et al. What is a cohort effect? Comparison of three statistical methods for modeling cohort effects in obesity prevalence in the United States, 1971-2006. *Soc Sci Med.* 2010;70:1100-8. • **Worksheet 1 due at 6 PM**
		09/15/15 & 09/22/15	No class scheduled	
	3	09/29/15	**Lab 1:** Introduction to SAS, measures of frequency, association and non-parametric survival analysis	• Szklo & Nieto, Chapter 2 & 3 • **Worksheet 2 due at 6 PM** • ***Note: Class will be in Room C08***
	4	10/06/15	Case control studies and sampling design and methods	• Abelson, *Statistics as Principled Argument.* Hillsdale, NJ: Lawrence Erlbaum Associates; 1995, Chapter 1, Making claims with statistics. • Walker. Reporting the results of epidemiologic studies. *Am J Public Health*. 1986:76:556-8. • Outlaw et al. Using motivational interviewing in HIV field outreach with young African American men who have sex with men: A randomized clinical trial. *Am J Public Health*. 2010:100:S146-51 • **Worksheet 3 due at 6 PM**
	5	10/13/15	**Lab 2:** Sample size and power in SAS	• Kelsey, Whittemore, Evans & Thompson. *Methods in Observational Epidemiology*. New York, NY: Oxford University Press, 1996, Chapter 12, Methods of sampling and estimation of sample size.

Theme		Date	Topic	Readings and Assignments
				• Braitman. Confidence intervals extract clinically useful information from data. *Ann Intern Med*. 1988:108:296-8 • Rothman. Significance questing. *Ann Intern Med.* 1986:445-7. • Nuzzo.Statistical errors.*Nature.2014:506:150-2* • **Homework 1 due at 6 PM** • ***Note: Class will be in Room C08***
Threats to internal validity / alternative explanations	6	10/20/15	Selection and information bias	• Szklo & Nieto Chapter 4, • Gradus et al. Acute stress reaction and completed suicide. *Int J Epidemiol* 2010:doi.10.1093/ije/dyq112:1-7 • **Worksheet 4 due at 6 PM**
	7	10/27/15	Confounding	• Szklo & Nieto Chapter 5, • Greenland & Robins. Identifiability, exchangeability, and epidemiological confounding. *Int J Epidemiol* 1986;15:413-9. • Maldonado & Greenland. Estimating causal effects. *Int J Epidemiol* 2002;31-422-29. • **Homework 2 due at 6 PM** • **Worksheet 5: Bring to class 5 sample midterm questions on index cards (with answers on the back)**
	8	11/03/15	MIDTERM	
Strengthening causal inference and hypotheses / causal partners and causal mechanisms	9	11/10/15	Effect measure modification & mediation	• Szklo & Nieto Chapter 6 & App. C, • Hafeman & Schwartz. Opening the black box: a motivation for the assessment of mediation. *Int J Epidemiol.* 2009;38:838-45. • Knol et al. When one depends on the other: reporting of interaction in case-control and cohort studies. *Epidemiology*. 2009:20:161-66 • Suzuki, Yamamoto & Tsuda. Identification of operating medication and mechanism in the sufficient-component cause framework. *Eur J Epidemiol* 2011:26:347-57. • Van der Weele. Subtleties of explanatory language: what is meant by "mediation"? *Eur J Epidemiol.* 2011;26:343-6. <u>Optional:</u> • Kaufman. Interaction reaction. *Epidemiology*. 2009:20:159-60 • **Worksheet 6 due at 6 PM**

Theme		Date	Topic	Readings and Assignments
	10	11/17/15	**Lab 3**: Data analysis for confounding, mediation and effect measure modification	• Ahlbom A, Alfredsson L. Interaction: a word with two meanings creates confusion. *Eur J Epidemiol*. 2005;20:563-4 • Andersson T et al. Calculating measures of biological interaction. *Eur J Epidemiol.* 2005;20:575-9. • Karp. Getting started with proc logistic. *SUGI* Paper 26. <u>Optional:</u> • Szklo & Nieto chapter 7 • **Worksheet 7 due at 6 PM** • ***Note: Class will be in Room C08***
	11	11/24/15	**Lab 4:** Cox proportional hazards model, adjusted SEs using SUDAAN	• Szklo & Nieto Chapter 7 • Smith et al. Survival analysis using cox proportional hazards modeling for single and multiple event time data. *SUGI* Paper 28 <u>Optional:</u> • Clark et al. Survival analysis Part 1: basic concepts and first analyses. *Brit J Cancer* 2003;89:232-8. • Bradburn et al. Survial analysis Part 2: multivariate data analysis – an introduction to concepts and methods *Brit J Cancer* 2003;89:431-6 • ***Note: Class will be in Room C08***
	12	12/01/15	Directed Acyclic Graphs (lab) **Worksheet 8 in class**	• Hernán et al. Causal knowledge as a prerequisite for confounding evaluation: an application to birth defects epidemiology. *Am J Epidemiol*. 2002;155:177-84. • Shrier et al. Reducing bias through directed acyclic graphs. *BMC Med Res Meth.* 2008;doi:10.1186/1471-2288-8-70. • Yang et al. Serum folate and cancer mortality among US adults: findings from the NHANES. *Cancer Epidemiol Biomarkers Prev* 2009;18:1439-47. • **Homework 3 due at 6 PM** • ***Note: Class will be in Room C08***
	13	12/08/15	Instrumental variables	• Rassen et al. Instrumental variables I: instrumental variables exploit natural variation in nonexperimental data to estimate causal relationships. J *Clin Epidemiol*. 2009:62:1226-

Theme		Date	Topic	Readings and Assignments
				32 • Glymour et al Does childhood schooling affect old age memory or mental status? Using state schooling laws as natural experiments. *J Epidemiol Community Health.* 2008;62:532-7. • Wong et al. Estimating influenza vaccine effectiveness in community-dwelling elderly patients using the instrumental variable analysis method. *Arch Intern Med*. 2012;172:484-91 • Voight et al. Plasma HDL cholesterol and risk of myocardial infarction: a mendelian randomization study. *Lancet*. 2012:380:572-80. <u>Optional:</u> • Rassen et al. Instrumental variables II: instrumental variable application-in 25 variations, the physician preference generally was strong and reduced covariate imbalance. *J Clin Epidemiol* 2009:62:1233-41. • **Worksheet 9 due at 6 PM** • **Homework 4 due on 5/11 at 11:59 PM**
	14	12/15/15	Final review	Come prepared to ask questions
	15	12/22/15	No class	Take home FINAL DUE at midnight

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
BIOS 75000: Applied Biostatistics I
3 Credits
Spring 2016

Time and location	Thursday, 6:05-7:50 pm, Silberman (2180 3rd Ave), Room C05/C06
Instructor	Hongbin Zhang, PhD CUNY School of Public Health 55 West 125th Street, Room 806 Phone 646-664-8375 hongbin.zhang@sph.cuny.edu (preferred contact)
Office hours	by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	A follow up course to PH 7500/75100 and PH 75200/75300, covering intermediate-level statistical methods commonly used in public health research. Topics include: simple and multiple linear regression; logistic regression; residual analysis; variable selection. Focus on practical applications, utilizing statistical software.
Course prerequisites	PH 750/751 and PH 752/753 or equivalents
Course format	This course is taught with a combination of lectures and in-class computer exercises using SAS. All materials are available on the course website.
Required reading and resources	Ford AC, et al. 2005. *American Journal of Epidemiology* 162:454-460. Hall SL, Greendale GA, 1998. *Calcified Tissue International* 63:183-189. Simanek AM, Dowd JB, Aiello AE. 2009. *International Journal of Epidemiology* 38:775-787. Wisborg K, et al. 2001. *American Journal of Epidemiology* 154:322-327.
Suggested reading and resources	Fox J. *Applied Regression Analysis and Generalized Linear Models. Third Edition*. Sage Publications; 2015. ISBN-10: 1452205663, ISBN-13: 978-1452205663. (Second Edition is also all right.)

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	***After successfully completing this course, you are expected to be able to:***	***Competencies and learning objectives will be assessed as part of the following course assignments:***
Biostatistics-track Competencies		
Describe assumptions, procedures, strengths and limitations of statistical methods that are used in public health research	• Describe and explain the model equations, assumptions of linear regression and logistic regression • Understand the difference of estimation procedures of linear regression and logistic regression	• Mid-term and Final Examinations • Homework 1 & 2
Select statistical methods that are suitable for different purposes of analysis and different types of data	• Understand the difference between continuous outcome and binary outcome; • Able to decide the type of model to use for confounding model or for prediction model; • Compare different methods for identifying confounders	• Mid-term and Final Examinations • Homework 1 & 2 • Research Notes 1 & 2
Apply statistical methods correctly in public health research	• Set up linear regression and logistic regression models that are suitable for the data and research question*	• Mid-term and Final Examinations • Homework 1 & 2 • Research Notes 1 & 2
Use information technology and computer software effectively for management, analysis of public health data	• Use SAS to do basic data management; • Use SAS to conduct linear regression and logistic regression	• In-class Computer Exercises • Research Notes 1 & 2
Accurately describe computer outputs of those analyses and	• Interpret results of linear regression and logistic regression analyses; assess the	• Mid-term and Final Examinations • Homework 1 & 2

appropriately interpret the statistical results	extent to which the results support the initially proposed hypothesis; • Compare the interpretation of absolute and relative risk • Apply methods to determine effect modification, including homogeneity and expected versus observed • Evaluate the predictive accuracy and reliability of the results; and examine if the results are consistent with the statistical assumptions of the methods and models	• Research Notes 1 & 2
Write scientific reports of statistical analyses correctly	• Write scientific reports of linear regression and logistic regression analyses, with properly formatted and labeled tables and figures; • Write scientific reports of linear regression and logistic regression analyses, with essential components • Discuss planning and evaluating epidemiologic studies, threats to validity and value of the inferences drawn from these studies	• Research Notes 1 & 2
Summarize correctly and critically evaluate statistical analyses in published literature	• Correctly summarize results of linear regression and logistic regression analyses in published literature, and critically evaluate statistical aspects of the research*	• Research Notes 1 & 2

Epidemiology-track Competencies

Identify key sources of data for epidemiologic purposes	• Describe the design of major US surveys (NHANES) and explain how this affects analysis of the survey • Conduct a web search to identify publicly available population-based health data to answer research questions	• Mid-term and Final Examinations • Homework 1 & 2 • Research Notes 1 & 2
Use measures of disease frequency and association to appropriately describe the distribution and determinants of disease, and appropriately characterize statistical uncertainty around such estimates	• Compare the interpretation of absolute and relative risk • Apply methods to determine effect modification, including homogeneity and expected versus observed • Explain additive and multiplicative effect modification • Apply descriptive and analytic statistics to describe the distribution of health conditions using publicly available data • Test hypotheses regarding associations of health with environmental, demographic, social and economic factors using publicly available data. • Use confidence intervals and p-values to assess statistical uncertainty using publicly available data	• Mid-term and Final Examinations • Homework 1 & 2 • Research Notes 1 & 2
Select epidemiologic study designs, data collection techniques, and analytic approaches suitable for different scientific inquiries	• Compare different methods for identifying confounders • Compare the biases generated by colliders and confounders • Discuss planning and evaluating epidemiologic studies, threats to validity	• Mid-term and Final Examinations • Homework 1 & 2 • Research Notes 1 & 2

	and value of the inferences drawn from these studies • Construct a data analysis plan for a publicly available dataset that is appropriate given the study design used to collect that data and the research question being addressed	
Use statistical software to collect, retrieve, analyze and summarize epidemiologic data	• Identify the type of data to be analyzed • Implement descriptive and analytic analyses in SPSS • Select appropriate statistical methods for the data type and the research question	• Mid-term and Final Examinations • Homework 1 & 2 • Research Notes 1 & 2

Course Assessments

Descriptions on details about the assignments and grading criteria will be shown on the course website

Mid-term Examination: Students will take an in-class examination, solving technical and computational problems that are mostly related to linear regression analysis.

Final Examination: Students will take an in-class examination, solving technical and computational problems that are mostly related to logistic regression analysis.

Homework 1: Students will solve a set of technical and computational problems that are mostly related to linear regression analysis and submit the answers.

Homework 2: Students will solve a set of technical and computational problems that are mostly related to logistic regression analysis and submit the answers.

Research Note 1: A subset of data from a health survey will be provided. Each student will develop a hypothesis that could be investigated with the data, analyze the data using linear regression, and write a research report.

Research Note 2: A subset of data from a health survey will be provided. Each student will develop a hypothesis that could be investigated with the data, analyze the data using logistic regression, and write a research report.

In-class Computer Exercises: During the last 30~40 minutes of most classes, students will do computer exercises using computer terminals in C08, and upload their output files onto the assigned location of Discussion Board of the course website or submit them to the instructor by email after the class. The output files may be edited to remove results with errors.

Class Participation: Students should actively participate in the classes by asking questions to the instructor and orally responding to questions from the instructor during the lecture and in-class exercise.

Grading

Evaluation criteria

Evaluation criteria for research notes are described in the assignment instructions, which will be posted on the course website. Homework and in-class examinations are assessed primarily with respect to the accuracy of answers and the appropriateness of the approach adopted to solve the problems. Class participation is assessed in terms of the quality and frequency of questions and replies; and the in-class computer exercises completeness.

The relative weight of each course component is as follows:

Assessment	Weight
Mid-term in-class examination	20%
Final in-class examination	20%
Research note 1	20%
Research note 2	20%
Homework 1	5%
Homework 2	5%
In-class exercise and class participation	10%
	100%

The grading system for the course is as follows:

Letter Grade	Quality Points	Percentage
A+	4.0	97.0 - 100
A	4.0	93.0 - 96.9
A-	3.7	90.0 - 92.9
B+	3.3	87.0 - 89.9
B	3.0	83.0 - 86.9
B-	2.7	80.0 - 82.9
C+	2.3	77.0 - 79.9
C	2.0	70.0 - 76.9
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the

student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Attendance is required. No student will get a full point for "in-class exercise and class participation" if s/he misses more than 3 classes or the number of in-class exercise outputs that are not submitted in time is 3 or more.

Late/incomplete submission of assignments

Late/incomplete submission of Research Notes is not accepted. Late submission of Homework is not accepted. In-class exercise outputs are accepted if they are submitted by the end of the class or within 4 days after the class.

Make-ups, rewrites, and extra credit

With permission of the instructor, students may be allowed to resubmit research notes, homework assignments, and in-class computer exercise outputs before the due date.

Expectations of students

- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Know how to use library resources and citation tools.
- Show respect to everyone in the course.
- Classes are offered in a computer laboratory. During the class, NEVER do any email work or website browsing unrelated to the class.
- Complete all assignments by their assigned due date.
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Regularly check the course website and official university email for course correspondence.
- There is no group discussion in this course, but students are expected to participate actively in the classes, by asking scientific and technical questions to the instructor if there are any unclear issues, and by responding to questions from the instructor.
- Contact the professor directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.

- Because in-class exercise outputs and homework assignments 1 and 2 are not returned with corrections or comments, students are expected to compare their outputs and answers with the model scripts/outputs and answer keys that will be posted on the course website.

Expectations for the instructor

- Provide course materials (including presentation files, data files, computer programs, assignment instructions, copies of or links to articles in the required reading list), regular announcements, reminders, suggestions on the course website.
- Answer questions asked by students during the class.
- Respond to students' email inquiries within 2 days.
- Provide students with individualized in-person instructions during their appointment visits.
- Communication about grades and progress in the course will be given through the course website.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

This schedule may change as the semester progresses. Refer to the current academic calendar for important dates.

Session	Date	Topic	Readings/Resources	Assessment
1	2/4	Introduction to multiple linear regression 1: Basic models and partial regression coefficients (Part 1)	JF 5	ICE
2	2/11	Introduction to multiple linear regression 1: Basic models and partial regression coefficients (Part 2)	JF 5; HG	ICE
	2/18	Last day to drop without a grade of "W"		
3	2/25	Introduction to multiple linear regression 2: Categorical independent variables	JF 7.1-2	ICE
4	3/3	Introduction to multiple linear regression 3: Ordinary least squares and R^2	JF 5	ICE
5	3/10	Introduction to multiple linear regression 4: Statistical inference.	JF 6.1-2	ICE Homework 1 assigned
6	3/17	Issues in regression analyses 1: Examination of hypotheses on causal relationships I. Explanation of RN1. HW1 answers	JF 6.3 & 1.2	Homework 1 due Research Note 1 assigned
7	3/24	Issues in regression analyses 2: Nonlinearity (Mid-term in-class examination)	JF 12.3	Mid-term in-class examination
8	3/31	Introduction to logistic regression 1: Basic models	JF 14.1	ICE
9	4/7	Introduction to logistic regression 2: Adjusted odds ratio	JF 14.1; AF; KW	ICE Research Note 1 due
	4/11	Last day to withdraw with a grade of 'W'		
10	4/14	Issues in regression analyses 3: Interaction	JF 7.3	ICE
11	4/21	Introduction to logistic regression 3: Maximum likelihood estimation.	JF 14.1.4-5	
	4/28	Spring Recess (no class)		
12	5/5	Issues in regression analyses 4: Examination of hypotheses on causal relationships II.	SDA	ICE Homework 2 assigned

				Research Note 2 assigned
13	5/12	Introduction to logistic regression 4: Ordinal and polytomous logistic regression.	JF 14.2	ICE Homework 2 due
14	5/19	(Final in-class examination)		Final in-class examination
15	5/26	Issues in regression analyses 5: Multi-collinearity, stepwise regression, partial and part correlation	JF 13	ICE
	5/28			Research Note 2 due

Keys: AF = Ford et al. 2005; HG = Hall & Greendale 1998; ICE = In-class computer exercise; JF = recommended textbook by John Fox; KW = Wisborg et al. 2001; SDA = Simanek Dowd & Aiello 2008.

Spring 2016

STAT 752: Analysis of Categorical Data

Meeting times: Thursdays 7:35 – 9:25 pm, Room E920

Instructor: Dobrin Marchev

Email: dm1901@hunter.cuny.edu

Learning Outcomes
We will begin with a review of the binomial and multinomial probability distributions, and the basic principles of estimation and hypothesis testing. These tools will be applied first to statistical inference in two-way contingency tables, then to logistic regression and log-linear models. Generalized linear models will be presented as a unifying framework. The emphasis throughout will be on the application of statistical methods rather than theory.

Prerequisite
C or better in STAT 614 or STAT 750 or BIOS 750 on an equivalent statistics course.

Textbook
"An Introduction to Categorical Data Analysis" by Alan Agresti, 2nd edition, 2007

Software
Many examples will be given implemented using the R package. It can be downloaded for free from http://www.r-project.org/
However, you are free to use any other statistical software you wish.

Grading Policy
There will be regular weekly homework assignments worth 60% of the grade. The remaining 40% are based on the final exam at the end of the course including both in-class and take-home components.

Incomplete and Credit/Non-Credit
Students wishing to *request an INC grade* must do so in writing explaining the reasons, AND have AT LEAST a C average. Students wishing to *request a CR/NCR grade* must have taken the exams, and have at least a 40% average.

Policy on Cheating
Cheating is an extremely serious offense. You are encouraged to discuss homework problems with your classmates, but all work submitted must be your own. If multiple students turn in identical solutions, all of them will receive a zero. Collaboration on the exam is strictly prohibited. Any students who work together on the final will be given a score of zero. Hunter College regards acts of academic dishonesty (e.g., plagiarism, cheating on examinations, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The college is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures.

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

BIOS77001: Applied Biostatistics III

3 Credits
Spring 2016

Time and location	Tuesdays 4.15-6.15 pm Room C196.02 (Graduate Center)
Instructor	Katarzyna Wyka, PhD: kwyka@hunter.cuny.edu (response time 24-48 hours)
Office hours	Mondays 4.30-6PM (room 537, Silberman Building) or by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	An advanced biostatistics course that focuses on mixed models, GEE for analysis of correlated data, management of missing data and imputation, propensity scoring, and causal inference.
Course prerequisites	BIOS 75100 and EPI 75100
Course format	This is a lecture-lab course. Topics are presented by the instructor and labs are completed by students during class. All materials are posted on Blackboard. Students complete data analysis projects and present their analyses in class.
Required reading and resources	Data Analysis Using Regression and Multilevel/Hierarchical Models by Andrew Gelman and Jennifer Hill. Paperback: 648 pages Publisher: Cambridge University Press; 1 edition (December 18, 2006) ISBN-10: 052168689X ISBN-13: 978-0521686891 Price on Amazon.com: $55.20
Suggested reading and resources	Access to SAS and R statistical software. Additional readings are listed under Course Schedule on p. 5.

Program Competencies	**Course Learning Objectives**	**Relevant sessions and assignments**
This course will help you:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be addressed as part of the following course assessments:
Describe assumptions, procedures, strengths and limitations of statistical methods that are used in public health research	• Explain the assumptions necessary for statistical inference in Generalized Estimating Equations (GEE), Generalized Linear Mixed Models and instrumental variable framework • Reflect intelligently on the limitations inherent in both the data under study as well as the statistical methods used to analyze the data	Reports 1, 2 and 3
Select statistical methods that are suitable for different purposes of analysis and different types of data	• Compare and contrast the similarities and difference of intermediate - statistical methods and their use in addressing various research questions	Reports 1, 2 and 3
Apply statistical methods correctly in public health research.	• Show competency in techniques related to the analysis of correlated public health data • Implement instrumental variable analysis and propensity score matching analysis and explain their relevance to causal inference • Implement and interpret a meta-analysis • Apply statistical techniques related to missing data problem • Show competency in assessing model fit and model building	Reports 1, 2 and 3
Use information technology and computer software effectively for collection, management, analysis and presentation of public health data.	• Master the use of statistical software for collection, management and analysis of public health data	Reports 1, 2 and 3
Accurately describe computer outputs of these analyses and appropriately interpret the statistical results	• Interpret computer output from GEE, mixed models and instrumental variable analyses • Interpret computer output from missing data imputation problems	Reports 1, 2 and 3
Write scientific reports of statistical analyses correctly with tables and figures.	• Produce data analysis reports of the highest quality as to their conciseness, readability and cohesion • Create appropriate tables and figures that adequately convey the key points of statistical analysis	Reports 1, 2 and 3
Orally present statistical findings clearly and effectively.	• Present your findings orally clearly and effectively • Incorporate feedback into an improved data analysis report after in class “peer review”	Reports 1, 2 and 3
Summarize correctly and critically evaluate statistical analyses in published literature.	• Identify research questions posed in published reports • Critique the analytic approach and data presentation in published research	Reports 1 and 2

Last updated 1.29.15

Course Assessments

Your understanding of the course material will be evaluated through a total of three (3) data analysis reports. Each report will consist of 3 problems. Master level students should choose 2 out of 3 problems. Each student will be expected to present his/her results in class and actively participate in the constructive critique/review of the work of his/her peers. You will have the chance to revise and resubmit each report after the first round of critique/review. This will give you the chance to deepen your analysis and bolster your mastery of the statistical methods.

Grading

Evaluation criteria
All assignments will be evaluated based upon rubrics found on the course website.

The relative weight of each course component is as follows:

Assessment	Weight
Report 1	30%
Report 2	30%
Report 3	30%
Attendance and class participation	10%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an “unofficial withdrawal” (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Regular weekly attendance is strongly advised. Your absence is detrimental not only to your performance but also to that of your colleagues, who benefit from your important feedback during in-class discussions.

Late/incomplete submission of assignments
- Late reports will not be accepted under any circumstance.
- A full letter grade will be deducted if a student fails to show up on the day his/her data analysis presentation is scheduled.

Make-ups, rewrites, and extra credit
There are no make-ups, rewrites, or extra credit allowed.

Expectations of students
- Check email and Blackboard announcements on weekly basis
- Access course materials on weekly basis
- Complete and submit reports on time
- Participate in class discussion board

Expectations for the instructor
- Provide regular announcements and reminders on the course website and via email
- Respond to student email within 24-48 hours Monday through Friday
- Grade and provide feedback on assignments within 1 week of the due date
- Communicate grades and progress through Blackboard (My Grades)

Accessibility
Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Last updated 1.29.15

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

The preliminary schedule of lectures below is meant to serve as a guide. Depending on the class needs, interests, and progress during the semester, some topics may be given more or less class time than others. Accordingly, the scheduling of in-class presentations and the due dates of reports may vary.

Important dates

- LAST DAY TO DROP CLASS WITH THE GRADE OF "WD": February 18th
- LAST DAY TO DROP CLASS WITH THE GRADE OF "W": April 11th

Refer to the current academic calendar for other important dates.

Date	Lecture	Topic	Reading & Assignments
2/2	#1	**Models for correlated data** Extending GLM: Generalized Estimating Equations (GEE) • Models for Continuous outcomes • Models for Binary outcomes Generalized Linear Mixed Models (GLMM) • Variance components • Random intercept model	Gelman & Hill chapter 12 Diez-Roux AV. Multilevel analysis in public health research. Annual Review of Public Health 2000; 21:171-92. Hubbard AE, Ahern J, Fleischer NL, Van der Laan M, Lippman SA, et al. To GEE or Not to GEE. Comparing population average and mixed models for estimating the associations between neighborhood risk factors and health. Epidemiology 2010; 21:467-474. Online resources for GLMM
2/16	#2	**Models for correlated data** Generalized Linear Mixed Models (GLMM) • Random intercept and slope • Strategies for Model Building	Gelman & Hill chapter 13.1-13.2, 13.4-13.5 Singer J. Using SAS Proc Mixed to fit multilevel models, hierarchical models, and individual growth models. Journal of Educational and Behavioral Statistics 1998; 24:323-355. Gary-Webb TL, Baptiste-Roberts K, Pham L, Wesche-Thobaben J, Patricio J, et al. Neighborhood and weight-related health behaviors in the Look AHEAD (Action for Health in Diabetes) Study. BMC Public Health 2010; 10: 312.

2/23	#3	**Models for correlated data** Generalized linear mixed models (GLMM) • Multilevel logistic regression • Diagnostics for GLMM	Gelman & Hill chapter 14.1-14.2 Ene M, Leighton EA, Blue GL, Bell BA. Multilevel Models for Categorical Data Using SAS Proc GLIMMIX: SESUG 2014, Paper 134-2014.
3/1	#4	**Models for correlated data** Generalized linear mixed models (GLMM) • Models for longitudinal data • Mediation analysis	Gelman & Hill chapter 11.3 Landerman RL, Mustillo SA, Land KC. Modeling repeated measures of dichotomous data: testing whether the within-person trajectory of change varies across levels of between-person factors. Social Sciences Research 2011; 40(5), 1456-1464. Valeri L, VanderWeele TJ. Mediation analysis allowing for exposure-mediator interactions and causal interpretation: theoretical assumptions and implementation with SAS and SPSS macros. Psychological Methods 2014; 18(2): 137-150.
3/8	#5	**Meta-Analysis** • Fixed vs. random effects models • Reporting the results of meta-analysis • Criticism of meta-analysis	Vandenbroucke JP, von Elm E, Altman DG, Gotzsche PC, Mulrow CD, et al. Strengthening the reporting of observational studies in epidemiology (STROBE): Explanation and elaboration. Annals of Internal Medicine 2007; 147:163-194. Moher D, Shamseer L, Clarke M, Ghersi D, Liberati A, Petticrew M, et al. Preferred reporting items for systematic review and meta-analysis protocols (PRISMA-P) 2015 statement. Systematic Review Journal 2015; 4:1. Lies, Damned Lies, and Medical Science, November 2010 ATLANTIC MAGAZINE http://www.theatlantic.com/magazine/archive/2010/11/lies-damned-lies-and-medical-science/8269/
3/15	#6	**Report 1 discussion**	**Report 1 draft due**
3/22	#7	**Causal Inference-review** • Causal Inference in Experimental designs & Observational studies • Propensity score matching	Gelman & Hill chapter 9, 10.1-10.4 Little R, Rubin D. Causal effects in clinical and epidemiological studies via potential outcomes: concepts and analytical approaches. Annual Review of Public Health 2000; 21:121–45. Austin PC. An introduction to propensity score methods for reducing the effect of confounding in observational studies. Multivariate Behavioral Research 2011; 46:399-424. **Report 1 due**

3/29	#8	**Casual inference-Instrumental variables** • Definition of Instrumental Variables • Instrumental variables in regression framework	Gelman & Hill 10.5-10.6 Greenland S. An introduction to instrumental variables for epidemiologists. International Journal of Epidemiology 2000; 29: 722-729. Hirano K. Imbens GW, Rubin DB, Zhou XH. Assessing the effect of an influenza vaccine in an encouragement design. Biostatistics 2000; 69-88.
4/5	#9	**Casual inference-Instrumental variables (online)** • Pitfalls (e.g. problem of weak instruments) • Introduction to Mendelian randomization	Hernan MA, Robins JM. Instruments for causal inference - An epidemiologist's dream? Epidemiology 2006;17(4): 360-372. Davey Smith G, Ebrahim S. Mendelian randomization: can genetic epidemiology contribute to understanding environmental determinants of disease? International Journal of Epidemiology 2003; 32: 1-22.
4/12	#10	**Casual inference-Instrumental variables** • Clustered Encouragement designs • Regression Discontinuity designs	Gelman & Hill 10.4 Taylor L, Zhou X. Methods for clustered encouragement design studies with noncompliance and missing data. Biostatistics 2011; 12(2): 313-326. Pennell ML, Hade EM, Murray DM, Rhonda DA. Cutoff designs for community-based intervention studies. Statistics in Medicine 2011; Vol 30(15), 1865–1882.
4/19	#11	**Report 2 discussion**	**Report 2 draft due**
4/26	#12	**Missing data analysis** • Missing data mechanisms • Simple techniques (listwise deletion, available case, LVCF, mean imputation, dummy variable methods) • More advanced techniques (weighting, hotdecking)	Gelman & Hill 25.1-25.6 Donders AR, van der Heijden, Stijnen T, Moons KG. Review: A gentle introduction to imputation of missing values. Journal of Clinical Epidemiology 2006; 59: 1087-1091. **Report 2 due**
5/3	#13	**Missing data analysis** • Building blocks of multiple imputation (regression imputation, regression imputation with noise)	Su Y, Gelman A, Hill J, Yajima M. Multiple imputation with diagnostics (mi) in R: Opening windows into the Black Box. Journal of Statistical Software; 2011, 45 (2)
5/10	#14	**Missing data analysis** • Multiple imputation in practice • Diagnostics	
5/17	#15	**Report 3 discussion**	**Report 3 due**

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

COMHE 75000: Community Health Assessment
3 Credits
Spring 2016
Last Updated: February 3, 2016

Time and location	Silberman 219 Tuesdays 6:05-7:50 pm
Instructor	Sandra E. Echeverria, PhD, MPH Associate Professor and Program Director Sandra.Echeverria@hunter.cuny.edu (best way to reach me) Silberman Room 529 (212) 396-7740
Office hours	By Appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course prepares students to collect and analyze data on community health from a variety of sources, to identify problems and assets, and to develop objectives for community health interventions.
Course prerequisites	PH 75500
Course format	Lecture with applied sessions in computer lab
Required reading and resources	Hodges, Bonnie C & Videto Donna M. Assessment and Planning in Health Programs. 2nd edition. Jones & Bartlett. 2011. Other articles available on BlackBoard
Suggested reading and resources	See last page

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply social and behavioral theory and evidence to assess, plan, implement and evaluate community health programs, policies and interventions that promote health equality and reduce inequities.	• Compare and prioritize health issues for action and community resources and capacity, based on epidemiological evidence, equity, feasibility and other considerations • Identify community level health and social indicators and specify whether appropriate tracking data exist or need to be collected	• Community map • Community profile
Demonstrate team building, negotiation, and conflict management skills in community health interventions.	• Design a process for establishing community or organizational health priorities and strategies through community dialogue • Identify and incorporate principles of CBPR into a community health assessment • Formulate an assessment planning model that ensures participation for key community constituencies including beneficiaries of anticipated health promotion efforts • Describe the power dynamics involved in a particular community collaboration, the importance of these dynamics, and ways of addressing them	• Community Impression • Community Tour • Community Board Meeting
Use qualitative and quantitative research methods to generate insight into community health issues.	• Locate, analyze and interpret community-level qualitative and quantitative data on health from a variety of sources • Construct and deliver a presentation on the health of a community (overall or with respect to specific health	• Community Tour • Community Map and Community Profile

	issues) that synthesizes data from multiple sources and incorporates community perspectives • Design, conduct and interpret community level qualitative research, using ethnographic observation, in-depth interviews and content analyses, using community sourced documents or texts	• Quantitative Instrument • Qualitative Instrument
Apply ethical, socially just, and culturally competent principles and strategies to community organizing, community health assessment, program planning, implementation and evaluation.	• Practice reflexivity with respect to one's own social position vis a vis the community being assessed.	• Community Impression

Course Assessments

You will be assigned to a community district which will be the subject of the following assignments: community impressions, community tour and community board meeting, community map and community profile, instrument development and your oral presentation. Despite being assigned in groups to districts, the only assessments that should be done as a group are the community map, preliminary community profile, and the final CHA report. The oral presentation should also be done as a group but you will receive an individual grade. All other assessments should be completed independently and without the help of group members. The page limits are listed below for each assignment do not include tables, figures or references. Please keep these at the end of your papers so I am able to easily assess if you are within the page limits. To be clear, a page length of 4-6 pages means at least 4 pages but no more than 6 pages (so it ends somewhere on the fifth or sixth page). All written assignments will be scanned in BlackBoard for plagiarism via SafeAssign. You will be able to review your score. You will have 2 attempts to upload each assignment to BlackBoard (so if you receive a high score for copied text in the first submission, not related to quotes or citations, it is up to you to review and edit and resubmit before the deadline). Allow yourself time for potential revisions before the deadline.

Your district is designed to be a community that you don't work or live in. It will likely take you some time to commute to your community district but you only need to do this once if you conduct the tour on the same day as the board meeting. You will be given a "free" class for the time it will take to visit your community.

1. Community Impressions (reflexive exercise):

In qualitative research, we often engage in reflexive exercises to understand how our own biases may impact our research. Reflexivity is "acknowledging the existence of researcher bias and explicitly locating the researcher within the research process" (Finlay). It emphasizes the importance of self-awareness and self-questioning. It is an ongoing process to understand "what I know and how I know it" (Patton). In this way, before you plan your walking tour of the community, write down your impressions of the community to which you have been assigned. Articulate how you think you developed these thoughts (press, movies, discussions, etc.) and how these impressions could impact your assessment of the community.

DUE DATE: February 23, 2016
Length: 2-3 pages (not including references, tables or figures)

2. Preliminary Community Profile and Community Map

This assignment involves the preliminary data gathering for the final CHA report and a creative exercise to construct a community needs and assets map for your assigned community. This work will be done in groups and only one community profile and community map will be handed in by each group. The specific elements of each are describe below.

Preliminary Community Profile:

a. **Description of the history and physical environment** of the community (who founded the community and when, what is it like today, physical boundaries, names and roles of major institutions in the formation of the neighborhood, historical landmarks, types of housing stock (including rental vs. ownership), types of transportation including names and routes, etc.)

b. **Demographic profile** of the community (race/ethnicity, sex ratio, percentages and numbers of persons in all age categories listed by groups of 5 and younger and then in ten year integers up until 85+.) Note- you do NOT need to present the breakdowns of race/ethnicity and gender by each age category. The table should reflect the % and raw numbers by the following three variables: age (listed by groups of 5 and younger and then in ten year integers up until 85+), gender and race/ethnicity. One way to organize it is in the left hand column of your table to list each of these categories, with the other columns showing their respective % and raw numbers. You can also present these separately in different tables, pie charts, graphs, etc.

c. **Social and economic profile** of the community (religious affiliations, social successes and problems, environmental successes and problems, political affiliations and numbers of voters, types of employment, and numbers of employees and those on public assistance).

d. **Epidemiologic profile** of the community: including a description of the health status of your community, a comparison of rates for the five major causes of death in your community, rates for the five major causes of death in New York City and rates for the five major causes of death in the United States (A possible listing of fifteen major causes of death). Chart format will be provided on BlackBoard. You can use either the age-adjusted rate or the non-adjusted rate for this table. (Age-adjusted is preferable, if available.) Whichever you use, though, be sure that is consistent across your district, NYC and the US- and cited. There must be a written discussion/comparison of data across these three levels.

   LENGTH: 6-8 pages (not including references, tables or figures)

Community Map:

Draw/create **1 or 2** community map(s). One that represents a needs-based approached and one that represents an assets-based approach, or you can make one map that combines both. Use the lecture and reading for examples and as guide for your maps. Your maps should focus on the needs/assets of the community as a whole. In the end be creative, this is an exercise in presenting information in a different format. Think about how you would present this to members of the community you were assigned.

Some suggestions for the maps:

Needs Based Map
- What are the problems facing the community?
- What are the basic needs that are lacking in the community?
- Represents the barriers that people face in that community in order to lead a healthy life
- Orient whoever is looking at the map to the deficits that exist in the community and depending on the strategy used exactly where these deficits are located

Assets Based Map
- What are the assets present in the community?
- How can aspects of the community that may represent a barrier be looked at as an asset?
- What are the other non-economic or physical resources present in the community that can be used to improve health and the condition of the community?
- Are these assets wide-spread or located in particular areas?

LENGTH: No formal write-up is required for the community map. Examples will be shown. You will briefly (1-2 min.) present your "map" to the class on the due date. See instructions posted on BlackBoard.

DUE DATE FOR BOTH COMMUNITY MAP AND PRELIMINARY COMMUNITY PROFILE: April 5, 2016 One (1) Submission per group.

3. <u>Community Tour and Attendance at Community Board Meeting (ethnographic and participant observation exercise)</u>

***Note:** Both assignments A and B below are due on the same day. Students are strongly encouraged to use the 'free' class day to complete the community tour and attend the Community Board Meeting.

A. Community Tour (ethnographic)

Take a walking tour of the community to which you have been assigned. In an expository description, state the day of the week and time of day you walked around the neighborhood and summarize your insights and feelings about walking around the community. Were there any surprises? The description should answer questions such as:

<u>General Observations of the community</u>

1. What kinds of noises do you hear on the street? Where are the noises coming from?

2. Do the streets appear clean? At night, are there working streetlights on the streets?

3. What kind of transportation do people use? How accessible is the neighborhood? What kind of traffic is there?

4. How safe is the neighborhood? Explain your perceptions.

<u>Population</u>

1. Who are the people on the street? Describe their age, gender, race/ethnicity; what languages do you hear spoken? If people are hanging out in groups, note who they are with - - families, intergenerational groups, friends of the same age, race/ethnicity?
2. What are people doing? (Shopping/ "hanging out"/recreational activities) Are there local gathering spots for some people in the community such as parks, cafes, community centers?

3. What are people buying in the neighborhood supermarkets? Do community residents go to specific local restaurants or bars?

4. Does the population of the neighborhood change according to the time of day? Is there a large influx of people from outside the community during business hours (how do you know this)?

<u>Institutions</u>

1. What kind of commercial businesses are in the neighborhood? Are they "small" businesses or franchises?

2. What kind of religious institutions are there in the community?

3. What kind of government offices, schools, libraries, other city-run services exist in the neighborhood? Are the buildings clearly marked and what is the physical condition of the structures?

4. What kind of social service institutions or community groups exist? Are there youth service organizations, community centers, day care or senior centers?

5. What kinds of health services are available in the community? Drug stores? Private doctors offices? Hospitals? Community clinics? Drug treatment centers? Nursing homes? Others?

LENGTH: 2-3 pages (not including references, tables or figures)

B. Attendance at Community Board Meeting (participant observation)
Students are required to attend a community the community to which you have been assigned is mandatory. Access to information about Community Boards can be found by going to the WebPages at *www.nyc.gov*. Meetings generally take place once a month. The following questions must be answered and please provide any additional comments about the Community Board Meeting.

1. Before you attend the meeting, write down your expectations. How many people will attend? What are the topics that will be addressed? What will the site be like? Compare these notes with your actual experience and describe this in your report.

2. Describe the process of finding out when and where the meeting will occur and any concerns or suggestions that you might have about the process. See if you can obtain the minutes of a previous meeting.
3. Note the make-up of the board and of the attendees. Do they reflect the overall makeup of the population? What are the topics on the agenda? What discussions occurred? How are decisions handled?

4. How effective is the mechanism of community boards in reaching out to and learning about community level concerns? Would you attend another meeting? Would you consider becoming more involved in the future? Explain why.

LENGTH: 2-3 pages (not including references, tables or figures)

DUE DATE FOR BOTH ASSIGNMENTS (A and B): April 12, 2016 *(Note: if you are not able to attend a board meeting until after this date, please notify the instructor. You will be given 7 days from the date of the board meeting attended to submit the paper without penalty.)*

4. Quantitative and Qualitative Instruments

In class, we will discuss the importance of using both primary and secondary data collection approaches to conduct a community health assessment. Primary data collection gives us the opportunity to interview community members, community stakeholders, and other key informants about specific topics of interest in the community health assessment process that may not be available through public data (secondary data). Students will gain basic skills in the design of a quantitative instrument to conduct a community health survey, and skills designing a qualitative instrument to conduct a focus group or in-depth interview. Subsequent courses in the COMHE sequence and elective courses will provide students more in-depth coverage of these data collection approaches. This assignment should be completed by each student, not as a group.

1. Quantitative Instrument: develop a close-ended questionnaire comprised of at least 4 health areas (e.g., mental health, physical activity, HIV testing, health insurance coverage and access to care, etc.), 12 questions drawn from the published literature, and a section on social and demographic characteristics. The questionnaire must also include 4-5 questions independently developed by the student. This will give students practice in constructing close-ended questions. The questionnaire should build on the data identified in the community profile, but add new data on a health area not publicly available or for a specific population (e.g., the elderly or adolescents). A brief description of the target population and sampling design for the survey must also be included.

   DRAFT DUE: March 8, 2016
   FINAL VERSION DUE: March 22, 2016

2. Qualitative Instrument: develop an open-ended focus group guide or in-depth interview instrument to interview community members on a specific topic of relevance to the student's assigned community. The qualitative instrument should allow for an in-depth exploration of specific topics that would uncover new meanings and give 'voice' to community members, which is not captured through close-ended questionnaires. The in-depth instrument should include 4-5 open-ended questions with additional 'probes' added as needed. A brief description of the target population and sampling design for the use of the qualitative instrument must be included.

   DRAFT DUE: April 19, 2016
   FINAL VERSION DUE: May 10, 2016

5. Community Health Assessment Final Report

The major course assignment will be a final community health assessment (CHA) report completed by the group. Each student has been assigned a Community District for this semester-long project. Throughout the semester, time will be allotted during

class for you to meet with your fellow classmates who are assigned to your same Community District. All citations and the bibliography must be in AJPH format. The *New York City Department of Health Summary of Vital Statistics* must be included in your reference list.

The final community health assessment report will be a written description of the community. Listings of data or presentation/copying of books/reports without written description are unacceptable. The final report will synthesize all data sources collected about the community with actionable next steps highlighted. The information that **MUST** be included in each section is outlined below.

a. **Preliminary Community Profile.** You will have already completed this section earlier in the semester (Point 2). You simply need to add it to your final report.
b. **Selection of Primary Health Concerns**: Select 3-4 current major public health concerns in your community previously identified in the Preliminary Community Profile (it must be listed in *Healthy People 2020)*. These concerns do not have to be a major cause of death, but what you define as a major public health problem based on your community research. This condition/disease may be one for which there are primary, secondary or tertiary prevention intervention strategies. Describe and justify your choice of the selected public health problems in your community. If you are selecting drug use, please choose a specific drug such as alcohol, heroin, etc.
b. **Review the literature** on your selected public health problem. Define and discuss a) what is it, including its physiologic manifestations? b) What causes it? c) Can it be prevented? d)Who gets it? and e) What are the treatments?
c. **Analysis** of the economic, social and health trends of your community. Identify existing organizational resources (name and type of organizations, scope of services provided, etc.) that help address the needs of the community. Indicate gaps in services.
d. **For your community, write at least two program objectives:** What are the best ways to approach going about reducing the burden of the conditions you have chosen, given all that you know about the area and population that lives in that area? Include a brief overview of the proposed program/intervention your group has developed and list at least two detailed program objectives. Examples on writing program objectives provided on Blackboard.

DUE DATE: May 17, 2016 (One (1) paper per group)
LENGTH: 6-8 pgs (not counting preliminary profile (6-8 pages) and not including references, tables or figures)

6. Oral Presentations:
During the last session of class, each group will present a summary of their assigned community as if they were presenting to their assigned community board. The presentation should highlight 1) a description of what was learned about the community; 2) key health data and health concerns identified; 3) description of the sources used to

find your data and **posting these resources on a google site created by your group** (additional instructions will be posted on Blackboard); 4) community assets/resources; 5) the major health concerns that you identified for how and what they should do reduce the burden of the health concern. Please review the instructions posted on BlackBoard for the oral presentation. Each member of the group needs to present for about 5 minutes, with a total presentation time of 15-20 minutes per group. You will present as a group but receive individual grades.

DUE: May 17, 2016 (You will need to submit your slides by 4 pm on the day of the presentation via BlackBoard. Use of powerpoint slides submitted later will result in a penalty, in fairness to other students.)

Grading

Evaluation criteria

The relative weight of each course component is as follows:

Assessment	Weight
Regular class attendance	5%
Class participation	5%
Community Impressions	5%
Community Tour and Community Board Meeting	10%
Community Profile and Map	25%
Quantitative Instrument	10%
Qualitative Instrument	10%
Community Health Assessment Report (group)	25%
Oral Presentation	5%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.
