Your attendance grade reflects the number of in-class sessions you attend fully and on time. Excessive lateness and absences will be noted and reflected in your final grade. Class will start promptly at 6:05 pm in order to maximize our time together. If you are going to be late or going to miss a session, please inform the instructor via email *prior* to the class. It is your responsibility to obtain the content and assignments for those sessions you miss (network with your classmates). If you miss *more than two* classes you risk receiving a failing grade for this course. Please initiate a meeting with the instructor if you miss three or more courses.

Participation in class discussion and reading material on Blackboard is vital in this course. Your participation grade will reflect consistent, thoughtful contributions to class discussions. Your participation should reflect your reading and understanding or questions related to the assigned reading.

Late/incomplete submission of assignments

All work is expected to be presented on time. 5% will be deducted for each day a written assignment is late. **After one week of lateness you will not receive any credit for that assignment.** In case of extenuating circumstances, please contact me. Please note the following specifications for all assignments: Papers and other assignments are due at the beginning of the class period (6:05pm) via BlackBoard unless otherwise noted. Any assignment submitted at or after 6:06 pm will be considered late. If you anticipate the need to turn in work late, please negotiate with me a mutually acceptable submission plan in advance of the established due date. **DO NOT SEND AN E-MAIL REQUESTING AN EXTENSION ON THE DAY THE ASSIGNMENT IS DUE.** Papers and reports should be kept to the maximum length specified. I will stop reading after the maximum length and you will be marked down, accordingly. It is expected that your writing will be of graduate-level quality, presented in a readable and consistent manner: Times New Roman 12 pt font, double-spaced, typewritten, with one inch margins all around and proof-read. All written assignments should use the American Journal of Public Health reference format (this journal uses AMA style format).

Make-ups, rewrites, and extra credit

There are no make-ups, rewrites or extra credit offered for this course.

Expectations of students

All students must enroll in BlackBoard. BlackBoard will be used on a routine basis as a learning tool to distribute course materials, as well as to facilitate communication with the instructor and classmates. You are expected to check your Hunter email daily for course updates.

The classroom is a community. Respectful interaction with classmates, the instructor and guests is expected at all times. Public health deals with controversial issues from multiple perspectives and consideration of these issues may cause disagreements among us or may evoke strong personal feelings, depending on our individual experiences, histories, identities and worldviews. Therefore, in all of interactions and communications, it is important that students strive to demonstrate mutual respect for one another and for any course guests and members of the community with whom they come into contact.

Please avoid crosstalk, text messaging, and turn off (or set to vibrate) cell phones etc., anything that can be distracting and take away from a climate of mutual learning or attentive listening and participation. Student announcements of related events and opportunities of interest to students may be made at the end of the class. Students should let the instructor know if they have an announcement to make. Feel free to bring refreshments to class for yourself and/or others; but please help clean up afterwards.

Expectations for the instructor

Direct any inquiries to the instructor via e-mail. A response can be expected within 72 hours. Assignments will be graded within two weeks of the due date (unless otherwise stated). I will post lecture slides (if applicable) within 48 hours after our class.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857. If you have special accommodations that are necessary for class sessions, exams or presentations, please let me know at the beginning of the semester.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Help with research and writing: Feedback will be given on the quality of all written assignments. If you require further assistance with improving your writing skills, consider visiting the Student Reading and Writing Center on the main campus. For more information, visit http://rwc.hunter.cuny.edu/ .

Course Schedule

The schedule and assigned readings are subject to change throughout the semester. The "Last Updated" Date in the header references the current version of the syllabus and will be updated if a change in schedule is made. Please refer to the Hunter Academic Calendar for important dates including holidays, course meeting dates and withdrawals.

Please Note: This schedule & assignments are subject to change. Additional readings and handouts may be provided. Check BlackBoard for updates.

Session Date	Topic/Assignments	Readings
Session 1: 2/2	Introductions and Overview Definitions of community & health	Jewkes 1996; Finlay 2002
2/9/2016	NO CLASS- FOLLOWS FRIDAY SCHEDULE	
Session 2: 2/16	Community health assessment (CHA) process overview - Social Justice as organizing principle	Hodges Ch. 1 and 2; Jewkes 1998, Sharma 2003 Recommended: Bronx Community Needs Assessment; RWJ University Hospital Community Health Assessment **Visit by Dr. El-Mohandes, Dean of the CUNY Graduate School of Public Health and Health Policy and Dr. Joshi, CUNY GSPH&HP Dean of Student Services**
Session 3: 2/23	Theories of Health Promotion and Conceptual and Planning Models **Due: Community Impressions**	Hodges Ch. 6; Castellanos 2013; Buta 2011; Morgan 2010
Session 4: 3/1	Data Collection : Quantitative Methods (1) - Overview - Secondary data: national, state-wide, New York City and neighborhood specific	Hodges Ch. 3, Finifter 2005 **Guest Lecturer (TBD)**
Session 5: 3/8	Data Collection: Quantitative Methods (2) Primary data: designing community health surveys, estimating sample size, and practical applications for conducting surveys in community	Echeverria SE et al, 2014. Romero D et al. (Part II), 2010. **Laboratory Session, Silberman Room C06**

Session Date	Topic/Assignments	Readings
	settings **DUE: Draft Quantitative Instrument**	
Session 6: 3/15	Data Collection: Quantitative Methods (3) - Selecting indicators - Selecting comparison groups/ places - Synthesizing and presenting results - Mapping health	Braveman 2003 and 2010 **Laboratory Session, Silberman Room C06**
Session 7: 3/22	Identifying & Employing Community Assets **DUE: Final Quantitative Instrument**	Kretzman 2013; Sharpe 2000; Cacari-Stone 2014
Session 8: 3/29	WORK IN GROUPS- NO CLASS	
Session 9: 4/5	Engaging Communities: CBPR Orientation, "insider" vs. "outsider" perspectives & power dynamics **Due: Community Map and Preliminary Community Profile**	Israel 1998; Minkler, 2004; Kerstetter 2012
Session 10: 4/12	Data Collection: Qualitative Methods (1) - Overview - Integrating qualitative and quantitative (mixed methods designs) **Due: Community Tour & Board Mtg. written assignments**	Ulin Ch. 2; Emerson 1995; Hsieh 2005;
Session 11: 4/19	Data Collection: Qualitative Methods (2) Designing FG and In-depth Interviews **Due: Draft of Qualitative Instrument**	Ritchie Ch. 7; UCLA Section4; Schensul Ch 6 (Israel Ed)

Session Date	Topic/Assignments	Readings
4/26-3/3	NO CLASS- Spring Recess	
Session 12: 5/3	Data Collection: Qualitative Methods (3) Analysis of Qualitative Data	Romero D (Part I), 2010 **Laboratory Session, Silberman Room C06**
Session 13: 5/10	Synthesizing and Prioritizing Health Issues Elements of Final CHA Report **Due: Final Qualitative Instrument**	Gandelman 2006 San Francisco CHA, 2012
Session 14: 5/17	Next Steps after CHA: Program Planning and Implementation	Hodges Ch. 9; Kellog Ch 1 & 2, Van der Weese 2014; Faridi 2007
Session 15: 5/24	**Oral Presentations/ Wrap Up** **Due: FINAL CHA REPORTS**	No reading

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS
Community Organizing and Development for Health
COMHE 75200
3 Credits
Spring 2016

Time and location	Silberman Campus, Room 215, Mondays 6:05 – 7:50 PM
Instructor	Lynn Roberts, PhD e-mail: lroberts@hunter.cuny.edu (best way to contact) Office: Room 530, Silberman Phone: 212-396-7742 (do not leave message)
Office hours	Mondays 4-6 PM and by apt
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Prepares students to work in communities by presenting the theory and practice of organizing for social justice, skills for promoting leadership development within communities, and the tools to create and sustain healthy organizations.
Course prerequisites	PH 75500, COMHE 75000, COMHE 75100
Course format	Seminar with field based learning experiences
Required reading and resources	Minkler M. (Ed) *Community Organizing & Community Building for Health and Welfare (3rd Edition)*. New Brunswick, NJ: Rutgers University Press; 2012. [ISBN: 978-0-8135-5300-9] The following materials are on reserve in the Silberman Library: **Bhargava** D. Progressive organizing on welfare policy. Champagne, IL: University of Illinois Press; 2010. [ISBN: 978-0-252-07888-0] **Sen** R. *Stir It Up: Lessons in Community Organizing and Advocacy.* San Francisco: Jossey-Bass; 2003. [ISBN 07879653332] The following videos can be viewed in the Helene Fuld Media Center located on the mezzanine level of the West Building at the Brookdale campus –OR- borrowed from Professor Roberts. Should you decide to write a brief (no more than three pages) critical analysis of any of these films, you will receive extra credit (up to maximum of 5 points for each paper; no more than 2 papers to be submitted). Do not merely summarize the films, but rather, present your original thoughts and reactions in relation to course readings and discussions. Other films may be identified. 1. *Another Brother* Tami Gold and Elena Schwoltsky-Fitch. Call number: # 6062. 2. *Corner Prophets* Youth Force. Call number: # R93. 3. *GMHC: Community Organizing with Larry Kramer and Roger McFarlane*. 1996. (60 minutes) Call number: #5745. 4. *Women, Organizing, Diversity: Struggling with the Issues*. 1996. (120 minutes) Call number: #5852. You are also encouraged to visit the inaugural exhibit *Activist New York* at the Museum of the City of New York. ***Activist New York*** explores the drama of social activism in New York City from the 17th century right up to the present. In a town renowned for its in-your-face persona, citizens of the city have banded together on issues as diverse as historic preservation, civil rights, wages, sexual orientation, and religious freedom. Using artifacts, photographs, audio and visual presentations, as well as interactive components that seek to tell the entire story of activism in the five boroughs, ***Activist New York*** presents the passions and conflicts that underlie the city's history of agitation. For more information visit: http://www.mcny.org/exhibition/activist-new-york

	Finally, throughout the semester, reference will be made in class discussions and readings to seminal texts that are relevant to social justice and community organizing. For your convenience, here is a link to a compilation of several of these works: http://flanneryogonner.tumblr.com/post/40237682151/free-pdf-books-on-race-gender-sexuality-class

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Community and Social Sciences (Program Core)		
1. Apply social and behavioral theory and evidence to assess, plan, implement and evaluate community health programs, policies and interventions that promote health equality and reduce inequities.	• Analyze the impact of individual, organizational, community, national, and global trends and interdependencies on public health related problems and systems • Assess organizing tactics and strategies that are most effective in mobilizing communities around selected health-related issues. • Discuss the importance of community organizing in improving the health status of diverse populations	• Facilitated Class Discussions • Issue Analysis Paper • Activities Paper • Strategy Paper • Final Exam
2. Demonstrate team building, negotiation, and conflict management skills in community health interventions.	• Participate in a collaborative process for prioritizing individual, organizational, and community concerns, and for bringing resources to bear on public health problems. • Critically compare and contrast disparate community organizing activities.	• Activities Paper • Strategy Paper • Oral Presentation
3. Engage communities to propose solutions to health inequities that recognize the role of power and stratification systems.	• Conduct interview and actively engage with community organizer(s) to improve the health status of diverse	• Activities Paper • Interview Paper • Strategy Paper

	populations. • Work within small groups to critically assess which organizing strategies and tactics are most effective in mobilizing communities around selected health-related issues. • Prepare and present an evidence-based campaign for community mobilization to address the root causes of a selected health-related issue.	• Oral Presentation

Course Assessments

Your understanding of the course material will be evaluated through the following:

1. Each student will be expected to **lead the class in a discussion of the readings once during the semester**. Assignments to lead discussion will be made during the first two weeks of class. Guidelines for preparing for class discussions will be developed in consultation with the instructor.

2. Enrollment in **BlackBoard** to facilitate communication with instructor and classmates and identify resources for completing class assignments.

3. Completion and presentation of a Semester Project based on several component parts:

    a. **Choose a health issue you feel passionate about** and that can be addressed through community organizing. Bring a one paragraph description of the health issue including an example of current strategies being used to address it to class on **2/22** for topic approval (this may be legibly hand written). It is suggested, but not required, that you also have identified and mention an organization or group that you will work with for the remainder of the project to fulfill course requirements. **Health Issue Topic due 2/22.**

    b. Once topic is approved, **prepare a written analysis of the issue** (maximum 4 pages), including a description of its antecedents (i.e., its root causes), the community organizing strategies currently being used to address the problem (if any), as well as an overview of some of the other health education methods employed to address the health issue, if applicable. Include a reference list of at least 5 references (properly cited), of which at least two must be professional peer-reviewed journals. It is also required that you include additional sources of information (e.g., alternative and progressive printed and broadcast media, CBO reports, issue papers, etc.). **Issue Analysis Paper due 3/14.**

    c. If not already done, identify one or more groups, organizations or agencies that are actively involved in community organizing around your chosen health issue. **Become *actively* involved in at least 2 organizing activities** of one or more of these groups. For example, you may participate in:
        - a meeting to plan, organize, strategize, build coalitions, etc. to effect change concerning this health issue.
        - a march, rally, protest, vigil, public hearing or other organized activity designed to engage or confront the public/elected officials to effect change concerning your selected health issue.

Please note that these are *just examples* and are not meant to limit the types of activity in which you become engaged. You must become an active participant in these two functions, not remain an observer or sidelines participant. (If your selected group will not be sponsoring one or more of these activities while you are working on this project, you may select similar activities from another group or health issue. Please discuss with me, first, if this is the case). **To assist you in identifying CO organizations or activities, periodic announcements, e-mail notices, and Web Links via BlackBoard will be made available to you.** For both activities, write one short report (no more than 5 pages) describing, comparing and contrasting your two experiences. Analyze what you have observed in light of class discussions and readings. Especially important to note is how closely these activities meet (or not!) the criteria for community building or community organizing as discussed in class and readings. **Community Organizing Activities Report due 4/4. Extensions (if requested in advance of the due date) are permitted if activities are scheduled beyond this date.**

d. **Conduct an interview with a community organizer** who is working on the health issue you have selected. If unable to find an organizer working on your issue, you can interview someone else, as long as you consider him/her/them to be an organizer. We will discuss and develop guidelines for the interview in the class. If you have any questions about the appropriateness of the organizer you have selected, please see me. Write a paper (no more than 5 pages) describing and analyzing your interview with the organizer, incorporating what you have learned from class readings and discussions. Include in your paper a description of the origin, structure, problems and successes of the group(s) the organizer has worked with as applicable. **Interview Paper due 4/18. Extensions (requested in advance) are granted if interviewee is not available prior to this date.**

e. **Working with group members in (and outside) of class, select and describe one or more community organizing strategies** (that you learned about from class readings, discussions, participation in organizing activities, and/or your interview) that you think would be best used to address the health issue(s) that is/are important to you and your group. Write an individual brief paper (no more than 4 pages) describing the organizing strategy(ies) selected, your rationale, and how you (in consultation with fellow class members) would implement the overall strategy. **Strategy Paper due no later than 5/23.**

f. Make an oral presentation and lead class in discussion of your findings on either 5/16 or 5/23. Presentations will be grouped with other members of the class who worked on the same or related issues.

Approximate presentation/discussion length will be 10-15 minutes per student depending on class size.

4. A **take-home FINAL EXAM** will be distributed in class on **5/9** and will be due on **5/16 at the beginning of class**. **No extensions will be accepted for the Final Exam.**

Grading

Evaluation criteria

All papers will be assessed as follows: Content (5%); Style (5%); and Analysis (5%).

The relative weight of each course component is as follows:

Assessment	Weight
Attendance/Participation/Facilitation	10%
Issue Analysis Paper	15%
Activities Paper	15%
Interview Paper	15%
Final Exam	20%
Strategy Paper	15%
Oral Presentation	10%
TOTAL:	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw

from a course. Failure to officially withdraw may result in an “unofficial withdrawal” (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

General guidance for submission of all assignments

It is expected that all writing will be of high quality, presented in a readable and consistent manner: **typewritten, double-spaced, 12 inch font, with one-inch margins all around, stapled in upper left-hand corner, with all pages enumerated and proofread.** All papers and exams should be kept to the maximum length specified. The instructor will stop reading after the maximum length and the assignment will be marked down, accordingly. A simple cover sheet with student name, title of assignment, course info, term, and date is adequate for identification purposes. Please do not submit papers in folders or binders.

Any deliberate borrowing of the ideas, terms, statements, or knowledge of others without clear and specific acknowledgment of the source is intellectual theft and is called plagiarism. It is not plagiarism to borrow the ideas, terms, statements, or knowledge of others if the source is clearly and specifically acknowledged, and quoted if appropriate. Students who consult such critical material and wish to include some of the insights, terms, or statements encountered must provide full citations in an appropriate form. All citations should follow the *Am J Public Health* style, which follows the guidelines of the American Medical Association (AMA). A style guide is provided in the Assignments section of BlackBoard.

Attendance and class participation

Timely arrival, regular attendance and *informed* participation in class discussions and exercises based on a critical reading of the assigned articles and text is required. Students must sign up for Blackboard to receive updates, in-class materials, lectures, readings and assignments, as well as to submit assignments. For instructions on registering for Blackboard through Hunter, go to: http://bb.hunter.cuny.edu. Students should check their Blackboard□related email for class announcements and assignments.

Late/incomplete submission of assignments

Papers and other assignments are due at the beginning of the class period or by the deadline specified for submitting electronically. One point will be deducted for each day an assignment is late. If a student anticipates the need to turn in work late, they must send a request via e-mail and negotiate a mutually acceptable submission plan in advance of the established due date (this applies to the Activities and Interview Papers as specified above). Students should not send an e-mail requesting an extension on the day the assignment is due**.** Students should not miss class nor be tardy on the day an assignment is due in order to complete the assignment. No extensions will be granted for the Final Exam.

Make-ups, rewrites, and extra credit

Re-writes will not be accepted for any assignments. Students can receive up to 5 extra points toward their final grade by viewing any of the films provided in the syllabus and writing a thoughtful analysis (not just a summary). Students who already have a 97+ cumulative grade in the course are not eligible for Extra Credit. Deadline for E.C. submissions (hard copies only) is the last day of class on May 23.

Expectations of students

- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Learn how to use library resources and citation tools.
- Show respect to everyone in the course.
- Be fully prepared to actively participate in discussion.
- Complete all assignments by their assigned due date. Reduced credit for work completed after the due date.
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Regularly check the course website and official university email for course correspondence.

- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted in the discussion board.
- Contact professor directly with personal questions and concerns related to the course.
- **On the last day of class, we will hold a dish-2-pass/pot luck to celebrate the end of the semester.** Students are expected to contribute a dish, beverage or paper goods of choice.

Expectations for the instructor

- Provide regular announcements, reminders, and suggestions on the course website.
- Monitor, ask follow-up questions, and answer questions presented during discussion
- Preferred method of communication is email and will respond to student email within 24 hours Monday through Thursday and within 48 hours Friday- Saturday or during holiday breaks.
- Grading and feedback on assignments within 1-2 weeks of the due date.
- Communication about grades and progress in the course will be given through the course website.
- **On the last day of class, we will hold a dish-2-pass/pot luck to celebrate the end of the semester.** Students can expect the instructor to contribute a carrot cake.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

Please Note: This schedule & assignments subject to change. Additional readings and handouts may be provided. Check BlackBoard for updates.

Session	Date	Topic	Readings and Assignments
1.	Feb 1	Introductions/Overview of Course	Beauchamp, Minkler, Ch 1
2.	Feb 8	Dialogues and Discourses on Power	Petchesky, Young
No Class Feb 15 – President's Day			
3.	Feb 22	History, theories and models of community organizing and mobilization	Minkler: Chs. 3, 4 (pp. 59-64), 5; Rothman; Sen (1) **Assignment 1: Health Issue due**
4.	Feb 29	Utilizing media, technology & the arts/ Youth as Organizers	Barrett & Leddy; Echoing Justice Report; Minkler: Chs. 15, 16, 22; We Interrupt this Message/Youth Force
5.	Mar 7	Critical pedagogy and community strategies for empowerment	Airhihenbuwa; Minkler: Ch. 4 (64-77) & 14; Wallerstein
6.	Mar 14	Direct action strategies for community mobilization	Pursley; Shaw (1) **Assignment 2: Issue Analysis due**
7.	Mar 21	Legal, legislative and political action	Biklen; Guinier; Heiser&Begay; Kahn; Minkler: Chs. 20, 21
8.	Mar 28	Coalition & movement building strategies	Feinberg; Groarke; Minkler: Chs. 8, 17, 18; Reagon; Silliman (1); Shaw (2)
9.	Apr 4	Community-based participatory research for community mobilizing and social change	Israel; Minkler: Chs. 9, 19 **Assignment 3: Activities Report due**

10.	Apr 11	Role of health educators in community and social justice organizing; Ethical considerations	Alinsky; Minkler: Chs. 6, 7; Wallerstein & Freudenberg
11.	Apr 18	Organizing across differences; Facing "race" and sustaining multi-cultural organizations	Anner; Delgado*; Minkler: Chs. 12, 13; Silliman (2); Toney **Assignment 4: Interview Report due**
No Class on April 25 ~ Spring Break April 22 – 30			
12.	May 2	Organizing at the grass roots; Leadership development in marginalized communities	Bhargava/ARC*****; Lewis & McNeil; Minkler: Chs. 10, 11 Optional readings: Picture the Homeless (1&2)
13.	May 9	Organizational development & maintenance; Organizing post-9/11, in the age of Obama, Occupy Wall St, and #BlackLivesMatter	Minkler, Ch. 2; Milkman et al; Pharr; Sen (2); van Gelder*; Zald & Ash; Incite! * Time will be allotted for "in class" consultation with class members working on similar issues **Final Exam distributed**
14.	May 16	**Oral Presentations**	**Final Exam due**
15.	May 23	**Oral Presentations** Dish-2-Pass	**Assignment 5: Strategy Paper due**

COMMUNITY HEALTH EDUCATION SPECIALIZATION

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

COMHE 753.02 -- Health Program Planning and Funding
3 Credits
Spring 2016

Time and Location	Thursday, 6:05pm – 7:50pm Silberman Building, Room 320
Professor	Karyn Faber, EdD, MPH
Email	kf206@hunter.cuny.edu
Office hours	By Appointment
Course Description	This course will engage students in identifying or designing a health program, finding funding sources, and developing a proposal covering program need, program objectives, a management and quality assurance plan, preliminary work, evaluation, budget, and a plan for funding support.
Course Prerequisites	Completion of 15 credits including PH75000 (Fundamentals of Biostatistics) or PH75100 (Principles of Biostatistics); and either COMHE 75000 (Community Health Assessment), COMHE 75100 (Community Health Interventions), and COMHE 75200 (Community Organizing for Health); OR COMHE 75000 and NUTR 71000 (Principles of Public Health Nutrition); OR NURS 77100 (Community/Public Health Nursing), COMHE 75100 and COMHE 75200.
Course Format	This course is taught with a mix of online learning resources and in-class discussion.
Required text	• Geever, Jane C. The Foundation Center's Guide to Proposal Writing, 6th Edition, 2012. • All additional class readings are available on Blackboard.
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Suggested reading	See Page 7 of this document

ACADEMIC PROGRAM COMPETENCIES

Program Competencies *This course will help you to:*	**Course Learning Objectives** *After successfully completing this course, you are expected to be able to:*	**Assessment Methods** *Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply social and behavioral theory and evidence to assess, plan, implement and evaluate community health programs, policies and interventions that promote health equality and reduce inequities.	• Critically evaluate the assumptions in a logic model (particularly about race, gender, poverty, culture, and local community dynamics). • Distinguish between community based and community placed public health programs and initiatives. • Develop a theory of change and logic model for a multi-component and multi-level community-based health program. • Write program objectives that are clear, specific, measurable and logical, given an overall health promotion strategy. • Write an implementation plan including specification of required resource, a service utilization and organizational plan.	• Statement of Need • Foundation Center Workshop • Mock proposal evaluation • Class participation via online quizzes and in-person.
Demonstrate team building, negotiation, and conflict management skills in community health interventions.	• Work within small groups to develop the program proposal and presentation. • Identify strategies for developing collaborative initiatives and engaging various stakeholders and community members in the design of a community based intervention program.	• Class attendance and participation • Group member evaluations • Proposal draft
Use qualitative and quantitative research methods to generate insight into community health issues.	• Develop a full grant application for public health programs and research and identify appropriate funding mechanisms.	• Final draft of grant proposal • Group oral presentation

COURSE ASSESSMENTS

Overview: All assignments should be double-spaced, in an acceptable 12-point type font, with 1.0 inch margins on all sides and page numbers on the bottom right of each page, with student names on the top of the first page (or title page of the proposal). All assignments should be submitted via Blackboard by 6:05pm on the due date. **Any assignment sent at or after 6:06pm will be considered late**. The course will be aimed toward producing the main assignment, an 11-13 page proposal with a budget spreadsheet and 1-2 page accompanying budget justification. Please follow the AMA format for citing references. Papers and reports should be kept to the maximum length specified. I will stop reading after the maximum length and you will be marked down, accordingly. It is expected that your writing will be of graduate-level quality, presented in a readable and consistent manner as specified in the format requirements for assignments.

A. **Foundation Center Workshop.** Students are required to attend one workshop of their choice at the Foundation Center. Please sign up for workshops online in advance, as they fill up. We will start each class with students giving a brief & informal overview of the workshop they attended. These workshops are usually 1 hour in length & free of charge: http://www.grantspace.org/Classroom/training-calendar/New-York. **A brief write-up of the workshop is due by 4.14.2016**

B. **Statement of Need:** Individually, write a 2-3 page brief literature review which makes the case for a data-driven, theoretically-driven program of public health significance, addressing an important and current UNMET need. This review should contain at least 8-10 references of journal articles related to a health promotion or research on a community health

issue. This review should serve as a research source for the needs development and proposed program in your group proposal.

C. **Proposal Draft Part I.** In your assigned groups, students should research and select a national or local community-based organization for which to develop and write the proposal. Each group will submit one draft proposal that includes the following proposal sections: statement of need (1-2 pgs.), project goals/objectives (1-2 pgs.) and methods (1 pg.). In addition, create a table of prospective funders along with a 1-2 pg. description of your funding search (include databases & search terms used). This table should include approximately 5-10 funders and the following column headings and corresponding information for each potential funder:

- Name of funder, Subject area they are interested in funding, Geographic Focus, and Notes. In the Notes column give justification for keeping or removing this funder on your refined list of final potential funders.

D. **Mock Proposal Evaluation.** Assuming the role of a reviewer/funder, students will complete an evaluation of a grant proposal using a rubric template that will be provided on Blackboard. The proposal will be provided two weeks prior to the assignment due date.

E. **Final Group Proposal.** The final proposal should incorporate edits from the first draft and should include the following sections:

a. Cover letter (1 pg.)
b. Title page & table of contents (1 pg.)
    i. Please note on the title page if you are planning to actually use this proposal. Note that the program needs to be created independently (in your groups), without replicating an existing program at your organization in its current form.
c. Executive summary (1 pg.)
d. Narrative
    i. Statement of need (2 pgs.)
    ii. Project description (4-5 pgs.)
        1. Goals/objectives
        2. Methods
        3. Evaluation
        4. Sustainability
    iii. Organization information (1-2 pgs.)
    iv. Conclusion (2 paragraphs)
e. Budget spreadsheet (1 pg.)
f. Budget justification (1-2 pgs.)
g. Appendices & supporting materials (optional)

F. **Oral Presentation.** Each group will present as a whole on their program proposal, but students will be graded individually. Each student will have 5 minutes to present (total of 20 minutes per group). Five percent (5%) of the grade will be derived from average of group peer evaluations (peer evaluation form posted on Blackboard & due by May 19th) and 10% will be derived from the instructor's grade.

Suggested Journals and Sites for Health Promotion/ Intervention Program Resources:

1. http://www.health.state.ny.us/statistics/
2. http://www.nyc.gov/html/doh/html/community/community.shtml
3. http://www.cdc.gov/brfss/
4. http://www.hhs.gov/ophs/oah/prevention/index.html
5. DEBI, Diffusion of Effective Behavioral Interventions, CDC http://www.effectiveinterventions.org
6. Health Education and Behavior (formerly Health Education Quarterly)
7. AIDS Education and Prevention
8. Health Promotion Practice
9. American Journal of Public Health
10. Health Promotion International
11. Journal of Urban Health: Bulletin of the New York Academy of Medicine
12. Journal of Health Care for the Poor and Underserved

GRADING

Evaluation Criteria:
All work is expected to be presented on time. Five points (out of 100) will be deducted for each day a written assignment is late. In case of extenuating circumstances, please contact me. Please do NOT ask for an extension the day before an assignment is due. The relative weight of each course component is as follows:

Assignment	Type	% grade	Due Date
Class Attendance	Individual	5	Throughout semester
Class Participation	Individual	10	Throughout semester
Statement of Need	Individual	10	3.10.2016
Foundation Center Workshop (attendance, brief presentation & write-up)	Individual	5	4.14.2016
Proposal Draft – Part I	Group	15	4.21.2016
Mock proposal evaluation	Individual	15	5.05.2016
Group member evaluation	Individual	5	5.19.2016
Oral presentation of proposal	Individual	15	5.19.2016
Final written proposal	Group	20	5.20.2016

The grading system for the course follows guidance in the Hunter Catalog:

Letter Grade	Quality Points	Percentage
A+	4.0	97.5%- 100%
A	4.0	92.5 – 97.4%
A-	3.7	90.0 – 92.4%
B+	3.3	87.5 – 89.9%
B	3.0	82.5 – 87.4%
B-	2.7	80.0 – 82.4%
C+	2.3	77.5 – 79.9%
C	2.0	70.0 – 77.4%
F	0	0.00 – 69.9%

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

COMHE 753 (Section 2) – Health Program Planning and Funding
January 25, 2016 Spring 2016

COURSE POLICIES

Format:
The course uses a "learn-by-doing" and "learn-by-exposure-to-success" approach to program planning and funding, and will be run as an interactive seminar. Some lectures will be held online, which means although there will not be an in-class session, students are required to access all recorded lectures or other activities posted to Blackboard.

Attendance, Lateness and Absences:
Participation in class discussion and Blackboard (when assigned) is vital in this course. Class will start promptly in order to maximize our time together. If you are going to be late or going to miss a session, please inform the instructor via email *prior* to the class. It is your responsibility to obtain the content and assignments for those sessions you miss (network with your classmates). Excessive lateness and absences will be noted and reflected in your final grade. If you miss more than two classes you risk receiving a failing attendance and participation grade.

Late Submission of Assignments:
All assignments are expected to be completed on time. **DO NOT SEND AN E-MAIL REQUESTING AN EXTENSION ON THE DAY THE ASSIGNMENT IS DUE.** All assignments should be submitted via Blackboard by 6:05pm on the due date. **Any assignment sent at or after 6:06pm will be considered late**. With the exception of cases involving critical extenuating circumstances, late submissions of written assignments will be penalized 5 points each day it is late (*including weekends*). **After 2 days of lateness, you will not receive credit for the assignment(s).**

Make-ups, rewrites, and extra credit:
There are no allowances for make-ups, rewrites, or extra-credit assignments.

Citizenship & Rules of Conduct**:**
The classroom is a community. Respectful interaction with the instructor, classmates, and guests is expected at all times. Public health deals with controversial issues from multiple perspectives and consideration of these issues may cause disagreements among us or may evoke strong personal feelings, depending on our individual experiences, histories, identities and worldviews. Therefore, in all of interactions and communications, it is important that students strive to demonstrate mutual respect for one another and for any course guests and members of the community with whom they come into contact.

Please avoid crosstalk, text messaging, and turn off (or set to vibrate) cell phones, tablets, or anything that can be distracting and take away from a climate of mutual learning or attentive listening and participation. Student announcements of related events and opportunities of interest to students may be made at the end of the class. Students should let the instructor know if they have an announcement to make. Feel free to bring refreshments to class for yourself and/or others; but please help clean up afterwards.

Email correspondence:
Direct any inquiries to the instructor via e-mail. A response can be expected within 48 hours Monday through Thursday, and within 72 hours on a weekend or during holiday breaks.

Accessibility:
Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity:
Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty. If a student engages in such behaviors in this course, he or she will receive a failing grade (F) for the assignment or the course and a formal report will be filed.

COURSE SCHEDULE

The course schedule is subject to change throughout the semester. The "Last Updated" Date in the header of the syllabus references the current version of the syllabus and therefore will be updated if a change in schedule is made.

SES	DATE	TOPIC(s)	READINGS	ASSIGNMENT DUE
1	2.4	Review Syllabus and course requirements. Introduction to program planning and grant writing	**Geever**: Ch. 1, 2	Student questionnaire due on **2.5.2016**
2	2.11	Health Program planning: Goals, Objectives, & Logic models	**Hodges & Videto** (pdf) **Kellogg Logic Model Guide**, Ch 1 & 2 (pdf)	Groups will be formed and organization chosen.
3	2.18	Health Program Planning: Finding Evidence-Based Programs; Program Adaptation	**McKenzie, et al** (Ch 8 pdf)	
4	2.25	Writing Program Grants I (statement of need, project narrative)	**Geever** : Ch 3-5	
5	3.3	Writing Program Grants II (Evaluation, Sustainability, Organizational Capacity)	**Geever** : Ch 6, 8, Appendix A	
6	3.10	Building a Budget	**Geever** : Ch 7, 9, 10	Statement of Need due; Group meetings in class.
7	3.17	Packaging the Proposal	**Geever**: Ch 7, 9, 10	Course meets online.
8	3.24	Finding Funding	**Geever**: Ch 11, 12 ***College follows a Friday Schedule (no in-class meeting).***	Course meets online.
9	3.31	Understanding the Review Process	**Geever**: Ch 14 **McKenzie, et al** (Ch 12 pdf)	Course meets online.
10	4.7	Program Implementation & Program Fidelity; Evaluation	**Readings TBD**	Course meets online.

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

COMHE75300-01 Health Program Planning and Funding
3 Credits
Spring 2016
LAST UPDATED: January 26, 2016

Time and location	Building & room number: N/A; Course fully online Mondays 4:10-5:55pm (meets online synchronously 3 times throughout semester; see schedule below)
Instructor	Meredith G. Manze, MPH, PhD Assistant Professor Email (best way to reach me): Meredith.manze@hunter.cuny.edu Office: Silberman 523 Phone: 212-396-7736
Office hours	By appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course will engage students in identifying or designing a health program, finding funding sources, and developing a proposal covering program need, program objectives, a management and quality assurance plan, preliminary work, evaluation, budget, and a plan for funding support.
Course prerequisites	prereq: completion of 15 cr incl PH 75000 or 75100, PH 75500 and either COMHE 75000, COMHE 75100, COMHE 75200 or COMHE 75000 and NUTR 71000 or NURS 77100, COMHE 75100 and COMHE 75200.
Course format	Online; Meets synchronously online for 3 sessions
Required reading and resources	• Geever, Jane C. The Foundation Center's Guide to Proposal Writing, 6th Edition, 2012. • Karsh, Ellen & Fox Arlen S. The Only Grant Writing Book You'll Ever Need. 4th Edition, 2014. All other articles will be provided.
Suggested reading and resources	See bottom of syllabus for suggested readings

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Apply social and behavioral theory and evidence to assess, plan, implement and evaluate community health programs, policies and interventions that promote health equality and reduce inequities.	1. Critically evaluate the assumptions in a logic model (particularly about race, gender, poverty, culture, and local community dynamics) 2. Distinguish between community based and community placed public health programs and initiatives 3. Develop a theory of change and logic model for a multi-component and multi-level community-based health program. 4. Write program objectives that are clear, specific, measurable and logical, given an overall health promotion strategy. 5. Write an implementation plan including specification of required resource, a service utilization and organizational plan	• Proposal Draft I • Final Proposal • Discussion Forum Participation • Mock Proposal Evaluation • Statement of Need
2. Demonstrate team building, negotiation, and conflict management skills in community health interventions.	6. Work within small groups to develop the program proposal and presentation 7. Identify strategies for developing collaborative initiatives and engaging various stakeholders and	• Oral presentation • Group Member Evaluation • Proposal Draft I • Final Proposal • Foundation Center

	community members in the design of a community based intervention program	Workshop • Discussion Forum Participation
3. Use qualitative and quantitative research methods to generate insight into community health issues.	8. Develop a full grant application for public health programs and research and identify appropriate funding mechanisms.	• Final Proposal • Oral Presentation • Oral Presentation Response • Discussion Forum Participation • Mock Proposal Evaluation

Course Assessments

This course will be run as an interactive seminar, using a "learn-by-doing" and "learn-by-exposure-to-success" approach to program planning and funding. Working in groups, students will produce a proposal to fund a program. These proposals will be sharpened as the semester progresses by discussion, coaching by fellow students and by review. Students will have access to model proposals.

Pre-requisites: ability to use/access a computer and email, use a web browser (Internet Explorer, Firefox or Safari) and Microsoft Office applications and use the Blackboard system regularly.

Course format: Class lectures will be posted (PowerPoint with audio recording) by 4:10pm on the Mondays listed in the schedule below (unless otherwise noted). Length of lectures will vary; because all of what would otherwise be in-class activities will be instead be done as part of the Discussion Board Forum, most lectures will run approximately an hour in length (less than the regular class time length).

Your response to the Discussion Board Forum prompts (related to the lecture & readings for that week & the weeks after the last Forum) will be due by the Sunday following that lecture by 4:10pm. (You are of course welcome to post your response any time during that week.) Your responses in these forums will contribute towards your participation grade (see below for more details).

This is NOT a self-paced course; there are deadlines for course assignments throughout the semester. Thus, it is critical that you schedule time to review the lecture & complete the Discussion Board Forums, as well as complete the readings and assignments.

All general questions should be posted in the Discussion Board Forum titled "Questions for the Instructor". Please email me only if you have a question about your personal situation. Otherwise, post general questions in that Forum. Students should check the Forum regularly.

Written Assignments: All assignments should be double-spaced, in Times New Roman 12-point type font, with 1.0 inch margins on all sides and page numbers on the bottom right of each page, with student names on the top of the first page (or title page of the proposal). All assignments should be submitted via BlackBoard (unless otherwise noted) by 4:10pm on the due date. **Any assignment sent at or after 4:11pm will be considered late**.

The course will be aimed toward producing the main assignment, a program proposal. Please follow the AMA format for citing references. Papers and reports should be kept to the maximum length specified. I will stop reading after the maximum length and you will be marked down, accordingly. The page limits listed below for each assignment do not include references. Please keep these at the end of your papers so I am able to

easily assess if you are within the page limits. To be clear, a page length of 2-3 pages means at least two pages but no more than three pages (so it ends somewhere on the second or third page).

All written assignments will be scanned in BlackBoard for plagiarism via SafeAssign. You will be able to review your score. You will have 2 attempts to upload each assignment to BlackBoard (so if you receive a high score for copied text in the first submission, not related to quotes or citations, it is up to you to review and edit and resubmit before the deadline). Allow yourself time for potential revisions before the deadline.

It is expected that your writing will be of graduate-level quality, presented in a readable and consistent manner as specified in the format requirements for assignments. All assignments should be completed independently, unless noted as a group project.

See description of all course assessments below.

Grading

Evaluation criteria

A. Attendance (DUE: throughout semester, 3 points)
Attendance online will be required for 3 synchronous classes (see schedule below). Your attendance grade will be based on your arriving in the chat room on time (class will start promptly at 4:10pm) for all 3 classes (1 point each).

If a class is listed as synchronous that means you will need to attend class online via BlackBoard Collaborate that day from 4:10-5:55pm. More information will be posted about using Collaborate. Also visit:
http://www.cuny.edu/about/administration/offices/CIS/functions/bb/userguides/blackboardcollaborate.html

If you are unable to attend a synchronous class, please email the instructor. If there is a legitimate reason for missing the class, an alternate assignment for attendance will be to watch the recorded session and post three things you learned from it under the Discussion Forum titled “Alternate Assignment”. (Note that this requires instructor approval, so do not assume you can miss class. Email the instructor as soon as you know will need to miss class).

B. Discussion Forum Participation (DUE: throughout semester, 15 points)
You will be asked to participate in 5 Discussion Board Forums. Each of the 5 Forums is worth 3 points, for a total of 15 points. The Forum will have prompts (related to all of the readings and lectures since the previous Forum). Some will require additional reading (of sample proposals, etc.); you should set aside at 1-2 hours for each Forum (in addition to the time needed to listen to the lecture & complete the readings). Your response to each Forum is due on the dates listed below in the schedule (the Sunday

following the lecture, by 4:10pm). For example, the Discussion Board Forum due on Sunday 3/6 will cover the lecture and readings from 2/22 and 2/29. No late responses will be accepted; after 4:10pm on the Sunday it's due, the Discussion Forum will no longer will available.

To obtain a full 3 points you will need to respond substantively, thoroughly and thoughtfully to all prompts, reference the lecture(s) and/or reading(s) and respond to at least two other students' posts. No late submissions will be accepted, except in the case of critical, extenuating circumstances.

The following tips for online communication "netiquette" are taken from Dr. Pei-Ju Liu (professor of online education at Central Michigan University):

1. Check before you post. Always check whether a similar question has been posted and answered on the discussion board to avoid duplicated messages and responses.
2. Use a descriptive subject line that reflects the content of your message for effective discussion / communication
3. Write in short paragraphs. If you have lots to say, break it down using smaller segments, so it is easier to read and follow.
4. Do not write in all uppercase. USING ALL CAPS MEANS YOU ARE SHOUTING although you may not intend to.
5. If you'd like, use emotional symbols (:-), ;-), :-(, :`-(, :-p, etc.) to indicate the tone of voice. It is hard to tell the emotion of a text-based message.
6. Avoid sarcasm as it often is interpreted as rude and hurtful.
7. Do not edit or change message content when someone has already responded to you. If you have something to add or change, simply add a follow-up message.
8. People in this course may come from places around the world, so be respectful to other cultures and languages.
9. Respect others. Like all communication and discussion occasions, use your professionalism and respect others. Unprofessional messages will be removed.
10. Points will be deducted for failing to comply with this online communication policy. Students who are abusive or rude may be banned from posting. Serious violation may be reported and result in further academic and/or disciplinary action.

C. Syllabus Quiz. (DUE: 2/7, 2 points)

To ensure an understanding of how this online course will operate, there will be a brief (6 question) quiz. This will be posted by February 1st and due February 7th at 4:10pm. You will need to take it in one sitting (once you start it, you will need to finish so make sure you have about a half hour of dedicated time). Note that we will review the syllabus on February 1st so you may want to wait until after class to take the quiz.

D. Statement of Need: (DUE: 3/21, 10 points)

Individually, write a 2-3 page brief literature review which makes the case for a data-driven, theoretically-driven program of public health significance, addressing an

important and current UNMET need. This review should contain at least 8-10 references of journal articles related to a health promotion or research on a community health issue. This review should serve as a research source for the needs development and proposed program in your group proposal.

E. Proposal Draft Part I. (DUE: 4/4, 15 points)
In your assigned groups, students will select a local community-based organization for which to develop and write the proposal (by February 4th; Google Doc to sign up posted in Course Materials titled "Group Assignment- Organizations").

Each group will submit one draft proposal that includes the following proposal sections: statement of need (1-2 pgs.), project goals/objectives (1-2 pgs.) and methods (1 pg.). In addition, create a 1-2pg. table of prospective funders with a brief description of your funding search (include databases & search terms used). This table should include approximately 5-10 funders and the following column headings and corresponding information for each potential funder:

- Name of funder, Subject area they are interested in funding, Geographic Focus, Keep/Remove and Notes. In the Notes column give justification for keeping or removing this funder on your refined list of final potential funders.
    - If funders have a long list of subjects, just put those that are relevant to your program (in the Subject area). Add a note if this is an abbreviated list.
- Note: this table font size can be reduced to 8 points or above and does not need to be double spaced

F. Mock Proposal Evaluation. (DUE: 5/2, 15 points)
Students will write a 2-3 page evaluation of a grant proposal, assuming the role of a reviewer/funder. Proposal will be provided two weeks prior to assignment due date.

G. Foundation Center Workshop. (DUE: 5/2, 5 points)
Students are required to attend one workshop of their choice at the Foundation Center. Please sign up for workshops online in advance, as they fill up.. These workshops are usually 1 hour in length & free of charge:http://www.grantspace.org/Classroom/training-calendar/New-York A brief description of the workshop you attended and what you learned will need to be submitted to the BlackBoard Discussion Forum "Foundation Center Workshop" by May 2nd. Note that the longer you wait to go in the semester, the more likely that the seminar you choose may seem redundant. Try to go as early in the semester as possible.

H. Final Group Proposal. (DUE: 5/9, 15 points)
As a group you will assume the role of the organization for which you have been assigned. Your proposal should be directed towards a specific funder/foundation. Note that the program you propose needs to be created independently (in your groups), without replicating an existing program at your organization in its current form. You are also not able to use any written materials provided by the organization. The final

proposal should incorporate edits from the first draft and should include the following sections:

a. Cover letter (1 pg.)
b. Title page & table of contents (1 pg.)
c. Executive summary (1 pg.)
d. Narrative
    i. Statement of need (2 pgs.)
    ii. Project description (4-5 pgs.)
        1. Goals/objectives
        2. Methods
        3. Evaluation
        4. Sustainability
    iii. Organization information (1-2 pgs.)
    iv. Conclusion (2 paragraphs)
e. Budget spreadsheet (1 pg.)
f. Budget justification (1-2 pgs.)
g. Appendices & supporting materials (optional)
h. References (no page limit)

I. Oral Presentation. (DUE: 5/16, 10 points)

Each group will present as a whole on their program proposal, but students will be graded individually. Each student will have 5 minutes to present. The presentation should be given as if to potential funders. As a group you will uploaded one audio-recorded PowerPoint presentation. (Please identify yourself at the start of your section.)

J. Group Peer Evaluations. (DUE: 5/16, 5 points)

5% of your final grade will be an average of your peer evaluations for your group work. The group member evaluation template form is posted on BlackBoard and due on 5/16 (at 4:10pm). No late assignments will be accepted. If you do not submit this evaluation by the deadline, your own score will be deducted by 1 point and be default your score for your group members will be considered the highest score.

K. Oral Presentation Response. (DUE: 5/23, 5 points)

Individually, you will listen/watch at least four group presentations (not your own group's) and provide substantive feedback or questions on their presentation and proposed programs (4 points). Please submit these responses prior to the deadline, to allow fellow classmates ample time to respond to your comments or questions. For questions or comments on your own group's oral presentation, at least one group member will need respond by 4:10pm on 5/24 (1 point); you can decide collectively as a group who will respond to what. If no group member responds, all group members will be deducted 1 point.

The relative weight of each course component is as follows:

Assessment	**Type**	**Weight**
Attendance	Individual	3%

Discussion Board Participation	Individual	15%
Syllabus Quiz	Individual	2%
Statement of Need	Individual	10%
Proposal Draft Part I	Group	15%
Mock Proposal Evaluation	Individual	15%
Foundation Center Workshop	Individual	5%
Final Group Proposal	Group	15%
Oral Presentation	Group (graded individually)	10%
Group Peer Evaluation	Individual	5%
Oral Presentation Response	Individual	5%
	TOTAL	**100%**

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an “unofficial withdrawal” (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the

student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Attendance online will be required for 3 synchronous classes (see schedule below). Your attendance grade will be based on your arriving in the chat room on time (class will start promptly at 4:10pm) for all 3 classes.

Participation in class discussion and Blackboard (when assigned) is vital in this course. Your participation grade will reflect consistent, thoughtful contributions to the discussion forums. See descriptions above for attendance and participation grades.

Late/incomplete submission of assignments

***Late Submission of Assignments:**
All assignments are expected to be completed on time. All assignments are due at 4:10pm via BlackBoard on the due date noted (unless otherwise specified). **DO NOT SEND AN E-MAIL REQUESTING AN EXTENSION ON THE DAY THE ASSIGNMENT IS DUE.** With the exception of cases involving critical extenuating circumstances, late submissions of written assignments will be penalized 5 points (out of 100) each day it is late (*including weekends*). **After 5 days of lateness, you will not receive credit for the assignment(s).** No late submission of Discussion Group Forums will be accepted, again except in cases involving critical extenuating circumstances.

Make-ups, rewrites, and extra credit

There are no make-ups, rewrites or extra credit for this course.

Expectations of students

Being successful as a student in an online course takes much self-discipline and motivation. Be mindful of figuring out the best strategy to pace yourself to keep up with the many various assignments and assessments in this course. Your active participation is critical in creating an engaging online course and maximizing what you learn from the material.

The online classroom is a community. Respectful interaction with the instructor, classmates, and guests is expected at all times. Public health deals with controversial issues from multiple perspectives and consideration of these issues may cause disagreements among us or may evoke strong personal feelings, depending on our individual experiences, histories, identities and worldviews. Therefore, in all of

interactions and communications, it is important that students strive to demonstrate mutual respect for one another and for any course guests and members of the community with whom they come into contact.

All students must enroll in BlackBoard. BlackBoard will be used on a routine basis as a learning tool to distribute course materials, as well as to facilitate communication with the instructor and classmates. You are expected to check the Discussion Forums regularly. You are expected to check your Hunter email daily for course updates.

Expectations for the instructor
I will post relevant announcements via BlackBoard. Direct any inquiries to the instructor via e-mail. A response can be expected within 72 hours (unless otherwise specified), but I often respond within <24 hours. Assignments will be graded within two weeks (unless otherwise specified).

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

The schedule and assigned readings are subject to change throughout the semester. The "Last Updated" Date on the first page of the syllabus will be updated if a change in schedule is made. Please refer to the Hunter Academic Calendar for important dates including holidays, course meeting dates and withdrawals.

SESSION	DATE	Synchronous?*	TOPIC(s)	ASSIGNED READINGS	ASSIGNMENTS DUE

Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course provides an overview of environmental and occupational research and writing techniques. The course explains how to conduct a rapid literature review, how to use research and citation software and how to use widely available spreadsheets programs (such as Excel and Google Sheets) to analyze and present data. The course provides an overview of environmental and occupational databases online and how to use data to investigate environmental and occupational health problems.
Course prerequisites	None
Course format	Hybrid
Required reading and resources	Health Research Methods, Author: Kathryn Jacobsen, Publisher: Jones Bartlett
Suggested reading and resources	List optional reading and learning resources

Program Competencies	**Course Learning Objectives**	**Assessment Methods**
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Apply the core functions of PH practice (assessment, policy development, and assurance)	· Identify and frame a research question · Conduct a literature review to help answer your research question	· Rapid lit scan · Research paper
2.Understand basic theories, concepts, models and methods from a range of core and related disciplines and apply them to the design of PH research, policy, and practice.	· Apply PH theory to recommend policy changes and interventions based on research findings	· Research paper
3.Use basic statistical and informatics techniques	· Apply basic statistical methods to answer a research question	· Data analysis
4. Explain key social, behavioral, biomedical, and environmental determinants of and inequities in health and disease across the lifespan in urban settings	· Identify susceptible populations · Recommend policy changes to alleviate the disease burden among these groups	· Research paper
5. Describe the legal foundations of the US PH system and its interrelationships with other systems (e.g. health care, education, environmental protection)	· Identify policy gaps as it pertains to your research question	· Rapid lit scan · Research paper
6. Design and evaluate interventions to prevent or control urban public health problems	· Provide policy recommendations based on research findings	· Research paper

Course Assessments

Students will work together through a series of research assignments culminating in both written work product and a recorded presentation. Students will work through the research assignments in groups of four organized based on similar topics. The assignments are designed to both refine research skills and allow students to explore one aspect of environmental and occupational health in depth. Although students will work together in groups through most of the research modules (RMs), the final work (draft paper, peer reviews and final paper) will be done individually. This term the class will look at various aspects of the public health risk associated with shale gas extraction (what the public calls “fracking”).

Students will begin by selecting one of the following research groups:

Group 1: What’s OSHA Got to Do With It?
Suggested Topics:

1. Worker Health Implications of Radiation in Shale Gas Extraction (aka fracking)
2. Accidents in Shale Gas Extraction
3. Reducing Fatality Rates and Hazards to Oil and Gas Extraction Workers
4. Health Impacts of Silica in Shale Gas Extraction
5. Health implications in first responders
6. Exposure of gas field workers (and neighbors) to toxic chemicals from drilling additives

Group 2: Water Pollution
Suggested Topics:

1. Public Health Implications of Methane Intrusion into Water from Shale Gas Extraction (aka fracking)
2. Public Health Implications of Radiation (NORM/TENORM) in flowback and produced waters from Water Shale Gas Extraction (aka fracking)
3. Contaminated water management -- flowback and produced waters
4. Patterns in surface water contamination
5. Biological contamination of water sources (e.g., risk of contaminating aquifers with sulfate reducing bacteria)

Group 3: Water Allocation
Suggested Topics:

1. Patterns in Water Withdrawal from Shale Gas Extraction & Drought
2. Implications of water withdrawal and water cycle/ecology

Group 4: Air Pollution/ Climate Change
Suggested Topics:

1. Public Health Implications of Venting Methane in Shale Gas Extraction (aka fracking)
2. Fugitive emissions & impact of EPA green completion rules

3. “Downwinders syndrome”
4. Protective measures: comparative state set-back requirements
5. GHG emissions during each phase of shale extraction
    a. horizontal drilling
    b. hydraulic fracturing
    c. transportation of water
    d. transportation of wastewater
    e. treatment of wastewater and solids

Group 5: Chemical Exposure
Suggested Topics:
1. EDCs & Chemicals Used in Shale Gas Extraction: BTEX
2. EDCs & Chemicals Used in Shale Gas Extraction: Naphthalene
3. Obesogens & Chemicals Used in Shale Gas Extraction
4. “Shale Gas Syndrome”

Group 6: Social & Other Impacts
Suggested Topics:
1. Impact on local health systems
2. Risk of certain health issues
3. Noise pollution
4. Traffic accidents
5. Landscape impacts
6. Threatened & endangered species
7. Boom/Bust Cycle
8. Seismic impacts
9. Severance tax (use for local economies, including medicare/caid & education)
10. Exportation of LNG & national defense

Literature Scan
The purpose of the rapid literature scan is to quickly familiarize yourself with a research topic. For the literature scan you will need to identify at least 15 articles, from either government documents or peer-reviewed literature and construct an evidence table. This initial literature review scan will help develop your research question.

Data Analysis
A dataset will be provided to you for analysis. You will be responsible for using the statistical techniques discussed in class to analyze and interpret the data using EXCEL or SPSS. You will then use the data to produce tables.

Research Paper
A 10-12 page, double-spaced, research paper is required of all students. Each student will select a research topic from an approved topic list. Grading will be based on content, quality of

research, organization, and effectiveness of presentation. Sources must be included as in text citations (AMA) and a reference list must be included at the end of the paper. We recommend using endnote, write-n-cite or other citation software to assist your paper. Please no plastic binders/covers. Use plain white paper, stapled at the top.

The due date for the draft paper is indicated on the syllabus. The draft paper will be distributed to other students for peer review. Instructions and a grading rubric for peer review will be provided during the semester. If you fail to hand in a draft paper prior to the due date you will lose points for both the rough draft and the peer review. Unless prior arrangements are made, if you do not turn in all three of your peer reviews on time, you will both lose points for failure to the assignment and your final paper will not be graded.

A final draft of your research paper is due according to the date on the syllabus. The final draft must incorporate your revisions requested by your peers and instructors. Include a copy of your paper with track changes so we can see the changes you made from your draft to your final copy. Discuss questions about peer review comments first with the peer who wrote the comments; see the instructors for any further questions or concerns about peer review comments.

Peer Review

All students will be assigned three draft papers for review. Peer reviewers are responsible for marking up their peers' paper and filling out a grading rubric. Each student will meet with their peers and discuss ways to improve each other's work. The peer-review is a valuable part of the research process and significant time and effort should be put into this assignment.

Warning: Students that do not complete all three peer reviews on time will be graded on their draft and will not have any final, revised paper graded by the instructors.

Recorded Presentation

As a final project, students are expected to produce a recorded oral presentation. The presentation can be a video posted on YouTube, a recorded PowerPoint presentation or any other recorded oral presentation or video that you create as a summary of your project.

Attendance and class participation

Class attendance will be taken every day. Students must sign in at the beginning of class. 10% of the final grade is class participation. It is your responsibility to sign in every class period. Students who are not in attendance are, by definition, not participating on that day. Students are expected to complete assignments for each class and engage in discussion during class.

Grading

Evaluation criteria

Students will be evaluated on the assignments outlined above as well as attendance and participation. The relative weight of each assessment is shown below. Formal rubrics for assignments will be provided to the students and can be found on BlackBoard.

Assessment	Weight
Research Modules (including literature scan, rough draft & peer reviews)	22%
Data analysis	20%
Final paper	40%
Recorded Presentation	8%
Class participation	10%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an “unofficial withdrawal” (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete

grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies
Attendance and class participation
You are expected to attend all in class lectures. However, you may be excused from one lecture without penalty. Please notify us via email if you will be late or not able to attend the lecture.

Late/incomplete submission of assignments
Assignments handed in 24 hours after the due date will be given 75% credit. No credit will be given for work handed in after 24 hours.

All papers and assignments are due at the beginning of class at 6:00pm. Papers turned in after the beginning of class are considered late.
No papers or assignments will be accepted after the instructor has released answers and/or returned graded work to the class. Once work is returned to the class, the link to the assignment will expire on BLACKBOARD.

Late assignments hold the entire class up and can delay return of graded assignments to other students.

How to Turn In Assignments
All papers must be turned in on BLACKBOARD as an attachment, with a paper confirmation copy turned in at the beginning of class on the date due. Papers that are submitted without a paper confirmation copy or that are not also posted on BLACKBOARD are considered late unless prior written approval is received from the instructor. It is the responsibility of each student to post his or her own assignments on time, even if the assignment is done in a group.

All assignments posted on BLACKBOARD as an attachment must be named using the following formula:

EOHS70N01_S16_
StudentLastName_StudentFirstName_Date_Group#_RM#_AssignmentName

Assignments will not be graded for students or groups not naming files according to instructions.

No papers, internet assignments or other homework will be accepted by email unless prior written arrangements are made with the instructor.

Make-ups, rewrites, and extra credit

As a general rule, there are no make-ups, rewrites, or extra credit assignments in this course. Plan to do your best work and turn your work in on time.

Students will never be given make-ups, rewrites, or extra credit assignments on a case-by-case. The instructors reserve the right to add extra credit assignments or rewrites during the semester to the entire class, as the instructors deem appropriate. If added or allowed, it is the policy of instructors to extend the same offer to all students in the class.

Expectations of students

Students are expected to come to class prepared to discuss the lesson and homework assignments.

Electronics may not be used during class. Please silence your cell phones prior to class the start of class. If it is an emergency and you need to make a phone call please quickly and quietly leave the class. Students texting, checking email or other electronics/ social media during class will be asked to leave the classroom as this is disruptive to the instructors and to fellow students. Everyone should be respectful of others' opinions and questions.

Expectations for the instructors

We are both available for extra help outside of class. Students are encouraged to stop by our offices for help with exams and homework assignments. The classroom is a place for discussion26and we welcome and encourage students' questions about the topics that will be covered in the course.

Professor Pavilonis is available at Bp305@hunter.cuny.edu and Prof. Geltman is at eg86@hunter.cuny.edu during business hours to answer questions by email. **Please do not abuse the email privilege**. Consult the syllabus, blackboard and other course materials first for answers to your questions. Allow 24 to 48 business hours for an email response. Note that we cannot answer email while teaching, in meetings, and while working on research. Students should plan to contact us during business hours. We are often not available and students should not expect to reach us by email after business hours, on weekends, and during holidays.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that

are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

The schedule is subject to change throughout the semester. Revised syllabi will be posted on the course website.

The Spring 2016 academic calendar can be found at the following address http://www.cuny.edu/academics/calendars/spring-2016.html. Please refer to it for information regarding withdrawal dates.

Week	Date	Topic	Assignment(s)	
1 Guest lecture: John Pell	2/2/16 F2F	Course Overview How To Install & Use *Write-N-Cite* How to select & use citation software: Zotero, EndNote, Mendeley, Flow Guest Lecture: John Pell	RM1 (2 points): Go to: http://library.hunter.cuny.edu/citation-tools & install *Write-N-Cite* Select a citation manager and set up an account. Be prepared to explain why you selected the system you did. Set up an account on Zotero.org Identify a topic from the list and join a group. Complete the research survey. CUNY - School of Public Health

EOHS-741 Environmental and Industrial Hygiene Laboratory
4 credits
Spring 2016

Instructor: Prof. Jack Caravanos and Anthony Devito **Thursday 6:05 - 9:45 PM**
Spring 2016 **Room C-14**

Office Hours: M,Th 4:00 to 5:30 pm or by appointment.
Office: Room 720, Silberman Bldg
Office Phone: (212) 396-7780
Email: jcaravan@hunter.cuny.edu , adevito@hunter.cuny.edu
Program Office: Room 720
Pre-Requisites: Pre- or Co-Requisite, EOHS 70500
Course Description: Physical, chemical, and instrumental methods for measuring environmental and occupational contaminants.

Required Reading:

- *NIOSH Manual of Analytical Methods,* NIOSH Publication # 2003-154 at www.cdc.gov/niosh.
- Please print-out specified chapters and bind.
- Homepage for chapter links for PDFs: http://www.cdc.gov/niosh/docs/2003-154/chaps.html
- Supplemental reading materials and web sites will be posted on Blackboard, as needed.

NIOSH Manual of Analytical Methods

- Chapter A - Purpose & Scope
- Chapter B - How to Use NMAM
- Chapter C - Quality Assurance
- Chapter D - General Considerations for Sampling Airborne Contaminants
- Chapter E - Development and Evaluation of Methods
- Chapter F - Application of Biological Monitoring Methods
- Chapter G - Aerosol Photometers for Respirable Dust Measurements
- Chapter H - Portable Electrochemical Sensor Methods
- Chapter I - Portable Gas Chromatography
- Chapter J - Sampling and Characterization of Bioaerosols
- Chapter K - Determination of Airborne Isocyanate Exposure
- Chapter L - Measurement of Fibers
- Chapter M - Sampling and Analysis of Soluble Metal Compounds
- Chapter N - Aerosol Sampling : Minimizing Particle Loss from Cassette Bypass Leakage
- Chapter O - Factors Affecting Aerosol Sampling
- Chapter P - Measurement Uncertainty and NIOSH Method Accuracy Range
- Chapter Q - Monitoring of Diesel Particulate Exhaust in the Workplace
- Chapter R - Determination of Airborne Crystalline Silica

Glossary - Glossary of Abbreviations, Definitions, and Symbols

EOHS-741, Environmental and Industrial Hygiene Laboratory - Spring 2016

COURSE OUTLINE

Date	Week	Topic	Reading	Reports
Thurs. 2/4	1	Course Introduction **(Caravanos)** • Env. Laboratories / Analysis / QA / QC • Interpreting consultant reports	Ch. A, B, C	none
2/11	2	Asbestos Fiber Counting and Identification Lecture **(Caravanos)** Asbestos Fiber Counting Laboratory • Using a Phase Contrast Microscope • Fiber counting and calculations	Ch. L NIOSH Method 7400	Data sheet due
2/18	3	Asbestos Polarizing Light Microscopy Laboratory **(Caravanos)**		Data sheet due
2/25	4	Microbial Assessment: –Air and swab sampling **(Caravanos)** Mold sample analysis – Colony morphology • Take-home: environmental mold testing	Ch. F, J	
3/3	5	Microbial Assessment (part 2) **(Caravanos)** Lead Lecture (part 1) • Sampling methods – dust, air and paint • X-Ray Fluorescence detection / Flame Atomic Absorption Spectrophotometry • Take-home: environmental lead testing	NIOSH Methods: 9100 & 7700	Full lab report (mold)
3/10	6	Lead Laboratory (part 2), **(Caravanos)** • XRF Analysis of samples • Blood lead measurements		Full lab report (lead)
3/17	7	***MIDTERM EXAM (online, no class meeting)***		
3/24	8	Air Sampling and Calibration: **(DeVito)** • Air Sampling Methodologies for Vapors, Gases and Dusts • Assembling a sampling train, pump calibration (primary & secondary) • Collecting air samples (particulates, organics)	Ch.D, M, N, O	
3/31	9	Sampling of Organic Vapors **(DeVito)** - Low flow pump calibration, Preparation of sampling train - Sampling with charcoal tubes, passive dosimeters - Sampling with direct readers (OVA, length of stain tubes) - Review of calculations	NSC, Ch. 17; QIH, Section 1-IH Chem, #11, 23, 24	
4/7	10	Indoor Air Quality and Direct Reading Instruments **(DeVito)** • Principles • IAQ monitors • Dust Monitors, PID meters	Ch. G, H, I	
4/14	11	Personal Protective Equipment (lecture and Lab) **(DeVito)** • Qualitative and Quantitative Respiratory Fit Testing • Chemical Protective Suits / SCBA	OSHA-3352	
4/21	12	Assessing Ventilation Systems **(DeVito)** • Use of pitot tubes, swinging vane anemometers, thermo-anemometers • Measuring velocity pressure in a duct with a pitot tube • Selecting the Proper Capture Device • Evaluating capture velocity in front of a hood • Assessing a laboratory hood	Reading: NSC, Ch. 19; QIH, Section 3 Ventilation, # 1-11, 20	
4/28		**Spring Break**		
5/5	13	Assessing Noise Hazards – (Lecture / Lab)		
5/12	14	Assessing Radiation Hazards – (Lecture / Lab) Student Presentations		
5/19	***15***	***FINAL EXAM***		

Use of Blackboard:
All assignments, course documents, notes and presentations will be posted on Blackboard. It is the student's responsibility to check Blackboard frequently for new materials.

Grading:

Midterm Exam:	30%
Final Exam:	30%
Lab Performance/Assignments:	10%
Project Report	30%

Term Project:
The class will conduct an environmental data collection survey. Each student group will conduct a different sampling site using a direct reading instrument survey of an establishment or environment. Details will be provided at the first class session. (Presentations due May 12th).

Course-Syllabus Change Policy:
Except for changes that substantially affect implementation of the evaluation (grading) statement, this course outline is a guide for the course and is subject to change with advance notice. Changes will be announced in class and will be posted on the course Blackboard site.

Policies Concerning Attendance, Missing Tests, Handing in of Assignments, Grading, Extra Credit, and Incomplete grade:

- Students should contact instructor prior to absence (email or voicemail is acceptable).
- It is the students' responsibility to obtain class notes from a colleague.
- Make-up tests will be given only under extraordinary circumstances. It is the student's responsibility to inform the instructor of these circumstances **before** exam day and to make alternate arrangements.
- 2 points will be deducted for assignments handed-in after the due date. 5 points will be deducted from assignments handed in more than 1 week late.
- Assignments must be handed in as hard copy in class. E-mailed assignments will not be accepted.
- Final grades are based on the weighted average of assignments and exams as described above. There will be no opportunity to do additional work for extra credit.
- Incompletes are given only under special circumstances. If student cannot complete the course, this must be discussed with instructor. The student must sign an "Incomplete Contract" with the instructor detailing the terms of the incomplete.

Withdrawing from the course:

- Refer to the Hunter College Office of the Registrar for additional requirements and information for dropping or withdrawal from courses.

EOHS Track Competencies	Course Learning Objectives	Most relevant sessions and assignments (objectives are also touched on in other sessions)
This course will help you to achieve the following competencies, which are expected of EOHS track MPH/MS graduates	**After successfully completing this course, you are expected to be able to:**	
TC1. Identify and describe environmental and occupational sources of chemical, biological, physical and/or safety (CBPS) hazards.	Develop skills to present observations, lab data and conclusions in standardized report format that is consistent with professional practice. Develop ability to identify, describe qualitatively, and quantify agents, factors, and stressors generated by and/or associated with defined sources, unit operations, and/or processes.	2, 3, 6, 9 (lab performance, exams)
TC2. Predict and prevent health, safety and environmental risks from processes, work tasks, the built environment and other economic and/or social activities.	Develop an understanding of the qualitative and quantitative aspects of exposure assessment, dose-response, and risk characterization based on applicable pathways and modes of entry.	1, 13, 14 (Term project, exams)

Hunter College Statement on Academic Dishonesty
Hunter College regards acts of academic dishonesty (e.g., plagiarism, cheating on examinations, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The college is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. To view the entire Hunter College Academic Integrity Policy and Procedure, please go to the Hunter College Senate homepage at www.hunter.cuny.edu/senate/ and click on "Documents

ADA Policy
In compliance with the American Disability Act of 1990 (ADA) and with Section 504 of the Rehabilitation Act of 1973, Hunter College is committed to ensuring educational parity and accommodations for all students with documented disabilities and/or medical conditions. It is recommended that all students with documented disabilities (Emotional, Medical, Physical, and/or Learning) consult the Office of AccessABILITY, located in Room E1214B, to secure necessary academic accommodations. For further information and assistance, please call the Office.

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions.

Grade Appeals
Students will follow the procedures specified in the Hunter College Grade Appeals Procedures (Approved by the Hunter College Senate 10/9/85 – Updated 5-4-05) as posted on the following site:
http://www.hunter.cuny.edu/provost/repository/files/COLLEGE-WIDE%20GRADE%20APPEALS%20PROCEDURES%205-4-05.pdf
This is a progressive process that starts with the instructor and ultimately involves a Departmental/School Grade appeals Committee. The student will initiate the discussions with the instructor and follow the appropriate steps as outlined in the official Hunter grade appeals process.

CUNY SCHOOL OF PUBLIC HEALTH

HUNTER COLLEGE

COURSE SYLLABUS
EOHS 75400: Environmental and Occupational Toxicology
Spring 2016

Time & Location Monday 8-9:45 Room 214 Silberman

EOHS 75400 Environmental and Occupational Toxicology, 3 credits

Spring Semester, 2016	Prof. Franklin E. Mirer, PhD, CIH
Time Monday 8-9:45	Office: Room 722
Room SB 214	Telephone: 212-396-7782
Office Hours: Tues 5:30-6:30, Wednesday 4:30-5:30, and otherwise by appointment	Email: fmirer@hunter.cuny.edu

Course Description and objectives: Introduction to principles of toxicology with emphasis on environment and occupational aspects. Systematic review of the toxicology of major organ systems; health effects of categories of toxins, such as solvents and metals; and review of toxicological testing and evaluation. Required for MS and MPH.

Prerequisite courses: PH 75400 and EOHS 70500

Texts: 1 required book

Casarett and Doull's Essentials of Toxicology Second Edition [Book] by Curtis D. Klaassen, John Barr Watkins

$44 online By Curtis D. Klaassen, John Barr Watkins - McGraw-Hill (2010) - Paperback - 472 pages - ISBN 0071622403

http://en.wikibooks.org/wiki/Human_Physiology/Cell_physiology

Recommended: Kuhn, TS, The Structure of Scientific Revolutions

White, The Elements of Style

Additional readings will be assigned during the term. These will include at least one original research paper, one peer reviewed review paper, and one authoritative recommendations document.

==========

Course Outline

Session	Date	Topic	Reading
1	2/2	Course Administrative; Introduction, History and Principles Paradigms and Paradigm Cases, Paper and Discussion Board Posting	ET Ch. 1 & 2
	2/9	No class Friday sched	
2	2/16	Mechanisms of Toxicity, Absorption, Distribution and Excretion of Toxicants **Post MSDS and Comments**	ET Ch. 3 & 5 Cells
3	2/23	Biotransformation and Toxicokinetics	ET Ch. 6 & 7
4	3/1	Respiratory System Toxicology **Paper Topic Due –** Discussion of Papers	ET Ch. 15 Respiratory
		Immune System Toxicology	ET Ch 12 Immune
5	3/8	Chemical Carcinogenesis and Genetic Toxicology	ET Ch. 8 & 9
		Risk Assessment **Paper Tentative Literature Summary – at least 10 References**	
6	3/15	Nervous System Toxicology	ET Ch. 16 Nervous

15	5/24	**Final**	

Educational Outcomes:

This course should contribute to the student's abilities to:

1. Understand and assess occupational and environmental hazard notification systems including Material Safety Data Sheets, Transportation placards, HMIS placards.
2. Identify the origin and scientific basis of various environmental and occupational exposure limits.
3. Describe physiological and/or toxic interactions of physical, chemical, biological, and ergonomic agents, factors, and/or stressors with the human body.
4. Explain environmental and occupational health laws and regulations and be able to suggest appropriate legislative controls.
5. Recommend and evaluate personal protective equipment including respiratory selection, fit-testing procedures and use of chemical protective clothing and/or other interventions to reduce or eliminate hazards.
6. Prepare scientific and technical summaries and reports.
7. Use the Internet to conduct literature searches, database searches and communicate with colleagues in the EOHS profession.
8. Understand and critically analyze published reports on urban health issues.
9. Attain recognized professional certification.

	EOHS 754 Environmental and Occupational Health Track Competencies – MS & MPH	**Course Learning Objectives**	**Assessment Methods**
T1	Identify and describe environmental and occupational sources of chemical, biological, physical and/or safety (CBPS) hazards	• Assess chemical hazard warnings and warning systems • Describe sources and exposure circumstances for chemical hazards of health importance	Class discussion, msds exercise, paper
T2	Predict and prevent health, safety and environmental risks from processes, work tasks, the built environment and other economic and/or social activities.	• Interpret and apply occupational and environmental chemical exposure measurements to assess delivered doses and health risks	paper
T3	Evaluate the human health risks from CBPS hazards using qualitative, quantitative and/or instrumental assessment methods	• Apply biological and chemical principles to explain toxic action of chemicals. • Apply typical occupational and environmental measurements to determining delivered dose of chemicals to people • Describe the origin, scientific basis, implementation and strength and weaknesses of different approaches to risk assessment • Describe the biological basis for occupational and environmental exposure limits	Paper, class discussion, midterm and final exam
T4	Recommend appropriate engineering, personal protection or administrative controls and policies for CBPS hazards and evaluate their effectiveness.	• Describe the bases of occupational and environmental chemical exposure standards and societal processes for change.	paper

	EOHS 754 Environmental and Occupational Health Track Competencies – MS (ABET)	**Course Learning Objectives**	**Assessment Methods**
2	. Study and assess occupational and environmental hazard notification systems such as MSDS and transportation placards.	• Assess chemical hazard warnings and warning systems • Describe sources and exposure circumstances for chemical hazards of health importance	Class discussion, msds exercise, paper

4.	Learn about physiological and/or toxic interactions of physical, chemical, biological, and ergonomic agents, factors, and/or stressors with the human body.	• Interpret and apply occupational and environmental chemical exposure measurements to assess delivered doses and health risks	Paper, midterm and final exam
5	Develop an understanding of the qualitative and quantitative aspects of exposure assessment, dose-response, and risk characterization based on applicable pathways and modes of entry.	• Apply biological and chemical principles to explain toxic action of chemicals. • Apply typical occupational and environmental measurements to determining delivered dose of chemicals to people • Describe the origin, scientific basis, implementation and strength and weaknesses of different approaches to risk assessment • Describe the biological basis for occupational and environmental exposure limits	Midterm and final exam, paper
10	. Learn the origin, scientific basis, interpretation, and application of various environmental and occupational exposure limits and be able to communicate that information to others.	• Describe the bases of occupational and environmental chemical exposure standards and societal processes for change.	paper
11	Become skilled at evaluating, recommending, and putting into practice administrative and engineering controls and personal protective equipment to reduce or eliminate occupational hazards.	• Interpret averaging periods for occupational and environmental exposure standard	Paper, msds exercise
19	Acquire the knowledge needed to attain recognized professional certification.	• Answer typical questions from industrial hygiene certification exams	Final and midterm exam

Pre-Class Preparation

All students are expected to have read the assigned chapters in each book prior to each class. Examinations may include this material and it may only be reviewed quickly in class if at all. Students should assume that "key points" in the ET chapters will appear on exams, since these points will likely appear on IH certification and other future professional exams.

Another resource that may be helpful regarding the physiology material is the following website:

http://homepage.smc.edu/wissmann_paul/anatomy1/

While this material will not be on exams unless covered specifically in class, it can be helpful to fill in the large gaps that the physiology book will leave. Finally, Chapters 22 (sections on Insecticides and Rodenticides), 23 (Entire Chapter) and 24 (Entire Chapter) will be covered at various points in conjunction with sections on organ system toxicity. Students should read these Chapters immediately after the mid-term in order to be prepared.

Required Paper

An EOH professional may be called on to explain divergent exposure limits, for example, why an occupational limit is so much higher than an environmental regulation, or why two occupational exposure limits diverge. Select an exposure or agent of interest for which there are divergent limits. You are responsible for finding environmental reference levels for agents whose primary exposure is occupational. You are the health and safety professional for a facility using that chemical and potentially releasing that agent into the environment. Your selection of agents and circumstances will be discussed with the instructor and fellow students. Prepare a summary of toxicity information (routes of exposure, transport in the body, target organ effects, mechanisms of toxicity and metabolism, body burden measurements if applicable) and an explanation for different limits. You should consult at least one authoritative recommendations document, which may the preamble and explanation of an OSHA standard, or the Documentation for a TLV, or can be found at
http://www.epa.gov/iris/subst/index.html
http://www.atsdr.cdc.gov/toxpro2.html
http://www.cdc.gov/niosh/critdoc2.html

The writing must be yours. Text taken from documents or the internet must be indicated with quotes and appropriately cited. Discussion with the instructor and other students is encouraged.

Guidelines:
1. Approximately 2000 words (Not counting title page and bibliography.)
2. Paginated. Figures and tables should be included in the document after the references, one to a page, separated by page breaks.
3. Must contain at least 10 different references, 5 from peer-reviewed journals; documents explaining the exposure limits (Documentation for TLV's, IRIS summaries, OSHA standards explanations) should be cited. Citations should be formatted appropriately.
4. Internet citations are OK, but full web site address must be cited, and the site must be from a government agency or a university. Wikipedia is not acceptable. Generally .com domain addresses are not acceptable.
5. Deadlines are essential and are contained in the Course Outline. Late paper counts against you.
6. The paper must have a statement of key points at the top: identity of substance, major exposure situations, contrasting exposure limits and agencies, and the key reasons the agency gives for why limits contrast. This section should consist of bullet points and be set off by typeface in a box.
7. Single spaced, submitted electronically in Word or RTF format unless arrangements have been made for alternative presentation.

Grading of the paper will be based on:
1. The presentation: did the paper follow the ground rules?
2. The cohesiveness of the argument: is there a logical flow to the paper, do the sections fit together, do the recommendations and conclusions follow from the information presented?
3. The extent to which the paper reflects an understanding of the material gleaned from the journals and other information sources.

4. Writing skills: grammar, spelling, punctuation (to the extent that they enhance or dampen understanding of the paper)

The paper topic [target substance] should be selected and submitted no later than (4th meeting) and posted to the discussion board. The tentative literature review working bibliography should be posted to the discussion board by (5th Meeting), A strawman summary listing the exposure limits to be compared, and their sources should be submitted by (7th Meeting) and posted to the wiki. These early dates are to give an opportunity for direction and correction. The final paper is due (12th Meeting), to permit classroom discussion. Electronic submission of the paper and posting to the discussion board is required.

Discussion Board
A toxic events discussion board will be created in the course blackboard site. You are required to post at least one entry to this discussion board and at least one comment on another posting. A satisfactory blog post shall consist of a reference and link to a journalistic or scientific publication, an extract or abstract of the publication, and a commentary identifying the agent and reasons why others in the class should be interested in the matter. The commentary must be at least four sentences. You may be asked to discuss your posting in class.

Grades
Grades will be assigned as follows:

Mid-term	30%
Final	40%
Paper	15%
MSDS Posting	5%
Class Participation	5%
Discussion Board Posting	5%

Examination format typically consists of multiple choice and fill in the blanks questions. Exams will emphasize recall of specific information, in contrast to the paper which will emphasize discussion. A perfect score on an examination is unlikely to be 100, scoring of questions may be modified during the grading process. The mid-term and final exam are independent, the final exam is not cumulative. However, some material discussed after the midterm is linked to pre midterm and thus may appear on the final.

The final grade will be assigned based on the weighted average of component scores in relation to the median and distribution of class scores.

Policy on Incompletes
Refer to Urban Public Health School Policy.

Academic Honesty
A statement on academic honesty was passed by the Hunter College Senate in Spring 2005 and is required on all course syllabi. Each syllabus must state, “Hunter College regards acts of academic dishonesty (e.g., plagiarism, cheating on examinations, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures.”

Please refer to the Hunter College Catalog for more information.

Services For Disabled Students
The Office of Disabled Students is located in Student Services, 1128 East Building, 772-4857. Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life’s basic functions.

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

EOHS75700 Principles of Industrial Hygiene
3 Credits
Spring 2016

Time and location	Silberman Room 214 Wednesday 8:00-9:45 p.m.
Instructor	Brian Pavilonis, Ph.D. Bp305@hunter.cuny.edu (preferred method of contacting me) 212-396-7739 Silberman Room 534
Office hours	Tuesday 4:00-5:30 p.m. Wednesday 7:00-8:00 p.m.
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Recognition, evaluation, and control of industrial hazards due to chemical and physical agents. Topics include occupational health standards, regulatory agency activities, effects of contaminants on human health, sampling and control of hazards, and current issues.
Course prerequisites	EOHS 70500 & EOHS 70200 or equivalents
Course format	In class lecture
Required reading and resources	Fundamentals of Industrial Hygiene, Author: Barbara Plog, Publisher: National Safety Council, Edition: 6th, Year Published: 2012 Lecture slides posted on Black Board
Suggested reading and resources	Supplemental reading assignments will be posted on Blackboard or available online. It is the student's responsibility to keep track of supplemental reading assignments.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Apply the core functions of PH practice (assessment, policy development, and assurance)	Apply course information including workplace assessment factors to evaluate worker exposures and recommend effective controls for specific occupational exposure hazards.	• HW #5 and #6 • Test #2
2. Understand basic theories, concepts, models and methods from a range of core and related disciplines and apply them to the design of public health research, policy, and practice	Understand the scientific disciplines that contribute to the ability to recognize and control occupational exposures that may lead to work-related diseases. Acquire the knowledge needed to attain recognized professional certification.	• All assignments and tests
3. Use basic statistical and informatics techniques	Develop an understanding of personal protective devices, and exposure controls. Develop ability to recognize hazards and correctly protective measures best suited for work operations. Apply OSHA severity and significance calculations to compare worker exposure levels to occupational exposure limits.	• HW #6 • Test #2
4. Explain key social, behavioral, biomedical and environmental determinants of and inequities in health and disease across the lifespan in urban settings.	Recognize and identify at-risk work operations and tasks typically performed by low wage and unskilled workers. Apply preventive strategies utilizing recognized protective strategies (PPE-engineering/administrative controls and sustaining programs) that greatly reduce these workplace exposures and prevent associated occupational disease.	• HW#6 • Test #2
5. Design and evaluate interventions to prevent or control urban public health problems	Describe the hierarchy of controls designed to protect workers, and provide examples of each level of control. Understand work processes, tasks and exposure factors that contribute to airborne exposure risks and physical hazards. Understand how to devise controls that best address these specific hazards.	• HW #3, #4, #5, and #6 • Test #1 and Test #2
6. Describe the legal foundations of the US public health system and its interrelationships with other systems (e.g. health care, education, environmental protection)	Interpret and apply applicable occupational and environmental regulations with regard to the need for controls. Explain environmental and occupational health laws, consensus standards and regulations pertinent to workplace conditions and to recommend improvements and updates to pertinent regulations	• All assignments and tests

Environmental and Occupational Health Sciences Specialization Competencies	**Course Learning Objectives**	**Assessment Methods**
This course will help you achieve increased competency in environmental and occupational health sciences. By the time you graduate, you should be able to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Identify and describe environmental and occupational sources of chemical, biological, physical and/or safety (CBPS) hazards.	Understand work processes, tasks and exposure factors that contribute to airborne exposure risk for workers and apply industrial hygiene principles to reduce these exposure risks.	• All assignments and tests
2. Predict and prevent health, safety and environmental risks from processes, work tasks, the built environment and other economic and/or social activities.	Understand, and to the extent possible become familiar with examples of common industrial processes, operations and manufacturing techniques found in the US. Understand work processes, tasks and exposure factors that contribute to airborne exposure risk and physical hazards for workers and apply appropriate control principles to reduce these exposure risks. Identify effective and sustaining controls for at-risk work operations and tasks typically performed by low wage and unskilled workers. Understand the scientific disciplines that contribute to the ability to recognize and control occupational diseases.	• HW#6 and #7 • Test #2
3. Evaluate the human health risks from CBPS hazards using qualitative, quantitative and/or instrumental assessment methods.	Understand the scientific disciplines that contribute to the ability to recognize and control occupational diseases. Describe routes of entry to chemicals in the occupational environment. Be familiar with recognized design and performance considerations for effective and efficient operation of local and general exhaust ventilation systems, noise controls, PPE and radiation shielding.	• HW #3, #4, #5, and #6 • Test #1 and Test #2
4. Recommend appropriate engineering, personal protection or administrative controls and policies for CBPS hazards and evaluate their effectiveness.	Describe the hierarchy of controls designed to protect workers, and provide examples of each level of control. Understand and develop work process flow charts for several industries, and interpret and apply occupational safety and health regulations to reduce exposure risks. Apply knowledge gained during this course to prescribe occupational health management programs to control physical hazards and specific airborne environmental and occupational exposure hazards. Acquire the knowledge needed to attain recognized professional certification. (e.g., CIH, CHMM, CSP)	• HW#6 • Test #2

Course Assessments

Your understanding of the course material will be evaluated through homework, class participation, a midterm exam, and a final exam

Grading

Evaluation criteria

Exams
Two, equally weighted, take home exams will be given. Exams are due on the date listed above. Exams should be written legibly with all calculations shown. Exams can be scanned and submitted via email or handed in to the instructor.

Homework
Seven, equally weighted, homework assignments will be given throughout the course. It is due prior to the start of class. You must show all your work and write legibly in order to receive full credit. We will spend a significant portion of class time going over the solutions to problems and you will be called on in class to present answers.

Attendance and class participation
Class attendance will be taken every day. Students must sign in at the beginning of class. 10% of the final grade is class participation. It is your responsibility to sign in every class period.

The relative weight of each course component is as follows:

Assessment	Weight
Class participation	10%
Homework	30%
Midterm exam	30%
Final exam	30%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

You are expected to attend all lectures. However, you may be excused from two lectures without penalty. Please notify me via email if you will be late or not able to attend the lecture.

Late/incomplete submission of assignments

Homework and exams handed in 24 hours after the due date will be given 75% credit. No credit will be given for work handed in after 24 hours.

Make-ups, rewrites, and extra credit

No make-ups, rewrites, or extra credit assignments are allowed and under what conditions.

Expectations of students

Students are expected to come to class prepared to discuss the lesson and homework assignments.

Please silence your cell phones prior to class the start of class. If it is an emergency and you need to make a phone call please quickly and quietly leave the class. Please refrain from texting and checking email while in class as this is disruptive to the instructor and fellow students. Everyone should be respectful of others' opinions and questions.

Expectations for the instructor

I am available for extra help outside of class. Students are encouraged to stop by my office for help with exams and homework assignments. The classroom is a place for discussion and I welcome students' questions about the topics that will be covered in the course.

I am available by email at Bp305@hunter.cuny.edu during business hours to answer questions by email. Please do not abuse the email privilege. Consult the syllabus, blackboard, and other course materials first for answers to your questions. Allow 24 to 48 hours for an email response. I cannot answer email while teaching, in meetings, and while I am working on research. I am often not available by email after business hours, on weekends, and during holidays.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

The schedule is subject to change throughout the semester. The revised syllabus will be posted on the course website.

The Spring 2016 academic calendar can be found at the following address http://www.cuny.edu/academics/calendars/spring-2016.html. Please refer to it for information regarding withdrawal dates.

Session	Date	Topic	Readings and Homework
1	2/3/2016	Introduction	Chapter 1 Appendix C
2	2/10/2016	IH statistics and toxicology	Appendix D Chapter 6 HW #1 due
3	2/17/2016	Basic IH calculations	Chapter 15 HW #2 due
4	2/24/2016	Airflow calibration	Whitebook- Ch. 8
5	3/2/2016	Sampling for gasses and vapors	Chapter 7 HW #3 due
6	3/9/2016	Respiratory deposition and particulate sampling	Chapter 8
7	3/16/2016	Asbestos, mineral fibers, and silica	HW #4 due
	3/23/2016	No Class	
8	3/30/2016	Exam	
9	4/6/2016	Occupational exposure assessment	Whitebook- 15
10	4/13/2016	Direct reading instruments	Chapter 17
11	4/20/2016	Indoor air quality	OSHA IAQ Reading HW #5
	4/27/2016	Spring break	
12	5/4/2016	Occupational controls	Chapter 18 & 22
13	5/11/2016	Biological Hazards	Chapter 14 HW #6 due
14	5/18/2016	Biomonitoring	Whitebook- Ch. 13
15	5/25/2016	Exam	HW #7 due

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

EOHS 76500 Environmental Audits & Remediation

3 Credits

Spring 2016

Time and location	Wednesday 6:05-7:50, Silberman 326
Instructor	Elizabeth Glass Geltman, JD, LLM eg86@hunter.cuny.edu cell: 202-320-4520
Office hours	Geltman: Tuesday & Wednesdays 4-5:50pm
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Introduction to environmental investigation and remediation technologies commonly used in professional practice. Presents proper practices for assessing and remediating asbestos, lead-based paint, indoor air quality, and underground storage tanks situations and Phase I site audits.
Course prerequisites	PH 75000 or 75100
Course format	Hybrid
Required reading and resources	There is no assigned textbook for this course. All reading materials are posted on BlackBoard.
Suggested reading and resources	All suggested and optional reading materials are posted on BlackBoard.

Program Competencies	Course Learning	Assessment Methods

	Objectives	
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Identify and describe environmental and occupational sources of chemical, biological, physical and/or safety (CBPS) hazards.	Explain how to conduct a comprehensive Phase I environmental site assessment of an industrial or residential property Explain the major tasks of a Phase II environmental site assessment. Explain approaches to identifying common urban environmental hazards, such as asbestos containing materials, lead-based paint, radon gas and other building-related hazards.	Group project; homework assignments; research paper; exam
Evaluate the human health risks from CBPS hazards using qualitative, quantitative and/or instrumental assessment methods	Interpret a Phase I and II Environmental Site Assessment reports and critically evaluate the findings Evaluate sampling data from surveys of hazardous materials such as asbestos containing materials in buildings, lead based paint hazards, poor indoor air quality and radon gas	Group project; homework assignments; research paper; exam
Recommend appropriate engineering, personal protection or administrative controls and policies for CBPS hazards and evaluate their effectiveness.	Demonstrate a working knowledge of commonly used remediation practices for the management of asbestos containing building material, lead based paint,	Group project; homework assignments; research paper; exam

	contaminated properties, mold and radon gas	

Course Assessments

Homework Assignments (20 points):

There are 10 homework assignments that will comprise 20% of your grade. These assignments are found in the class folders and are designed to: (1) improve your internet searching skills, (2) introduce you to important sites containing environmental audit and remediation information on the internet; (3) allow you to identify and explore various databases and public sources of information valuable in the environmental audit and remediation process and (4) aid in your understanding of environmental health and environmental protection programs.

The assignments generally involve searching an environmental or public health web site for specific information. Once found, you must submit your answers in the space provided on BlackBoard.

Internet assignments are graded on a 2-point scale using the following formula:

2—on time & 75% or more correct & posted as instructed on BB

1—no more than 1 day late or 25% to 75% correct & posted as instructed on BB

0 – not turned in, more than 1 day late, less than 25% correct or not posted as instructed on BB

Research Paper (10 points)

The research paper requires students to consider a cutting edge issue in environmental audits or remediation. A list of suggested topics will be provided.

Group Project (50 points)

Students will work in groups on a cutting edge issue of environmental health relating to environmental audits and remediation. Students will be randomly assigned to groups. The topics and techniques needed to conduct the study will be explained in class.

Attendance and class participation (10 points)

Class attendance will be taken every day. Students must sign in at the beginning of class. 10% of the final grade is class participation. It is your responsibility to sign in every class period. Students who are not in attendance are, by definition, not participating on that day. Students are expected to complete assignments for each class and engage in discussion during class.

Grading

Evaluation criteria

Students will be evaluated on the assignments outlined above as well as attendance and participation. The relative weight of each assessment is shown below. Formal rubrics for assignments will be provided to the students and can be found on BlackBoard.

Assessment	Weight
Homework Assignments	20%
Group project	50%
Research Paper	10%
Exam	10%
Participation/ Student Timesheet	10%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

You are expected to arrive on time and attend all in class lectures. You may, however, be excused from one lecture without penalty. Please notify me via email if you will be late or not able to attend the lecture.

Students are asked to keep a timesheet of time spent on class work and projects. The purpose of the timesheet is reflect practice of environmental professionals. Timesheets also help the instructor in course development and student time management.

Late/incomplete submission of assignments

All papers and assignments are due at the beginning of class at 6:00pm. Papers turned in after the beginning of class are considered late. Assignments handed in 24 hours after the due date will be given 75% credit. No credit will be given for work handed in after 24 hours.

Late assignments hold the entire class up and can delay return of graded assignments to other students.

No papers or assignments will be accepted after the instructor has released answers and/or returned graded work to the class. Once work is returned to the class, the link to the assignment will expire on BLACKBOARD.

How to Turn In Assignments

All papers must be turned in on BLACKBOARD as an attachment, with a paper confirmation copy turned in at the beginning of class on the date due. Papers that are submitted without a paper confirmation copy or that are not also posted on BLACKBOARD are considered late unless prior written approval is received from the instructor. It is the responsibility of each student to post his or her own assignments on time, even if the assignment is done in a group.

All assignments posted on BLACKBOARD as an attachment must be named using the following formula:
EOHS765_S16_ StudentLastName_StudentFirstName_Date_Group#_RM#_AssignmentName
Assignments will not be graded for students or groups not naming files according to instructions.

No papers, internet assignments or other homework will be accepted by email unless prior written arrangements are made with the instructor.

Make-ups, rewrites, and extra credit

As a general rule, there are no make-ups, rewrites, or extra credit assignments in this course. Plan to do your best work and turn your work in on time.

Students will never be given make-ups, rewrites, or extra credit assignments on a case-by-case. The instructors reserve the right to add extra credit assignments or rewrites during the semester to the entire class, as the instructors deem appropriate. If added or allowed, it is the policy of instructors to extend the same offer to all students in the class.

Expectations of students

Students are expected to come to class prepared to discuss the lesson and homework assignments.

Electronics may not be used during class. Please silence your cell phones prior to class the start of class. If it is an emergency and you need to make a phone call please quickly and quietly leave the class. Students texting, checking email or other electronics/ social media during class will be asked to leave the classroom as this is disruptive to the instructors and to fellow students. Everyone should be respectful of others' opinions and questions.

Expectations for the instructors

I am available for extra help outside of class. Students are encouraged to stop by my office for help with exams and homework assignments. The classroom is a place for discussion and I welcome and encourage students' questions about the topics that will be covered in the course.

I can be reached at eg86@hunter.cuny.edu during business hours to answer questions by email. **Please do not abuse the email privilege**. Consult the syllabus, blackboard and other course materials first for answers to your questions. Allow 24 to 48 business hours for an email response. Note that I cannot answer email while teaching, in meetings, and while working on

research. Students should plan to contact me during business hours. I am often not available and students should not expect to reach me by email after business hours, on weekends, and during holidays.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

The schedule is subject to change throughout the semester. Revised syllabi will be posted on the course website.

The Spring 2016 academic calendar can be found at the following address http://www.cuny.edu/academics/calendars/spring-2016.html. Please refer to it for information regarding withdrawal dates.

Class Schedule				
	Date	**Topic**	**Reading Assignments**	**Written Assignments**
Week 1	2/3/16	**F2F Class** Introduction & overview	Read the materials in the "Reading Assignment" folder on BlackBoard (BB) for	Visit the course site Complete Homework Assignment (HM) #1: Research Survey

			Week 1.	
Week 2	2/10/16	F2F Class-- Search Techniques, Coding and Use of LawAtlas	Read the materials in the "Reading Assignment" folder on BB for Week 2.	Complete HM#2.
Week 3	2/17/16	**F2F Class:** Beyond "all appropriate inquiry": asbestos, mold, radon, lead, USTs, soil vapor intrusion, wetlands & more. Use of transaction screen.	Read the materials in the "Reading Assignment" folder on BB for Week 3.	Complete HM#3. **Group Project #1 Due**
Class 4	2/24/16	**Online—Module 2**	Read the materials in the "Reading Assignment" folder on BB for Week 4.	**Group Project #2 Due**
Week 5	3/2/16	**F2F Class** Brownfields Programs	Read the materials in the "Reading Assignment" folder on BB for Week 5.	Complete HM#4. **Group Project #3 Due**
Week 6	3/9/16	**Online Module 3**	Read the materials in the "Reading Assignment" folder on BB for Week 6 & 7.	Complete HM#5. **Group Project #4 Due**
Week 7	3/16/16	**F2F Class** Environmental Compliance Audits: US EPA policy & programs	Read the materials in the "Reading Assignment" folder on BB for Week 7.	Complete HM#6. **Group Project #5 Due**

Week 8	3/23/16	**Online Module 4**	Read the materials in the "Reading Assignment" folder on BB for Week 8.	Complete HM#7. **Group Project #6 Due**
Week 9	3/30/16	**F2F Class** Environmental Compliance Audits: 3rd Party Programs	Read the materials in the "Reading Assignment" folder on BB for Week 9.	**Group Project #7 Due**
Week 10	4/6/16	**Online Module 5**	Read the materials in the "Reading Assignment" folder on BB for Week 10.	**Group Project #8 Due**
Week 11	4/13/16	**F2F Class** **Remediation** **Student Presentations**	Read the materials in the "Reading Assignment" folder on BB for Week 11.	**Group Project #9 (Presentation) Due for Presenting Groups**
Week 12	4/20/16	**Online Module 6**	Read the materials in the "Reading Assignment" folder on BB for Week 12.	**Research Paper Draft Due**
Week 13	4/27/16	**Spring Break**		
Week 14	5/4/16	**FTF** **Discussion of Paper Topics**	Read the materials in the "Reading Assignment" folder on BB for Week 14.	**Peer Review of Paper Due**

Week 15	5/11/16	**FTF** **Exam Review**	Read the materials in the "Reading Assignment" folder on BB for Week 15.	**Final Paper Due** HM#8: Student logs due.
Week 16	5/18/16	Online Exam		**Group Project #10 Due:** Peer & self review forms. HM#9: CUNY SPH student evaluation. HM#10: Class evaluation.

THE CUNY SCHOOL OF PUBLIC HEALTH

Hunter College

Environmental and Occupational Health Sciences

EOHS 770 Biohazards and Emergency Response (Cross listed with MLS 466)

Spring, 2016

Catalogue description

Looking at the course schedule, one can come away with the idea that the course is only concerned with Bioterrorism. All that is used in this type of response situation, comes from technology and work practices that were developed in Industrial Hygiene, Haz-Mat Response and BioSafety over the past 30-40 years.

As will be demonstrated in class, the Industrial Hygiene Paradigm of Anticipation, Recognition, Evaluation and Control lends itself well to Biosafety, and also to the subspecialty of BioTerrorism response. Add to this base the practices and principles used in Biosafety and Microbiology, and you come away with the skills and ability to deal with any situation in a normal research lab setting, or health care facility, or Haz-Waste remediation site.

Industrial Hygiene practices controlling the Source, Pathway and Recipient will be applied in this special setting.

Course meets: Room 232, Brookdale Campus, Thursdays, 6:05-7:50 pm,

e-Mail: **philip.hauck@mssm.edu**

Phone: 212 241 5169 **Office hours: By appointment**

Required books: Biosafety In Microbiology and Biomedical Laboratories

Available at: http://www.cdc.gov/biosafety/publications/bmbl5/index.htm (this is a FREE publication available on line!!-**there is a charge for a printed copy**).

This is also free

http://osp.od.nih.gov/sites/default/files/NIH_Guidelines.html

Recommended **Textbook: You should still have this as an MLS student.**
http://www.us.elsevierhealth.com/isbn/9780323054706/Medical-Microbiology

Medical Microbiology, 6th Edition - *with STUDENT CONSULT Online Access*

By Patrick R. Murray, PhD, Ken S. Rosenthal, PhD and Michael A. Pfaller, MD

960 pages Trim size 8 1/2 X 10 7/8 in
Copyright 2009 Mosby Title ISBN: 978-0-323-05470-6 **$83.95**, Softcover

Computer requirements: Access to Hunter Computers, your own PC or a friend's PC.

Program Competencies
This course will help you to achieve the following competencies

1. Understand the basic principles of Biological Safety
2. Understand the proper use of risks and hazards presented by microbial
3. Know how to use the Industrial Hygiene Paradigm of making interventions at the Source-Pathway-Recipient level of operations.
4. Know how to use safety equipment such as Biological Safety Cabinets and Personal Protective Equipment.
5. Know how to find information available on government websites to create and implement a Biological Safety Program.
6. Orally present findings clearly and effectively.
7. Through a class exercise, learn how to interact as a team using the Incident Command System, using the tools learned in the class to respond to a hypothetical (though realistic) exercise involving a microbial release and health impact.

Course Learning Objectives
After successfully completing this course, you are expected to be able to:

1. Become fluent in the language of Biosafety; able to interpret and apply regulations / guidelines; use guidance manuals, other documents

2. Understand the underlying principles of Biological Safety and where to find source materials such as CDC, NIOSH, ABSA, AIHA, EPA-to name a few

3. Have knowledge of how to survey for biological contamination – limitations of such surveys; how to use the data properly

4. Understand the use / limitations of Engineering Controls

5. Understand the use / limitations of Emergency Response Procedures

6. Understand the selection / use / limitations of Personal Protective Equipment

7. Understand microbial infection process and how to make interventions

8. Understand the similarities / differences between a naturally- occurring outbreak and a bioterrorism / deliberate release act

9. Know how to address a problem through all of the items above using the Incident Command System and developing team interactions in order to respond to an incident through an in-class table-top exercise.

10. To have confidence in your ability to do this type of work in the future

Grading System:

Exam 1 and Exam 2; 40 % each - Total Value for Grade - 80%
Class Presentation; - Total Value for Grade - 20%**
P+ 100% (20%) = 20
P 90% (20%) = 18
P- 80 % (20%) = 16
BL 70% (20%) = 14

***Class Presentation:**
The class will be divided into groups of 4 – 6 each. ***Each group*** will be given a card with a scenario. Your group will be responsible for:

a. Identifying agent(s) / hazard(s) contained in the scenario 4pts
b. Identifying agencies / organizations to notify 4pts
c. Developing an incident response plan 4pts
d. What Safety / Health Precautions to institute 4pts
e. What sampling method(s) to use to identify the hazard 4pts

This is a collaborative effort that gives you an opportunity to work on a simulated real -world problem, using the tools that you are acquiring through the course. *Be Creative* in your presentations — if you want to role play, act-out etc…do it- what ever gets the job done is fine. Just make sure you cover all of the five points above.

You will be "prodded" at certain points to ensure that you are making the right progress, through questions or prompts in class. If you are having difficulty, talk to me and I will make careful recommendations that will lead you on the right track- I will not do your presentation for you.

The assignment is to be enjoyable as well as educational. The other groups not presenting will constitute a "Town Hall forum"- you will have to impress them!! They will ask questions about your presentation….and if they do not….*I will.*

Warning* - all students will be expected to participate in both the presentation and the "Town-Hall" phase….*early presenters will be penalized* if they do not participate (i.e. absent themselves) in the second series of presentations. *Fair is fair*…you wanted an audience to be there for your presentation!!! *Return the courtesy to your classmates.

Assessment
Your understanding of the course material will be evaluated through examinations, research reports, homework assignments, in-class computer exercises, class participation, and class attendance.

Course policies

Grad School
Letter grade ranges are:

97.5-100%	A+
92.5-97.4%	A
90.0-92.4%	A-
87.5-89.9%	B+
82.5-87.4%	B
80.0-82.4%	B-
77.5-79.9%	**C+**
70.0-77.4%	**C**
<70.0%	**F**

Other course policies and formats

- Attendance will be taken and is mandatory.
- Cell Phones, I-pods are to be shut –off (unless you participate in emergency response- excuse yourself and take your call outside of class
- No private discussions or loud talking in class-it disrupts your classmates –If I can hear it…they can too.
- **During the class, do not do any email work or website browsing unrelated to the class.**
- You must sign up for Blackboard 8 so that you can receive course updates and obtain lecture notes and other handouts (For instructions on registering for and using Blackboard, go to: http://bb.hunter.cuny.edu).
- Power Point lecture notes will be available for downloading from Blackboard by the start of each class. (4 slides per page are recommended for printing.)
- Emergency communications and periodic updates about the class will be sent via Hunter email. Forward your Hunter email to your most frequently checked email address so that you can receive important communications. It is your responsibility to ensure that you receive all e-mails regarding the class that are sent to your Hunter e-mail address, so please check it occasionally to be sure that it is functioning properly.
- Instructors are available during office hours and by appointment to assist students with course material, exercises, and exam preparation throughout the semester. Students are encouraged to let the instructor know their office-hour visit plans in advance, in order to avoid overlapped visits.

Institutional policies (provide website link)

Accessibility

In compliance with the Americans with Disabilities Act (ADA) and Section 504 of the Rehabilitation Act, the Hunter College Office for Access and Accommodations ensures the availability of accommodations and supporting services for all students with documented disabilities. Those eligible include students with mobility, visual and hearing impairments, learning disabilities, psychiatric disorders, or any medical condition that limits one or more of life's basic functions. For Further Information, please contact: The Office for Access and Accommodations, Room 1124 Hunter East, Telephone: (212) 772-4857.

Academic integrity

"Hunter College regards acts of academic dishonesty (e.g., plagiarism, cheating on examinations, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures." As stated on pp. 17 of the Hunter College 2006-2009 Graduate Catalog, "Any deliberate borrowing of the ideas, terms, statements, or knowledge of others without clear and specific acknowledgement of the source is intellectual theft and is called plagiarism. It is not plagiarism to borrow the ideas, terms and statements, or knowledge of others if the source is clearly and specifically acknowledge. Students who consult such critical material and wish to include some of the insights, terms or statement encountered must produce full citations in an appropriate form." The CUNY Policy on Academic Integrity is available on pp. 216-217 of the catalogue and online at: http://www.kbcc.cuny.edu/Academic_Integrity_Policy.pdf. The Hunter College Academic Integrity Procedures are summarized at: http://www.hunter.cuny.edu/studentservices/advising/policies-sub/policies-academic-integrity and its full description is available at: http://www.hunter.cuny.edu/senate/assets/Documents/Hunter%20College%20Policy%20on%20Academic%20Integrity.pdf

Course withdrawal

Procedures and rules about course withdrawal are available at: http://www.hunter.cuny.edu/studentservices/advising/policies-sub/policies-course-withdrawal

Last day to drop the course with the grade of "W" is

Help with research and writing

The School of Health Sciences is committed to improving the writing skills of our students. If you feel you need assistance in strengthening your writing skills, take advantage of the materials developed by the Writing Center that are available on their website at http//rwc.hunter.cuny.edu, or sign up for tutoring at the Writing Center (Room 416 Thomas Hunter Hall, 212-650-3937). As a substantial portion of your grade in this course is based on written assignments, you are advised to take advantage of Hunter's writing assistance services early in the semester.

The Hunter College reading/writing center has a wealth of helpful material about how to write outlines and papers. You should access and use this material throughout this course.
http://rwc.hunter.cuny.edu/

Grade of incomplete

Only documented legitimate reasons will be accepted for a student's failure to submit work by the date it is due. There is no absolute right to a grade of incomplete (IN). Only students averaging B or above in this course are eligible to request an incomplete course grade. Granting incompletes to eligible students is at the discretion of the instructor. These grades can be assigned for incomplete presentations, homework, laboratory assignments, class projects, papers, and examinations.

"These steps must be taken as soon as possible and no later than the end of the second week of the following semester. The student shall then be given the opportunity to complete the course without penalty beyond previous established penalties for lateness. The length of time permitted for completing missing coursework remains at the discretion of the instructor and shall be indicated in writing to the student, but shall not extend beyond the end of the semester following the one in which the course was taken. Unless the student submits the work by the date specified by the instructor, the grade will automatically become FIN on the student's permanent record. (Under certain circumstances, where the student must repeat class sessions in a course not given during the following semester, the FIN grade may later be converted to the appropriate letter grade.)" Graduate students have one academic year in which to submit the missing work otherwise the IN grade is permanent on the college transcript. Incompletes should be limited to legitimate and documented emergencies. See the Hunter College 2006-2009 Graduate Catalog (pp.16-17) for more information.

See also:
http://www.hunter.cuny.edu/studentservices/advising/grades-sub/grades-incomplete-grades

Grade appeals

When a student considers a final course grade unsatisfactory, the student can appeal the grade in a progressive order to the instructor, the school director, and the Hunter College Senate. In 1985, grade appeals procedures were adopted by the college. Consult the Hunter College 2006-2009 Graduate Catalog (p. 17) for the time frame and other information regarding the appeals process.

See also:
http://www.hunter.cuny.edu/provost/repository/files/COLLEGE-WIDE%20GRADE%20APPEALS%20PROCEDURES%205-4-05.pdf/view

Attendance and Coursework:

You are a college student at Hunter College, and therefore are expected to attend ***every*** class, participate in class activities and hand in your assignments on time. There are times and occasions where this is not possible -Talk to me so that other

arrangements can be made ahead of time. People do get ill or have conflicts with work / school. I am flexible .once or twice .not every week!!

I do not have an office on campus, however, if you need to see me or are having problems with course i.e. some of the material doesn't make sense, DO NOT wait until May 20th to talk to me about it. I am available to help.

INCOMPLETE Policy

You are expected to complete your coursework on time. Incompletes are NOT an option!! Only in the rarest, most extreme, dire cases and only if approved by the MLS or EOHS Directors, respectively, will an incomplete be considered as an option.

If you are having trouble in the course, do not wait until the last day to discuss it with me. Once the grades are in, it is very difficult to make adjustments. I can schedule meeting times for you (I do not have an Office on the Hunter Campus).

EOHS 770 Biohazards and Emergency Response (Cross listed with MLS 466)
Spring, 2016

Week	Thurs	From: 6:05 To: 7: 50 Rm: W232 Brookdale Campus 2016 Schedule
1	4 Feb	The CDC's Biosafety Levels 1- 3
2	11 Feb	Biological Agents as members of the Microbial World (overview)
*******	****	Start thinking about forming your groups (6 -7 groups of 6-7 students)
3	18 Feb	Sampling Methods and Evaluation of Samples
4*	25 Feb	Microbial Remediation Methods-Setting up Barrier/Containment Facilities and Decon Methods
5	3 Mar	Controlling Microbial Hazards in the Field and in the Laboratory - (RG's and BSL's 1-4)
6	10 Mar	PPE for the Responder- Everything except Respirators
7	17 Mar	Exam 1 – (One Hour) Then PPE for the Responder- Respirators, selection, fit-testing, OSHA 29 CFR 1910.134; CP**Assignment
8	24 Mar	Biology of Microbial Agents and Toxins
9	31 Mar	Mechanisms of Infection; Anti-Microbial Drugs, Vaccines
10	7 Apr	Biological Risk Assessments- or "How to Handicap a Hazard"
11	14 Apr	Emergency Management Procedures; Incident Command System; FRP
12**	21 Apr	Anatomy of an Incident -The Dalles Incident; Contrast to other incidents
13	28 Apr	Spring Recess (Yeah….No Mr. Hauck for a week!!)
14	5 May	Exam 2 – (One Hour) / work on presentations
15	12 May	Class Presentations
16	19 May	Reading Day
17	26 May	Class Presentations

* Monte- Carlo Night One - You get to pick your project assignments
** Monte - Carlo Night Two – You get to pick your presentation order

EOHS 770 Biohazards and Emergency Response (Cross listed with MLS 466)
Spring, 2016

Reading Assignments Biohazards and Emergency Response P. Hauck

You are welcomed to read as much as you want (or need) to help you understand the class material—**but, you will only be responsible for the class notes and sections specifically designated by the instructor**. Many of the Other Sources material are given to you to aid you in developing your class presentations and to retain for future reference in your professional development. Sources **like Chapter J (NIOSH)** have material that is not found in general textbooks, as these are professional guidance materials to governmental and private sector practitioners of Industrial Hygiene.

It is important for you to know what federal agencies and guidance materials they have to assist you in your practice, just as much as what is in the textbooks, and how to apply it. There are many "free sources" on the government web sites imbedded in the lecture material.

Books-Required: (They are Free!!!)

Biosafety in Microbiological and Biomedical Laboratories (BMBL-5th) is an invaluable reference to MLS folks as well as the EOHS folks. It should be used as a main reference in your class presentations. It is FREE on line at www.cdc.gov/biosafety You also have to read the assigned sections.

NIH Guidelines for rDNA: A good source of information on recombinant DNA research http://osp.od.nih.gov/sites/default/files/NIH_Guidelines.html

Books- *NOT*Required: (They are *NOT* Free!!!)

Medical Microbiology, Patrick Murray *et.al:* I have given you chapter sections for both the 5th Edition **(MM-5)** and 6th Edition **(MM-6**). You do not have to read any / all of the material, unless you are bogging down. Those Chapters bolded, are very good summaries and supplement class material- spend the time to look these over if you can

p.hauck 2016

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

EPI 75000 Epi Methods I:Study Design
3 Credits
Spring 2016

Time and location	Silberman, 322 (and C05), Wed 6:05-7:50
Instructor	Professor C Mary Schooling PhD Email: mschooli@hunter.cuny.edu Phone: 212 396 7753
Office hours	Wednesdays 4:00pm – 6:00pm, by appointment or walk-in Silberman 545
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course will provide an in depth understanding of the design and conduct of epidemiological studies, including causal inferences, measurement, major study designs and threats to validity.
Course prerequisites	PH 750/751 & PH 752/53
Course format	Lecture/seminar
Required reading and resources	Aschengrau A & Seage GR. *Essentials of Epidemiology in Public Health*, 2nd edition, Jones and Bartlett publishers, 2008 And reading on blackboard, see schedule
Suggested reading and resources	Susser E, Schwartz S, Morabia A, & Bromet EJ. Psychiatric Epidemiology, 1st edition, Oxford University Press, 2006

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Epidemiology-track Competencies		
1. Identify key sources of data for epidemiologic purposes 2. Use measures of disease frequency and association to appropriately describe the distribution and determinants of disease, and appropriately characterize statistical uncertainty around such estimates	1. Describe the design of major US surveys (NHANES) and explain how this affects analysis of the survey 2. Distinguish between incidence and prevalence 3. Explain the relation between different measures of association 4. Compare the interpretation of absolute and relative risk 5. Test hypotheses regarding associations of health with environmental, demographic, social and economic factors.	Worksheet 1 Worksheet 1 Worksheet 2 Worksheet 2 Midterm and Final
3. Critically read and evaluate the strengths and limitations of epidemiologic literature from a methodologic perspective	1. Evaluate the relevance of the Bradford Hill criteria to the scientific method 2. Compare the role of causal factors and predictors in public health 3. Explain the scientific process and the role of refutation in epidemiology	Worksheet 3 Worksheet 1 Worksheet 1
4. Select epidemiologic study designs, data collection techniques, and analytic approaches suitable for different scientific inquiries	1. Draw a directed acyclic graph for a research question using an RCT, a cohort study and a case-control study 2. Compare the biases generated by selection bias and confounders 3. Describe the uses of instrumental variable analysis in public health 4. Explain the “Table 2” problem	Worksheet 4 Worksheet 4 Worksheet 5 Worksheet 5

	5. Compare inferences that can be made from a cohort study and an RCT 6. Compare and contrast different types of case-control studies, and the measures they generate 7. Compare different methods for identifying confounders 8. Evaluate a study against the relevant checklist 9. Explain additive and multiplicative effect modification 10. Explain mediation 11. Evaluate a screening test 12. Calculate NPV, PPV and explain their determinants 13. Identify and communicate the limitations of specific research projects 14. Explain why most research findings are false	Worksheet 5 Worksheet 7 Worksheet 8 Worksheet 9 Worksheet 12 Worksheet 13 Worksheet 14 Paper
5. Identify key threats to validity (internal and external) within and across epidemiologic studies	1. Explain how to assess internal and external validity 2. Identify and communicate the limitations of specific research projects	Worksheet 9 Worksheet 9
6. Use statistical software to collect, retrieve, analyze and summarize epidemiologic data	1. Implement descriptive and analytic analyses in SAS 2. Select appropriate statistical methods for the data type and the research question	Computer assignments Midterm and Final

Course Assessments

The course will be assessed based on a written assignment, 3 computer assignments, 12 worksheets, a midterm and a final.

Grading

Evaluation criteria

Written Assignment:
Paper: Students are asked to write a position paper discussing the levels of evidence needed for policy. Specifically: What level of evidence do you need for policy? Your paper should include a discussion about what we mean by a cause in epidemiology (definition), how we conceptualize causes and try to identify them in epidemiology, with specific reference to the thinking behind the RCT, cohort and case control study designs, and the limitations of epidemiology in identifying causes? The purpose of the position paper is to help students organize their thoughts on a topic of importance in epidemiology and develop an informed argument to support their ideas. The paper should begin with a clear statement of the student's position, or thesis, followed by a structured argument supporting that thesis, describing and discussing the limitations of the counter-arguments. The paper should be no more than 5 pages long, single spaced, 12-point font with 1 inch margins. Please ensure all statements of fact are referenced.

Grading rubrics for the written assignment

(A+ to A-)	(B+ to B-)	(C+ to C)	(F)
Provides a comprehensive synthesis of the topic with appropriate examples and discussion of the implications for practice	Identifies the implications of the key points in the topic, provides some examples and relevance to practise	Describes the main concepts in the topic	Inability to identify and describe the main concepts

Students are to complete 3 computer assignments, these are computer exercises.

Students are to complete 12 worksheets of mainly short answer questions about the topics covered in the lectures.

Midterm Exam: Students will have a take home midterm exam to complete in 1 week, consisting of short answer questions about topics covered during class lectures and in readings. Students must work independently and not discuss the exam with classmates.

Final Exam: The final exam will be a take-home computer assignment involving statistical analysis in SPSS of an analytic question, and students are expected to analyze the provided data, interpret findings in the context of the literature, and draw conclusions. The exam must be completed independently and students may not discuss the exam with classmates. Students will be given the questions 1 week before the exam is due.

The relative weight of each course component is as follows:

Assessment	Weight
Written Assignment	20%
Computer Assignments	20%
Worksheets	24%
final	20%
Midterm	16%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an “unofficial withdrawal” (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation
Attendance is mandatory and class participation may generate extra credit.

Late/incomplete submission of assignments
Late or incomplete assignments will be accepted at the discretion of the instructor.

Make-ups, rewrites, and extra credit
Make-ups and not available, but rewrites are allowed.

Expectations of students
- You must sign up for Blackboard so that you can receive course readings, updates and obtain lecture notes and other handouts. For instructions on registering for a portal account in order to access Blackboard, go to: https://portal.cuny.edu/portal/site/cuny/index.jsp?epi-content=LOGIN.
- Please forward your CUNY e-mail to your most frequently checked e-mail address. Check your e-mail regularly so that you can receive emergency communications and periodic updates about the class.
- You are expected to complete readings and written assignments prior to class.
- Any written assignments should be uploaded to blackboard by 4pm on the day of the class.
- Students are expected to participate in class discussions, treating their classmates and the instructor with respect.
- Statistical analysis will be conducting using SAS. Students should be aware that they can bring their laptop computers to the CUNY School of Public Health library and get SAS software loaded for their home use. SAS has an excellent help menu and that there is a large amount of SAS code available online easily accessible through Google.

Expectations for the instructor
- Power Point lecture slides will be available for download on Blackboard after class.
- The instructor is available during office hours and by appointment to assist students with assignments, course material, and exam preparation. The preferred method of communication with the instructor is e-mail.
- Grades for each piece of work will be uploaded to blackboard within a week.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

The schedule is subject to change throughout the semester.

Please refer to the current academic calendar for important dates (for example: holidays, course drop, course withdrawal). http://www.hunter.cuny.edu/onestop/repository/files/registrar/Academic%20Calendar%20Fall%202015%20thru%20Spring%202016%2010-19-20151.pdf.

Course schedule

Session	Date	Topic	Reading	
1	3feb16	Introduction and review	None	
2	10feb16	Review measures of effect and data analysis	Assigned Readings: 1. Aschengrau text Ch. 2 & 3. 2. Northridge ME. Annotation: public health methods—Attributable risk as a link between causality and public health action. *American Journal of Public Health* 1995; 85:1202-1204. 3. Morabia A. The Essential Tension Between Absolute and Relative Causality *American Journal of Public Health* 2001; 91(3): 335-336 4. Davies HT, Crombie IK, Tavakoli M. When can odds ratios mislead? British Medical Journal 1998; 316: 989-991. Recommended readings: 1. Zhang J, Yu KF. What's the relative risk? A method of correcting the odds ratio in cohort studies of common outcomes. *JAMA* 1998; 280: 1690-1691. 2. Schwartz LM, Woloshin S, Dvorin EL, Welch HG. Ratio measures in leading medical journals: structured review of accessibility of underlying absolute risks. BMJ 2006; 333(7581):1248.	Worksheet 1
3	17feb16	Causal inference in epidemiology 1	Assigned Readings: 1. Aschengrau text Ch.15. 2. Susser text pp. 33-52. 3. Benson K. Hartz AJ. A comparison of observational studies and randomized, controlled trials. *New England Journal of Medicine 2000*; 342(25):1878-1886. 4. Prasad V, Jorgenson J, Ioannidis JP, Cifu A.J Observational studies often make clinical practice recommendations: an empirical evaluation of authors' attitudes.J Clin Epidemiol. 2013 Apr;66(4):361-366. 5. M Parascandola, D L Weed. (2001) Causation in epidemiology. *J Epidemiol Community Health* 2001;55:905–912. 6. Hill AB. The environment and disease: Association or Causation? *Proceedings of the Royal Society of Medicine* 1965; 295-300. 7. Kreiger N. Epidemiology and the Web of Causation: Has anyone seen the spider? *Social Science and Medicine* 1994; 39:887-903. Recommended reading	Worksheet 2

			1. Taubes G. Epidemiology faces its limits. *Science* 1995; 269(5221):164-169 2. J Pearl. Introduction to Causal Inference. Int J Biostats 2010; 6: 1-11.	
4	24feb16	Directed acyclic graphs	Assigned Readings Greenland S, Pearl J, Robins, JM. Causal Diagrams for Epidemiologic Research. (1999) Epidemiology; 10(1): 37-48. Assigned Readings: 1. Iwashyna TJ, Kennedy EH, Instrumental variable analyses. Exploiting natural randomness to understand causal mechanisms. *Ann Am Thorac Soc*. 2013 Jun;10(3):255-60. 2. O'Keeffe AG, Geneletti S, Baio G, Sharples LD, Nazareth I, Petersen I.Regression discontinuity designs: an approach to the evaluation of treatment efficacy in primary care using observational data. *BMJ*. 2014 Sep 8;349:g5293. doi: 10.1136/bmj.g5293. 3. Keene D, Price C, Shun-Shin MJ, Francis DP, Effect on cardiovascular risk of high density lipoprotein targeted drug treatments niacin, fibrates, and CETP inhibitors: meta-analysis of randomised controlled trials including 117,411 patients. *BMJ*. 2014 Jul 18;349:g4379. doi: 10.1136/bmj.g4379. 4. Haase CL, Tybjærg-Hansen A, Qayyum AA, Schou J, Nordestgaard BG, Frikke-Schmidt R.,LCAT, HDL cholesterol and ischemic cardiovascular disease: a Mendelian randomization study of HDL cholesterol in 54,500 individuals. *J Clin Endocrinol Metab*. 2012 Feb;97(2):E248-56. 5. CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

EPI 75200 APPLIED RESEARCH: DATA MANAGEMENT AND ANALYSIS

3.0 Credits
Spring 2016

Time and location	Silberman Building (2180 Third Avenue on 119th Street) room C-09 Tuesdays 6:05PM - 7:50PM
Instructor	Associate Professor, Elizabeth Kelvin, PhD, MPH Silberman building (2180 Third Avenue on 119th Street), Room 543 E-mail: ekelvin@hunter.cuny.edu Phone: 212-396-7751 Email is preferred method of communication
Office hours	Tuesdays 4:30-5:45 or by appointment
Course website	Black Board: https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Data management and analysis are essential components of all epidemiologic research studies. Often insufficient thought is put into these tasks with serious consequences to the outcome of the study. Data entered into poorly designed databases may turn out to be entirely unusable, or usable only after extensive cleaning and manipulation that is beyond the ability of many investigators. This problem can be prevented if database management and analysis are kept in mind during all aspects of the study, starting with the design of the data collection instruments. This course will provide an introduction to some of the core concepts of database design, data management, data cleaning and analysis. Via class lectures, student assignments and projects, and discussion, we will consider the best methods for working with data from the initial collection through analysis and interpretation.
Course prerequisites	• EPI 750 & EPI751 or equivalent with a course grade of B or better • BIOS 750 & BIOS751 or equivalent with a course grade of B or better • Experience using SAS software
Course format	Most classes will begin with a lecture, followed by discussion. Some classes are for students to receive help with their data analysis.
Required reading and resources	There is no required text book for this course, but some classes have assigned journal articles, which are posted on black board (BB). For help with SAS programming, goggle is usually very

	helpful, but students may also consider referring to the following suggested textbooks:
Suggested reading and resources	(1) Delwiche, LD & Slaughter, SJ. 2008. The Little SAS Book: A Primer (4th edition) . Cary, NC: SAS Institute, Inc. (2) Cody, RP & Smith, JK. 2005. Applied Statistics and the SAS Programming Language (5th edition). Upper Saddle River, NJ: Prentice Hall.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Identify key sources of data for epidemiologic purposes	• Define a research questions based on a review of the literature. • Conduct a web search to identify publicly available population-based health data to answer research questions • Identify the benefits and limitations of using publicly available data.	Paper & presentation
2. Use measures of disease frequency and association to appropriately describe the distribution and determinants of disease, and appropriately characterize statistical uncertainty around such estimates	• Construct a data analysis plan for a publicly available dataset that is appropriate given the study design used to collect that data and the research question being addressed. • Apply descriptive and analytic statistics to describe the distribution of health conditions using publicly available data. • Test hypotheses regarding associations of health with environmental, demographic, social and economic factors using publicly available data. • Use confidence intervals and p-values to assess statistical uncertainty using publicly available data. • Write a research paper in which data analysis methods and results are presented.	Paper, presentation & data management assignments
3. Critically read and evaluate the strengths and limitations of epidemiologic	• Discuss epidemiological articles in terms of the strengths and weaknesses of the	Paper & presentation

literature from a methodologic perspective	research design, data collection, analysis and interpretation. • Write a research paper in which the literature is synthesized into a structured argument justifying addressing a specific research question in the introduction and the research results are put into context of the literature in the discussion section.	
4.Select epidemiologic study designs, data collection techniques, and analytic approaches suitable for different scientific inquiries	• Write the methods section of a research paper using publicly available data • Construct a data analysis plan for a publicly available dataset that is appropriate given the study design used to collect that data and the research question being addressed. • Write the limitations section of a research paper.	Paper & presentation
5.Identify key threats to validity (internal and external) within and across epidemiologic studies	• Write the limitations section of a research paper. • Discuss study limitations	paper & presentation
6.Use statistical software to collect, retrieve, analyze and summarize epidemiologic data	• Use database software (EpiInfo) to design a database, enter data, and pull that data into SAS for analysis. • Use SAS to describe epidemiologic data and assess the relationships among variables, including mediation and effect modification.	paper, presentation & data management assignments

Course Assessments

Student project: One important part of this course is a workshop in which students will work through the steps involved in writing a research paper. These steps include formulating and justifying testable hypotheses, cleaning and analyzing publicly available data, and writing a manuscript in publishable format. Specifically, activities include:
(1) Writing a literature review formulated as a structured argument describing what is known about the topic, what is missing in the current literature and how the student's analyses will fill that gap. This section of the paper should be no longer than 3 pages (double spaced, 12pt font, 1 inch margins).
(2) Specifying research questions, which have been justified in the literature review, and stating testable hypotheses to be examined to answer the research questions using a publicly available dataset (research question is usually specified at the end of the literature review section).
(3) Describing the study population and the methods used to collect and analyze the data. This section should be no more than 3 pages (double spaced, 12pt font, 1 inch margins).
(4) Cleaning and analyzing the data using SAS software.
(5) Describing the results of the analyses in tables and text. The results section should be no more than 4 pages (double spaced, 12pt font, 1 inch margins) and the paper should have no more than 4 tables.
(6) Discussing the results in light of the literature, describing the public health implications of the findings, and stating the strengths and weaknesses of the study the student has conducted. This section should be no more than 3 pages (double spaced, 12pt font, 1 inch margins).

Each student will work independently, but students are strongly encouraged to share ideas, syntax, read each other's drafts, and obtain feedback and suggestions from their colleagues both in and outside of the class.

For this project, students may choose one of four publicly available datasets:
1) The New Immigrant Survey, conducted by Princeton University. The study follows a cohort of new permanent residents in the United States, and currently the baseline data (called "NIS-2003-1") and first round of follow-up data (NIS-2003-2) is available for use. The data and documentation (code books, etc.) is available online at: http://nis.princeton.edu. Note that you have easy access to the study documents (questionnaires, data dictionary, etc.) but in order to access the actual data for analysis you will have to register on the website. The data are available in SPSS and SAS.
2) The Global School Based Student Health Survey (GSHS) from the World Health Organization & the Centers for Disease Control and Prevention (CDC). GSHS is a school-based survey conducted in various countries primarily among students aged 13–15 years that aims to provide data on health behaviors and protective factors related to the leading causes of mortality and morbidity among children. The data and documentation (code book, etc.) are available online at: http://www.who.int/chp/gshs/en/. The data are available in SAS (as well as other formats). You should probably focus on one country if using this data.

3) The 2013 Community Health Survey (CHS), conducted by the New York City Department of Health and Mental Hygiene. CHS is a cross sectional telephone survey conducted annually by the NYCDOH. Students interested in using this dataset should use the most up-to-date data (2010). The data and documentation is available online at: http://www.nyc.gov/html/doh/html/data/chs-data.shtml . The data are available in SAS.
4) 2013 NYC Youth Risk Behavior Survey (YBRS). The NYC Youth Risk Behavior Survey (YRBS) is conducted through an ongoing collaboration between the New York City Department of Health and Mental Hygiene (DOHMH), the Department of Education (DOE), and the National Centers for Disease Control and Prevention (CDC). The New York City's YRBS is part of the CDC's National Youth Risk Behavior Surveillance System (YRBSS). The survey has been conducted in odd-numbered years since 1997. The surveys' primary purpose is to monitor priority health risk behaviors that contribute to the leading causes of mortality, morbidity, and social problems among youth in New York City. Students complete a self-administered, anonymous questionnaire that measures a variety of behaviors, including tobacco, alcohol and drug use, unintentional injury and violence, sexual behaviors, dietary behaviors, and physical activity. The data is available online at: http://www.nyc.gov/html/doh/html/data/episrv-yrbsdata.shtml

All four datasets have population weights, which should be used to apply the descriptive statistics and analytic results to the total population rather than just the study sample, and were collected using a complex sampling scheme that needs to be taken into account during analysis. The weighting and sampling scheme can be taken into account in SAS for most statistical tests you would want to run. More complicated analyses might require SUDAAN, which is beyond the scope of this class. Note that it is possible to analyze this type of data in STATA and, if you have the complex sampling module add-on, in SPSS, but for this course we will be using SAS. The websites for the data sets have instructions for how to analyze the data and students should refer to those instructions when planning and conducting their analyses.

Written assignments: The end product of the class project will be a research paper in the format of a publishable manuscript. However, students will work on the sections of the manuscript in steps: (1) Introduction and methods section), (2) full paper draft with edited introduction and methods sections (no more than 15 pages) (3) final paper draft (no more than 15 pages). At each step, students will turn-in (post on discussion board of BB) to their instructor the written documents. Students will also be invited to read each others' work for class discussions during certain classes. Students should be considerate in giving feedback to their colleagues, and can do so either orally or by writing comments on the document and returning it to the author. Sources cited in the paper must be appropriately cited and referenced. Students are REQUIRED to use endnote for their references, and they must paste their data cleaning and statistical analysis syntax (SAS syntax, well organized and labeled) at the end of their paper as an appendix. Endnote is available for students to download to their personal computer (PC or MAC) for free from Hunter: http://library.hunter.cuny.edu/citation-tools. The final paper should be formatted for a specific journal to which the student thinks his/her paper could be submitted (at least theoretically). If the student does not have a

preferred journal, s/he may format for AJPH (http://ajph.aphapublications.org/userimages/ContentEditor/1318438422261/Instructions_for_Authors.pdf). Each draft of the paper turned-in will be assigned a numeric grade by the instructor. Late assignments will lose 5 points out of 100 for each day they are late (including weekends and holidays).

Data management assignment: In addition to the paper, early in the semester students will complete and turn-in for evaluation a data management assignment. The assignment will be completed and turned-in in three sections: (1) Database creation & data entry: students will create a database in EpiInfo and enter some provided data (free software from the CDC: http://wwwn.cdc.gov/epiinfo/html/downloads.htm. Note EpiInfo cannot be loaded on a Mac). (2) Merging data and formatting: Export the data from EpiInfo and import it into SAS, merge in additional data and write syntax to format and label the data. (3) Data cleaning: Write SAS syntax to run queries to identify problematic data, and correct the data. Students will turn-in (1) their database with the entered data, (2) their formatted data and syntax, and finally (3) their merged and cleaned data with syntax by posting the assignments on BB. Late assignments will lose 5 points out of 100 for each day they are late (including weekends and holidays).

Class attendance & participation: This class is being taught partly as a seminar and manuscript writing workshop and students will be given time to discuss and work-on their papers during class. Therefore students are expected to attend class in order to participate in discussions and provide comments and suggestions to their fellow students on their work. Students may be absent for up to three classes without having any effect on their grade.

Student presentations: Students will also be required to present their paper at the end of the semester. The presentation should take no more than 8 minutes and include no more than 12 Power Point slides.

Grading

Evaluation criteria

Describe the grading methodology that will be used to assess performance in the class. If a rubric is not used, what method will be used to evaluate graded assignments?

The relative weight of each course component is as follows:

Assessment	**Weight**
Class attendance and participation	5%
Student presentation	5%
Database design & data entry assignment	10%
Dataset Formatting Assignment	10%
Data queries & cleaning assignment	10%
Written Literature Review & Methods Section	15%
Paper draft	15%

Final paper	30%
TOTAL	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

. Students may be absent for up to three classes without having any effect on their grade.

Late/incomplete submission of assignments

- Late assignments will lose 5 points out of 100 for each day they are late (including weekends and holidays).
- Students who miss their scheduled presentation will receive a grade of zero which will be averaged into their course grade.

Make-ups, rewrites, and extra credit

There are no make-ups, rewrites, or extra credit assignments. This is an advanced graduate level course and as such it is assumed that students are able to manage their time and complete assignments at the high level expected for such a course.

Expectations of students

- This is the final epidemiology/biostatistics methods course in the MPH series. It is assumed that by this point students feel relatively comfortable writing research-style papers and conducting statistical analysis using SAS. Students should be aware that they can bring their laptop computers to the CUNY School of Public Health library and get SAS software loaded for their home use. SAS has an excellent help menu and that there is a large amount of SAS code available online easily accessible through Google. In addition, the NYCDOH website provides sample SAS code for analyzing data collected using their complex sampling methods. Students should not expect to be given all the SAS code they will need to analyze the data for their papers and should plan to spend time searching for examples of the code they need.
- There are three software packages you will need to have access to in this class: (1) EpiInfo, which can be downloaded to your PC for free from the CDC website but which does not work on Macs (2) Endnote, which can be downloaded to your PC or Mac for free from Hunter's website, and (3) SAS, which is available to load on student's personal laptops from the library. Students should plan on loading Endnote, EpiInfo and SAS and become comfortable with their features early in the semester so that they are ready to use the software when required for an assignment. The software for this course will also be available for student use at the following locations (1) on the laptop computers in the library in the Silberman building should have SAS, EpiInfo and Endnote (2) the computer labs at 68th Street should have SAS and Endnote, may have EpiInfo (hours can be found at this link: http://www.hunter.cuny.edu/it/it-services/computer-labs-alias). Most students will likely have to schedule time to come to the Silberman building or some other computer lab to complete the class assignments. Students should keep this in mind when deciding when to take this class and in planning their schedules throughout the semester. Not having access to software is not a valid excuse for turning-in an assignment that is incomplete (e.g. does not have citations in endnote) or late.
- In this class you will be working with real data. Therefore, if you put thought and effort into the project and have a little luck you may finish the class with a paper that

is worth publishing or presenting at a public health conference. Of course, luck is something you cannot control and there are no guarantees, but previous classes have been very successful. In 2011, for example, two students won BEST POSTER awards at the Hunter College Student Research Day for the analyses they conducted as part of this class. In addition, three students have presented their work form this class at professional conferences, and four papers have been published in journals with high impact factors. A couple of additional papers are being edited for journal submission.

- If a student will not be able to attend a class, assignments due on that day should be e-mailed to the instructor or, when appropriate, posted on BB before the class begins (e.g. before 6:05pm the day of the class) to receive full credit. The instructor will reply when a document is received via e-mail. If a reply is not received by the student he/she should contact the instructor to be sure that the assignment was sent correctly. Students should keep their sent e-mail to demonstrate that the assignment was turned-in and when, in the event that the instructor has a questions about this. Late assignments will receive a penalty in the form of a grade reduction (see below for specifics).
  - Students must turn in their own, independently written assignments and papers. However, students are encouraged to work collaboratively on data analysis and paper editing. Students working with similar variables should collaborate by sharing variable definitions or data analysis syntax. When one or more student has provided a large amount of help to another student in any aspect of the final paper (hypothesis conceptualization, data analysis, paper editing, etc.), that help should be acknowledged by including an acknowledgement statement at the end of the final paper that is turned in. Such collaboration might also warrant co-authorship should the paper be submitted for publication.
- **Resources for help:** Hunter college has a writing center that can provide guidance for paper writing (website for information: http://rwc.hunter.cuny.edu/). Students are encouraged to use this and other resources in preparing their written assignments. Students should also feel free to discuss their papers with each other and to seek assistance from others in editing their papers, refining their hypotheses and clarifying their argument. However, the final paper or assignment that is turned in must be written by the student him or herself. Others may NOT contribute to the paper or assignment by writing portions of it.

Expectations for the instructor

- Power Point lecture slides will be available for download on Blackboard prior to class.
- Students can expect the instructor to start and end class on-time and give feedback on assignments in a constructive way.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's

basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

Note that the schedule is subject to change throughout the semester.

EPI752 Course Schedule		
Date of class	**Topic**	**Assignment due (should be completed prior to class)**
February 02, 2016	1. Introduction: what is data management?	
Feb 9, 2016 follows a Friday Schedule		
February 16, 2016	2. Database design, software & data entry	Readings: Pinol 1998, Linger 1998 **Assignment Due**: Post on BB which dataset you will use for your paper, what outcomes and exposures you want to look at. Describe how these variables are coded, their frequency (unweighted) and what recode, if any, you might make (you can change your plan later)
February 23, 2016	3. Writing a research paper introduction	Readings: Marquez 2006
March 01, 2016	4. Data management (formatting, queries, cleaning, merging, etc.); organizing your syntax	**Assignment Due:** Data Management 1: Creating a database & data entry (post database on BB)
March 08, 2016	5. Writing a methods section: study population, study design, data collection procedures, variable definition & data analysis plan	**Readings:** Montgomery 2013 **Assignment Due**: Post on BB your initial bibliography for your paper with at least 25 papers cited using endnote.
March 15, 2016	6. Data analysis review & advanced topics (regression options, sampling weights, complex sampling designs, merging complex data across time or populations)	**Readings**: Sakshaug 2014 & Martin **Assignment Due:** Data Management 2: Pulling data into SAS, merging & formatting (post syntax & data on BB)
March 22, 2016	7. Presenting your analytic results (tables & text)	Readings: LeVasseur 2013, Mantell 2011 **Assignment Due:** Data Management 3: Queries & cleaning (post syntax and cleaned data on BB)
March 29, 2016	8. Class time for data analysis problem solving	**Assignment Due:** Paper introduction & Methods Sections
April 05, 2016	9. Class time for data analysis problem solving	

EPI752 Course Schedule		
Date of class	**Topic**	**Assignment due (should be completed prior to class)**
April 12, 2016	10. Writing a discussion section, sensitivity analysis & pulling the whole paper together Additional time for data analysis problem solving	Readings: Kelvin 2012
April 19, 2016	11. Missing Data & Multiple Imputation	**Assignment Due:** Complete paper draft 1 with edited paper introduction & methods sections as well as results (tables & text) & discussion section
April 22-30, 2016 Spring Recess		
May 03, 2016	12. Student Presentations	
May 10, 2016	13. Student presentations	
May 17, 2016	14. Final student presentations Lecture on Presenting & publishing your research	
May 24, 2016	**15. No class meeting**	**Final Paper Due**

Assigned readings:

Class 2: February 16, 2016

(1) Pinol A, Bergel E, Chaisiri K, Diaz E and Gandeh M. Managing data for a randomised controlled clinical trial: experience from the WHO antenatal care trial. Paediatric and Perinatal Epidemiology 1998, 12, Suppl. 2: 142-155.

(2) Linger H, Burstein F, Zaslavsky A, Aitken C, Crofts N. Conceptual development of an information systems framework for improving continuity in epidemiological research. European Journal of Epidemiology 1998, 14(6): 587-593.

Class 3: February 23, 2016

(1) Marquez DX and McAuley E. Social cognitive correlates of leisure time physical activity among Latinos. Journal of Behavioral Medicine 2006, 29(3): 281-289.

Class 5: March 08, 2016

(1) Montgomery MA, Jackson CT, Kelvin EA. Premigration Harm and Depression: Findings from the New Immigrant Survey, 2003. Journal of Immigrant and Minority Health, DOI 10.1007/s10903-013-9810-z, 2013.

Class 6: March 15, 2016

(1) Sakshaug JW & West BT. Important considerations when analyzing health survey data collected using a complex sample design. American Journal of Public Health 2014, 104(1): 15-16.
(2) Martin K. Analyzing Data from Complex Samples Using PROC SURVEYFREQ in SAS® 9.2. Available at: http://www.wuss.org/proceedings10/HOC/Analyzing%20Data%20from%20Complex%20Samples%20Using%20PROC%20SURVEYFREQ%20in%20SAS%C2%AE%209.2.pdf.

Class 7: March 22, 2016
(1) LeVasseur MT, Kelvin EA, Grosskopf NA. The Modifying Effect of Intersecting Identities on the Association Between Bullying and Suicide Attempt among New York City Youth: Results from the 2009 New York City Youth Risk Behavior Survey. American Journal of Public Health, 103(6):1082-9.
(2) Mantell JE, Kelvin EA, Sun X, Zhou JF, Exner TM, Hoffman S, Zhou F, Sandfort TGM , Leu CS. HIV/STI risk by migration status among workers in an urban high-end entertainment centre in Eastern China. Health Education Research 2011, 26(2): 283-295.

Class 10: April 12, 2016
(1) Kelvin EA, Yung J, Fong MW, Carpio A, Bagiella E, Leslie D, Leon P, Andrews H, Hauser WA. The association of living conditions and lifestyle factors with burden of cysts among neurocysticercosis patients in Ecuador. Transactions of the Royal Society of Tropical Medicine and Hygiene, 106(12): 763-9, 2012.

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

EPI 76100-01 Psychiatric and Mental Health Epidemiology
3 Credits
Spring 2016

Time and location	Graduate Center, Room 02, Thursdays, 6:30-8:30
Instructor	Angela Parcesepe, PhD, MPH, MSW Adjunct Assistant Professor Silberman Building (2180 Third Avenue, corner of 119th Street), Room 530 E-mail: ap3471@cumc.columbia.edu Phone: 646-774-6990 **Please note: Email is the best way to reach me.**
Office hours	Office Hours: Wednesdays, 4:00-5:00 pm and by appointment
Course website	The CUNY Blackboard website can be found at: https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course offers an introduction to the epidemiology of mental health and mental illness. This course takes an explicit epidemiologic perspective, focusing on the study of the burden and determinants of mental illness. We will review the extant literature on the epidemiology of specific disorders and evaluate studies that investigate risk factors for mental illness. We will consider methodologic challenges involved in the study of mental health and illness such as limitations to diagnostic techniques and screening instruments and issues surrounding co-morbidity. The course will also address the social consequences of mental illness, and consider how we may apply epidemiologic methods to promoting psychological wellbeing in the general population.
Course prerequisites	EPI 75000 or equivalent
Course format	Each class will begin with a lecture (45-60 minutes). Most classes will then be followed by class discussion.
Required reading and resources	1) Journal articles provided on Black Board 2) Selected chapters from *Psychiatric Epidemiology*. Second Edition. Tsuang MT, Tohen M. eds. Wiley-Liss, 2002 (Available on Black Board; NO NEED TO BUY THE TEXTBOOK)
Suggested reading and resources	Hunter College has a writing center that can provide guidance for paper writing (website for information: http://rwc.hunter.cuny.edu/). Students may use this and other resources in preparing their written

	assignments. Students should also feel free to discuss their papers as well as the computer assignments with each other and to seek assistance from others in editing their papers and clarifying their argument. However, the final paper or assignment that is turned in must be written by the student him or herself. Others may NOT contribute to the paper or assignment by writing portions of it.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Critically read and evaluate the strengths and limitations of epidemiologic literature from a methodologic perspective	Discuss epidemiological articles in terms of the strengths and weaknesses of the research design, data collection, analysis and interpretation. Evaluate key theoretical, methodological and substantive contributions of epidemiologic studies Synthesize extant epidemiologic literature on a research question of relevance to mental health	• Class participation • Reaction papers • Literature review
2. Select epidemiologic study designs, data collection techniques, and analytic approaches suitable for different scientific inquiries	Evaluate to what extent analytic strategies used in psychiatric epidemiologic literature are appropriate to answer research questions of interest	• Literature review
3. Identify key threats to validity (internal and external) within and across epidemiologic studies	Recognize potential sources of bias in psychiatric epidemiologic studies	• Literature review
4. Assess substantive and methodologic gaps in psychiatric epidemiologic literature and use epidemiologic methods to address such gaps	Identify key substantive or methodological gaps in the psychiatric epidemiologic literature Discuss how epidemiologic methods can be used to address gaps in psychiatric empirical literature	• Final paper • Final paper

Course Assessments

Literature review and final paper:

All students will prepare a final paper on a psychiatric epidemiology topic of their choosing. Students will work on their papers in two parts. The first part is a literature review of the selected topic, which must be uploaded to Blackboard by **prior to class on the date it is due**. This review should summarize current epidemiologic knowledge of the selected topic and should be between **6 and 8 double-spaced pages** with references cited appropriately. The final paper will include the literature review, with revisions based on feedback from the instructor, with two additional sections that (1) identify key gaps in the current literature and (2) comment on how epidemiologic methods can be used to address these gaps. Final papers should be between **12 and 15 pages, double-spaced, excluding references**. **Final papers are due on the last day of class** and must **be uploaded to Blackboard prior to that class.** More detailed information on the literature review and final paper will be provided on Blackboard.

Sources cited in the paper must be appropriately cited and referenced. The literature review as well as the final completed paper will be assigned a letter grade by the instructor. Late assignments will lose 5 points out of 100 for each day they are late (including weekends and holidays).

Class Participation & Individual Presentations: Students are expected to attend class in order to participate in discussions. Students will also be required to give brief presentations on their project twice during the semester. During the first presentation (approximately 10 minutes in length), students will share findings on their literature review. The second presentation will occur at the end of the semester and will consist of a 15 minute presentation on their final paper.

Reaction Papers: Students will write ten 1-2 page reaction/discussion commentaries related to the week's readings, along with a few questions for clarification and discussion. Reaction papers should synthesize and critically evaluate key theoretical, methodological and/or substantive contributions of the readings. This may consist of identifying questions that the readings provoke; critiquing problematic assumptions, logic, and measurement; discussing theoretical and empirical advances; and considering ideas for future directions. Late response papers will not be evaluated. The reflections are due by email to ap3471@cumc.columbia.edu before the start of that week's class. When referring to a specific article in the reflection, please use the author-date style. Format: single-spaced, typed, 12-point Times Roman font with 1-inch margins.

Grading

Evaluation criteria

In general, papers and presentations will be evaluated according to their demonstration of a) grasp of the topic, b) identification of the key points, c) synthesis of the material, and d) discussion of the implications for public health research and practice.

Class participation will be evaluated less according to the number of times a student participates or length of student contributions to class discussion and more on the student's contribution to the discussion, use of readings in discussion and engagement with the topic being discussed.

Grading rubrics for assessments

GRADING RUBRICS	(A+ to A-)	(B+ to B-)	(C+ to C)	(F)
Reaction papers	Demonstrates engagement with and synthesis of assigned readings and critical evaluation of key theoretical, methodological or substantive contributions of the readings to public health research and practice	Demonstrates familiarity with assigned readings and consideration of contributions of readings to public health research and practice	Demonstrates familiarity with assigned readings	Does not demonstrate familiarity with assigned readings
Literature review, final paper, and presentations	Provides a comprehensive synthesis of the topic with appropriate examples and discussion of their implications for public health research and practice	Describes the main concepts of the topic, provides some examples of relevance to public health research and practice	Describes the main concepts of the topic	Does not describe the main concepts of the topic

The relative weight of each course component is as follows:

Assignment	Weight
Class Participation	10%
Reaction papers (10 x 3 points each)	30%
Literature review	20%
Final paper	30%
Class presentation	10%
Total	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4

C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation
Students are expected to attend class in order to participate in discussions. Students will also be required to give brief presentations on their project twice during the semester. If a student will not be able to attend a class, assignments should be e-mailed to the instructor before the class begins (e.g. before 6:30 pm the day of the class) to receive credit. The instructor will reply when a document is received. If a reply is not received by the student she or he should contact the instructor to be sure that the assignment was sent correctly. No more than two classes can be missed.

Late submission of assignments
Reaction papers are due by email to ap3471@cumc.columbia.edu before the start of that week's class. Late response papers will not be evaluated.

Literature reviews and final papers must be uploaded to Blackboard prior to the start of class on the day that they are due. Papers that are turned in late will lose 5 points out of 100 for each day they are late (including weekends and holidays).

Make-ups, rewrites, and extra credit
Make-up, rewrites and extra credit are not provided in this class.

Expectations of students
Students are expected to arrive on class on time and prepared to participate in discussion. Reading and written assignments are expected to be completed prior to every class.

The use of cell phones is prohibited during class. Laptops may be used for note-taking only.

Expectations for the instructor
The instructor is available during office hours and by appointment to assist students with assignments and course material. It is best to schedule an appointment in advance.

Accessibility
Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity
Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

Please note: The schedule is subject to change throughout the semester.

Please refer to the current academic calendar for important dates (e.g., holidays, course drop, course withdrawal). The current academic calendar can be found at: http://www.hunter.cuny.edu/onestop/repository/files/registrar/Academic%20Calendar%20Fall%202015%20thru%20Spring%202016%20-Repaired-FINAL.pdf

EPI 76100-01 Course Schedule, Spring 2016		
Date of class	**Topic**	**Assignments**
February 4, 2014	1. Course overview and introduction to the topic	
February 11, 2014	2. The DSM, diagnostic methods, and screening tools	Reaction Paper
February 18, 2014	3. Assessing mental disorders using available datasets	Reaction Paper
February 25, 2014	4. Investigating social and environmental risk factors for mental disorders	Reaction Paper
March 3, 2014	5. Epidemiology of affective and anxiety disorders	Reaction Paper
March 10, 2014	6. Epidemiology of psychotic disorders	Reaction Paper
March 17, 2014	7. Students present literature review	Literature Review Due
March 24, 2014	NO CLASS	
March 31, 2014	8. Characterizing posttraumatic stress in epidemiologic studies	Reaction Paper
April 7, 2014	9. Psychiatric co-morbidity and the consequences of illness	Reaction Paper
April 14, 2014	10. Service utilization and unmet need	Reaction Paper
April 21, 2014	11. Epidemiology of substance use disorders	Reaction Paper
April 28, 2014	NO CLASS	
May 5, 2014	12. Cross-cultural mental health	Reaction Paper
May 12, 2014	13. Mental illness in children and adolescents	
May 19, 2014	14. Student research presentations	Present Papers
May 22, 2014	15. Student presentations and the future of psychiatric epidemiology	Final Paper Due

SCHEDULE AND READINGS

Class 1: Course overview and introduction to the topic

Required Readings:

Tohen M, Bromet E, Murphy JM, Tsuang MT. Psychiatric epidemiology. Harvard Review of Psychiatry 2000; 8111-8125.

Insel T, Fenton WD. Psychiatric epidemiology: It's not just about counting anymore. Arch Gen Psych 2006;62:590-592.

Kessler RC. Psychiatric epidemiology: Select recent advances and future directions. Bulletin of the World Health Organization 2000;98:464-474.

Class 2: The DSM, diagnostic methods, and screening tools
Required Readings:

Frist MB. DSM-IV and psychiatric epidemiology. Chapter 13 in Textbook in Psychiatric Epidemiology. Second Edition. Tsuang MT, Tohen M. eds. Wiley-Liss, 2002.

Robins LN. Birth and development of psychiatric interviews. Chapter 11 in Textbook in Psychiatric Epidemiology. Second Edition. Tsuang MT, Tohen M. eds. Wiley-Liss, 2002.

Goldstein JM, Simpson JC. Validity: Definitions and application to psychiatric research. Chapter 5 In Textbook in Psychiatric Epidemiology. Second Edition. Tsuang MT, Tohen M. eds. Wiley-Liss, 2002.

Regier DA, Kaelber CT, Rae DS, Farmer ME, Knauper B, Kessler RC, Norquist GS. Limitations of diagnostic criteria and assessment instruments for mental disorders. Implications for research and policy. Arch Gen Psychiatry. 1998;55(2):109-15.

Class 3: Assessing mental disorder using available datasets
Required Readings*:*

Kessler, R.C., McGonagle, K.A., Zhao, S., Nelson, C.B., Hughes, M., Eshleman, S., Wittchen H.-U., Kendler, K.S. (1994). Lifetime and 12-month prevalence of DSM-III-R psychiatric disorders in the United States: Results from the National Comorbidity Survey. *Archives of General Psychiatry*;51:8-19.

Aldworth J, Colpe LJ, Gfroerer JC, et al. The National Survey on Drug Use and Health Mental Health Surveillance Study: calibration analysis. *Int J Methods Psychiatr Res* 2010;19(Suppl 1):1-98.

Strine TW, Dhingra SS, Okoro CA, et al. State-based differences in the prevalence and characteristics of untreated persons with serious psychological distress. *Int J Public Health* 2009;54(Suppl 1):9-15.

Class 4: Investigating social and environmental risk factors for mental disorder
Required Readings:

Kohn R, Dohrenwend BP, Mirotznik J. Epidemiological findings on selected psychiatric disorders in the general population. In: Dohrenwend BP, ed. *Adversity, stress, and psychopathology*. New York: Oxford University Press; 1998.

Kessler RC, Price RH, Wortman CB. Social factors in psychopathology: stress, social support, and coping processes. *Ann Rev Psychol* 1985; 36:531-72.

Dohrenwend BP, Levav I, Shrout PE, et al. Socioeconomic status and psychiatric disorders: the causation-selection issue. *Science* 1992.

Class 5: Epidemiology of affective and anxiety disorders
Required Readings:

Horwath E, Cohen RS, Wissman MM. Epidemiology of depressive and anxiety disorders. Chapter 16 In Textbook in Psychiatric Epidemiology. Second Edition. Tsuang MT, Tohen M. eds. Wiley-Liss, 2002.

Kessler RC, Berglund P, Demloer O, Jin R, Koretz D, Merikangas KR, Rush AJ, Walters EE, Wang PS. The epidemiology of major depressive disorder: results from the National Comorbidity Survey Replication. JAMA 2003;289(23):849-857.

Tohen M, Angst J. Epidemiology of bipolar disorders. Chapter 17 In Textbook in Psychiatric Epidemiology. Second Edition. Second Edition. Tsuang MT, Tohen M. eds. Wiley-Liss, 2002.

Class 6: Epidemiology of psychotic disorders

Jablensky A, McGrath J, Herrman, H, et al. Psychotic disorders in urban areas: an overview of the Study on Low Prevalence Disorders. Australian and New Zealand Journal of Psychiatry 2000; 34:221-236.

Class 14: Final student presentations
No readings

Class 15: Final student presentations and future of psychiatric epidemiology
Required Readings:
TBD

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

EPI 76400 Epidemiology Methods III
3.0 Credits
Spring 2016

Time and location	The Graduate Center (34th Street & 5th Avenue) room C01 Wednesdays 6:30-8:30pm
Instructor	Associate Professor, Elizabeth Kelvin, PhD, MPH Silberman building (2180 Third Avenue on 119th Street), Room 543 E-mail: ekelvin@hunter.cuny.edu Phone: 212-396-7751 Email is preferred method of communication
Office hours	Tuesdays 4:30-5:45 or by appointment
Course website	Black Board: https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course exposes students to intermediate methods in epidemiologic research and provides students with an opportunity to consider how these strategies complement and advance the more commonly used strategies. Doctoral and master's students will apply these concepts and theoretical knowledge to quantitative analyses using different types of epidemiologic data. Emphasis will be placed on developing practical skills relevant to contemporary epidemiologic research. Students will explore individual-level exposure-disease associations using classic study designs and techniques, as well as more recent methods that shift away from identifying individual risk factors for disease causation to the description and analysis of environmental systems that give rise to both exposures and health states. Students will also examine potential mediators of these relations.
Course prerequisites	EPI 75100 (Epidemiological Methods II) and BIOS 75100 (Applied Biostatistics II)
Course format	This class is taught as a combination of lecture, student presentation/student-led group discussion, computer-based data analyses, and short analytic papers. In general, the first hour of class will be used for lecture and discussion of the readings, and the second hour will be used to work on either a computer-based exercise or a case study. The computer based exercises provide an opportunity to practice applying methodologies discussed, and case studies provide an opportunity to understand how the methods are

	used to address a real world challenge.
Required reading and resources	• Rothman, KJ and Greenland, S. Modern Epidemiology, 3nd edition. Lippincott-Raven, 2008 • Hernan M. Causal Inference, 1st edition. Chapman & Hall/CRC, 2011. Draft chapters available at: http://www.hsph.harvard.edu/faculty/miguel-hernan/causal-inference-book/ • Additional readings as described below
Suggested reading and resources	For help with SAS programming, goggle is usually very helpful, but students may also consider referring to the following suggested textbooks: (1) Delwiche, LD & Slaughter, SJ. 2008. The Little SAS Book: A Primer (4th edition). Cary, NC: SAS Institute, Inc. (2) Cody, RP & Smith, JK. 2005. Applied Statistics and the SAS Programming Language (5th edition). Upper Saddle River, NJ: Prentice Hall.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Identify key sources of data for epidemiologic purposes	• Conduct in-depth epidemiologic analyses using data from local and public use datasets • Recognize how epidemiologic studies can build upon routine or mandatory administrative data sources	Papers & presentations
2. Use measures of disease frequency and association to appropriately describe the distribution and determinants of disease, and appropriately characterize statistical uncertainty around such estimates	• Use descriptive statistics to characterize disease states in the context of an analytic study • Appreciate the strengths and limitations of stratified analyses in data analysis	Papers & presentations
3. Critically read and evaluate the strengths and limitations of epidemiologic literature from a methodologic perspective	• Discuss epidemiologic theory and principles from published literature and in the context of a changing field of inquiry • Identify and critique research hypotheses in published literature	Papers & presentations
•4. Select epidemiologic study designs, data collection techniques, and analytic approaches suitable for different scientific inquiries	• Develop testable research hypotheses using principles from causal theory, including causal diagrams • Operationalize hypotheses into statistical testing strategies	Papers & presentations

5. Identify key threats to validity (internal and external) within and across epidemiologic studies	• Recognize key sources of bias and measurement error in published literature and their potential effects	Papers & presentations
6. Use statistical software to collect, retrieve, analyze and summarize epidemiologic data	• Develop capacity to complete in-depth epidemiologic and statistical analyses using SAS	Papers & presentations

Course Assessments

Short analytic papers: Students will complete two papers presenting the results of data analysis. Three paper topics together with data and instructions will be posted on BB each with its own due date. Hunter students must pick two of the papers to complete for the course. If a student would like to complete all 2 papers, the paper grade will be calculated using the two papers that received the highest grades.

All short papers should be 6-8 pages of text (double-spaced, 12-point font, 1 inch margins). Papers must be handed in on paper on the assigned day. If a student is unable to attend class on the day when a paper is due, the paper may e-mail it to the class instructor. The e-mail must be sent before the beginning of the class when the paper is due (i.e. by 6:30 pm). Students e-mailing papers will be sent an acknowledgement of receipt. If you do not receive an acknowledgement within 24 hours of e-mailing the paper, contact the instructor to make sure that the e-mail went through. Late papers will have 5 points deducted for each day they are late (including holidays and weekends. Papers should roughly be organized according to the following format:

Brief introduction/Literature review	(1-2 page)
Methodology	(2-3 pages)
Results	(1-2 pages)
Discussion	(1-2 pages)
Tables & Figures	(1-5, not included in the 10 page limit)
List of Citations	(As many as necessary)
Appendix with annotated SAS syntax	(as many as necessary)

Students may submit as many tables and figures as they wish to accompany this paper to demonstrate their systematic analysis strategy, but recall the power of parsimonious presentation (fewer is sometimes better). Tables may be in formats that are more work-in-progress than typically seen in published journals (for example, explorations of confounding or interaction can be shown). All tables and figures should be numbered and include self-explanatory titles and labels and go at the end of the paper. Tables and figures should be references in the text by table/figure number.

All analysis strategies should involve the following, when appropriate:

a) Basic descriptive epidemiology
b) Univariate analysis
c) Analysis for confounding
d) Analysis for interaction
e) Multivariable model building

Citations MUST be inserted into the paper using citation software (Endnote, Refworks, Zotero), which are available online (Graduate Center: http://libguides.gc.cuny.edu/c.php?g=159565&p=1045007 Hunter:

http://library.hunter.cuny.edu/citation-tools). It is strongly suggested that students download (when appropriate) the software and start working with is in the very beginning of the semester to ensure that they are comfortable with the program by the time they start working on papers for the course. Five points will be deducted from papers that do not have the citations inserted using Endnote.

Individual presentations: Students will present the methods and results of each of the 2 papers so that the different approaches taken can be compared and discussed. Students who write all 3 papers will present on all 3 papers and their presentation grade will be calculated using the two highest grades. Missing a scheduled presentation will results in a zero grade for that presentation.

Group Session: Students will be randomly assigned into teams of 2-3. Each team will be responsible for teaching one class. While the responsible student team will present the material and lead the discussion, it is expected that ALL students will be prepared for and actively participate in the discussion, and participation grades will reflect the level of engagement in these discussions. If a student misses his/her scheduled presentation a grade of zero will be assigned for that component of the grade.

Attendance & class participation: Each student is expected to attend and actively participate in each class. Two absences are allowed with no effect on the participation grade

Grading

Evaluation criteria

Describe the grading methodology that will be used to assess performance in the class. If a rubric is not used, what method will be used to evaluate graded assignments?

The relative weight of each course component is as follows:

Assessment	**Weight**
Paper 1	25%
Paper 2	25%
Paper 3	25%
Presentation 1	5%
Presentation 2	5%
Presentation 3	5%
Group Session	5%
Attendance & Participation	5%
TOTAL	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100

A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Two absences are allowed with no effect on the participation grade

Late/incomplete submission of assignments

- Late papers will have 5 points (out of 100) deducted for each day they are late (including holidays and weekends
- Students who miss their scheduled presentation (individual or group) will receive a grade of zero which will be averaged into their course grade.

Make-ups, rewrites, and extra credit

There are no make-ups, rewrites, or extra credit assignments. This is an advanced graduate level course and as such it is assumed that students are able to manage their time and complete assignments at the high level expected for such a course.

Expectations of students

- This is an advanced, doctoral level epidemiology methods course. It is assumed that by this point students feel relatively comfortable writing research-style papers and conducting statistical analysis using SAS. Hunter students should be aware that they can bring their laptop computers to the CUNY School of Public Health library and get SAS software loaded for their home use. GC students can access SAS through the intranet (contact It for support). SAS has an excellent help menu and that there is a large amount of SAS code available online easily accessible through Google. In addition, many publicly available data websites (e.g. the NYCDOH) provide sample SAS code for analyzing data collected using their complex sampling methods. Students should not expect to be given all the SAS code they will need to analyze the data for their papers and should plan to spend time searching for examples of the code they need.
- There are two software packages you will need to have access to in this class: (1) SAS and (2) citation software. Students should arrange access to the software and start using it early in the semester so s to be prepared when they start working on the assigned papers. The software for this course will also be available for student use at the following locations (1) on the laptop computers in the library in the Silberman building should have SAS and Endnote (2) the computer labs at 68th Street should have SAS and Endnote (hours can be found at this link: http://www.hunter.cuny.edu/it/it-services/computer-labs-alias), and the computers in the GC library should have this software. Most students will likely have to schedule time to come to their campus or some other computer lab to complete the class assignments. Students should keep this in mind when deciding when to take this class and in planning their schedules throughout the semester. Not having access to software is not a valid excuse for turning-in an assignment that is incomplete (e.g. does not have citations) or late.
- If a student will not be able to attend a class, assignments due on that day should be e-mailed to the instructor or, when appropriate, posted on BB before the class begins (e.g. before 6:30pm the day of the class) to receive full credit. The instructor will reply when a document is received via e-mail. If a reply is not received by the student he/she should contact the instructor to be sure that the assignment was sent correctly. Students should keep their sent e-mail to demonstrate that the assignment was turned-in and when, in the event that the instructor has a questions about this. Late assignments will receive a penalty in the form of a grade reduction.
- Students must turn in their own, independently written papers. However, students are encouraged to discuss their data analysis approaches and papers with colleagues.

Expectations for the instructor

- Power Point lecture slides will be available for download on Blackboard prior to class.
- •Students can expect the instructor to start and end class on-time and give feedback on assignments in a constructive way.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

Note that the schedule is subject to change throughout the semester.

COURSE SCHEDULE			
Date	**Lecture and Discussion Topics**	**Lab**	**Assignments Due (see below for readings)**
Class 1: Feb 3, 2016	Introduction & statistics review	Review of data analysis with SAS I	
Class 2: Feb 10, 2016	Causality & DAGS	Discussion	
Class 3: Feb 17, 2016	Developing and testing hypotheses & sampling	Data analysis of complex samples in SAS	
Class 4: Feb 24, 2016	Confounding & effect modification	Lab to explore confounding and effect modification	
Class 5: March 2, 2016	Cohort Analysis	Lab to explore person time	PAPER 1 DUE: DESCRITIVE ANALYSIS & HYPOTHESIS TESTING OF A CROSS SECTIONAL STUDY
Class 6: March 9, 2016	Student Presentations More on DAGS	Discussion	Student Presentations
Class 7: March 16, 2016	Model Development & DAGS	Lab to explore modeling	
March 23, 2016 follows a Friday schedule			
Class 8: March 29, 2016	Multilevel models	Lab I to explore neighborhood and multilevel models	
Class 9: April 6, 2016	More on Multilevel Models	Lab II to explore neighborhood and multilevel models	PAPER 2 DUE: ANALYSIS OF DATA FROM A COHORT STUDY
Class 10: April 13, 2016	Student presentation of paper 2 Analysis of case control study data	Lab to explore case control study data with without matching	Student Presentation

	with and without matching		
Class 11: April 20, 2016	Missing Data & Multiple Imputation Guest Lecture by: Matthew Romo, DPharm, MPH	Lab to explore multiple imputation in SAS	
April 22-30, spring recess			
Class 12: May 4, 2016	Internal validity and sensitivity analysis	Lab to explore sensitivity analysis	
Class 13: May 11, 2016	Other topic of interest TBD by class		
Class 14: May 18, 2016	Student presentations of paper 3 Putting it all together	Discussion	Presentation on paper 3
Class 15: May 25, 2016	NO CLASS MEETING		PAPER 3 DUE: NEIGHBORHOOD ANALYSIS

READING ASSIGNMENTS

Class 2 (February 10, 2016): Causality & DAGS
Required readings:
(1) Rothman Text Ch. 2 (Causality) & 6(Causal Diagrams)
(2) Hernan Website Ch. 1 (A Definition of Cause and Effect), Ch. 3 (Observational Studies) & Ch. 6 (Graphical representation of causal effects)
(3) Cornfield J et al. "Smoking and lung cancer: recent evidence and a discussion of some questions" JNCI 1959 (reprint IJE 2009; 38: 1175- 1191)

Recommended readings:
(1) Cox DR. "Commentary smoking and lung cancer: reflections on a pioneering paper" IJE 2009; 38: 1192-1193.
(2) Greenhouse JB. "Commentary: Cornfield, epidemiology and causality" IJE 2009; 38: 1199-1201.
(3) Vandenbroucke JB. "Commentary: 'Smoking and lung cancer'—the embryogenesis of modern epidemiology" IJE 2009; 38: 1193-1196.
(4) Zwahlen M. "'Commentary: Cornfield on cigarette smoking and lung cancer and how to assess causality" IJE 2009; 38: 1197-1198.

Class 3 (February 17, 2016): Developing and Testing Hypotheses & sampling
Required readings:
(1) Rothman Text Ch. 4, pp.51-62 (Measures of Effect), Ch. 10 (Precision) & Ch. 13, pp. 213-219 (Fundamentals of Analysis)
(4) Sakshaug JW & West BT. Important considerations when analyzing health survey data collected using a complex sample design. American Journal of Public Health 2014, 104(1): 15-16.
(5) Martin K. Analyzing Data from Complex Samples Using PROC SURVEYFREQ in SAS® 9.2. Available at: http://www.wuss.org/proceedings10/HOC/Analyzing%20Data%20from%20Complex%20Samples%20Using%20PROC%20SURVEYFREQ%20in%20SAS%C2%AE%209.2.pdf.

Class 4 (February 24, 2016): Confounding & effect modification
Required readings:
(1) Rothman Text Ch. 7 (confounding), Ch. 9 (Validity), Ch. 15 (Introduction to Stratified Analysis)
& Ch. 5 (concepts of Interaction)
(2) Hernan Website Ch. 7 (confounding) , Ch. 4 (Effect Modification) & Ch. 5 (Interaction)
(3) Sun X, Briel M, Walter SD, Guyatt GH. Is a subgroup effect believable? Updating criteria to evaluate the credibility of subgroup analyses. BMJ 2010; 340: 850-855.

Class 5 (March 2, 2016): Cohort Analysis Methods
Required readings:
(1) Rothman Text Ch, 7 (Cohort Studies)
Recommended readings:
(1) Hernan Website Ch. 17 (Causal survival Analysis)
(2) Samet JA. Perspective: cohort studies Epidemiol Rev 1998; 20(1): 135-6.
(3) Doll, Richard 2004 “Cohort studies: history of the method I. prospective cohort studies” pp. 75-86 in A history of epidemiologic methods and concepts, edited by A Morabia.
(4) Doll, Richard 2004 “Cohort studies: history of the method II. Retrospective cohort studies” pp. 152-160 in A history of epidemiologic methods and concepts, edited by A Morabia.

Class 6 (March 9, 2016): More on DAGS
(1) Hernan et al. Causal knowledge as a prerequisite for confounding evaluation: an application to birth defects epidemiology AJE 2002; 155: 176-184.
(2) Fleischer NL, Diez Roux AV. Using directed acyclic graphs to guide analyses of neighborhood health effects: an introduction. JECH. 2008 Sep;62(9):842-6.
(3) Glymour, M. Maria. 2006. "Using causal diagrams to understand common problems in social epidemiology." in Methods in Social Epidemiology, edited by J. Michael Oakes and Jay S. Kaufman. San Francisco: Jossey-Bass / Wiley.

Class 7 (March 16, 2016): Model Development & DAGS
Required readings:
(1) Rothman Text Ch. 20 (Regression Models)
(2) Rothman Text Ch. 21 (Regression Modeling)
Recommended readings:
(1) Hernan Website Ch. 11 (Why Model?)
(1) Donders AR, van der Heijden GJ, Stijnen T, Moons KG. Review: a gentle introduction to imputation of missing values. J Clin Epidemiol 2006;59:1087-1091.

Class 8 (March 29, 2016): Multilevel Analysis
Required readings:
(1) Merlo J, Chaix B, Yang M, Lynch J, Rastam L. A brief conceptual tutorial of multilevel analysis in social epidemiology: linking the statistical concept of clustering to the idea of contextual phenomenon. J Epidemiol Community Health 2005;59:443–449..
(2) Diez-Roux A. The Study of Group-Level Factors in Epidemiology: Rethinking Variables, Study Designs, and Analytical Approaches. Epi Reviews 2004, 26: 104-11
(3) Theall KP et al. Impact of small group size on neighborhood influences in multilevel models. JECH 2010 May 27.
Recommended readings:
(1) Hubbard AE et al. To GEE or not to GEE: comparing population average and mixed models for estimating the associations between neighborhood risk factors and health. Epidemiology. 2010 Jul;21(4):467-74.
(2) Boone-Heinonen J et al. Where can they play? Outdoor spaces and physical activity among adolescents in U.S. urbanized areas. Prev Med. 2010 Jul 22

Class 9 (April 6, 2016): More on Multilevel Models
Required readings:
(1) Merlo J, Chaix B, Ohlsson H, Beckman A, Johnell K, Hjerpe P, Rastam L, Larsen K. A brief conceptual tutorial of multilevel analysis in social epidemiology: using measures of clustering in multilevel logistic regression to investigate contextual phenomena. J Epidemiol Community Health 2006;60:290–297.

Class 10 (April 13, 2016): Case-control analysis methods
Required readings:
(1) Rothman Text Ch. 8 (Case-Control Studies)
(2) Hernan Website Ch. 2 (RCT) & Ch. 3 (Observational Studies)
Recommended readings:
(1) Paneth N and Susser M 2004 “Origins and early development of the case-control study: part 2, The case-control study from Lane-Claypon to 1950” p. 360-365 in A history of epidemiologic methods and concepts, edited by A Morabia.

Class 11 (April 20, 2016): Multiple imputation with SAS
Required Readings
TBD

Class 12 (May , 2016): Internal validity & sensitivity analysis
Required readings:
(1) Hernan Website Ch. 8 (Selection Bias)
(2) Hernan Website Ch 8 (Selection Bias) & 9 (Measurement Bias)
(3) Cole SR et al. Illustrating bias due to conditioning on a collider. IJE 2010; 39:417-420
(4) Greenland S. Basic methods for sensitivity analysis of biases. Int J Epi 1996;2:1107-1116.
Recommended readings:
(1) Bodnar LM, Tang G, Ness RB, Harger G, Roberts JM. Periconceptual vitamin use reduces the risk of preeclampsia. Am J Epidemiol 2006;164:470-477.
(2) Hernán MA, Cole SR. Invited Commentary: Causal diagrams and measurement bias. Am J Epidemiol. 2009 Oct 15;170(8):959-962
(3) Shahar E. “Shahar Responds to ‘‘Causal Diagrams and Measurement Bias’’ Am J Epidemiol. 2009 Oct 15;170(8):963-964.

Class 13 (May 11, 2016):
Assigned Readings
TBD

NOTE: Additional readings may be added throughout the semester.

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

EPI 77201: Time Series
1.5 Credits
Winter 2016

Time and location	Graduate Center 6418, Tues and Thursdays 6:05-8:30
Instructor	Professor Jay Verkuilen, PhD Email: jverkuilen@gc.cuny.edu Phone:
Office hours	Tuesdays 4:00pm – 6:00pm
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course will discuss models for data with serial dependence, often referred to as time series. Much of the terminology in this area comes from economics, particularly macroeconomics, and many of the models are rooted in that area. However, serial dependence appears in many areas of science, including psychology, special education, epidemiology, and environmental science. These tools are important even in statistics itself: In Bayesian analysis using Markov chain Monte Carlo (MCMC) estimation, time series analysis methods are used to diagnose model fit.
Course prerequisites	N/A
Course format	Lecture/Seminar
Required reading and resources	R.J. and Athanasopoulos, G. (2013) Forecasting: principles and practice.
Suggested reading and resources	Moeyaert M et al. (2012). Coding the Design Matrix

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Critically read and evaluate the strengths and limitations of epidemiologic literature from a methodologic perspective	Interpret a times series analysis Explain the strengths and weaknesses of a times series analysis	Project Project
Select epidemiologic study designs, data collection techniques, and analytic approaches suitable for different scientific inquiries	Explain the difference between linear models and time series analysis Explain the concept of serial dependence	Homework 1 Homework 1
Identify key threats to validity (internal and external) within and across epidemiologic studies –	Describe how a times series model can be used for forecasting Apply Model Building techniques and Diagnosis to time series models	Homework 4 Homework 3
Use statistical software to collect, retrieve, analyze and summarize epidemiologic data	Implement times series models in stata with appropriate graphics	Homework 2

Course Assessments

The course will be assessed based on a four weekly assignments and a project.

Grading

Evaluation criteria

.
Grading rubrics for the weekly assignments and project

(A+ to A-)	(B+ to B-)	(C+ to C)	(F)
Provides a comprehensive synthesis of the topic with appropriate examples and discussion of the implications for practice	Identifies the implications of the key points in the topic, provides some examples and relevance to practise	Describes the main concepts in the topic	Inability to identify and describe the main concepts

Project: The project will be a take-home assignment involving statistical analysis in stata of an analytic question, and students are expected to analyze the provided data, interpret findings in the context of the literature, and draw conclusions. The project must be completed independently and students may not discuss the project with classmates. Students will be given the questions 1 week before the project is due.

The relative weight of each course component is as follows:

Assessment	Weight
Homeworks x4	40
Project	60
	100

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation
Attendance is mandatory and class participation may generate extra credit.

Late/incomplete submission of assignments
Late or incomplete assignments will be accepted at the discretion of the instructor

Make-ups, rewrites, and extra credit
Make-ups and not available, but rewrites are allowed.

Expectations of students
- You must sign up for Blackboard so that you can receive course readings, updates and obtain lecture notes and other handouts. For instructions on registering for a portal account in order to access Blackboard, go to: https://portal.cuny.edu/portal/site/cuny/index.jsp?epi-content=LOGIN.
- Please forward your CUNY e-mail to your most frequently checked e-mail address. Check your e-mail regularly so that you can receive emergency communications and periodic updates about the class.
- You are expected to complete readings and written assignments prior to class.
- Any written assignments should be uploaded to blackboard by 4pm on the day of the class.
- Students are expected to participate in class discussions, treating their classmates and the instructor with respect.

Statistical analysis will be conducting using stata. stata has an excellent help menu and that there is a large amount of stata code available online easily accessible through Google..

Expectations for the instructor

- Power Point lecture slides will be available for download on Blackboard after class.
- The instructor is available during office hours and by appointment to assist students with assignments, course material, and exam preparation. The preferred method of communication with the instructor is e-mail.
- Grades for each piece of work will be uploaded to blackboard within a week.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule

The schedule is subject to change throughout the semester.

- Please refer to the current academic calendar for important dates (for example: holidays, course drop, course withdrawal).

Course schedule

Session	Date	Topic	Reading	
1	5jan16	Linear Model review		
2	7jan16	Linear Model – serial dependence		
3	12jan16	Graphical Analysis		
4	14jan16	ARIMA Models overview		
5	19jan16	ARIMA models Model Building and Diagnosis		
6	21jan16	ARIMA Models Forecasting		
7	26jan16	Interrupted Time Series		
8	28jan16	Markov Switching Models		

Brooklyn College, 2900 Bedford Avenue, Brooklyn, NY 11210

HNSC 7120X: Fundamentals of Epidemiology
Spring, 2016 (ET6A, Code 32558)

Catalogue description	Principles and application of epidemiological analysis, illustrations of incidence, distribution, multiple determinants, and control of disease. Methods of investigation. Sources, presentation, and interpretation of Data.
Course meets	Tuesdays, 6:30-9:00pm, Room 232 New Ingersoll.
Instructor	Prof. James Greenberg
Email	jamesg@brooklyn.cuny.edu (Email is best way to contact me; expect a response within 2 business days)
Phone	718-951-5000 ext. 2736
Office	4107 Old Ingersoll
Office hours	M & W 1-2 pm & Tu 5:15 - 6:15 pm, or by appointment.
Required Text	Gordis L. Epidemiology. 5th ed. Philadelphia, PA: Saunders, Elsevier, 2013 (ISBN: 978-1-4557-3733-8)
Additional Required Reading Materials	Online in Blackboard.* Other additional Materials may be supplied by the instructor.
Additional Required Materials	A simple calculator should be brought to every meeting of our class, including the Midterm and Final Exam. Cell phones are not allowed.
Reserve Material	Gordis L. Epidemiology. 5th ed. Philadelphia, PA: Saunders, Elsevier, 2013 (ISBN: 978-1-4557-3733-8)

* It is YOUR responsibility to successfully log onto Blackboard throughout the semester. For more information on using Blackboard, see: **http://library.brooklyn.cuny.edu/blackboard**

Competencies and Objectives:

Apply the public health core functions of assessment, policy development and assurance	• Describe in writing the purpose of surveillance and how surveillance is used in public health practice • Explain the difference between incidence and prevalence • Describe the process of identifying and testing potential targets of intervention and give examples of effective and ineffective public health interventions • Describe the process of identifying vulnerable sub-populations, and give examples • Describe under what conditions screening is appropriate	Sessions 1-3 Epi paper Participation Midterm Home Work Lab 1-3
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Describe epidemiological studies, including observational, quasi-experimental and experimental studies • Differentiate between primary and secondary data collection and identify possible sources of secondary data • Explain the difference between correlation and causation; risk factors/predictors and causes • Describe the causal inferences which can be made from experimental, quasi-experimental and observational studies using published examples	Sessions 2-12 Epi paper Participation Midterm Final Exam Home Work Lab 2-12
Adhere to ethical and social justice principles and standards	• Describe circumstances in which an experimental study would and would not be ethical • Describe major disparities in life expectancy nationally and globally	Session 13 Participation Final Exam
Interpret and analyze public health literature and apply evidence-based research	• Access and use published data to accurately describe in writing the health of populations and factors that affect health in terms of person, time and place characteristics • Distinguish between narrative and systematic reviews • Systematically review the literature on a specific topic using a PICO question	Sessions 3-12 Epi paper Participation Midterm Final Exam Home Work Lab 3-12
Apply basic statistical and informatics techniques	• Explain in a few sentences the principle	Sessions 1-7 & 9-11

	of screening • Define lead time and length bias and how these biases may impact screening program evaluation • Describe in a few short sentences sensitivity, specificity, positive predictive value and negative predict value of a screening test compared to a gold standard test • Calculate and interpret a mean, a proportion, a rate and an odds ratio, • Explain the difference between relative and absolute risk • Calculate age-standardized rates	Epi paper Participation Midterm Final Exam Home Work Lab 1-7 & 9-12
Communicate public health information through oral, written, digital and visual presentation	• Describe the validity, utility and feasibility of tests used for screening and diagnosis of health conditions • Present visually information on key public health topics such as the major causes of death nationally and globally	Sessions 2-5 & 7-13 Epi paper Participation Midterm Final Exam Home Work Lab 2-5 & 7-12
Design and evaluate interventions to prevent or control public health problems	• List the strengths and weaknesses of different techniques for evaluating interventions • List the strengths and weaknesses of different techniques for controlling public health problems	Sessions 2-5 & 7-13 Epi paper Participation Midterm Final Exam Home Work Lab 2-5 & 7-12
Collect, analyze and interpret public health data	• Explain how to choose and apply appropriate study designs to answer a research question • Explain the interpretation of different measures of population health, such as life expectancy, quality adjusted life years	Sessions 2-11 Epi paper Participation Midterm Final Exam Home Work Lab 2-11

SECTION 1. ASSESSMENT

	Percentage of Grade

Participation Includes attendance, answers to instructor's questions about assigned readings, in-class writing, group work, and active participation in class discussion	10%
Epi Paper* Topic Selection (2%), draft (5%), final paper (10%), individual class presentation (3%)	20%
Midterm (~60 minutes, multiple choice & short answer) There will be one midterm that will contain ~30 questions.	25%
Homework* There will be 10 homework assignments due, to be handed in at the start of class.	10%
Final Exam (during final class session, multiple choice & short answer) There will be ~40 questions.	35%
Total	**100%**

*** Paper assignments** must be uploaded into SafeAssign in Blackboard by 6:00 pm on the day that they are due. **Assignments cannot be submitted by email**

MAKEUPS: Makeup exams and late homework and epi paper assignments will only be accepted with a very good reason, e.g. court stipulation, death certificate, physician's note or police report.

PLEASE NOTE: To maintain fairness among all students, there will be no extra credit assignments at any point to make up for a low grade.

Grades will be Posted in Blackboard within a few days after the Midterm and Final Exam.

Grading Scale: A+ 97-100; A 93-96; A- 90-92; B+ 87-89; B 83-86; B- 80-82; C+ 77-79; C 73-76; F Less than 73

* Note that, per Brooklyn College regulations, there is no "D" grade. For more information, please see the "Academic Regulations and Procedures" section of the Brooklyn College Graduate Bulletin

SECTION 2. CLASS FORMAT & POLICIES

Class Format

The first part of each class will be a lecture/discussion session that will involve, instructor's questions about assigned readings, Powerpoint slides and will last about 1 ½ hours. The Powerpoint slides are posted in Blackboard. The second part of each class will be a lab in which students will be divided into groups for the purpose of discussing the questions and answers in the homework assigned for the class.

Homework

There will be 10 weekly homework assignments due at the start of class. Five of the homework assignments, randomly selected, will be graded.

Homework assignments will be posted in Blackboard at least one week prior to class. **Homework assignments are described as "Lab Ex 2" through "Lab Ex 12"** on the class schedule (down below). Each assignment will have multiple-choice and short-answer questions.

Answers to multiple-choice questions should be submitted on assignment sheets and Scantron sheets, obtainable from the instructor. Answers to short-answer questions should be typed on assignment sheets. **Show your work** on assignment sheets for answers that require numeric calculations. Submitted Scantron and assignment sheets should have your name, course number and name, Lab number and date clearly marked.

Bring two copies of your completed assignment sheet and one copy of your completed Scantron sheet to each class in which the assignment is due. Hand in your completed Scantron and one copy of the completed assignment sheet at the start of class. No late assignment or Scantron sheets will be accepted

I will calculate the grade for homework assignments (10% of course grade) as follows: 1) 0.5% of course grade for handing in each of the 10 completed Scantrons plus completed assignment sheets on time; & 2) 1% of course grade for each of the 5 graded homework assignments.

Keep the second copy of your completed assignment sheet for the lab-session group discussion of the questions and answers. I will present correct answers toward the end of the lab session

Epi Paper

The epi paper is an opportunity for you to conduct a structured, formal investigation of a health topic of interest to you. The paper topic is of your choosing, but must be approved by me.

Generally, any aspect of public or individual health that could be, or has been, improved as a result of epidemiological research would be suitable. Your topic must involve two epidemiological research studies aimed at assessing the association between a specific disease and a potential causative agent or risk factor. Review articles and meta-analyses do not qualify.

There will be three submissions:

1) Your proposed topic, to be typed and handed in at the start of the third class of the semester and submitted into SafeAssign in Blackboard before 6 pm on the day of the third class (2% of course grade). This assignment should be on one page and should contain:
   - your name
   - your proposed topic (include specific disease and potential causative agent)
   - the research question to be addressed
   - expected conclusions
   - two or more references, including the two studies that you propose to summarize and critique. All references should be in a standard format.

2) A 2-3 page draft due at 6 pm on the day of the 5th class of the semester (5% of course grade), to be submitted into SafeAssign in Blackboard. The draft should contain:

. Title of your paper & your name
. Word count (max 500 words, not counting references)
. Introduction which should present evidence, with references, showing why the topic is important.
. Body of the paper, containing a summary of two (2) peer reviewed epidemiological studies on your topic.

FORMAT FOR EACH SUMMARY (Use bold words as headings)
. **Title** of the study
. **Objectives** (Objectives of the study. Two sentences at most)
. **Type of Study**
. **Sample** (how was the sample obtained. Two sentences at most)
. **Hypothesis of Interest** (One sentence)
. **Primary exposure variable of interest** (maximum of one variable)
. **Primary outcome variable of interest** (maximum of one variable)
. **Confounder Variables**
. Method of Statistical Analysis for hypothesis of interest (maximum of three sentences)

. **Give Data & p-values for results** Please see the description of the Epi Paper in our syllabus **for the primary exposure and outcome variables (**Two sentences at most)
. **Conclusions** (Two sentences at most)
. **Limitations of the Study** – maximum of two limitations
. **Summary of Your Conclusions from the Two Studies**– (three sentences maximum).
. **Recommendation for the Future**– (three sentences maximum)
. **List of References in Standard Format- (**References should be papers published in peer-reviewed journals, information on government websites or in government reports, or other similarly authoritative sources)
. **Copy of the Abstract of Each of the Two Studies Summarized in Your Paper**

3) Final 2-3 page paper due at 6 pm on the day of the 11th class of the semester (10% of course grade). Format is the same as for the draft;

4) Oral presentation of your paper (10-15 minutes), aided by the overhead projector in 14th class of the semester (3% of course grade). Your presentation should be in MSWord format. Please ensure that fonts are large enough to be easily read by your audience.
IT IS YOUR RESPONSIBILITY TO CHECK PRIOR TO THE CLASS that your data file and thumbdrive are compatible with the Windows computers on the Brooklyn College campus.

Submission policy

- Unless noted otherwise, written assignments must be successfully uploaded to SafeAssign on Blackboard by 6:00 pm on the day on which they are due. Unless you do this, the assignment will not be considered to have been submitted.

Formatting of paper assignments

- Write your name, title of your paper, course number and name and date at the top of the assignment
- Unless otherwise specified, your paper assignment should be typed, double spaced, with 1 inch margins and 12 point font. All pages must be numbered.
- All statements of fact or expert opinion should be supported with one or more references.
- You must properly cite each data source, both in the text and in a reference section at the end of the paper, per a standard format of your choosing.
- Points will be automatically deducted from your grade if your assignment is not formatted as instructed. Here are a few examples:
    - If your assignment has 1.5 spacing rather than double spacing, you will lose points
    - If your margins are 1.25" and not 1", you will lose points
    - If your assignment does not have a bibliography, literature or "works cited" section (and you were asked to create one), you will lose points
    - If your citations are not presented in a standard format, you will lose points

Spelling and grammar ALWAYS count

- Points will be automatically deducted from your grade if there are *excessive* and *serious* spelling, grammar and/or writing deficiencies.

- What counts as “excessive”? This varies by assignment, but my general rule of thumb is that the number of serious mistakes should not exceed the number of pages of that assignment. For example, if you are submitting a 2 page paper, any more than 2 serious errors could lead to a reduction in your grade.
- What counts as “serious”? Again, there is no hard and fast rule, but here is how I break down categories of “spelling/grammar/writing issues”
-
    - Sentence is grammatically incorrect or awkward. Usually requires reshuffling words.
      Example: “The next goal Braun et al. (2007) acts on is when and where did race become so important in health.”
    - Sentence is unclear but I have some idea what writer is trying to say
      Example: “The residential concentration of Asian Americans is very typical, and marinating the inequality of socioeconomic medical care between these neighborhoods when compared to the whites’ is an important factor for continuing the gap.”
    - Sentence is unclear and I have little or no idea what writer is trying to say
      Example: “Categories of race that define illnesses came into medical research with the intention to arrange full racial formation in clinical trial.”

Class Attendance and Participation

Your class attendance and participation will be scored using the rubric in the table below. There are 12 points in total in the table, which after I multiply by 10/12 will represent 10% of your course grade.

	Strong work (3)	Needs development (2)	Unsatisfactory (1)
Active listening (3 points)	Actively and respectfully listens to peers and instructors; consistently engaged and focused.	Sometimes displays lack of interest; not entirely engaged throughout the session; occasionally checks email, instant/text messages or other non-course material during class time.	Projects lack of interest during class; apparent visible clues that s/he is not listening to peers or instructors; frequently checks email, instant/text messages or other non-course internet material during class time.
Preparation (3 points)	Arrives to class with questions about reading assignments; active involvement in the lab sessions, clearly demonstrating that s/he has read/thought about the material	Sometimes arrives unprepared or with only superficial preparation for the lab sessions	Exhibits little evidence of having read or thought about assigned material
Quality of contributions to class discussions (3 points)	Comments and asks pertinent questions frequently. Expresses thoughts clearly.	Comments and questions sometimes advance the discussion, but sometimes do little to move it forward	Thoughts are not expressed clearly; comments are often off topic; or student does not participate in class discussions
Attendance	Arrives in class on	Usually arrives in class	Arrives consistently late,

(3 points)	time, does not have unexcused absences, and ≤ 2 absences	on time; ≤ 2 absences, but only sometimes informs instructors about unavoidable absences.	and/or does not inform instructors about absences, or > 2 absences.

* adapted from: http://www46.homepage.villanova.edu/john.immerwahr/TP101/EvDay/discussion%20rubric.pdf. Accessed on July 21, 2010

Absence, Lateness, and Early Exit

- Please note that assignments and exams are based in part on class lectures
- Students are expected to attend the full duration of ALL class sessions. It is advised that you inform me of any emergencies or long-term illnesses or other circumstances as soon as possible
- If you are absent for a class, or miss any part of it due to lateness or early exit, it is **your responsibility** to contact a classmate for notes on any material covered in class, and to complete any work that is due for the next class. "I wasn't here" is not an acceptable excuse!
- You are expected to arrive on time for class. If you arrive late to an exam or other activity, you will have until the end of the allotted period to finish (i.e., no extra time will be granted). The same policy applies for leaving class early. No students may begin an exam or other activity after another student has completed/turned in an exam
- You may NOT make-up any exam assignment, report, papers or in-class activity that you missed, unless there is a valid serious reason, documented by a police report, physician's note, court stipulation or death certificate.

Professional Conduct

- Professional development constitutes a tremendous proportion of your professional degree career and this class in particular. Please treat this class as if it were your "real" job. This includes formal correspondence via email (i.e., "Dear Professor Greenberg…"), proofread and spell-checked work (including emails), professional presentation and demeanor during class time. Please sign your emails and avoid using abbreviations and slang in all work

Writing and Preparation

- It is critical that your writing be clear and commensurate with professional level writing. The Library maintains a collection of links to sites that can assist you with proper citation format and paraphrasing and quoting other authors at http://library.brooklyn.cuny.edu → Research & Writing Help. The Learning Center has writing tutors available to help you with your writing http://lc.brooklyn.cuny.edu . The department of Health & Nutrition Sciences has a writing tutor.
- As a graduate student, you are expected to spend at least 3-5 hours per course credit, per week, doing course-related work. As this is a 3-credit class, you should anticipate spending 12-15 hours/week outside of class time doing work for this course. Please plan appropriately
- All written work must conform to assignment instructions, including the specified format, or points will be deducted.

Email Correspondence

- I will respond to quick questions via email, however if you have a more substantive issue to address you MUST see or call me during office hours
- Please check your email daily
- When sending me an email, ALWAYS put "HNSC 7120 - [Your name]" in subject line so that I know who the message is from

- Email is a *formal* means of communication in the context of school or work; please sign every message at the bottom, use polite language, capital letters, punctuation, greetings and salutations. Please avoid abbreviations, slang and cuteness

IMPORTANT: Please do not expect an immediate response when you email me. During the week I will generally respond to an email within 2 business days. If you email me on a Friday afternoon the soonest I will get back to you is early in the following week

Other Classroom Rules

- Use of cell phones and other electronic media is not permitted.
- Respect others, including their opinions (you do not have to agree, but you should show respect), and their skill levels

NOTE: You will be asked to leave the classroom if you break any of these rules and your class participation grade (10% of your final grade) will be penalized

SECTION 3. INSTITUTIONAL POLICIES

University's Policy on Academic Integrity

The faculty and administration of Brooklyn College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete text of the CUNY Academic Integrity Policy and the Brooklyn College procedure for implementing that policy can be found at this site: http://www.brooklyn.cuny.edu/bc/policies. If a faculty member suspects a violation of academic integrity and, upon investigation, confirms that violation, or if the student admits the violation, the faculty member MUST report the violation. **A copy of the Faculty Action Report is appended to this syllabus. I WILL report ALL instances of cheating, plagiarizing, or any other type of academic dishonesty.**

> **IMPORTANT:** A number of the assignments due in this course must be submitted on Blackboard through SafeAssign, an anti-plagiarism tool.

Center for Student Disability Services

In order to receive disability-related academic accommodations, students must first be registered with the Center for Student Disability Services. Students who have a documented disability or suspect they may have a disability are invited to set up an appointment with Valerie Stewart-Lovell, Director of the Center for Student Disability Services, at 718-951-5538. If a student is already registered with the Center for Student Disability Services, the student should provide the professor with the course accommodation form and discuss the specific accommodation with the professor.

> **IMPORTANT:** For more information on college-wide regulations governing grading, attendance, grade appeals, and other important matters, please see the "Academic Regulations and Procedures" section of the Brooklyn College Graduate Bulletin.

SECTION 4. PRELIMINARY CLASS SCHEDULE

As you go through this schedule, please remember:

1. This schedule, including assigned readings and due dates, is **SUBJECT TO REVISION** throughout the semester.
2. **ALWAYS** bring your readings, homework assignments and calculator to class.

3. You are responsible for **ALL** readings assigned for this course, even if they are not discussed in class.
4. Unless noted, all written assignments must be uploaded to SafeAssign in Blackboard in order to be considered submitted.

Session	Date	Lecture	Workshop / Exams	Readings and Assignments
1	2/2	Introduction/Historical Epidemiology	Lab 1: Intro to Epidemiological Databases	Gordis, Chap 1
2	2/16	Surveillance & Morbidity & Mortality Measures	Lab 2: Measures of Disease & Direct Age Adjustment	Gordis, Chap 3 & 4.
3	2/23	Infectious Disease Epidemiology	Lab 3: Outbreak investigation & Critique Wade on Gene Drives	Gordis, Chap 2 **Epi Paper Topic**.
4	3/1	Case reports, Case series, Cross-sectional & Ecological studies. Prognosis	Lab 4: Case Series & Cross-sectional & Ecological Studies	Gordis, Chap 6 & p 140 & 208-212
5	3/8	Case-Control study design	Lab 5: Case-control Studies	Gordis, Chap 10 & p 220-222 **Epi Paper Draft.**
6	3/15	Cohort study design	**MIDTERM**	Gordis, Chap 9 & 13.
7	3/22	Clinical Trials study design	Lab 7: Analyze and interpret clinical trials data	Gordis, Chap 7 & 8.
8	3/29	Interpreting measures of risk	Lab 8: Critique Golomb et al., on Chocolate & BWT I	Gordis, Chap 11 & 12.
9	4/5	Bias, Confounding, Mediation, Interaction	Lab 9: Confounding & Stratified analysis	Gordis, Chap 15
10	4/12	Causation	Lab 10: Critique Greenberg & Buijsse, on Chocolate & BWT II	Gordis, Chap 14
11	4/19	Genetic vs Environmental Causation	Lab 11: Critique Corder et al., on Alzheimer's Disease	Gordis, Chapter 16 **Epi Paper Final.**
12	5/3	Screening	Lab 12: Evaluating a screening test	Gordis, Chap 5 & 18.
13	5/10	Ethics & Genetic Engineering		Gordis, Chap 20 & Wade, NY Times 12/21/15
14	5/17			**Epi Paper Presentations**
15	5/24		**FINAL**	

Department of Health and Nutrition Sciences, Brooklyn College

Brooklyn College MPH Program, The CUNY School of Public Health

HNSC 7120X
Fundamentals of Epidemiology
Section ET6B
Code: 74455
Spring 2016

Course Description
Apply principles and methods of epidemiological analysis. Identify and interpret epidemiological data. Illustrate and investigate incidence, distribution, determinants and control of disease.

Pre-Requisites
N/A

Objectives of Course
The course will provide an introduction to basic epidemiologic concepts, terms, methods and numeric measures. By the end of the semester students should be able to explain basic epidemiologic terminology and definitions; describe study designs; understand, calculate and interpret epidemiology measures; interpret and critically examine published epidemiologic studies; comprehend ethical issues in epidemiology.

Course Meets Tuesday, 6:30-9:00 PM, 329 Ingersoll Hall Extension

Instructor Ruth McChesney, PhD, MPH

Email ruthmc@brooklyn.cuny.edu

Office Room 4200 Ingersoll Hall

Office Hours and Phone Number Tuesday 5:30 - 6:30 p.m.
Other appointment times can be set up as needed.
(718) 951-5000 Ext 2757

Required Textbook Gordis, L. Epidemiology, Fifth Edition, Elsevier Saunders, 2014.

Attendance and Class Participation

You are expected to attend all class meetings. Attendance at lectures is required for satisfactory completion of the course requirements. If you will not be able to attend, please notify the instructor as soon as possible. Please arrive on time for meetings. If you are absent please make contact for any material covered in class, and to complete any work that is due for the next class. For all assignments, please submit in a timely manner. Please see the Brooklyn College Bulletin for details about the New York State Education Law regarding nonattendance because of

religious beliefs. Normal, respectful etiquette is expected. Professional conduct is expected in interpersonal interactions, both for in-class and email communications.

Course Requirements and Grading:

The topics and lecture material for the course are mainly based on the recommended textbook. Other supplementary material will be included as appropriate, and made available to students. It is recommended that you have access to the required textbook. Additional handouts will be given out in class.

A calculator is needed for the course. When appropriate, use of the computer will accompany some of the topics as part of the classes. Computer use will not be included in the examinations.

Assignments need to be handed in by the indicated dates. Each assignment will be checked and returned. Satisfactory completion of the assignment by the indicated date will give you full credit for the assignment. The completion of other in-class exercises will be considered to contribute to class participation. There is no resubmission of assignments.

Assessment

The cumulative grade for the course will be based on the midterm examinations, a final examination, the assignments and class participation. Students should not expect to be offered make-ups for missed examinations. For an absence from an examination, a prompt communication is expected as the situation permits. For an absence from the final examination please see the Brooklyn College Bulletin.

The final grade will be determined by demonstration of knowledge and performance during the course, as indicated below. The class distribution will also be considered, if necessary.

Determination of Final Grade

	% of final grade
Midterm Examination I (1 hour)	10%
Midterm Examination II	25%
Final Examination	30%
Assignments	25%
Class Participation and Discussion	10%

Grading scale

97-100=A+	87-89=B+	77-79=C+	Less than 73=F
93-96=A	83-86=B	73-76=C	
90-92=A-	80-82=B-		

As stated in the Brooklyn College Graduate Bulletin, students in the MPH program must receive a grade of B or better in HNSC 7940 and may take the course a maximum of two times; Note that there is no grade of D in any of the graduate programs at Brooklyn

The University's Policy on Academic Integrity

The faculty and administration of Brooklyn College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete text of the CUNY Academic Integrity Policy and the Brooklyn College procedure for implementing that policy can be found at this site: http://www.brooklyn.cuny.edu/bc/policies. If a faculty member suspects a violation of academic integrity and, upon investigation, confirms that violation, or if the student admits the violation, the faculty member MUST report the violation.

Student Disability Services

In order to receive disability-related academic accommodations students must first be registered with the Center for Student Disability Services. Students who have a documented disability or suspect they may have a disability are invited to set up an appointment with the Director of the Center for Student Disability Services, Ms Valerie Stewart-Lovell at (718) 951-5538. If you have already registered with the Center for Student Disability Services please provide your professor with the course accommodation form and discuss your specific accommodation with him/her.

Important Dates

Thursday, February 4	Last day to add a course
Tuesday, February 9	Conversion Day: Classes follow a Friday Schedule
Monday, February 15	Last day to apply for Spring (June 1) 2016 Graduation
Thursday, February 18	Last day to drop a course without a grade
Friday-Saturday April 22- 30	Spring Recess
Monday, April 11	Course withdrawal period ends

Brooklyn College Learning Center

Help may be obtained through the Brooklyn College Learning Center http://lc.brooklyn.cuny.edu

Information For MPH Students

Program Competencies **This course will help you to achieve the following competencies, which are expected of all MPH graduates.**	**Course Learning Objectives** **After successfully completing this course, you are expected to be able to:**	**Assessment Methods** **Attainment of program competencies and learning objectives will be assessed with the following methods**
Apply the public health core functions of assessment, policy development and assurance	• Describe in writing the purpose of surveillance and how surveillance is used in public health practice • Explain the difference between incidence and prevalence • Describe the process of identifying and testing potential targets of intervention and give examples of effective and ineffective public health interventions • Describe the process of identifying vulnerable sub-populations, and give examples • Describe under what conditions screening is appropriate	• Midterm Exam I & II • Final Exam • Assignments
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Describe epidemiological studies, including observational, quasi- experimental and experimental studies • Differentiate between primary and secondary data collection and identify possible sources of secondary data • Explain the difference between correlation and causation; risk factors/predictors and causes • Describe the causal inferences which can be made from experimental, quasi-experimental and observational studies using published examples	• Midterm Exam I & II • Final Exam • Assignments • Class participation & discussion
Adhere to ethical and social justice principles and standards	• Describe circumstances in which an experimental study would and would not be ethical • Describe major disparities in life expectancy nationally and globally	• Assignments • Class participation & discussion
Interpret and analyze public health literature and apply evidence-based research	• Access and use published data to accurately describe in writing the health of	• Midterm Exam I & II

	populations and factors that affect health in terms of person, time and place characteristics • Distinguish between narrative and systematic reviews • Systematically review the literature on a specific topic using a PICO question	• Final Exam • Assignments
Apply basic statistical and informatics techniques	• Explain in a few sentences the principle of screening • Define lead time and length bias and how these biases may impact screening program evaluation • Describe in a few short sentences sensitivity, specificity, positive predictive value and negative predict value of a screening test compared to a gold standard test • Calculate and interpret a mean, a proportion, a rate and an odds ratio, • Explain the difference between relative and absolute risk • Calculate age-standardized rates	• Midterm Exam I & II • Final Exam • Assignments
Communicate public health information through oral, written, digital and visual presentation	• Describe the validity, utility and feasibility of tests used for screening and diagnosis of health conditions • Present visually information on key public health topics such as the major causes of death nationally and globally	• Assignments • Class participation & discussion
Design and evaluate interventions to prevent or control public health problems	• List the strengths and weaknesses of different techniques for evaluating interventions • List the strengths and weaknesses of different techniques for controlling public health problems	• Assignments
Collect, analyze and interpret public health data	• Explain how to choose and apply appropriate study designs to answer a research question • Explain the interpretation of different measures of population health, such as life expectancy, quality adjusted life years	• Midterm Exam I & II • Final Exam

HNSC 7120X Fundamentals of Epidemiology
Syllabus Spring 2016

Week	Date	Topics	Textbook Chapter Gordis	Assignment Due
1	2/02	Introduction to Concepts and Methods in Epidemiology	1, 2

CUNY SCHOOL OF PUBLIC HEALTH

Fundamentals of Environmental Health - Spring 2016

Course Number/Class Section	HNSC7130X/EW6 Fundamentals of Environmental Health
Course Meeting Day/Time	Wednesday - 6:30 to 9:00 PM
Location	Ingersol Extension, Room 238
Instructor	Singh, Supy, MA
Office	4123 Ingersol Hall
Phone	718-951-5026
E-Mail	Subraham.Singh@brooklyn.cuny.edu Please put "HNSC7130" in the subject field
Office Hours	Available before or after class or by appointment
Text (Recommended)	Environmental Health: From Global to Local (2nd ed.) by Howard Frumkin, San Francisco, CA: John Wiley & Sons, Inc; 2010.

I. Course Description

Environmental health consists of various aspects of public health issues as it relates to physical, chemical, biological, social and psychological, economic, and political factors affecting vulnerable population. It plays a key role with respect to theory and practice of assessing and controlling in the environment that may potentially impact human health. This is a survey based course aimed at to examining the environment impact of the shifting trends at the local and global level including urban development and land use, air pollution, water quality, resource management, climate instability, solid waste management, environmental justice, and technological development of the urban infrastructure (e.g., housing, transportation, sewage and waste disposal). The impact of the changing trends and shifts in policies for abating environmental health problems will be assessed and developed during the course discussions and assignments. This course will help students facilitate the following:

- Identify the various factors and other trends that are and will be impacting urban environmental health landscape in the 21st century;
- Analyze the impact of these shifting trends and policies on the public health of vulnerable populations;
- Identify technical, economic, and political strategies at multiple levels for mitigating environmental health problems that is essential to human health and environmental quality;
- Assess and evaluate the effect of environmental health hazards in the urban environmental landscape; and,
- Provide a more concise and thorough understanding of the impact of environmental hazards on the health of urban populations, and strategies for mitigating and preventing.

II. Assessment

Grading for the course will be based on a scale. Due dates for examinations and assignments are noted in the course schedule section of this syllabus. Extensions for exams are not available unless planned with the professor well in advance of day the exam is distributed or the assignment is due. Your understanding of the course material will be evaluated though three short writing assignments, two short oral presentations, class participation, two examinations, and a term paper

Grading:

	Activity	Due
5%	Short Assignment 1-Causes and consequences	February 10
5%	Short Assignment 2-Climate change	February 24
5%	Short Assignment 3-Risk Assessment	March 9
5%	Class Participation	Throughout the Semester
5%	Presentation 1-Emergent Environmental Health Issue in the News	Throughout the semester
5%	Presentation 2-Environmental Health consultant	Throughout the semester
20%	Mid-term examination	March 30
20%	Final examination	May 25
	Research Paper on an Environmental Health Topic:	
5%	Topic/Annotated bibliography	March 16
20%	Draft term paper	April 20
	Final term Paper	May 18
5%	Oral or poster presentation	May 18
100%		

Letter Grading:

A	≥ 93%
A	92 -90%
B+	87 -89%
B-	83 -86%
B	80 - 82 %
C+	77- 79%
C	73 -76%
C-	70 -72 %
F	< 70%

The grading criteria for the course are as follows:

1. Class Attendance and Participation. (5%) Students are expected to attend class regularly, show up on time, participate actively, and be prepared to discuss readings and other assignments.

2. 3- Short related writing assignment (15%): Short related written assignments are from 1-2 pages in length focusing on key concepts illustrated during class discussion and supported by the reading assignments. Information about the short assignments will be posted on Blackboard in the Assignment tab and reviewed in detail the week before the assignment is due.

First Short Written Assignment (5%) (February 10):

Second Short Written Assignment (5%) (February 24):

Third Short Written Assignment (5%) (March 10):

3. 2-Presentations (10%):

1. Emergent Environmental Health Issue in the News (5%)
Presentation 1 allows you, as a student, to introduce emergent environmental health issue of your choosing. A semester schedule for the Environmental Health in the News will be developed starting with week 2. During the course of the semester, the 2-3 students scheduled for that week will each provide a short presentation on an environmental health story of their choosing. The stories should be taken from the publicly available credible news media outlet. A subsequent supporting scholarly article on the issue should be acquired.

Guidelines for your oral presentation on Emergent Environmental Health Issue in the News
1. Prior to class, find a story that you find important and of interest to you.
2. Prepare a Powerpoint presentation with a maximum of three (3) slides that include the following

Slide 1:

- One sentence statement of the nature of the environmental health story
- Citation for your environmental health story with title and URL (or written reference). The citation should be in AMA format.

Slide 2:

- Additional information that explains the situation.

Slide 3:

- A citation of a peer reviewed source that is relevant for your news story. The citation should be in AMA format.
- A statement saying about the findings of the paper.
- A statement saying how the peer review source relates to your news story.

A template for the Powerpoint presentation can be found in the "Environmental Health in the News folder" in the assignments tab.
3. Come to class 10 minutes early (6:20) to upload your Powerpoint.
4. Deliver your presentation to the class—you'll have 5 minutes with 3 minutes for questions.
5. You cannot read your presentation.
6. Your grade will be based on your how well you convey emergent environmental health issue in the news.
7. Additional guidelines can be found in the "Environmental Health in the News" folder.

Scheduling Ground Rules: Due to the size of the class, changes in scheduling are not encouraged. A copy of the presentation schedule will be posted on Blackboard.

2. Consulting on Environmental Health Policy (5%)
Presentation 2 consists of the assignments of an environmental health topic to present to the class 2-3 minutes. A semester schedule for the Consulting on Environmental Health Policy will be developed starting with week 2.You will acquire a peer-reviewed journal on the subject matter and come to class prepared to summarize, answer questions from myself and

other students and to discuss topic, policies associated with the topic, and mitigation and interventions as needed.

3. Mid-term (20%): The mid-term exam will consist of some combination of essay and short-answer responses covering key concepts from the course sessions and selected readings. Mid-term exam scheduled for *March 30*.

4. Final Exam (20%): The final exam will also consist of some combination of essay and short-answer responses covering key concepts from the course sessions and selected readings. The format will be multiple choice, short answer, and essay questions. Final exam scheduled for *May 25*.

5. Research Paper (30%): The purpose of this research paper is for you to demonstrate key concepts illustrated in the readings and class sessions and to practice clear and concise writing and proper citation format. You'll write an 8-10 page research paper using at least 8-10 peer reviewed sources.

There are three types of paper from which you can choose from:

- The "Description and verification" paper topics ask you examine the evidence of the environmental-relatedness of your topic (either a chemical or illness).
- The "Ranking and analysis-risk assessment" papers should be modeled on the EPA's risk assessment guidelines which means you will need to assess both the magnitude of exposure and the health effects of chemical. Using this information, you will make an inference as to whether the situation is one where a person's health could be at risk. Then, you will critically describe a policy that addresses the hazard.
- The "Policy" papers ask you to identify the information needed in order to formulate policy recommendations.

At a minimum the paper should include but not limited to following subject areas:

- **Introduction:** Clearly identify the environmental health issue and its impact, describe the public health significance of the problem, the objective of the paper, and the position you are taking with respect to the problem;
- **Discussion:** Detail description of the history and the current status of the environmental health problem, what is the cause or is causing the problem? What is the evidence base for the problem? Use examples from reference materials to cite support your agreement. What are the adverse health conditions the problem is causing?
- **Population and Setting:** Identify the location and population that is being impacted the most by this environmental health problem;
- **Prevention/Intervention Strategies:** Include the strategies on abating the problem, include a theoretical framework for your intervention, describe how you would implement the intervention including barriers that may hamper the implementation; and,
- **Conclusion:** Summarize the problem, your position on the problem, policy and practices that can potentially mitigate the problem, areas for future research.

Formatting of written assignments:

- Title page;
- 8-10 pages in length;
- Times New Roman, 12pt font;
- Double spaced;
- 1-incg margins;
- Page numbers;
- At least 8-10-peer reviewed references should appear on a separate page; and,
- APA/MLA citation style.

Research Paper Submittal: There will be three submission dates to remember.

a. **Thesis/Topic/Annotated Bibliography:** (5%): Describe the environmental health issue of interest that is significantly impacting or will be impacting public health of a population in urban environment. The annotated bibliography should include 8-10 references pertaining to your selected topic. Your topic and annotated bibliography which will be due on *March 16*.

b. **Presentation:** (5%) Each student will give a presentation of no longer than five (5) minutes, including some questions based on time limitations. The presentation will be a discussion of the student's final paper, supporting evidence, analysis and conclusion. The presentation may not be read although you may use Powerpoint (provided you don't read the slides!).

   The Powerpoint if used should highlight and expand the impact of your presentation and not simply substitute for notes. As such a thorough use of graphical or visual enhancements can be productive means of conveying key information to your audience. The presentation will be graded for the accuracy of content, organization, and effectiveness in conveying the topic. Presentations will occur on *May 18.*

c. **Research Paper Submittal** (20%)**:** The term paper will have two due dates. If you submit the draft research paper on or before April 20, it will be returned to you on May 4 and you'll have an opportunity for revision.

   Submission by the first deadline (April 20) is highly recommended. All term papers, whether revised or not will be due on *May 18*, the day of the class presentation. Papers submitted after class time on *April 20* will be accepted without the revision option.

III. General Information and Policies

Class participation

Success in the course depends on preparation, participation, and engagement. Students should attend class, do the readings, be prepared to initiate and participate in class discussions, prepare oral presentations, collaborate with other students, and submit assignments by their due date. The focus of this course is to produce a supportive and inclusive learning environment that

facilitates the exchange of ideas and thought from all students through discussion while maintaining mutual respect.

Lateness & Absences
Attendance is mandatory and will be taken every day at the beginning of class. The course consists of a total of 15 sessions so timely and regular attendance is essential. Therefore, if you do have to miss class due to exceptional circumstances, please make arrangements to get notes from a classmate and to meet me to go over the notes once you have had a chance to read them.

Late submission of assignments
All assignments are expected to be submitted via hardcopy or Blackboard on the due date. Assignments are not to be submitted by e-mail unless you are specifically requested to do so.

Assignments handed in after the due date without prior permission will have points deducted. If you anticipate the need to turn in work late, please contact me to negotiate a mutually acceptable submission plan in advance of the assignment's due date. Please do not ask for an extension on the due date of the assignment.

Class citizenship & rules of conduct
Cell phones: Please refrain from using cell phones during the class unless specifically instructed to do so. If you have a situation where it is necessary to take a call, please step outside.

Plagiarism and Academic Misconduct
The best learning is done in conversation with others, whether they are people—classmates, teachers, friends—or texts—books, articles, essays, poems, films etc. It should not be a solitary process. However, the assignments that you hand in for this course must be done on your own, should represent your own thinking, and should be original work that you have done for this particular course. The best way to balance these two seemingly contradictory approaches (collaborative learning and original individually-produced work) without knowingly—or, even unwittingly—resorting to plagiarism or other forms of academic misconduct is to learn and meticulously observe the rules for citing the work of others. It is **your** responsibility to learn what constitutes plagiarism and the correct rules for citing sources—read the information on the following website carefully: http://www.brooklyn.cuny.edu/bc/policies/.

Center for Student Disability Services
In order to receive disability-related academic accommodations, students must first be registered with the Center for Student Disability Services (CSDS). Students who have a documented disability or suspect they may have a disability are invited to set up an appointment with Valerie Stewart-Lovell, Director CSDS, at 718-951-5538. If a student is already registered with CSDS, the student should provide the professor with the course accommodation form and discuss the specific accommodation with the professor. Per College policy, students are not permitted to bypass CSDS and go directly to a faculty member to request accommodation. Faculty members are not permitted to grant an accommodation without receiving the *Verification of Disability and Course Accommodations* forms from CSDS. Please note that, in addition to chronic conditions, many students who are dealing with acute or short-term health issues may be eligible for accommodation

The Library maintains a collection of links to sites that can assist you with proper citation format and paraphrasing and quoting other authors at http://library.brooklyn.cuny.edu→ Research & Writing Help. The Learning Center has writing tutors available to help you with your writing http://lc.brooklyn.cuny.edu/.

Incomplete Grade Policy
A grade of Incomplete (INC) may be given at the discretion of the instructor when 1) a student has satisfactorily completed most, but not all, course requirements, and 2) a student provides to the instructor evidence documenting the extenuating circumstances that prevent the completion of course requirements by the end of the semester. The instructor may change the grade of INC to another grade when the work has been completed. An INC grade may also be given at the discretion of the instructor when 1) a student has been fulfilling course requirements but is absent from the final examination, and
2) A student provides to the instructor evidence documenting the extenuating circumstances that prevent the taking of the scheduled final examination. The instructor may change the grade of INC to another grade after the final exam has been taken.

Grade appeals
You have the right to appeal a grade with which you disagree. For details, please go to:
http://www.brooklyn.cuny.edu/pub/pdf/departmental_grade-appeals.pdf

Brooklyn College Graduate Policies
For additional information on Brooklyn College policies governing graduate students, please consult the Graduate Bulletin which can be found at:
http://www.brooklyn.cuny.edu/web/off_registrar/2015

Course Communication and Assignment Submission
This course is, in part, delivered using the Blackboard course management system. In addition, students may be required to submit course assignments from time to time to the instructor "electronically" using Brooklyn College e-mail or Blackboard. An active Brooklyn student e-mail user ID and password is required to log into both systems. An active CUNY e-mail ID is required for non-Brooklyn students taking the class. All students are issued a free e-mail account when registering for classes for the first time. Blackboard and Brooklyn e-mail will be used for communicating with the instructor, for receiving some supplemental course materials, and for submitting assignments. It is the responsibility of the student to remain current on this system.

Email Correspondence
Announcements, changes in the syllabus, reminders about tests or due dates etc may be sent out via email is necessary. It is your responsibility to check e-mail regularly to keep up-to-date with these announcements. I will use the e-mail address you have provided, so please make sure that this is indeed the correct address and you are receiving email correspondences.

- Check your email daily; and,
- ALWAYS PUT <yourname> AND <class title> IN THE SUBJECT (HNSC7130) so I know who the message is from. You may want to consider using your Brooklyn College email for school work – you can access it in the BC WebCentral Portal http://portal.brooklyn.edu

Readings and assignments
As indicated above the **recommended** text ***for*** the course is Environmental Health: From Global to Local (2nd ed.) by Howard Frumkin. Supplemental readings will also be posted on BlackBoard/provided via email for students.

Assignments must be named using the following formulae when submitted:

HNSC7130 StudentLastName_StudentFirstName_AssignmentID
HNSC7130 StudentLastName_StudentFirstName_Assignment ID

Papers (and paper related assignments) will not be graded for students who do not name files according to instructions.

Assignments are due by class time on the day indicated in section on grading policies. For course discussion purposes, you may also be asked to bring paper copies of your assignments to class.

Syllabus Change Policy
Except for changes that substantially affect implementation of the evaluation (grading) statement, this syllabus is a guide for the course and is subject to change with advance notice. Changes to the syllabus will be communicated in class/Blackboard/ via email if deemed necessary.

Important Dates

Thursday, February 4 Last day to add a course

Tuesday, February 9 Conversion Day; Classes follow a Friday Schedule

Monday, February 15 Last day to apply for Spring 2016 Graduation

Thursday, February 18 Last day to drop a course without a grade

Wednesday, March 23 Conversion Day: Classes follow a Friday Schedule

Monday, April 11 Last day to withdraw from a course with a W (non-penalty) grade

Monday, May 2 Last day to resolve Fall 2015 and Winter 2016 incomplete grade (INC)

.

COURSE SCHEDULE				
Session	**Date**	**Topics**	**Readings for Session**	**Assignments Due For Class**
Session 1	February 3, 2016	Introduction to Environmental Health Ecology and Environmental Health Principles and Processes Healthy Communities Emerging Environmental Health Issues	Chapter 1-Ecology and Human Health Chapter 11 –Developing Nations Chapter 14 – Healthy Communities	
Session 2	February 10, 2016	Environmental Health Policies Environmental Justice Environmental Intervention and Prevention	Chapter 27-Environmenatl Health Practices Chapter 26 –Prevention in Environmental Health Chapter 8 –Environmental Justice Chapter 30-Environmental Health Policy	First Short Asignment
Session 3	February 17, 2016	Industrialization Globalization Population Pressure Climate Instability Global Warming	Chapter 9-Population Pressure Chapter 10- Climate Change	3-Students Presenting on Emerging Environmental Health Issues 3- Students Consulting Environmental Health Policies
Session 4	February 24, 2016	Physical Environment Technological development of the urban infrastructure (e.g., housing, transportation, sewage and waste disposal) Green Initiatives/LEED	Chapter 14 – Healthy Communities Chapter 19 –Healthy Buildings	Second Short Assignment 3- Students Consulting Environmental Health Policies 3-Students Presenting on Emerging Environmental Health Issues

Session 5	March 2, 2015	Water Quality and Health Sanitation	Chapter 15 –Water and Health	3-Students Presenting on Emerging Environmental Health Issues 3- Students Consulting Environmental Health Policies
Session 6	March 9, 2015	Air Pollution/ Energy Production	Chapter 12 –Air Pollution Chapter 13 – Energy Production	3-Students Presenting on Emerging Environmental Health Issues
Session 7	March 16, 2015	Toxicology/ Risk Assessment/ Exposure Assessments	Chapter 2- Toxicology Chapter 3 -Epidemiology Chapter 4 –Exposure Assessment Chapter 6 –Genetic and Environmental Health Chapter 29-Risk Assessment	Thesis Topic/Annotated Bibliography 3-Students Presenting on Emerging Environmental Health Issues 3- Students Consulting Environmental Health Policies
March 23, 2015 No Class –Conversion Day (Classes Follow a Friday Schedule)				
Session 8	March 30, 2016	Environmental Disasters (Natural/Anthropogenic)	Chapter 23 –Environmental Disasters	**Midterm Exam**

Session 9	April 6, 2015	Solid/Hazardous Waste Management (landfills, RCRA, CERCLA, Superfund Sites)	Chapter 16 –Solid and Hazardous Waste Management	Third Short Assignment 3-Students Presenting on Emerging Environmental Health Issues 3- Students Consulting Environmental Health Policies
Session 10	April 13, 2016	Children Environmental Health Hazards (PCBs/Pesticides/Lead)/ Persistent Organic Pollutants	Chapter 17 –Pesticides Chapter 25-Children	3-Students Presenting on Emerging Environmental Health Issues 3- Students Consulting Environmental Health Policies
Session 11	April 20, 2016	Occupational Health and Safety Work Place Accidents and Injuries	Chapter 20-Work Place Health and Safety Chapter 22 -Injuries	Draft of Research Paper 3-Students Presenting on Emerging Environmental Health Issues 3- Students Consulting Environmental Health Policies
April, 27, 2016 Spring Recess – No Class				
Session 12	May 4, 2016	Radiation Vector Borne Illnesses	Chapter 21 - Radiation	6- Students Consulting Environmental Health Policies

Session 13	May 11, 2016	12-Student Presentations	Oral and Poster Presentations Final Research Paper
Session 14	May 18, 2016	11-Student Presentations	Oral and Poster Presentations Final Research Paper
Session 15	May 25, 2016	**Final Exam**	

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you achieve increased competency in health care policy and administration. By the time you graduate, you should be able to:	After successfully completing this course, You are expected to be able to:	Competencies and learning objectives will evaluated by the following assessment methods:
Apply the public health core functions of assessment, policy development and assurance	Describe approaches for identifying and assessing the human and ecological impacts of workplace and environmental hazards	Open forum discussion during all courses sessions
Apply theories, concepts, models and methods to the design of public health research, policy and practice	Explain the importance of working collaboratively with diverse communities, sectors, and constituencies in the development, implementation, and evaluation of workplace and environmental health programs and policies. Describe the elements, appropriate use and limitations of key risk assessment, risk management and risk communication strategies	Cass discussion
Apply basic statistical and informatics techniques	Use informatics techniques to retrieve, analyze and summarize environmental health data Use spreadsheet applications to collect and graphically represent data	Three class presentations 1.emergent environmental health issues in the news, 2. students panel discussion consulting on environmental health policy, 3. final research paper presentations oral /posters
Communicate public health information through oral, written, digital and visual presentation	Describe common strategies and their limitations for controlling workplace and environmental hazards	Open forum class discussion throughout the semester during all courses sessions
Explain how social, behavioral, biomedical and environmental determinants affect population health	Understand the basic mechanisms of toxicity and pathobiology Describe the genetic, physiologic, psychosocial factors that affect susceptibility to adverse health outcomes following exposure to workplace and environmental hazards Explain the reasons, sources, and impacts of inequitable	Discussion during course sessions 2, 4, 5, 7, and 11

	distribution of environmental hazards	
Design and evaluate interventions to prevent or control public health problems	Describe common strategies and their limitations for controlling workplace and environmental hazards	This will be facilitated throughout the semester during all courses sessions
Describe the legal foundations of the U.S. public health system and its interrelationships with other systems including health care, education and environmental protection	Identify the accomplishments and limitations of key environmental regulatory programs, guidelines, and authorities at the federal and state level.	Discussions during course sessions 3, 5, 6, 7, 8, 10, 11, and 12

THE CUNY SCHOOL OF PUBLIC HEALTH
Brooklyn College MPH Program
HNSC 7140
Fundamentals of Health Policy and Management
[Code: 32560, Section NETA]
Spring 2016

Catalogue description	Examination of the organization, delivery and financing of health care in the United States as it pertains to the health policy-making process, including the organization of the agencies and personnel constituting the health care system, and analysis of government structure, laws, and regulations. Theoretical concepts, practice, and implementation of health programs in organized settings, including the planning, administration, management, evaluation, and policy analysis of public health agencies and private sector managed care.
Course Meets	Fully online*
Instructor	Dr. Betsy Eastwood
Email	eastwood@brooklyn.cuny.edu
Phone	718-951-5000 ext. 2755
Office	5129 Ingersoll Hall
Office Hours	Tuesdays from 3-6 PM. For other times, please email me.
Required Books	Sultz, H.A. & Young, K.M. (2013). Health Care USA: Understanding Its Organization and Delivery (8th edition), Sudbury, MA: Jones & Bartlett. ISBN-10: 128029883; ISBN-13: 978-1284029888 Bodenheimer, T.S. & Grumbach, K. (2012). Understanding Health Policy: A Clinical Approach (6th edition), New York: McGraw Hill. ISBN-10: 0071770526; ISBN-13: 978-0071770521
Other Required Materials	Assignments and additional required readings will be posted on Blackboard

*This is a fully online course. This means that, as with a traditional class, you are responsible for weekly readings and activities. Unlike a traditional class, you are expected to independently access and view PowerPoint presentations/lectures every week, and to participate in online discussion boards (DB), as well as to complete activities and take quizzes and exams online. **All weekly course materials will be made available by WEDNESDAY; weekly assignments are due by the following FRIDAY and TUESDAY nights.**

It is YOUR responsibility to successfully log onto Blackboard and successfully participate in the course throughout the semester. If you need assistance, Brooklyn College's Information Technology Systems (ITS) Help Desk can be accessed by calling 718-677-6180 (9am-5pm), emailing helpdesk@brooklyn.cuny.edu, or visiting http://dewey.brooklyn.cuny.edu/resources/?service=blackboard

COURSE OBJECTIVES

Program Competencies	Course Learning Objectives	Sessions/ Activities
This course will help you to achieve the following competencies, which are expected of all MPH graduates	**After successfully completing this course, you are expected to be able to:**	
Apply the public health core functions of assessment, policy development and assurance	• Assess the effects of political, social and economic policies on public health systems and the health of urban population's terms of effectiveness, efficiency and equity. • Discuss political and economic feasibility issues related to health policy	Sessions 2-14; DB postings
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Describe evidence-based approaches in the development and evaluation of public health policies and interventions • Discuss the function and role of management and the organizational structure of public health organizations • Explain quality and performance improvement concepts employed in public health organizations	Sessions 2-14; Writing Assign. 1-5
Adhere to ethical and social justice principles and standards	• Explain the difference between health care systems based on market justice and those based on social justice through a comparison of the U.S. healthcare system to global health systems.	Session 14
Interpret and analyze public health literature and apply evidence-based research	• Prepare documents for use in legislative testimony.	Writing assignments 2-5
5. -----	-----	
Communicate public health information through oral, written, digital and visual presentation	• Communicate the impact of current and potential policies to the lay public, advocacy groups and policy professionals.	Writing Assign. 1-5
Explain how social, behavioral, biomedical and environmental determinants affect population health	• Analyze the impact of individual, organizational, community, national and global trends and interdependencies on public health related problems and health disparities	DB postings; Sessions 2-14
Engage and collaborate with diverse groups	• Explain how professional ethics and practices relate to equity and accountability in diverse community settings.	Writing assignments 2-5
9. -----	-----	
10. -----	-----	
Describe the legal foundations of the U.S. public health system and its interrelationships with other systems including health care, education and environmental protection	• Describe the legal foundation of public health and the public health policy process, including the role of each level and branch of government in assuring the health of the public • Assess the main components of, and issues related to, the organization, financing and delivery of health services and public health in the US in terms of equity, access cost and effectiveness	Sessions 2-14; Writing Assign. 1, 2, 5
Apply a framework for the planning, implementation and evaluation of public health programs, policies and interventions	• Describe communication, strategic planning and marketing principles related to public health activities across different settings and audiences • Investigate the role of major stakeholders including non-	Sessions 2-14; Writing Assign. 1-2

	profit and community-based organizations in the policy process and their impact on public health	
Explain the context of public and private health-care systems in which health care and public health policy are made and healthcare is delivered	• Explain the basic organization, financing and delivery of health services in the U.S. • Discuss the impact of a lack of access to health care for both individuals and society • Specify the role of public health and other governmental agencies in providing access to care for the U.S. population	Sessions 2-14; Writing Assign. 1, 2, 5

PART I. COURSE COMPONENTS & ASSESSMENT

Online courses can be challenging to master in the beginning. As a first step you MUST thoroughly review both this syllabus and the other materials available in the "Syllabus & Other Course Info" folder and the "Session #1 (Orientation)" folder on BB.

Technical requirements

- Access to an Internet connection with high bandwidth for streaming video, Flash and audio
- Mozilla Firefox or Microsoft Internet Explorer Internet browsers preferred
- Microsoft Office applications (Word, Excel, PowerPoint), version 2010 or later
- ***You may NOT use a Smartphone, tablet or any other device other than a computer to complete activities such as DB posts or quizzes.***

  For technical assistance with BB: Please contact Brooklyn College Information Technology Services (ITS) Help Desk at 718-677-6180 (9am-5pm) or helpdesk@brooklyn.cuny.edu. Basic information on how to use BB, as well as full contact information for ITS, including on-campus assistance, can be found at http://dewey.brooklyn.cuny.edu/resources/?service=blackboard

Student expectations

- Students are expected to thoroughly understand all requirements, components, and procedures of this online class by carefully reviewing this syllabus and asking questions.
- Students are expected to successfully navigate the various components of Blackboard, including the Discussion Boards, assignments, and quizzes, by dedicating an adequate amount of time (well in advance of any deadlines) to exploring the site and accessing the help resources available to them.
- Students are expected to log onto the course BB site several times a week to read announcements, retrieve and view course materials, and participate in the Discussion Boards.
- Students are expected to ensure that they have reliable and timely access to an adequate Internet connection. In other words, if your home computer crashes or Internet access fails, you will be able to use a university computer or a friend's computer to access course materials, submit postings and assignments, and take exams by the stated deadline. ***"My computer or Internet crashed so I couldn't post to the Discussion Board or take the quiz"*** is not an acceptable excuse!

Assessment

The way you are assessed and graded for an online class does not differ greatly from a face-to-face class. Your grade is derived from three basic course components, which are listed below and described in detail in the table presented on the next two pages.

1. Participation (primarily from 3 weekly Discussion Board posts)……..30%

2. Weekly quizzes (14 in total) and Final Exam……..…….……35%

3. Written assignments (5 in total)……..……..35%

Component	% of Grade	What is it?	Where is it?	What else should I know?
(1) Discussion board (DB) participation	30%	• The majority of your participation grade will consist of posting to weekly discussion boards (14 sessions in total). For *each* of the 14 sessions, you should post a total of 3 posts. These posts should consist of 1 substantive original post (e.g., thread) of at least 150 words and 2 short interaction/reply posts of at least 25 words in response to other students' original posts. • Some additional online assignments will also count towards your participation grade, including providing feedback for the course in two "Feedback forums." These postings are mandatory, but graded as "pass/fail". • All original postings are due by 11:59pm on Friday, reply posts are due 11:59pm on the Tuesday at the end of session week.	• Each week's DB is located in that week's folder – so the DB for Session #1 is located in the Session #1 folder, etc.	• DB posts are formal written assignments for a graduate-level course and will be graded as if you had handed in your writing on a piece of paper (e.g., in the form of an essay or research paper). • Please see Appendix A "Writing for this Class," as well as Appendix B "Grading Rubric for Discussion Board Participation".
(2) Quizzes/ Final Exam	35%	• There will be 14 weekly quizzes throughout the semester, each worth 2% of your final grade. These quizzes are short (approximately 10 questions, usually multiple choice), timed (you have 20 minutes to complete each quiz, and you may not stop once you have started a quiz), and must be completed individually and without referring to notes or text. All quizzes are due by 11:59pm on the Tuesday at the end of session week. • The final exam is longer, and is worth 7% of your final grade. The final exam is due by the end of Session #15	• Each week's quiz is located in that week's folder – so the Quiz #1 is located in the Session #1 folder, etc. • The final exam will be located in the Session #15 folder.	• Nervous about what a timed online quiz is like? Take "Quiz #1," located in the "Session #1" folder, to get a feel for it. All students will receive full credit for this first quiz as long as they complete it on time!

Component	% of Grade	What is it?	Where is it?	What else should I know?
(3) Writing Assignments§	35%	• You will have 5 writing assignments due throughout the semester. Each assignment is worth 7% of your final grade and "builds up" to a 3-6 page policy memo on a health topic of your choice that also incorporates at least one international comparison. These assignments consist of: ➢ Writing Assignment #1: International comparisons exercise ➢ Writing Assignment #2: Policy memo topic, outline, sources ➢ Writing Assignment #3: Draft of a policy memo (3-6 pgs.). Graded as "pass/fail" -- full credit will be awarded if assignment is submitted on time ➢ Writing Assignment #4: "Double-blind" peer review of a classmate's policy memo draft ➢ Writing Assignment #5: Final submission of your policy memo and response to peer reviewer • Note that all written assignments be processed through SafeAssign, a plagiarism detection tool. • All assignments are due by 11:59pm on the Tuesday at the end of the session week in which they are due. **NO LATE WORK WILL BE ACCEPTED.** NO EXCEPTIONS.	• All assignments are in the "Assignments" folder in BB. • Unlike quizzes, lectures, and DB's, which are released on a week-by-week basis, all written assignments are available to you at least 6 weeks before the deadline (usually sooner) and may be found in the "Assignments" folder in BB. As such, you may work on most assignments throughout the semester, though there is a finite deadline for each.	• Please see Appendix A "Writing for this Class." • Anxious about SafeAssign? As your first assignment ("Sample Assignment"), you are asked to upload any college-level paper with citations to the SafeAssign link provided and to view the results. This is a Pass/Fail assignment! I will not be grading (or even viewing) the SafeAssign results; I just want you to become familiar with how the program works. You will be asked to comment on your results in Session #2's DB.

§ **I DO NOT ACCEPT EMAILED ASSIGNMENTS. EVER**. Assignments must uploaded to BB by the date and time specified. **NO EXCEPTIONS.**

Grading scale^

97-100=A+	86-89=B+	77-79=C+
93-96=A	83-86=B	73-76=C
90-92=A-	80-82=B-	Less than 73=F

^ A few notes about the grading scale:

(1) Students enrolled in this course come from many different programs and situations. For example, some students may have been admitted on a non-matriculated basis, such that earning a certain grade in this class may be a condition of matriculating. Some students are MPH students, who are required to earn at least a B in all of the 10 "core" public health courses (if this information is news to you, you should review the Brooklyn College Graduate Bulletin ASAP). Keep in mind that, as with all your instructors, I don't necessarily know who is who, so it is each student's personal responsibility to monitor their grades and their progress. Moreover, everyone is judged by the same standard, no matter what grade they "need" to get!

(2) Note that there is no grade of D in any of the graduate programs at Brooklyn College.

(3) My policy is that I do not give INC grades. NO EXCEPTIONS. EVER.

An illustration of how weekly deadlines work in this class (Note that the class week starts on WED and ends on TUES!)

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
			Session #2 released at 12:00am		Original 150-word DB post by 11:59pm	
		Quiz, 25-word DB replies, etc. due by 11:59pm	Session #3 released at 12:00am		Original 150-word DB post by 11:59pm	
		Quiz, 25-word DB replies, etc. due by 11:59pm	Session #4 released at 12:00am		Original 150-word DB post by 11:59pm	*And so on…*

Suggestions for a successful online experience

Time management is crucial in an online class. It is expected you will have completed all the assigned reading for each of the class sessions, and that you will join each week's Discussion Board (DB) prepared to thoughtfully read, write, and learn.

Please note that this marks a significant difference from some face-to-face courses, where you might be able to fall behind on reading and catch up before exams or papers are due without your grade being affected. Staying on schedule by doing the reading will make the class more enjoyable for you, make for a better learning experience, make for livelier Discussion Boards, and improve your grade.

I would suggest the following sequence of events for any given session:

1. "ANYTIME" ACTIVITIES: You may do these activities at any time before their due dates

- Read the textbook chapters that are due for the upcoming week. You may do this at any time, as all assigned readings from the textbooks are listed in this syllabus.

- Work on any upcoming writing assignments. Assignments are usually available in the "Assignments" folder on BB at least 3 weeks before the due date.

2. SESSION-SPECIFIC ACTIVITIES: For any given session, from Wednesday onwards you may log onto BB to access that week's materials (labeled Session #1, Session #2, etc.). You have until the following Tuesday night to:

- Retrieve additional course materials for that week's topic and view the PowerPoint lecture for that week

- Post to BB for that week, remember that the longer original post is due on Friday night, and the reply posts are due on Tuesday night, but there is nothing stopping you from posting earlier!

- Take the weekly quiz. The quizzes are based on both the textbook readings and the materials presented in each session folder. Each quiz is also due by Tuesday night at 11:59PM, but you should take it whenever you have completed reviewing the materials for that week

- IMPORTANT: *Do not wait until Tuesday night to complete the session-specific activities!*

.

PART II. COURSE POLICIES

Email correspondence

I will respond to most questions via email, however if you have a more substantive issue to address please arrange to meet with me (in person or on the phone) during office hours.

When you email me, you can usually expect a response within 2 business days, but generally sooner. Do not expect an immediate response. Note that I do not respond to emails on the weekend.

Golden Rules for Email

- Keep in mind that I get many emails a day. ALWAYS put "HNSC 7140 - [Your name]" in subject line so that I know who the message is from and what it is in regard to.
- You are expected to conduct yourself in a professional manner in all of your interpersonal interactions, including in email. Email is a *formal* means of communication in the context of school or work; please sign every message at the bottom, use polite language, capital letters, punctuation, greetings and salutations. Please avoid abbreviations, slang and cuteness.
- As noted above, I do not accept assignments via e-mail.

Other forms of communication

In person: As noted above, my office hours at Brooklyn College for Spring 2016 are Tuesdays 3:00-6:00pm; please email for an appointment for those dates), or by appointment. You are always welcome to

drop by during office hours, but to avoid long waits I ask that students please make an appointment via email beforehand whenever possible.

Phone or chat: I can also make appointments to either talk with students on the phone or communicate via chat (via BB's "Collaboration") during office hours for those who cannot make it to campus on Tuesdays. Please make these appointments via email. I am rarely right in front of my Brooklyn College phone (unless we have scheduled a phone meeting), and I usually only pick up phone messages during office hours, so the phone is the least efficient way to contact me, unless you want to let me know that you are running late for a face-to-face meeting.

PART III. INSTITUTIONAL POLICIES

Brooklyn's Policy on Academic Integrity

The faculty and administration of Brooklyn College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete text of the CUNY Academic Integrity Policy and the Brooklyn College procedure for implementing that policy can be found at this site: http://www.brooklyn.cuny.edu/bc/policies. If a faculty member suspects a violation of academic integrity and, upon investigation, confirms that violation, or if the student admits the violation, the faculty member MUST report the violation.

A copy of the Faculty Action Report in Incidents of Academic Dishonesty is appended to this syllabus. This form, as well as full CUNY and Brooklyn College-specific policies and procedures, may be found in the folder "*Academic Integrity & Plagiarism Resources"* in the *"Syllabus & Other Course Info" section of BB. I* WILL report ALL instances of cheating, plagiarizing, or any other type of academic dishonesty.

Cheating on weekly quizzes or exams, for example by using notes or text, or by completing a test with assistance, constitutes an act of academic dishonesty and WILL be reported. In addition, all written assignments will be processed through SafeAssign, a plagiarism detection tool.

Center for Student Disability Services

In order to receive disability-related academic accommodations, students must first be registered with the Center for Student Disability Services (CSDS). Students who have a documented disability or suspect they may have a disability are invited to set up an appointment with Valerie Stewart-Lovell, Director CSDS, at 718-951-5538. If a student is already registered with CSDS, the student should provide the professor with the course accommodation form and discuss the specific accommodation with the professor. Per College policy, students are not permitted to bypass CSDS and go directly to a faculty member to request accommodation. Faculty members are not permitted to grant an accommodation without receiving the *Verification of Disability and Course Accommodations* forms from CSDS.

Please note that, in addition to chronic conditions, many students who are dealing with acute or short-term health issues may be eligible for accommodation, so get help if you need it.

PART IV. PRELIMINARY READING/ASSIGNMENT SCHEDULE & CALENDAR

This schedule, including assigned readings and due dates, is **SUBJECT TO REVISION** throughout the semester.

Session	Release date (Wednesday)	Topic	Readings	Activities due by the following Tuesday at 11:59pm
#1	2/3	``````````````````	ALL documents in the folder "Syllabus & Other Course Info"	1. Session #1 DB postings (class introduction) 2. Quiz #1 3. "Sample" Assignment (SafeAssign upload)
#2	2/10	Overview of Health Care: What it Is, What it Does	S&Y Ch. 1 B&G Chs. 1, 11 See BB for additional materials	1. Session #2 DB postings 2. Quiz #2
#3	2/17	Benchmarks Developments in U.S. Health Care	S&Y Ch. 2 See BB for additional materials	1. Session #3 DB postings 2. Quiz #3
#4	2/24	How Health Care is Organized I	S&Y Chs. 3, 4 See BB for additional materials	1. Session #4 DB postings 2. Quiz #4
#5	3/2	How Health Care is Organized II	B&G Chs. 5 & 6 See BB for additional materials	1. Session #5 DB postings 2. Quiz #5 3. "Feedback forum" posting due (mandatory, but ungraded)
#6	3/9	Accessing & Paying for Health Care	B&G Chs. 2, 4 See BB for additional materials	1. Session #6 DB postings 2. Quiz #6
#7	3/16	Cost Control	B&G Chs. 8, 9 See BB for additional materials	1. Session #7 DB postings 2. Quiz #7
#8	3/23	International Comparisons	B&G Ch. 14 See BB for additional materials	1. Session #8 DB postings 2. Quiz #8 3. Writing Assignment #1 of 5
#9	3/30	Quality of Health Care	B&G Ch. 10 See BB for additional materials	1. Session #9 DB postings 2. Quiz #9
#10	4/6*	Long Term Care	S&Y Ch. 8 B&G Ch. 12 See BB for additional materials	1. Session #10 DB postings 2. Quiz #10 3. Writing Assignment #2 of 5: Policy memo topic, outline, sources
Session	**Release date (Wednesday)**	**Topic**	**Readings**	**Activities due by the following Tuesday at 11:59pm**
#11	4/13*	Public Health and the Role of Government in Health Care	S&Y Ch. 10 See BB for additional materials	1. Session #11 DB postings 2. Quiz #11 3. Writing Assignment #3 of 5: Draft

Acronyms to know: Blackboard (BB); Discussion board (DB); Bodenheimer & Grumbach, 2012 (B&G); Sultz & Young, 2011 (S&Y)

#12	4/20 Assignment not due until 5/3	The Health Care Workforce	S&Y Chs. 5, 6 B&G Ch. 7 See BB for additional materials	1. Session #12 DB postings 2. Quiz #12 3. Writing Assignment #4 of 5: Peer review 4. "Feedback forum" posting due (mandatory, but ungraded)
SPRING BREAK				
#13	5/4	Current Reform in Context	B&G Ch. 15, 16 S&Y Ch. 12 See BB for additional materials	1. Session #13 DB postings 2. Quiz #13
#14	5/11	TBA	TBA	1. Writing Assignment #5 of 5: Final paper & response to reviewer
#15	5/18			1. Final Exam due

*4/11 last day to withdraw with a W.

IMPORTANT DATES FOR SPRING 2016

Full Spring 2016 academic calendar at http://www.brooklyn.cuny.edu/web/off_registrar/Spring_2016_calendar.pdf

Lincoln's Birthday (College closed)	Fri, Feb 12
Presidents' Day (College closed)	Mon, Feb 15
Last day to drop classes	Thurs, Feb 18
Conversion day (Classes follow Fri schedule)	Wed, Mar 23 (this course will still 'meet' today)
Spring Recess	Fri, Apr 22-30
Last day to apply for withdrawal (i.e., W grade)	Mon Apr 11
Last day of graduate classes	Fri, May 20

Appendix A: Writing for this Class

Developing your writing in this course

- This is a graduate-level course. You are expected to submit graduate-level writing*, including in your Discussion Board posts.* "Graduate-level writing" means written work that follows the directions of the assignment, articulates original ideas and insights, and is free of excessive spelling, grammatical, and writing errors. Please see the section, "Writing issues" for more details.

- Time management is essential to academic success. As a graduate student, you are expected to spend at least 3-5 hours per course credit, per week, doing course-related work. As this is a 3-credit class, you should anticipate spending 12-15 hours/week outside of class time doing work for this course. Please plan appropriately.

- Apart from learning content, another goal of the course is to develop or strengthen skills that will help you be a better student and, ultimately, a better professional. These skills include: articulating your ideas in writing, collaborating with peers, and engaging in a productive critique of your own writing.

Writing issues

- Spelling, punctuation, grammar, and writing ALWAYS count*, including in your Discussion Board posts.* You must write in full, properly punctuated, sentences. Sentences must be actual sentences, rather than sentence fragments. Paragraphs must contain thesis statements.

- Points will be automatically deducted from your grade if there are *excessive* and *serious* spelling, grammar, and/or writing issues.

- What counts as "excessive"? This varies by assignment, but my general rule of thumb is that the number of mistakes should not exceed the number of pages of that assignment. For example, if you are submitting a 5 page paper, any more than 5 errors could lead to a reduction in your grade.

- What counts as "serious"? Again, there is no hard and fast rule, but here is how I break down categories of "spelling/grammar/writing issues." The examples given below are from graduate student papers.

    - Sentence is grammatically incorrect or awkward. Usually requires reshuffling words.
      Example: "The next goal Braun et al. (2007) acts on is when and where did race become so important in health."
    - Sentence is unclear, but I have some idea what writer is trying to say
      Example: "The residential concentration of African Americans is very typical, and marinating the inequality of socioeconomic medical care between these neighborhoods when compared to the whites' is an important factor for continuing the gap."
    - Sentence is very unclear and I have little or no idea what writer is trying to say
      Example: "Categories of race that define illnesses came into medical research with the intention to arrange full racial formation in clinical trial."

- **For additional assistance with writing issues, contact the Brooklyn College Learning Center, which offers one-on-one tutoring, at 718-951-5821 or http://lc.brooklyn.cuny.edu**

The citation style and formatting of papers in this course

- You must properly cite each data source, both in text and in a reference section at the end of the paper, per American Psychological Association (APA) style (6th edition).
    - For more guidance on **HOW** to cite sources in APA format, please see http://owl.english.purdue.edu/owl/resource/664/01/ as well as other resources available in the "APA Resources" folder in the "Syllabus and Other Course Info" section of BB. For students who use RefWorks, Endnote, or any other bibliographical/citation program, please note that it is YOUR responsibility to double-check the output these programs produce, as it is YOU who are ultimately liable for all of the work you submit.
    - If you are unsure of **WHEN** to cite a source, please see the "Academic Integrity & Plagiarism Resources" folder in the "Syllabus and Other Course Info" section. *Do not make up your own rules about what is or is not plagiarism, or go by the standards you thought were in place based on previous classes.*

- Unless otherwise specified, your papers should be typed, double spaced, with 1 inch margins and 12 point font. All pages must be numbered.

- Points will be automatically deducted from your grade if your assignment is not formatted as instructed. Here are a few examples:
    - If your assignment has 1.5 spacing rather than double spacing, you will lose points
    - If your margins are 1.25" and not 1", you will lose points
    - If your assignment is doesn't have a bibliography or "works cited" section (and you were asked to create one), you will lose points
    - If your citations are not presented in APA format, you will lose points

- BOTTOM LINE: Formatting is not hard; looking up citation style is not hard. Just follow the directions you are given!

Submission policy

- Unless noted otherwise, written assignments must be successfully uploaded or posted to BB by the date and time indicated. If you do not this, the assignment is not considered to be submitted. NO EXCEPTIONS.

Plagiarism

- All work must be properly cited. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. We may review strategies for avoiding plagiarism in this class; however it is ultimately YOUR job to know what is and is not plagiarism.

- The complete text of the CUNY Academic Integrity Policy and the Brooklyn College procedure for implementing that policy can be found in the "Academic Integrity & Plagiarism Resources" folder in the "Syllabus and Other Course Info" section.

- Note that all written assignments will be processed through SafeAssign, a plagiarism detection tool. However, SafeAssign is not the only method I may employ to detect plagiarism.

- If you are caught plagiarizing you will get an F in this course. I am also required by the college to submit a "Faculty Action Report Form for Incidents of Academic Dishonesty." NO EXCEPTIONS.

Appendix B: Grading Rubric for Discussion Board Participation

Overview: Discussion boards are an integral part of this online course. The majority of your participation grade will consist of posting to weekly discussion boards (14 sessions in total). For *each* of the 14 sessions, you should post a total of 3 posts, for which you will earn approximately 2 points towards your participation grade per week. *Note that I will not be responding to every post of every thread, but I will be popping in to each DB periodically to spur conversation or give feedback.*

Specific requirements by type of discussion board post

Type of post	Original Post/Thread	Reply/Interaction Posts
Frequency	• At least 1 per week, though you may post more often	• At least 2 per week, though you may post more often
Length	• At least **150** words. Posts must be free of spelling, punctuation, grammatical or other writing issues.	• At least **25** words. Posts must be free of spelling, punctuation, grammatical or other writing issues.
For full credit	• Posting was placed in the appropriate DB within the week indicated • Posting was responsive to the discussion board prompt question, and consisted of substantive comments that enhanced the discussion and helped move the conversation forward. These comments may have included follow up questions, examples, or new perspectives • When not posting first, comments provided evidence that the participant had read at least some postings from colleagues • Posting showed ample evidence of having reviewed, or completed the relevant readings or assignments • Posting was constructive and differences of opinion expressed in a collegial manner	• Posting was placed in the appropriate DB within the week indicated • Posting was responsive to the discussion board prompt question, and consisted of substantive comments that enhanced the discussion and helped move the conversation forward. These comments may have included follow up questions, examples, or new perspectives • Posting provided evidence that the participant had actually read the colleague's posting • Posting was constructive and differences of opinion expressed in a collegial manner

In addition, ALL posts should demonstrate:

- *Quality of Thinking*: Develop, support, and convey clear, focused, and substantive ideas in ways appropriate to topic, context, audience, and purpose
- *Organization and Coherence:* Organize writing in clear, coherent sequences, making connections and transitions among ideas, paragraphs, and sentences
- *Sentence Structure and Word Choice:* Use and vary sentence structures and word choices to achieve clear and fluent writing
- *Editing:* Edit for correct spelling, grammar, punctuation, capitalization, paragraph structure, sentence construction, formatting, and, when appropriate, citations
- *Use of Researched Information:* Use, integrate, and cite researched information and evidence
- *Reflection:* Evaluate and articulate one's own point of view supported by research and logic

Remember: DB posts are formal written assignments for a graduate-level course and will be graded as if you had handed in your writing on a piece of paper (e.g., in the form of an essay or research paper).

Appendix C: Brooklyn College Faculty Action Report for Incidents of Academic Dishonesty*

Print Form

BROOKLYN COLLEGE

Faculty Action Report Form for Incidents of Academic Dishonesty

If a faculty member, upon investigation, confirms that a suspected violation of the CUNY Policy on Academic Integrity has occurred and/or if the student admits to the violation, the faculty member **must** report the violation by completing and submitting a FAR Form.

The form should be forwarded to the appropriate Academic Integrity Official. For a violation in an undergraduate course send the form to Mr. Patrick Kavanagh (3208 Boylan Hall); for a violation in a graduate course send the form to Professor Philip Gallagher (3227 Boylan Hall).

A. Information about the Incident

Student Name: _____ Student ID#: _____

Date of Incident: ____ / ____ / ____ Type of Incident: ☐ Cheating ☐ Plagiarism ☐ Other

Description of Incident (please be specific): _____

_____

_____

Indicate the outcome of your discussion of the violation with the student: _____

_____

_____

Course Title: _____ Course Number: _____ Section: _____

Instructor Name: _____ Dept: _____

Phone: _____ E-mail: _____

B. Academic (Grade) Sanction

What academic sanction are you imposing?

☐ Failing Grade on Exam/Assignment ☐ Failing Grade for Course

☐ Other (please explain): _____

Did the student accept this sanction: ☐ Yes ☐ No, please explain: _____

_____

C. Disciplinary Complaint Option

Are you filing a disciplinary complaint with the Office of the Dean of Student Affairs for investigation and possible disciplinary charges?

☐ No

☐ Yes - Please be sure to enter a PEN grade for the course and to forward the *Disciplinary Complaint Form* and all supporting documentation to the Office of Student Affairs.

Instructor Signature _____ Date: ____ / ____ / ____

* Copies of all disciplinary forms are available for print-out at http://www.brooklyn.cuny.edu/bc/offices/studlife/ (under the category "Get It Right").

Revised 9/2007

**Note that a copy of this form, as well as the full CUNY Policy on Academic Integrity and Brooklyn College-specific procedures, is available in "Academic Integrity & Plagiarism Resources" in the "Syllabus & Other Course Info" folder on BB.*

Spring 2016

Time and location	Fully online
Instructor	Peter Freeman, MPH peter.freeman59@brooklyn.cuny.edu; 773-318-4842 Skype: petaire.finch
Office hours	By appointment only. Please email or call for an appointment.
Course website	*This is a fully online course. This means that, as with a traditional class, you are responsible for weekly readings and activities. Unlike a traditional class, you are expected to independently access and view course materials every week, and to participate in online discussion boards (DB), as well as to complete activities and take quizzes and exams online. All weekly course materials will be made available by MONDAY; weekly assignments are due by the following THURSDAY and SUNDAY nights. It is YOUR responsibility to successfully log onto Blackboard and successfully participate in the course throughout the semester. If you need assistance, Brooklyn College's Information Technology Systems (ITS) Help Desk can be accessed by calling 718-951-4188 (9 AM-5 PM) or emailing helpdesk@brooklyn.cuny.edu.
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Examination of the development of modern medical systems; description and discussion of the organization of the agencies and personnel constituting the health care system; the planning, administration, management, evaluation, and policy and analysis of health programs; investigation of the health legislative process and institutions that attempt to influence the process. Study of the principles and programs involved in the financing of health care services; critical analysis of current criticisms of the modus operandi of the health care system.
Course prerequisites	N/A
Course format	Fully online
Required reading and resources	Bodenheimer, T.S. & Grumbach, K. (2012). Understanding Health Policy: A Clinical Approach (6th edition), New York: McGraw Hill. ISBN-10: 0071770526; ISBN-13: 978-0071770521 Sultz, H.A. & Young, K.M. (2013). Health Care USA: Understanding Its Organization and Delivery (8th edition), Boston, MA: Jones & Bartlett. ISBN-10: 1284029883; ISBN-13: 978-1284029888 Assignments and additional required readings will be posted on Blackboard

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply the public health core functions of assessment, policy development and assurance	• Assess the effects of political, social and economic policies on public health systems and the health of urban population's terms of effectiveness, efficiency and equity. • Discuss political and economic feasibility issues related to health policy.	• Sessions 2-14; DB postings
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Describe evidence-based approaches in the development and evaluation of public health policies and interventions. • Discuss the function and role of management and the organizational structure of public health organizations • Explain quality and performance improvement concepts employed in public health organizations.	• Sessions 2-14; Writing Assign. 1-5
Adhere to ethical and social justice principles and standards	• Understand how ethics plays into the delivery of healthcare services • Describe what population(s) experience disproportionately low representation in the access of healthcare services	• Sessions 2-14; DB postings; Writing Assign. 2-5
Interpret and analyze public health literature and apply evidence-based research	• Identify reputable sources of public health data • Interpret and communicate findings from research related to healthcare delivery and outcomes	• Sessions 2-14; Writing Assign. 1-5
Communicate public health information through oral, written, digital and visual presentation	• Communicate the impact of current and potential policies to the lay public, advocacy groups and policy professionals.	• Writing Assign. 1-5
Explain how social, behavioral, biomedical and	• Analyze the impact of individual, organizational,	• DB postings; Sessions 2-14

environmental determinants affect population health	community, national and global trends and interdependencies on public health related problems and health disparities.	
Engage and collaborate with diverse groups	• Effectively communicate ideas and concepts of healthcare delivery to colleagues and peers	• DB postings
Describe the legal foundations of the U.S. public health system and its interrelationships with other systems including health care, education and environmental protection	• Describe the legal foundation of public health and the public health policy process, including the role of each level and branch of government in assuring the health of the public. • Assess the main components of, and issues related to, the organization, financing and delivery of health services and public health in the U.S. in terms of equity, access cost and effectiveness.	• Sessions 2-14; Writing Assign. 1, 2, 5
Apply a framework for the planning, implementation and evaluation of public health programs, policies and interventions	• Describe communication, strategic planning and marketing principles related to public health activities across different settings and audiences. • Investigate the role of major stakeholders including non-profit and community-based organizations in the policy process and their impact on public health.	• Sessions 2-14; Writing Assign. 1-2
Explain the context of public and private health-care systems in which health care and public health policy are made and healthcare is delivered	• Discuss the roles of major influencing factors in the development of healthcare policies and practices, including finances and quality metrics	• Sessions 2-14; DB postings; Writing Assign. 1

PART I. COURSE COMPONENTS & ASSESSMENT

Online courses can be challenging to master in the beginning. As a first step you MUST thoroughly review both this syllabus and the other materials available in the "Syllabus" & "Course Documents" folders and the "Session #1 (Orientation)" folder on BB.

Technical requirements

I. Access to an Internet connection with high bandwidth for streaming video, Flash and audio
I. Mozilla Firefox or Microsoft Internet Explorer Internet browsers preferred
II. Microsoft Office applications (Word, Excel, PowerPoint), version 2010 or later
III. You may NOT use a Smartphone, tablet or any other device other than a computer to complete activities such as DB posts or quizzes.

For technical assistance with BB: Please contact Brooklyn College Information Technology Services (ITS) Help Desk at 718-951-4188 (9 AM-5 PM) or helpdesk@brooklyn.cuny.edu.

Student expectations

I. Students are expected to thoroughly understand all requirements, components, and procedures of this online class by carefully reviewing this syllabus and asking questions.
II. Students are expected to successfully navigate the various components of Blackboard, including the Discussion Boards, assignments, and quizzes, by dedicating an adequate amount of time (well in advance of any deadlines) to exploring the site and accessing the help resources available to them.
III. Students are expected to log onto the course BB site several times a week to read announcements, retrieve and view course materials, and participate in the Discussion Boards.
IV. Students are expected to ensure that they have reliable and timely access to an adequate Internet connection. In other words, if your home computer crashes or Internet access fails, you will be able to use a university computer or a friend's computer to access course materials, submit postings and assignments, and take exams by the stated deadline. "My computer or Internet crashed so I couldn't post to the Discussion Board or take the quiz" is not an acceptable excuse!

Assessment

The way you are assessed and graded for an online class does not differ greatly from a face-to-face class. Your grade is derived from three basic course components, which are listed below and described in detail in the table presented on the next two pages.

I.	Participation (primarily from 3 weekly Discussion Board posts)	30%
II.	Weekly quizzes (14 in total) and Final Exam	35%
III.	Written assignments (5 in total)	35%

Acronyms to know: BB = Blackboard; DB = Discussion board; B&G = Bodenheimer & Grumbach, 2012; S&Y = Sultz & Young, 2013

Component	% of Grade	What is it?	Where is it?	What else should I know?
(1) Discussion board (DB) participation	30%	I. The majority of your participation grade will consist of posting to weekly discussion boards (14 sessions in total). For each of the 14 sessions, you should post a total of 3 posts. These posts should consist of 1 substantive original post (e.g., thread) of at least 150 words and 2 short interaction/reply posts of at least 25 words in response to other students' original posts. II. Some additional online assignments will also count towards your participation grade, including providing feedback for the course in two "Feedback forums." These postings are mandatory, but graded as "pass/fail." III. All original postings are due by 11:59 PM on Thursday, reply posts are due 11:59 PM on the Sunday at the end of the session week.	I. Each week's DB is located in that week's folder – so the DB for Session #1 is located in the Session #1 folder, etc.	I. DB posts are formal written assignments for a graduate-level course and will be graded as if you had handed in your writing on a piece of paper (e.g., in the form of an essay or research paper). II. Please see Appendix A "Writing for this Class," as well as Appendix B "Grading Rubric for Discussion Board Participation."
(2) Quizzes/ Final Exam	35%	1. There will be 14 weekly quizzes throughout the semester, each worth 2% of your final grade. These quizzes are short (approximately 10 questions, usually multiple choice), timed (you have 20 minutes to complete each quiz, and you may not stop once you have started a quiz), and must be completed individually and without referring to notes or text. All quizzes are due by 11:59 PM on the Sunday at the end of the session week. 2. The final exam is longer, and is worth 7% of your final grade. The final exam is due by the end of Session #15.	1. Each week's quiz is located in that week's folder – so the Quiz #1 is located in the Session #1 folder, etc. 2. The final exam will be located in the Session #15 folder.	1. Nervous about what a timed online quiz is like? Take "Quiz #1," located in the "Session #1" folder, to get a feel for it. All students will receive full credit for this first quiz as long as they complete it on time!

Component	% of Grade	What is it?	Where is it?	What else should I know?
(3) Writing Assignments	35%	• You will have 5 writing assignments due throughout the semester. Each assignment is worth 7% of your final grade and "builds up" to a 3-6 page policy memo on a health topic of your choice that also incorporates at least one international comparison. These assignments consist of: • Writing Assignment #1: International comparisons exercise • Writing Assignment #2: Policy memo topic, outline, sources • Writing Assignment #3: Draft of a policy memo (3-6 pgs.). Graded as "pass/fail" -- full credit will be awarded if assignment is submitted on time • Writing Assignment #4: "Double-blind" peer review of a classmate's policy memo draft • Writing Assignment #5: Final submission of your policy memo and response to peer reviewer • Note that all written assignments must be processed through SafeAssign, a plagiarism detection tool. • • All assignments are due by 11:59 PM on the Sunday at the end of the session week in which they are due. NO LATE WORK WILL BE ACCEPTED. NO EXCEPTIONS.	• All assignments are in the "Assignments" folder in BB. • Unlike quizzes, lectures, and DB's, which are released on a week-by-week basis, all written assignments are available to you at least 6 weeks before the deadline (usually sooner) and may be found in the "Assignments" folder in BB. As such, you may work on most assignments throughout the semester, though there is a finite deadline for each.	• Please see Appendix A "Writing for this Class." • • Anxious about SafeAssign? As your first assignment ("Sample Assignment"), you are asked to upload any college-level paper with citations to the SafeAssign link provided and to view the results. This is a Pass/Fail assignment! I will not be grading (or even viewing) the SafeAssign results; I just want you to become familiar with how the program works.

Grading scale^

97-100=A+	86-89=B+	77-79=C+
93-96=A	83-85=B	73-76=C
90-92=A-	80-82=B-	Less than 73=F

^ A few notes about the grading scale:

(1) Students enrolled in this course come from many different programs and situations. For example, some students may have been admitted on a non-matriculated basis, such that earning a certain grade in this class may be a condition of matriculating. Some students are MPH students, who are required to earn at least a B in all of the 10 "core" public health courses (if this information is news to you, you should review the Brooklyn College Graduate Bulletin ASAP). Keep in mind that I don't necessarily know who is who, so it is each student's personal

responsibility to monitor their grades and their progress. Moreover, everyone is judged by the same standard, no matter what grade they "need" to get.

(2) Note that there is no grade of D in any of the graduate programs at Brooklyn College.

(3) My policy is that I do not give INC grades. No exceptions.

An illustration of how weekly deadlines work in this class (Note that the class week starts on MON and ends on SUN).

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
	Session #2 released at 12:00 AM			Original 150-word DB post by 11:59 PM		
Quiz, 25-word DB replies, etc. due by 11:59 PM.	Session #3 released at 12:00 AM			Original 150-word DB post by 11:59 PM		
Quiz, 25-word DB replies, etc. due by 11:59 PM.	Session #4 released at 12:00 AM			Original 150-word DB post by 11:59 PM		
Quiz, 25-word DB replies, etc. due by 11:59 PM.						

Suggestions for a successful online experience

Time management is crucial in an online class. It is expected you will have completed all the assigned reading for each of the class sessions, and that you will join each week's Discussion Board (DB) prepared to thoughtfully read, write, and learn.

Please note that this marks a significant difference from some face-to-face courses, where you might be able to fall behind on reading and catch up before exams or papers are due without your grade being affected. Staying on schedule by doing the reading will make the class more enjoyable for you, make for a better learning experience, make for livelier Discussion Boards, and improve your grade.

I would suggest the following sequence of events for any given session:

1. "ANYTIME" ACTIVITIES: You may do these activities at any time before their due dates

- Read the textbook chapters that are due for the upcoming week. You may do this at any time, as all assigned readings from the textbooks are listed in this syllabus.

- Work on any upcoming writing assignments. Assignments are usually available in the "Assignments" folder on BB at least 6 weeks before the due date.

2. SESSION-SPECIFIC ACTIVITIES: For any given session, from Friday onwards you may log onto BB to access that week's materials (labeled Session #1, Session #2, etc.). You have until the following Thursday night to:

- Retrieve course materials for that week's topic

- Post to BB for that week, remember that the longer original post is due on Thursday night, and the reply posts are due on Sunday night, but there is nothing stopping you from posting earlier.

- Take the weekly quiz. The quizzes are based on both the textbook readings and the materials presented in each session folder. Each quiz is also due by Thursday night, but you should take it whenever you have completed reviewing the materials for that week.

- IMPORTANT: Do not wait until Sunday night to complete the session-specific activities!

PART II. COURSE POLICIES

Email correspondence

I will respond to most questions via email, however if you have a more substantive issue to address please arrange to meet with me either in person, on the phone, or via Skype.

When you email me, you can usually expect a response within 2 business days, sometimes sooner. Do not expect an immediate response. Note that I do not respond to emails on the weekend.

Golden Rules for Email

- Keep in mind that I get many emails a day. ALWAYS put "HNSC 7140 - [Your name]" in the subject line so that I know who the message is from and what it is in regard to.
- You are expected to conduct yourself in a professional manner in all of your interpersonal interactions, including in email. Email is a formal means of communication in the context of school or work; please sign every message at the bottom, use polite language, capital letters, punctuation, greetings and salutations. Please avoid abbreviations, slang and cuteness (including emoticons).

Other forms of communication

In person: As noted above, in-person meetings are available by appointment only. As I am an Adjunct Lecturer teaching a fully online course, I am not regularly on campus. Appointments may be held on Brooklyn College's campus (please note that if we meet on campus, it will be after business hours [e.g., 6 PM or later]) or elsewhere in Brooklyn or Manhattan if that is more conducive to our schedules.

Phone or Skype: I can also make appointments to either talk with students on the phone or communicate via Skype. When meeting via phone or Skype, please make sure you are in location with a reasonable level of quiet and reliable cell or internet connectivity. Treat these appointments as is they were a face-to-face meeting.

*A note on texting: In general, I do not accept communication via text message. Instances where I will communicate via text include alerting me to an e-mail that requires my attention sooner than 2 business days or letting me know you are running late for an appointment. Like with e-mail communication, I consider these text messages a formal means a communication and expect your conduct to be professional. Text messages utilizing text lingo will be ignored. Please also include your name in the text message.

PART III. INSTITUTIONAL POLICIES

University's Policy on Academic Integrity

The faculty and administration of Brooklyn College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete text of the CUNY Academic Integrity Policy and the Brooklyn College procedure for implementing that policy can be found at this site: http://www.brooklyn.cuny.edu/bc/policies. If a faculty member suspects a violation of academic integrity and, upon investigation, confirms that violation, or if the student admits the violation, the faculty member must report the violation.

A copy of the Faculty Action Report in Incidents of Academic Dishonesty is appended to this syllabus. This form, as well as full CUNY and Brooklyn College-specific policies and procedures, may be found in the folder "Plagiarizing and How Not To Do It" in the "Course Documents" section of BB. I will report all instances of cheating, plagiarizing, or any other type of academic dishonesty.

Cheating on weekly quizzes or exams, for example by using notes or text, or by completing a test with assistance, constitutes an act of academic dishonesty and will be reported. In addition, all written assignments will be processed through SafeAssign, a plagiarism detection tool.

Center for Student Disability Services

In order to receive disability-related academic accommodations, students must first be registered with the Center for Student Disability Services (CSDS). Students who have a documented disability or suspect they may have a disability are invited to set up an appointment with CSDS by calling 718-951-5538. If a student is already registered with CSDS, the student should provide me with the course accommodation form and discuss the specific accommodation with me. Per College policy, students are not permitted to bypass CSDS and go directly to a faculty member to request accommodation. Faculty members are not permitted to grant an accommodation without receiving the Verification of Disability and Course Accommodations forms from CSDS.

Please note that, in addition to chronic conditions, many students who are dealing with acute or short-term health issues may be eligible for accommodation.

PART IV. PRELIMINARY READING/ASSIGNMENT SCHEDULE & CALENDAR

This schedule, including assigned readings and due dates, is SUBJECT TO REVISION throughout the semester.

Session	Release date (Monday)	Topic	Readings	Activities due by the following Sunday at 11:59 PM[1]
#1	2/1	Introduction to the Course	ALL documents in the folder "Syllabus" & "Course Documents" folders	1. Session #1 DB postings (class introduction) 2. Quiz #1 3. Sample Assignment (SafeAssign upload)
#2	2/8	Overview of Health Care: What it Is, What it Does	S&Y Ch. 1 B&G Chs. 1, 11 See BB for additional materials	1. Session #2 DB postings 2. Quiz #2
#3	2/15[2]	International Comparisons	B&G Ch. 14 See BB for additional materials	1. Session #3 DB postings 2. Quiz #3
#4	2/22	How Health Care is Organized: Part I	S&Y Chs. 4 & 5 See BB for additional materials	1. Session #4 DB postings 2. Quiz #4
#5	2/29	How Health Care is Organized: Part II	B&G Chs. 5 & 6 See BB for additional materials	1. Session #5 DB postings 2. Writing Assignment #1 of 5
#6	3/7	Paying for Health Care	S&Y Ch. 8 B&G Chs. 2, 4 See BB for additional materials	1. Session #6 DB postings 2. Quiz #6 3. "Feedback forum" posting due (mandatory, but ungraded)
#7	3/14	Cost Control	B&G Chs. 8, 9 See BB for additional materials	1. Session #7 DB postings 2. Quiz #7
#8	3/21	Benchmark Developments in U.S. Health Care	S&Y Ch. 2 B&G Ch. 16 See BB for additional materials	1. Session #8 DB postings 2. Quiz #8 3. Writing Assignment #2 of 5
#9	3/28	Quality of Health Care	B&G Ch. 10 See BB for additional materials	1. Session #9 DB postings 2. Quiz #9
#10	4/4	Long Term Care	S&Y Ch. 9 B&G Ch. 12 See BB for additional materials	1. Session #10 DB postings 2. Quiz #10
#11	4/11	Health Care & Mental Health	S&Y Ch. 10 See BB for additional materials	1. Session #11 DB postings 2. Quiz #11 3. Writing Assignment #3 of 5
#12	4/18[3]	Public Health and the Role of Government in Health Care & Health Care Ethics	S&Y Ch. 11 B&G Ch. 13 See BB for additional materials	1. Session #12 DB postings 2. Quiz #12
SPRING BREAK				

[1] Except for original DB postings, which are due by 11:59 PM on Thursday

[2] Despite Lincoln's Birthday, Week #3 materials will still be released on Monday, February 15th

[3] Due to Spring Recess, Reply DB Posts and Quiz #12 are due by 11:59 PM on Sunday, May 1st

Session	Release date (Monday)	Topic	Readings	Activities due by the following Sunday at 11:59 PM[4]
#13	5/2	The Health Care Workforce	S&Y Chs. 6 & 7 B&G Ch. 7 See BB for additional materials	1. Session #13 DB postings 2. Quiz #13 3. Writing Assignment #4 of 5: Peer review 4. "Feedback forum" posting due (mandatory, but ungraded)
#14	5/9	Current Reform in Context	B&G Ch. 15 S&Y Ch. 13 See BB for additional materials	1. Session #14 DB postings 2. Quiz #14
#15	5/16	Health Information Technology	S&Y Ch. 3 See BB for additional materials	1. Final Exam due 2. Writing Assignment #5 of 5: Final paper & response to reviewer

IMPORTANT DATES FOR SPRING 2016

Full Spring 2016 academic calendar at:
http://www.brooklyn.cuny.edu/web/about/administration/enrollment/registrar/bulletins/spring16/calendar.php

Classes begin	Fri, Jan 29
Lincoln's Birthday (College closed)	Fri, Feb 12
Presidents' Day (College closed)	Mon, Feb 15
Last day to drop classes without a "W"	Thurs, Feb 18
Conversion day (Classes follow Fri schedule)	Wed, Mar 23
No classes	Fri, Mar 25 - Sun, Mar 27
Spring Recess	Fri, Apr 22 - Sat, Apr 30
Final Examinations	Mon, May 23 - Fri, May 27

[4] Except for original DB postings, which are due by 11:59 PM on Thursday

Appendix A: Writing for this Class

Developing your writing in this course

- This is a graduate-level course. You are expected to submit graduate-level writing, including in your Discussion Board posts. "Graduate-level writing" means written work that follows the directions of the assignment, articulates original ideas and insights, and is free of excessive spelling, grammatical, and writing errors. Please see the section, "Writing issues" for more details.

- Time management is essential to academic success. As a graduate student, you are expected to spend at least 3-5 hours per course credit, per week, doing course-related work. As this is a 3-credit class, you should anticipate spending 12-15 hours/week doing work for this course. Please plan appropriately.

- Apart from learning content, another goal of the course is to develop or strengthen skills that will help you be a better student and, ultimately, a better professional. These skills include: articulating your ideas in writing, collaborating with peers, and engaging in a productive critique of your own writing.

Writing issues

- Spelling, punctuation, grammar, and writing ALWAYS count, including in your Discussion Board posts. You must write in full, properly punctuated, sentences. Sentences must be actual sentences, rather than sentence fragments. Paragraphs must contain thesis statements.

- Points will be automatically deducted from your grade if there are excessive and serious spelling, grammar, and/or writing issues.

- What counts as "excessive"? This varies by assignment, but my general rule of thumb is that the number of mistakes should not exceed the number of pages of that assignment. For example, if you are submitting a 5 page paper, any more than 5 errors could lead to a reduction in your grade.

- What counts as "serious"? Again, there is no hard and fast rule, but here is how I break down categories of "spelling/grammar/writing issues." The examples given below are from graduate student papers.

    - Sentence is grammatically incorrect or awkward. Usually requires reshuffling words.
      Example: "The next goal Braun et al. (2007) acts on is when and where did race become so important in health."
    - Sentence is unclear, but I have some idea what writer is trying to say
      Example: "The residential concentration of African Americans is very typical, and marinating the inequality of socioeconomic medical care between these neighborhoods when compared to the whites' is an important factor for continuing the gap."
    - Sentence is very unclear and I have little or no idea what writer is trying to say
      Example: "Categories of race that define illnesses came into medical research with the intention to arrange full racial formation in clinical trial."

- For additional assistance with writing issues, contact the Brooklyn College Learning Center, which offers one-on-one tutoring, at 718-951-5821, LC@brooklyn.cuny.edu, or http://lc.brooklyn.cuny.edu

The citation style and formatting of papers in this course

- You must properly cite each data source, both in text and in a reference section at the end of the paper, per American Psychological Association (APA) style (6th edition).
    - For more guidance on HOW to cite sources in APA format, please see https://owl.english.purdue.edu/owl/section/2/10/ as well as other resources available in the "APA Style" folder in the "Course Documents" section of BB. For students who use RefWorks, Endnote, or any other bibliographical/citation program, please note that it is YOUR responsibility to double-check the output these programs produce, as it is YOU who are ultimately liable for all of the work you submit.
    - If you are unsure of WHEN to cite a source, please see the "Plagiarism and How Not To Do It" folder in the "Course Documents" section. Do not make up your own rules about what is or is not plagiarism, or go by the standards you thought were in place based on previous classes.

- Unless otherwise specified, your papers should be typed, double spaced, with 1 inch margins and 12 point font. All pages must be numbered.

- Points will be automatically deducted from your grade if your assignment is not formatted as instructed. Here are a few examples:
    - If your assignment has 1.5 spacing rather than double spacing, you will lose points
    - If your margins are 1.25" and not 1", you will lose points
    - If your assignment doesn't have a bibliography or "works cited" section (and you were asked to create one), you will lose points
    - If your citations are not presented in APA format, you will lose points
    - If your assignment is to be 2-3 pages in length and you submit 1.5 pages, you will lose points. Similar rules apply for word counts.

- BOTTOM LINE: Formatting is not hard; looking up citation style is not hard. Just follow the directions you are given.

Submission policy

- Unless noted otherwise, written assignments must be successfully uploaded or posted to BB by the date and time indicated. If you do not this, the assignment is not considered to be submitted. No exceptions.

Plagiarism

- All work must be properly cited. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. We may review strategies for avoiding plagiarism in this class; however it is ultimately YOUR job to know what is and is not plagiarism.

- Note that all written assignments will be processed through SafeAssign, a plagiarism detection tool. However, SafeAssign is not the only method I may employ to detect plagiarism.

- If you are caught plagiarizing you will get an F in this course. I am also required by the college to submit a "Faculty Action Report Form for Incidents of Academic Dishonesty" (Appendix C).

Appendix B: Grading Rubric for Discussion Board Participation

Overview: Discussion boards are an integral part of this online course. The majority of your participation grade will consist of posting to weekly discussion boards (14 sessions in total). For each of the 14 sessions, you should post a total of 3 posts, for which you will earn approximately 2 points towards your participation grade per week. Note that I will not be responding to every post of every thread, but I will be popping in to each DB periodically to spur conversation or give feedback.

Specific requirements by type of discussion board post

Type of post	Original Post/Thread	Reply/Interaction Posts
Frequency	· At least 1 per week, though you may post more often	· At least 2 per week, though you may post more often
Length	· At least 150 words. Posts must be free of spelling, punctuation, grammatical or other writing issues.	· At least 25 words. Posts must be free of spelling, punctuation, grammatical or other writing issues.
For full credit	· Posting was placed in the appropriate DB within the week indicated · Posting was responsive to the discussion board prompt question, and consisted of substantive comments that enhanced the discussion and helped move the conversation forward. These comments may have included follow up questions, examples, or new perspectives · When not posting first, comments provided evidence that the participant had read at least some postings from colleagues · Posting showed ample evidence of having reviewed, or completed the relevant readings or assignments · Posting was constructive and differences of opinion expressed in a collegial manner	· Posting was placed in the appropriate DB within the week indicated · Posting was responsive to the discussion board prompt question, and consisted of substantive comments that enhanced the discussion and helped move the conversation forward. These comments may have included follow up questions, examples, or new perspectives · Posting provided evidence that the participant had actually read the colleague's posting · Posting was constructive and differences of opinion expressed in a collegial manner

In addition, ALL posts should demonstrate:

- Quality of Thinking: Develop, support, and convey clear, focused, and substantive ideas in ways appropriate to topic, context, audience, and purpose
- Organization and Coherence: Organize writing in clear, coherent sequences, making connections and transitions among ideas, paragraphs, and sentences
- Sentence Structure and Word Choice: Use and vary sentence structures and word choices to achieve clear and fluent writing
- Editing: Edit for correct spelling, grammar, punctuation, capitalization, paragraph structure, sentence construction, formatting, and, when appropriate, citations
- Use of Researched Information: Use, integrate, and cite researched information and evidence
- Reflection: Evaluate and articulate one's own point of view supported by research and logic

Remember: DB posts are formal written assignments for a graduate-level course and will be graded as if you had handed in your writing on a piece of paper (e.g., in the form of an essay or research paper)

Appendix C: Brooklyn College Faculty Action Report for Incidents of Academic Dishonesty*

Print Form

BROOKLYN COLLEGE

Faculty Action Report Form for Incidents of Academic Dishonesty

If a faculty member, upon investigation, confirms that a suspected violation of the CUNY Policy on Academic Integrity has occurred and/or if the student admits to the violation, the faculty member **must** report the violation by completing and submitting a FAR Form.

The form should be forwarded to the appropriate Academic Integrity Official. For a violation in an undergraduate course send the form to Mr. Patrick Kavanagh (3208 Boylan Hall); for a violation in a graduate course send the form to Professor Philip Gallagher (3227 Boylan Hall).

A. Information about the Incident

Student Name: _____ Student ID#: _____

Date of Incident: ____ / ____ / ____ Type of Incident: ☐ Cheating ☐ Plagiarism ☐ Other

Description of Incident (please be specific): _____

_____

_____

Indicate the outcome of your discussion of the violation with the student: _____

_____

_____

Course Title: _____ Course Number: _____ Section: _____

Instructor Name: _____ Dept: _____

Phone: _____ E-mail: _____

B. Academic (Grade) Sanction

What academic sanction are you imposing?

☐ Failing Grade on Exam/Assignment ☐ Failing Grade for Course

☐ Other (please explain): _____

Did the student accept this sanction: ☐ Yes ☐ No, please explain: _____

_____

C. Disciplinary Complaint Option

Are you filing a disciplinary complaint with the Office of the Dean of Student Affairs for investigation and possible disciplinary charges?

☐ No

☐ Yes - Please be sure to enter a PEN grade for the course and to forward the *Disciplinary Complaint Form* and all supporting documentation to the Office of Student Affairs.

Instructor Signature _____ Date: ____ / ____ / ____

* Copies of all disciplinary forms are available for print-out at http://www.brooklyn.cuny.edu/bc/offices/studlife/ (under the category "Get It Right").

Brooklyn College

HNSC 7142X: Health Policy and Administration in Public Health
Spring 2016

Catalogue description	Study of public health policy and its impact on health care service organization, administration, and delivery. Study of public policies that drive health care organization and delivery. Examples of special topics in public health policy such as Medicare and Medicaid development and changes. Administrative responses to policy shifts. Increasing complexity and frequent changes in law and regulation change how health care services are defined and delivered.
Prerequisite	Health and Nutrition Sciences 7140X [770X] or its equivalent. Graduate students are welcomed and may be enrolled with the permission of the instructor.
Course meets	Tuesdays 6:30PM-9PM, Ingersoll Hall 4145N
Instructor	Gordon Shen, PhD, SM Assistant Professor of Health Care Policy, Management, and Administration
Email	Gordon.Shen@brooklyn.cuny.edu
Phone	(718) 951-2059
Office	Ingersoll Hall 0119
Office hours	Tuesdays, 9:00PM-10:00PM, or by appointment.
Required books	1. Teitelbaum, JB & Wilensky, SE. (2014). *Essentials of Health Policy and Law: with 2015 Annual Health Reform Update (2nd Edition)* New York, NY: Jones & Bartlett Learning. ("TW"). 2. COURSE OVERVIEW

This seminar course is designed to provide students with an overview of the structure, politics, and policies of health care delivery in the United States. The goal is to increase students' knowledge and abilities to analyze and address health care issues from both management and policy perspectives. This course will provide students with a hands-on opportunity to learn about the health policy development process in the United States. The course begins with a brief history of health care in the United States. Students will gain a deeper understanding of the myriad ways in which health policy are made through the judicial, legislative, and executive branches of government. Issues addressed by health policy tend to coalesce around a corner of the "iron triangle of health care": access, quality, and financing. The corners, or health care system goals, pertain to public- (i.e. Medicare, Medicaid, CHIP) as well as private-sponsored insurance programs. The course segues into an overview of rationales that affect Affordable Care Act, including genetic predisposition and social determinants of health. The course concludes with how to U.S. health care system fares relative to other national health care systems.

The course prepares students to understand and apply concepts in policy analysis, which entails communicating novel ideas through oral and written assignments. As such, students will gather into groups for a semester-long project, through which they will learn how to: (1) define a health care problem, (2) analyze different policy options, (3) conduct a stakeholder analysis, (4) develop an advocacy strategy or a set of recommendations, and 5) make a presentation based on a report documenting (1)-(4). Student groups will first choose a topic that is not exclusively covered in the course including, but not limited to, long-term care, mental health, oral health, the Veterans Administration Health System, and epidemics. Students will outline the various options already exercised to address this topic. They will then chart out the various stakeholders (i.e. media, advocates) working to shape the chosen health issue. Finally, students will design a campaign aimed at changing health policy. The instructor uses learning techniques that are interactive, encourages discussion of the current health reform debate, and prompts students to formulate solutions to problems inherent in the complex, evolving U.S. health care system.

Students will develop several important skills. First, students will develop communication skills through reflections on readings and a debate in class. Second, students will work on their writing skills through an individual fact sheet and a group policy papers. Finally, students will come to actively listen and to engage in respectful, productive dialogue with peers whose ideas and values may differ from their own. These skills will undoubtedly students to become 21st century leaders in the health sector.

SCHOOL OF PUBLIC HEALTH COMPETENCIES AND COURSE LEARNING OBJECTIVES

Competencies	Course Learning Objectives	Sessions and Assessments
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be addressed as part of the following course sessions and assessments:*
1. Apply principles of program planning, development, budgeting, management and evaluation in organizational and community initiatives	• Apply knowledge to policy and administrative decision-making. • Analyze an important health policy issue. • Discuss political, social, and economic feasibility issues related to said health policy issue.	Sessions: Weeks 9-11, 13, 14 Assessment: Policy analysis group assignment.
2. Discuss the legal and ethical bases for public health and health services	• Understand pass, current and emerging key issues in health care delivery in the United States. • Distinguish among various actors shaping the legal and ethical basis in U.S. health care delivery. • Explain quality and performance improvement concepts employed in public health organizations.	Sessions: Weeks 2, 9, 10 Assessment: Readings are curated to show the legal and ethical bases for public health, as reinforced with case examples.
3. Explain methods of ensuring community health safety and preparedness.	• Examine important public health issues, identify alternative policy approaches, and recommend at least one approach to addressing the issues. • Cogently discuss and debate complex health-related issues.	Sessions: Weeks 3-5 Assessment: Readings are curated to show how the iron triangle of health care can ensure population health.
4. Demonstrate leadership skills for building partnerships.	• Work effectively in a team with fellow students	Sessions: Weeks 9-11, 13, 14 Assessment: Present findings in writing, via the needs/strength assessment report, to

Competencies	Course Learning Objectives	Sessions and Assessments
		permission of community-based partner organization.
5. Apply systems thinking for resolving organizational problems.	• Understand the interrelationships of health care problems and other public health problems. • Explore interdependencies across units of analysis: individual, organization, community, and national. • Recognize the impact of environmental factors on health policy-making.	Sessions: Weeks 8, 11 Assessment: Readings are curated to show how systems theory and complexity science can information the analysis of U.S. health care system.
6. Discuss the policy process of improving the health status of populations.	• Explain the public policy-making process in the US using different health care examples. • Understand levels and branches of the US. government in assuring the health of the public. • Specify the role played by the government and other major stakeholders in health policy-making and delivery of health care services for the U.S. population. And identify the politics arising from the stakeholders' interaction.	Sessions: All weeks. Assessment: Readings are curated to describe the contextual forces that influences population health status.
7. Examine, analyze and explain the intended and unintended consequences of national policies and reforms.		Assessment: Instructor will help guide students' policy analysis through various assignments.
8. Demonstrate knowledge of political, economic and social context of health policies.	• Explain the basic organization, financing and delivery of health services in the U.S. • Discuss the facilitators and barriers to the attainment of three goals of the U.S. health care system: equity, access, and cost(-effectiveness).	Sessions: Weeks 9-11, 13, 14 Assessment: Students will be given the opportunity to choose a health issue, and to conduct an analysis of the policy addressing said issue through a semester-long project.

COURSE POLICIES

Communication*

Email Correspondence: The subject line of your email should be formatted as:

- For assignments: "HNSC 7142X – [the name of the assignment as it appears in this syllabus]."
- For all other matters: "HNSC 7142X – [purpose of the email, e.g. "Office Hours", "Appointment Request"]."

Failure to format emails according to the above guidelines might result in a delay. Please allow 24-48 hours for a response.

*Note that email is a *formal* means of communication with superiors and colleagues in the context of the university or place of employment. As such, get into the habit of reading your e-mail twice before send-off (or undo it as soon as a mistake is spotted), sign off every message, and always use polite language, capital letters where appropriate, punctuation marks, grammar, and syntax. E-mails should begin with greetings and end salutations. Please minimize the use of abbreviations and acronyms, and avoid using slang.

Academic Integrity*

The faculty and administration of Brooklyn College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete test of the CUNY Academic integrity Policy and the Brooklyn College Procedures for implementing the policy can be found at http://www.brooklyn.cuny.edu/bc/policies. If I, or any other faculty member, suspects a violation of academic integrity and, upon investigation, confirms that violation, or if you, the student, admits the violation, the faculty member MUST report the violation. A copy of the Faculty Action Report is appended to this syllabus, which I WILL use to report ALL instances of cheating, plagiarizing, or any other type of academic dishonesty (see Appendix A).

You should carefully and thoroughly read the section entitled "Academic Regulations and Procedures" in the Brooklyn College Graduate Bulletin (http://www.brooklyn.cuny.edu/web/off_registrar/141024_2014-15_Graduate_Bulletin.pdf) for a complete listing of academic regulations of the College.

*Note that all of the assignments due in this course are subject to screening through SafeAssign, an anti-plagiarism tool.

Assistance with writing

The library maintains a collection of website links within the Research & Writing Help section that can assist you with proper citation format and paraphrasing and quoting other authors:

http://library.brooklyn.cuny.edu. Both the Learning Center (http://lc.brooklyn.cuny.edu) and the Health and Nutrition Sciences Department have writing tutors available to help you with your writing. Seek help early, should you need it, because an appointment's required!

Assistance with library research

The library maintains a collection of website links that can assist you with library searches:

- Health & Nutrition Subject Guide (http://library.brooklyn.cuny.edu/resources/?subject=hns)
- Library Research Guide for Nutrition (http://library.brooklyn.cuny.edu/resources/loop/research.php?s=250&c=942)
- Library Research Guide for Public Health (http://library.brooklyn.cuny.edu/resources/loop/research.php?s=250&c=948)

For further assistance please contact Lee Ann Fullington at LAFullington@brooklyn.cuny.edu or 718-758-8217.

Accessibility

In order to receive disability-related academic accommodations, students must first be registered with the Center for Student Disability Services. Students who have a documented disability or suspect they may have a disability are invited to set up an appointment with Ms. Valerie Stewart-Lovell, Director of the Center for Student Disability Services, at 718-951-5538. If you have already registered with the Center for Student Disability Services, please provide me, your professor, with the course accommodation form and discuss your specific accommodation with me.

Class citizenship and Rules of Conduct

Attendance

- Students are expected to attend all class sessions. In cases of personal emergency or illness I, the professor, must be notified.
- See p. 46 of the Graduate Bulletin regarding non-attendance due to religious beliefs. I, as the professor, must be notified in advance.
- Assignments are based on lectures and activities, as well as course readings. If you are absent from class it is *your responsibility* to contact a classmate for notes and other materials you missed.
- A record of attendance will be maintained with attendance taken throughout the semester.
- Written assignments must be submitted electronically by midnight on the due date. Absence from the session during which an assignment is due does not excuse or preclude you from turning in the assignment.

Lateness and Early Exits

- Please enter and exit the class with the least amount of disruption.
- You are expected to arrive on time for class. Tardiness and absences are disruptive to fellow students and your professor.
- Persistent tardiness and/or early exits will result in a grade reduction.

Other Classroom Etiquette

- Use of cell phones and other electronic media (e.g. video game consoles) is not permitted. Laptops or iPads that are used to take notes or making presentations are allowed; however, if your device is viewed as disruptive, you will be asked to put it away.
- Respect others and their opinions. Constructed a well-informed argument if you disagree.
- Be an avid participator in class discussions.

Assignments

Submission mode

Be sure to put a title, your name, and date at the top of each assignment. I expect assignments to be submitted electronically, specifically via email, by midnight of the due date. See guidelines for email correspondence in the next section.

Formatting

The following guidelines apply to all forthcoming assignments, in addition to assignment-specific guidelines that will be distributed:

- Title, name, and date (in that order) on the upper left corner of p.1
- Times New Roman or Garamond, 12pt font
- Single-spaced
- 1" margins all around
- Page numbers on the bottom right corner of each page
- References should appear as the last section in APA citation format (http://www.apastyle.org/), preferably with a section break inserted

Failure to format submissions according to the stated guidelines will result in an automatic half-grade reduction for the written assignment.

Description

The course consists of a group project, a midterm, and a final examination. Each student will be responsible for all assignments. A few notes on each:

- Class participation (15% for total grade) is encouraged and expected during the entire semester. It breaks down as a debate and leading two class discussion.
    - *Debate* (5% of class participation grade): 2016 election mock debate on health care issues where each student represents a presidential candidate.
    - *Discussion leader* (10% of class participation grade): For two sessions of your choosing, you are expected to (a) read the assignments, (b) prepare at least five discussion questions and at least five take-away points to be emailed to me at least one hour before each class session, and (c) facilitate discussion during class. Evaluations on your class participation will be based on your ability to prepare, make insightful and relevant comments, and ability to move the class discussion along

  If you are on the cusp between two grades, class participation and overall preparedness will be considered in making final grade determinations.

- Term-project (65% of total grade):

- *Paper* (55% of term project grade): Parts of the final paper will be due throughout the semester; my intent is so you get started working on it early. I will grade the draft each part and give you comments. I will adjust the percentage you receive on each draft to match the same part in the final paper, provided that your group adequately addresses my comment(s) in a matrix and the manuscript itself. In the event that your group chooses not to submit a certain part by the draft deadline, your draft grade will be the same as what's earned for that very part in the final paper. Be sure to take advantage of the library research and writing resources offered on campus, as stated above. See Appendix B for full project guidelines.
- *Presentation* (5% of term project grade): Presentation is based on the final paper. You are expected to pick up to five key references from said final paper, seek approval from me, and then share them with the class before your scheduled presentation date on May 10 or May 17.
- *Peer rating* (5% of term project grade): Submission of peer ratings using the form in Appendix C will automatically earn you 5% of the term project grade. If there are no disparities about member contribution, all group members will receive the same grade on the final paper. If there are disparities, I will take the average score given to you by your team members and weigh your report grade accordingly.

- Fact sheet (10% of total grade): My hope is that writing the fact sheet will make the debate less worrisome, especially for introverted students or those not comfortable with public speaking (yet). The fact sheet will help me assess the quality of your thoughts and level of preparedness. See guidelines in Appendix D.

Grading

Grading for the course will be based on a scale, as opposed to on a curve. Assignment due dates are noted in the course schedule section of this syllabus.

Students will be evaluated based on the following criteria:

Assignment	**Due date**	**Percentage**
Group Project		
Problem definition (draft)	Apr. 12	10
Policy options and evaluation criteria (draft)	Apr. 19	10
Stakeholder analysis (draft)	May 2	10
Peer evaluation	May 24	5
Final paper (including revised version of all sections above)	May 24	25
Presentation	May 10 or May 17	5
Fact sheet	Mar. 29	10
Class participation		
Debate	Mar. 29	5
Discussion leader (5%/session x 2 sessions)		10
Attendance		10
Total		**100**

Letter grading
The grading system (letter grad, quality points, percentage) for this course follows guidance in the Graduate Bulletin:

A+	4.0	97.5 - 100%	B+	3.3	87.5%-89.9%	C+	2.3	77.5%-79.9%
A	4.9	92.5 – 97.4%	B	3.0	82.5%-87.4%	C	2.0	70.0%-77.4%
A-	3.7	90 – 92.4%	B-	2.7	80.0%-82.4%	F	0	<70%

Extensions for assignments are not given unless planned with the professor *at least two weeks in advance* of the specified due date, otherwise the deadlines are firm and enforced by the date and time stamp on your email. Late or incomplete submission of assignments are not accepted. The assignments come together as a gestalt, so missing any assignment would render your final product incomplete. No make-ups, rewrites, and extra credit.

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Graduate Bulletin and the Program Director for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Program Director in writing giving the factual reasons and basis for the complaint. A student who wishes to appeal a grade must initiate the process in the full semester following the one in which the contested grade was received. For further guidance, refer to the Graduate Bulletin.

COURSE SCHEDULE

Topic	Activities	Objectives	Assignments
Week 1 – February 2			
Introduction	Course overview Brief history of health care in the United States Policy analysis group project	• Go over how the course is structured • Give an overview of the breadth of material the course will cover • Preview the steps students will be expected to include as part of their policy analysis group exercise • Pique student interest in U.S. health policy so they will be think critically about health care issues. • Give a brief history of the US medical and public health systems • Introduce key concepts that will recue throughout the semester	Readings: 1. BG Ch. 1, 16 2. TW Ch 1 Optional readings: 1. Raff R. How to read and understand a scientific paper: a guide for non-scientists. Available at: http://violentmetaphors.com/2013/08/25/how-to-read-and-understand-a-scientific-paper-2/ 2. Reuben A. How to read a scientific paper. Available at: http://www.sciencemag.org/careers/2016/01/how-read-scientific-paper?utm_source=sciencemagazine&utm_medium=facebook-text&utm_campaign=scientificpaper-2042
Schedule note: February 9 is a Conversion Day, so class will not be held on that day.			
Week 2 – February 16			

Legislative and regulatory processes	Workshop: How to read a scientific paper	• Gain a basic understanding of the legislative process • Gain a basic understanding of the regulatory process • Explain the difference between the legislative and regulatory processes • Identify sources of authority for development and implementation of health policies • Understand the basic steps of policy-making	Readings: 1. BG Ch. 1 2. TW Chs. 1, 2, 3 Optional readings: I assume that you have background knowledge of the U.S. health system, so I did not assign readings on the U.S. legislative or regulatory process. If you need to brush up on this material, read about the federal and/or New York legislative rules at these sites: • Graham JD. (2002). An Overview of the U.S. Regulatory System. The White House Office of Management and Budget. https://www.whitehouse.gov/omb/inforeg_pres_mgmt_regulatory_state • Sullivan, John V. (2007). How Our Laws are Made. Revised and Updated. U.S. House of Representatives. Available at: http://thomas.loc.gov/home/lawsmade.toc.html • Enactment of a Law. U.S. Senate. Available at: http://www.senate.gov/legislative/common/briefing/Enactment_law.htm • Senate Legislative Process. U.S. Senate. Available at: http://www.senate.gov/legislative/common/briefing/Senate_legislative_process.htm • US House of Representatives. The legislative process. http://www.house.gov/content/learn/legislative_process/

			• A Guide to the Rulemaking Process. Prepared by the Office of the Federal Register. https://www.federalregister.gov/uploads/2011/01/the_rulemaking_process.pdf. • New York State Senate. How a Bill Becomes A Law. Available at: https://www.nysenate.gov/how-bill-becomes-law-1
Week 3 – February 23			
Iron triangle of health care – Part 1	Cost	• Give an overview of the U.S. health system • Describe the goals of health policy	Readings: 1. BG Chs. 2, 8, 9 2. TW Ch. 4 3. Berwick DM, Nolan TW, Whittington J. (2008). The triple aim: care, health, and cost. *Health Affairs*; 27(3): 759-769. 4. Commonwealth Fund. (2007). *Bending the Cost Curve: Options for Achieving Savings and Improving Value in U.S. Health Spending.* 5. Fuchs, V. R. (2010). Health Care Is Different—That's Why Expenditures Matter. *JAMA*, 303(18), 1859-1860. 6. Chernew, ME, et al. (2010). The Specter of Financial Armageddon – Health Care and Federal Debt in the United States. *NEJM* 362(13): 1166-1168. 7. Pauly MV, Sloan FA, Sullivan SD. (2014). An economic framework for preventive advice. *Health Affairs*; 33(11):2034-2040. Optional readings:

1. Gawande, A. (2009). The Cost Conundrum – What a Texas Town Can Teach us about Health Care". *The New Yorker*.
2. Keehan S et. al.. (2015). National Health Expenditure Projections 2014-24: Spending Growth Faster than Recent Trends. *Health Affairs*.

Appendix A: Brooklyn College Faculty Action Report for Incidents of Academic Dish

Print

BROOKLYN COLLEGE

Faculty Action Report Form for Incidents of Academic Dishonesty

If a faculty member, upon investigation, confirms that a suspected violation of the CUNY Policy on Academic Integrity has occurred and/or if the student admits to the violation, the faculty member **must** report the violation by completing and submitting a FAR Form.

The form should be forwarded to the appropriate Academic Integrity Official. For a violation in an undergraduate course send the form to Mr. Patrick Kavanagh (3208 Boylan Hall); for a violation in a graduate course send the form to Professor Philip Gallagher (3227 Boylan Hall).

A. Information about the Incident

Student Name: _____ Student ID#: _____

Date of Incident: ____ / ____ / ____ Type of Incident: ☐ Cheating ☐ Plagiarism ☐ Other

Description of Incident (please be specific): _____

_____

_____

Indicate the outcome of your discussion of the violation with the student: _____

_____

_____

Course Title: _____ Course Number: _____ Section: _____

Instructor Name: _____ Dept: _____

Phone: _____ E-mail: _____

B. Academic (Grade) Sanction

What academic sanction are you imposing?

☐ Failing Grade on Exam/Assignment ☐ Failing Grade for Course

☐ Other (please explain): _____

Did the student accept this sanction: ☐ Yes ☐ No, please explain: _____

_____

C. Disciplinary Complaint Option

Are you filing a disciplinary complaint with the Office of the Dean of Student Affairs for investigation and possible disciplinary charges?

☐ No

☐ Yes - Please be sure to enter a PEN grade for the course and to forward the *Disciplinary Complaint Form* and all supporting documentation to the Office of Student Affairs.

Instructor Signature _____ Date: ____ / ____ / ____

* Copies of all disciplinary forms are available for print-out at http://www.brooklyn.cuny.edu/bc/offices/studlife/ (under the category "Get It Right").

Appendix B

HNSC 4300: Organization, Administration, and Supervision of Health Services
Group Project Guidelines[1]

Professor Gordon Shen
Spring 2016

Deadlines: This assignment, worth 65% of your course grade, includes six sub-assignments as outlined:

Sub-assignment	Deadline	% of assignment grade
Problem definition (draft)	Apr. 12	10
Policy options and evaluation criteria (draft)	Apr. 19	10
Stakeholder analysis (draft)	May 2	10
Peer evaluation	May 24	5
Final paper (including revised version of all sections above)	May 24	25
Presentation	May 10 or May 17	5

All submissions should be done by email.

Aim: To work in a group on an analysis of a health policy problem.

Assignment Description
Students will work in a group of three to four students on a health policy problem. Each group is given the opportunity to choose a particular health policy problem not exclusively covered in this course including but not limited to: long-term care, oral health, behavior health, patient safety, hospital acquired infections, pharmaceuticals, aging, health informatics and electronic medical records, rural health, health technology (mHealth, devices), disaster preparedness, or Veteran's Administration. The project has five parts, which come together as a gestalt. In other words, the final paper consists of:

1. Defining the problem, or a description of the problem;
2. Analyzing and selecting a policy option (April 19, 2016 deadline), which entails presenting:
    a. At least four different policy options to address the underlying problem (one of which is maintaining the status quo);
    b. At least three evaluation criteria you plan on using (including those listed below), and how you will use the evaluation criteria to evaluate the different options (eg, on a scale of 1-5, with 5 being best, and 1 being worst),

[1] Note: This assignment was adapted from Prof. Pam Silberman for her UNC Chapel Hill course HPM 754 "Health Care in the United States: Structure and Policy" in Fall 2015.

c. An evaluation of the different policy options using your selected evaluation criteria. This should be presented in both a matrix and written format.

3. A stakeholder analysis, in which you should think about the stakeholder positions for the other proposed solutions that will affect the political feasibility of the different options.
4. Final policy recommendation, which you will submit with the rest of the final paper.

Sub-Assignment Description

Problem Definition
*Based on Bardach Steps 1 & 2

Each student group will write a 2.5-5 single-spaced or 5-10 page double-spaced paper that:

a. Describes the problem you want to address. Include information on who the problem affects, how many people are affected, and why there is a problem in the first place. On the first facet, it is important to note the number of people who will be assisted through the proposed policy.
b. Identifies any programs/systems that exist to address the problem. Include a description of the existing programs/systems (e.g., services provided, people covered, funding sources, etc.) and gaps or limitations in existing programs/systems.
c. Describes your policy goals. What do you want to accomplish? Where can the policy best be addressed?
    i. Legislative, regulatory, courts
    ii. Federal, state, county or local level

Policy Analysis
*Based on Bardach Steps 3-8

Each group will prepare a 2.5-5 single-spaced or 5-10 page double-spaced paper that compares different policy options to address their problem by:

a. Includes a short description of at least four alternative policy options that could address their problem. At least one of these options should be to maintain the status quo. For each policy option, you should:
    i. Describe the option, and project how it will impact on the problem (projecting outcomes)
    ii. Describe whether the policy has been implemented elsewhere, and if so, what the experience has been (including any evaluations of the option)
    iii. You should try to include information needed to assess the different the policy options.
b. Includes at least three evaluation criteria the student will use to compare the different policy options including cost and other resources needed to implement each policy option, ease of implementation including political feasibility, and number of people that will be helped by each policy option. For instance, with cost, you do not need to come up with exact cost estimates, just high, medium or low will be sufficient. I just want you to think about the potential implications for the different policy options.
c. Present your analysis of the different policy options using the evaluation criteria chosen. Present in both matrix and in descriptive format.

Stakeholder Analysis

Each student group will prepare a stakeholder analysis of the different options considered. The stakeholder analysis should be in grid form and have the following information for each of the different policy options considered above:

a. Will the group be a supporter or opponent? (For ease of presentation, you might want to separate the supporters from opponents). Will they offer strong support, moderate support, neutral, moderate opposition, or strong opposition?
b. What is their reason for supporting or opposing your recommended policy option?
c. How powerful is the group? Are they very powerful, somewhat powerful, or weak? (Note: this is closely connected with the next point).
d. What are the resources that this group can bring to the effort? (e.g., can they set policy themselves (policy makers), do they have a PAC or make substantial financial contributions to candidates, do they have lobbyists, personal connections to policy makers, ability to mobilize grassroots, provide information/research, etc.)
e. What is the likelihood of this group getting involved in this issue (very likely, somewhat likely, or not likely). Note: Just because a group has an "interest" in an issue does not mean that they will use their political capital to actively engage in the issue.
f. How can you influence the stakeholders' positions? Can you compromise to neutralize your opponents or to get them to support your position (remember, not all compromises are good compromises—some would undermine what you are trying to accomplish)? Alternatively, can you find supporters even within your larger group of opponents—for example, if business and industry will oppose as a group, are there any businesses that would support your position who can counter their industry position?

For example, if you are in a group working on expanding dental care access, your group would fill out the grid from the perspective of low-income consumer groups, dental society, hygienists' association, Blue Cross and Blue Shield, and the association of community health centers.

Final Recommendation

Each student group will write a 1-2 single-spaced or 2-4 page double-spaced paper that:

a. Choose one option
b. Indicate the approximate number of people affected by the policy option
c. Political feasibility of this option based on your stakeholder analysis
d. Costs of policy option based on your evaluation criteria

Final paper

The sub-assignments culminate to eight parts for the final paper:

1) A description of the public health problem that you are examining
2) At least four different policy options to address the underlying problem (one of which is maintaining the status quo)
3) A description of at least three criteria used for evaluating the policies
4) An evaluation of the different policy options using the selected evaluation criteria. (This should be presented in both a matrix and written format.)

5) A stakeholder analysis: groups only have to submit the stakeholder analysis for the recommended policy, not the alternatives.
6) A recommendation for a policy
7) An executive summary
8) A list of references

Style

- Length of the final paper is 4000-5000 words, or roughly 8 pages single-spaced/16 pages double-spaced to 10 pages single-spaced/20 pages double-spaced.
- 12-point Times New Roman or Garamond font.
- Standard 1" margins.

Grading

A few additional notes on how I will grade on the assignment described above:

- Clearly written paper with topics arranged logically. The analysis should include: a description of the problem, explanation of the different policy options you considered, stakeholder analysis, evaluation of the different policy options using your selected evaluation criteria, and final recommendations.
- Your policy brief should also include visual aids (i.e. well-designed tables and figures) that convey relevant, important information.
- Stakeholder analysis. You should be able to articulate the stakeholder's perspective on the different policy alternatives, along with an explanation of why they are likely to support/oppose those options, resources they bring to the table, and likelihood of getting involved in a particular policy debate.
- Evidence-informed recommendations. Your policy brief should include realistic policy alternatives designed to address the problem, and you should be able to articulate how you applied the different evaluation criteria to the policy options to recommend a specific policy. Your analysis should be based on data, to the extent possible, or reasonable assumptions of the outcomes of different policy options.
- Effective presentation, clearly presented, within the specified time limits for oral presentation and space constraint for the written paper.

Peer Rating: This is a group assignments so one grade will be given per group. However, each student's grade is weighted based on the average percentage assigned by his/her group members. This system is designed to encourage every person participate sufficiently in his/her group!
The UNC Writing Center is available to help students with writing, if you need assistance. They have helpful information on their website at: http://writingcenter.unc.edu/handouts/.
Note also that students will complete a peer evaluation that assesses their own and their teammates' contributions to the project. Your final grade will factor in your peer evaluations. Students who do not contribute appropriately will have their score lowered.

General Advice

- Redacted examples will be made available on Blackboard.
- Use resources from the library, Internet, and course materials. You must include a reference list of these resources accordingly to APA format.

- Integrate concepts from course lectures and readings, and from other academic and professional literature.
- Meet with me at least during the semester to discuss their policy paper and potential policy options.
- I do not meddle in intra-group affairs, but you are advised to divide up the scope of work in a fair, more so than equitable, manner.
- Each group member should proofread the entire document before submission.
- You should set up at least two meetings:
    1) In the first three weeks, after you have done some initial research on the problem and as you are identifying potential policy options to consider to address your policy problem and appropriate evaluation criteria.
    2) And again before finalizing their policy analysis—to discuss how the different policy options meet the specified evaluation criteria and to discuss different stakeholder positions.
- The Writing Center and Health and Nutrition Science (HNSC) Department offers free help with different aspects of writing as you are developing this policy analysis paper. However, you should make appointment at either or both places at the beginning of the semester before slots are filled. To make the best use of your time there, bring a copy of your policy analysis guidelines and either an outline or draft with you. Neither The Writing Center nor the HNSC writing tutor will proofread papers or talk with you about grades.
- Students are expected to conduct all academic work in the spirit of the CUNY Academic integrity Policy.
- Consult with me, the graduate student handbook and other sources to clarify the meaning of plagiarism. All team members share the responsibility of identifying and properly attributing credit to sources used in all graded work.
- Report any instance in which reasonable grounds exist to believe that a fellow team member has violated CUNY's honor code.
- Treat all team members with respect.

Rater (Your Name)	Team Organization

PART I: TEAM RATING

Instructions: Complete the following rating form with regard to your team project members and their contributions to the project. For each item, rate your team as a whole on a scale of 1 (poor) to 5 (excellent).

	1 Poor	2 Fair	3 Good	4 Very Good	5 Excellent
Reliably attended team meetings (and communicated with me if unable to do so)					
Communicated well in accordance with the norms we established as a team					
Fulfilled his/her responsibilities as determined during planning and/or subsequent discussions					
Met internal team deadlines					
Made useful contributions during brainstorming and/or task completion					
Made him/herself available to support me as needed					
Offered criticism that was constructive rather than disruptive					
Maintained a collaborative attitude					
Responded constructively to feedback					
Made quality contributions to the team's final deliverables					

PART II. TEAM MEMBER RATING

Note: Please do not evaluate yourself.

NAME OF TEAM MEMBER	% (out of 100)
1._____	_____
2._____	_____
3._____	_____
4._____	_____

PART III: DISTRIBUTION OF WORK

Provide a short explanation of the contributions (or lack of contributions) of your team members. **Please describe any social loafing (i.e., slacking off) or backup (i.e., helping) behaviors that you observed**. ***Indicate your contributions as well in your written description.*** The evaluation of group members is to be based on the following:

- ***Intellectual Contribution:*** The extent to which the each member (including you) contributed intellectually to preparing and writing the report (i.e., ***came up with ideas*** for the project/report). You may *also* discuss any intellectual contributions devoted to dealing with the challenges of working on your team project (e.g., if you came up with solutions for handling problems).
- ***Physical and intellectual Effort***: Extent to which each group member (including you) was willing to ***spend the time and effort*** to communicate with their partner, coordinate with sources, gather other materials for the report, and write/edit the report.

PART IV: OTHER/MISC.

Is there anything else you would like me to know about this team member's performance that was not adequately captured in the items above?

Appendix D

HNSC 4300: Organization, Administration, and Supervision of Health Services
Fact Sheet Guidelines[2]

Professor Gordon Shen
Spring 2016

Deadline: March 29, 2016

Aim: To write a fact sheet that will prepare you for a class discussions, possibly debate, on the 2016 presidential candidates' stance on the Affordable Care Act.

Description
Writing skills are a crucial to have for you to be successful as a public health, health care management, and/or medical professionals. Through this assignment, students will each produce a one- to two-page fact sheet on the Affordable Care Act (ACA) and proposed reform to it from the perspective of a presidential candidate in 2016 election race. Each student will be assigned to represent one presidential candidate. You should do research to examine the candidate's position on health care issues as a background to their outlook on the Affordable Care Act. Note that his/her policy position may be influence by special interest group(s) and/or experience with health reform in specific state(s) or at the national level.

The fact sheet should be easy to read, written for a lay person, and make a clear argument from the perspective of your presidential candidate. The fact sheet should crudely support or oppose the ACA as it exists today. If the candidate is opposed to the ACA, what is an alternate option promoted? Good fact sheets generally have limited (i.e. three) number of points they convey in support of a certain position.

Style-wise, bear in mind the following. Fact sheets should be:

- Concise, or no more than two-single spaced pages, although one page is better;
- Easy to read, with key points or arguments bulleted;
- Grammatically correct, which means free of typos and other errors, and
- Logically constructed.

You are welcomed to submit an example facet sheet which you modeled the format of yours after.

Grading
This assignment is worth 10% of your course grade. I will grade fact sheets based on the following rubric criteria:

[2] Note: This assignment was adapted from Prof. Pam Silberman for her UNC Chapel Hill course HPM 754 "Health Care in the United States: Structure and Policy" in Fall 2015.

- Clearly written facet sheet that presents one or more plausible arguments from the perspective of your presidential candidate (40% of fact sheet grade)
- Written so that it is understandable to a lay person (20% of fact sheet grade)
- Attractive format so that a legislator/policy maker would want to read it. For example, topics should be arranged logically. Tables and figures should be well-designed and convey relevant, important information. The fact sheet should be attractive to the reader, with appropriate white space and major points highlighted. (20 percent of fact sheet grade)
- Clear, logical, appropriate, evidence-based conclusions, analyses, and recommendations (20 percent of fact sheet grade).

CUNY SCHOOL OF PUBLIC HEALTH

Brooklyn College
Health Care Financial Management (HNSC 7143, 3 credits)

Spring 2016

Course Description	Study of the basic principles of health-care finance and accounting. Analysis of health-care financial statements and accounting techniques. Evaluation of managing working capital, budgeting, using cost information in decision making, controlling costs, and financing capital projects in the health-care setting. Analysis of approaches to pricing, rate setting and cost control in the health-care reimbursement environment.
Course meets	4145 Ingersoll, Thursdays 6:30-9:00
Instructor	Robert A. Padgug PhD
Email	RPadgug@brooklyn.cuny.edu (easiest way to reach me)
Phone	917-484-0744
Office	4145 Ingersoll
Office hours	5:00-6:20 Mondays and Thursdays (no appointment necessary, but best to email or phone to alert me that you are coming)
Required books	Michael Nowicki, *Introduction to the Financial Management of Healthcare Organizations* (6th edition, Chicago: American Health Administration Press, 2015; ISBN: 978-1-56793-699–8)
Recommended books	Supplemental readings appear on Blackboard within each session section ("Course Documents")
Other Required Material	Supplemental readings appear on Blackboard within each session section ("Course Documents")

Assessment
Your understanding of the course material will be evaluated through midterm and final exams, term paper, class participation,

Grading Policies

Midterm	30%
Final exam	30%
Term Paper	30%
Class Participation	10%
	100%

Attendance and class participation: Attendance is mandatory. Non-attendance will result in reduced credit. If you cannot attend a class, please let the instructor know in advance so that you do not lose credit.

Class citizenship & rules of conduct

Cellphones: turn cellphones off

Others: you may use laptops or recording devices

CLASS SCHEDULE

Session	Date	Topic	Assignment
1-2	Feb. 4-11	Introduction/Overview	Nowicki 1-2
3	February 18	Organization Structures/Tax Status	Nowicki ch. 3
4	February 25	Operating Revenue (1) (3rd-party Payment)	Nowicki ch. 4 (paper topic distributed in class)
5	March 3	Operating Revenue (2) (Medicare/Medicaid)	Nowicki ch. 5
6	March 10	Cost Accounting	Nowicki ch. 6
7-8	March 17-24	Reimbursement	Nowicki ch. 7 (initial paper outline due March 17)
9	March 31	In-Class Mid-Term	Includes Nowicki chs. 1-7 and Black board materials
10	April 7	Working Capital, Revenue Cycle	Nowicki chs. 8-9
11	April 14	Planning	Nowicki ch. 11
12	April 21	Budgeting	Nowicki chs. 12-13
	April 28	No Class (spring break)	
13-14	May 5-12	Financial Analysis	Nowicki ch. 14
	May 19	No Class (reading day)	
15	May 26 (6:00-8:00)	In-Class Final exam	Includes Nowicki chs. 8, 9, 11, 12, 13, 14; course paper due

COURSE COMPETENCIES

Competencies	Course Learning Objectives	Sessions & Assessments
Listed below are the competencies . This course will help you to:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be addressed as part of the following course sessions and assessments:
1. Demonstrate knowledge of political, economic and social context of health policies	• understand the various contexts of financial management • understand the role of public and private reimbursement policies in the financial management of hospitals and	Sessions 1, 2, 3, 4, 5 (with slides and readings); will be tested on mid-term and through term paper

Competencies	Course Learning Objectives	Sessions & Assessments
	other health institutions	
2. Examine, analyze and explain the intended and unintended consequence of national policies and reforms	• comprehend how the federal ACA and the NYS DSRIP programs affect health care institutional financing	Sessions 4, 5 (with slides and readings); will be tested on mid-term and through term paper
3. Discuss the policy process of improving the health status of population	• understand the responsibilities of hospitals in improving the health of their catchment area populations	Sessions 1, 2 (with slides and readings); will be tested on mid-term and through term paper
4. Discuss the legal and ethical bases for public health and health services	• understand the ethical basis of financial management	Session 2 (with slides and readings); will be tested on mid-term and through term paper
5. Demonstrate leadership skills for building partnerships	• understand why partnerships with community-based organizations and other institutions are necessary and how they can be created for improved financial results	Session 3, 4, 5, 11 (with slides and readings); will be tested on mid-term and through term paper
6. Apply principles of program planning, development, budgeting, management and evaluation in organizational and community initiatives	• be able to create a healthcare organization financial plan, budgets, evaluation methods	Sessions 1-11. 12. 13. 14 (with slides and readings); will be tested on mid-term and final and through term paper
7. Explain methods of ensuring community health safety and preparedness	• understand how hospitals and other institutions finance community health safety and preparedness methodologies	Sessions 1-8, 11 (with slides and readings); will be tested on mid-term and final and through term paper
8. Apply systems thinking for resolving organizational problems	• understand financial planning, budgeting, and financial analysis	All sessions, especially 11-14 (with slides and readings); will be tested on mid-term and especially final and through term paper

Additional Objectives Specific to HNSC 7143:

1. Analyze and explain the role of financial management in health care. (sessions 1-2)
2. Understand health care systems and the health care environment in which managers operate. (sessions 1, 2, 3, 4, 5)
3. Understand the role of financing in health care organizations. (all sessions, in particular 1, 2)
4. Learn the legal environment that constrains health care structure and finance. (session 2)
5. Understand public policy as it affects health care financing. (sessions 1-5)
6. Work with varied approaches to pricing, rate-setting and cost control (sessions 4-5)
7. Analyze and articulate health care inpatient, outpatient, and managed care reimbursement strategies and investment strategies (session 3-5)
8. Comprehend financial reporting and financial ratios (sessions 13-14)
9. Understand corporate budgeting (session 12)
10. Understand financial planning (session 11)

Institutional policies

Accessibility – Center for Student Disability Services

In order to receive disability-related academic accommodations, students must first be registered with the Center for Student Disability Services. Students who have a documented disability or suspect they may have a disability are invited to set up an appointment with Valerie Stewart-Lovell, Director of the Center for Student Disability Services, at 718-951-5538. If a student is already registered with the Center for Student Disability Services, the student should provide the professor with the course accommodation form and discuss the specific accommodation with the professor.

IMPORTANT: For more information on college-wide regulations governing grading, attendance, grade appeals, and other important matters, please see the "Academic Regulations and Procedures" section of the Brooklyn College Graduate Bulletin.

Academic integrity

The faculty and administration of Brooklyn College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete text of the CUNY Academic Integrity Policy and the Brooklyn College procedure for implementing that policy can be found at this site: http://www.brooklyn.cuny.edu/bc/policies. If a faculty member suspects a violation of academic integrity and, upon investigation, confirms that violation, or if the student admits the violation, the faculty member MUST report the violation. **I WILL report ALL instances of cheating, plagiarizing, or any other type of academic dishonesty.** (See form at end of syllabus)

Help with research and writing

The Library maintains a collection of links to sites that can assist you with proper citation format and paraphrasing and quoting other authors at http://library.brooklyn.cuny.edu Research & Writing Help. The Learning Center has writing tutors available to help you with your writing: http://lc.brooklyn.cuny.edu

Grade of incomplete: can be given when appropriate; it is the student's responsibility to complete all class work by the date specified by the college (see college calendar for Fall 2016)

Appendix C: Brooklyn College Faculty Action Report for Incidents of Academic Dishonesty

Print Form

BROOKLYN COLLEGE

Faculty Action Report Form for Incidents of Academic Dishonesty

If a faculty member, upon investigation, confirms that a suspected violation of the CUNY Policy on Academic Integrity has occurred and/or if the student admits to the violation, the faculty member **must** report the violation by completing and submitting a FAR Form.

The form should be forwarded to the appropriate Academic Integrity Official. For a violation in an undergraduate course send the form to Mr. Patrick Kavanagh (3208 Boylan Hall); for a violation in a graduate course send the form to Professor Philip Gallagher (3227 Boylan Hall).

A. Information about the Incident

Student Name: _____ Student ID#: _____

Date of Incident: ____ / ____ / ____ Type of Incident: ☐ Cheating ☐ Plagiarism ☐ Other

Description of Incident (please be specific): _____

_____

_____

Indicate the outcome of your discussion of the violation with the student: _____

_____

_____

Course Title: _____ Course Number: _____ Section: _____

Instructor Name: _____ Dept: _____

Phone: _____ E-mail: _____

B. Academic (Grade) Sanction

What academic sanction are you imposing?

☐ Failing Grade on Exam/Assignment ☐ Failing Grade for Course

☐ Other (please explain): _____

Did the student accept this sanction: ☐ Yes ☐ No, please explain: _____

_____

C. Disciplinary Complaint Option

Are you filing a disciplinary complaint with the Office of the Dean of Student Affairs for investigation and possible disciplinary charges?

☐ No

☐ Yes - Please be sure to enter a PEN grade for the course and to forward the *Disciplinary Complaint Form* and all supporting documentation to the Office of Student Affairs.

Instructor Signature _____ Date: ____ / ____ / ____

* Copies of all disciplinary forms are available for print-out at http://www.brooklyn.cuny.edu/bc/offices/studlife/ (under the category "Get It Right").

GENERAL PUBLIC HEALTH SPECIALIZATION

CUNY SCHOOL OF PUBLIC HEALTH

Brooklyn College

Health Services Development and Implementation in Community and Public Health

HNSC 7164 (3 credits)

Spring 2016

Catalogue description (modified)	Planning, developing and implementing public health and personal health services are vital to population health. Planning for health services is conducted from the global to the community level. This course examines health service planning in the United States and especially New York State and City. The course will also examine the way in which corporations and community-based organizations carry out strategic planning in order to better be able to design public health programs. The public policy environment will be used as an important part of the context in which program development takes place.
Course meets	Ingersoll 3424, 6:30-9:00 PM
Instructor	Robert A. Padgug PhD
Email	RPadgug@brooklyn.cuny.edu (best way to reach me)
Phone	917-484-0744
Office	Ingersoll 4111
Office hours	Monday, Thursday 5:00-6:20 (no appointment needed, but it helps if you email, text, or phone that you are coming, if possible)
Required books	Bonnie C. Hodges with Donna M.Videto, *Assessment and Planning in Health Programs* (Sudbury, MA: Jones & Bartlett 2011; ISBN 9780763790097). Other required reading will be found in the session listing section, below
Recommended articles	Recommended articles will be found for each class session in Blackboard "Course Documents" section

Assessment

Your understanding of the course material will be evaluated through assignments, exams, term project, and class participation

Grading

%	Assignments	10%
%	Midterm	25%
%	Term project/paper	30%
%	Class participation	10%
%	Final exam	25%

Institutional policies (provide website link)
Academic integrity
The faculty and administration of Brooklyn College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both.
Cheating on weekly quizzes or exams, for example by using notes or text, or by completing a test with assistance, constitutes an act of academic dishonesty. If a faculty member suspects a violation of academic integrity and, upon investigation, confirms that violation, or if the student admits the violation, the faculty member MUST report the violation. The complete text of the CUNY Academic Integrity Policy and the Brooklyn College procedure for implementing that policy can be found at this site: http://www.brooklyn.cuny.edu/bc/policies/

Center for Student Disability Services
In order to receive disability-related academic accommodations, students must first be registered with the Center for Student Disability Services (CSDS). Students who have a documented disability or suspect they may have a disability are invited to set up an appointment with Valerie Stewart-Lovell, Director CSDS, at 718-951-5538. If a student is already registered with CSDS, the student should provide the professor with the course accommodation form and discuss the specific accommodation with the professor. Per College policy, students are not permitted to bypass CSDS and go directly to a faculty member to request accommodation. Faculty members are not permitted to grant an accommodation without receiving the *Verification of Disability and Course Accommodations* forms from CSDS. Please note that, in addition to chronic conditions, many students who are dealing with acute or short-term health issues may be eligible for accommodation

Schedule

Session 1 Introduction to Course

Institute of Medicine: U.S. Health in International Perspective: Shorter Lives, Poorer Heath, January, 2013. Available on Blackboard. Read the summary document and the chapter entitled Summary that is contained in the full report.

Session 2 An Overview of Program Evaluation

Issel, Chapters 1 and 2, Context of Health Program Development and Evaluation

Session 3 The Planning Process

Related course learning objectives:
o Identify strategies and activities to help mobilize community support for health programs
Required reading:
Issel, Chapter 3, Planning for Health Programs and Services
75-105.
Applications:
WK Kellogg Foundation. Sustaining Community-based Initiatives. Module One: Developing Community Capacity. Chapter 3, Building the Coalition.

Session 4 Models for Program Planning

Related course learning objectives:
o Identify strategies and activities to help mobilize community support for health programs

Required:
Issel, Chapter 4, Community Health Assessment for Program Planning

Application:
Hanni K, Garcia E, Ellemberg C, Winkelby M. Targeting the taqueria: Implementing healthy food options at Mexican American restaurants. Health Promotion Practice 2009;10(2) Suppl.: 91S-99S.

Recommended:
The Precede-Proceed Planning Model. See The Community Toolbox at http://ctb.ku.edu/en/tablecontents/sub_section_main_1008.aspx

WK Kellogg Foundation. Sustaining Community-based Initiatives. Module Three: Community and Economic Development Chapter 4. Identifying Service Venture Opportunities.

Session 5 Conducting A Community Assessment

Related course learning objectives:

o Identify community assets that can be used to address community health issues

Principles & Methods:
Issel, Chapter 6, Program Theory and Interventions Revealed

Francisco V & Butterfoss F. How do we know if we are making a difference with our program or community initiative? Health Promotion Practice 2003;4:367-370

Nation M, Crusto C, Wandersman A et al. What works in prevention. American Psychologist 2003; 58(6/7):449-456.

Application:
Polacek G, Coker J, Lewis K et al. BART to HIVEd: Adapting an HIV education prevention program. Health Promotion Practice 2008;9(1):45-58.

Session 6 Developing Evidence-Based Programs

Related course learning objectives:
o Select an appropriate intervention strategy for a community health program

Required reading:

Rossi et al., Chapter 5, Expressing and Assessing Program Theory
Centers for Disease Control and Prevention. Community Health Resources.
http://apps.nccd.cdc.gov/dach_chaps/Default/index.aspx

Session 7 Community Assessment Presentations

Related course learning objectives:
o Apply elements of a community health assessment using health and social statistics and information from community observations
o Compile and present findings from a community health assessment

Session 8 Developing Quality Programs

Related course learning objectives:
o Select an appropriate intervention strategy for a community health program

Required reading:
Issel, Chapter 7, Program Objectives and Setting Targets
Wandersman A, Morrissey E, Davino K, et al. Comprehensive quality programming and accountability: Eight essential strategies for implementing successful prevention programs. The Journal of Primary Prevention 1998; 19:3-30.

Application:
Johnston Y, Denniston R, Morgan M, Bordeau M. Rock on café: Achieving sustainable systems changes in school lunch programs. Health Promotion Practice 2009; 10(2) Suppl.: 100S-108S.

Session 9 Developing a Program Logic Model and Program Plan

Related course learning objectives:
o Formulate a program logic model and related program objectives for a community health program
o Develop a program plan and budget for a community health program
Required reading:

W.K. Kellogg Foundation Logic Model Development Guide.

Applications:
Dilley J, Reuer J, Colman V, Norman RK. From making pamphlets to making policies: Results from a collaborative training to increase knowledge, motivation, and self-efficacy for achieving public health policy and systems change. Health Promotion Practice 2009; 10 (2) Suppl.:138S-145S.
Goldman K., Schmalz K. Facilitated fussbudgeting : how to plan and revise budgets. Health Promotion Practice 2003; 3:210-213.

Recommended:

Session 10 Evaluation for Program Quality Improvement

Related course learning objectives:
o Identify the main elements and applications of program monitoring and process evaluation

Required reading:
Issel, Chapter 9, Process Evaluation - Measuring Inputs and Outputs
Rossi et al., Chapter 6, Assessing and Monitoring Program Process.

Applications:
Saunders R, Evans M, Joshi P. Developing a process evaluation plan for assessing health promotion program implementation: a how-to guide. Health Promotion Practice 2005;6: 134-147.

Session 11 Evaluating Program Effects

Related course learning objectives:
o Describe major designs for outcome evaluation and their respective strengths and

weaknesses regarding the ability to draw conclusions about program effects

Required reading:
Issel, Chapter 11, Planning Intervention Effects Evaluation
Issel, Chapter 12, Choosing Designs for Effect Evaluation

Session 12 Monitoring Program Outcomes; Developing an Evaluation Plan

Related course learning objectives:
o Identify the main elements and applications of program monitoring and process evaluation
o Select an appropriate evaluation strategy
o Develop an evaluation plan and budget

Required reading:
Rossi et al., Chapter 7, Measuring and Monitoring Program Outcomes
Applications:
Linnan L, Ferguson, Y, Wasilewski Y, et al. Using community-based participatory research methods to reach women with health messages: results from the North Carolina BEAUTY and health pilot project. Health Promotion Practice 2005;6:164-173.
McDonald E., Gielen A., Trifiletti L. et al. Evaluation activities to strengthen an injury prevention resource center for urban families. Health Promotion Practice 2003; 4:129-137.

Session 13 Data Collection for Program Evaluation; Qualitative Methods

Related course learning objectives:
o Identify methods for collecting quality community health data
Required reading:
Issel, Chapter 13 Sampling Designs and Data Sources for Effect Evaluation
Issel, Chapter 15 Qualitative Methods for Planning and Evaluation

Application:
Brown K, Lindenberger J, Bryant C. Using pretesting to ensure your messages and materials are on strategy. Health Promotion Practice 2008; 9(2):116-122.

Session 14 Ethics of Program Evaluation; Strengthening the Planning-Evaluation Cycle

Related course learning objectives:
o Identify evaluation situations requiring IRB review
o Describe elements required for participant/client informed consent process
o Describe how HIPAA requirements apply to program evaluations

Required reading:

Session 15 <u>Student Presentations</u>

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you achieve increased competency in health care policy and administration. By the time you graduate, you should be able to:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be assessed through the following methods
Apply approaches for improving the health status of populations, including a specific initiative for a target population	• Identify strategies and activities to help mobilize community support for health programs • Identify community assets that can be used to address community health issues • Select and use public access databases to assess community needs • Select an appropriate intervention strategy for a community health program • Formulate program logic model and related program objectives for a community health program a program plan and budget for a community health program	Assignment1 – determining a population health problem and method to address problem
Apply principles of planning, development and practice of organizational and community initiatives that relate to program planning, policy formulation or research	• Identify methods for collecting quality community health data • Apply elements of a community health assessment using health and social statistics and information from community observations • Develop an evaluation plan and budget • Develop a program plan and budget for a community health program • Describe elements required for participant/client informed consent process	Assignment 2 and 3 – Review of pertinent literature and development of logic model
Use audience-appropriate written and oral communication to convey public health information	• Compile and present findings from a community health assessment • Develop a written proposal for an evidence- based community health program	Assignment 4 –class presentation of program design, implementation, and evaluation methods

Develop collaboratively public health programs and strategies responsive to the diverse cultural values and traditions of the communities being served		Assignment 4 –class presentation of program design, implementation, and evaluation methods
Differentiate among evaluation methods in relation to their strengths, limitations and appropriate uses	• Describe major designs for outcome evaluation and their respective strengths and weaknesses regarding the ability to draw conclusions about program effects • Identify the main elements and applications of program monitoring and process evaluation • Identify evaluation situations requiring IRB review • Select and appropriate evaluation strategy • Describe how HIPAA requirements apply to program evaluations	Assignment 3 – logic model including evaluation techniques
Analyze the effects of political, social and economic policies on public health systems at the local, state, national and international levels		Assignment 2 – literature review and review of local data resources and key stakeholders

COURSES TAUGHT TO MPH STUDENTS AT BROOKLYN COLLEGE

CUNY SCHOOL OF PUBLIC HEALTH

Campus – Brooklyn College
Course Number HNSC 7920X – Supervised Fieldwork in Public Health
ER6
Spring Semester 2016

Course meets	Thursdays - 6:30-9:00pm - 4141N (Ingersoll Hall)
Instructor	Sean J. Haley Ph.D., MPH
Email	SJHaley@brooklyn.cuny.edu
Phone	Messages at 718-951-5000 x5766
Office	Ingersoll 4430
Office hours	Wednesday 3:30-5:50, Thursday 5:30-6:30
Required books	None
Recommended books	None
Reserve material	NA
Other required materials	Posted on Blackboard (Articles posted to Blackboard are listed below following the class schedule)
Catalogue description	Students carry out 180 hours of supervised field work that is intended to bridge academic preparation and public health practice. Knowledge and skills from the core MPH and specialization courses are applied in a public health agency, community organization or other setting relevant to the student's academic background, specialization and career expectations. This is accomplished under the supervision and guidance of an experienced preceptor. Field-based hours are implemented with classroom and individual meetings along with online communication. Aside from deliverables required by the preceptor, the student develops a reflection paper, a self-evaluation and a capstone proposal. Supervised individual projects in community program or health agency. Weekly seminars, except when noted below. Note: Internship Manual for Spring 2016 is an official part of this syllabus.
Pre-Reqs	Completion of at least 18 MPH credits, which includes biostatistics, epidemiology, and two courses in the student's area of specialization.

Assessment
Students understanding of the course material will be evaluated through papers submitted, class participation, and evaluation by internship site supervisors. This course requires the fulfillment of the hours specified by the student's degree at the year of your matriculation (between 90-180 hours).

Course policies

Grading
Students grade in this class is based on evaluations by both the field supervisor and the course instructor.

Course writing assignments are described in separate handouts. Grades will be determined as follows:

A+	96 - 100	C	73 – 77
A	93 – 96	C -	70 – 72
A-	90 – 92	D+	68 – 69
B+	88 – 89	D	63 – 67
B	83 – 87	D-	60 – 62
B-	80 – 82	F	59 or below
C+	78 – 79		

1. Supervisor's evaluation 30%
2. Attendance/participation 10%
3. Summary Paper 30%
4. Supporting documents 20%
   (Abstract, learning objectives, Gantt, Logic Model, CITI, Timesheets, doc)
5. Poster/Oral presentation 10%

Internship:

The internship grade will based on the quality of the contract elements that are submitted, field supervisor comments, assessment of the quality of your service and difficulty of the placement (midpoint and final reviews). **Students should have secured an internship before the first class. Failure to do so may compromise the delivery of timely products and course standing.** All items are to be submitted electronically.

Contract elements include:

- Student information form (available electronically on Blackboard)
- Supervisor information form (available electronically on Blackboard)
- Signed student/supervisor agreement form (last page of the manual)
- *Approved abstract***Note-Professor will review one draft. The next iteration will be graded.
- *Approved learning objectives***
- *Approved logic model*** (see: http://www.wkkf.org/knowledge-center/resources/2006/02/WK-Kellogg-Foundation-Logic-Model-Development-Guide.aspx) (sample format available on Blackboard)
- *Approved Gantt chart*** (sample format available on Blackboard)
- *Human Subjects Basic Course*** – Complete the Human Subjects Basic Course at the Collaborative Institutional Training Initiative (CITI) online site: https://www.citiprogram.org/ In creating your individual user login account when asked for the institution indicate CUNY, then follow the prompts to set up your account. After establishing your account you will be able to complete the online course for free. PDF certificate confirming completion is required.
- *Students' self assessment at midpoint***
- *Time sheets*** Completed timesheets (Blank forms Available on Blackboard) - Copies scanned to one PDF document with signatures are to be submitted electronically to Blackboard.

**Contract elements not due within first three weeks.

Midpoint review. Described in detail in the Manual.

- Student mid-point self evaluation, signed by supervisor. (Available on Blackboard).

Final Evaluation. Described in detail in the Manual.

- To be submitted electronically Blackboard.
- Field supervisor final evaluation of student (The form will be emailed to the site supervisor and returned to Professor Stackhouse) Note, failure of the supervisor to return the completed evaluation before grades are due may delay of grade submission.

Guidelines for all materials to be submitted in fulfillment of course requirements noted above.

- All materials are to be submitted via Blackboard.
- In addition to the detailed instructions for materials found in the Fieldwork Handbook the

following standards apply:

- As noted in the Handbook, any time a reference is made the APA reference format is required.
- **All materials submitted** should have a document name using the following naming convention to upload (This holds for all types of saved electronic documents – MSWord, Excel, PDF, or any other):
    - Last name. First initial. document name (not yours-the name of the assignment e.g. "abstract" .MM.DD.YR Example: Smith.M.Abstact 1.09.15.14

Attendance:
Attendance is mandatory and absences will result in reduced credit unless excused before the class by email; please arrive on time and make sure that all cell phones are silenced.

Summary document/evaluation:
The summary is a10 page detailed review that critically describes your internship responsibilities, reflects on major course discussion areas. The summary should be more than a description of what you did, it should contain insights about unexpected learnings what you might have done differently. **To be clear, admitting that an internship was not perfect is not a weakness.** Indeed, identifying potential areas for improvement (either your own or the organization's) is at the core of what the internship is meant to deliver. If you have produced a report, document or other final product(s), it **MUST** be attached as an appendix. The summary should include itemized references to your learning objectives and clearly identify progress made and challenges faced for each objective. See grading rubric.

Posters:
Posters & their presentation represent a public display of your internship. Instructions appear in the Manual. Samples of posters from previous classes can be found posted in the hallway outside the Departmental Office. Note: this must be a professional poster. Posters not meeting professional expectations will not be graded.

University Policy on Academic Integrity: The faculty and administration of Brooklyn College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutions cheating and plagiarism and for avoiding both. The complete test of the CUNY Academic Integrity Policy and the Brooklyn College procedure for implementing that policy can be found at this site: http://www.brooklyn.cuny.edu/bc/policies . If a faculty member suspects a violation of academic integrity and, upon investigation, confirms that violation, or if the student admits the violation, the faculty member MUST report the violation. Please note, I take this very seriously.

Disability: In order to receive disability-related academic accommodations, students must first be registered with the Center for Student Disability Services (CSDS). Students who have a documented disability or suspect they may have a disability are invited to set up an appointment with Valerie Stewart-Lovell, Director CSDS, at 718-951-5538. If a student is already registered with CSDS, the student should provide the professor with the course accommodation form and discuss the specific accommodation with the professor. Per College policy, students are not permitted to bypass CSDS and go directly to a faculty member to request accommodation. Faculty members are not permitted to grant an accommodation without receiving the *Verification of Disability and Course Accommodations* forms from CSDS. Please note that, in addition to chronic conditions, many students who are dealing with acute or short-term health issues may be eligible for accommodation

Non-Attendance Because of Religion Beliefs: see p. 53 of the BC Bulletin. Please let Professor Haley know about such absences before the class(es) to be missed so that he can make arrangements for you to make up the missed material.

Schedule

Class	Date	Topic	Due
1.	February 4	Introduction to Class & Ethics	*Draft abstract due in class*
2.	February 11	Public Health Core Functions	*Draft abstract due (BB)* *Internship profile due (BB)* *Supervisor profile due (BB)*
3.	February 18	Public Health Infrastructure and Delivery	
4.	February 25	Logic Models and Gantt Charts	
5.	March 3	Complete CITI	*CITI due (BB)* *Draft LOs due (BB)*
6.	March 10	Making Presentations	*Draft Logic Model (class)* *Draft Gantt Chart (class)*
7.	March 17	Fieldwork Progress	*Draft Logic Model (BB)* *Draft Gantt Chart (BB)*
8.	March 24	Leadership & Management	*Mdpt Eval (BB)*
9.	March 30	Challenges and Opportunities: Internship at the Midpoint	
10.	April 7	No Class to be held - Individual telephone calls will be scheduled once Dr. Haley has received your signed midpoint evaluation and spoken with your supervisor.	
11.	April 14	No Class to be held - Individual telephone calls will be scheduled once Dr. Haley has received your signed midpoint evaluation and spoken with your supervisor.	
April 22-30		**Spring Break**	
12.	May 5	Resumes and professional development.	*Resume due (class and BB)*
13.	May 12	Presentation of Internships, Posters (session I):	*All final documents due for presenters.(Abstract, Logic model, Gantt)*
14.	May 19	Presentation of Internships, Posters (session II):	*All final documents due for presenters.(Abstract, Logic model, Gantt)*
15.	May 26		*Final Papers due (BB), Timesheets (BB), Intern evaluation (BB), Copy of signed thank you letter*

Program Competencies	Course Learning Objectives	Sessions
This course will help you achieve increased competency in health care policy and administration. By the time you graduate, you should be able to:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be addressed as part of the following course sessions:
Apply the public health core functions of assessment, policy development and assurance	Demonstrate (e.g. through the portfolio) the application of assessment, assurance and/or policy development during the fieldwork experience.	* 1,2,3,4,9, & internship placement * Assignments: Learning objectives, Logic model, Gantt chart, summary paper
Apply theories, concepts, models and methods to the design of public health research, policy and practice	Demonstrate (e.g. through the portfolio) the application of one or more core PH values or techniques through the fieldwork experience	*1,2,3,4,7,9 & internship placement * Assignments: Learning objectives, Logic model, Gantt chart, poster, summary paper, poster presentation
Adhere to ethical and social justice principles and standards	• Apply ethnical principles to fieldwork placement, (e.g. human subjects' protection principles to the data collection). • Assess the degree to which the fieldwork placement agency adheres to ethical principles and standards	* 1 and internship placement * Summary paper
Interpret and analyze public health literature and apply evidence-based research	Demonstrate (e.g. through the portfolio) the application of findings from public health literature to the field work experience	*1,2,3,4,7,9 & internship placement * Assignments: Learning objectives, Logic model, Gantt chart, poster, summary paper, poster presentation
Apply basic statistical and informatics techniques	Participate, through the fieldwork experience, in using statistical and informatics techniques to support a public health program or policy in it's provision and effectiveness.	* Internship placement – when required in the internship setting and experience * Assignments: poster presentation and poster
Communicate public health information through oral, written, digital and visual presentation	Prepare written and oral progress and evaluation reports (e.g. the fieldwork project), using appropriate professional formats.	* 6,7, 13, 14 & Class participation and internship placement * Assignments: Learning objectives, Logic model, Gantt chart, abstract, summary paper, poster presentation and poster
Explain how social, behavioral, biomedical and environmental determinants affect population health	Apply the elements of social, behavioral, biomedical and environmental determinants of and inequities in health and disease to aspects of the provision of public health activities in the internship settings and activities.	*1, 2,3,4,7,9 & internship placement * Assignments: Logic Model, poster presentation and poster
Design and evaluate interventions to prevent or control public health problems	Participate, through the fieldwork experience, in developing, carrying or evaluating out a public health program, remediation measure or policy.	* Internship placement – when required in the internship setting and experience * Assignments: Learning objectives, Logic model, Gantt chart, abstract, summary paper, poster presentation and poster
Collect, analyze and interpret public health data	Participate, through the fieldwork experience, in collecting, analyzing and interpreting public health data to support a public health program or policy in it's provision and effectiveness.	* Internship placement – when required in the internship setting and experience * Assignments: poster presentation and poster
Engage and collaborate with diverse groups	Identify different stakeholders and evaluate their roles on the fieldwork project.	* 1,2,3,4,7,9, & internship placement
Describe the legal foundations of the U.S. public health system and its interrelationships with other systems including health care, education and environmental protection	Apply the elements of public health core elements, infrastructure, and delivery to aspects of the provision of public health activities in the internship settings and activities.	* 2,3, & internship placement * Assignments: summary paper
Apply a framework for the planning, implementation and evaluation of public health programs, policies and interventions	Explain the difference between key planning constructs and demonstrate the ability to incorporate them in planning, implementing and evaluating the fieldwork project	* 1,2,3,4,7,9 & internship placement * Assignments: Learning objectives, Logic model, Gantt chart
Explain the context of public and private health-care systems in which health care and public health policy are made and healthcare is delivered	• Describe skills for organizational and community problem solving, decision making, and evaluation of public health issues. • Describe a collaborative process for prioritizing individual, organizational, and community concerns, and for bringing resources to bear on public health programs.	* 2,3,7,9 & internship placement * Assignments: Learning objectives, Logic model, Gantt chart, poster, summary paper, poster presentation and poster

Public Health Advocacy HPM 754 Spring 2016

Instructor: Nicholas Freudenberg, Distinguished Professor of Public Health
Time: Tuesdays, 4:05 – 5:50 pm Room 217
Hunter Silberman Campus 119th Street and Third Avenue
Room: Office Hours: Tuesdays 2 -3:30 pm and by appointment Room 534
Contact: Telephone 212-396-7738 E-mail nfreuden@hunter.cuny.edu
Pre-Reqs: PH 75500, PH 75600. Students can take this course or HPM 75200.

Brief Course Description:
Prepares students to advocate for policies that promote public health, develops skills in planning and implementing advocacy campaigns; assess theories on role of coalitions and advocacy in changing health policy.

Program Competencies	**Course Learning Objectives**	**Assessment Methods**
This course will help you achieve increased competency in health care policy and administration. By the time you graduate, you should be able to:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be assessed through the following methods
Apply relevant theoretical/conceptual models and leadership principles to developing health policy and administrating health programs	• Identify theories of policy making that inform public health advocacy efforts • Apply these theories to current advocacy efforts	•
Identify and analyze the legal, economic, ethical and health bases and implications of public health policies that affect urban populations	• Analyze opportunities for health advocacy at the individual, community , organizational and policy levels • Identify and provide a rational for specific advocacy actions designed to achieve at least one health policy goal in New York City	•
Apply strategies for advocating for effective public health policies and programs	• Describe the rational for advocacy as a public health intervention strategy • Explain how advocacy fits with other tools of public health • Analyze the role of public health leaders within advocacy and the impact of advocacy on leaders	•
Evaluate public health programs and health policies and apply evaluation results to their improvement	• Analyze the successes and limitations of a specific health advocacy initiative • Plan, implement and evaluate public health advocacy campaigns	•

Identify and discuss the partnership and collaborative skills needed to develop effective public health programs and policies	• Demonstrate advocacy skills used to raise awareness of health and social policy issues • Assist community residents and organizations to change systems that impede health • Lead groups effectively to achieve health goals	•

Course Topics

Feb 2 *Course Introduction and Overview*
Review of syllabus and assignments. Overview of advocacy in public health. Discussion of student advocacy group profiles and advocate profiles

2/9 *Advocacy within the Policymaking Process* Introduction to agenda setting and policy subsystems, analytic frameworks for understanding policy making. How are agendas set? What roles and power do advocates have? From where is power derived? Case Study 1: The Treatment Action Campaign in South Africa

2/16 *The Role of Evidence in Advocacy*
Lecture and discussion, making use of real-world examples of the ways in which evidence is used, misused and ignored in the policy making process, and the role of advocacy in bringing evidence into the policy arena

2/23 *The Structure of Government: Opportunities and Challenges for Advocacy*
Lecture and analysis of opportunities for advocacy in each branch and level of government

3/1 *Advocacy at the Individual and Family Levels*

3/8 *Theories and Models for Understanding Stakeholders, Building Coalitions and Organizing Communities* Lecture and guided discussion of models of mounting campaigns with coalitions, working alongside and outside of government. Case Study: From Fringe to Establishment, AIDS activism in NYC 1983-2005

3/15 *Communication campaigns for advocacy: theory and application*
Using communication campaigns to persuade the public, including working with the media, utilizing advertisements and other avenues to disseminate messages; discussion of shock vs. education, crafting messages.

3/22 *Using the Law for Advocacy.* Case Study: Legal Action Against Childhood Lead poisoning

4/5 *Legislative Advocacy Campaigns*

4/12 *The Special Challenges of Evaluating Advocacy Campaigns*
Lecture reviewing terms and concepts regarding evaluation.

4/19	*Pulling it all together: Planning an advocacy campaign. Steps and Principles* Lecture and guided discussion on turning tools into a campaign; special attention to sequencing of activities, monitoring, stakeholder involvement, political environment, media.
4/26	spring break
5/3	*Pulling it all together Case Studies:* Class discussion applying planning framework from previous sessions week by focusing on several current advocacy efforts Case Study: The Treatment Action Coalition in South Africa
5/10	*Training for advocacy*: Approaches to preparing citizens and professionals to take on advocacy roles; indications for and limits of this approach.
5/17	*Media advocacy.* Use of mass and other forms of media for advocacy, roles of health professionals Student presentations
5/24	Final presentations

Course Assignments

1. Attendance, participation(rated on quantity and quality), short homework assignments and readings. 10 % of final grade
   On first day of class, submit a one profile of an advocate you admire and (separately) an advocacy organization that works on a health issue you care about and come to class prepared to discuss the advocate profile.
2. Lead a 10 minute advocacy skills session, 5% (see schedule below)
3. Written report on interview with policy advocate 20% Due 3/22
4. Two meetings with instructor, one to discuss draft case study the other to discuss career goals related to advocacy
4. Case study paper following outline to be developed in class, 35%
   First draft due 5/3 Final Draft Due 5/17
5. Oral presentation of case study of advocacy campaign 5% (5/24)

6a. Two short written assignments: op ed or legislative testimony (10% each) Due on 3/22 and 4/26 **OR** 6b. A 10-15 page policy advocacy report (20%) (Due 4/26)

For all assignments, students are expected to follow all university guidelines. See last pages of syllabus for a description of these expectations

Assignemnt 1 Due First Day of Class

1 a. Public health advocates

Write a one page single spaced profile of one of the following public health activists/advocates, describe their role, their advocacy accomplishments, the challenges they face and 3 questions you would want to ask them if you were to meet.

Advocate	**Reference**—This is to get you started—please find others to fill out your profile	**Link**
Zachie Achmat, a co-founder and activist in South Africa's Treatment Action Coalition, an AIDS group	Powers S. (2003) .The AIDS Rebel: Letter from South Africa. The New Yorker 79:12, pp54-64	http://honors490-2014-penner.wikispaces.umb.edu/file/view/Power,+theAidsRebel.NewYorker.20035.19-1.pdf

Linda Rae Murrey	Currie DY. The Socially Just Face of Public Health Leadership Linda Rae Murray American Journal of Public Health: 2011,101, 2, 209-211	

1b Public health advocacy organizations

Write a one page single spaced profile of this organization giving its mission, describing its advocacy work related to health and their accomplishments, explaining what you find appealing about the group and listing 3 questions you hope to be able to answer about this group and its role in advocacy by the end of the semester. Start by looking at the organization's web site, then find at least 3 other references that will help you fill out the profile.

ACT UP
Black Lives Matter
Citizens Committee for Children
Doctors Without Borders/Médecins Sans Frontières
Families for Safe Streets NYC
New York Immigration Coalition
New Yorkers Against Gun Violence
Planned Parenthood New York City
Physicians for Reproductive Health
WEACT (West Harlem Environmental Action Coalition

2. Student led skills sessions. By 2/9 , each student will sign up for one of the topics and dates below to present for 5-6 minutes, then answer questions and distribute a one page handout with tips and resources on one of the following topics:

SCHEDULE FOR SKILLS SESSIONS		
Date/Session	Topic	Presenters(Sign up in Class on 2/2 or 2/9)
2/23 The Structure of Government: Opportunities and Challenges for Advocacy	SkillSession 1: Writing a position paper on a policy issue for your agency	
3/8 Theories and Models for Community-Level Advocacy	SkillSession 2: Writing a press release for an advocacy event	
3/15 The benefits and perils of community coalitions for advocacy	SkillSession 3: Writing a letter to the editor	
3/22 Using the Law for Advocacy.	SkillSession 4: Mastering IRS and state rules on non-profit lobbying	
3/29 Legislative Advocacy Campaigns	SkillSession 5: Meeting with an elected official	
4/12 The Special Challenges of Evaluating Advocacy Campaigns	SkillSession 6: Preparing a social media advocacy campaign	

Suggested Resources for Preparing Skills Session Presentations

American Public Health Association. Media Advocacy Manual. Washington, D.C.: APHA at www.apha.org/about/news/mediaadvocacy.htm an Advocacy Tips http://www.apha.org/advocacy/tips/

Community Tool Box http://ctb.ku.edu/en/default.aspx The Community Tool Box is a global resource for free information on essential skills for building healthy communities. It offers more than 7,000 pages of practical guidance in creating change and improvement.

Grantmakers in Health. Funding Health Advocacy. Washington, D.C., 2005. http://www.gih.org/usr_doc/issuebrief21_Funding_Advocacy.pdf

Trust for America's Health. Health Policy and Advocacy Resources. http://healthyamericans.org/policy/ And other resources on Suggest Reading list in this syllabus

3. **Interview with policy advocate**. Select a health professional or activist for whom policy advocacy is an essential part of what they do. A guide is that they spend at least half their time doing policy advocacy. Arrange a face-to-face interview with that person by March 1 following a question guide to be developed in class and write a 4-5 page summary of your interview due March 22. Let me know by email who you plan to interview (name, organization and job title) by no later than February 16 and be sure you have my ok for this person before scheduling interview. .

4 and 5. **Class Project and Presentation**

For this main assignment for the course, which you can complete with one other student, you will select a health advocacy campaign and prepare a written case study of that campaign, describing its activities and assessing its successes and limitations. You'll also present a summary of your findings to the class. Advocacy campaigns should be well underway (not in the planning stages), have been carried out in the New York area (unless you know you will have

access to leaders for out-of-area campaigns). Suitable campaigns will meet the following criteria:

1. An outcome clearly related to improved public health in New York
2. Access to leaders and members for visits and interviews
3. A written record of its activities that may include media coverage, web site reports, and promotional materials. You should be able to find at least three different accounts of the campaign, written from the vantage point of different stakeholders (e.g., leader, critic or opponent, and reporter)

Let me know which advocacy campaign you plan to profile by March 1, submit a one page description of the evidence you will use to write your case study by March 15 and submit a final draft on May 3 and the revised final paper on May 17th. Presentations will be in class on May 24. We'll develop guidelines for case study paper and presentations in class. Students are encouraged but not required to select policy advocate for interview who is connected to the campaign you will study.

6a. **Two short written assignments: op ed and legislative testimony 20% Due on 3/22 and 4/19 OR 6b. A 10-15 page policy advocacy report (20%) Due 4/19**

If you choose 6A: Submit these two assignments

i. Write an op ed (maximum 800 words) on a health advocacy topic. Guidelines to be distributed in class

ii. Prepare 3-4 (maximum 100 words) pages of legislative testimony supporting or opposing a specific health-related bill before the New York City Council, the New York State Legislature or the US Congress. Please follow guidelines for legislative testimony

First submission is due 3/22; second submission is due 4/19.

or 6B. Policy Advocacy Report (Due 4/19)

For this assignment, students prepare a 10-15 page policy report advocating for a specific policy approach for a specified audience (e.g., activists, City Council members, etc.) on a health policy issue relevant to NYC. MPH students who select this option will get extra credit if their submission meets professional standards, i.e., is close to ready for distribution. Sample reports will be distributed in class

Class Calendar

Date Topic	Skills Session	Assignments due	Notes
2/2 Course Introduction and Overview		2 profiles of activist and advocacy organization	
2/9 Advocacy within the Policymaking Process			
2/16 The Role of Evidence in Advocacy		Select and get faculty approval for person to interview for policy advocate interview	
2/23 The Structure of Government: Opportunities and Challenges for	SkillSession 1: Writing a position paper on a policy	Schedule interview	

Advocacy	issue for your agency		
3/1 Advocacy at the Individual and Family Levels		Submit name and brief description of advocacy campaign you plan to profile

4/19 Pulling it all together Case Studies		6a. Short Paper 2 due 6b. Policy advocacy report due	
4/26	SPRING BREAK		
5/3 Training for advocacy and Media advocacy		Submit complete draft of case study paper	
5/10 One-on-one meetings	Individual meetings with instructor to review case study drafts		
5/17 TBA		Final Case Study Paper due	
5/24 Final presentations	TBA		

Grading

Grading criteria:

The grading scale follows the 2006-2009 Graduate catalog as follows:

A+	97.5%-100%	487.5-500.0	**B-**	80.0 – 82.4%	400.0-412.0
A	92.5 – 97.4%	462.5-487.5	**C+**	77.5 – 79.9%	387.5-399.5
A-	90.0 – 92.4%	450.0-462.0	**C**	70.0 – 77.4%	350.0-387.0
B+	87.5 – 89.9%	437.5-449.5	**F**	below 70%	349.5 and below
B	82.5 – 87.4%	412.5-437.0			

Class Attendance and Lateness Policy

Attendance will be taken. Each student is expected to attend and actively participate in each class. Students are expected to hand in all assignments on time. Any exceptions must be discussed with instructor in advance.

Academic Integrity Statement

Hunter College regards acts of academic dishonesty (e.g., plagiarism, cheating on examinations, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The

College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. More information can be found at: *http://www.hunter.cuny.edu/senate/assets/Documents/Hunter%20College%20Policy%20on%20Academic%20Integrity.pdf.*

Students with Disabilities

The Office of AccessABILITY provides services to all students with permanent or temporary disabilities to ensure that all Hunter College programs and activities are accessible. The program can assist students to maximize their potential while helping them develop and maintain independence. Additional information concerning disability services can be viewed at: http://www.hunter.cuny.edu/studentservices/access.

Course Communication and Assignment Submission

This course is delivered using the Blackboard course management system. In addition, students may be required to submit course assignments from time to time to the instructor "electronically" using Hunter or other CUNY e-mail. **An active Hunter or CUNY student e-mail user ID and password is required to log into both Blackboard and e-mail.** An active CUNY e-mail ID is required for non-Hunter students taking the class.

Blackboard and Hunter/CUNY e-mail will be used for communicating with the instructor, for receiving some supplemental course materials, and for submitting assignments. It is the responsibility of the student to remain current on this system.

Date Topic	xxxAssigned Readings for Session
2/2 Course Introduction and Overview	Read activist profile and view video as described on pages 3-4. Chapman, S. (2004). Advocacy for public health: A primer. *Journal of Epidemiology and Community Health*. 58, 361-365. http://www.ncbi.nlm.nih.gov/pmc/articles/PMC1732774/pdf/v058p00361.pdf 5 pages Bassett, Mary T. (2003). Public health advocacy. *American Journal of Public Health.* 93(8), 1204. http://www.ncbi.nlm.nih.gov/pmc/articles/PMC1447936/?report=reader#__ffn_sectitle 1 page Chapman, S. (2001). Advocacy in public health: roles and challenges. *International Journal of Epidemiology,* 30, 1226-1232. http://ije.oxfordjournals.org/cgi/reprint/30/6/1226 7 pages Mullan, F. 2000. Don Quixote, Machiavelli, and Robin Hood: Public health practice, past and present. *American Journal of Public Health* 90:702–706. 5 pages http://www.ncbi.nlm.nih.gov/pmc/articles/PMC1446241/pdf/10800417.pdf Discussion Questions: what is public health advocacy? What role does it play in public health practice? What do you need to learn to be an effective public health advocate?
2/9 Advocacy within the Policymaking Process	Kingdon J W, 2002, The reality of public policy in *Ethical Dimensions of Health Policy* By Marion Danis, Carolyn M. Clancy, Larry R. Churchill, editors, pp. 97-116. Available on Google books at http://books.google.com/books?hl=en&lr=&id=tIFvZI6IF-UC&oi=fnd&pg=PA97&dq=JW+Kingdon 20 pages Dorfman L, Wallack L, Woodruff K. 5/11	Student presentations
5/19 Final session	Meet with instructor for feedback and discussion Discussion Questions: To achieve your professional goals, what else do you need to learn about advocacy? What did you learn about yourself as a public health professional this semester? What are the key values you hope to advance in your career? What role, if any, will advocacy play in promoting these values?

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
HPM 750: Public Health Management
3 Credits
Spring 2016

Time and location	Tuesdays from 6:05 to 7:50 PM Silberman (2180 3rd Ave), Room 221
Instructor	Vicki Breitbart, EdD, LCSW Email: vickibreitbart@yahoo.com Telephone: (347)-267-6339
Office hours	By appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Focuses on management issues in a variety of organizational settings and the larger public health environment; describes managerial functions and problem solving strategies, financial management principles, and management models for change; develops specific skills in program management, budgeting, workforce development, and managing intersectoral programs.
Course prerequisites	PH756; PH755
Course format	This course will rely heavily on experiential learning (e.g. participation and attendance is expected and required).Some of the course will be taught via "case studies" that outline real-world scenarios that have taken place in healthcare and related settings. We will also use role-play, small group problem solving, individual presentation, and ample amounts of class discussion to explore management challenges and approaches. Students will participate in study groups that serve as vehicles for analyzing the concepts in the reading material. These study groups will meet in class to prepare responses to questions handed out in advance of the session. If you are going to be absent, be sure to notify me in advance and arrange with a classmate to get the prep questions.
Required reading and resources	**Johnson, Spencer MD Who Moved My Cheese ISBN 0-399-14446-3** **Available from Amazon used for $.01** **Harvard Business Review** http://hbr.org/?conversationId=1237405 Sign up for an account **Public Health Management and Practice** http://journals.lww.com/jphmp/pages/default.aspx **All Readings or other references will be posted on Blackboard.**
Suggested reading and resources	

Copmpetencies
This course will help students to achieve the following competencies expected of all MPH graduates:
1. Analyze management challenges that arise in public and private (for profit and not-for profit) healthcare settings related to public health using a variety of tools.
2. Develop and understand budgeting and understand the difference between fixed and variable costs and distinguish between capital and operating budgets.
3. Identify several professional opportunities in public health that can utilize management and supervisory skills.
In addition, by the end of this course, students will be able to:
 Describe their own personal characteristics as related to management and where their own supervision and management challenges lie.
 Define alternative approaches to leadership and management in the context of health care organizations.
 Utilize effective communication styles for hiring, supervising and managing staff.
 Construct program management tools for monitoring and evaluating individual, program and institutional performance.
 Identify approaches to dealing with the changing healthcare environment.

Course Assessment
Classroom participation will constitute 20% of the grade

The course will benefit greatly from the variety of backgrounds and perspectives held by the students. The more students put into the classes, the more they will get out of them. For that reason, participation is a key component of the course and will count for 20% of the final grade.

Written assignments will constitute another 40% of the grade:

1) "Shadowing" assignment
   Students will schedule a time to "shadow" a manager in a healthcare or non-profit setting. This should be an opportunity to observe a manager in action, in meetings, supervising staff, planning, and or trouble shooting. I will provide a series of questions that will serve as a guide for the report on the management and supervisory challenges you witness. Answers o several questions will constitute the outline for the paper of not more than 5 pages **due on 3/22 and be expected to share their findings in class on that day.** The "shadow" assignment with report back in class will count for 20% of the final grade.
2) Health Care Innovation
   Students will identify an area of change that has occurred as a result of the Affordable Care Act and discuss a management technique or approach that will be needed to implement this change in a healthcare setting. This can be the student's organization or the organization visited as part of the shadowing assignment. The approach should be evidenced based with effectiveness demonstrated in the literature. In a paper of about 5 pages in length, students will discuss the health care change, and the efficacy or expected of the approach to change. **This paper is**

due 4/12 and the students are expected to discuss their findings as part of the class on that day. This assignment will constitute 20% of the final grade.

Class presentation will constitute 20% of the grade

Students will be asked to identify either a management technique or approach and analyze its effectiveness based on the literature. Students will write up the evidence they have found to prove or disprove the efficacy of the approach in a paper of about 5 pages. A number of possible topics will be provided in class**. This paper is due 5/10. Students will be asked to present their findings in class discussion on either 5/10 or 5/17**. This will count for 20% of the grade. Students are not expected to provide PowerPoint presentation, but to participate in a review of the findings and recommendations in a class discussion. Assignments handed in late may affect the student's grade.

Final exam will constitute 20% of the grade:

The final exam will be an on-line assignment posted at **6:00 on 5/3 to be returned by 8:00 PM that same evening.** It will involve a review of class work and readings and/or a case study with a number of questions that parallel the types of inquiry we will undertake as a class throughout the semester. The final will count for 20% of the grade.

Class participation	20%
Shadowing paper	20%
Affordable Care Act change paper	20%
Evidenced-based management presentation	20%
Final	20%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal

are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

I. 2/2/16: Introduction. Being a Manager

No class on 2/9/16. Classes follow a Friday schedule.

2. 2/16/16: Organization Mission, Vision, Values and Strategic Planning

Readings:
"National Campaign to Prevent Teen Pregnancy", Harvard Business School Publishing*

Drucker, PF "Self-Assessment Tool".
http://www/leadertoleader.org/leaderbook/sat

3. 2/23/16: Building the Learning Organization

Readings:
Senge. P The Fifth Discipline. Chs. 1 and 2

Pfeffer J, Sutton RI "Evidenced-based management" *Harvard Business Review*. January 2006*

Aragon TJ, Garcia BA. Designing a Learning Health Organization for Collective Impact. *Public health Management and Practice.* Jan/Feb. 2015 (21) S24-33.
http://journals.lww.com/jphmp/Fulltext/2015/01001/Designing_a_Learning_Health_Organization_for.5.aspx

Optional
Garvin DA. Edmondson AC, Gino F. "Is yours a learning organization?" Harvard Business Review. March 2008 *

4. 3/1/16: Staff performance and management

Readings:
Senge P. The Fifth Discipline. Ch. 8,9,10.

Gladwell M. "The newboy network". *The New Yorker*. 5/29/2000 pp.68-86.

Goleman. Working with Emotional Intelligence, Ch. 12

Optional
Gary L. "Performance management that drives results" Harvard Business Review. Sept. 2004 *

5. 3/8/16: Health Care Center visits

6. 3/15/16: Supervising effectively

Prior to class, please go on line to: http://www.humanmetrics.com/cgi-win/JTypes2.asp
and do the quick personality profile based on Meyers Briggs. The key is not to think about the items, just go with your gut. Review and bring notes about your "type" for class discussion.
Also complete The Collaborative Leadership - Self Assessment Questionnaire:. https://view.officeapps.live.com/op/view.aspx?src=http%3A%2F%2Fwww.partneringintelligence.com%2Fdocuments%2F5.02_CollaborativeLeadershipAssessment.doc

Readings:
Fryer, B. "The Micromanager" *Harvard Business Review*. Sept. 2004 Update. Aug. 2007*

Borkowski N. Organizational behavior, theory and design in health care. Jones and Bartlett. 2009.Ch. 13

Optional
Hill, LA. "Becoming the Boss" Harvard Business Review. Jan. 2007 *

Bielaszka-Duvernay C. A CEO's six steps to effective feedback" Harvard Management. *

7. 3/22/16: Management as Leadership in Health Care

Readings:
Goleman D. "Leadership that gets results" *Harvard Business Review*. March-April 2000*

Tervalon M, Murray-Garcia J. Cultural humility versus cultural competence: A critical distinction in defining physician training outcomes in multicultural education. Journal of Health Care for Poor and Underserved. 9 (2) 1998.

Optional

Katzenbach JR. Smith DK “The discipline of teams” Harvard Business Review. July 2005*

No class on 4/26 – **Spring break**

12. 5/3/16: Final EXAM – on-line

13. 5/10/16 Evidenced-based management presentations

14. 5/17/16: Evidenced-based management presentations

The CUNY School of Public Health
Campus [Hunter]
Public Health Management
HPM 75000 01 (Code 1166), Spring 2016

Catalogue description	Focuses on management issues in a variety of organizational settings and the larger public health environment; describes managerial functions and problem solving strategies, financial management principles, and management models for change; develops specific skills in program management, budgeting, workforce development, and managing intersectoral programs. (Prerequisites: PH 75500, PH 75600)
Course meets	Room SB 326, Thursdays 6:05 PM – 7:50 PM
Instructor	George A, Schwartz, Adjunct Lecturer, Urban Public Health
Email	george.schwartz@hunter.cuny.edu, gschwartz27@gmail.com
Phone/Text	212 777-5255
Office hours	Thursdays before/after class or by appointment
Required text	Burton, Lawton Roberts, *et al*. Shortell & Kaluzny's Health Care Management: Organization Design & Behavior, Delmar Cengage Learning, Clifton Park, NY. ISBN-13: 978-1-4354-8812-2, ISBN-10: 1-4354-8812-2. (Text or electronic edition. In addition to the bookstore, you may view the publisher's web site for purchase options: http://www.cengagebrain.com/course/site.html?id=1-1ZBUFAE.)
Reserve material	Reading assignments and the class calendar are posted on Blackboard.
Other readings	Required readings from journals are posted by links through the Hunter/CUNY library system. You will click the links in Blackboard and log into the library system using the identification number found on the back of your Hunter OnePass ID card.

Important Dates and Deadlines

Class	*Due Date(s)*	*Assignment*
Class 5	03/03/16	Short paper due
Class 8	03/24/16	In-class midterm
Class 2 - 7	02/11/16 to 03/17/16	First team presentations
Class 9 – 13	03/31/16 to 05/05/16	Second team presentations
Class 14 - 15	05/12/16 to 05/19/16	Individual presentations
Class 15	05/19/16	Final projects submitted

Assessment

Method of Evaluation/Grading

Grading criteria:

Short paper	100 points
Midterm exam	125 points
In-class journal article reviews	100 points
Final project in-class presentation	50 points
Final project paper	125 points
Total	**500 points**

The grading scale follows the Graduate catalog:

A+	97.5%-100%		B-	80.0 – 82.4%
A	92.5 – 97.4%		C+	77.5 – 79.9%
A-	90.0 – 92.4%		C	70.0 – 77.4%
B+	87.5 – 89.9%		F	00.0 – 69.9%
B	82.5 – 87.4%			

Short paper

With your workplace as a model, describe your organization in terms of the management theories, leadership styles and motivational techniques represented there. How do these theories, styles and techniques serve to advance or hinder your organization's mission? What would you change, and how would you accomplish that change? This should be a 3 to 5 page paper, double spaced; it does not have to be footnoted but it does have to demonstrate knowledge of the material covered in class and in the text and assigned articles through the first four classes. This paper is due in class March 5. 2016.

In-class journal article reviews

Student teams will be responsible for summarizing and presenting the findings of the journal articles that are assigned each week. These presentations will be brief (5-10 minutes), may utilize PowerPoint, and should help the class make the connection between the text assignment and the articles. (Class size will dictate team size – I would assume 2 or 3 persons for each team).

Midterm exam

There will be a one-hour, in-class, closed book midterm examination on March 24, 2016 covering material from the text, class lectures and the other assigned readings to date. It will include multiple choice questions and short essays.

Final presentation and paper

Working alone, each student will prepare and present a research paper on a topic of personal interest in health care management. You will be expected to read and cite at least three scholarly articles on the subject, clearly explain how this management policy or recommended changes of policy will affect health care and/or save money and/or improve the performance of health care organizations in the US. You should focus on the

appropriate and unbiased use of management tools in the articles themselves and in making the argument for taking your approach to the problem. Your in-class presentations, occurring on May 12 and May 19, should take approximately 10 to 15 minutes, allowing time for questions, and your final paper, due for submission in class May 19, should be 5-10 pages typed double-spaced as well as fully sourced and footnoted. You may use PowerPoint or other visual aids or handouts in your presentations. All final projects require the approval of the instructor.

(Suggestions for possible financial projects will be posted to Blackboard.)

Class Policies

Class participation

Students should read the subject material prior to attending class. Students should participate in class discussions and should ask relevant questions during class time.

Lateness, absences and late submission of assignments

Each student is expected to attend and actively participate in each class. One absence is allowed. Each additional absence will result in a penalty of 5 points from the final grade, with almost no exceptions. Late assignments will be penalized at the rate of 5 points taken off per day of lateness.

Course Communication and Assignment Submission

Some course assignments will be delivered using the Blackboard course management system or the Hunter College e-mail system. **An active Hunter student e-mail user ID and password is required to log into both systems.** An active CUNY e-mail ID is required for non-Hunter students taking the class. All students are issued a free e-mail account when registering for classes for the first time.

Blackboard and Hunter e-mail may be used for communicating with the instructor, for receiving some supplemental course materials, and for submitting assignments. It is the responsibility of the student to remain current on this system.

Institutional Policies

Academic Integrity Statement

Hunter College regards acts of academic dishonesty (e.g., plagiarism, cheating on examinations, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures.

"Any deliberate borrowing of the ideas, terms, statements, or knowledge of others without clear and specific acknowledgement of the source is intellectual theft and is called plagiarism." "It is not plagiarism to borrow the ideas, terms and statements, or knowledge of others if the source is clearly and specifically acknowledge. Students who consult such critical material and wish to include some of the insights, terms or statement encountered must produce full citations in an appropriate form." Hunter College 2006-2009 Graduate Catalog, page 17

More information can be found at:
http://www.hunter.cuny.edu/senate/assets/Documents/Hunter%20College%20Policy%20on%20Academic%20Integrity.pdf.

Students with Disabilities

The Office of AccessABILITY (1124 East Building, 212-772-4857). provides services to all students with permanent or temporary disabilities to ensure that all Hunter College programs and activities are accessible. The program can assist students to maximize their potential while helping them develop and maintain independence. Additional information concerning disability services can be viewed at:
http://www.hunter.cuny.edu/studentservices/access.

Grade of Incomplete

THERE IS NO ABSOLUTE RIGHT TO A GRADE OF INCOMPLETE. Only students averaging B or above in a course are eligible to request an incomplete course grade. Graduate students have one academic year in which to submit the missing work otherwise the IN grade is permanent on the college transcript. A specific, written agreement between the instructor and the student that details the requirements for making up the incomplete is also required.

Grade Appeals

Grades can be appealed in a progressive order to the instructor, School Director and the Hunter College Senate. When a student considers a final course grade unsatisfactory, the student should first confer with the instructor regarding the accuracy of the grade received. Graduate students have the right to request in writing that the Director of the School of Health Sciences appoint a student as a member to the department/School Grade Appeals Committee. This appeal conference should be held within the first five weeks of the semester following receipt of the grade, in accordance with the "College-wide Grade Appeals Procedures" adopted by the Senate in fall 1995 Hunter College 2006-2009 Graduate Catalog (page 17).

SUMMARY OF COURSE LEARNING OBJECTIVES

Apply relevant theoretical/conceptual models and leadership principles to developing health policy and administrating health programs	∗ Describe tradeoffs associated with different leadership styles ∗Explain barriers to decision making and organizational change	Final project and paper
Evaluate public health programs and health policies and apply evaluation results to their improvement	∗ Describe the relationship among organizations, health care services and public health	In-cIass journal reviews
Identify and discuss the partnership and collaborative skills needed to develop effective public health programs and policies	∗Analyze the tradeoffs associated with different types of partnerships, and be able to identify when a partnership between organizations is likely to result in a successful outcome	Short paper
Analyze and critically evaluate theoretical and conceptual models used to describe the U.S. health care system and the delivery of health care	∗Identify theories of internal and external organizational behavior 8Analyze how organizational behavior and individual behavior within organizations contributes to success or failure, and how those outcomes can be measured	Midterm

HPM 75000 01 (Code 1166), Spring 2016

Class Calendar and Required Readings

Before you get to the calendar of topics and assigned readings, here are some important questions to keep in mind throughout the semester:

- Are we discussing an issue of policy or an issue of management? How can we tell? Why is this distinction significant?

- Why do not-for-profit organizations and government agencies also need to make a "profit?"

- What are appropriate financial goals for management? Are policies that reduce competition and increase profits (or cash flow) acceptable? Under what conditions?

- What are legitimate, ethical strategies for improving organizational performance?

- What is the role of ethical standards of behavior in the management of health care organizations? What principles (should) apply to the individual manager and to the organization?

- How do we improve consumer behaviors without taking coercive measures? How can we extend the notion of personal responsibility for good health?

- How do we deal with information asymmetry between consumers and providers in public health and the health care system? Again, what degree of coercion is ethical? What can be done to increase informed and, presumably, wise decision making by consumers?

Class 1, February 4, 2016
Course introduction, class rules and requirements, assignments and due dates
The management challenge in health care

Text, chapter 1, pp. 1- 12

What is unique about health care?
Why should we consider it a business?
The value equation in health care

Class 2, February11, 2016
Management theories

Text, chapter 1
Box
Perry

A short history of management science
Differences in approaches to management among private, public and not-for-profit entities

Class 3, February 18, 2016
Leadership

Text, chapter 2
McCrae
Shanafeldt
Weisman

Leadership vs. management
The agency relationship in health care
What is different about leadership in health care/public health?
What are the best practices?

Class 4, February 25, 2016
Motivating and managing people

Text, chapter 4
O'Leary
Behn

Hierarchy of needs
Motivation vs. performance

Class 5, March 3, 2016
First Assignment Due

Organization design

Text, chapter 3
DeVore
Goldsmith
Kessell

Teamwork
Specialization
Integration
Accountable Care Organizations (ACOs)

Class 6, March 10, 2016
Communication skills, tools and strategies
Diversity

Text, chapters 5, 6
De Leon-Siantz
Mattson
Nunez-Smth
Parston

Within health care organizations
With patients and consumers
With regulators
With the public

Class 7, March 17, 2016
Complexity and innovation

Text, chapter 8
Beitsch
Chesluk

Health care is a complex system
Teaching new skills
Fostering innovation

Class 8, March 24, 2016
In-Class Midterm Exam

Professor's special on Palliative Care

Temel
May

Palliative care for cost control and better health care

Class 9, March 31, 2016
Conflict management
Performance measurement

Text, chapter 7
PorterC
Behn (revisited)
Mattson (revisited)
O'Leary (revisited)

Competing demands on resources
Power relationships

Class 10, April 7, 2016
A Deep Dive into Diversity in the Health Care Workplace

Dobbin <1>
Dobbin <2>

The significance of diversity
What has worked to change corporate and bureaucratic cultures?
Effects on employees
Effects on their organizations
Effects on patients and clients: the special case of health care
Developing constructive diversity programs

Class 11, April 14, 2016
Strategic thinking
TQM and other "systems" for improvement
Measurement

Text, chapter 9
Litvak
Manary
Randolph
Smith

How do we measure the impact of management?
How do we know we are doing well or poorly?
Connection to the value equation

Class 12, April 21, 2016
Public policy

Text, chapters 11, 12
Cramm
Kessell (revisited)
de Oliveira
Melnick

Implementation of ACA
Forecasting needs and demands for health care
Adapting the organization to changing clientele

Class 13, May 7, 2015
Ethics, Expectations and The Future

Text, chapters 10, 14
Jarris
Rutkow
Verni

What constitutes ethical behavior in the health care manager?
Ethical dilemmas
How do we ethically help our agencies achieve the best possible outcomes?

HPM 752 Comparative Analyses of Urban Health Care Systems

Instructor	*Justin P. Swearingen, DrPH (ABD), MHA*
Course Meets	*Online*
Class Location	*Online via Adobe Connect and Blackboard*
E-Mail	*JSwearingen@gradcenter.cuny.edu*
Office Hours	*By Appointment*
Program Office	*2180 Third Ave., New York, NY 10035; 212-481-5111*
Program website	*http://www.hunter.cuny.edu/uph*

CATALOGUE LISTING:

HPM 752, Comparative Analyses of Urban Health Care Systems, 3 credits

(Prerequisites PH 755, PH756).

Examines unique challenges and opportunities for delivering health care in developed and developing world cities; analyses impact of national and local policies and social and political factors on health access, quality and outcomes for urban populations; introduces empirical methods for making comparative studies across municipalities and nations.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Identify and analyze the legal, economic, ethical and health bases and implications of public health policies that affect urban populations	• Compare and contrast healthcare delivery in U.S. cities with healthcare delivery in cities in both the developing and the developed world • Examine the uses and limits of comparative analysis in learning from other cities in the developed and developing world	*Paper 1, Paper 2, Final Presentation, Final Paper*
Apply strategies for advocating for effective public health policies and programs	• Analyze the strategies and solutions that municipal health care systems have used to address identified problems and engage in prevention and health promotion	*Paper 3, Final Presentation, Final Paper*
Evaluate public health programs and health policies and apply evaluation results to their improvement	• Apply lessons from one urban area to problems faced by another	*Paper 1, Paper 2, Final Presentation, and Final Paper*
Identify and discuss the partnership and collaborative skills needed to develop effective public health programs	• Apply lessons from one urban area to problems faced by another	*Paper 1, Paper 2 Final Presentation, and Final Paper*

and policies		
Analyze and critically evaluate theoretical and conceptual models used to describe the U.S. health care system and the delivery of health care	• Describe the roles of city, state and federal government in promoting health and preventing disease	*Paper 1, Paper 2, Paper 3, Final Presentation, and Final Paper*

CLASS FORMAT:

This class is an on-line hybrid class that is taught in ten sessions. Some sessions will be completed independently (with deadlines as listed in the schedule). Other sessions are LIVE online and require that the student attend the virtual classroom with others in the class. Students can log-in from anywhere with an internet connection. Additionally, students will participate in online discussion groups that require posting throughout the semester.

This is an entire 3 credit course in 4 weeks. The sessions are fast paced and it is expected that each student will be prepared for and actively participate in each class, both live and Blackboard only.

Class	Date	Type	Location	Time	DUE
1 Intro	1/4/2016	Blackboard	Online		Prepare for Paper 1
2 US	1/6/2016	LIVE	Adobe Connect	6:00-9:00pm	Blackboard (BB) Discussion Item 1 by 11:59pm
3 Germany	1/8/2016	Blackboard	Online		Paper 1 due by 11:59pm
4 Japan	1/11/2016	Blackboard	Online		BB Discussion Item 2 by 11:59pm. Prepare for Paper 2.
5 Canada	1/13/2016	Live	Adobe Connect	6:00-9:00pm	BB Discussion Item 3 by 11:59pm
6 UK	1/15/2016	Blackboard	Online		Paper 2 due at by 11:59pm
7 India/Portugal	1/18/2016	Blackboard	Online		BB Discussion Item 4 by 11:59pm
8 France	1/20/2016	Blackboard	Online		Paper 3 due by 11:59pm
9 Global	1/22/2016	Blackboard	Online		BB Discussion Item 5 by 11:59pm
10 Presentations	1/25/2016	Live	Adobe Connect	6:00-9:00pm	Final Presentations (live). Final Paper due by 11:59pm (post AND email)

REQUIRED BOOKS

1. Johnson JA, Stoskopf C. (2011). Comparative Health Systems: Global Perspectives. Jones & Bartlett Publishers: Toronto. ISBN-13: 978-1449625610

TECHNOLOGY REQUIREMENTS

Students will need access to Blackboard for this course. It is the responsibility of the student to obtain and maintain this access. We will be using the Adobe Acrobat Connect Pro System for our live sessions. Detailed requirements can be found at:
http://www.hunter.cuny.edu/it/it-services/adobe-connect

In order to participate, you will need the following:
1. Updated Internet Explorer, Mozilla Firefox, or Safari. Cookies must be enabled.

2. Updated Flash Player (might be necessary, so test your system)
(Download the free Flash player at: http://get.adobe.com/flashplayer/)

3. A high speed internet connection (the software does not work as well from slow wireless internet).

4. Once all of this is in place, you can simply click on the link provided by the professor which will take you directly to the live session.

COURSE PHILOSOPHY:

This course is meant to be valuable as well as fun. It is also designed to be intellectually challenging, interactive, and relevant to your needs now and in the future. The course utilizes a variety of teaching styles and learning methods including webcasts, instructional videos, documentaries, and traditional articles and books. Through such engagement, it is my hope that at the end of the course you end up being an "International Health Policy Star" – the person that your family, colleagues and friends turn to when they are confused and need an explanation about what is happening with global health policy. At the very least, I hope that you will say that you like global health policy better than you did when you started the class.

ASSIGNMENTS:

GRADING CRITERIA:

PARTICIPATION IN CLASS AND ON-LINE DISCUSSION BOARDS	20
SHORT PAPERS (3)	50
FINAL PRESENTATION	10
FINAL PAPER	20
TOTAL	100 POINTS

THE GRADING SCALE:

A+	**97.5%-100%**	**B-**	**80.0 – 82.4%**
A	**92.5 – 97.4%**	**C+**	**77.5 – 79.9%**
A-	**90.0 – 92.4%**	**C**	**70.0 – 77.4%**
B+	**87.5 – 89.9%**	**F**	**BELOW 70%**
B	**82.5 – 87.4%**		

1. Class participation (20% of grade)

   - Participation is graded and there is an expectation that you to have done all the required material for class. This will make the course sessions much more productive. As such, students should read the subject material prior to attending class and arrive ready for active discussion. Students will be called upon to answer questions relating to the material and actively participate in the class discussions during each of the live sessions, so proper preparation is required.

   - On-line Discussion Boards (included in participation grade):

- For many classes, students will be required to answer the on-line discussion board question and respond to the on-line postings by other students in their city/country "group."

- Students will also be expected to read and respond to the posted papers of other group members.

2. Short Papers (50% of grade)

Students will write three short (3-4 page) papers (**please do not exceed 5 pages**)

These papers will be posted to the city/country discussion board for other students to read and comment upon. It is expected that each student will read and make substantive comments about the posted papers of other students in their group.

Short papers are 3-4 pages typed double spaced not including tables, figures and references. Each short paper should have at least 8 relevant references of which some should be from class readings and others not. References need to be from peer-reviewed journal articles or from non-partisan, non-opinion governmental or non-governmental resources (websites/white papers). No Wikipedia references and no opinion pieces. Topics are listed below.

Papers should be posted to Blackboard in your city group discussion board on Blackboard by 11:59pm on the date indicated in the syllabus. Please post both as full-text in the posting so that your fellow students can easily read it and with a Word attachment for the instructor to grade.

**** Remember, when evaluating a city, there are city-level, state-level, and country-level health policies that might need to be considered. ****

Paper 1 (20%): Define the characteristics of your urban city and country (20%)- may need to use outside resources. Evaluate its health system in terms of cost, quality, and access (50%). Using specific examples, describe at least two challenges of providing health care to the population (30%).

Paper 2 (20%): Define "access to health care" OR "quality of health care" (20%). Using specific examples, describe at least two specific challenges to achieving access or quality in your city (40%). Using specific examples, describe at least two ways your city does well in this area (40%). (Your challenges may be the same as in Paper 1).

Paper 3 (10%): Equitable care was defined by the IOM as care that does not vary in quality because of personal characteristics such as gender, ethnicity, geographic location, or socioeconomic status. Describe two challenges that NYC faces in providing equitable health care to all its citizens (40%). Make sure to include data indicating the scope of the problem (20%). For one of these challenges, analyze how a specific policy in the Affordable Care Act will help to meet this challenge (40%).

3. Final Presentation (10% of final grade)

   Each student pair will post a 10 minute presentation in PowerPoint to the class discussion board. These will be presented live on the last day of class. Please locate a computer with a working microphone or contact the professor for assistance.

4. Final Paper (20% of final grade)

   Perform a Comparative Analysis of how your world city addresses the challenges of access, cost, quality, prevention, and equity compared to New York City.

   Students will work in pairs to write 12-15 pages (not including references or tables)

   Details of this assignment will be posted to Blackboard.

   ****Can use country-level data as a proxy when city data is not available****

   Your paper should follow this outline, using section titles as headers for that section:

   - Executive Summary (no more than 1 page single spaced)- 10%
   - Introduction – Briefly introduce and discuss the purpose of the paper – 5%
   - City profile – Discuss the demographic and socioeconomic characteristics of the city (within the larger country), the overall health care system (in terms of cost, quality, access, equity and prevention), and major system health challenges (can micro such as obesity, macro such as long wait times for procedures, or both). Include tables to summarize this information – 25%
   - Major health system challenge detail – Go into more detail (qualify and quantify) one of the major health challenges. Asses the city's success in addressing this challenge- 10%
   - Compare/Contrast to NYC - Compare and contrast the health system in which this city finds itself to that which New York City funds itself (in terms of cost, quality, access, equity and prevention). Make sure to include changes that the Affordable Care Act will bring and include these in your evaluation- 25%
   - Discuss lessons that NYC (within the US) can learn from your international city- 15%
   - Summary/ Conclusions- 10%

   References: At least 15. Classroom readings can be used, but outside references will also be necessary.

COURSE POLICIES:

SYLLABUS CHANGE POLICY

This syllabus is a guide for the course and is subject to change with advance notice. Changes to the syllabus will be announced in class and posted to Blackboard as an announcement.

CLASS PARTICIPATION

Class participation is graded (20% of final grade). As such, students should read the subject material prior to attending class and arrive ready for active discussion. Students will be called upon to answer questions relating to the material, so proper preparation is required.

ATTENDANCE, LATENESS, AND ABSENCES

Every student is expected to attend every class (in-person or on-line). Without excuse from the instructor, each additional absence will result in a 5% reduction from the final grade.

Without sufficient reason (Ex: sickness) and email approval from the instructor, late assignments will be penalized at a rate of 5 percentage points taken off per day of lateness.

WRITTEN ASSIGNMENTS

All assignments should be typed, double spaced, 11 or 12 point font (depending on your style). Use the citation style of your choice, but be consistent throughout the paper.

ASSIGNMENTS SUBMISSION

All assignments should be submitted in person or via blackboard (I will specify depending on the assignment) prior to the beginning of class on the assignment's due date. It is expected that your writing will be of graduate-level quality, presented in a readable and professional manner.

COURSE COMMUNICATION

This course is delivered using the Blackboard course management system. In addition, students may be required to submit course assignments from time to time to the instructor "electronically" using Hunter or other CUNY e-mail. An active Hunter or CUNY student e-mail user ID and password is required to log into both Blackboard and e-mail. An active CUNY e-mail ID is required for non-Hunter students taking the class. This class also uses Adobe Connect as the venue for the 'live' classes and for some of the lectures. Students will need, at a minimum, a computer with speakers and a microphone to participate. An aftermarket headset/microphone combination is acceptable. In addition, we strongly recommend that students have a webcam.

Blackboard and Hunter/CUNY e-mail will be used for communicating with the instructor, for receiving some supplemental course materials, and for submitting assignments. It is the responsibility of the student to remain current on this system.

GRADE OF INCOMPLETE

There is absolutely no right to a grade of incomplete. Only students averaging B or above in a course are eligible to request an incomplete grade. Graduate students have one academic year in which to submit the missing work otherwise the "IN" grade is permanent on the college transcript. A specific, written agreement between the instructor and the student that details the requirements for making up the incomplete is also required.

INSTITUTIONAL POLICIES:

ACADEMIC INTEGRITY STATEMENT

Hunter College regards acts of academic dishonesty (e.g., plagiarism, cheating on examinations, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures.

Any deliberate borrowing of the ideas, terms, statements, or knowledge of others without clear and specific acknowledgement of the source is intellectual theft and is called plagiarism. It is not plagiarism to borrow the ideas, terms and statements, or knowledge of others if the source is clearly and specifically acknowledge. Students who consult such critical material and wish to include some of the insights, terms or statement encountered must produce full citations in an appropriate form. See the Hunter College Graduate Catalog for the following link for more information:

http://www.hunter.cuny.edu/senate/assets/Documents/Hunter%20College%20Policy%20on%20Academic%20Integrity.pdf

STUDENTS WITH DISABILITIES

The Office of AccessABILITY (1124 East Building, 212-772-4857). provides services to all students with permanent or temporary disabilities to ensure that all Hunter College programs and activities are accessible. The program can assist students to maximize their potential while helping them develop and maintain independence. Additional information concerning disability services can be viewed at: *http://www.hunter.cuny.edu/studentservices/access*

HELP WITH RESEARCH AND WRITING

The School of Health Sciences is committed to improving the writing skills of our students. If you feel you need assistance in strengthening your writing skills, take advantage of the materials developed by the Writing Center that are available on their website at http//rwc.hunter.cuny.edu, or sign up for tutoring at the Writing Center (Room 416 Thomas Hunter Hall, 212-650-3937). As a substantial portion of your grade in this course is based on written assignments, you are advised to take advantage of Hunter's writing assistance services early in the semester.

The Hunter College reading/writing center has a wealth of helpful material about how to write outlines and papers. You should access and use this material throughout this course. http://rwc.hunter.cuny.edu/

GRADE APPEALS

Grades can be appealed in a progressive order to the instructor, School Director and the Hunter College Senate. When a student considers a final course grade unsatisfactory, the student should first confer with the instructor regarding the accuracy of the grade received. Graduate students have the right to request in writing that the Director of the School of Health Sciences appoint a student as a member to the department/School Grade Appeals Committee. This appeal conference should be held within the first five weeks of the semester following receipt of the grade, in accordance with the "College-wide Grade Appeals Procedures" adopted by the Senate in fall 1985. See Hunter College Graduate Catalog for more information

HEALTH ECONOMICS (3 credits)
HPM 755.00 - 01
Spring 2016
Thursdays, 8:00 – 9:45 pm, Silberman 320
Silberman Campus, East Harlem

Michele J. Siegel, Ph.D.
Adjunct Associate Professor, Health Policy and Management
CUNY School of Public Health
E-mail: ms1950@hunter.cuny.edu
Office Hours: By Appointment

Pre-requisites
PH 75600
PH75500

Brief Course Description

The purpose of this course is to introduce students to essential microeconomic concepts as they apply to health systems, individual and public health, particularly in urban settings. Students will become familiar with the role of economics in health policy, analyze health care and health insurance in the frame work of classical economic theory, and critically evaluate health care systems.

Specialization Competencies	Learning Objectives	Assessment Methods
Apply relevant theoretical/conceptual models and leadership principles to developing health policy	Apply economic theory to analyze health policy	Weekly assignments, exams
Identify and analyze the legal, economic, ethical and health bases and implications of public health policies that affect urban populations	Discuss the role of economics in health policy	Weekly assignments, exams
Identify non-public health policies and describe how they can mitigate or exacerbate health disparities and influence the health of urban populations	Assess the need for non market-based suppliers of health care	Weekly assignments, exams
Analyze and critically evaluate theoretical and conceptual models used to describe the U.S. health care system and the delivery of health care	Assess the utility of economic theory to analyze the US health care system	Weekly assignments, exams
Apply economic concepts and theories to the analysis of health care policy and management issues that inform decision-making and policy development	Analyze the demand for and supply of health, health care, and health insurance in the classical economic theoretical framework	Weekly assignments, exams

Class Format/Learning Methods

This class will meet exclusively in person. Please see the course schedule for meeting dates and locations. The work is a combination of lectures, readings, tests, and weekly assignments. It is expected that each student will be prepared for and actively participate in each class.

Required Readings

Santerre and Neun's Health Economics: Theory, Insights, and Industry Studies, 6th Edition. Note: if the 6th edition is too expensive, you may also use the 4th or 5th editions.
Dewar's Essentials of Health Economics, 2nd Edition. Note: if the 2nd edition is too expensive, you may also use the 1st edition.

Method of Evaluation

Class Attendance & Participation

Attendance is required and is a graded part of the course. Participation is also required and graded. Participation in discussion includes asking questions, answering questions, and other thoughtful or intelligent contributions to the discussion. Students will be called upon to answer questions relating to the material, so proper preparation is required. I may not lecture on all of the readings. I will let you know which readings to prioritize a week in advance.

Weekly Assignments

Class sessions will include brief written assignments. These will be graded on a three point scale. Please proofread your work and correct grammatical and typographical mistakes.

Midterm Exam and Final Exam

There will be a take-home mid-term exam on microeconomic principles applied to health, and a take home essay-based final examination.

GRADING AND ASSESSMENT:

Grading for the course

- Class Participation & Attendance 20%
- Weekly Assignments 30%
- Take-home Midterm 25%
- Essay based take home Final Exam 25%

Graduate Center Grade Policy

- A (plus or minus)—Excellent
- B (plus or minus)—Good
- C (plus or minus)—Fair (lowest passing mark)
- W — Withdrew without academic penalty. This is a student-initiated grade, which may be requested from the fourth through the tenth week of the semester. Under no circumstances can a student withdraw and receive a —W grade after the tenth week of the semester without the written permission of the course instructor and the Executive Officer, and the approval of the Vice President for Student Affairs. This grade carries tuition liability.
- F—Failure

Graduate Center Policy on INC Grades

To resolve incomplete grades, students must fulfill their obligations within one calendar year after completion of the course. After one year, an incomplete (INC) will automatically be transformed into an INP (permanent incomplete); extensions will be granted only in exceptional circumstances upon written

application and with the permission of the faculty member, the Executive Officer, and the Vice President for Student Affairs. Permanent incompletes will accrue no credit. Incomplete grades cannot be changed to letter grades after a student has been advanced to candidacy and has been moved to Level III. Students with more than two incomplete courses will be brought to the attention of their Executive Officer to determine whether or not they are making satisfactory progress. Students will not normally be regarded as making satisfactory progress toward their degrees if they have more than two INCs on their records. (Please refer to Standards for Retention below, and to page 63 of this handbook.) Students should be aware that continued registration and most financial aid awards are conditional upon satisfactory progress. Students should also note that credits for which they have an INC as of the end of the third week of classes of a given semester are not counted toward advancement to the next level for that semester.

Information on Access to the Office of Disabled Students

CUNY GRADUATE CENTER: Among other responsibilities, the CUNY Graduate Center Vice President for Student Affairs has overall responsibility for Student Disability Services and is the 504/ADA Coordinator. Contact information: Vice President for Student Affairs - Matthew G. Schoengood, Room: 7301. Telephone: 212-817-7400 Email: studentaffairs@gc.cuny.edu

HUNTER COLLEGE: The Office of AccessABILITY provides services to all students with permanent or temporary disabilities to ensure that all Hunter College programs and activities are accessible. The program can assist students to maximize their potential while helping them develop and maintain independence. Additional information concerning disability services can be viewed at: http://www.hunter.cuny.edu/studentservices/access.

Course Communication and Assignment Submission

This course is delivered using the Blackboard course management system. Blackboard's email service will be used for class communication. It is the responsibility of the student to check the email account that is linked with the Blackboard system.

Class Attendance Policy

Class attendance is essential. Each student is expected to attend and actively participate in each class. One absence is allowed. Each additional absence will result in a penalty from the course grade, with almost no exceptions.

Syllabus Change Policy

Except for changes that substantially affect implementation of the evaluation (grading) statement, this syllabus is a guide for the course and is subject to change with advance notice. Changes to the syllabus will be announced in class and posted to Blackboard as an announcement.

Due Dates for Midterm and Final Exams

Class 7: March 17th	Take Home Midterm Exam Distributed
Class 8: March 31st	Take Home Midterm Exam Due
Class 14: May 19th	Take Home Final Exam Distributed
Class 15: May 26th	Take Home Final Exam Due

Schedule

Required Readings by Session (Read Before Class) –Readings may change*	
Class 1 February 4th	**Topic:** Course Introduction and Overview. What is health economics? Readings: ▪ Goldhill, D. How American health care killed my father. The Atlantic, September 2009. http://www.theatlantic.com/magazine/archive/2009/09/how-american-health-care-killed-my-father/307617/ ▪ Gawande, A. Big Med, Annals of Health Care, New Yorker, August 13, 2012 http://www.newyorker.com/magazine/2012/08/13/big-med ▪ Dewar Chapter 1: U.S. Healthcare System Issues ▪ Dewar Chapter 2: The Role of Economics ▪ Arrow, Kenneth. Uncertainty and the Welfare Economics of Medical Care, *American Economic Review,* Dec 1963.
Class 2 February 11th	**Topic**: Review of Key Concepts in Economics. Readings: ▪ Santerre and Neun Chapter 1: Introduction ▪ Santerre and Neun Chapter 2: Health and Medical Care: An Economic Perspective ▪ Rice, T. Can markets give us the health system we want? *Journal of Health Politics, Policy and Law*, 1997 April; Vol. 22, No. 2 ▪ Sarpel U, Vladeck BC, Divino CM, Klotman PE. Fact and Fiction Debunking Myths in the US Healthcare System. *Annals of Surgery.* 2008 April; 47(4): 563-569.
Class 3 February 18th	**Topic**: Reading Scientific Articles Readings: ▪ A primer. Purugganan M, Hewitt J. How to read a scientific paper. Cain Project for Engineering and Professional Communication Rice University, 2004. ▪ Basset, MT et al. Purchasing behavior and calorie information at fast-food chains in New York City, 2007. *American Journal of Public Health*, August 2008, Vol 98, No. 8. ▪ Zhang et al. Unmet eyecare needs among US 5th grade students. *Am J Prev Med* 2012; 43(1): 55–58. ▪ Elbel et al. Calorie labeling and food choices: A first look at the effects on low-income people in NYC. *Health Affairs*, 28, no.6 (2009):w1110-w1121.

Class 4 February 25th	**Topic**: Linear Regression in Health Economics Readings: ▪ Kleinbaum et al. Chapter 8: Multiple Regression Analysis ▪ Kleinbaum et al. Chapter 9: Testing Hypotheses in Multiple Regression ▪ Kleinbaum et al. Chapter 12: Regression Diagnostics. ▪ Fernald LCH: Socio-economic status and body mass index in low-income Mexican adult *Social Science and Medicine*. 2007; 64: 2030-2042. ▪ Monk-Turner E. Economic returns to community and four-year college education. *Journal of Socio-economics*. 1994; 23(4): 441-448 ▪ Video on linear regression: http://www.youtube.com/watch?v=833V0NaSVu4
Class 5 March 3rd	**Topic:** Grossman's Demand for Health Model Readings: ▪ Grossman, Michael. On the Concept of Health Capital and the Demand for Health, *Journal of Political Economy; 1972,* 80 (2): 223–255 ▪ Leibowitz AA. The demand for health and health concerns after 30 years. *Journal of Health Economics* 2004; 23:663-671. ▪ Gupta N. and Greve J. Overweight and obesity and the Demand for Primary Physician Care. IZA Discussion Paper No. 4098 March 2009. ▪ Dewar Chapter 6: The Demand for Health
Class 6 March 10th	**Topic**: Demand for Healthcare Readings: ▪ Kenkel, DS. The Demand for Preventive Medical Care. *Applied Economics* 1994 26(4) 313-325. ▪ Dewar Chapter 4: The Demand for Health Care, pages 25-30 ▪ Santerre and Neun Chapter 5: Demand for Medical Services.
Class 7 March 17th	Midterm Exam Distributed **Topic**: Healthcare Supply and Costs Readings: ▪ Health Care Costs: A Primer. Key information on health care costs and their impact. Henry J. Kaiser Family Foundation, March 2009. ▪ Dewar Chapter 6: Health Production, Costs, and Supply
March 24	**No Class--Classes Follow a Friday Schedule**

Class 8 March 31st	Midterm Exam Due **Topic:** Private Health Insurance and Moral Hazard Readings: ▪ Santerre and Neun Chapter 11: The Private Health Insurance Industry ▪ Gladwell, M. The Moral-Hazard Myth. The New Yorker, August 29, 2005. ▪ Nyman, John A. Is Moral Hazard Inefficient? *Health Affairs*, Vol 23, No. 5 ▪ Arrow, Kenneth. Uncertainty and the Welfare Economics of Medical Care, *American Economic Review,* Dec 1963.
Class 9 April 7th	**Topic:** Government Health Insurance, Access to Care and Costs Readings: ▪ Santerre and Neun Chapter 10: Government as Health Insurer (please double check this is the correct number of this chapter, as you may have a different edition of the text) ▪ Gruber, J. and Simon, K. Crowd-Out 10 Years Later: Have Recent Public Insurance Expansions Crowded Out Private Health Insurance? *Journal of Health Economics*, Vol 27: 2008. ▪ Baicker, K. The Oregon Experiment, *New England Journal of Medicine,* 2013. ▪ Taubman et al. Medicaid Increases Emergency Department Use: Evidence from Oregon's Health Insurance Experiment, *Science*, 343:2014
Class 10 April 14th	**Topic:** Overview of Randomized Controlled Designs and Rand Health Insurance Experiment; Discussion of Basic Econometric Designs. Readings: ▪ Welch BL et al. The Rand Health Insurance Study: a summary critique. *Medical Care.* 1987. 25:148-156. ▪ Aron-Dine A. et al. The Rand Health Insurance Experiment, Three Decades Later. *Journal of Economic Perspectives*, Vol 27, number 1: 2013 ▪ Brook R. et al. Does Free Care Improve Adult Health? *New England Journal of Medicine*: Vol 309, 1983 ▪ Manning et al. Health Insurance and the Demand for Medical Care. *American Economic Review*, Vol 77: No 3: 1987.
Class 11 April 21st	**Topic:** The Affordable Care Act Readings: ▪ Focus on Health Reform. Summary of Coverage Provisions in the Patient Protection

	and Affordable Care Act. ▪ Major Provisions of the Affordable Care Act By Years (ACA) http://www.commonwealthfund.org/Health-Reform/Health-Reform-Resource.aspx ▪ Blumenthal et al. The Affordable Care Act at 5 Years, *New England Journal of Medicine.* 2015 ▪ Han, Xuesong, et al. "Has recommended preventive service use increased after elimination of cost-sharing as part of the Affordable Care Act in the United States?" *Preventive medicine* 78 (2015): 85-91. ▪ Pande, A et al. Effects of Healthcare Reforms on Coverage, Access, and Disparities, American Journal of Preventive Medicine, July 2011:41:1 ▪ Abraham J. How Might the Affordable Care Act's Coverage Expansion Provisions Influence Demand for Medical Care? *The Milbank Quarterly*, Vol 92: No 1: 2014.
April 28th	**No Class—Spring Recess**
Class 12 May 5th	**Topic:** Quality of Care and P4P Readings: ▪ Emmert, M. et al. Economic Evaluation of Pay –For-Performance in Health Care: A systemic Review. *European Journal of Health Economics, 2012.* ▪ Sherilyn K. Does Performance Based Remuneration for Individual Health Care Practitioners Affect Patient Care. *Annals of Internal Medicine*, 2012. ▪ Werner, R. and Dudley R. Medicare's New Hospital Value-Based Purchasing Program is Likely to Have Only a Small Impact on Hospital Payments, *Health Affairs*, 31:9:2012
Class 13 May 12th	**Topic:** The Economics of Obesity Readings: ▪ Grossman and Mocan. Economic Aspects of Obesity. *NBER*. April 2011. ▪ Finkelstein E. and Strombotne, The Economics of Obesity, *The American Journal of Clinical Nutrition*, 2010. ▪ Brownell, K. The Public Health and Economic Benefits of Taxing Sugar-Sweetened Beverages, *New England Journal of Medicine*, Oct 2009. ▪ Cawley J. The Economics of Childhood Obesity. *Health Affairs*, 29:3:2010. ▪ Taubes G. "Is Sugar Toxic?" *The New York Times.* April 13, 2011 http://www.nytimes.com/2011/04/17/magazine/mag-17Sugar-t.html?pagewanted=all

Class 14 **May 19th**	**Take Home Final Exam Distributed** **Topic:** The Economics of Addiction Readings: ▪ Becker GS, Murphy KM. A theory of rational addiction. *Journal of Political Economy*. 1988; 96: 675-700. ▪ Grossman M, Chaloupka FJ. The demand for cocaine by young adults: a rational addiction approach. *Journal of Health Economics*. 1998; 17:427-474. ▪ Sloan FA, Wang Y. Economic theory and evidence on smoking behavior of adults. *Addiction.* 2008; 103: 1777-1785. ▪ Camerer C. Behavioral economics. Reunifying psychology and economics. *Proc Nat Acad Sci*. 1999; 96:10575-10577.
Class 15 May 26th	**Take Home Final Exam Due** **Topic:** Adolescent Health Readings: ▪ Markowitz S, Kaestner R, Grossman M. An investigation of the effects of alcohol consumption and alcohol policies on youth risky sexual behaviors. Alcohol Taxation and Control. *AEA Papers and Proceedings*. May 2005. Pages 263-266. ▪ Grossman M, Markowitz S. I did what last night?! Adolescent risky sexual behaviors and substance use. *Eastern Economic Journal*. 2005; 31:383-405. ▪ Grossman M, Kaestner RT, Markowitz S. Get high and get stupid: the effect of alcohol and marijuana use on teen sexual behavior. *National Bureau of Economic Research, Working Paper 9216:* 2002.

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

PUBH 851 – Advanced Methods in Epidemiology
3 Credits
Spring 2016

Time and location	Graduate Center Room C196.03, Wed. 6:30-8:30 PM
Instructor	Associate Professor, Heidi Jones, PhD MPH 212-396-7750 hjon@hunter.cuny.edu Email is preferred method for correspondence
Office hours	Monday from 4:00-6:00 PM in Silberman Room 426 or by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	A seminar course that provides an in-depth understanding of advanced epidemiological techniques for data analysis and promotes lifelong learning via student-led applications and discussions of these methods
Course prerequisites	PUBH 822 Epi Methods III & PUBH 825 Applied Bios II
Course format	I This is a seminar course with student-led group discussions combined with computer applications during lab sessions and as assignments. All materials are posted on Blackboard.
Required reading and resources	There is no required textbook. Weekly readings are available on Blackboard
Suggested reading and resources	Optional additional readings will also be posted on Blackboard.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Demonstrate mastery of causal inference and apply these techniques to scientific questions relevant to at least two current public health issues or population groups that are relevant to the student's substantive content interests.	• Describe the strengths and limitations to using propensity scores and inverse probability weights for treatment effects to adjust for confounding in observational studies • Describe the strengths and limitations to using inverse probability weights for censoring with use of multiple imputation to adjust for missing data in longitudinal observational studies	• Worksheets • Group discussion facilitation
.2 Identify and apply appropriate biostatistical approaches to analyses that address epidemiological questions in public health research and practice	• Run and interpret propensity score models with stratification and matching in SAS • Run and interpret IPW for treatment effect models in SAS • Run and interpret IPW to account for loss to follow up in SAS • Run and interpret multiple imputation to account for missing data in longitudinal studies	• Lab assignments
3. Teaching epidemiologic methods to students, more junior colleagues or to others in public health	• Facilitate group discussions of advanced epidemiological method papers • Present and explain SAS syntax and output for advanced epidemiological methods	• Group discussion facilitation • Analysis presentation

Course Assessments

Your understanding of the course material will be evaluated through 4 homework assignments using SAS statistical software, 7 worksheets based on the readings, group discussion facilitation, presentation of final analysis and class participation

Grading

Evaluation criteria

Homeworks: there will be 4 homework assignments based on the SAS labs in which students will be asked to apply the statistical techniques used in the lab to data, and interpret the results on their own. Each homework will be graded out of 25, based on the extent to which the results and interpretation are correct.

Worsheets: there will be 7 worksheets with guiding questions to focus students' reading of the weekly materials. Worksheets will be scored from 1-3, with 1 showing minimal effort, questions not fully answers, and/or lack of understanding of the material, 2 showing solid effort, with some questions not fully answered and 3 showing high level of effort, questions fully answered, and high level of comprehension.

Group facilitation: Articles will be assigned to facilitators for weekly article discussion. Facilitaors will be scored from 1-3, with 1 showing minimal preparation and/or inability to guide discussions effectively, 2 showing solid preparation and strong discussion, with some diversions, 3 showing high levels of preparation, and clear guidance to keep discussions focused on content area.

Final project: For the final project, students will select a dataset of their choice and apply one or two methodological techniques covered in class to explore a research question. They will present the results from the final analysis during class, and will prepare a 5-6 page paper describing the methods and interpreting the results. Additional information on the final project, including the grading rubrics will be posted on Blackboard.

The relative weight of each course component is as follows:

Assessment	Weight
Homeworks	30%
Worksheets	30%
Group facilitations	10%
Final presentation	15%
Final project/paper	15%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation

Class will begin promptly to maximize our time together. Please arrive to class on time, and be prepared to contribute to class discussion. Participation and in-class attendance are worth 5% of your grade.

Late/incomplete submission of assignments

Worksheets are due electronically at 6 PM prior to the beginning of class. No late assignments for worksheets will be accepted. SAS exercises are due electronically at 6 PM prior to the beginning of class. Late assignments will receive 4 points (out of 100) deducted for every day late and NO assignments will be accepted more than 3 days late (i.e. later than 6 PM on Saturday).

Make-ups, rewrites, and extra credit
There will not be any opportunities for extra credit or rewrites.

Expectations of students
Attend seminars, read articles prior to class, participate during class discussions, seek help/ask questions early and often, provide the instructor with constructive feedback on course material and content and, have fun with the material,

Expectations for the instructor
I will respond to emails within 24-48 hours, excluding weekends. I will tailor the class to your needs and interests depending on the feedback I receive. Generally, I will return graded homework assignments within two weeks (will return them within one week, when possible)

"Green" policies
In an attempt to save paper, homework assignments will be submitted electronically and will be returned electronically, with comments in track changes. Suggestions for other adjustments to the course to reduce environmental impact are always welcome.

Accessibility
Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity
CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule

	Date	Topic	Readings and Assignments
1	02/03/16	Review confounding, selection bias, measurement error and DAGS	Come to class with suggestions for additional topics to consider in this class
2	02/10/16	Propensity scores and IPW for treatment	• Austin. 2011. An introduction to propensity score methods for reducing the effects of confounding in observational studies. *Multivariate Behavioral Research*. 46:399-424. • Crowson et al. 2013. The basics of propensity scoring and marginal structural models. Technical report #84, Mayo Clinic. • Hernán and Robins. Causal Inference. Chapter 2 Randomized Experiments. • Rubin. 2007. The design versus the analysis of observational studies for causal effects: Parallels with the design of randomized trials. *Statistics in Medicine.* 26:20-36. • Three letters – Shrier, Rubin and Pearl in response to the above Rubin 2007 article. • Dean et al. 2015. Can you party your way to better health? A propensity score analysis of block parties and health. *Social Science & Medicine.* 138:201-9. **Worksheet 1 due**
3	02/17/16	Lab 1: Propensity score stratification and matching in SAS	• Parsons. Using SAS software to Perform a Case-Control Match on Propensity Score in an Observational Study. • Yanovitzky et al. Estimating causal effects of public health education campaigns using propensity score methodology. 2005. *Evaluation and Program Planning*. 28:209-220. • Hernán and Robins. Causal Inference. Chapter 3 Observational studies.
4	02/24/16	***Please note we are meeting in the conference room in 3317 for discussion***	• Cepeda et al. 2003. Comparison of logistic regression versus propensity score when the number of events is low and there are multiple confounders. *American Journal of Epidemiology*. 158:280-7. • Zule & Bobashev. 2009. High dead-space syringes and the risk of HIV and HCV infection among injecting drug users. *Drug and Alcohol Dependence*. 100:204-13. • Kurth et al. 2005. Results of multivariable logistic regression, propensity matching, propensity adjustment, and propensity-based weighting under conditions of nonuniform effect. *American Journal of Epidemiology*. 163:262-70. • Stuart. 2010. Matching methods for causal inference: a review and a look forward. *Statistical Science*. 25:doi.10/1214/90-STS313.

	Date	Topic	Readings and Assignments
			• Glynn et al. 2006. Indications for propensity scores and review of their use in pharmacoepidemiology. *Basic Clin Pharmacol Toxicol*. 98:253-9. • Vaughan et al. 2015. An application of propensity score weighting to quantify the causal effect of rectal sexually transmitted infections on incident HIV among men who have sex with men. BMC Medical Research Methodology.15:doi.10/1186/s12874-015-0018-y. **4 facilitators for assigned article(s) posted on Bb (30 minutes per facilitator)** **Worksheet 2 due**
5	03/02/16	Lab 2: Propensity scores and creation of IPW for treatment (chapter 12 SAS code Hernan text)	• Hernán and Robins. Causal Inference. Chapter 11 Why Model? & Chapter 12 IP Weighting and Marginal Structural Models **Homework 1 due**
6	03/09/16	IPW vs. multiple imputation for longitudinal studies with missing data	• Weitz et al. 2013. Safety of aspiration abortion performed by nurse practitioners, certified nurse midwives, and physician assistants under a California legal waiver. *Am J Pub H.* • Sterne et al. 2009. Multiple imputation for missing data in epidemiological and clinical research: potential and pitfalls. *BMJ.* 338:b2392. • Pearl and Mohan. 2014. Recoverability and testability of missing data: introduction and summary of results • Mohan and Pearl. 2015. Graphical models for recovering probabilistic and causal queries from missing data. • *Additional readings TBD.* **Assigned facilitators** **Worksheet 3 due**
7	03/16/16	Lab 3: IPW vs. multiple imputation for loss to follow up	• Readings TBD **Homework 2 due**
	03/23/16	No Class – Friday Schedule	
8	03/30/16	Marginal Structural Models vs. Structural nested models (g-estimation)	• Hernán and Robins. Causal Inference, chapter 13 Standardization and the parametric g-formula & G-estimation of structural nested models • Additional reading TBD **Assigned facilitators** **Worsheet 4**

	Date	Topic	Readings and Assignments
9	04/06/16	Doubly robust estimation	• Readings TBD **Assigned facilitators** **Worsheet 5**
10	04/13/16	Lab 4: Doubly robust estimation	• Readings TBD **Homework 3 due**
11	04/20/16	Transportability	• Readings TBD **Assigned facilitators** **Worsheet 6**
	04/27/16	No class - spring break	
12	05/04/16	Non-linear associations – splines and transformations	• Readings TBD **Assigned facilitators** **Worsheet 7**
13	05/11/16	Lab 5: Non-linear associations	• Readings TBD
14	05/18/16	Competing risks in survival analysis	• Readings TBD **Homework 4 due**
15	05/25/16	Final presentations	Final presentations

Please note, while the overall content of this course will be covered as outlined, the syllabus may change based on the need to adapt to student interests, feedback and expertise. Always check the Blackboard site for the most up-to-date information on course readings and assignments.

CUNY SCHOOL OF PUBLIC HEALTH

NUTR 702 - Pre-Professional Practice in Dietetics: Food Service
3 Credits **Spring 2016**

Time and Location	As arranged with preceptor, hours as arranged by preceptor and Internship Director
Instructor	Internship Director, Ann Gaba EdD, RD, CDN, CDE
Email	agaba@hunter.cuny.edu
Phone	Office: (212)-396-7773 Cell (interns ONLY): (646)-578-5886
Office	Silberman 611
Office hours	Walk-in: Wednesday 4:30 – 6:00 pm, or by appointment
Course website	https://bbhosted.cuny.edu
Course description	Supervised externship in food service and personnel management *Open to dietetic internship (DI) students only.*
Course Prerequisites	Complete all required coursed for a Didactic Program in Dietetics (DPD) and match to the Internship through the Dietetic Internship Centralized Application System and DnD Digital.
Course Format	In this supervised practice experience, interns are placed with preceptors in food service management practice sites. This fieldwork is supported by on-line reference materials and assignments via Blackboard.
Required books	none
Recommended books	Introduction to Foodservice,(formerly West and Wood) June Payne-Palacio and Monica Theis, Pearson/ Prentice Hall. ISBN 0135008204
Reserve material	See list posted on Blackboard Page
Other required materials	See web links on Blackboard Page

Assignments: Food Service Module, Food Service/ Food Science Conference Report

Class attendance/participation: Intern schedules are arranged individually with each preceptor. All interns are expected to arrive at their rotation sites at the agreed upon times. Interns are expected to notify the Internship Director and their preceptor of a need for any changes to the schedule in advance.

Supplemental Reading Materials: will be posted on Blackboard, or handed out in class. Any changes will be posted in Announcements.

Reference Manuals – refer to the **Dietetic Internship Policy and Procedure Manual** and the **Intern Handbook** for further details of policies and procedures.

50%	Preceptor Projects / Evaluation
100%	

MPH Program Competencies:

MPH Program Competencies for all MPH students	Course Learning Objectives
. Apply the core functions of PH practices (assessment, policy development, and assurance) to the analysis of urban PH problems and their solutions.	Demonstrate through the intern log and chart review assignments the application of assessment, assurance and/or policy development during the fieldwork experience.
. Apply the core PH values and techniques (e.g., science-based, population-focused, community-oriented, prevention-motivated approach, rooted in social justice).	Demonstrate through the intern log and chart review assignments the application of one or more core PH values or techniques through the fieldwork experience
. Apply ethical principles and standards when conducting PH activities (e.g. use of information technology; assessment and research; program development, implementation and evaluation; and policy development and analysis).	Apply ethnical principles to fieldwork placement, (e.g. human subjects' protection principles to the data collection). Assess the degree to which the fieldwork placement agency adheres to ethical principles and standards Practice in accordance with American Dietetic Association Code of Ethics.
. Apply principles of effective communication in presenting PH information in various media and formats to professional and lay audiences	Prepare written and oral progress and evaluation reports (e.g. intern logs, conference review papers, service improvement projects), using appropriate professional formats.
1. Collaboratively engage with diverse communities, sectors and/or constituencies (e.g. researchers, practitioners, community organizations)	Identify different stakeholders and evaluate their roles on the fieldwork project. Collaborate with one or more preceptors in

to achieve PH goals.	carrying out and evaluating a service improvement project.
4. Use key planning constructs (e.g. values, vision, mission, goals, objectives and outcomes) in planning, implementing and evaluating PH programs	Explain the difference between key planning constructs and demonstrate the ability to incorporate them in planning, implementing and evaluating the fieldwork project

Institutional policies

Academic honesty: Hunter College regards acts of academic dishonesty (e.g., plagiarism, cheating on examinations, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. For more information visit: http://www.hunter.cuny.edu/studentservices/advising/policies-sub/policies-academic-integrity. The complete text of the CUNY Academic Integrity can be found at this site: http://www.cuny.edu/about/administration/offices/la/Academic_Integrity_Policy.pdf/

Services for disabled students: "In compliance with the American Disability Act of 1990 (ADA) and with Section 504 of the Rehabilitation Act of 1973, Hunter College is committed to ensuring educational parity and accommodations for all students with documented disabilities and/or medical conditions. Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. It is recommended that all students with documented disabilities (emotional, medical, physical, and/or learning) consult the Office of AccessABILITY to secure necessary academic accommodations. For further information and assistance, please call: (212) 772- 4857 or (212) 650-3230 or visit http://www.hunter.cuny.edu /studentservices/access

Help with research and writing: Feedback will be given on the quality of all written assignments. If you require further assistance with improving your writing skills, consider visiting the Student Reading and Writing Center at the 68th Street campus. For more, information visit http://rwc.hunter.cuny.edu/

Last day to drop the course with the grade of "W" is Nov 6, 2014. Hunter has three types of grades of withdrawal: W, WA, and WU. There may be serious academic and financial consequences associated with course withdrawal. Discuss your situation with an Advisor

in the Office of Student Services, 1119 East Building, (212) 772-4882. For more information visit: http://www.hunter.cuny.edu/studentservices/advising/policies-sub/policies-course-withdrawal

Incomplete grade policy: Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an INCOMPLETE is at the discretion of the instructor. Only students averaging C or above in a course are eligible to request an incomplete course grade. According to Hunter regulations, there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, a contract stating the terms and deadlines for submission of pending assignments will be signed by both the student and the instructor. The student with an INC grade will not be permitted to register for classes in the upcoming semester unless this contract is on file in the SUPH office and the instructor advises the Program Director when the incomplete has been resolved.

Grade appeals: When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. Please consult with the instructor within the first 3 weeks of the following semester. If the student is still not satisfied, he/she should promptly contact the Program Director in writing giving the factual reasons and basis for the complaint. Students have the right to request in writing that the SHS Director of the Hunter College campus appoint a student as a member to the Grade Appeals Committee. This appeal at the campus level must be submitted within the first 5 weeks of the semester following the receipt of the grade. For further guidance, please refer to the "College-wide Grade Appeals Procedures" adopted by the Senate in fall 1985. Copies of this procedure may be obtained in the Senate Office, the Office of Student Services, or departmental offices. For more information, visit: http://www.hunter.cuny.edu/studentservices/advising/policies-sub/policies-academic-appeals

CUNY SCHOOL OF PUBLIC HEALTH

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

NUTR 710: Principles of Public Health Nutrition

3 Credits
Spring 2016

Time and location	Silberman Building Room TBD Tuesdays, 6:05 to 7:50 pm
Instructor	Assistant Professor May May Leung, PhD, RD mm.leung@hunter.cuny.edu (best way to reach me) 212.396.7774
Office hours	Tuesdays, 3:45 to 5:45 pm or by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Fundamentals of nutrition in public health as they apply to health promotion and disease prevention for individuals and society, with emphasis on urban populations.
Course prerequisites	N/A
Course format	Hybrid (lecture and online)
Required reading and resources	Edelstein S. Nutrition in Public Health: A Handbook for Developing Programs and Services (3rd edition). Sudbury (MA): Jones & Bartlett Learning; 2011.
Suggested reading and resources	Spark A. Nutrition in Public Health: Principles, Policies and Practice (2nd edition). Boca Raton (FL): CRC Press; 2015.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Apply research methodology, interpretation of research literature and integration of research principles into evidence-based practice for public health nutrition	• Locate and synthesize empirical evidence related to public health nutrition • Identify evidence-based health promotion strategies appropriate for a target population • Develop an evidence-informed public health nutrition initiative for a target population	• Discussion • Logic Model • RE-AIM Evaluation • Food Policy Debate • Grant Proposal: Letter of Intent • Grant Proposal: Paper • Grant Proposal: Presentation
2. Identify and prioritize nutritional problems for individuals at various stages of the life cycle and for diverse population groups using appropriate assessment methodologies.	• Locate and synthesize empirical evidence related to public health nutrition issues for diverse populations at different stages of the life cycle • Identify different nutrition and anthropometric assessment methodologies appropriate for public health nutrition issues	• Discussion • RE-AIM Evaluation • Food Policy Debate • Grant Proposal: Letter of Intent • Grant Proposal Paper • Grant Proposal Presentation
3. Use social and behavioral theories to inform public health and nutrition research and practice	• Apply social and behavioral theories in the design, development and evaluation of public health nutrition-related initiatives	• Grant Proposal: Paper • Grant Proposal: Presentation
4. Discuss the role of government and organizational systems and policies that influence accessibility, adequacy and safety of the food supply system (production, processing, distribution, consumption), and the relationship of food, nutrition and lifestyle choices in health promotion and disease prevention	• Identify factors that link the food supply system with the political, social, economic and health status of communities. • Identify federal, regional and local organizations that play roles in public health and nutrition promotion and advocacy. • Identify government policies at the federal, state and local levels that influence health and lifestyle choices of the population.	• Discussion • Logic Model • Food Policy Debate

5. Demonstrate effective oral and written communication and advocacy skills for public health nutrition	• Identify effective methods of translating evidence-based information for public health nutrition education and advocacy • Identify effective methods of communicating evidence-based nutrition information to different populations	• Discussion • Food Policy Debate • Grant Proposal: Letter of Intent • Grant Proposal: Paper • Grant Proposal: Presentation
6. Contribute to the planning, implementation or evaluation of community nutrition interventions as a member of an interdisciplinary team	• Design a public health nutrition initiative for a vulnerable population. • Develop outcome measures to evaluate the potential impact of a public health nutrition-related initiative.	• Logic Model • RE-AIM Evaluation • Goals and Objectives • Grant Proposal: Letter of Intent • Grant Proposal: Paper • Grant Proposal: Presentation

Course Assessments

Your understanding of the course material will be evaluated through multiple assignments, a grant proposal paper and presentation, a group policy debate, and class discussion/participation. Below is a brief description of the course assessments. Details about the assignments and grading criteria will be available on the course website.

Logic Model (40 points):
Develop a logic model for a nutrition and/or physical activity policy related to obesity and/or food security. Note what the policy is and also whether it is a city, state or federal level policy.

Goals and Objectives (40 points):
The prevalence of type 2 diabetes in adults in the South Bronx is higher than the national average. You are an RD/nutritionist at the NYC Department of Health who has been assigned the responsibility of addressing this problem.
Write 2 outcome objective for South Bronx adults related to the following behaviors:

a. reducing intake of sugary drinks (e.g., sodas)
b. increasing physical activity behavior

Write a process objective for each of the outcome objectives you wrote for Question #2. Be sure that your process objective is related to your outcome objective.

RE-AIM Evaluation (40 points):
Choose a federal, regional or local public health nutrition policy/program in which you're interested.

Using the RE-AIM framework and the Center-TRT website (www.center-trt.org), evaluate the policy/program's potential for public health impact by assessing each component of the RE-AIM framework.

Public Health Nutrition Career Goals (10 points):

- Update your resume and <u>bring it to class</u>.

- <u>Print out</u> two job descriptions/openings in the field of public health/community nutrition. Review the job descriptions and highlight parts of the job that you believe match your strengths. Highlight parts of the job description that you believe you need to improve upon to be a stronger candidate for the positions.

- Answer the following questions.
  - How do you define 'success'?
  - What are your career goals?
  - What do you want to accomplish in the next year that will help you reach your career goals?
  - State one next step that you will do to strengthen your potential candidacy for one of the positions you researched.

Food Policy Debate (60 points):
Classroom debates are exercises designed to allow you to strengthen your skills in the areas of leadership, interpersonal influence, teambuilding, group problem solving, and oral presentation. Debate topics and position statements are outlined below. You will be randomly assigned to your topic and position (e.g., Pro or Con). All group members are expected to participate in the research, development, and presentation of your debate position. Each participating member will receive the same group grade.

Grant Proposal: Letter of Intent (10 points)
Submit a letter of intent for approval before submitting a full proposal.
A letter of intent (LOI) informs the funding agency of your intent to apply for grant funds. The LOI can be used to 1) Screen out potential applicants/projects that are not of interest to the funding agency. 2) Help the funding agency plan for the grant review process.

Grant Proposal: Paper and Presentation (160 points): In a paper and presentation, you will develop a grant proposal for a 2-year public health initiative for your selected community population targeting one or more of the following outcomes:

1) Increasing healthy eating
2) Increasing physical activity
3) Increasing breastfeeding initiation, exclusivity, and/or duration

Your grant proposal should include the following information:

- Abstract
- Background and Significance
- Description of proposed project
- Potential public health impact of proposed project using the RE-AIM framework
- Goals and Objectives
- Evaluation Plan
- Budget and Budget Justification
- Logic Model
- References

All assignments (except for the Career Goals assignment) will be submitted via Blackboard. An “Assignments” folder is located within the Course Materials section of Blackboard. Within the “Assignments” folder, each assignment will have a corresponding folder, which includes the full description of the assignment (as they are issued) and a location where you can submit your assignment.

Attendance and Class Participation (40 points):
Significant participation is expected during each class. Discussion forums, in-class discussion, interactive communication and the attitude you display towards others will be a part of your final grade.

Grading

Evaluation criteria

All assignments will be assessed based upon a rubric. Specific information about grading criteria and rubric will be distributed with the assignment.

The relative weight of each course component is as follows:

	Points	Weight
Logic Model	40	10%
Goals and Objectives	40	10%
RE-AIM Evaluation	40	10%
Career Goals	10	2.5%
Policy Debate	60	15%
Grant Proposal		
-Letter of Intent	10	2.5%
-Paper	120	30%
-Presentation	40	10%
Attendance & Class Participation	40	10%
	400	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty

generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Expect to actively contribute to the discussion in class and complete and submit all assignments by posted due dates. Missed assignments or lack of participation not only affect the individual student, but they also affect the class as a whole due to the high degree of interaction within the course. Interactive communication and the attitude you display towards others will also be a part of your final grade (as class participation). Expect to attend each class on time, thus frequent days of lateness will also be marked and deducted as part of your final grade.

Absences due to religious holidays/beliefs: Each student who is absent from class because of his/her religious beliefs will be given an equivalent opportunity to make up examination or assignment that s/he may have missed. No student will be penalized for absence due to religious beliefs, and alternative means will be sought for satisfying the academic requirements involved. Please inform the course instructor ahead of time (at least one week prior to a scheduled absence) so that alternative options can be scheduled accordingly.

Late/incomplete submission of assignments

Five (5) percentage points will be deducted for each day after the due date an assignment is submitted. NO ASSIGNMENT WILL BE ACCEPTED AFTER A WEEK FROM THE DUE DATE.

Make-ups, rewrites, and extra credit

There are no make-ups, rewrites, or extra credit allowed.

Expectations of students

- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Know how to use library resources and citation tools.
- Show respect to everyone in the course.
- Be fully prepared to actively participate in discussion.
- Complete and upload all assignments by their assigned due date onto Blackboard. NO hard copy or emailed versions of assignments will be accepted.
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Regularly check the course website and official university email for course correspondence.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and may be posted on Blackboard.
- Contact the professor directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.
- Turn off (or silence) all communication devices when entering the classroom.

Expectation for written assignments:

Students may work with their peers **for feedback and discussion** on assignments and the paper; however the final version of these assignments **must reflect independent work and be written in each student's own language**. When working on the assignments and paper, students need to follow these guidelines:

- Reference and identify all sources and quotations. If there is any doubt about proper procedures, students should consult the instructor.
- If another person's ideas are used or paraphrased acknowledge the source in a proper citation,
- If actual words or expressions of another person or source, including the Internet, are used, indicate such use by incorporation of quotation marks and a proper citation.
- Provide your own work, not someone else's. Examples of using someone else's work include: submitting essays or portions of essays written by other people as one's own; or collaborating with others on an assignment or examination without specific permission from the instructor to do so.
- Do not submit material prepared for one course to fulfill the requirements for this course.

Expectations for the instructors

- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during discussion
- Grading and feedback on assignments within 2 weeks of the due date.
- Communication about grades and progress in the course will be given through the course website.
- Answer any specific questions related to assignments prior to submission. However, to ensure fairness and feasibility for the class, the instructor is NOT able to evaluate assignments prior to submission.
- The instructor will try to respond to emails within a 24-hour period during the standard Monday through Friday work week. Students should not wait until a Friday to send an email if a response is needed before the following Monday. The instructor may respond over the weekend, but it is not guaranteed. Responses that take more than a day during the work week may be due to special circumstances, such as the instructor is attending an out-of-town conference, the student's query is of a complex nature that requires consultation with others/obtaining additional information, etc.
- Grading and feedback on assignments within 2 weeks of the due date.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Last Updated January 11, 2016

Course Schedule

This schedule may change as the semester progresses. Refer to the current academic calendar for important dates.

Session	Date	Topic	Assigned Readings & Assignments
1	Feb 2	Course Overview Introduction to Public Health Nutrition	
	Feb 9	**Friday schedule (No class)**	
2	Feb 16	Diet-related Chronic Diseases & Health Disparities in US Population Collective Impact and Systems Approach in Seeking Solutions	**Readings** Articles re: Diet-related Disparities in US populations
3	Feb 23	Library Session Guest lecturer: *Mason Brown*	
4	Mar 1	Nutrition Epidemiology Guest lecturer: *Beth Widen, PhD* Evidence-based Programs; Research Translation	**Readings** Articles re: Nutrition Epidemiology; Edelstein (Chap 1); Articles re: translational research
5	Mar 8	Community Needs Assessment Methods Grant Writing: Letter of Intent and Budgeting	**Readings** Articles re: Community Assessment Model; Boyle & Holben (Chap 20-Budget section); Spark (Chap 16)
6	Mar 15	Social and Behavioral Theories Grant Writing: Logic Models	**Readings** Articles re: *Logic Models* **Assignment Due** Grant Proposal: Letter of Intent
7	Mar 22	Grant Writing Skills: Abstract and Goals & Objectives	**Readings** Articles re: SMART Goals & Objectives; Evaluation Planning **Assignment Due** Logic Model
8	Mar 29	Evaluating programs and policies using RE-AIM	**Readings** Articles re: RE-AIM **Assignment Due**

			Goals & Objectives
9	Apr 5	Addressing Obesity & Hunger through Advocacy & Policies Guest lecturer: Kelly Moltzen, MPH, RD?	**Readings** Edelstein (Chaps 7 to 9); Articles re: Policies in Response to Childhood Obesity **Assignment Due** RE-AIM Evaluation
10	Apr 12	Food Policy Debates	**Readings** Debate articles
11	Apr 19	Careers in Public Health Nutrition Guest lecturer: *Diana Johnson, MA?*	**Assignment Due** PH Nutrition Career Goals

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS
Nutr 73300 Nutrition and Human Development
Hunter College
3 Credits
Spring 2016

Time and location	Wednesday, 6:05 – 7:50 pm Silberman (2180 3rd Ave), Room 217
Instructor	Laurie Tansman, MS, RD, CDN Adjunct Lecturer, CUNY School of Public Health 212-241-7797 laurie.tansman@mountsinai.org
Office hours	By appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course will provide an understanding of nutrition in relation to growth and development throughout the life cycle. While the course will review the basics, it will build on your present knowledge and provide you with an advanced understanding of public health issues throughout the life cycle. Lastly, this course will address controversial issues in life cycle nutrition.
Course prerequisites	As per program director.
Course format	This course is taught in a classroom format. All materials will be made available on Blackboard with some also being distributed in the classroom.
Required reading and resources	There is no required text. Reading Lists will be provided of journal articles that are required and recommended. These lists will identify information available on websites that will also be required.
Suggested reading and resources	See Reading Lists.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be assessed as part of the following course assignments:
KRD 1.1: The curriculum must reflect the scientific basis of the dietetics profession and must include research methodology, interpretation of research literature and integration of research principles into evidenced-based practice.	Locate, interpret, evaluate and use professional literature to make ethical evidence-based practical decisions.	Discussion Journal Article Review
KRD 2.1: The curriculum must include opportunities to develop a variety of communication skills sufficient for entry into professional practice.	Demonstrate effective and professional oral and written communication with individuals, groups and the public.	Discussion Current Events Journal Article Review
KRD 3.2: The curriculum must include the role of environment, food, nutrition and lifestyle choices in health promotion and disease prevention.	Demonstrate an understanding of the components that impact on health promotion and disease prevention	Discussion Exams Journal Article Review How low can you go – limiting sodium intake
KRD 5.1: The food and food systems foundation of the dietetics profession must be evident in the curriculum. Course content must include the principles of food science and food systems, techniques of food preparation and application to the development, modification and evaluation of recipes, menus and food products acceptable to diverse groups.	Demonstrate an understanding of how following diet guidelines/diet restrictions can be delicious and enjoyable using appropriate food preparation techniques during the process of modifying recipes.	Discussion Exams How low can you go – limiting sodium intake.
KRD 5.2: The physical and biological science foundation of the dietetics profession must be evident in the curriculum. Course content must include organic chemistry,	Demonstrate an understanding of the science of nutrition.	Discussion Exams Journal Article Review

biochemistry, physiology, genetics, microbiology, pharmacology, statistics, nutrient metabolism, and nutrition across the lifespan.		
KRD 5.3: The behavioral and social science foundation of the dietetics profession must be evident in the curriculum. Course content must include concepts of human behavior and diversity, such as psychology, sociology or anthropology.	Have an understanding of how human behavior impacts on -reliability of nutrition data -compliance with diet guidelines for the risk reduction and therapy of chronic disease	Discussion Journal Article Review How low can you go – limiting sodium intake

Course Assignments:
There are three assignments for this course. All submitted reports should use 12 font. All assignments must be handed-in on the due date.

Assignment #1 – Current Events Presentation
Due as per student sign-up on February 3rd.
Select a nutrition-related newspaper article from the seven-day period prior to class. Prepare a five minute oral presentation about the article. No written report is required. Be sure to state where the article appeared as well as the date. It is required that you bring the newspaper article to class from the print edition version. *An online copy of the article is unacceptable for this assignment.*

Assignment #2 – Journal article review
Due as per student sign-up on February 3rd.
You will be required to give an oral review of one of the assigned readings for a class lecture. Your presentation should include 2 – 3 slides that will be incorporated into the PowerPoint for that class lecture and will need to be e-mailed to the instructor the Friday before that class lecture. The slides should summarize the salient points of the article.

Assignment #3 – How Low Can You Go – Limiting Sodium Intake
Due December 3rd.
You will follow a low sodium diet for one day that should not exceed 1,500 mg. The challenge is to try and get as low sodium as possible.*****
**Please see the instructor if you have a medical reason for which following a low sodium diet is contraindicated.*

You will submit a report that includes:
One page summary of the challenges encountered as well as diet adequacies and inadequacies. Include your thoughts about the enjoyment of what you consumed
A copy of the diet record for that day and that includes the time, food/beverage consumed and amount consumed.
A print out of the nutrient analysis of the diet record using SuperTracker found at www.choosemyplate.gov.

Grading

Current Events Presentation	5%
Journal article review	20%
Midterm	25%
How Low Can You Go	15%
Final	25%
Class Participation	10%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 – 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Expect to actively contribute to the discussion and complete and submit all assignments by posted due dates. Missed assignments or lack of discussion and participation not only affect the individual student, but they also affect the class as a whole due to the

high degree of interaction within the course. Grades for interactive communication are based on a rubric that includes the number, tone, and content of your contributions and the attitude you display towards others.

Late/incomplete submission of assignments
Late or incomplete assignments are not accepted.

Make-ups, rewrites, and extra credit
There are no make-ups, rewrites, or extra credit allowed.

Expectations of students
- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Know how to use library resources and citation tools.
- Show respect to everyone in the course.
- Be fully prepared to actively participate in discussion.
- Complete all assignments by their assigned due date. No credit for work completed after the due date.
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Regularly check the course website and official university email for course correspondence. Course correspondence will also be via our preferred e-mail address.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted in the discussion board.
- Contact the professor directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.

Expectations for the instructor
- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during discussion
- Respond to student email within 24 hours Monday through Friday.
- Grading and feedback on assignments within 1 week of the due date.
- Communication about grades and progress in the course will be given through the course website.

Accessibility
Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a

student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule
This schedule may change as the semester progresses. Refer to the current academic calendar for important dates. On schedule below, JAR = Journal Article Review

Session	Date	Topic	Readings/Resources	Assessment
1	2/3	Course Overview Understanding Nutrition Research Review of Epidemiological Nutrition Studies	See Reading Lists	-Current Events -Discussion
2	2/10	Preconception Nutrition Nutrition During Pregnancy	See Reading Lists	-Current Events -Discussion

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
PH 73700: Supervised Fieldwork in Public Health
3 Credits
Spring 2016

Time and location	Mondays 8:00pm-9:45pm // XXXXX See **Schedule** below for details.	
Instructors	**Contact info**	**Office hours and location**
Barbara Berney (HPM)	bberneyh@gmail.com	By appointment
Heidi Jones (EPI/BIOS)	hjon@hunter.cuny.edu	By appointment
Karyn Faber (COMHE)	kf206@hunter.cuny.edu	By appointment
Frank Mirer (EOHS)	fmirer@hunter.cuny.edu	By appointment
Course website	https://bbhosted.cuny.edu	
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.	
Course description	Students carry out 180 hours of supervised field work that is intended to bridge academic preparation and public health practice. Knowledge and skills from the core MPH and specialization courses are applied in a public health agency, community organization, or other setting relevant to the student's academic background, specialization, and career goals. This is accomplished under the supervision and guidance of an experienced preceptor. Field-based hours are complemented by faculty group meetings and online didactic sessions. In addition to deliverables required by the preceptor, the student develops and several assignments, culminating in a reflection paper, a self-evaluation, a preceptor evaluation, and the Capstone proposal.	

Course prerequisites	Completion of 18 credits toward the master's degree, including at least 3 required core courses (biostatistics, epidemiology, and the course most relevant to your specialization) and at least 2 courses in student's specialization.
Course format	The course is provided in a hybrid format – didactic sessions are provided online, including confirmatory participation quizzes, and face-to-face sessions are held, primarily for group meetings with faculty advisors and peers. Please see Schedule below for details.

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply the public health core functions of assessment, policy development and assurance	• Demonstrate (e.g. through the portfolio) the application of assessment, assurance and/or policy development during the fieldwork experience.	• Identify and assemble in the e-portfolio the product(s) of fieldwork project that exemplify the application of core public health functions in your work
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Demonstrate through self-reflection activities the application of one or more core public health values or techniques through the fieldwork experience	• Submit a "Reflections" paper on the fieldwork project and your perspective on public health practice
Adhere to ethical and social justice principles and standards	• Apply ethical principles to fieldwork placement, (e.g. human subjects' protection principles to the data collection). • Assess the degree to which the fieldwork placement agency adheres to ethical principles and standards	• Establish an approved protocol through CUNY IRB for human subjects' protection in your fieldwork project • Complete and submit the Student's Evaluation of Fieldwork Project Form
Interpret and analyze public health literature and apply evidence-based research	• Explore and become familiar with the public health literature databases and resources for organizing citations and sources	• Submit a rapid literature scan on your fieldwork topic • Submit a literature review on your

		Capstone research question
Apply basic statistical and informatics techniques	• Review and identify appropriate quantitative methods and tools for measuring public health data	• OPTIONAL (Quantitative Studies Only). In your Capstone Proposal, describe the method(s) you've selected for measuring your data from the fieldwork project
Communicate public health information through oral, written, digital and visual presentation	• Prepare written and oral progress and evaluation reports (e.g. the fieldwork project), using appropriate professional formats.	• Submit via electronic forms two progress reports on the fieldwork placement project • Complete and submit the Student's Evaluation of Fieldwork Project Form
Explain how social, behavioral, biomedical and environmental determinants affect population health	• Discuss the relationship between social, behavioral, biomedical, and environmental elements and health outcomes	• Submit a "Reflections" paper on the fieldwork project and your perspective on public health practice
Design and evaluate interventions to prevent or control public health problems	• Develop and assess policies and activities that are responsive to public health problems	•
Collect, analyze and interpret public health data	• Apply data collection, analysis, and interpretation methods to public health data	• OPTIONAL (Quantitative Studies Only). In your Capstone Proposal, describe the method(s) you've selected for measuring your data from the

		fieldwork project
Engage and collaborate with diverse groups	• Identify different stakeholders and evaluate their roles on the fieldwork project.	• Complete and submit the Student's Evaluation of Fieldwork Project Form
Describe the legal foundations of the U.S. public health system and its interrelationships with other systems including health care, education and environmental protection	• Discuss the legal aspects of the US public health system and its inter-sectoral relationships with other public systems.	• Submit a "Reflections" paper on the fieldwork project and your perspective on public health practice
Apply a framework for the planning, implementation and evaluation of public health programs, policies and interventions	• Explain the difference between key planning constructs and demonstrate the ability to incorporate them in planning, implementing and evaluating the fieldwork project	• Complete and submit a Gantt chart describing the timeline for the fieldwork project • Design and submit a logic model describing the process for the research conducted via the fieldwork project
Explain the context of public and private health-care systems in which health care and public health policy are made and healthcare is delivered	• Discuss how the agencies you worked with during your fieldwork experience deliver health-related services to the populations they serve.	• Submit a "Reflections" paper on the fieldwork project and your perspective on public health practice

Course Assessments

The Supervised Fieldwork course is designed to guide students through the development, implementation, and completion of a research or practicum project on some aspect of public health practice at an approved placement site. Course assignments reflect the progressive activities involved in conducting the project, including design, planning and management, and implementation. This course process is intended to support the student's progress in the fieldwork project and to generate the elements of a resulting Capstone proposal or template paper for the student's culminating experience in the degree program. During the fieldwork period, students are expected to complete and submit two progress reports, and a final "reflections" paper on the experience. Both students and preceptors are required to complete evaluations of the fieldwork project upon its completion.

Grading

Evaluation criteria

Assignments and their relative weight toward your final grade in the course are listed below. The evaluation rubric which will be used to establish the grade for each assignment is available on the course Blackboard website under the section entitled My Assignments, along with instructions for that assignment. Items prefaced with an asterisk (*) will not have an evaluation rubric, and will be graded simply as complete (full points) or missing/incomplete (no points).

The relative weight of each course component is as follows:

Assessment	Weight
Rapid literature scan	10%
*CITI certificate	5%
*IRB determination	5%
*Progress report #1	5%
Gantt chart	5%
Logic model	5%
*Progress report #2	5%
Literature review	15%
"Reflections" paper on fieldwork project	15%
Capstone proposal	20%
Online session quizzes	5%
Class participation	5%
*Student Evaluation of Fieldwork Project Form	%
*Preceptor Evaluation of Fieldwork Project Form	%
	100%

The final course grade will be determined using the performance assessment described above, and resulting in a Pass (70% or higher) or a Fail (less than 70%) grade.

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

While the program discourages students from taking Incompletes, under some circumstances, an Incomplete may be the only option for completing the Fieldwork Project.

A request for an Incomplete must be approved by the Faculty Advisor, and the incomplete grade must be resolved within the next two semesters.

Students with an Incomplete in this course, Fieldwork (PH 73700), are not eligible for enrollment into the Capstone course (PH 73800) until the Incomplete is resolved.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

Because this is a hybrid course, students are expected to participate both online and in face-to-face meetings in class. Online participation is limited to two didactic sessions, and will be assessed with mini-quizzes to be completed at the end of each module in the session. Face-to-face participation will be assessed by faculty-administered attendance at the six class meetings.

Late/incomplete submission of assignments

Late assignments will not be accepted except in extenuating circumstances, with written approval by the student's faculty advisor. Incomplete assignments will be graded as such, unless the student is granted the opportunity to submit a rewrite by the faculty advisor, with written approval.

Make-ups, rewrites, and extra credit

Make-ups and extra credit assignments are not available for this course. In extenuating circumstances, the faculty advisor may allow a rewrite (or resubmission) of an Incomplete assignment, and must agree to this arrangement with written approval.

Expectations of students

Students are expected to submit Assignments on time, to participate respectfully in class and on the course Blackboard website, and to communicate with their Faculty Advisor on progress and problems related to the Fieldwork Project, as soon as issues arise.

Expectations for the instructor

Faculty Advisors will grade Assignments and post results within seven days of submission. Faculty Advisors will respond to all emails from students within 72 hours of receipt, and will arrange face-to-face meetings with students as requested, and with Preceptors, as necessary.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

Sessions 1, 2, 8 will be held as all-class meetings at the regularly-scheduled time and location.
Sessions 3, 5, 7 will be held as group meetings by track with your faculty advisor, at a time and location convenient to students and faculty in that group.
Sessions 4, 6 will be held online via the course Blackboard site, as noted.
This course schedule is subject to change.

For important dates, please refer to the current academic calendar.

Session # Mode Date	**Topic**	**Assignment** **(Please submit all Assignments via the Assignments section on the course Blackboard site, unless otherwise noted.)**
Session 1. **Face-to-face all-class meeting** February 1	Welcome and overview, Fieldwork connection to Capstone • Searching the literature: Initial Lit Scan • Developing a research question • Prepping IRB submission	By 2/1 • Bring fieldwork contract to class By 2/14 • Submit completed IRB information sheet
Session 2. **Face-to-face all-class meeting** February 8	Library session • Search tools • Reference management tools	**Meet in C Level at Silberman Room TBD**

Session # Mode Date	**Topic**	**Assignment** **(Please submit all Assignments via the Assignments section on the course Blackboard site, unless otherwise noted.)**
Session 3. **Face-to-face group meeting with faculty advisor** March 7 – March 10	Meet in track-specific groups • Discuss research question and literature review development	By 3/6 • A brief literature scan • First progress report
Session 4. **Online** March 14 – March 20	• Project Management using Gantt Charts or Timelines • Logic Models	
Session 5. **Face-to-face group meeting with faculty advisor** March 21	Meet in track-specific groups • Discuss project management planning, processes, and implementation • Discuss data collection plans and progress • Discuss template paper selection	By 3/20 • A project plan using a Gantt chart or similar timeline model • Project logic model (Please bring both documents to meeting)
Session 6. **Online** April 12 – April 17	• Quantitative Analysis – planning and preparation: data analysis and mini stats review • Qualitative Studies – planning and analysis • Capstone paper – planning and development	By 4/17 • Second Progress Report • Literature review

Session # Mode Date	**Topic**	**Assignment** **(Please submit all Assignments via the Assignments section on the course Blackboard site, unless otherwise noted.)**
Session 7. **Face-to-face group meeting with faculty advisor** May 2 – May 5	Meet in track-specific groups • Share and discuss template journal articles • Peer review and discuss each other's Capstone paper proposals	By 5/1, **submit to Discussion Group** • First draft of Capstone proposal • Journal article(s) you will use as template/model for your Capstone paper (Please bring both submissions to class)
Session 8. **Face-to-face all-class meeting** May 16	**All-class meeting** • Review Fieldwork to Capstone requirements • Track-specific group meetings to finalize Fieldwork to Capstone processes	By 5/22 • A completed **Student's Evaluation of Fieldwork Experience Form** • A completed **Field Placement Supervisor's Evaluation Form (emailed from Placement Supervisor to Fieldwork faculty)** • A 'Reflections' document on Fieldwork for Student Portfolio • Capstone Proposal
Optional. **Individual consultations** May 17 – May 26	Student Faculty Consultations	**Note: Students should verify that all Assignments have been delivered or scheduled for delivery with Fieldwork faculty.**

Support resources

For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.

Course description

This course consists of a structured seminar aimed at allowing students to apply experiences gained during their graduate program and synthesize that knowledge and experience in the form of a major writing project. It is expected that students use a combination of synthesized evidence, theoretical models, and empirical research to answer a public health research question or practice problem using interdisciplinary perspectives.

Course prerequisites

Completion of at least 36 credits of coursework toward the Master of Public Health (MPH) or Master of Science degree, including at least one course in each of the 5 core areas of public health (biostatistics, epidemiology, social and behavioral sciences, public health policy and environmental health and safety); and at least 3 specialization courses.

Course format

This course is taught with a mix of online learning resources and in-class discussion. This is not a self-paced course; there are weekly deadlines for writing, discussion and revisions, and attendance at and participation in the final presentations of all capstone projects.

This course is designed for students writing Capstone Papers and for those with permission to write Master's Essays. The schedule of assignments and deadlines vary depending on the type of project. Students writing the Capstone Paper attend every class; students writing the Masters Essay may attend all classes, but they must attend classes with an asterisk (*) in the Course Schedule below.

Core Competencies *This course will help you to:*	**Course Learning Objectives** *After successfully completing this course, you are expected to be able to:*	**Assessment methods** *Competencies and learning objectives will be assessed as part of the following course assignments:*

Apply the public health core functions of assessment, policy development and assurance	• Construct a testable research question or practice problem, which
	  ○ can feasibly be addressed within a specified time period
	  ○ is of public health relevance
	  ○ when addressed will fill a knowledge gap
		Session 1, 2

Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Place a research question or practice problem within a relevant conceptual framework and the broader public health context • Identify and apply relevant professional or scholarly methods to an investigation or practice problem, including use of a predefined protocol or research plan. • Plan the analysis, synthesis and write up of an investigation from inception to completion including scheduling of items on the critical path to completion	Session 1-8
Adhere to ethical and social justice principles and standards	• Analyze relevant ethical or social justice issues using widely recognized principles or standards. • Obtain IRB or IACCU approval or exemption if appropriate. • Conduct any public health investigations involving human subjects in accordance with OHRPP ethical performance standards, including maintenance of confidentiality and security.	Session 1
Interpret and analyze public health literature and apply evidence-based research	• Implement a structured search of the literature. • Summarize the literature to date, including quantitative associations and qualitative themes, on a specific topic taking into account levels of evidence	Session 1, 2

	• Identify weaknesses within existing literature, such as addressing the wrong question, lack of comparison groups, biases or limited generalizability	
Apply basic statistical and informatics techniques	• Generate summarized descriptive information from PH data, such as frequencies and cross-tabulations • Assess qualitative data according to accepted methods, such as componential analysis. • Identify the key findings of a study or practice experience. • Provide sources of information for all statements of fact in the draft through use of a citation manager • Present PH information in figures, tables and graphs, such that each figure/table/graph is interpretable, self-explanatory and can be read standalone	Session 2-4
Communicate public health information through oral, written, digital and visual presentation	• Identify the interests of different stakeholders in the findings • Make an oral or poster presentation conveying key findings to a defined audience contextualized within current knowledge and interests of stakeholders, as well as with due acknowledgement of strengths and weakness of findings. • Write a document a public health problem such as a research report, program evaluation, analytic paper or policy analysis, using language appropriate for a professional public health audience.	Session 8-11
Explain how social, behavioral, biomedical and environmental determinants affect population health	• Identify and describe environmental, behavioral, interpersonal, social, economic, political or policy factors that affect the etiology, prevention or resolution of a selected public health problem	Session 1,2
Design and evaluate interventions to prevent or control public health problems	• Implement the analysis, synthesis and writing plan for the culminating writing experience according to a predefined plan • Discuss the implications of a study or evaluation to address the needs for future evaluation and research, or for the development and implementation of programs and policies.	Session 1-8
Collect, analyze and interpret public health data	• Synthesize findings within the context of existing knowledge with acknowledgement of the strengths, weaknesses of the findings and gaps in knowledge that remain, and the corresponding implications for interpretation • Identify issues with reliability and validity of findings and explain their likely implications. • Justify methods of measurement • Identify public health implications of an investigation	Session 4-7
Apply a framework for the planning, implementation and evaluation of public health programs, policies and interventions.	• Generate logic models, theory of change diagrams, and Gantt Charts to implement and plan public health programs • Demonstrate program effectiveness through quantitative and qualitative measures	Session 1,2

Course Assessments

The major deliverables for the course are the (a) written capstone project and the (b) accompanying oral *or* poster presentation. The written and oral or poster presentation are evaluated by two and five faculty members, respectively. The rubrics for grading each component are available on the course Bb site.

Grading

Evaluation criteria
Grading rubrics for each course component will be available on Bb
The relative weight of each course component is as follows:

Course component	**Weight**
Capstone paper or master's essay, plus letter of response to reviewers	75%
Oral or poster presentation of capstone paper or master's essay	15%
Portfolio (required in order to earn a grade for the course)	5%
Attendance, Bb posts and participation	5%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	**Quality Points**	**Percentage**
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete
The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. If an incomplete grade is granted, the student negotiates and prepares a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact Professor Khursheed Navder, the Hunter Campus Director, in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation
Attendance is taken seriously and we do take attendance.

Late/incomplete submission of assignments
This course runs on a very tight, inflexible schedule. Late or incomplete assignments are seriously discouraged. Once a capstone student gets behind, it will be extraordinarily difficult to catch up and finish on time.

Rewrites, and extra credit
Rewrites are essential in this course! In fact, rewrites are an integral part of every serious writing endeavor. Extra credit is not available in this course.

Capstone handbook
The latest edition of the Capstone handbook is available on our course Bb site and at:
http://www.cuny.edu/site/sph/hunter-college/campus-resources/capstone.html

Statistical and IRB assistance
Jennifer Brite is available for statistical advice and help with SPSS software. Contact her by email to make an appointment. IRB assistance is available from your capstone faculty member.

Portfolio
Every MPH- and EOHS MS-degree student is required to prepare and maintain a professional portfolio. The portfolio describes relevant public health experiences and achievements during the course of the studies leading to the master's degree. The portfolio is submitted toward the end of the Capstone course and uploaded onto a WORDPRESS website. Information for this process will be provided during course meetings in the semester.

Expectations of the capstone faculty
- Provide regular announcements, reminders, and suggestions on the course website
- Respond to student email within 24 hours Monday through Friday.
- Provide feedback on assignments within 1 week of the due date.

Expectations of capstone students

- Arrive on time for class sessions and individual appointments, submit deliverables on time, participate in discussions.
- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Show respect to everyone in the course.
- Be held accountable for all material assigned/covered in the course.
- Regularly check the course website and official university email for course correspondence.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted in the discussion board.
- Contact your Capstone track faculty directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.

Skills the Capstone Faculty Expects of Capstone Students

Be able to prepare the following

- Written work that is free of plagiarism.
- Article summary
- Structured abstract
- Testable hypothesis
- Reference list using RefWorks, MS Word 2013, or other electronic citation software
- Annotated bibliography
- Literature review
- Policy brief (1 page)
- Editorial
- Research report
- Op-ed essay

Be able to do the following

- Critically analyze public health documents, including peer-reviewed articles, grey literature, books, newspaper and magazine articles, blogs, texts produced by for-profit organizations, etc.
- Present your views clearly to a range of audiences
- Present both sides of controversial issues
- Copy edit an essay, which involves correcting spelling, punctuation, and grammar. It also includes suggesting the appropriate use of headings and subheadings, and ensuring that the required citation style is used. The task of the copy editor is to make the written work clear, correct, concise, comprehensible, and consistent.
- Develop a testable hypothesis
- Interpret statistical analyses and explain findings in narrative form
- Calculate & interpret descriptive statistics
- Calculate & interpret rates and proportions
- Calculate & interpret chi square and t-tests
- Construct & interpret tables & graphs
- Analyze and present quantitative data

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

CUNY academic calendar

Please refer to the academic calendar for important dates, such as holidays and the deadlines for dropping and withdrawing from a course. http://www.cuny.edu/academics/calendars/fall-2015.html

Course schedule and assignments

This class is designed for all Capstone Projects, both students writing Capstone Papers and for students writing Master's Essays. The schedule of assignments and deadlines vary depending on the type of project. Please review the tables on the next pages that clearly indicate when items are due depending on whether you have approval to work on a Master's Essay or Capstone Paper. Refer to the current academic calendar for important dates.

This course schedule is subject to change.

Capstone students write and submit their papers section-by-section over the course of the semester. The faculty member makes suggestions, and students make revisions as suggested. When indicated, also post the assignment on Bb. Capstone students are required to attend all class sessions.

#	Date	Topic	Assignment / Due-date **Please submit all Assignments to the Discussion Group for your Track on the course Blackboard site or as instructed by your Advisor.** **^Applies to all students, including those doing Master's Essays.**
1	2/1 Face-to-face	• Faculty introductions • Course overview • Outline, key sections of a paper • Oral presentation or poster? • Portfolio assignment	**By 2/3, please submit** • Capstone proposal (final from Fieldwork PH737 or revised) • Literature review, including citations (from Fieldwork PH737) • Provisional title for Capstone paper
2	2/8 – 2/14 Online	• Methods – Quantitative & Qualitative Approaches • Mini Stats Review and Data Analysis • Table Shells (planning results)	**By 2/7, please submit** • Template paper(s) (to use as a model for your Capstone paper) • Outline of Capstone paper (section headings and sub-headings) • Introduction section (including Background, Significance, Literature review, What's knowledge gap, Research question/Hypothesis) In Meeting #1 (week of 2/15), you'll receive comments and feedback from faculty
3	Week of 2/15	Meeting #1 w/capstone faculty member • Come prepared to discuss your plans and progress on the Methods / Process section	**By 2/27, please submit** • Introduction + **Methods / Process section** • **Shells / Descriptions for Tables, Graphs, Figures** By 3/7, you'll receive comments and feedback from faculty

#	Date	Topic	Assignment / Due-date **Please submit all Assignments to your Faculty Advisor via email and/or via the Assignments section on the course Blackboard site as instructed by your Advisor.** **^Applies to all students, including those doing Master's Essays.**
4	3/7 – 3/13 Online	• Results for Quantitative and Qualitative Analysis • Results for Project Papers	**By 3/13, please submit** • Introduction + Methods + **Results section** In Meeting #2 (week of 3/21), you'll receive comments and feedback from faculty
5	Week of 3/21	Meeting #2 w/capstone faculty member	**By 3/27, please submit** • First complete draft of Capstone paper: Introduction + Methods + Results + **Conclusion section** In Meeting #3 (week of 4/11), you'll receive comments and feedback from faculty
6	4/4 Face-to-face	• How to structure and prepare your PowerPoint presentation • How to structure and prepare your Poster Presentation • Finalizing the portfolio • Group exercise: "Writing a structured abstract"	**By 4/3, please read** assigned papers (to be posted on Blackboard) and prepare to write a structured abstract for each of them in class (see Group exercise)
7	Week of 4/11	Meeting #3 w/ capstone faculty member • Come prepared to select oral presentation or poster	**By 4/10, please submit** • Structured abstract (250 words) for your Capstone paper

#	Date	Topic	Assignment / Due-date **Please submit all Assignments to your Faculty Advisor via email and/or via the Assignments section on the course Blackboard site as instructed by your Advisor.** **^Applies to all students, including those doing Master's Essays.**
8	5/2 Face-to-face	• Student presentations (1)	**By 5/1, please submit** • Second draft of the complete Capstone paper, revised (this version will also be reviewed by a second faculty member) By 5/15, you'll receive comments and feedback from faculty
9	5/9 Face-to-face	• Student presentations (2)	**By 5/8, please submit** • Portfolio draft By 5/15, you'll receive comments and feedback from faculty
10	5/16 Face-to-face	• Student presentations (3)	
11	5/23 Face-to-face	• Student presentations (4)	**By 5/22, please submit** • Final Capstone paper • Final portfolio

NB: While the overall content of this course will be covered as outlined, the syllabus may change based on the need to adapt to student interests, feedback and expertise. Always check the Bb site for the most up-to-date information on course readings and assignments.

B.Master's essay students work with their first and second readers throughout the semester, and have assignments that must be turned in to the Capstone faculty member by the specified due date (see below). The schedule of submissions of paper drafts should be arranged with the first reader as early in the semester as possible.

Master's essay students must attend class sessions 2/1, 4/4, 5/2-5/23

Due date	**Assignment for master's essay students**
2/1	Advise your Capstone faculty advisor of your Master's essay title and your 1st & 2nd readers. Your Capstone faculty advisor may serve as one of your readers.
2/8	Email Master's essay proposal to your readers. Your Capstone faculty advisor and at least one other reader must approve the proposal.
4/11	Notify your Capstone faculty advisor of your decision to do a poster presentation or oral presentation.
5/2	Submit Master's essay complete, refined draft to your readers.
5/9	Submit Portfolio draft to Capstone faculty advisor
5/16	• Receive Master's essay draft critiqued from your readers • Receive Portfolio draft critiqued from Capstone faculty advisor
5/23	• Submit final Master's essay • Submit final Portfolio

References, resources, and readings

WRITING THE CAPSTONE PAPER

1. Practical advice

For practical advice, look into the writing center at any major college or university, for example:

- Purdue Online Writing Lab (OWL). http://owl.english.purdue.edu/
- Hunter College Writing Center. http://rwc.hunter.cuny.edu/

2. Style

Unless indicated otherwise, papers submitted in PH 738: Capstone Seminar follow the style of the *American Journal of Public Health* (*AJPH*). The *AJPH* style is the same as that of the American Medical Association (AMA).

- *AJPH's* instructions for authors. http://ajph.aphapublications.org/userimages/ContentEditor/1318438422261/Instructions_for_Authors.pdf
- AMA Style Stat! For Research Papers. A quick reference to using the AMA style in college research papers. http://www.docstyles.com/library/amastat.pdf

3. Organization of the capstone paper

It is customary to organize the capstone paper using the IMRAD format: *Introduction, Method, Results And Discussion.* The IMRAD structure is not an arbitrary organization, but a direct reflection of the process of scientific discovery. AMA Stat! presents these variations on the IMRAD theme, which are also acceptable:

- For reports of original data: Context, Objective, Design, Setting, Population, Intervention(s), Main Outcome Measure(s), and Results.
- For a systematic literature review: Context, Objective, Data Sources, Study Selection, Data Extraction, Results, and Conclusions.

Please see the AMA Stat! website for detailed descriptions:
http://writingcenter.missouristate.edu/assets/WritingCenter/amastat.pdf

4. The capstone paper in general

- How to write all sections of a research paper Rice Univ: http://www.ruf.rice.edu/~bioslabs/resources_home.html
- Writing a research article: advice to beginners. http://intqhc.oxfordjournals.org/content/16/3/191.full/
- How to write a paper. Bates College: http://abacus.bates.edu/~ganderso/biology/resources/writing/HTWsections.html
- Writing research papers. Rice Univ: http://www.ruf.rice.edu/~bioslabs/tools/report/reportform.html
- Guide to writing a formal physics lab report [despite the title, this has relevance for all science writing]. Union College. http://www.union.edu/Resources/Academic/writing/Help/Faculty/Orzel/GuideToWritingLabReports.php
- Preparation of the research report /scientific paper . http://www.sagepub.com/bjohnsonstudy/notes/Ch20_Lecture.doc
- How to write your thesis. [This could be titled 'How to write your capstone paper.'] http://www.ldeo.columbia.edu/~martins/sen_sem/thesis_org.html#Conclusions

5, Key sections of the capstone paper

A. Structured abstract

- Importance of 180 words (PPT): http://www.jpgmonline.com/documents/author/24/4_Aggarwal_11.pdf
- The structured abstract: http://research.mlanet.org/structured_abstract.html
- Structured abstracts: http://www.nlm.nih.gov/bsd/policy/structured_abstracts.html

B. Introduction/Background

- UNC: http://writingcenter.unc.edu/handouts/introductions/
- How to write the background/introduction section (PPT).
- How to write a literature review.

http://www.sportsci.org/jour/9901/wghreview.html

- Sample research paper. Although this paper is in the APA style, this site is worth examining for the side notes and also to see how the background section segues into the methodology and results sections of the paper. http://thewritesource.com/apa/apa.pdf
- Synthesis writing. Drew Univ: http://www.users.drew.edu/sjamieso/Synthesis.pdf

C. Methods

- How to write the methods section of a research paper. http://cancer.dartmouth.edu/documents/pdf/methods_section.pdf
- Logic model
  Please refer to your PH 737 notes.
- Threats to validity

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

PH 75000: Fundamentals of Biostatistics
3 Credits
Spring 2016

Time and location	This is a hybrid course. Students can attend the class **either in-person or online**. In-class attendance is mandatory only for the first class meeting (2/1), exams (3/14 and 5/16) and poster presentation of the final project (5/23). **Lectures** for all sections will be held on Mondays 6.05-7.20PM in room 201 (Silberman building) and on the YouTube channel/Google Hangout (links will be posted on Blackboard). Lectures will be led by Dr. Katarzyna Wyka. **Lab session** will be held on Mondays 7.30-8.50PM in Room C05, Respective lab links will be posted on Blackboard. Labs will be led by Anthony Devito.
Instructor	• Katarzyna Wyka, PhD: kwyka@hunter.cuny.edu (response time 24-48 hours) • Anthony Devito, M.S. EOHS tonydevito@gmail.com (response time 24-48 hours) Note: Always include "PH750" in the subject line.

Office hours	• Katarzyna Wyka, PhD:
	  ○ Mondays 4.30-6PM (online via Google Hangout or in person room 537 (Silberman Building) or by appointment
	• Anthony Devito, M.S.EOHS
	  ○ Alternating days and times schedule will be published on BB announcements each week or by appointment

Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Application and interpretation of basic descriptive and inferential statistical methods for the analysis of public health and other health-related data. *prereq: No prerequisites required.*
Course prerequisites	Elementary statistics or calculus or equivalent.
Course format	This is a hybrid course. Students can attend the class **either in-person or online**. Class lectures and labs will be broadcasted live and class recordings will be posted on Blackboard. Class activities include short weekly quizzes, lab assignments, exams and a project. Questions about class material will be posted and answered using discussion boards on Blackboard. It is extremely important that students devote 5-10 hours for the class on a weekly basis to keep up with class activities and interactions.
Required reading and resources	None.

Suggested reading and resources	*OpenIntro Statistics: Third Edition*. CreateSpace Independent Publishing Platform. Diez, D. M., Barr, C. D., Cetinkaya-Rundel M. (2015). **ISBN-10:** 194345003X, **ISBN-13:** 978-1943450039 A digital version is available free at http://www.openintro.org/stat/textbook.php. A print version is available for $10.14 from amazon.com, linked to from the website above. We strongly suggest that you purchase student license for PASW(SPSS) to use the software at home. Information on obtaining it is on Blackboard. Note that almost all computers in the libraries and Public Computing Services (PCS) labs at the Silberman Building, Brookdale and at 68th Street have PASW(SPSS) software installed. In addition, the Hunter College library operates a laptop loan program: http://library.hunter.cuny.edu/services/laptoploan. Such laptops would also have PASW (SPSS) and Microsoft products installed.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Explain the role and importance of bio-statistical analysis in public health research • Design an appropriate statistical analysis for a given public health research design • Recognize ethical principles and legal standards that should be followed in the collection, management and analysis of statistical data on human and non-human subjects	• Quizzes, project, CITI training
Apply basic statistical and informatics techniques	• Perform statistical calculations using a statistical software package • Create graphics and visual representations of statistical data using a statistical software package • Apply appropriate statistical analysis techniques based on the size of the data	• PASW(SPSS)/Excel exercise, project
Communicate public health information through oral, written, digital and visual presentation	• Write the interpretation of results from statistical analysis • Create and present an oral presentation of statistical output	• Final project, project presentation
Collect, analyze and interpret public health data	• Identify continuous, discrete, nominal and ordinal data • Summarize these data types using ◦ Bar charts, box plots, histograms, scatter plots ◦ Measures of central tendency: mean, median, and mode of measures of spread: variance, interquartile range, range of frequency tables • Define and differentiate between precision and accuracy • Define and calculate marginal, joint and conditional probability • Use binomial distribution to calculate probabilities	• Quizzes, exams, project

	associated with binary data • Convert count data to rates and proportions • Estimate centrality and variance of a sampling distribution from the population distribution using the Central Limit Theorem • Construct and interpret confidence intervals for ◦ Population mean and population proportion ◦ Large and small samples (using z and t sampling distributions) • Identify how changes in sample size, confidence level and other parameters affect the width of a confidence interval • Define null and alternative hypotheses for one-sided and two-sided inference • Perform inference tests for proportions using the normal approximation, for mean of a single sample, difference in means of two samples, and difference in means of paired samples • Use Z and t tables for hypothesis tests and constructing confidence intervals • Estimate the power of a t test • Calculate odds ratios, relative risks, and risk difference • Perform Pearson Chi-Square Test of Independence for r x c frequency tables • Perform and interpret one-way Analysis of Variance • Correct for multiple comparisons • Define type I and II error, power, and sample size and the relationships between them • Perform and interpret correlation and linear regression analysis	

Course Assessments

Your understanding of the course material will be evaluated through quizzes, two open book/notes exams, a project, and class participation. For the best possible grade, you must demonstrate an understanding of covered concepts, as well as mastery of basic computer skills.

Class Quizzes: There are 13 online weekly class quizzes corresponding to class materials. All quizzes specific due dates (posted on BB) and answer keys will be posted 2 days after the deadline. You should post questions regarding quizzes in the Discussion Board (Q&A Forum). Check My Grades to view your grade and feedback.

Class Exams: There are two open book/notes non-cumulative exams. Class exams will be completed in-person via Blackboard. Graded exams will be returned to students within 7 days. Check My Grades to view your grade and feedback.

Project. Each student will chose a research topic and will prepare 1) a report that will be submitted via Blackboard and 2) a PowerPoint presentation that will presented on 5/23 (6PM – 8.50PM) in class. Project description and grading rubric is located in the Project tab on BB. Project sections will be submitted throughout the semester (refer to Class Schedule on page 10). Project-related questions should be posted in the Discussion Board. All students who want a passing grade must complete the group project. Check My Grades to view your grade and feedback.

Class Participation: You are expected to participate in in-person meetings and/or via the Discussion Board. We will use the Discussion Board to clarify concepts covered in the class and answer questions pertaining to class material, quizzes and project sections. Each student is expected to contribute to the class by posting at least 5 questions/answers throughout the semester. Grading rubric is provided in the Discussion Board. Unprofessional and disrespectful posts will be removed and penalized. Check My Grades to view your grade and feedback.

Grading

Evaluation criteria

All assignments will be evaluated based upon rubrics found on the course website.

The relative weight of each course component is as follows:

Assessment	Weight
Quizzes	25%
Exams	25%
Project	30%
Class participation	20%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

It is very important to keep connected and interact with class instructors and classmates throughout the semester. The majority of our communication will occur via Blackboard:

- Complete all weekly classwork in a timely manner
- Post class related questions on Discussion Board (Discussion Board > General Q&A)
- In you would like to discuss a private matter email us directly

Online communication netiquette: All students are expected to follow rules of common courtesy in all online communication:

- Use a descriptive subject line that reflects the content of your message (e.g. "interpretation of p-value, class 7"; "hw1 question 3"). Write in short paragraphs and sign

your message with your full name.
- Check the content of your message for grammatical and spelling errors. Do not write in UPPERCASE as this is often interpreted as shouting in text-based messages. You can use emotional symbols (e.g. :-)) to indicate the tone of your voice.

Late/incomplete submission of assignments
Late quizzes will be penalized by deducting 10% from the earned grade per day, with no credit after homework answer key is posted (end of Day 2 post due date). Late exams will not be accepted. Late projects will not be accepted.

Make-ups, rewrites, and extra credit
There are no make-ups, rewrites, or extra credit allowed.

Expectations of students
This is not a self-paced course. Students are expected to:
- Check email and Blackboard announcements on **weekly** basis
- Access course materials on **weekly** basis
- Complete and submit **weekly** quizzes
- Participate in **weekly** discussion board
- Complete and submit other assignments **as required**
- Check My Grades to monitor progress and received feedback on **weekly** basis

Expectations for the instructor
- Provide regular announcements and reminders on the course website and via email
- Answer questions posted on Discussion Board within 24-48 hours
- Respond to student email within 24-48 hours Monday through Friday
- Grade and provide feedback on assignments within 1 week of the due date
- Communicate grades and progress through Blackboard (My Grades)

Accessibility
Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity
Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

This schedule may change as the semester progresses. Refer to the current academic calendar for important dates.

Session number/Week	Date of class	Topic	Reading	Assignment
0 1/29-1/31	**none**	**Getting started**	Syllabus	• Read syllabus • Complete quiz 0 (Syllabus quiz) • Introduce yourself on Blackboard • Read Online Student Resources • Read information about CITI training
1 2/1-2/7	**2/1** in-class attendance mandatory	**Introduction** • Study designs & sampling • Types of data • Standardization (Age Adjustment)	PowerPoint 1 OpenS CH 1.1-1.5	• Submit week 1 quiz • Complete SPSS/Excel exercise • Respond to Student introductions on Blackboard • Sign up for Project
2 2/8-2/14	**2/8**	**Data Summarization** • Tabular and graphical methods for describing data • Measuring center and spread	PowerPoint 2 OpenS CH 1.6-1.8	• Submit week 2 quiz • Complete SPSS/Excel exercise • Work on project
3 2/22-2/28	**2/22** 2/18 - Last day to withdraw with a grade of "WD"	**The role of probability** • Conditional probability • Diagnostic testing	PowerPoint 3 OpenS CH 2	• Submit week 3 quiz • Complete SPSS/Excel exercise • Work on project
4 2/29-3/6	**2/29**	**Probability Distributions and applications** • The Normal distribution • The Binomial distribution	PowerPoint 4 OpenS CH 3	• Submit week 4 quiz • Complete SPSS/Excel exercise • Submit project: Section 1 & 2
5 3/14-3/20	**3/14** in-class attendance mandatory	**EXAM 1**		
6 3/7-3/13	**3/7**	**Sampling distributions** • Sampling distribution of the mean • Sampling distribution of a proportion	PowerPoint 6 OpenS CH 4.1&4.4	• Submit week 6 quiz • Complete SPSS/Excel exercise • Work on project
7	**3/14**	**Estimation of Confidence**	PowerPoint 7	• Submit week 7 quiz

3/14-3/20		**Intervals** • Confidence intervals for a population mean • Confidence intervals for a population proportion	OpenS CH 4.2 & 4.5	• Complete SPSS/Excel exercise • Work on project
8 3/21-3/27	**3/21**	**Hypothesis Testing** • Hypotheses & test procedures • One-sample tests for a population mean • One-sample tests a population proportion	PowerPoint 8 OpenS CH 4.3 & 5.1-5.2 & 6.1	• Submit week 8 quiz • Complete SPSS/Excel exercise • Work on project
9 3/28-4/3	**3/28**	**Hypothesis Testing** • Two-sample tests for a population mean • Two-sample tests for a population proportion	PowerPoint 9 OpenS CH 5.3-5.4 & 6.2	• Submit week 9 quiz • Complete SPSS/Excel exercise • Work on project
10 4/11-4/17	**4/11** 4/11 - Last day to withdraw with a grade of 'W'	**Hypothesis Testing** • Odds Ratio/relative risk • Pearson's Chi-square/Fisher exact test	PowerPoint 10 OpenS CH 6.4	• Submit week 10 quiz • Complete SPSS/Excel exercise • Work on project
11 4/18-4/24	**4/18**	**Hypothesis Testing** • One-way ANOVA	PowerPoint 11 OpenS CH 5.5	• Submit week 11 quiz • Complete SPSS/Excel exercise • Work on project
12 5/2-5/8	**5/2**	**Multivariable Regression** • Correlation • Linear regression	PowerPoint 14 OpenS CH 7 &8.1-8.3	• Submit week 12 quiz • Complete SPSS/Excel exercise • Work on project
13 5/9-5/15	**5/9**	**Multivariable Regression** • Logistic regression	PowerPoint 13 OpenS CH 8.4	• Submit week 13 quiz • Complete SPSS/Excel exercise • Submit project: Section 3 & 4
14 5/16-5/22	**5/16** in-class attendance mandatory	**EXAM 2**		
15 5/23 (6PM – 8.50PM)	**5/23** in-class attendance mandatory	**Final Project Presentations**		• Submit Completed Project (all sections) • Participate in poster presentations • Submit CITI training certificate to BB.

Note: OpenS=*OpenIntro Statistics* textbook

Last Updated: February 23, 2016

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

Hunter College
PH 75200: Fundamentals of Epidemiology
3 Credits
Spring 2016

Time and location	This is a hybrid course which means the course will be taught partially online and partially in person. In-person sessions will be held Thursdays from 6-8:50pm in the Silberman Bldg, Rm 220 (lecture) and Rm C09 (lab) Online sessions are not held live. Instead, they can be viewed on your own time via Adobe Connect. Please see additional details below. Also, consult the Course Schedule below for dates of online and in-person sessions.
Instructor	Rosann Costa, MA rc181@columbia.edu Phone: 212-305-9346 E-mail is the preferable method of contact for the instructor.
Office hour	Rosann Costa Silberman Rm C09 Thurs*, 9-10pm & by appointment *after in-person sessions only If possible, please provide the instructor with advance notice that you wish to attend office hours.
Course website	https://bbhosted.cuny.edu/
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Apply principles and methods of epidemiological analysis. Identify and interpret epidemiological data. Illustrate and investigate incidence, distribution, determinants, and control of disease.
Course prerequisites	N/A

Course format	▪ In-person sessions will typically begin with a lecture (approximately 1-2 hours), followed by a five minute break and then a practical hands-on SPSS exercise (approximately 1-1.5 hours). Any remaining time will be used for review and questions. ▪ Online sessions will involve viewing a recorded lecture/lab exercise via Adobe Connect from any location of your choosing on your own time. These sessions are NOT held live.
Required reading and resources	Gordis L. *Epidemiology*. 4th or 5th ed. Philadelphia, PA: Saunders Elsevier, 2009 or 2013. *(on reserve at the Silberman library)* Additional assigned articles will be posted on Blackboard. Required to subscribe by email to *Morbidity and Mortality Weekly Reports*, published by the CDC: http://www.cdc.gov/mmwr/ *(no fee)*
Suggested reading/ resources and hardware/software	Aschengrau A, Seage III GR. *Essentials of Epidemiology in Public Health*. 3rd ed. Sudbury, MA: Jones & Bartlett, 2014. Rothman K. *Epidemiology – An introduction.* New York, NY: Oxford University Press, 2002. *(Both of these texts are on reserve at the Silberman library)* SPSS will be used in class and will be required for parts of the three HW assignments. The Hunter College license covers only on-campus use. The SPSS software is available for student use in the library and in computer labs at multiple Hunter campuses. Students who wish to purchase a student copy of SPSS can do so at www.onthehub.com. *SPSS Statistics Base GradPack 23* for 6 months for Mac or Windows for approximately $40 will suffice for this course. Again, purchasing SPSS is NOT required for this course as long as you can regularly access the library and/or computer labs to complete the SPSS-related HW sections. You will NOT need to have SPSS on your personal computer in order to view the online SPSS lab exercises but you will definitely need SPSS access to complete the three HWs. Aside from an internet connection, you will not need any special hardware/software to view the webcasts. You will click on a provided link and watch your screen/listen through your speakers/headphones as the instructor runs through a lecture/lab which can be paused, fast forwarded, rewound and saved for your viewing as often as you wish. You may want to bring a basic calculator with you to class. A calculator will be needed for the Final Exam and Quiz; cell phone calculators will NOT be permitted. The instructors recommend bringing a flash drive to save your in-class SPSS work, although these are not required.

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply the public health core functions of assessment, policy development and assurance	• Describe in writing the purpose of surveillance and how surveillance is used in public health practice • Explain the difference between incidence and prevalence • Describe the process of identifying and testing potential targets of intervention and give examples of effective and ineffective public health interventions • Describe the process of identifying vulnerable sub-populations, and give examples • Describe under what conditions screening is appropriate	• HW 1-3 • Descriptive epidemiology assignment • In-class quiz • Final exam
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Describe epidemiological studies, including observational, quasi- experimental and experimental studies • Differentiate between primary and secondary data collection and identify possible sources of secondary data • Explain the difference between correlation and causation; risk factors/predictors and causes • Describe the causal inferences which can be made from experimental, quasi-experimental and observational studies using published examples	• HW 1-3 • Critique • In-class quiz • Final exam
Adhere to ethical and social justice principles and standards	• Describe circumstances in which an experimental study would and would not be ethical • Describe major disparities in life expectancy nationally and globally	• Descriptive epidemiology assignment • Final Exam • HW 1 - 3

Interpret and analyze public health literature and apply evidence-based research	• Access and use published data to accurately describe in writing the health of populations and factors that affect health in terms of person, time and place characteristics • Distinguish between narrative and systematic reviews • Systematically review the literature on a specific topic using a PICO question	• Descriptive epidemiology assignment • HW 1-3 • Final exam
Apply basic statistical and informatics techniques	• Explain in a few sentences the principle of screening • Define lead time and length bias and how these biases may impact screening program evaluation • Describe in a few short sentences sensitivity, specificity, positive predictive value and negative predict value of a screening test compared to a gold standard test • Calculate and interpret a mean, a proportion, a rate and an odds ratio, • Explain the difference between relative and absolute risk • Calculate age-standardized rates	• HW 1-3 • In-class quiz • Final exam
Communicate public health information through oral, written, digital & visual presentation	• Describe the validity, utility and feasibility of tests used for screening and diagnosis of health conditions • Present visually information on key public health topics such as the major causes of death nationally and globally	• Descriptive epidemiology assignment • HW 1-3 • Final exam
Design and evaluate interventions to prevent or control public health problems	• List the strengths and weaknesses of different techniques for evaluating interventions • List the strengths and weaknesses of different techniques for controlling public health problems	• HW 1-3 • Critique • Final exam
Collect, analyze and interpret public health data	• Explain how to choose and apply appropriate study designs to answer a research question • Explain the interpretation of different measures of population health, such as life expectancy, quality adjusted life years	• HW 1-3 • Descriptive epidemiology assignment • Critique • Final exam

Course Assessments

Use of Blackboard (Bb)
No later than the first week of class, you must sign up for Blackboard to receive updates, in-class materials, recorded lectures, readings and assignments, as well as to submit your assignments. For instructions on registering for Bb, go to: http://bb.hunter.cuny.edu. Please make sure that you have access to Bb Hunter College.

If you encounter problems with Bb at any time throughout the semester, please immediately contact the Bb Helpdesk who have the expertise to assist you. The Bb contact information is (212) 650-3624 and studenthelpdesk@hunter.cuny.edu. *Instructors cannot assist students with Bb.*

Submission of assignments through Blackboard
In an attempt to save paper, homework and written assignments should be submitted electronically. Suggestions for other adjustments to the course to reduce environmental impact are always welcome. Be sure to check your Hunter email address and Blackboard regularly for class announcements and assignments.

Step-by-step instructions for uploading assignments onto Blackboard will be provided on each assignment. After uploading an assignment, the instructor recommends that you log out and then back in again to ensure your assignment has successfully posted to avoid receiving lateness point deductions. If Blackboard is down when attempting to upload an assignment, please email the assignment to the instructor by the due date/time.

PLEASE DO NOT FORGET TO INSERT YOUR NAME ON THE FIRST PAGE OF ALL ASSIGNMENTS.

VERY IMPORTANT: BE SURE TO CHECK YOUR HUNTER EMAIL AND BLACKBOARD *AT LEAST ONCE DAILY* FOR CLASS ANNOUNCEMENTS AND ASSIGNMENTS. SINCE THE COURSE IS SCHEDULED TO BE HELD PARTIALLY ONLINE, MANY IMPORTANT ANNOUNCEMENTS WILL BE SENT VIA EMAIL THROUGHOUT THE COURSE OF THE SEMESTER. PLEASE CHECK THE EMAIL ADDRESS OF YOUR HUNTER ACCOUNT AND CONFIRM THAT YOU ARE ABLE TO RETRIEVE MESSAGES SENT TO THIS ACCOUNT. THE BLACKBOARD HELPDESK WILL BE GLAD TO HELP.

Homework assignments: There will be 3 graded homework assignments to complete over the semester which will be posted on Bb well in advance of the due date. Each assignment will include multiple choice, short answer and SPSS questions. The assignments are organized according to the class lecture schedule so you may work through the assignment over time, completing the applicable sections soon after each lecture rather than leaving the assignment to the last minute. The final homework grade will be based on the highest 2 grades of the 3 assignments ONLY if all 3 assignments

have been fully completed (this includes the SPSS section) and submitted as described above. **Again, the lowest HW will NOT be dropped unless each HW is fully completed and submitted by the due date, including each SPSS section of the HW. I'm sorry, but to maintain fairness among your fellow classmates, there will be no exceptions.**

Descriptive epidemiology assignment: Conduct a literature search on one health condition of your choice and write a 3-4 page paper (double spaced, 12-point font, 1 inch margins) describing the epidemiology of this condition in terms of person, place and time. You must have at least 10 citations from the public health literature (peer-reviewed journals instead of websites). Please be sure to appropriately cite other people's work in AMA reference style. Additional instructions, regarding this assignment, will be posted within the first week or two of the semester.

An ungraded bibliography will be due several weeks prior to the paper. Although the bibliography will not be graded, it must be submitted in order to receive full credit for the paper. The bibliography will help ensure you are on the right track as MANY students fail to understand the unique nature of this assignment.

Quiz
You will have the first 20-30 minutes of the 3/17/16 class session to complete the in-class quiz which will consist of multiple choice and short answer questions in a format similar to the homework assignments. You are allowed to use a basic calculator (no cell phones) and you may bring **one page** of prepared notes (front and back on 8 1/2 x 11 inch paper). **The quiz is worth only 5% of your grade.** It is a chance for you and the instructor to assess your knowledge of the material covered thus far and to prepare for the final exam. Often, it will help students determine whether it would be wise to begin meeting with one of the instructors to clarify unclear concepts early in the semester. **There is no make-up for this quiz**

Critique: Choose one of two published papers and use a series of guiding questions (all posted on Blackboard) to develop a 3-5 page (double spaced, 12-point font, 1 inch margins) critical analysis of the paper you have chosen. Additional details, regarding this assignment, will be posted as time approaches.

In-Class Exam: The final exam will be held on 5/19/16. You will have the entire class period to complete the exam. The exam will consist of multiple choice and short answer and SPSS questions in a form similar to the homework assignments. Since you will NOT have access to a computer for you to run analyses in SPSS, the SPSS output will be provided for you to interpret. You are allowed to use a calculator (no cell phones) and you may bring 1 page of prepared notes (front and back on 8 &1/2 x 11 inch paper).

Online discussion/reflections: Participation in online discussions are part of your grade. Throughout the semester, Epi-related news articles/videos and questions of interest may be posted on Blackboard. The instructor will let you know when this material has been posted. Students will be expected to post their reactions/reflections

on this Blackboard discussion board using at least 3-5 complete sentences.

Help with research and writing

Hunter College's Reading/Writing Center is available to all students for guidance on paper writing (http://rwc.hunter.cuny.edu/). The Center is located on the 68th Street Campus in Thomas Hunter Hall Room 416, phone (212) 772-4212. Students may use this and other resources in preparing written assignments. Students should feel free to discuss their homework assignments with each other and to seek assistance from others in editing their papers to refine and clarify arguments. However, the final submitted work must be written by the student herself/himself; others may NOT contribute to the assignment by writing portions of it.

While students may ask peers for feedback on written assignments and brainstorm on solutions to the homework assignments, descriptive paper and critique paper; the final version of these assignments must reflect independent work and be written in each student's own language. ***In other words, no two homework assignments or papers should ever be similar to each other.***

When working on the assignments and paper, you will need to follow these guidelines:

- All sources must be referenced and quotations identified. If there is any doubt about proper procedures, students should consult the instructor.
- If you use or paraphrase another person's ideas, you must acknowledge the source in a proper citation.
- If you use the actual words or expressions of another person or source, including the Internet, you must indicate such use by incorporation of quotation marks and a proper citation.
- You are to provide your own work, not someone else's. Examples of using someone else's work include: submitting essays or portions of essays written by other people as one's own; or collaborating with others on an assignment or examination without specific permission from the faculty member to do so.
- Students may not submit material prepared for one course to fulfill the requirements for a second course without having received prior written permission from the instructors.

Grading

Evaluation Criteria

The total number of points assigned to each HW, quiz and final exam question will be listed after each question. Likewise, the total number of points assigned to each section of the required papers will be listed on the paper instructions.

The relative weight of each course component is as follows:

Assessment	Weight
HW Assignments (2/3) (See above under HW Assignments)	25%
Descriptive Epi Assignment	20%
In-Class Quiz	5%
Critique Assignment	20%
In-Class Exam	25%
Online Discussions/In-class Participation	5%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw

from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Please check the Registrar's website for the most up-to-date information: http://www.hunter.cuny.edu/onestop/repository/files/registrar/Academic%20Calendar%20Fall%202015%20thru%20Spring%202016%208-20-2015.pdf

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation

As described above, 5% of your grade will be based on attendance and class participation. Since the instructor understands that students may not all be able to attend all classes, recorded lectures and labs will be provided when requested to help catch up with missed material. However, since the in-person sessions are designed to promote discussion in a face-to-face environment and to more carefully review the material covered during the online sessions, the instructor expects students to attend the in-person sessions. Class will begin promptly to maximize our time together. Please arrive to class on time and inform the instructor of unavoidable absences. Mandatory class sessions are on the quiz and final exam dates listed below because there is no make-up quiz or final exam.

Late/incomplete submission of assignments

Homework assignments and papers are due electronically on Bb on the dates listed on the Course Schedule below. If Bb is down, email the assignments to the instructor (email address is listed above on Page 1) and then contact Bb for assistance. Late homework assignments will have 3 out of 100 points deducted per day (including weekends) and late papers will have 1.5 out of 50 points deducted per day (including weekends). Both HWs and papers will not be accepted more than 3 days late. A zero

grade will be assigned to any HW or paper that misses the deadline and, to maintain fairness among your fellow classmates, this zero grade will NOT be dropped from your overall grade.

Make-ups, rewrites, and extra credit

No make-up tests will be given if you fail to attend the in-class quiz or final exam.

To maintain fairness among all students, extra credit assignments will not be offered to make up for a low grade. For the same reason, extensions for assignments will not be offered as mentioned above.

Expectations of students

Attend and very carefully review lectures & labs, read textbook and any articles prior to class, participate during class discussions, seek help/ask questions early and often.

Expectations for the instructor

The instructor is available during office hours and by appointment to assist students with homework, course material, exam preparation and assignments throughout the semester. The preferred method of communication with the instructor is email. Since Instructors are generally teaching more than one course and receive many email messages, **please always put your name and course number into the email header.**

The instructor will respond to emails within 24-48 hours, including weekends. Generally, graded assignments with feedback will be returned within two weeks but do not hesitate to tell the instructor you would prefer to receive your feedback sooner.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents)

as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

The schedule is subject to change throughout the semester although this is unlikely. The "Last Updated" Date in the header of the syllabus is meant to reference the current version of the syllabus and, therefore, will be updated if a change in schedule is made. You will be made aware of any amendments to the syllabus or course schedule.

Please refer to the current academic calendar for important dates (holidays, course drop, withdrawal):

http://www.hunter.cuny.edu/onestop/repository/files/registrar/Academic%20Calendar%20Fall%202015%20thru%20Spring%202016%208-20-2015.pdf

14	5/12/16 ONLINE	Ethics	SPSS Review	Gordis, Chapter 20 Coughlin SS. Ethical issues in epidemiologic research and public health practice. *Emerg Themes in Epidemiol.*2006, 3:16, doi:10/1186/1742-7622-3-16. Jaakola MS. et al. Environmental tobacco smoke and adult-onset asthma: a population-based incident case-control study. *AJPH*: 2003;93:2055-60.
15	5/19/16 IN PERSON	**Final Exam (in-class)[2]** Bring basic calculator, pencils/pens and one 8 ½ x 11 page of notes (only notes allowed).		

[1]You are expected to complete readings in Gordis before on- or off-campus session. Supplemental readings (in italics) are extra resources and entirely optional. Homework and papers must be uploaded to Blackboard by due date and time as listed on this Course Schedule above.

[2] For exam and quiz, bring a basic calculator and one 8 & 1/2x11 page of notes (front and back).

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

PH75200: Fundamentals of Epidemiology (online)
3 Credits
Spring 2016

Time and location	This is a fully online course. Weekly lectures **will be made** available online on Blackboard. Students will be able to view online materials at any time based on their own schedule.
Instructor	Sheng Li, PhD, MD, MPH — Rosann Costa, MA **Email** sheng.li@sph.cuny.edu — rc181@columbia.edu **Phone** 646-664-8349 — 212-305-9346 **Office** Room 805, 55 W. 125th Street, New York, NY 10026 E-mail is the preferable method of contact for both instructors.
Office hours	There is **NO** physical office hour. Individual personal meeting with instructors can be arranged through email if needed.
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Apply principles and methods of epidemiological analysis. Identify and interpret epidemiological data. Illustrate and investigate incidence, distribution, determinants, and control of disease.
Course prerequisites	N/A Should have ability to use a computer, access emails, use a web browser (Internet Explorer, Firefox, or Safari) and Microsoft Office applications, and use the Blackboard system on a daily basis.
Course format	This is an online course. This course is taught through a mix of online lecture, online discussion, individual assignment, online exam, and course project paper. Course contents are divided into 15 weekly sessions to be completed over the Spring 2016 semester. Each weekly session involves viewing multiple lecture recordings, each approximately 15-20 minutes long. PowerPoint slides will be provided to accompany the recordings. Additionally, most weekly sessions will include an SPSS lab exercise. All course materials will be made available on

	Blackboard (Bb).
Required reading and resources	Gordis L. Epidemiology. 4th or 5th ed. Philadelphia, PA: Saunders Elsevier, 2009 or 2013. (on reserve at the Silberman library) Required to subscribe by email to Morbidity and Mortality Weekly Reports, published by the CDC: http://www.cdc.gov/mmwr/ *(no fee)* Any additional assigned articles will be posted on Blackboard.
Suggested reading and resources	Aschengrau A, Seage III GR. Essentials of Epidemiology in Public Health. 3rd ed. Sudbury, MA: Jones & Bartlett, 2014. Rothman K.. Epidemiology – An introduction. New York, NY: Oxford University Press, 2002. (Both of these texts are on reserve at the Silberman library) **Very Important: Be sure to check your Hunter email account and Blackboard *at least once daily* for class announcements and assignments. Since the course is scheduled to be held partially online, many important announcements will be sent via email throughout the course of the semester. Please check the email address of your Hunter account and confirm that you are able to retrieve messages sent to this account. The blackboard helpdesk will be glad to help. This important request will likely be repeated throughout this syllabus.**

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Apply the public health core functions of assessment, policy development and assurance	• Describe in writing the purpose of surveillance and how surveillance is used in public health practice • Explain the difference between incidence and prevalence • Describe the process of identifying and testing potential targets of intervention and give examples of effective and ineffective public health interventions • Describe the process of identifying vulnerable sub-populations, and give examples • Describe under what conditions screening is appropriate	• 3 HWs and Descriptive epidemiology written assignment • Weekly quizzes • Midterm exam • Final exam
2. Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Describe epidemiological studies, including observational, quasi- experimental and experimental studies • Differentiate between primary and secondary data collection and identify possible sources of secondary data • Explain the difference between correlation and causation; risk factors/predictors and causes • Describe the causal inferences which can be made from experimental, quasi-experimental and observational studies using published examples	• 3 HWs, Critique paper • Weekly quizzes • Midterm quiz, • Final exam
3. Adhere to ethical and social justice	• Describe circumstances in which an experimental	• Weekly quizzes

principles and standards	study would and would not be ethical • Describe major disparities in life expectancy nationally and globally	• 3 HWs • Final exam
4. Interpret and analyze public health literature and apply evidence-based research	• Access and use published data to accurately describe in writing the health of populations and factors that affect health in terms of person, time and place characteristics • Distinguish between narrative and systematic reviews • Systematically review the literature on a specific topic using a PICO question	• Descriptive epidemiology written assignment • 3 HWs • Final exam •
5. Apply basic statistical and informatics techniques	• Explain in a few sentences the principle of screening • Define lead time and length bias and how these biases may impact screening program evaluation • Describe in a few short sentences sensitivity, specificity, positive predictive value and negative predict value of a screening test compared to a gold standard test • Calculate and interpret a mean, a proportion, a rate and an odds ratio, • Explain the difference between relative and absolute risk • Calculate age-standardized rates	• 3 HWs, • quizzes • Final exam •
6. Communicate public health information through oral, written, digital & visual presentation	• Describe the validity, utility and feasibility of tests used for screening and diagnosis of health conditions • Present visually information on key public health topics such as the major causes of death nationally and globally	• Descriptive epidemiology written assignment • 3 HWs and Final exam
7. Design and evaluate interventions to prevent or control public health problems	• List the strengths and weaknesses of different techniques for evaluating interventions • List the strengths and weaknesses of different techniques for controlling public health problems	• 3 HWs and Critique paper • Final exam
8. Collect, analyze and interpret public	• Explain how to choose and apply appropriate study designs to answer a research question	• 3 HWs and Descriptive epidemiology written

health data	• Explain the interpretation of different measures of population health, such as life expectancy, quality adjusted life years	assignment • Critique paper • Final exam

Grading

Evaluation criteria

The students will be assessed through a mix of homework assignments, epidemiology papers, weekly quizzes, a midterm quiz, a final exam and Blackboard Discussion postings.

The relative weight of each course component is as follows:

Assessment	**Weight**
Homework Assignment (2/3)	20%
Descriptive Epidemiology Written Assignment	15%
Critique Epidemiology Paper	15%
Weekly Quick Quiz (14)	14%
Midterm Exam	6%
Final Exam	20%
Online Discussion Board (4)	8%
Midway survey	1%
Exit survey	1%
Optional biweekly online virtual office hour	0%
	100%

The grading system for the course follows the guidelines in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Homework Assignments

There will be **3** graded homework assignments to complete over the semester which will be posted on BB in advance of the due date. Each assignment includes multiple choice, and short answer questions including SPSS questions. The assignments are organized according to the class lecture schedule so you may work through the

assignment over time, completing the applicable sections soon after each lecture rather than leaving the assignment to the last minute. The final homework grade will be based on **the highest 2 grades** of the 3 assignments ONLY if all 3 assignments have been fully completed (this includes the SPSS section) and submitted as described above. The lowest HW will **NOT** be dropped unless each HW is fully completed and submitted by the due date, including each SPSS section of the HW. You will need access to SPSS to complete the HW assignments.

Descriptive Epidemiology Written Assignment

Students will be provided with several questions to answer regarding the descriptive epidemiology of public health conditions. These questions will be posted on Bb in advance of the due date.

Critique Epidemiology Paper

Each student will choose one of two published epidemiological study papers and use a series of guiding questions (all will be posted on Blackboard) to develop a 3-5 page (double spaced, 12-point font, 1 inch margins) critical analysis of the paper you have chosen.

Weekly Quiz

You will take a weekly quiz focusing on weekly lecture contents. In general, the quiz will consist of 5 multiple-choice questions. Each question may have a single or multiple correct answers, and you need to select all that apply. The purpose of the weekly quiz is to ensure students viewing materials on time. It is a chance for you to assess your knowledge of the material covered in that week. Thus the quiz is straightforward and is close to the lecture contents. **All 14 weekly quizzes are together worth 14% of your grade.** The weekly quiz must be taken before11:30 pm last day in a week (see course schedule below for week periods). You can take the quiz two times and the best score will be the final. The quiz is timed and it will automatically end 30 minutes after you click to start even you are not done. **There is no make-up for this quiz**.

Online Midterm Exam

You will have a brief online midterm exam that will consist of multiple choice and short answer questions in a format similar to the homework assignments. **The midterm exam is worth 6% of your grade.** It is a chance for students to assess knowledge of the material covered thus far and to prepare for the final exam. It will help students determine whether it would be wise to begin meeting with one of the instructors to clarify unclear concepts early in the semester. The exam will available on Bb in a period of 24 hours. The exact time and rules will be posted on Bb before the week of midterm exam (see course schedule below). **There is no make-up for this quiz.**

Online Final Exam

The final online exam will take place in the final week of the semester. The exam will consist of multiple choice and short answer, including SPSS questions in a form similar to the homework assignments. Since the SPSS output will be provided for you to

interpret, you will not to run any analyses in SPSS. Instructors suggest that you have a calculator available for the exam. The exam will available on Bb in a period of 24 hours. The exact time and rules will be posted on Bb before the final exam week (see course schedule below). **There is no make-up for this final exam.**

Online Discussion Board Postings

Discussion Boards are one of the most commonly-used channels for sharing information and promoting critical thinking in an online class. Participation in online discussions is part of your grade.

There will be **4** discussion forums in this course. You will be expected to post your reflections/reactions on this Blackboard discussion board using at least 3-5 complete sentences. Your participation in all 4 discussion forums will bee worth **8% of your grade**. The discussion boards will typically involve an Epi-related news articles/videos, posted for you by the Instructors, along with questions of interest for you to answer. Instructors will let you know when this material has been posted.

Midway and Exit Survey

To improve our online teaching and learning, students are expected to respond to 2 brief surveys: Midway and Exit survey. The course may be modified based on these survey results during and after this semester. Each survey will contribute 1 point to your course grade.

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and Class Participation

As described above, a significant part of your grade will be based on online attendance and participation. The recorded lectures and labs provide great flexibility for student learning. However, we expect students to attend at least half of the online office hour sessions.

Late/incomplete Submission of Assignments

Homework assignments and papers are due electronically on Bb on the dates listed on the Course Schedule below. If Bb is down, email the assignments to both instructors and then contact Bb for assistance. Late homework assignments will have 3 points out of 100 points deducted per day (including weekends) and late papers/other written assignments will have 1.5 out of 50 points deducted per day (including weekends). Both HWs and papers/written assignments will not be accepted more than 3 days late. A zero grade will be assigned to any HW or paper that misses the deadline and, to maintain fairness among your fellow classmates, this zero grade will NOT be dropped from your overall grade.

Make-ups, Rewrites, and Extra credit

No make-up tests will be given if you do not take the online quiz and exam on time. To maintain fairness among all students, we do not offer any or extra credit assignments to make up for a low grade or any extensions for assignments.

Expectations of Students

Students need to take greater effort to be successful in online learning than in face-to-face learning. You must be self-motivated and self-disciplined because it is easy to fall behind in online learning. Please keep yourself on schedule with reading, assignments, online class activities etc. It is extremely important that students take ownership of the learning for online course, and to demonstrate their ownership. Students are expected to be full participants throughout the entire semester.

It is very important that we keep connected and interact with one another. If you have questions, please feel free to use email, discussion board, text, or phone to contact your Instructors or your classmates. Learning in a community is more effective.

Online participation and communication are paramount to the success of this course, and they are an integral part of this course, and will count significant part of your grade.

Students are expected to:
1. Spend anywhere from 10-12 hours per week on reviewing lectures & labs, and reading the textbook:
2. Complete the early class tasks (explore BB, welcome video) at the beginning of first week.
3. Check your e-mail and Announcements on Blackboard DAILY.
4. Submit assignments/papers online through Blackboard.
5. Participate in the 4 discussion board activities.
6. Seek help/ask questions early and often.
7. Check grades and feedback regularly.

Expectations for the Instructors

The instructors will try their best to be available as often as possible throughout the semester to assist students with homework, course material, exam preparation and assignments.

You can expect from instructors:
1. The instructors are available by appointment. The preferred method of communication with the instructors is **email.** Please always put your name and course number into the email header.
2. The instructors will respond to course related questions within 24-48 hours during weekdays. Emails sent after Friday 5PM will be responded on next Monday. If your question is urgent, please insert "URGENT" in the subject field of your email message.
3. If your questions are relevant and important to others, the instructors will post them in Bb Announcements or on the discussion board.
3. The instructors will typically post announcements and reminders once per week, or more frequently, if needed.
4. The instructors will give feedback on submitted assignments within 2 weeks after the deadline due to the large online class size.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents)

as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Hardware/software

SPSS will be used for data analysis in this class and will be required for parts of the homework assignments and SPSS lab exercise. The Hunter College license covers only on-campus use. The SPSS software is available for student use in the library and in computer labs at multiple Hunter campuses. Students who wish to purchase a student copy of SPSS can do so at www.onthehub.com. SPSS Statistics Base GradPack 23 for 6 months for Mac or Windows for approximately $40 will suffice for this course. Again, purchasing SPSS is suggested but is NOT required for this course as long as you can regularly access the library and/or computer labs to complete the SPSS-related HW sections. You will NOT need to have SPSS on your personal computer in order to view the online SPSS lab exercises but you will definitely need SPSS access to complete the HWs.

You need MS PointPower to watch weekly primary lecture PPT file. You will not need any special hardware/software to view the SPSS lab webcasts aside from an internet connection. You will click on a provided SPSS lab link and watch your screen/listen through your speakers/headphones as the Instructor runs through a SPSS lab which can be paused, fast forwarded, rewound and saved for your viewing as often as you wish.

You may want to have a basic calculator for the homework, exam and Quiz.

Help with research and writing

Hunter College's Reading/Writing Center is available to all students for guidance on paper writing (http://rwc.hunter.cuny.edu/). The Center is located on the 68th Street Campus in Thomas Hunter Hall Room 416, phone (212) 772-4212. Students may use this and other resources in preparing written assignments. Students should feel free to discuss their homework assignments with each other and to seek assistance from others in editing their papers to refine and clarify arguments. However, the final submitted work must be written by the student herself/himself; others may NOT contribute to the assignment by writing portions of it.

While students may ask peers for feedback on written assignments and brainstorm on solutions to the homework assignments, descriptive paper and critique paper; the final version of these assignments must reflect independent work and be written in each student's own language. In other words, no two homework assignments or papers should ever be similar to each other.

When working on the assignments and paper, you will need to follow these guidelines:

- All sources must be referenced and quotations identified. If there is any doubt about proper procedures, students should consult the Instructors.
- If you use or paraphrase another person's ideas, you must acknowledge the source in a proper citation.
- If you use the actual words or expressions of another person or source, including the Internet, you must indicate such use by incorporation of quotation marks and a proper citation.
- You are to provide your own work, not someone else's. Examples of using someone else's work include: submitting essays or portions of essays written by other people as one's own; or collaborating with others on an assignment or examination without specific permission from the faculty member to do so.
- Students may not submit material prepared for one course to fulfill the requirements for a second course without having received prior written permission from the instructors.

Use of Blackboard (Bb)

No later than the beginning of the first week, you must sign up for Blackboard to receive updates, class materials, recorded lectures, readings and assignments, as well as to submit your assignments. For instructions on registering for Bb, go to: http://bb.hunter.cuny.edu. Please make sure that you have access to Bb Hunter College.

If you encounter problems with Bb at any time throughout the semester, please immediately contact the Bb Helpdesk who has the expertise to assist you. The Bb contact information is (212) 650-3624 and studenthelpdesk@hunter.cuny.edu. *Instructors cannot assist students with BB.*

Submission of Assignments through Blackboard

In an attempt to save paper, homework and written assignments should be submitted electronically. Be sure to check your Hunter email address and Blackboard regularly for class announcements and assignments.

Step-by-step instructions for uploading assignments onto Blackboard will be provided on each assignment. After uploading an assignment, the instructor recommends that you log out and then back in again to ensure your assignment has successfully posted to avoid receiving lateness point deductions. If Blackboard is down when attempting to upload an assignment, please email the assignment to both instructors by the due date/time. Please do not forget to insert your name on the first page of all assignments.

Course Schedule
The schedule is subject to change throughout the semester.

Please refer to the current academic calendar for important dates (holidays, course drop, withdrawal):
http://www.hunter.cuny.edu/onestop/repository/files/registrar/Academic%20Calendar%20Fall%202015%20thru%20Spring%202016%2010-19-20151.pdf

Date*	**Topic**	**SPSS Lab Exercises**	**Reading & Assignments**
Week 0 Before 1/31/2016	Explore BB View introduction to the course video	NA	
Week 1 1/31 – 2/6	Introduction to Epidemiology	SPSS Exercise: Introduction to database design	Gordis, Chapter 1
Week 2 2/7 – 2/13	Measures of disease occurrence and association	SPSS Exercise: Introduction to disease occurrence measures	Gordis, Chapter 1
Week 3 2/14 – 2/20	Causation and risk in epidemiology	NA	Gordis, Chapter 14
Week 4 2/21 – 2/27	Surveillance Study Designs: Cross-sectional study designs	SPSS Exercise: Cross-sectional study data analysis	Gordis, Chapter 3
Week 5 2/28 – 3/5	Study designs: Cohort study design (prospective & retrospective)	SPSS Exercise: Cohort study data analysis	Gordis, Chapter 9
Week 6 3/6 – 3/12	Study designs: Case-control study design	SPSS Exercise: Case-control study data analysis Online office hour	Gordis, Chapter 10 **HW1 DUE at 3/12 11:30 pm**
Session 7 3/13 – 3/19	Study designs: Clinical trials (RCTs)	SPSS Exercise: RCT data analysis	Gordis, Chapters 7 & 8

Week 8 3/20 – 3/26	Ecological Study Design Screening	SPSS Exercise1: Ecological Study Design data analysis SPSS2: Screening lab/paper and pencil exercise	Gordis, Chapters 4 & 6 Gordis, Chapter 20 **DESCRIPTIVE EPI WRITTEN ASSIGNMENT DUE at 3/30 11:30 pm**
Week 9 3/27 – 4/2 Midterm Exam	Overall Review of Cohort, Case-Control and RCT Study Designs / Related SPSS Exercises Critical Review of Epidemiologic Medical Literature	No SPSS	Kendzor DE, et al. Financial strain and smoking cessation among racially/ethnically diverse smokers. *Am J Pub Health*. 2010;100:702-6.
Week 10 4/3 – 4/9	Hypothesis Testing Ethics in Research	SPSS Exercise: Hypothesis Testing	Gordis, Chapters 11 & 12 Goodman S. A dirty dozen: twelve p-value misconceptions. *Semin Hematol*. 2008;45:136-40 (with erratum 2011:48:302. **HW2 DUE at 4/9 11:30 pm**
Week 11 4/10 – 4/16	Bias & confounding	SPSS Exercise: Assessing & removing confounding through stratified analysis & MH adjusted OR	Aschengrau, Chapter 13, 15
Week 12 4/17 – 4/21	Confounding, mediation & effect modification	SPSS Exercise: Assessing mediation & effect modification in stratified analysis	Aschengrau, Chapter 14:
April 22 - April 30, 2016 Spring recess No class			

Week 13 5/1 – 5/7	Measurement: reliability, internal and external validity	SPSS Exercise: Reliability and validity	Gordis, Chapter 15 HW3 Due at 5/7 11:30 pm
Week 14 5/8 – 5/14	Infectious disease epidemiology Final exam review	SPSS: Outbreak Analysis Screening lab/paper and pencil exercise	Gordis, chapter 2, 5 & 18 **CRITIQUE PAPER DUE at 5/14 11:30 pm**
Week 15 5/15 – 5/21	Online FINAL EXAM Exit survey		Gordis, Chapter 20 Coughlin SS. Ethical issues in epidemiologic research and public health practice. *Emerg Themes in Epidemiol.*2006, 3:16, doi:10/1186/1742-7622-3-16.

* A week session period is defined here. The first date indicates the 1st of a week session and the 2nd date indicates the last day of a week session. For example, 2/7/2016 will be the first day of week 2 and 2/13/2016 will be the last day of week 2.

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College

PH 754 Fundamentals of Environmental Health (In-Class)

3 Credits - Spring 2016 – Room 218

Time and location	Monday 8:00 – 9:45 pm weekly for 15 sessions. Room 218 (Silberman)
Instructor	Jack Caravanos, DrPH, CIH Professor, CUNY School of Public Health 2180 3rd Ave, Room 720 Phone 212-396-7780 (do not leave messages) jcaravan@hunter.cuny.edu
Office hours	Online and Thursday 4-6 pm in my office
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Survey of chemical, physical and biological factors influencing quality of ambient, workplace and home environments. Topics include: air and water pollution; radiation; hazardous substances; solid wastes; food protection; and natural and human-made disasters.
Course prerequisites	None
Course format	This course is present in weekly units (lessons) dispersed with weekly internet assignments and periodic short quizzes. and assignments.
Required Reading	• Our Global Environment: A Health Perspective, Anne Nadakavukaren, 7th Edition, Waveland Press, ISBN-13: 978-1577666868 (available online as hardcopy or eTextbook) • A Civil Action – Jonathan Harr, Vintage Press (non-fiction paperback available online)
Suggested reading and resources	Posted online as needed.

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply the public health core functions of assessment, policy development and assurance	• Describe approaches for identifying and assessing the human and ecological impacts of workplace, community, and residential environmental hazards	• Assignments, online quizzes and in section exam
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Explain the importance of working collaboratively with diverse communities, sectors, and constituencies in the development, implementation, and evaluation of workplace and environmental health programs and policies. • Describe the elements, appropriate use and limitations of key risk assessment, risk management and risk communication strategies	• Online quizzes and in section exam
Apply basic statistical and informatics techniques	• Use informatics techniques to retrieve, analyze and summarize environmental health data • Use spreadsheet applications to collect, conduct descriptive analyses, and graphically represent data	• Environmental data project, online assignments
Communicate public health information through oral, written, digital and visual presentation	• Construct a multimedia learning module on an environmental topic using published data	• Environmental data project
Explain how social, behavioral, biomedical and environmental determinants affect population health	• Understand the basic mechanisms of toxicity and pathobiology • Achieve a basic understanding of how genetic, physiologic, psychosocial factors influence susceptibility to adverse health outcomes following exposure to workplace, community, and residential environmental hazards • Identify the major types and sources of environmental agents that can impact health in workplace, urban community and residential settings. • Describe the pathways by which major environmental agents cause human exposure in workplace, urban community and residential settings. • Explain the reasons, sources, and impacts of inequitable distribution of environmental hazards	• Assignments, online quizzes and in section exam
Design and evaluate interventions to prevent or control public health problems	• Describe basic concepts and strategies for controlling environmental hazards in workplace, community, and residential settings and the advantages and limitations of	• Assignments, online quizzes
Describe the legal foundations of the U.S. public health system and its interrelationships with other systems including health care, education and environmental protection	• Identify the major provisions, accomplishments and limitations of key environmental and occupational regulatory programs, guidelines, and authorities at the federal, state and local level.	• Online quizzes and in section exam

Course Assessments

Details about the assignments can be found on the course website as lessons are presented. There are 3 exams based on 4-5 lessons and 6 quizzes based on short environmental presentations usually of historical value.

Environmental Data Project:

On the first day of class you will be given an environmental topic to research. Each student must assemble tabular and graphical data on this topic and submit an interpretation through a narrated PowerPoint presentation. The format of the presentation should be 5 tables, figures, graphs with a written paragraph describing the findings. Grading will be based on format, quality of graphs and data representation, organization and effectiveness of presentation. Use PPTs "narration" feature to record your presentation. You will submit this through BB as either a narrated PPT or common video file (MP4, WMV or QuickTime)

The assignment must include (in this order):

- Title Slide (include name, course information, date)
- Purpose/Objectives slide
- Table of Contents slide
- The 5 Tables, Figures, Illustrations etc
- Summary Slide
- Professional style reference list

The presentation must proceed from general to specific and should temporal and spatial variables. Do not use all graphs or all figures (variety is desired).

For example let's say your topic was "Environmental Asthma"; here are 5 appropriate tables/graphs:

1. Table of Environmental Asthma triggers
2. Figure of Asthma rates for entire US (color coded?)
3. Graph or table of Asthma rates in NYC by borough
4. Graph or table of Asthma rates in NYC by year (1990-2003)
5. Graph or table of Asthma rates in NYC by who is affected (gender, ethnicity, age)

Grading Criteria for Course

Exam 1,2,3	2 x 20% =	60%
Quizzes 1-6	6 x 4% =	24%
Env Data Assignment	1 x 10% =	10%
In Line Assessments	many	6%
		100%

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Attendance and class participation
This is a fully online course and attendance is not recorded. The synchronous (live) sessions are strongly recommended and students will be responsible for comments or notices made in these sessions. Each synchronous session is recorded for future viewing in the event you cannot attend the live sessions.

Late/incomplete submission of assignments
Late or incomplete assignments are accepted with penalty unless approved by instructor.

Make-ups, rewrites, and extra credit
There are no make-ups, rewrites, or extra credit allowed.

Expectations of students
- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Know how to use library resources and citation tools.
- Show respect to everyone in the course.
- Be fully prepared to actively participate in discussion and online forums.
- Complete all assignments by their assigned due date (10% penalty per week late will be applied)
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted in the discussion board.
- Contact the professor directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.

Expectations for the instructor
- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during discussion
- Respond to student email within 24 hours
- Grading and feedback on assignments (when applicable) within 1 week after the due date.

Accessibility
Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity
Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule:
Also refer to the current academic calendar for important dates.

Class	Date	Topic	Readings	Assgn Due Date
Pre		Understanding BB, Reviewing site Practice Quiz	BB Online Student Resources	
1	Feb 1	Lesson 1: Course Welcome / Introduction to Env Health / Environmental Controls	Chp 1, p2-5, Chp 2, p33-54, Box 1-4 www.epa.gov, www.cdc.gov/atsdr	Feb 7

CUNY SCHOOL OF PUBLIC HEALTH

Hunter College

PH 75500

FUNDAMENTALS OF SOCIAL AND BEHAVIORAL HEALTH
3 credits

SPRING 2016

Catalogue description: This course provides a topical and theoretical survey of social and behavioral issues in public health

Course meets: Fully online

Instructor: Professor Michele Greene, DrPH

Email: MGGreene@brooklyn.cuny.edu

Phone: 718-951-5000 ext. 2756 Please do NOT leave voicemail.

Office: 4109 Ingersoll Hall, Brooklyn College

Office Hours at Brooklyn College: 7:30 - 9:00 AM, Tuesday and Thursday

11:00 AM – 12:45 PM Tuesday and Thursday*

*Please note that on some Tuesdays and Thursdays I may not be available during these office hours because of meetings. If you plan to come in, please arrange a specific appointment time via email.

Required books: NA

Required materials: Required readings and assigned materials are posted on Blackboard.

This is an asynchronous, fully online course. This means that, as with a traditional class, you are responsible for weekly readings and activities. Unlike a traditional class, you are expected to independently access and view PowerPoint presentations when available, and to participate in online Discussion Boards (DB), as well as to complete activities and take exams online.

It is **YOUR** responsibility to successfully log onto Blackboard and participate in the course throughout the semester.

The email for the student help desk is: studenthelpdesk@hunter.cuny.edu and the phone number is: 212-650-3624. The student help desk is located in Thomas Hunter Hall on the 4th floor. The link to the student resources page is: http://www.hunter.cuny.edu/it/blackboard/student-documentation-and-support-for-blackboard

The online technical components of the class will NOT be managed by the course instructor.

BB refers to Blackboard.

DB refers to Discussion Board

PH 75500
Course Competencies and Objectives

Program Competencies	Course Learning Objectives	Competencies
This course will help you to achieve the following competencies, which are expected of MPH graduates	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be addressed as part of the following course assignments:
Apply the public health core functions of assessment, policy development and assurance	• Describe the role of social and community factors, including respect for individuals and communities, including sensitivity to cultural issues, in the onset and the development, implementation, and evaluation of public health strategies, programs, research, and policies as solutions of public health problems • Describe opportunities, challenges, methods of applying an evidence-based, systems approach to program planning, including the application of relevant social ecological models to public health.	• Discussion board leader • Discussion board participant • Research paper
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Identify basic theories, concepts and models from a range of social and behavioral disciplines that are used in public health research and practice. • Describe leading theories of individual, interpersonal, group, organizational, and community-level change.	• Discussion board leader • Discussion board participant • Research paper • Exams

Adhere to ethical and social justice principles and standards	• Relate contemporary public health problems to power and resource distribution, equity, diversity, sustainability, and intended and unintended consequences of interventions.	• Discussion board leader • Discussion board participant
Interpret and analyze public health literature and apply evidence-based research	• Conduct a systematic literature review of a public health issue using bibliographic databases, government statistics and other information available on the Internet	• Discussion board leader • Discussion board participant • Research paper
Communicate public health information through oral, written, digital and visual presentation	• Develop skills for writing research papers using a scholarly format by employing a critical review and synthesis of the literature on a selected public health topic	• Research paper • PowerPoint presentation
Explain how social, behavioral, biomedical and environmental determinants affect population health	• Analyze the impact of individual, organizational, community, national, and global trends and interdependencies including, but not limited to, major economic, political, and environmental forces, that shape the health of U.S. urban populations, contribute to public health related problems, and influence systems. • Identify basic social and behavioral theories, concepts, and models that explain differences in the distribution of health and illness in the United States (including multiple perspectives on the meaning of key social concepts such as race, class, ethnicity, gender, and disability)	• Discussion board leader • Discussion board participant • Research paper • Exams
Engage and collaborate with diverse groups	• Describe the strengths	• Discussion board leader

	and limitations of social and behavior-based interventions and policies for improving the health of urban populations with an emphasis on reducing health disparities.	• Discussion board participant • Research paper

Course Expectations and Assessment

Online courses can be challenging to master in the beginning. As a first step, you MUST thoroughly review both the syllabus and the other materials available in the "Syllabus & Other Course Information" folder on Blackboard.

Technical requirements

- Access to an Internet connection with high bandwidth for streaming video, Flash and audio
- Mozilla Firefox or Microsoft Internet Explorer Internet browsers preferred
- Microsoft Office applications (Word, Excel, PowerPoint), version 2010 or later
- You may NOT use a Smartphone, tablet or any other device other than a computer to complete activities such as DB posts or exams.

The email for the student help desk is: studenthelpdesk@hunter.cuny.edu and the phone number is: 212-650-3624.

For information about BlackBoard, go to: http://www.hunter.cuny.edu/it/blackboard/student-documentation-and-support-for-blackboard

Student expectations

- Students are expected to thoroughly understand all requirements, components, and procedures of this online class by carefully reviewing the syllabus and asking questions.

- Students are expected to successfully navigate the various components of Blackboard (henceforth referred to as BB), including the Discussion Boards (henceforth referred to as DB), assignments, and exams, by dedicating an adequate amount of time (well in advance of any deadlines) to exploring the site and accessing the help resources available to them.

- Students are expected to log onto the course BB site several times a week to read announcements, retrieve and view course materials, and participate in the DBs.

- Students are expected to ensure that they have reliable and timely access to an adequate Internet connection. In other words, if your home computer crashes or Internet access fails, you will be able to use a university computer or a friend's computer to access course materials, submit postings and assignments, and take exams by the stated deadline. "My computer or Internet crashed or BB froze, so I couldn't post to the Discussion Board" is not an acceptable excuse.

Suggestions for a successful online experience

Time management is crucial in an online class. It is expected you complete all the assigned readings for each of the class sessions, and that you join each week's DB prepared to thoughtfully read, write, and learn.

Please note that this marks a significant difference from some face-to-face courses, where you might be able to fall behind on reading and catch up before exams or papers are due without your grade being affected. Staying on schedule by doing the reading will make the class more enjoyable for you, make for a better learning experience, make for livelier DBs, and improve your grade.

Assessment

The way you are assessed and graded for an online class does not differ greatly from a face-to-face class. Your grade is derived from six basic course components, which are listed below and described in the table that follows:

1. Discussion Board (DB) leader	10 points
2. DB participant (9 articles + review of 1 student PowerPoint presentation)	20 points
3. Midterm exam	15 points
4. Final exam	15 points
5. Paper	30 points
6. PowerPoint presentation based on the paper	10 points

Component	% of Grade	What is it?	Where is it?	What else should I know?
1. Discussion Board leader	10%	• As the DB leader, you must post a substantive original comment of at least 250 words and raise one open-ended question by MONDAY at 11:59pm. The criteria for DB leader points are displayed below.	• See the DB leader assignments on BB.	• Everyone will act as DB leader once. • The DB leader readings were randomly assigned by the instructor. • DB posts are formal written assignments for a graduate level course and will be graded as if you had handed in your writing on a piece of paper (e.g., in the form of an essay or research paper). • See the criteria for grading the DB leader below. • If it is impossible for you to be a DB leader on the assigned date, it is your responsibility to find a classmate to switch with you. The instructor must be informed in writing by both students that the change was made and it is acceptable to both of you. Please submit the change at least one week prior to the due date.

2. Discussion Board participant	20%	• You are responsible for commenting on 9 articles plus 1 student PowerPoint presentation. **You must choose one article each week**. Each week's post is worth a maximum of 2% of your final grade. • You must post a minimum 100-word response to the leader's post. • The criteria for the DB participant points are displayed below. • All comments are due by 11:59pm on the Sunday at the end of the session week.	• Each week's DB is located in that week's folder. The first DB is in Session 2.	• DB participant responses are formal comments appropriate for a graduate level class and will be graded as if you had submitted it in writing to the professor. • Make sure to identify which article/post you are commenting on. • See the criteria for grading the DB participant below.
3. Midterm exam	15%	• A midterm exam will be given about halfway through the semester. The exam is based on assigned readings and films, PowerPoints, and discussions. There are no exemptions from the midterm. • The exam will consist of multiple choice/true-false questions. It is timed.	• The midterm will take place on the week of the 8th session. The exam will be posted on BB.	• Further information about the exam will be posted. • The exam must be completed individually and without referring to notes or reading materials
4. Final exam	15%	• A final exam will be given at the end of the semester. The exam is based on assigned readings and films, PowerPoints, and discussions for the subjects covered after the midterm exam. There are no exemptions from the final exam. • The exam will consist of multiple choice/true-false questions. It is timed. • The final exam is not cumulative.	• The final exam will be posted below the "Course Sessions" area of BB in a folder labeled "Final Exam."	• Further information about the exam will be posted. • The exam must be completed individually and without referring to notes or reading materials

5. Library research paper	30%	• The purpose of the research paper is to give each student the opportunity to conduct an in-depth examination of the application of social theory and concepts to a health problem of interest. A list of possible topics is provided in the BB section on the research paper. • Papers are expected to be at least 10 pages (2500 words) including references. In preparation, students will submit a proposed topic description early in the semester, and a detailed outline and bibliography later on. Each paper should have a brief abstract. • All papers must be typed, double-spaced, spell-checked and proofread. Use 1-inch margins all around and 12-point font. Please follow the APA format for citing references. A useful website for information on scholarly writing styles is: <http://owl.english.purdue.edu/owl/resource/560/01/> • You must submit an electronic copy through SafeAssign on Blackboard by the due date.	• Carefully review the section on the research paper that is listed as "Research Paper" on BB.	• The completed research paper must be submitted no later than 11:59PM on May 1, 2016. • NO LATE PAPERS WILL BE ACCEPTED.

6. Research paper presentation	10%	• Each student will prepare a PowerPoint presentation based on the research paper. The presentation should contain about 10-20 slides. Make sure to include an introduction, a full description of the main topic, a summary of the literature review and suggestions for future research in the area. • You may provide narration with the Powerpoint or notes on the bottom of the page to summarize the main points of the slide. If you are showing data on the slide, your commentary or notes should summarize the data for others.		• The PowerPoint presentation is due on May 8, 2016. • NO LATE PRESENTATIONS WILL BE ACCEPTED.

IMPORTANT: LATE ASSIGNMENTS ARE NOT ACCEPTED. All DB posts must be posted in the appropriate place on BB and all exams completed by the date and time specified. **NO EXCEPTIONS.**

Discussion Board (DB) Guide for Leaders and Participants

Overview

Discussion boards are an integral part of this online course. You must post EVERY WEEK, either as a Discussion Board leader or in response to a leader's post, as a DB participant. Note that I will not be responding to every post of every thread, but I will be popping in to each DB periodically to spur conversation or give feedback.

Specific requirements

Post Requirements	Discussion Board Leader	Discussion Board Participant
Frequency	• Each student will be a DB leader once during the semester. • You must post on the date indicated in the syllabus.	• Each week there is a DB leader (9 weeks), you must select one article to post about. The last post will be a comment or response to at least one student PowerPoint presentation. • You must post by the date indicated in the syllabus.
Length and Content	• Your entry should be a minimum of 250 words (one typed page). • Discuss the main points from the specified readings. • Pose one open-ended question for participants to respond to. • The post must be free of spelling, grammatical, and punctuation errors. • You may comment on DB participants' posts.	• The post must demonstrate that you have read the article in its entirety and you must respond to the open-ended question raised by the DB leader. • You must post a minimum 100-word response to the leader's post. The post must be free of spelling, grammatical and punctuation errors.

For Full Credit	• The post was substantive and captured important points from the articles. • The open-ended question prompted a scholarly discussion of the issues. • The post was constructive and differences of opinion are expressed in a collegial manner. • The post was clearly written and organized. Grammar, spelling and punctuation count.	• The post showed ample evidence of having completed the relevant readings, as well as evidence that the participant thought about the DB leader's discussion and open-ended question. • The post was constructive and differences of opinion are expressed in a collegial manner. • The post was clearly written and organized. Grammar, spelling and punctuation count.

In addition, ALL posts should demonstrate:

Quality of Thinking: Develop, support, and convey clear, focused, and substantive ideas in ways appropriate to topic, context, audience, and purpose

Organization and Coherence: Organize writing in clear, coherent sequences, making connections and transitions among ideas, paragraphs, and sentences

Sentence Structure and Word Choice: Use and vary sentence structures and word choices to achieve clear and fluent writing

Editing: Edit for correct spelling, grammar, punctuation, capitalization, paragraph structure, sentence construction, formatting, and, when appropriate, citations

Use of Researched Information: Use, integrate, and cite researched information and evidence

Reflection: If appropriate, evaluate and articulate one's own point of view supported by research and logic

REMEMBER DB posts are formal written assignments for a graduate-level course and will be graded as if you had handed in your writing on a piece of paper (e.g., in the form of an essay or research paper).

A special DB – Questions and Comments

If you have general questions about the course or other comments, please post them on the *Questions and Comments* DB. This is a site for you to address issues that you are confused about or concerns you may have. You are not graded or evaluated on any of the posts in this section. If you have questions or are confused, chances are that other students feel similarly.

READING/ASSIGNMENT SCHEDULE & CALENDAR

This schedule, including assigned readings and due dates, is **SUBJECT TO REVISION** throughout the semester.

DB leader reviews are due on the Monday of each week.

DB participants' comments are due on the Sunday of each week.

Session	Dates	Topics	Required Readings and Multimedia Materials	Activities due by 11:59pm on due date
#1	2/1-2/7	Overview and introduction to the course.	1. National Research Council & Institute of Medicine (2013). *US Health in International Perspective: Shorter Lives, Poorer Health.* Washington, DC: The National Academies Press. Read the Summary on pages 1-9 at: http://www.nap.edu/openbook.php?record_id=13497&page=1 2. Braveman P. (2014). What are health disparities and health equity? We need to be clear. *Public Health Reports* 129: 5-8 (supplement 2). 3. Bassett M. (2015). #BlackLivesMatter — A Challenge to the Medical and Public Health Communities. *New England Journal of Medicine* 372:1085-1087. ➢ Carefully read http://library.brooklyn.cuny.edu/resources/loop/research.php?s=250&c=948 The Health and Nutrition Sciences librarian at Brooklyn College has prepared this website to assist students in conducting library research Read the entire "Public Health Loop." ➢ Review PowerPoint posted for Session 1.	• Read all the articles for this week and view the websites specified by 2/7. • Read the entire syllabus. • Make sure you understand the technology involved for the course and if you do not, contact the resources specified. • Carefully review the information about the paper. Think about your paper topic. • Introduce yourself to fellow students and the professor on the Discussion Board. DUE by 2/7/16. • Optional post to DB – Do you believe that health care is a right? Explain your answer.

#2	2/8-2/14	Introduction continued. Selected important concepts in social and behavioral sciences	1. Adler N & Stewart J. (2009). Reducing obesity: Motivating action while not blaming the victim. *The Milbank Quarterly* 87: 49-70. 2. Earnshaw V. et al. (2013). Stigma and racial/ethnic HIV disparities. *American Psychologist* 68: 225-236. 3. Grollman E. (2014). Multiple disadvantaged statuses and health: The role of multiple forms of discrimination. *Journal of Health and Social Behavior* 55: 3-19. Read only pp. 3-6; 14-16. 4. Hatzenbuehler M and Link B. (2014). Introduction to the special issue on structural stigma and health. *Social Science and Medicine* 103: 1-6. 5. Cooper et al. (2015). Calling for a bold new vision of health disparities intervention research. *American Journal of Public Health* 105 (supplement 3): s374-s376.	• DB leaders for Session 2 post discussion and open-ended question based on this week's readings. DUE on 2/8/16 • DB participant responses DUE on 2/14/16. • Submit the topic of your paper by 2/14. See the instructions under "Research Paper."

#3	2/15-2/21	Factors influencing health: Race and SES	1. Freiden TR (2010). A framework for public health action: The health impact pyramid. *American Journal of Public Health* 100: 590-595. 2. Braveman PA et al. (2011). Broadening the focus: The need to address the social determinants of health. *American Journal of Preventive Medicine* 40: S4-S18. 3. Satcher D & Higginbotham EJ (2008). The public health approach to eliminating disparities in health. *American Journal of Public Health* 98: 400-403. 4. Williams DR et al. (2010). Race, socioeconomic status, and health: Complexities, ongoing challenges, and research opportunities. *Annals of the NY Academy of Sciences* 1186: 69-101. 5. Braveman PA et al. (2011). The social determinants of health: Coming of age. *Annual Review of Public Health* 32: 381-398. 6. David R and Collins J (2014). Layers of inequality: Power, policy, and health. *American Journal of Public Health* 104: S8-S9. View the following film, "When the Bough Breaks" from *Unnatural Causes* (about 30 minutes) http://1660912-2.mediaspace.kaltura.com/media/Unnatural+CausesA+When+the+Bough+Breaks+%28Part+2%29/1_cutxz67l	• DB leaders for Session 3 post discussion and open-ended question based on this week's readings. DUE on 2/15/16. • DB participant responses DUE on 2/21/16. • Optional viewing Roberts, a legal scholar and author of *Fatal Invention: How Science, Politics, and Big Business Re-create Race in the Twenty-First Century*, examines the political and commercial incentives for continuing the categorization of people by race. http://www.pbs.org/wnet/tavissmiley/interviews/law-professor-author-dorothy-roberts/ • Optional webinar Naming and Addressing Racism: A Primer. Presented by the American Public Health Association, July 21, 2015. https://cc.readytalk.com/cc/playback/Playback.do?id=gj5zph If you view or listen to either of these optional talks, please comment on the DB for the week.

#4	2/22-2/28	Neighborhoods and health	1. Braveman PA et al. (2011). Neighborhoods and health. Robert Wood Johnson Foundation. 2. Diez Roux AV & Mair C (2010). Neighborhoods and health. *Annals of the NY Academy of Sciences* 1186: 125-145. View the following film, "Place Matters" from *Unnatural Causes* (about 30 minutes) http://1660912-2.mediaspace.kaltura.com/media/Unnatural+CausesA+Place+Matters+%28Part+5%29/1_z0na9s8b	• DB leaders for Session 4 post discussion and open-ended question based on this week's readings. DUE on 2/22/16. • DB participant responses DUE on 2/28/16.
#5	2/29-3/6	Work and health	1. Burgard SA & Lin KY (2013). Bad jobs, bad health? How work and working conditions contribute to health disparities. *American Behavioral Scientist* 57: 1105-1127.	• DB leader for Session 5 posts discussion and open-ended question based on this week's readings. DUE on 2/29/16. • DB participant responses DUE on 3/6/16.
#6	3/7-3/13	Health disparities: Gender and health	1. Rieker PP and Bird CE (2005). Rethinking gender differences in health: Why we need to integrate social and biological perspectives. *Journals of Gerontology* (Special Issue II) 60B: 40-47. 2. Rosenthal L. and Lobel M. (2011). Explaining racial disparities in adverse birth outcomes: Unique sources of stress for Black American women. *Social Science & Medicine* 72: 977-983. 3. Christopher G and Simpson P. (2014). Improving birth outcomes requires closing the racial gap. *American Journal of Public Health* 104: S10-S12.	• DB leaders for Session 6 post discussion and open-ended question based on this week's readings. DUE on 3/7/16. • DB participant responses DUE on 3/13/16.

#7	3/14-3/20	Health behaviors	1. National Cancer Institute (2005). Theory at a glance: A guide for health promotion practice. 2. Braveman P et al. (2011). What shapes health-related behavior? The role of social factors. Robert Wood Johnson Foundation. 3. Glanz K and Bishop DB (2010). The role of behavioral science theory in development and implementation of public health interventions. *Annual Review of Public Health* 31: 399-418.	• DB leaders for Session 7 post discussion and open-ended question based on this week's readings. DUE on 3/14/16. • DB participant responses DUE on 3/20/16. • Paper outline and references due on 3/20/16. • For further information on some of the theories, you may want to view: Health Belief Model https://www.youtube.com/watch?v=6SfTbTkEozA Theory of Planned Behavior https://www.youtube.com/watch?v=DFn-lOcpd8A Transtheoretical Model of Behavioral Change https://www.youtube.com/watch?v=oO80XyBDrl0
#8	3/21-3/27	Mid-term	Further information will be provided.	Date to be announced.

#9	3/28-4/3	Social construction of illness and disease	1. Conrad P. & Barker KK (2010). The social construction of illness: Key insights and policy implications. *Journal of Health and Social Behavior* 51(S): S67-S79. 2. Cotton C. & Ridings JW (2011). What is health communication and how does it affect the HIV/AIDS continuum of care. *Journal of Acquired Immune Deficiency Syndrome* 66 (suppl 3): S241-S249.	• DB leaders for Session 12 post discussion and open-ended question based on this week's readings. DUE on 4/18/16. • DB participant responses DUE on 5/1/16. • Paper due on 5/1/16.
#13	5/2-5/8	Student presentations	See the instructions on the "Research Paper section of BB for additional information.	• Due 5/8/16.
#14	5/9-5/15	Review, evaluations, discussion	Review the Powerpoint presentations and in the DB provide comments.	• Post comments on students' Powerpoint presentations on the DB by 5/15/16.
#15	5/16-5/22	Final exam	Further information will be provided.	• Date to be announced.

COURSE POLICIES

Attendance and class participation

This course is fully online and thus, there are no fixed meeting times. However, students are expected to fully participate on the DBs on BB and submit the assignments on the dates they are due. If you do not participate on the DB or submit your work on time, you will lose points from your final grade.

Class citizenship and rules of conduct

When communicating or completing assignments online via BB, pay attention to the following:

- Check before you post. Always check whether a similar question has been previously posted and answered on the DB.
- On DB, write in short paragraphs or use bullets to break down your ideas into smaller chunks of information. This will make your posts easier to read.
- Do not write in all uppercase. USING ALL CAPS MEANS YOU ARE SHOUTING.
- Do not use sarcasm as it often is interpreted as rude and hurtful.
- Do not edit or change someone else's message content. If you have something to add or change, add a follow-up message.
- Students in the class may come from different places around the world, so be respectful to diverse perspectives, cultures and languages.
- Be professional and engage with others respectfully.

Email correspondence

If you would like to contact me, I will respond to most questions via email. However, if you have a more substantive issue to address, please arrange to meet with me (in person or on the phone) during office hours.

When you email me, you can usually expect a response within 2 business days, sometimes sooner. Do not expect an immediate response.

Guidelines for Email

- Keep in mind that I get many emails a day. ALWAYS put "PH 75500 - [Your name]" in the subject line so that I know who the message is from and what it is in regard to.
- You are expected to conduct yourself in a professional manner in all of your interpersonal interactions, including in email. Email is a formal means of communication in the context of school or work; please sign every message at the bottom, use polite language, capital letters, punctuation, greetings and salutations. Please avoid abbreviations, slang, and cuteness.

Other forms of communication

In person: My "live" office hours at Brooklyn College for Spring 2016 are Tuesday and Thursday, 7:30 AM – 9:00 AM and 11:00 AM – 12:45 PM. On occasion, because of meetings, I am not available at 11:00-12:45. You are welcome to drop by during office hours, but to avoid long waits and the possibility that I will not be present, please make an appointment for a specific time via email.

Phone: I can also make appointments to talk with students on phone during office hours.

Please make these appointments via email. I am rarely right in front of my Brooklyn College phone (unless we have scheduled a phone meeting), and I usually only pick up phone messages during office hours, so the phone is not the most efficient way to contact me, unless you want to let me know that you are running late for a face-to-face meeting.

Help with research and writing

If you require assistance with improving your writing skills, consider visiting the Student Reading and Writing Center on the main campus. For more information, visit http://rwc.hunter.cuny.edu/

Please note: Much of your grade is dependent on clear writing (specifically, DB posts, the paper, the PowerPoint presentation). You are strongly urged to seek assistance, should you need it.

INSTITUTIONAL POLICIES

Academic integrity: Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. For more information, visit: http://www.hunter.cuny.edu/studentaffairs/student-conduct/academic-integrity/welcome-academic-integrity/?searchterm=integrity

Accessibility: Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. The Office of Disabled Students is located in Student Services, 1128 East Building, 68th Street Campus, (212) 772-4857/TTY (212) 650-3230. For more information visit: http://www.hunter.cuny.edu/studentservices/access If a student has special accommodations that are necessary for class sessions, exams or presentations, please let the instructor know at the beginning of the semester.

Library Research Paper

The purpose of the research paper is to give each student the opportunity to conduct an in-depth examination of the application of social theory and concepts to a health problem of interest. A list of possible topics is provided. You may select one of these subjects or another topic of interest. This is a library research paper. You will not be conducting interviews or collecting your own survey data.

Make sure you carefully review: http://library.brooklyn.cuny.edu/resources/loop/research.php?s=250&c=948 which was posted under the first session of the class. It is an excellent source for conducting library research in public health.

Papers are expected to be at least 10 pages (2500 words) including references. In preparation, students will submit a proposed topic description early in the semester, and a detailed outline and bibliography later on.

Each paper should have an abstract. An abstract is a brief (about 100 words) statement of the objectives, findings and conclusions of the paper. It should be provided at the beginning of the paper. It does not count toward the 10 pages specified above.

Paper deadlines -

a. Proposed topic (about one typed page): February 14 The proposed topic is not graded.
b. Paper outline and references: March 20 or earlier. Do **not** provide a narrative of the topic; you are required to submit a formal outline. The outline and references are not graded.
c. Final paper: May 1 or earlier. NO LATE PAPERS WILL BE ACCEPTED.

Although I will carefully review the topic, outline and references and offer comments, I do not read earlier drafts of the paper.

All papers must be typed, double-spaced, spell-checked, and proofread. Use 1-inch margins all around and 12-point font. Please follow the APA format for citing references.

It is your responsibility to learn and properly use the APA format. Papers that do not meet these requirements will lose points.

You should search for the most recent academic and professional journal articles on the topic. Unless there is seminal research in the subject of your paper, as a rule, do not use references earlier than 2008.

Although you may use Internet sources from the CDC or the US Department of Health and Human Services, you may not use most other non-scholarly sources. If you are uncertain about what constitutes a scholarly source, you should contact a reference librarian at the Hunter library.

It is essential that you write clearly and the paper is carefully reviewed for logical organization, spelling, grammar and punctuation. You will lose points on the paper, if it is difficult to read or understand.

You must submit a final electronic copy through SafeAssign on Blackboard, which should be labeled as **FINAL VERSION**. Prior to when the paper is due, you will be able to submit earlier versions of the paper to SafeAssign to identify areas of possible plagiarism on the paper. The earlier versions will not be read by the instructor, but rather used by you as a tool to identify plagiarism. **The final version should also be submitted to me through email.**

Plagiarism of any kind – from the Internet, books, journals, another student's paper, etc. – results in an automatic grade of 0 for the assignment. It is your responsibility to understand what plagiarism is and how to avoid it.

Possible topics for the library research paper

It is important to select a specific topic. Please note the use of "or" in the topics below. You are not limited to these subjects. Select a topic that is of special interest or importance to you and within the subject area of this course. The course readings may also give you some ideas for possible paper topics.

- Stigma about mental illness or obesity or a sexually transmitted infection
- The effect of social support on recovery from major heart surgery or a mastectomy or another medical condition
- The effect of the media on adolescent use of alcohol or tobacco
- Factors that influence teens' drug use or contraceptive use. Focus on either young women or men
- Factors that influence health care providers' attitudes and behaviors toward LGBQ patients or obese patients or self-abusing patients or patients with a mental illness
- Stress and poor birth outcomes
- Problems in communication between low-English proficiency patients and their physicians
- The effect of religion on patients' choices about end-of-life care (select a specific religion)
- The social construction of a mental disorder, ADHD, autism or female sexual dysfunction
- The effect of immigration status on health
- The factors that influence teens' attitudes and perceptions of violence
- The factors that affect body image for young girls (select a specific racial-ethnic group)
- The effect of neighborhood on women's health status
- The psychological outcomes following mastectomy or coronary bypass surgery or another major health event
- The health impact of low health literacy
- Factors associated with low health literacy
- The intersection of race and stress
- The medicalization of childbirth or menopause
- The effect of neighborhood on obesity
- The role of corporations in influencing smoking or alcohol consumption or obesity

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

Hunter College
PH 75600: Fundamentals of Health Policy & Management
3 Credits
Spring 2016

Time and location	Fully Online. The course opens on January 29th.
Instructor	Michele J. Siegel, Ph.D. Adjunct Associate Professor, Hunter College Phone: 212-744-0802 E-mail: ms1950@hunter.cuny.edu (preferred contact)
Office hours	by appointment
Course website	Students should log into the course website through their Blackboard portal: https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Examination of the organization, delivery and financing of health care in the United States as it pertains to the health policy-making process, including the organization of the agencies and personnel constituting the health care system, and analysis of government structure, laws, and regulations. Theoretical concepts, practice, and implementation of health programs in organized settings, including the planning, administration, management, evaluation, and policy analysis of public health agencies and private sector managed care.
Course prerequisites	N/A
Course format	This is a fully online course that is taught with a mix of online learning resources, narrated lectures, discussion boards, collaborative exercises and individual exercises. All materials are available on the course website. This is not a self-paced course; there are weekly deadlines for discussion and activities.
Required reading and resources	Shi L, Singh DA. (2015). Delivering Health Care in America: A systems approach (enhanced 6th edition). Sudbury, MA: Jones & Bartlett Publishers. Reid TR. (2009). The Healing of America: A Global Quest for Better, Cheaper, and Fairer Health Care. Penguin Press. McDonough JE (2011). Inside National Health Reform. New

	York, NY: Milbank Memorial Fund.
Suggested reading and resources	Suggested articles are posted to Blackboard in each class folder.
Other Readings	Patient Protection and Affordable Care Act (ACA) http://www.gpo.gov/fdsys/pkg/BILLS-111hr3590enr/pdf/BILLS-111hr3590enr.pdf ACA Analysis http://healthreform.kff.org/ Health U. S. published by CDC http://www.cdc.gov/nchs/data/hus/hus12.pdf

Core Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply the public health core functions of assessment, policy development and assurance	• Assess the effects of political, social and economic policies on public health systems and the health of urban population's terms of effectiveness, efficiency and equity. • Discuss political and economic feasibility issues related to health policy	Discussion boards Op-Ed piece
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Describe evidence-based approaches in the development and evaluation of public health policies and interventions • Discuss the function and role of management and the organizational structure of public health organizations • Explain quality and performance improvement concepts employed in public health organizations	Quizzes Discussion boards
Adhere to ethical and social justice principles and standards	Explain the difference between health care systems based on market justice and those based on social justice through a comparison of the U.S. healthcare system to global health systems.	Quizzes Discussion boards Comparative health center visit
Interpret and analyze public health literature and apply evidence-based research	Prepare documents for use in legislative testimony.	Congressional testimony
Communicate public health information	• Communicate the impact of current and	Discussion boards

through oral, written, digital and visual presentation	potential policies to the lay public, advocacy groups and policy professionals.	Op-Ed piece Blog postings
Explain how social, behavioral, biomedical and environmental determinants affect population health	• Analyze the impact of individual, organizational, community, national and global trends and interdependencies on public health related problems and health disparities	Quizzes Congressional testimony
Engage and collaborate with diverse groups	Explain how professional ethics and practices relate to equity and accountability in diverse community settings.	Discussion boards Blog postings
Describe the legal foundations of the U.S. public health system and its interrelationships with other systems including health care, education and environmental protection	• Describe the legal foundation of public health and the public health policy process, including the role of each level and branch of government in assuring the health of the public • Assess the main components of, and issues related to, the organization, financing and delivery of health services and public health in the US in terms of equity, access cost and effectiveness	Quizzes
Apply a framework for the planning, implementation and evaluation of public health programs, policies and interventions	• Describe communication, strategic planning and marketing principles related to public health activities across different settings and audiences • Investigate the role of major stakeholders including non-profit and community-based organizations in the policy process and their impact on public health	Quizzes Congressional testimony
Explain the context of public and private health-care systems in which health	• Explain the basic organization, financing and delivery of health services in the U.S.	Quizzes Congressional testimony

care and public health policy are made and healthcare is delivered	• Discuss the impact of a lack of access to health care for both individuals and society • Specify the role of public health and other governmental agencies in providing access to care for the U.S. population	

Course Assessments

Quizzes

There will be on-line multiple choice quizzes that correspond to the readings and the lectures.
These will be taken on Blackboard and must be completed in one session (e.g. once you open the quiz, you must complete it). Only one attempt will be allowed. Each quiz will be located in the class folder related to the quiz.
Class Participation and Group Discussion Boards
This class is on-line and has extensive discussion boards (which take the place of in class discussions). It is expected that the student will fully participate in the on-line portion of the course through their group discussion board and through the general class discussion board.

Op-Ed Piece

Working alone, each student will write a 500 word essay suitable for submission to a local newspaper. Students will read and respond to each other's Op-Ed pieces on Blackboard. An Op- Ed essay (those found opposite the editorial page in most newspapers) gives a point of view on an issue of importance. Detailed instructions are in the Assignment section of Blackboard.

Comparative Health Center Visit/Write Up

Go to two places that deliver health care, one public AND one private. Spend an hour or more in each, and fill out the forms given out in class, one form for each visit. Students will post to the Discussion Board one or two paragraphs about the most important differences you observed in the public and private facilities you observed. Your observation forms are due to the instructor via e-mail (a scanned PDF of your handwritten notes is fine). Detailed instructions are in the Assignment section of Blackboard.

Blog Postings

You will be directed to three specific health care blogs. You will choose one post from each of them to read and to respond to. You do not actually have to post on the blog (but you can if you want to). Your group will have a group blog. You will post a short (3-5 sentence) summary of the posts you read and your response to each blog post. Each of your responses must be 1-2 paragraphs long (no longer, no shorter) and must state an opinion. You must clearly agree or disagree with the blog, but you must state your reasons why. Spelling and grammar count. Detailed instructions are in the Assignment section of Blackboard.

Congressional Testimony Assignment

Congressional hearings are the principal method by which governmental committees collect and analyze information in the early stages of legislative policymaking. At some point in your career, you may become so proficient in your chosen area of public health that you are asked to be an expert witness at a legislative congressional hearing. Each student group will prepare a short (7-9 pages) testimony outlining a position on a given topic. Student groups will also create a one page 'summary of points' page for the other groups to be posted to Blackboard. Detailed instructions are in the Assignment section of Blackboard

Extra Credit Book Review
Students wishing to earn extra credit in the course can choose a book from the list provided and write a 3-5 page review of the book (double spaced, 12pt font, 1" margins) that focuses on how the book has increased their knowledge of public health. You may propose another book, as long as you have not already read the book. The booklist is on Blackboard

Grading

Evaluation criteria
The quizzes are objective multiple choice tests.
The written activities will be graded with a rubric. You can find the rubric for each assignment on Blackboard.
The relative weight of each course component is as follows:
Weekly quizzes 30% Participation in group discussion boards 15% Op-Ed piece 10% Comparative health center visit/write up 10% Blog Postings (3) 15% Congressional Testimony Assignment 20% Total 100% Extra Credit: Book Report 2% Posting to a health care blog online 1%
The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an

incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

Syllabus Change Policy

This syllabus is a guide for the course and is subject to change with advance notice. Changes to the syllabus will be announced in class and posted to Blackboard as an announcement.

Course Communication and Assignment Submission

This course is delivered using the Blackboard course management system. In addition, students may be required to submit course assignments from time to time to the instructor using Hunter e-mail. An active Hunter student e-mail user ID and password is required to log into both systems. An active CUNY e-mail ID is required for non-Hunter students taking the class. It is the responsibility of the student to remain current on this system.

Attendance and class participation

Class attendance in an online class is assessed by participation in the class discussion boards. Class participation is graded (15% of final grade). As such, students should read the subject material prior to participating in their group discussion board. Students are expected to post their work to their group discussion board, read the work of other students and make substantive comments.

Late/incomplete submission of assignments

This is an online course, but it is a paced course. This means that the course assignments have hard deadlines which need to be met in order for you to go forward. The deadlines will come quickly. It is really important to meet these deadlines, as the course is designed so that your fellow students are depending on you to participate. Please note that in an online course, it is almost impossible to give extensions for most assignments. Most missed assignments (such as quizzes and discussion boards) will simply result in a grade of ‘0’. The larger assignments, such as the OpEd and the Congressional Testimony, will lose 5 points per day of lateness.

Make-ups, rewrites, and extra credit

There are no make-ups or rewrites allowed. There is an extra credit book report opportunity open to all students.

Expectations of students

•Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
•Know how to use library resources and citation tools.
•Show respect to everyone in the course.
•Be fully prepared to actively participate in discussion boards.
•No credit for assignments suspected of plagiarism or cheating.
•Be held accountable for all material assigned/covered in the course.
•Regularly check the course website and official university email for course correspondence.
•Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted in the discussion board.
•Contact the professor directly with personal questions and concerns related to the course.
• When in doubt, ask questions and clarify course assignments and expectations.

Expectations for the instructor

•Provide regular announcements, reminders, and suggestions on the course website
•Monitor, ask follow-up questions, and answer questions presented during discussion
•Respond to student email within 48 hours Monday through Friday. E-mail received on Friday will be responded to on Monday.
•Grading and feedback on assignments within 2 weeks of the due date.
•Communication about grades and progress in the course will be given through the course website.

Accessibility
Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity
Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the

CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

PH756: Public Health Policy and Management
Schedule is subject to change throughout the semester. Last Updated January 27, 2016

Date class materials will post	Topics	Materials to Read/View/Listen for the class (also check class folder on Blackboard)	Assignments Associated with this Class Module
Class 1 2/1	Overview of Health and Use of Healthcare in the U.S. Scanning the Environment	READ Shi & Singh: Chapter 1, Chapter 2 Reid TR. (2009). The Healing of America: A Global Quest for Better, Cheaper, and Fairer Health Care. Penguin Press (start reading) View materials in Blackboard Class 1 Folder	Quiz 1 by 11:59PM on 2/7. Introduce yourself on the group discussion board by 11:59PM on 2/4. Op-Ed Assignment: Choose an issue. Write a one- page overview of why your chosen Op Ed issue is a problem (1-2 paragraphs) AND describe how you will 'scan the environment' about this issue (1-2 paragraphs). Post to Blackboard on the group discussion board by 11:59PM on 2/7. Read and comment on the posts of your fellow group members.
Class 2 2/8	Global Models of Healthcare Delivery	READ Reid TR. (2009). The Healing of America: A Global Quest for Better, Cheaper, and Fairer Health Care. Penguin Press (finish reading) View materials in Blackboard Class 2 Folder	Quiz 2 by 11:59PM on 2/21. Op-Ed Assignment: E-mail draft copy of Op-Ed to instructor by 11:59PM on 2/21.
2/15	President's Day - No Class		
Class 3 2/22	Health Care Policy PPACA aka ObamaCare	READ Shi & Singh: Chapter 3 McDonough JE (2012). Inside National Health Reform. California/Milbank Books on Health and the Public. Pp103-286	Quiz 3 by 11:59PM on 2/28. Moderated group discussion (2-22 to 2-28): Respond to the group discussion board question by 11:59PM on 2/26. Comment on your fellow member's postings by 2/28 at 11:59PM.

		View materials in Blackboard Class 3 Folder	
Class 4 2/29	Health Care Delivery Overview of Model Financing and Payment Private Insurance	READ Shi and Singh: Chapter 4, Chapter 6 (p195- 213) View materials in Blackboard Class 4 Folder	Quiz 4 by 11:59PM on 3/6. Op-Ed Assignment: Post final copy of Op-Ed to your group discussion board by 11:59PM on 3/6.
Class 5 3/7	Health Care Delivery Financing and Payment Public Health Insurance Medicaid, Medicare, SCHIP, VA hospitals & clinics	READ Shi and Singh: Chapter 6 (p214-237) View materials in Blackboard Class 5 Folder	Quiz 5 by 11:59PM on 3/13. Comment on other Op-Eds in your group by 11:59PM on 3/13.
Class 6 3/14	Health Care Delivery Providers Health Services Professionals Primary Care/Ambulatory Health Services	READ Shi and Singh: Chapter 7 View materials in Blackboard Class 6 Folder	Quiz 6 by 11:59PM on 3/20. Blog Post #1 to your group discussion board by 11:59PM on 3/20.
Class 7 3/21	Health Care Delivery Providers Hospitals and other Inpatient Facilities Managed Care and Integrated Organizations	READ Shi and Singh: Chapter 8, Chapter 9 View materials in Blackboard Class 7 Folder	Quiz 7 by 11:59PM on 3/27. Read and comment on the blog posts of your group members by 11:59PM on 3/27.
Class 8 3/28	QPACE: Quality Prevention Access Cost Equity Efficiency	READ Shi and Singh: Chapter 12 View materials in Blackboard Class 8 Folder	Quiz 8 by 11:59PM on 4/3. Post your 1-2 paragraph health care facility comparison summaries to the CLASS discussion board by 11:59 on 4/3. Health Care Comparison Assignment: Sheets to be e-mailed to instructor. Handwritten and scanned is fine.

Class 9 4/4	Public Health System Structure of the U.S. Government The U.S. Public Health System Federal, State and Local Health Activities	READ Scutchfield: Chap 8-10 The Federal, State and Local Contribution to Public Health View materials in Blackboard Class 9 Folder	Quiz 9 by 11:59PM on 4/10. Read and comment on at least 5 health care facility comparison summaries by 11:59PM on 4/10. Blog Post #2 posted to your group discussion board by 11:59PM on 4/10.
Class 10 4/11	Health Policy Policy Process	READ Shi & Singh: Chapter 13 View materials in Blackboard Class 10 Folder	Quiz 10 by 11:59PM on 4/17. Read and comment on the blog posts of your group members by 11:59PM on 4/17.
Class 11 4/18	Health Policy Health Policy formulation and implementation	READ McDonough pp 19-99 View materials in Blackboard Class 11 Folder	Quiz 11 by 11:59PM on 5/1. Moderated group discussion (4/18 to 5/1): Respond to the group discussion board question by 11:59PM on 4/28. Comment on your fellow member's postings by 11:59PM on 5/1.
4/25	Spring Recess – No Class		
Class 12 5/2	Management: Management of Public Health Organizations	READ Scutchfield: Chapter 15: Management of PH Organizations, Chapter 18: Leadership in PH Practice View materials in Blackboard Class 12 Folder	Quiz 12 by 11:59PM on 5/8. Blog Post #3 due posted to your group discussion board by 11:59PM on 5/8.
Class 13 5/9	Leadership Assessment and Strategic Planning Performance Assessment and Management	READ Scutchfield: Chapter 16:Performance Measurement and Management in Public Health Chapter 18: Leadership in Public Health Practice View materials in Blackboard Class 13 Folder	Quiz 13 by 11:59PM on 5/15. Read and comment on the blog posts of your group members by 11:59PM on 5/12. Leadership self-assessment/growth plan due by 11:59PM on 5/15.
Class	Student Presentations	Online Group	Congressional Testimony one-

14 5/16	Due Today	presentations of Congressional Testimony View materials in Blackboard Class 14 Folder	page review and PPT due by 11:59PM on 5/22 posted to the CLASS discussion board.

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

PH 770.34 Adolescent Health, Development & Interventions
3 Credits
Fall 2016

Time and location	Room 331, Silberman Campus, Wednesdays 4:10 -5:55 PM
Instructor	Lynn Roberts, PhD e-mail: lroberts@hunter.cuny.edu (best way to contact) Office: Room 530, Silberman Phone: (212) 396-7742 (do not leave message)
Office hours	Mondays, 4-6 PM and by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Course explores the public health issues facing adolescents. Students will gain a broader understanding of adolescents through an examination of systems and contexts that can impact their health, development and well-being. Group problem solving strategies will be utilized to develop youth interventions based on knowledge gleaned from evidence-based prevention practice and from community members and organizations working with youth in NYC.
Course prerequisites	None
Course format	Seminar
Required reading and resources	Chase, C. *Queer 13*: *Lesbian and Gay Writers Recall Seventh Grade*. New York: William Morrow; 1998. [ISBN: 0-688-15811-0] Cox, AM. Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Demonstrate knowledge and understanding of MCRSH[1] as follows: 1. The major domestic and international causes of mortality and morbidity within adolescent populations including differences between the United States and other developed and less developed countries.	• Delineate the health status of adolescents with regard to the following indicators: o Major mortalities and morbidities o High risk behaviors associated with these morbidities and mortalities o Social ane environmental factors and contexts which influence the health and well-being of adolescents	• Class discussions • In class and homework assignments
2.The determinants of adolescent development, health, illness, and concomitant theories including biological, behavioral, and socio-cultural influences such as racism, sexism, and economic disparity, as well as protective factors.	• Describe theoretical models that have been useful in guiding health promotion and risk reduction programs for adolescents.	• Roundtable
Demonstrate the following MCRSH skills: 3. Describe adolescent health problems in terms of time, magnitude/severity, scope, dispersion/location, co-occurrence/co-morbidity.	• Analyze the relationship between and among environmental, social and personal factors that influence adolescent health.	• Issue Brief

[1] As per competencies developed by the Association of Teachers of Maternal and Child Health in collaboration with the MCH Council of the Association of Schools of Public Health and endorsed by the Association of Maternal and Child Health Programs (adopted 11/93; revised 6-7-96, 8/99; revisions approved by ATMCH membership 2/01).

4. Identify scientific underpinnings to determine the validity of evidence for interventions addressing adolescent health problems.	• Describe risk reduction programs targeted to adolescents. • Synthesize research and theory to develop recommendations to prevent health-related problems and promote adolescent health.	• Policy/Program Brief

Course Assessments

Your understanding of the course material will be evaluated through the following:

1) Regular attendance and active participation in all class sessions, including homework and postings in course blog.

2) Adolescent Health Issue Brief

Select a public health issue that affects adolescents and that you are interested in learning more about this semester. Research and write an individual Issue Brief addressing this particular adolescent health concern. The Issue Brief should meet the following criteria:

- Clearly define the adolescent health concern;
- Describe the magnitude of the adolescent health concern, including any recent changes in epidemiology.
- Utilize a conceptual framework to address the key determinants of the concern.
- Present any health intervention programs or policies (if any) that currently address this concern.
- Employ evidence-based literature and use only primary sources as references - a minimum of five (5) peer-reviewed journal articles.

The Issue Brief should be 1-2 pages in length.

Topics selected for the Issue Brief must be approved on or before February 10.

Assignment is **due Feb 24 via Safe Assign**. Please also bring a hard copy to class.

3) Adolescent Interview/Case Study Report

For this assignment you will be required to identify an individual between the ages of 12-20 who consents to a semi-structured "one-on-one" interview about the various facets of the individual's life. It is highly advisable to select someone with whom you do <u>not</u> have an on-going relationship in order for the adolescent to feel comfortable being open and honest and for you to enter the interview without foreknowledge or preconceptions that might bias the interview process. On the other hand, should you interview an individual who is more familiar, make note of the nature of this relationship and your reflections on its influence on the interview process (for better or worse).

The interview is expected to last between 30 minutes to an hour. You may want to audio-record the interview so you will not have to rely on notes or memory, but you will have to ask the respondent's permission to do so. Parental consent for youth under age 18 is advised.

A general outline for the interview will be provided, but it should be used as a guide. Some questions will have to be adjusted for young people who are not in school or who do not live with family members. Feel free to structure the interview as you see fit, and to depart from the list (or

order) of questions in effort to: 1) explore issues of interest to you; or to 2) pursue issues of concern or interest to your respondent.

The written report of your interview should be presented as a case study in which you attempt to describe the essential elements of this young person's health and well-being. It should not be a simple description/transcript of what the young person said; rather it should be a theoretically based assessment of this individual's life and health status.

Assignment is due **Apr 13**

5) Adolescent Health Policy or Program Brief

Develop a policy or program that recommends a strategy or strategies to prevent an adolescent health issue or promote health based on scientific evidence. When reviewing the literature and deciding on a recommendation you should:

- Critically review school, family and community programs and policies designed to prevent the health problem or promote health.
- Assess if strategies have been evaluated with rigorous research designs.
- Determine the results of these strategies. Were they effective? What does/doesn't work?

Based on your critical review of the literature and scientific evidence of what works, your policy or program must be evidence-based and supported with research. Develop a 2-4 page hand-out describing the policy or the program. Your short paper, formatted like a fact sheet (i.e., with bullet points rather than paragraphs), must include:

1. Short background about the health issue – magnitude, who is affected, severity.
2. Short review of the programs and policies that currently address the health issue – approaches, evidence about efficacy, gaps in knowledge.
3. Description of your proposed policy or program: rationale, design, intended audience, implementation, and anticipated outcomes.
4. References. There should be a minimum of 10 references, properly cited using AMA/AJPH style.

This Policy/Program Brief is **due May 18**

6) Roundtable Oral Presentation

Prepare a 10-minute presentation of your policy statement or program to be delivered informally in small groups. Also, make a copy of your hand-out for all students and the instructor (n= ##). Following your presentation, your small group will discuss the feasibility of your program or policy. Guidelines for these roundtable discussions will be provided in BlackBoard.

The Roundtable Presentation is **due May 25**.

Grading

Evaluation criteria

Describe the grading methodology that will be used to assess performance in the class. If a rubric is not used, what method will be used to evaluate graded assignments?

The relative weight of each course component is as follows:

Assessment	Weight
Attendance/Participation	10%
Issue Brief	20%
Interview	30%
Policy/Program Paper	30%
Roundtable Presentation	10%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

Course Policies

General guidance for submission of all assignments

It is expected that all writing will be of high quality, presented in a readable and consistent manner: **typewritten, double-spaced, 12 inch font, with one-inch margins all around, stapled in upper left-hand corner, with all pages enumerated and proofread.** All papers and exams should be kept to the maximum length specified. The instructor will stop reading after the maximum length and the assignment will be marked down, accordingly. A simple cover sheet with student name, title of assignment, course info, term, and date is adequate for identification purposes. Please do not submit papers in folders or binders.

Any deliberate borrowing of the ideas, terms, statements, or knowledge of others without clear and specific acknowledgment of the source is intellectual theft and is called plagiarism. It is not plagiarism to borrow the ideas, terms, statements, or knowledge of others if the source is clearly and specifically acknowledged, and quoted if appropriate. Students who consult such critical material and wish to include some of the insights, terms, or statements encountered must provide full citations in an appropriate form. All citations should follow the *Am J Public Health* style, which follows the guidelines of the American Medical Association (AMA). A style guide is provided in the Assignments section of BlackBoard.

Attendance and class participation

Timely arrival, regular attendance and *informed* participation in class discussions and exercises based on a critical reading of the assigned articles and text is required.
Students must sign up for Blackboard to receive updates, in-class materials, lectures, readings and assignments, as well as to submit assignments. For instructions on registering for Blackboard through Hunter, go to: http://bb.hunter.cuny.edu. Students should check their Blackboard related email for class announcements and assignments.

Late/incomplete submission of assignments

Papers and other assignments are due at the beginning of the class period or by the deadline specified for submitting electronically. One point will be deducted for each day an assignment is late. If a student anticipates the need to turn in work late, they must send a request via e-mail and negotiate a mutually acceptable submission plan in advance of the established due date. Students should not send an e-mail requesting an extension on the day the assignment is due**.** Students

should not miss class nor be tardy on the day an assignment is due in order to complete the assignment.

Make-ups, rewrites, and extra credit

Make-ups, re-writes or extra credit will not be accepted for any assignments.

Expectations of students

- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Learn how to use library resources and citation tools.
- Show respect to everyone in the course.
- Be fully prepared to actively participate in discussion.
- Complete all assignments by their assigned due date. Reduced credit for work completed after the due date.
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Regularly check the course website and official university email for course correspondence.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted in the discussion board.
- Contact professor directly with personal questions and concerns related to the course.
- **On the last day of class, we will hold a dish-2-pass/pot luck to celebrate the end of the semester.** Students are expected to contribute a dish, beverage or paper goods of choice.

Expectations for the instructor

- Provide regular announcements, reminders, and suggestions on the course website.
- Monitor, ask follow-up questions, and answer questions presented during discussion
- Preferred method of communication is email and will respond to student email within 24 hours Monday through Thursday and within 48 hours Friday- Saturday or during holiday breaks.
- Grading and feedback on assignments within 1-2 weeks of the due date.
- Communication about grades and progress in the course will be given through the course website.
- **On the last day of class, we will hold a dish-2-pass/pot luck to celebrate the end of the semester.** Students can expect the instructor to contribute a carrot cake.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located

in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

Course Schedule

Sess #	Day	Topic	Readings and Assignments
1.	Feb 3	Introduction/Overvie & the Epidemiology and Ethnography of Adolescent Health	**Cox**, Preface & Introd; **DiClemente**, Chs 1, 2; MacKay & Duran 8-41; Krieger (2005); Sleet et al (2010) WHO (2014); Blum & Mmari (2004); YRBSS, 2013 [Available at: http://www.cdc.gov/HealthyYouth/yrbs/index.htm]
2.	Feb 10	The Construction & Deconstruction of Theoretical Models of Adolescent Development	**Cox**, Chs 1& 2; **DiClemente**, Chs 3-5; **Roberts** (1999); Arnett (2000); Blum et al (2002); Fergus & Zimmerman (2005); Peterson (2004) **Notify Prof Roberts of your chosen health topic**
3.	Feb 17	Theoretical Frameworks & Approaches to Adolescent Public Health	**DiClemente**, Ch 6,7; **AMCHP** (2005); Catalano et al (2002); Goldenring (2004); He et al (2004)
Last day to drop without a "W" ~ Feb 18			
4.	Feb 24	Human & Legal Rights of Adolescents & Ethical Considerations	DiClemente, Ch 26; **NYCLU** **Adol Health Issue Briefs Due**
5.	Mar 2	NYC/NYS Adolescent Health Policies & Programs	TBA Invited Guests: NYC DOHMH, NYS DOH, ACS
6.	Mar 9	Adolescents in a Social Context Part One: Family, Peers, School and Community	**Chase**, 21-37; **DiClemente**, Ch 19, 20; Crane (1991); Leventhal & Brooks-Gunn (2000); Roche et al (2008); Walsemann & Bell (2010)
7.	Mar 16	Adolescents in a Social Context, Part Two: Youth Living on Their Own, On the Border, Under the Radar, Under Surveillance or in Custody of the State	**Cox**, Ch 5; **DiClemente**, Ch 17; Barry et al (2002); Browder (2015); Jones (2004); Fine et al (2003); Geneen & Powers (2007; **Peterson** (forthcoming) Invited Guests: James Bolas (Coalition for Homeless Youth), Liza Jessie Petersen (Artist/Writer/Educator), Joseph Toles (Foster Care Survivor/Dad), Shai Marcus (SNUG)
No class Mar 23 ~ Classes follow Friday schedule			
8.	Mar	The Margins and	Cox, Ch 4; Chase, 79-87; Berger et al (2005), pp. 85-106;

Course Description

This course will provide a historical and contextualized understanding of public health communications and introduce both communication models and theories. The course covers the basics of design, implementation and evaluation of public health communications. Collectively this content will serve as the foundation for analyzing a wide range of modalities including: print, TV, radio, events, web-based and mobile communications. Throughout the course we will be developing skills to analyze and critique public health messaging and campaigns. The goal is for students to develop the abilities to appreciate the power of communicating effectively to promote public health goals. Case studies are used throughout this course. You may regularly finding yourself taking a picture of a health message you've seen on the subway or telling the class about an Ad you saw on the internet.

COURSE COMPETENCIES

Program Competencies	**Course Learning Objectives**	**Sessions**
Communications and informatics: the ability to collect manage and organize data to produce information and meaning that is exchanged by use of signs and symbols; to gather, process, and present information to different audiences in-person, through information technologies, or through media channels; and to strategically design the information and knowledge exchange process to achieve specific objectives. *At the end of this course the student will be able to:*		
1. Describe how societal, organizational, and individual factors influence and are influenced by public health communications.	• Understand the psychology of persuasion and how it relates to effectively communicating health information, including chronic disease prevention and safety • Learn the challenges involved in communicating public heath	1,3,4,6,7,11
2. Apply theory and strategy-based communication principles across different settings and audiences.	• Understand various theoretical models across populations in relation to health communication	3,4,6-8,11,13-15
3. Collaborate with communication and informatics specialists in the process of design, implementation, and evaluation of public health programs.	• Engage stakeholders including, but not limited to, government, community organizations and coalitions on the development and implementation of health communication campaigns	1,2,5-15
4. Demonstrate effective written and oral skills for communicating with different audiences in the context of professional public health activities.	• Critique an existing health communication campaign • Design and develop a health communications campaign on a single health issue	3-11
5. Use informatics methods and resources as strategic tools to promote public health.	• Become proficient in manipulating evidence and data in the design of health communication campaigns and social marketing • Identify mechanisms for obtaining consumer health information through social media	1,2,5,7
6. Use informatics and communication methods to advocate for community public health programs and policies.	• Develop persuasive messaging to sustain community change	3,4
Diversity and culture: the ability to interact with both diverse individuals and communities to produce or impact an		

intended public health outcome.		
1. Differentiate between the linguistic competence, cultural competency, and health literacy in public health practice.	• Learn to use plain language for communicating health information to the public • Effectively frame the issue across diverse cultures as well as vulnerable and underserved populations	4,6-8,11
2. Develop public health programs and strategies responsive to the diverse cultural values and traditions of the community being served.	• Become proficient in assessing community needs • Learn formative research techniques including qualitative and quantitative methods and focus group testing	5-8, 10-15

SCHEDULE

Note: This schedule and assignments are subject to change. Additional readings and handouts may be provided, and session topics and activities may be altered if necessary. You will always have at least 5 days notice if something is being changed.

Session	Date	Topic	Reading and Assignments Due	Activity
1	Feb 1 2016	Introduction to Public Health Communication From pamphlets to tweets Historical change – where it's been, where it is, where it may be going.	Parvanta, Chapters 1 & 5	Syllabus Overview Discussion of Course Project Instructors will demonstrate a critique of a health communication message or campaign Assignment to photograph a "health" message from somewhere out in public space
2	Feb 8	Functions of health communications: what is the relationship between information and behavior change? Communications Theories; how does communications work. Old and new media – converging or colliding? Ethical issues in health communications	Parvanta Chp, 5 & 6 Parvanta Chp 11 Cialdini, Chp. Goffman Basu et al. Friedman, et al.	Discuss your public health photos in class

	Feb 15	**No Class – Lincoln's Birthday**		
3	Feb 22	Where and How Does Communication Happen? 4	Feb 29	*Developing a Plan – Part 1* Who is your Audience? What do you need to know about them? Choosing a strategy specifically for your audience. Health Literacy Social Marketing Is Selling Public Health Like Selling Soap? Culture and Gender Case examinations: TB, AIDS, ACA Critiquing messages re audience	Parvanta, Chp.2 (redux) Parvanta, Chp. 7 Cialdini, Chp. 2 Andreason Schiavo Zarcadoolas et al 2008	Part 1 : Topic and Problem Statement for Communication Plan Due
5	March 7	Quiz #1 Communicating Science and Evidence Why is there so much pseudo-science around? Communicating Risk – evidence, fear and what gets communicated Technology and Health Communication eHealth/mHealth and Web 3.0	Parvanta, Chp. 4 Cialdini, Chp. 4 & 7 Parker and Thorson PEW Parvanta Chp. 3 Wang, 2016 Kim & Niederdeppe 2014	
5	March 14	Mass Media as a Public Health Strategy Getting noticed Controlling the message – Is it possible Social Marketing Social Influence Critiquing messages re modality	Parvanta, Chapter 11 Cialdini, Chp. 3 Zarcadoolas/Dresser Adult Obesity Article Loader et. al. Andreason Human	
6	March 21	*Developing a Communications Plan – Part 2* Translating good ideas into a doable communications plan; Who is involved? Building collaborators/partners	Parvanta, Chapter 2 & 10	Part 2 Final: Research for Communication Strategy Due

		How do you get and keep them involved? Early evaluation - pilot testing		
7	March 28	How do you know what works? When do you evaluate? Formative Research - qualitative methods – focus groups, usability testing, cognitive testing Evaluative Research	Parvanta, Chp. 9 & 12 (redux) Dresser et al, Public Health Detailing Article Zoller (2005)	Quiz #2
8	April 4	*Developing a Plan – Part 3* What type of community/ stakeholder participation do you have? Portfolio Class: Each student shares a project plan	Parvanta Chp 13 & 14	Part 3 Final: Open Forum Discussion Due (Draft)
9	April 11	Communicating complexity and communicating in a complex real world environment Forces – the media, pseudo-science, social networks and being ignored, just to name a few.	Cialdini, Chp. 6	
10	April 18	Quiz #2 Evaluating and Revising a Campaign		
	April 22-30	**Spring Break**		
11	May 2	Work-shopping: Rapid Communications Design in Class	Parvanta, Chapter 14 Parker and Thorson	
12	May 9	Course Review Wrap-up and Summary of Key Concepts and Themes		
13	May 16	Class Presentations		
		FINAL PAPERS DUE May 25		

Assessment

Your understanding of the course material will be evaluated through several writing and oral assignments, an individual midterm paper, a final group project and thorough class participation and discussions.

Quizzes: Two in-class quizzes will be given during the semester related to readings as well as in-class discussions. Dates March 7 and April 18.

Weekly Presentation: On the first night of class each student will be assigned a week to present a short 3-4 minute critique of a health communication message. This could range from a tweet, Instagram post, TV commercial, YouTube video, poster/pamphlet, etc. You will tell the class why or why/not you like the piece and how it relates to the night's

class. Over the course of the semester we will see that the presentations change as we learn more about communication.

Midterm (Individual Project): 6 page strict limit
More instructions will be provided in class and on BB
The Midterm and Final papers are intended to be companion pieces. The topic that you choose for the midterm will be the same throughout – the lens that you look at the communication through will differ from start to finish.

1. Choose a health communications "campaign" that has been conducted within the last 5 years in the US, ideally NY but not necessary. This campaign must have had a multidisciplinary approach (i.e. more than 1 type of dissemination (i.e., TV media, subway, twitter, print, events, etc.)
2. Collect the pieces you will be focusing on – they will appear in your Appendix
3. Analyze and present the key elements: "who (target audience), what (focus), why (public health motivation – lit review of the health problem)" of the campaign.
4. Identify and evaluate the communications strategy and approach?

The paper must be informed by readings, in-class analysis and scientific journal articles, and must be appropriately referenced in APA style. 1.5 space, Arial 11 1 inch margins.

Final Paper – Extend your look at your topic to develop your own campaign plan
More instructions will be provided in class
6 pages- strict page limit

Components of the Final Paper
Part I –Heath Topic Description
- What is the problem?
- List and map the causes of the health problem
- Target audience defense

Part II – Present research for your market strategy
- Research previous campaigns and their impact (environmental scan)
- Define/describe communication/market strategy
- Write creative brief

Part III – Strategize Barriers to Campaign Development
- Present draft concepts *only* to class (you will not be graded on artistic ability)
- Class will work together to provide suggestions and initial feedback on campaign development

Part IV – Present Final Campaign to Class
- 10 minute presentation with accompanying paper
- 5 minutes for Q & A
- Everyone must attend the last class to get credit for your final

Grading

1. Attendance and participation in class/online	**10%**
2. Quizzes	**10%**
2. Midterm (Individual)	**30%**
3. Individual presentation	**10%**
4. Final Paper	**40%**

Grading

A+	**97.5%100%**	**4.0**	**B-**	**80.0 – 82.4%**	**2.7**
A	**92.5 –97.4%**	**4.0**	**C+**	**77.5 – 79.9%**	**2.3**
A-	**90.0 –92.4%**	**3.7**	**C**	**72.5 – 77.4%**	**2.0**
B+	**87.5 - 89.9%**	**3.3**	**C-**	**70.0 – 72.4%**	**0**
B	**82.5 –87.4%**	**3.0**	**F**	**0.0 – 69.9%**	**0**

Course Policies

Attendance and participation: Students are expected to arrive to class on time, to be prepared for class, and to actively participate in class discussions. Students are responsible for class content and assignments, even if they miss a class. Excessive absences (e.g., more than one), tardiness, or lack of participation will be reflected in final grades. If a student needs to miss a class, it should be discussed with the instructor in advance or as soon as possible.

Assigned readings: All readings, for each session, must be completed by students before the class meets for that session. If students are consistently coming to class unprepared, this will be reflected in their final grade.

Submission of assignments: Assignments are due on the date indicated in the syllabus. A full grade will be deducted for each week an assignment is late. If a student anticipates the need to turn in work late, negotiate an acceptable submission plan with the instructor in advance of the established due date. In case of emergency, please contact the instructor. Assignments are to be well written (reflecting the high standards expected of graduate level work), typed, double-spaced, and proofread. Please use 1-inch margins all around and 12-point font. Use only biomedical (AMA) style for citing references; this is the style used by the *American Journal of Public Health* (AJPH). You may consult this link at the AJPH website for guidelines: http://www.ajph.org/misc/ama_references.shtml.

Blackboard and email: Students must enroll in Blackboard (Bb) online, as it will be used on a routine basis as a learning tool to distribute course materials as well as facilitate communication with the instructor and class. Students are responsible for sorting out any technical issues with respect to Blackboard enrollment with the Helpdesk or other administrative offices, as necessary. Students should also check their Hunter emails for communications about the class.

Classroom conduct: You are expected to help build a comfortable classroom environment of mutual respect, inquiry, and learning. Laptops and IPads and other electronic devices are allowed for note taking only. Text messaging, phone use, emailing, web browsing, working on assignments, cross talking, etc. are not allowed in class.

Institutional Policies

Academic honesty: Hunter College regards acts of academic dishonesty (e.g., plagiarism, cheating on examinations, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. For more information visit: http://www.hunter.cuny.edu/studentservices/advising/policies-sub/policies-academic-integrity. The complete text of the CUNY Academic Integrity can be found at this site: http://www.cuny.edu/about/administration/offices/la/Academic_Integrity_Policy.pdf/

Services for disabled students: "In compliance with the American Disability Act of 1990 (ADA) and with Section 504 of the Rehabilitation Act of 1973, Hunter College is committed to ensuring educational parity and accommodations for all students with documented disabilities and/or medical conditions. Support services and accommodations are available

to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. It is recommended that all students with documented disabilities (emotional, medical, physical, and/or learning) consult the Office of AccessABILITY to secure necessary academic accommodations. For further information and assistance, please call: (212) 772- 4857 or (212) 650-3230 or visit http://www.hunter.cuny.edu /studentservices/access

Help with research and writing: Feedback will be given on the quality of all written assignments. If you require further assistance with improving your writing skills, consider visiting the Student Reading and Writing Center at the 68th Street campus. For more, information visit http://rwc.hunter.cuny.edu/

Last day to drop the course with the grade of "W" is Nov 6, 2014. Hunter has three types of grades of withdrawal: W, WA, and WU. There may be serious academic and financial consequences associated with course withdrawal. Discuss your situation with an Advisor in the Office of Student Services, 1119 East Building, (212) 772-4882. For more information visit: http://www.hunter.cuny.edu/studentservices/advising/policies-sub/policies-course-withdrawal.

Incomplete grade policy: Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an INCOMPLETE is at the discretion of the instructor. Only students averaging C or above in a course are eligible to request an incomplete course grade. According to Hunter regulations, there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, a contract stating the terms and deadlines for submission of pending assignments will be signed by both the student and the instructor. The student with an INC grade will not be permitted to register for classes in the upcoming semester unless this contract is on file in the SUPH office and the instructor advises the Program Director when the incomplete has been resolved.

Grade appeals: When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. Please consult with the instructor within the first 3 weeks of the following semester. If the student is still not satisfied, he/she should promptly contact the Program Director in writing giving the factual reasons and basis for the complaint. Students have the right to request in writing that the SHS Director of the Hunter College campus appoint a student as a member to the Grade Appeals Committee. This appeal at the campus level must be submitted within the first 5 weeks of the semester following the receipt of the grade. For further guidance, please refer to the "College-wide Grade Appeals Procedures" adopted by the Senate in fall 1985. Copies of this procedure may be obtained in the Senate Office, the Office of Student Services, or departmental offices. For more information, visit: http://www.hunter.cuny.edu/studentservices/advising/policies-sub/policies-academic-appeals

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

PUBH 851 and PH 77051
Global Maternal and Child Health
3 Credits
Winter 2016

I. Overview

Time and location	Tuesday, 8:00 PM to 9:45 PM, Silberman (2180 3rd Ave), Room 331
Instructor	Jim Sherry, MD, PhD Professor, CUNY School of Public Health 2180 3rd Ave, Room 506 james.sherry@sph.cuny.edu (preferred contact)
Office hours	By appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course will provide a framework for understanding both the theory and practice of advancing global health and in particular maternal, neonatal and child health. International systems, bilateral and multilateral initiatives and globalization trends and their effect on population health will be studied from a comparative perspective across countries and regions. The course aims at promoting an understanding the biomedical, socioeconomic and political effects of the globalization process on population health. During the semester, students will examine the emerging field of global health from an interdisciplinary perspective, by addressing the main health issues experienced by mothers and children worldwide. The course is intended for students enrolled in the DPH program, students who have completed their core requirements in the MPH program, and other advanced graduate degree programs who have an interest in global maternal and child health issues. *(This course is distinguished from PUBH 870 (Maternal, Child, Reproductive and Sexual Health in Context) in its focus on the*

	broad, global issues in the MCH field with particular emphasis on the health of children and their mothers in developing countries.)
Course prerequisites	PUBH 820 Epidemiologic Methods I Research Design and Inference PUBH 870 Maternal, Child, Reproductive and Sexual Health in Context
Course format	This course is taught with a mix of online learning resources, discussion, collaborative exercises, self-assessment, and case studies. All materials are available on the course website. This is not a self-paced course; there are weekly deadlines for discussion and activities.
Required reading and resources	See Topical Reading List (Section VII)
Suggested reading and resources	See Topical Reading List (Section VII)

II. Course Learning Objectives

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be assessed as part of the following course assignments:
1. Determine the status of maternal and child health ***within*** a particular country and assess the existing efforts and initiatives seeking to advance maternal and child health.	• Locate and critically assess available data/evidence on the status and health of women and children in various LMIC settings • Critically review the flow of resources that influence MNCH (financial and technical) to and among LMICs. • Critically discuss the published evaluations of large scale (country and global) initiatives influencing global MNCH	• Discussion Forum • Synthesis Assignments
2. Collect, analyze, and synthesize information about global MNCH determinants, interventions and outcomes ***across*** multiple countries in different regions.	• Locate and synthesize empirical information about international health organizations, initiatives and systems influencing global MNCH • Critically evaluate the quality of the published and gray literature on global and national level MNCH programs in LMICs • Analyze existing data/evidence (and identify gaps) on implemented or proposed global and national level MNCH programs	• Discussion Forum • Synthesis Assignments
3. Develop alternative strategies and recommendations for policy, program and systems level interventions within different epidemiologic, demographic, cultural and socioeconomic settings that can advance maternal and child health.	• Develop, compare and prioritize health sector policy and program recommendations to advance MNCH in various settings • Identify and propose major potential contributions to MNCH from outside the health sector and develop appropriate recommendations for action.	• Discussion Forum • Synthesis Assignments • Semester Paper

III. Course Assessments

Additional information about individual assignments and grading criteria can be found on the course website

Discussion Forum: Each week we will discuss the assigned learning resources. Students may be assigned the role of leader on specific topics and other students are expected to participate in the discussion.

Short Synthesis Assignments*:* The instructor will post short topical synthesis assignments for students to complete that demonstrate their achievement of the learning objectives of the particular topical areas presented and discussed.

Semester Paper**:** Students will write an analytic paper that demonstrates their ability to compare and contrast the maternal and child health status and efforts across several countries through a specific comparative lens.

.

IV. Grading

a. Evaluation criteria

All assignments will be assessed based upon a rubric found on the course website. Specific information about grading criteria will be distributed with the assignment.

The relative weight of each course component is as follows:

Discussion Forum Participation	20%
Synthesis Assignments	30%
Semester Paper:	50%
	100%

The grading system for the course follows guidance in the Hunter Catalog.

Letter Grade	Quality Points	Percentage
A+	4.0	97.5 - 100
A	4.0	92.5 - 97.4
A-	3.7	90.0 - 92.4
B+	3.3	87.5 - 89.9
B	3.0	82.5 - 87.4
B-	2.7	80.0 - 82.4
C+	2.3	77.5 - 79.9
C	2.0	70.0 - 77.4
F	0	<70

b. Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course.

Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for withdrawal are available online. Only the student (not the instructor or staff) may officially withdraw from a course. Failure to officially withdraw may result in an "unofficial withdrawal" (WU), which is equivalent to a grade of F, or 0 averaged into your GPA.

c. Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor; there is no absolute right to a grade of incomplete. In the case that an incomplete grade is granted, the student must negotiate and prepare a signed contract with the instructor specifying the terms and timeline for completion of all outstanding work. Refer to the Hunter Catalog for further details.

d. Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor within the first three weeks of the following semester. If the student is still not satisfied, the student should promptly contact the Campus Director in writing giving the factual reasons and basis for the complaint. This appeal must be submitted within the first five weeks of the semester following receipt of the grade. For further guidance, refer to the Hunter Catalog.

V. Course Policies

a. Attendance and class participation

Expect to actively contribute to the discussion and complete and submit all assignments by posted due dates. Missed assignments or lack of discussion participation not only affect the individual student, but they also affect the class as a whole due to the high degree of interaction within the course. Grades for interactive communication are based on a rubric that includes the number, tone, and content of your contributions and the attitude you display towards others.

b. Late/incomplete submission of assignments

Late or incomplete assignments are not accepted.

c. Make-ups, rewrites, and extra credit

There are no make-ups, rewrites, or extra credit allowed.

d. Expectations of students

- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Know how to use library resources and citation tools.
- Show respect to everyone in the course.
- Be fully prepared to actively participate in discussion.

- Complete all assignments by their assigned due date. No credit for work completed after the due date.
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Regularly check the course website and official university email for course correspondence.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted in the discussion board.
- Contact the professor directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.

e. Expectations for the instructor

- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during discussion
- Respond to student email within 24 hours Monday through Friday.
- Grading and feedback on assignments within 1 week of the due date.
- Communication about grades and progress in the course will be given through the course website.

f. Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions. Please let the instructor know at the beginning of the semester if a student has special accommodations that are necessary for class sessions, exams or presentations. The Office of AccessABILITY for Hunter College is located in Room 1214B, East Building, 695 Park Avenue, New York, NY 10065, email: AccessABILITY@hunter.cuny.edu, phone: (212) 772-4857.

g. Academic integrity

Hunter College regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures. Refer to the CUNY Policy on Academic Integrity and other sources for definitions and examples of academic dishonesty.

VI. Course Schedule

This schedule may change as the semester progresses. Refer to the current academic calendar for important dates.

Date		Topic
2-Feb		Topic 1: In-Country Real-Time Efforts to Improve Global Maternal, Neonatal and Child Health (MNCH): Indonesia
16-Feb		Topic 2: Overview of Determinants, Resources, Proximal Determinants and Strategies to Address Global MNCH
23-Feb		Topic 3: GMNCH Policy Space and Actors
1-Mar	online	Topic 4: US Development Assistance History in GMNCH: Four Perspectives
8-Mar		Topic 5: International Organizations and Framing the MDG/SDG Transition in GMNCH
15-Mar	online	Topic 6: Evaluating Current Evidence for Progress in Addressing GMNCH
22-Mar		Topic 7: Global MNCH Interventions I
29-Mar	online	Topic 8: Global MNCH Interventions II
5-Apr		Topic 9: Addressing Vulnerability and Equity in MNCH Programs
12-Apr	online	Topic 10: Overcoming early recognition, referral and service targeting and major logistics targeting challenges in MNCH programs
19-Apr		Topic 11: Major Country Initiatives in MNCH
3-May		Topic 12: Multilateral Initiatives in MNCH: Vertical, Horizontal and Diagonal
10-May	online	Topic 13: Implementation Research and Delivery Science Initiatives in Global MNCH
17-May		Topic 14: Synthesis Roundtable and GMNCH Strategy Recommendations

VII. Reading Resources

Topic 1: In-Country Real-Time Efforts to Improve Global Maternal, Neonatal and Child Health (MNCH): Indonesia

A. Familiarize yourself with the **Joint Committee on Reducing Maternal and Neonatal Mortality in Indonesia**; Development, Security, and Cooperation; Policy and Global Affairs; National Research Council; Indonesian Academy of Sciences. Washington (DC): National Academies Press (US); 2013 Dec 26.

B. Familiarize yourself with the **Request for Information (RFI): USAID/Indonesia Maternal and Newborn Health Activity**
https://www.fbo.gov/index?s=opportunity&mode=form&id=b2cf3447b429d95b1a241396663f3e31&tab=core&_cview=0

Topic 2: Overview of Determinants, Resources, Proximal Determinants and Strategies to Address Global MNCH

A. Familiarize yourself with the **Lancet Child Survival Series**
http://www.thelancet.com/series/child-survival

B. Familiarize yourself with the **Lancet Every Newborn Series**
http://www.thelancet.com/series/everynewborn

C. Familiarize yourself with the **Lancet Maternal and Child Nutrition Series**
http://www.thelancet.com/series/maternal-and-child-undernutrition

D. Familiarize yourself with the Child Survival (basics) and the Maternal and Neonatal Mortality (basics). See CDG **Million Lives Saved Case Studies** summaries arranged by subject area (attached) or at:
http://www.cgdev.org/page/case-studies

E. Familiarize yourself with the **Global Health Media** Newborn, Childbirth and Breastfeeding training videos.
http://globalhealthmedia.org/videos/

Topic 3: GMNCH Policy Space and Actors

A. Financing Global Health 2014: Shifts in Funding as the MDG Era Closes Health Diplomacy Paper
http://www.healthdata.org/policy-report/financing-global-health-2014-shifts-funding-mdg-era-closes

B. Ski, S., Kiddell-Monroe, R. and Sherry, J. M. (2013). Is Health Diplomacy Keeping Pace with Global Health Developments? Implications for Access to Medicines Strategies in the Post-2015 MDG Framework. Journal of Health Diplomacy, 1 (1).
http://www.ghd-net.org/sites/default/files/Is%20Health%20Diplomacy%20Keeping%20Pace%20with%20Global%20Health%20Developments_0.pdf

Topic 4: US Development Assistance History in GMNCH: Four Perspectives

A. Familiarize yourself with USAID Official Website's Summary of its History
https://www.usaid.gov/who-we-are/usaid-history
B. Review the Oral Histories of USAID 'Architect': David E. Bell

David E. Bell Oral History Interview #1, 7/11/1964
http://www.jfklibrary.org/Asset-Viewer/Archives/JFKOH-DEB-01.asp

David E. Bell Oral History Interview #2, 1/2/1965
http://www.jfklibrary.org/Asset-Viewer/Archives/JFKOH-DEB-02.aspx

C. Take in a third 'independent' perspective from DEVEX, a for-profit membership organization.
https://pages.devex.com/USAID-history.html

D. Contrast the perspectives with those reflected in The Annual Gates Letter
2016: https://www.gatesnotes.com/2016-Annual-Letter
2015: https://www.gatesnotes.com/2015-annual-letter
2014: http://www.gatesfoundation.org/Who-We-Are/Resources-and-Media/Annual-Letters-List/Annual-Letter-2014
2013: http://www.gatesfoundation.org/Who-We-Are/Resources-and-Media/Annual-Letters-List/Annual-Letter-2013

Topic 5: International Organizations and Framing the MDG/SDG Transition in GMNCH

A. Familiarize yourself with the health related Sustainable Development Goals navigating (deeply) the official website of the UN describing them..
http://www.un.org/sustainabledevelopment/sustainable-development-goals/

B. Familiarize yourself with organization and (high-level) political machinery around the SDG process and where it fits into the rest of the UN.
https://sustainabledevelopment.un.org/

C. Familiarize yourself with the 'official UN SDG Document' **Transforming Our World: The 2030 Agenda For Sustainable Development A/RES/70/1**
https://docs.google.com/gview?url=http://sustainabledevelopment.un.org/content/documents/21252030%20Agenda%20for%20Sustainable%20Development%20web.pdf&embedded=true

D. Familiarize yourself with the 'official WHO SDG Document' **Health in 2015: from MDGs to SDGs**
http://www.who.int/gho/publications/mdgs-sdgs/en/

E. BRIEFLY familiarize yourself with this website and determine how/if it is related to the UN and WHO processes and described above.
http://unsdsn.org/

F. BRIEFLY familiarize yourself with this document and determine how/if it is related to the official SDG Document' above.
Monitoring Framework for Sustainable Development Goals: Launching a data revolution for the SDGs
http://unsdsn.org/resources/publications/indicators/

Topic 6: Evaluating Current Evidence for Progress in Addressing GMNCH

1. **Navigate** the website of the **Cochrane Community** and familiarize yourself with its (relatively recent) history and efforts to bring systematic reviews of literature/evidence into the mainstream of health and medical practice.
http://community.cochrane.org/

2. **Read** the overview of the Grading of Recommendations Assessment, Development and Evaluation (**GRADE**) Working Group
   - Grading the quality of evidence and the strength of recommendations
   - *Criteria for applying or using GRADE* [pdf]

   http://www.gradeworkinggroup.org/intro.htm

3. **Review** the **U.S. Government Evidence Summit on Enhancing Child Survival and Development in Lower- and Middle-Income Countries by Achieving Population-Level Behavior Change**
   http://plbcevidencesummit.hsaccess.org/docs/public-documents/evidence-summit-process-15mar13.pdf?sfvrsn=2
   See also http://plbcevidencesummit.hsaccess.org/

4. **Read** papers #1 and # 5 and review the others making up the 6-part 2008 British Medical Journal (BMJ) series. (Note, that the online text is the longer, full version of the submitted manuscript. The pdf on BMJ's website is an abbreviated print issue version.)

   A. Guyatt GH, Oxman AD, Vist G, Kunz R, Falck-Ytter Y, Alonso-Coello P, Schünemann HJ, for the GRADE Working Group.
   Rating quality of evidence and strength of recommendations GRADE: an emerging consensus on rating quality of evidence and strength of recommendations.
   BMJ 2008;336:924-926 or [pdf]

   B. Guyatt GH, Oxman AD, Kunz R, Vist GE, Falck-Ytter Y, Schünemann HJ; GRADE Working Group.
   Rating quality of evidence and strength of recommendations: What is "quality of evidence" and why is it important to clinicians?
   BMJ. 2008 May 3;336(7651):995-8

   C. Schünemann HJ, Oxman AD, Brozek J, Glasziou P, Jaeschke R, Vist GE, Williams JW Jr, Kunz R, Craig J, Montori VM, Bossuyt P, Guyatt GH; GRADE Working Group.
   Grading quality of evidence and strength of recommendations for diagnostic tests and strategies.
   BMJ. 2008 May 17;336(7653):1106-10

   D. Guyatt GH, Oxman AD, Kunz R, Jaeschke R, Helfand M, Liberati A, Vist GE, Schünemann HJ; GRADE working group.
   Rating quality of evidence and strength of recommendations: Incorporating considerations of resources use into grading recommendations.
   BMJ. 2008 May 24;336(7654):1170-3

   E. Guyatt GH, Oxman AD, Kunz R, Falck-Ytter Y, Vist GE, Liberati A, Schünemann HJ; GRADE Working Group.
   Rating quality of evidence and strength of recommendations: Going from evidence to recommendations.
   BMJ. 2008 May 10;336(7652):1049-51

   F. Jaeschke R, Guyatt GH, Dellinger P, Schünemann H, Levy MM, Kunz R, Norris S, Bion J; GRADE working group.
   Use of GRADE grid to reach decisions on clinical practice guidelines when consensus is elusive.
   BMJ. 2008 Jul 31;337:a744

Topic 7: Global MNCH Interventions I

1. CDG Million Lives Saved Case Studies summaries arranged by subject area (attached)
   1. Child Survival Basics,

2. Maternal and Neonatal Mortality Basics,
3. Cross-Cutting Approaches Addressing the Poor and at:
http://www.cgdev.org/page/case-studies

Topic 8: Global MNCH Interventions II

1. Bennett, Sara, Ssengooba, Freddie (2010). Closing the Gaps: From Science to Action in Maternal, Newborn, and Child Health in Africa. PLoS Med 7(6): e1000298 doi: 10.1371/journal.pmed.1000298
2. Bowser, Diana, and Kathleen Hill. 2010. "Exploring Evidence for Disrespect and Abuse in Facility-Based Childbirth." TRAction Project. Harvard School of Public Health and University Research Co., LLC. http://www.tractionproject.org/sites/default/files/Respectful_Care_at_Birth_9-20-101_Final.pdf.
3. Freedman, Lynn P, Kate Ramsey, Timothy Abuya, Ben Bellows, Charity Ndwiga, Charlotte E Warren, Stephanie Kujawski, Wema Moyo, Margaret E Kruk, and Godfrey Mbaruku. 2014. Topic 14: Synthesis Roundtable and GMNCH Strategy Recommendations

VIII. CDG Million Lives Saved Case Study Resources

1. Child Survival Basics

Eliminating measles in southern Africa.

Measles vaccination campaigns in seven African countries nearly eliminated measles as a cause of childhood death in southern Africa and helped reduce the number of measles cases from 60,000 in 1996 to just 117 cases four years later.

Preventing Hib disease in Chile and The Gambia.

A national Hib vaccination program in Chile reduced prevalence of Hib disease by 90 percent in the early 1990s. In 1997, The Gambia introduced Hib vaccines into its national immunization program and has virtually eliminated the disease from the country.

Preventing diarrheal deaths in Egypt.

Using modern communication methods, a national diarrheal control program in Egypt increased the awareness and use of life-saving oral rehydration therapy, helping reduce infant diarrheal deaths by 82 percent between 1982 and 1987.

Reducing child mortality through vitamin A in Nepal.

Capitalizing on the discovery that vitamin A supplementation could save child lives, the government of Nepal began the National Vitamin A Program in 1995 that has averted nearly 200,000 child deaths.

Preventing iodine deficiency disease in China.

China's introduction of iodized salt in 1995 reduced the incidence of goiter among children, from 20 to 9 percent, and created a sustainable system of private provision of fortified salt.

2. Maternal and Neonatal Mortality Basics

Saving mothers' lives in Sri Lanka.

Despite relatively low national income and health spending, Sri Lanka's commitment to providing a range of "safe motherhood" services has led to a decline in maternal mortality from 486 deaths per 100,000 live births to 24 deaths per 100,000 live births over four decades.

Reducing fertility in Bangladesh.

In Bangladesh, strong leadership of the family planning program, a sustained outreach strategy, and a focus on access to services increased contraceptive prevalence from 3 to 54 percent (and correspondingly decreased fertility from 7 to 3.4 children per woman) over two decades, far in

excess of what would have been predicted based on changes in economic and social conditions alone.

Preventing neural tube defects in Chile.
Through a successful partnership between the flour industry and the national government, Chile began fortifying wheat flour with folic acid in 2002. This intervention has prevented life-threatening neural tube defects in infants and saved the health system millions of dollars in treatment costs.

3. Cross-Cutting Approaches Addressing the Poor

Improving the health of the poor in Mexico.
Since 1997, Mexico's Progresa (now known as "Oportunidades") has provided a comprehensive package of education, health, and nutrition interventions to rural families through a conditional cash grants program, resulting in lowered rates of illness and malnutrition and increased school enrollment.

4. HIV/AIDS, Malaria and TB

Preventing HIV and sexually transmitted infections in Thailand.
In Thailand, the government's "100 percent condom program" targeting commercial sex workers and other high-risk groups helped prevent the spread of HIV relatively early in the course of the epidemic. Thailand had 80 percent fewer new cases of HIV in 2001 than in 1991 and has averted nearly 200,000 new cases.

Controlling tuberculosis in China.
To address the problem of tuberculosis (TB) patients' early dropout from treatment, a national TB program in China implemented the directly observed treatment, short-course (DOTS) approach in which a health worker "watches" patients with TB daily for six months as they take their antibiotic treatment. The program helped reduce TB prevalence by 40 percent between 1990 and 2000 and dramatically improved the cure rate in half of China's provinces.

5. Other Health Issues Also Have an Impact on Maternal and Child Health

Curbing tobacco use in Poland.
Starting in the early 1990s, the transition to a market economy and a more open society paved the way for health advocates to implement strong tobacco controls in Poland, a country that had the highest rate of tobacco consumption in the world. A combination of health education and stringent tobacco control legislation has averted 10,000 deaths a year, has led to a 30 percent

reduction in the incidence of lung cancer among men aged 20 to 44, and has helped boost the life expectancy of men by four years.

Preventing dental caries in Jamaica.
Between 1987 and 1995 Jamaica's National Salt Fluoridation Program demonstrated up to an 87 percent decrease in dental caries in schoolchildren and has been regarded as a model for micronutrient interventions.

Treating cataracts in India.
An intensified cataract surgery program implemented in seven Indian states from 1994 to 2001, which was catalyzed by technical and operational innovations developed by a nongovernmental organization, saved more than 300,000 people per year from a lifetime of blindness

LEHMAN COLLEGE
DEPARTMENT OF HEALTH SCIENCES
Gillet Hall, Room 431

Fundamentals of Epidemiology / PHE 606

Spring 2016

TIME AND LOCATION	Tuesday, 6:00-8:40 p.m., Gillet 411
INSTRUCTOR	María Baquero, PhD, MPH Assistant Professor, Department of Health Sciences, 413 Gillet Hall
OFFICE HOURS	Thursday 11:30 am-1:30 pm or by appointment
EMAIL	maria.baquero@lehman.cuny.edu
Pre-Requisite	N/A

COURSE DESCRIPTION

Apply principles and methods of epidemiological analysis. Identify and interpret epidemiological data. Illustrate and investigate incidence, distribution, determinants, and control of disease. *3 credits.*

REQUIRED BOOKS

Aschengrau A, Seage III GR. ***Essentials of Epidemiology in Public Health***. 3rd ed. Sudbury, MA: Jones & Bartlett, 2008. A copy of the textbook will be available on reserve at the library

RECOMMENDED TEXTS

Gordis L. ***Epidemiology***. 5th ed. Philadelphia, PA: Saunders, Elsevier, 2013.
Friis R, Sellers T. ***Epidemiology for Public Health Practice***, 4th ed. Jones & Bartlett, 2009.

BLACKBOARD

The use of Blackboard is required for these classes. Blackboard will have links to assignments, required reading material and lecture slides available.

PROGRAM COMPETENCIES

This course will help you to achieve the following competencies expected of all MPH students:

1. Apply the public health core functions of assessment, policy development and assurance
2. Apply theories, concepts, models and methods to the design of public health research, policy and practice
3. Adhere to ethical and social justice principles and standards
4. Interpret and analyze public health literature and apply evidence-based research
5. Apply basic statistical and informatics techniques
6. Communicate public health information through oral, written, digital and visual presentation
7. Design and evaluate interventions to prevent or control public health problems
8. Collect, analyze and interpret public health data

CUNY

Program Competencies	**Course Learning Objectives**	**Assessment Methods**
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Apply the public health core functions of assessment, policy development and assurance	• Describe in writing the purpose of surveillance and how surveillance is used in public health practice • Explain the difference between incidence and prevalence • Describe the process of identifying and testing potential targets of intervention and give examples of effective and ineffective public health interventions • Describe the process of identifying vulnerable sub-populations, and give examples • Describe under what conditions screening is appropriate	• Class participation • Descriptive epidemiology paper • Homework assignments • Final exam
Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Describe epidemiological studies, including observational, quasi- experimental and experimental studies • Differentiate between primary and secondary data collection and identify possible sources of secondary data • Explain the difference between correlation and causation; risk factors/predictors and causes • Describe the causal inferences which can be made from experimental, quasi-experimental and observational studies using published examples	• Class participation • Descriptive epidemiology paper • Homework assignments • Journal article critique • Final exam
Adhere to ethical and social justice principles and standards	• Describe circumstances in which an experimental study would and would not be ethical • Describe major disparities in life expectancy nationally and globally	• Class participation • Homework assignments • Final exam
Interpret and analyze public health literature and apply evidence-based research	• Access and use published data to accurately describe in writing the health of populations and factors that affect health in terms of person, time and place characteristics • Distinguish between narrative and systematic reviews • Systematically review the literature on a specific topic using a PICO question	• Descriptive epidemiology paper • Journal article critique
Apply basic statistical and informatics techniques	• Explain in a few sentences the principle of screening • Define lead time and length bias and how these biases may impact screening program evaluation • Describe in a few short sentences sensitivity, specificity, positive predictive value and negative predict value of a screening test compared to a gold standard test • Calculate and interpret a mean, a proportion, a rate and an odds ratio, • Explain the difference between relative and absolute risk • Calculate age-standardized rates	• Class participation • Homework assignments • Journal article critique • Final Exam
Communicate public health information	• Describe the validity, utility and feasibility of tests used for screening and diagnosis of health conditions	• Class participation • Homework

through oral, written, digital and visual presentation	• Present visually information on key public health topics such as the major causes of death nationally and globally	assignments • Final exam
Design and evaluate interventions to prevent or control public health problems	• List the strengths and weaknesses of different techniques for evaluating interventions • List the strengths and weaknesses of different techniques for controlling public health problems	• Class participation • Descriptive epidemiology paper • Homework assignments • Journal article critique • Final exam
Collect, analyze and interpret public health data	• Explain how to choose and apply appropriate study designs to answer a research question • Explain the interpretation of different measures of population health, such as life expectancy, quality adjusted life years	• Class participation • Homework assignments • Final exam

STUDENT ASSESSMENT

Students' understanding of course material will be evaluated using the following criteria:

Assignment	Contribution to Grade
Attendance and Class Participation	15%
Critique of Journal Article	15%
Descriptive Epidemiology Paper	15%
Homework assignments (3)	30%
Final exam	25%

The following grading scheme will be applied:

A = 100 – 94	B+ = 89 – 87	C+ = 79 – 77
A - = 93 – 90	B = 86 – 84	C = 76 – 70
	B- = 83 – 80	F = 69 and below

Homework

Three homework assignments will include multiple choice and short answer questions and will consist in the practical application of concepts drawn from the readings and class lectures.

Descriptive Epidemiology Paper

Conduct a literature search on one health condition (examples will be provided) and write a 3-4 page double-spaced paper describing the epidemiology of this condition in terms of person, place and time. It should include at least 10 citations from the public health literature (peer-reviewed journals). An

ungraded bibliography will be due four weeks prior to the paper on which the instructor will provide feedback. Additional instructions on the requirements for this paper will be posted on Blackboard.

Journal Article Critique
Following an outline, write a critique of one of the two specified journal articles. The paper should be 4-6 pages typed, double-spaced.

Final Exam
The final exam will be an in-class, closed book exam. It will be cumulative and based on the material covered in class and in the readings. Students may use scientific calculators (no cell phones).

Class Attendance and Participation
Class attendance and participation is mandatory and will be scored using the following rubric:

	Strong work (3)	Needs development (2)	Unsatisfactory (1)
Active listening (3 points)	Actively and respectfully listens to peers and instructors; consistently engaged and focused.	Sometimes displays lack of interest; not entirely engaged throughout the session; occasionally checks email, instant/text messages or other non-course material during class time.	Projects lack of interest during class; apparent visible clues that s/he is not listening to peers or instructors; frequently checks email, instant/text messages or other non-course internet material during class time.
Preparation (3 points)	Arrives to class with questions about reading assignments; active involvement in the journal article breakout sessions, clearly demonstrating that s/he has read/thought about the material	Sometimes arrives unprepared or with only superficial preparation for the journal article breakout sessions	Exhibits little evidence of having read or thought about assigned material
Quality of contributions to class discussions (3 points)	Comments and asks pertinent questions frequently. Expresses thoughts clearly.	Comments and questions sometimes advance the discussion, but sometimes do little to move it forward	Thoughts are not expressed clearly; comments are often off topic; or student does not participate in class discussions
Attendance (3 points)	Arrives to class on time, does not have unexcused absences, and absent ≤ 2 times	Usually arrives to class on time; absent ≤ 2 times, but only sometimes informs instructors about unavoidable absences.	Arrives consistently late, and/or does not inform instructors about absences, or absent > 2 times.

COURSE POLICIES

Attendance and participation
All members of the class are expected to actively participate in class lectures, activities, and discussions, and to complete assigned reading and other assigned activities prior to class. If you are going to be late or have to miss a class, please contact me via email as far in advance as possible. Points may be deducted for absences, tardiness, or leaving class early.

Cell phones
Please do not use cell phones or laptops during the class, except during breaks.

Submission of assignments
All assignments should be submitted by the beginning of class on the assignment's due date. Papers should be no longer than the maximum length specified, and points may be deducted for exceeding the maximum length. It is expected that your writing will be of high quality, presented in a readable manner and proofread. Assignments handed in after the due date will have points deducted.

Blackboard
Please visit our Blackboard site and check your Lehman email frequently, as those will be our primary channels of communication outside of class. If you have any questions about your Lehman email address or your password, or if you have any problems accessing the site please call the computer helpdesk at 718-960-1111.

Academic Integrity
Academic dishonesty will not be tolerated. Academic dishonesty includes, but is not limited to, cheating, plagiarizing (including "cutting and pasting" or paraphrasing information from the internet without proper citation), fabricating information or citations, facilitating acts of academic dishonesty by others, submitting work of another person or papers written for other courses, or tampering with the academic work of other students. Students may be asked to submit their notes and references to prove that their work is their own. For further clarification, please read CUNY's policy on academic integrity at http://www.lehman.edu/provost/documents/academic-integrity.pdf. Violators will be reported to the head of the Department and to the Dean of Student Affairs.

Accommodating disabilities
Lehman College is committed to providing access to all programs and curricula to all students. Students with disabilities who may need classroom accommodations are encouraged to register with the Office of Student Disability Services. For more information, please contact the Office of Student Disability Services, Shuster Hall, Room 238, phone number: 718-960-8441.

Academic support
At Lehman College the Instructional Support Services Program (ISSP) is home of the Academic Center for Excellence (ACE) and Science Learning Center (SLC) which provides Lehman students with academic support from peer tutors and professional staff members. The ACE provides appointment based and drop-in tutoring in the humanities, social sciences, and writing. To obtain more information about the ACE, please visit their website at http://www.lehman.edu/issp, or call them at 718-960-8175.

COURSE CALENDAR OVERVIEW

Session	Date	Lecture Topics	Lab topic
Fundamental epidemiologic concepts			
1	2/2	Introduction/Historical overview of epidemiology	*Managing data*
	2/9	**NO CLASS**	
2	2/16	Dynamics of disease transmission	*Infectious disease analysis*
3	2/23	Measures of disease occurrence	*Analysis/interpretation of cross tabulated study data*
4	3/1	Concepts of causal inference	*Considering necessary and sufficient causes*
Epidemiologic study designs			
5	3/8	Experimental studies	*Analysis/interpretation of clinical trial study data*
6	3/15	Cohort studies	*Analysis/interpretation of cohort study data*
7	3/22	Case-control studies	*Analysis/interpretation of case-control study data*
8	3/29	Cross-sectional and ecologic studies	*Analysis/interpretation of ecologic study data*
Issues in epidemiologic analysis and practice			
9	4/5	Bias	*Assessing misclassification*
10	4/11	Confounding and random error	*Assessing confounding using stratified analysis*
11	4/19	Mediation and effect measure modification	*Assessing effect measure modification using stratified analysis*
	4/26	**SPRING BREAK**	
12	5/3	Screening	*Assessing screening tools*
13	5/10	Ethics in research	
14	5/17	Exam review	
15	5/24	**Final Exam**	

READINGS AND ASSIGNMENT DUE DATES

Fundamental epidemiologic concepts	
2/2	***Session 1: Introduction/Historical overview of epidemiology*** Readings: Gordis, Ch 1 (Optional)
2/9	**NO CLASS**
2/16	***Session 2: Dynamics of disease transmission*** Readings: Gordis, Ch 2
2/23	***Session 3: Measures of disease occurrence*** Readings: Aschengrau & Seage (A&S), Ch 2: p. 33-36, 39-52 Assignment due: Bibliography for Descriptive Epi Paper
3/1	***Session 4: Concepts of causal inference*** Readings: A&S, Ch 15, p. 389-407
Epidemiologic study designs	
3/8	***Session 5: Experimental studies*** Readings: A&S, Ch 6: p. 143-149 and Ch 7: p. 173-177, 183-199 Assignment due: HW 1
3/15	***Session 6: Cohort studies*** Readings: A&S, Ch 6: p. 149-153 and Ch 8: p. 205-214, 223-229
3/22	***Session 7: Case-control studies*** Readings: A&S, Ch 6: p. 153-160 and Ch 9: p. 233-246, 248-252, 257-259 Assignment due: Descriptive epi paper
3/29	***Session 8: Cross-sectional and ecologic studies*** Readings: A&S, Ch 6 p. 161-168

Issues in epidemiologic analysis and practice	
4/5	***Session 9: Bias*** Readings: A&S, Ch 10 Assignment due: HW 2
4/11	***Session 10: Confounding and random error*** Readings: A&S, Ch 11 p. 293-302, 307-309 and Ch 12: 313-315, 318-327
4/19	***Session 11: Mediation and effect measure modification*** Readings: A&S, Ch 13
4/26	**SPRING BREAK**
5/3	***Session 12: Screening*** Readings: A&S, Ch 16: p. 417-435 Assignment due: Journal article critique paper
5/10	***Session 13: Ethics in research*** Readings: A&S, Ch 17
5/17	***Session 14: Exam review*** Readings: None Assignment due: HW 3
5/24	***Session 15: Final exam***

Prof. M. Aguirre-Molina

PUBLIC HEALTH IN CUBA SEMINAR AND STUDY TRIP

PHE 680 - TOPICS IN PUBLIC HEALTH
3 CREDITS

The Cuban Public Health System

Orientation and Seminar Meetings Location:
Graduate Center (?)

Description

SEMINAR DESCRIPTION: The correlation between low income and poor health has been well established in many countries. Yet despite Cuba's poverty, the quality of health status of the population challenges this assertion. Cuba has the same life expectancy as the U.S. and a lower infant mortality rate when compared to other countries in the region. The course reviews the Cuban health/public health system: the structure, and underlying policies and principles that create this paradox. Included is a comprehensive review and analyses of the populations' health status; the organization and delivery of care; the training of health personnel; and, the role of centralized planning. Variances between the Cuban and US systems will be addressed. During spring break students will have the option of traveling to Cuba to further explore the public health system.

STUDY TRIP: The Cuban Public Health System Seminar and Study Trip to Cuba introduce students to the Cuban Health and Public Health Systems and exposes them to alternative approaches to achieving health equity and social justice. This course seeks to ground students' understanding of contemporary Cuba within the global context. In the process, students will learn how longstanding patterns regarding race, color, class, and gender relations have evolved in(to) the socialist, and now the "post-socialist," context.

In doing so, the course attempts to:

* foster an appreciation for alternative approaches to public health practice and the need to consider broader forces and trends in seeking solutions to public health problems;
* enhance students' skills in the diagnosis and analysis of problems and solutions via applied practice through visits to Cuban health care system programs ;
* enable students to identify and analyze an approach to achieving health equity in an economic and social system as that in Cuba; and
* prepare students to develop a project that critically examines ways of developing a potential cost-effective and beneficial approach to health care system administration

Faculty & Seminar Facilitators

* **Marilyn Aguirre-Molina, EdD, MS**
Professor of Public Health/Director, CUNY Institute for Health Equity
marilyn.aguirre-molina@lehman.cuny.edu
Office: 718-960-6928

Office Hours

By appointment

Office hours are by appointment to allow for flexibility (see phone number and email). You are encouraged to meet with faculty to discuss any and all seminar related issues, assignments and questions you may have, and assistance in the selection of the final paper framework and presentation preparation. Faculty looks forward to providing assistance so that the course results in a genuine learning experience for you.
Office:

Learning Objectives

PRIMARY OBJECTIVES

1. Describe verbally and in writing some of the specific ways that the Cuban Public Health Care systems have reduced inequities in health through policies and programs

2. Discuss the unique dimensions of the Cuban Public Health and Health Care systems that are grounded on the principles of primary care and work within an integrated systems approach to assure the high level of wellness of the population

3. Demonstrate application of critical skills in discussing and analyzing the distinguishing characteristics of the Cuban system

4. Identified and analyze a systemic area of concern in U.S.-based health care system/approaches and describe potential solutions gleaned from the experiential learning achieved in observing aspects of the Cuban Public Health and Health Care systems

5. To experience Cuba directly through group cultural and social activities and individual exploration and interaction.

SECONDARY OBJECTIVES

1. To obtain a general understanding of Cuban history from colonial times to the present, with an emphasis on the period stretching from 1959 to the present;

2. To explain the root causes for and consequences of the 26th of July Movement, led by Fidel Castro, that resulted in the overthrow of Fulgencio Batista in January 1959;

3. To analyze the political, economic, social, and cultural impacts of the Revolution on Cuban society, the health of the population, as well as on the wider world;

4. To interpret primary and secondary sources from a variety of disciplines, including history, sociology, anthropology, and political science, in order to gain a deeper awareness of the trajectory of the Revolution and to fashion coherent, well-supported arguments about the historical significance of various events and trends.

ORIENTATION AND SEMINAR SCHEDULE

Orientation Session 1:

* Rayne, T. History of the Cuban Revolution.
* Peters, P. A Policy toward Cuba that serves U.S. interests. *Policy Analysis*. 2000; 384: 1-14.
* Film Portions: *Fidel*

Recommended Readings:

* Revolutionary Economic Policies

Orientation Session 2:

Pinon Vega J, Iglesias Dios JL, Torres Hernandez M. Impact of health promotion and education on the achievements of Cuban public health. *Promot Educ*. 2000;7(4): 20-4, 40, 46

Spiegel JM, Yassi A. Lessons from the margins of globalization: appreciating the Cuban health paradox. *J Public Health Policy*. 2004;25(1):85-110.

World Health Organization. Cuba's primary health care revolution: 30 years on. *Bulletin of the World Health Organization*. 2008;86(5);327-329.

Film Portions of *Salud* will be shown.

Orientation Session 3:

NOTE: Before this session all students are required to take the University required on-line course on Sexual Misconduct that can be found using the following link: (insert)

Review and discussion of University guidelines for international travel, faculty expectations, student conduct and standards.

Assessment and Grading

Your understanding of the course material will be evaluated through the following student requirements & grading (greater detail follows):

Attendance, participation in
* 3 pre-travel seminars
* Cuba participation in all de-briefing sessions, and seminar sessions for development of final paper
* 1 post-trip debriefing session: **20%**

Journal reflections on required readings, session discussions, and trip site visits (assists in development of framework and final paper): **15 %**

Cuba Paper & Poster Presentations
Concept Paper of Preliminary Area of Interest (2-3 pages): **15%**
DUE:

Final Analytic Paper (6-8 pages): **30%**
DUE:

Campus Presentation(s): **20%**
DUE: D

The final course grade will be determined using the School's letter grade system. Grades are: **A, B, C**, with **+** and **–** as applicable. Grades are defined as follows:

A Excellent. Outstanding achievement.
A- Excellent work, close to outstanding.
B+ Very good. Solid achievement expected of most graduate students.
B Good. Acceptable achievement.
B- Acceptable achievement, but below what is generally expected of graduate students.
C+ Fair achievement, above minimally acceptable level.
C Fair achievement, but only minimally acceptable.
C- Very low performance.
F Failure.
AUD Attendance credit (auditor)

PLEASE NOTE: In fairness to students who submit assignments on deadline, those who do not meet the deadline, will have a half letter grade deducted from the assignment.

Grade of incomplete – The instructor will only issue a grade of INC under the most extreme circumstances. It is preferred that students complete assignments during the

semester that the course is taken. You do not want the burden of an INC when you go on to take other course.

Grading Policy: To resolve incomplete grades, students must fulfill their obligations within one calendar year after the INC grade is assigned. After one year, an incomplete grade (''INC'') will become a permanent incomplete. Extensions will be granted only in exceptional circumstances upon written application and with the permission of the faculty member, the Executive Officer, and the Vice President for Student Affairs. Permanent incompletes will accrue no credit. Students with more than two incomplete courses will be brought to the attention of their Executive Officer to determine whether or not they are making satisfactory progress. Students will not normally be regarded as making satisfactory progress toward their degrees if they have more than two "INC"s on their records. Students should be aware that continued registration and most financial aid awards are conditional upon satisfactory progress. Students should also note that credits for which they have an "INC" as of the end of the third week of classes of a given semester are not counted toward advancement to the next level for that semester.

Course Expectations

Ownership: This is your class and your contributions to it will greatly enhance the course for all. For this reason, you are encouraged to present relevant experiences and insights, question the faculty and classmates in a thoughtful and colleague-like manner that is conductive to the group's learning, and suggest readings or activities that might enhance the course.

Class Participation: As this is a field study course, the trip activities are designed to be highly participatory, which requires that students as well as the instructors come to prepared to associated activities. The combination of required readings, presentations, and specific site visits are intended to stimulate interactive discussions during the trip meetings. Therefore, students will gain the most from this course if they come prepared to meetings and engage in discussions that are informed by the readings and associated materials.

Writing: Writing skills are absolutely essential for public health professionals. Written assignments should be used as an opportunity to sharpen and strengthen the skills you already have. Therefore, please take the time and effort to ensure that your written work is free from misspellings, typos and major grammatical errors. Additionally, students are expected to appropriately cite all references used in presentations or written materials. Work that is not clearly organized and reasonably well written will be returned for a re-write.

Assigned Readings: Course readings have been selected to provide a foundation on which meetings and activities are based. As such, to promote learning and discussion it is

necessary to keep up with the readings and associated activities that are assigned prior to meetings.

Academic integrity: Academic Dishonesty is prohibited in The City University of New York and is punishable by penalties, including failing grades, suspension, and expulsion. Please review graduate bulletin for further detail. Additionally, the instructor will use SafeAssign in instances where there is question as to the originality of the material submitted.

Late submission of assignments - All assignments must be submitted in meeting sessions and by email on the date they are due. Late assignments will have half a letter grade deducted.

Required – CUNY Policy on Sexual Misconduct
Students traveling abroad as part of a course, must

ASSIGNMENTS

Attendance, participation and completion of project proposal sessions (20%):
As this is a field study trip, the activities are designed to be highly participatory, which requires that students as well as the instructors come to meetings prepared. The combination of required readings, presentations, and specific site visits are intended to stimulate interactive discussions during the trip meetings. Therefore, students will gain the most from this course if they come prepared to meetings and engage in discussions that are informed by the readings and associated materials. Active involvement in the debriefing sessions during the trip are expected. Early ideas for project will be discussed by each student.

Journal Reflections (15%):
Students will keep a journal as part of this field study trip. The journal should be used as a log and "idea" promoting tool. This should, in part, assist in the development of both the concept and final papers. The journal should include reflections on required readings, session discussions, and trip site visits. The journal may be written using an "informal writing" style when making the entries. The journal should be used as a core component of the course and as such should be written in on a daily basis while on the trip as well as during both planning activities and discussions related to the course. They will be submitted the week after return from field study.

Concept Paper/Preliminary Area of Interest (15%):
Students may identify and explore an area/issue of Cuban public health that interests them prior to the trip, and prepare a 2-3 page concept paper. The paper should identify the issue of special interest, why this issue is of special interest, how this will contribute to their professional development in public health, and indicate how they propose to study the issue (materials used, literature review, interviews, observations, etc.)

DUE :

Final Paper (30%):
Based on the student's topic/issue of concentration, each will prepare a well conceptualized paper that contains a substantiated discussion and analysis of issue examined as a result of the Cuba trip and experience. Please make every effort to assure that the paper is concise and the narrative pithy. Paper format and structure may vary based on issue of study. Individual meeting with faculty will provide the opportunity to discuss the format and structure of the paper.
DUE: Friday, **March15, 2012** (Late papers will have a half-letter grade deducted.)

Presentation and Poster (20%):
As part of the shared learning process, study trip participants will present the result of their experiences with their colleagues and faculty at the various CUNY campuses. Poster Session format will be used for the presentations. Details to follow.

Public Health to Cuba Seminar

SYLLABUS - SPRING

Date	Topics	Readings (to be completed prior to class), Assignments and Case Studies
November **Orientation session 1**	Introduction *Film Viewing & Discussion* *Cuba Trip Logistics & Planning Process*	READING: Required: * Rayne, T. History of the Cuban Revolution. (accessed via website) * Peters, P. A Policy toward Cuba that serves U.S. interests. *Policy Analysis*. 2000; 384: 1-14. Recommended: * Revolutionary Economic Policies
December XX **Orientation session 2**	Cuba & Healthcare *Brief History of Cuba & Healthcare* *Current Cuban Population: Health Profiles* *Current Healthcare System: Structure, Function, & Impact*	READING: Required: * Pinon Vega J, Iglesias Dios JL, Torres Hernandez M. Impact of health promotion and education on the achievements of Cuban public health. *Promot Educ*. 2000;7(4):20-4, 40, 46. * Spiegel JM, Yassi A. Lessons from the margins of globalization: appreciating the Cuban health paradox. *J Public Health Policy*. 2004;25(1):85-110. * World Health Organization. Cuba's primary health care revolution: 30 years on. *Bulletin of the World Health Organization*. 2008;86(5);327-329.

December XX **Orientation session 3**	Meet & Greet * *Final travel guidelines* * *Dinner & Mingling* * *Getting to know your fellow traveler*	*Review of CUNY Guidelines for International Travel* Discussion of special areas of interest Final Preparation for Travel and Questions
January X – January X **Field trip to Cuba** to study the public health system and learn about the economic and social aspects of Cuban life.		**Details to follow.**
PLEASE NOTE: A significant portion of the seminar is one-on-one meetings with faculty to review and discuss progress on the project, and identify additional resources to advance the student's work on the project.		
February XX	Post-Trip Debriefing & Discussion of Project	The **first** portion of the class will be devoted to a debriefing and discussion of learning experiences in Cuba. The **second** portion will be devoted to a discussion the students' proposed projects and expectations
5. March, XX	Group Discussion of Progress on Projects	Each student will provide the class an abstract of the project they are working and discuss the progress to date, and solicit feedback or suggestions from class mates on the topic.
6. March - April	One-on-one meeting with faculty.	Students will receive a calendar on which to identify the dates they will meet with faculty.

7. TBD (multiple dates)	Group Presentations	The Presentation(s): Students will prepare a Poster Session Presentation of their projects. Templates will be made available on BB.
8. May XX		Spring semester ends

THE CUNY SCHOOL OF PUBLIC HEALTH & HEALTH POLICY

PHE 703: Social and Behavioral Determinants of Health

Spring 2016

Catalogue description:	**Overview of social and behavioral aspects of health, the influence of social and behavioral factors in the distribution of health and illness among populations, and emphasis on how social science theory informs public health. Based on a social ecological perspective, this course offers an introduction to major theories of behavior change in health promotion, with a focus on applications to public health programs.**
Course meets:	Monday, 6:00 pm – 8:40 pm Gillet Hall - Room 430
Instructor:	Dr. Marilyn Aguirre-Molina, Professor
Email:	Marilyn.aguirre-molina@lehman.cuny.edu
Phone:	(718) 960-6928 or (917) 731-4323
Office:	Gillet 422
Office hours:	Monday and Tuesday, 4:00 pm – 6:00 pm
Texts & Readings:	Or by appointment to meet student's need. I encourage you to meet with me to discuss any and all course related issues, assignments and questions you may have. I look forward to providing assistance so that the course results in a genuine learning experience for you. Instead of a text, the class will be using the following free report for the National Academies of Science (NAS): **Health & Behavior – The Interplay of Biological, Behavioral, and Societal Influences -2001** The free report can be obtained via link in BlackBoard (BB) under content in the labeled folder. There will also be readings from selected journal articles, and other documents. Links to the readings are available on the syllabus or posted on BlackBoard.

Competencies and Learning Objectives

Program Competencies	Course Learning Objectives
This course will help you to achieve the following competencies, which are expected of all MPH graduates	After successfully completing this course, you are expected to be able to:
1. Apply the core functions of PH practice (assessment, policy development, and assurance)	• Analyze the impact of individual, organizational, community, national, and global trends and interdependencies on public health related problems and systems. • Identify beliefs, assets, and needs at the individual, interpersonal, organization, community, and policy levels that inform public health interventions. • Assess opportunities and challenges of applying a systems approach to addressing public health problems.
2. Understand basic theories, concepts, models and methods from a range of core and related disciplines and apply them to the design of PH research, policy, and practice	• Identify basic social and behavioral theories, concepts, and models that explain differences in the distribution of health and illness in the United States (including multiple perspectives on the meaning of key social concepts such as race, class, ethnicity, gender, and disability). Describe leading theories of individual, interpersonal, group, organizational, and community-level change. Describe the strengths and limitations of social and behavior-based interventions and policies for improving the health of urban populations. • Identify strategies to reduce disparities in health.
3. Apply ethical and social justice principles and standards	• Describe elements which characterize respect for individuals and communities, including sensitivity to cultural issues, when developing, implementing, and evaluating public health strategies, programs, research, and policies.
4. Interpret and apply the PH literature.	• Retrieve relevant materials, summarize and identify a topic for further exploration over the semester.

	• Find conflicting interpretations of the same phenomenon and use examples to support your case. • Research various intervention strategies to address a specific PH problem
6.Communicate PH information verbally and in writing	Diagnose strengths and problems of urban communities. Identify organizations that can play a role in health promotion and disease prevention within urban communities. Assess available resources for health promotion and disease prevention within urban communities. Describe the roles of various systems (e.g. schools, health care, environmental protection, criminal justice, food and nutrition) in promoting health and preventing disease among urban populations.
7. Explain key social, behavioral, biomedical and environmental determinants of and inequities in health and disease across the lifespan in urban settings	• Describe specific pathways by which urban living affects health across the lifespan. • Identify major economic, political, and environmental forces that shape the health of U.S. urban populations.
	• Describe the influence of behavioral, interpersonal, community, economic, sociocultural, and policy factors on health behaviors and health. • Assess the cultural beliefs of various urban populations and describe their impact on health and disease. • Analyze the impact of class, race, ethnicity, gender and sexual preference on the health status and needs of urban populations.

Assessment

Your understanding of the course material will be evaluated through the following:

Attendance and Class Participation:

Attendance - **5% of total grade**

It will be taken at the beginning of each class. It's more difficult to grasp course content and gain knowledge if you're not in class.

Class Readings and Participation - **10% of the total grade**

It is essential that students remain current with assigned readings. At the start of each, there will be a discussion asking students the primary "take away" from the readings that week. This entails reading the material and identifying the key issue that captured your attention, and why.

Students are required to participate in class and group discussions. Participation includes responding to questions posed by the professor but also responding to comments made by fellow students. The aim of class discussions is to create a discussion between students, not a discussion between the student and professor. Your class participation will be scored using the Participation Rubric attached to syllabus.

Exam – **15% of total grade**

The exam will cover all class lectures, readings and related discussion up until the date of the exam. The focus of the exam will be on theories of social and behavioral health. The exam will be a multiple choice and short essay format. **Exam Date: March 14th**

Public Health News Watch - 25% of total grade

A. Paper – 20%

This semester you are required to read or listen to **popular news media** such as newspapers, magazine, blogs, journals, and other news sources. The primary focus of the media platform is a health/public health topic. Identify the news item and write a discussion/critique paper. Include a copy of, or link to the article; visual images should be included in the paper (3 – 4 pages, 1.5 line spacing)

Do not summarize the news item. Address the questions and discussion points listed below. The discussion should include:

- Source of news item, date, if it is a published article include page number
- Indicate if sources of information/data are cited from a published scientific article, or other source of information/data used.
- Discuss how the article relates to public health.
- Was it directed at a particular audience or a general audience?

- How are social and behavioral factors conveyed/discussed in the item? If they are not discussed – should they have been included?
- Critique the news item itself:
    - Was the information accurate and based on a reliable source?
    - Was it credible and believable?
    - Was it well written and interesting?
    - Did it adequately address the issue?
    - Was key information is missing?
- Summarize your overall assessment of the article, and identify if it contribute to health improvements of populations, explain why or why not

B. Presentation- 5%

Student will make a 10 minute presentation of findings in a PowerPoint presentation to the class. The Template for the PP will be provided on BB. **Due: April 18th**

Survey of Public Awareness and Knowledge of Public Health Policies in Action – 40% of grade

In teams of three, students will conduct a convenience survey to identify public awareness of public health policies, and determine if groups of individual understand the intent of the policy. The teams may want to assess policies such as, Restaurant Letter Ratings, Menu Calorie Labeling, CUNY's Tobacco Free Policy, etc. The process will entail the following:

1 – identify a hypothesis/research question

2- identify population and site where to collect information

3 – develop and test the survey questionnaire

4 – develop a data collection strategy (when, where, who, incentives, analysis, timetable)

5 – collect, enter and analyze the survey data obtained (any program can be used for analysis can be employed

6 – organize findings

7 – Prepare report – details

8 – Brief presentations will be made in class **Due: May 23rd**

100%	

Course Policies & Expectations

Ownership - This is your class and your contributions to it will greatly enhance the course for all. For this reason, you are encouraged to question your instructor and classmates in a thoughtful and colleague-like manner that is conductive to the group's learning.

Attendance & Class Participation - Your attendance is crucial to the effectiveness of this course and to your overall grade. If you must be late or absent please call or email me prior to the class. This course is designed to be highly participatory, which requires that students as well as the instructor come to class prepared. The combination of required readings, instructor presentations, guest lecturers, and field visits is intended to stimulate interactive discussions during the class meetings. Therefore, students will gain the most from this course if they come prepared to class and engage in discussions that are informed by the readings.

Students are expected to demonstrate evidence of preparation by engaging in discussions, raising questions, and participating in exchanges with classmates that are relevant and related to the readings, lectures and course assignments.

Assigned Readings - Course readings have been selected to provide a foundation on which class sessions and lectures are based. As such, to promote in class learning and discussion it is necessary to keep up with the readings that are assigned each week. If you have not read the week's assignment, it will not be possible to participate in the class discussion.

Submission of assignments - All assignments must be submitted by email to the instructor on the date they are due (before class). Late assignments will have will have 2 points deducted.

Extra credit - There is not an extra credit option for this course. Students' grades are based on the assignments and expectations described in the syllabus.

Grade of incomplete – The instructor will only issue a grade of INC under the most extreme circumstances. It is preferred that students complete assignments during the semester that the course is taken. You do not want the burden of an INC when you go on to take other course.

A graduate student who receives a grade of INC (incomplete coursework) has one year from the time the grade was entered on the transcript to make up the work and have a change of grade submitted by the instructor. An INC grade entered in a fall semester, for example, must be completed before the end of the next fall semester. INC grades that are not made up within one year remain permanently on the record as INCs. They may not be made up at any later date unless the student successfully appeals for permission to do so. Permanent incompletes do not count in the Grade Point Average. INC grades cannot be made up after the student graduates.

Writing - Writing skills are absolutely essential for public health professionals. Written assignments should be used as an opportunity to sharpen and strengthen the skills you already

have. Therefore, please take the time and effort to ensure that your written work is free from misspellings, typos and major grammatical errors. Additionally, students are expected to appropriately cite all references used in presentations or written materials. Work that is not clearly organized and reasonably well written will be returned for a re-write, but nevertheless, will have a half letter graded deducted for the re-submission.

Help with research and writing - Students who need help with research and writing can contact the Academic Center for Excellence at 718.960.8175

Cell Phone and Laptops/iPads Use - Please keep all cell phones on silent and out of view during class. If you choose to use a Laptop or iPad in class, it should be used exclusively for note taking – not email, surfing the net, etc.

Institutional Policies

Accessibility - If students with disabilities require accommodations to allow greater accessibility to the academic environment, these students should contact The Office of Special Student Services is located in Shuster Hall, Room 238, 718-960-8441, TTY 718- 960-8931. For more information, visit *www.lehman.edu/vpstud/spstudentserv*.

Academic integrity - Academic Dishonesty is prohibited in The City University of New York and is punishable by penalties, including failing grades, suspension, and expulsion. Please review graduate bulletin for further detail. Additionally, the instructor will use SafeAssign in instances where there is question as to the originality of the material submitted.

While you are encouraged to discuss ideas with each other to facilitate your learning experiences, the work that is turned in must be your own. For example, allowing someone to copy your work, passing or sharing your answers to others, and/or doing work for others (including computer assignments) are examples of violations of Academic Integrity. For more information please visit and read the University of California Davis website (http://sja.ucdavis.edu/academic-integrity.html HYPERLINK "http://sja.ucdavis.edu/academic-integrity.html") or visit the Center for Academic Integrity at Clemson University (http://www.academicintegrity.org HYPERLINK "http://www.academicintegrity.org/") for a detailed description of academic integrity. One of the more common and more destructive breaches of academic integrity is plagiarism. Visit the Plagiarism.org Learning Center (http://www.plagiarism.org HYPERLINK "http://www.plagiarism.org/") for more information on how to avoid plagiarism. The concerns and guidelines provided in these websites will be seriously applied in this course.

Disability Act - In compliance with the American Disability Act of 1990 (ADA) and with Section 504 of the Rehabilitation Act of 1973, Lehman College is committed to ensuring educational parity and accommodations for all students with documented disabilities and/or medical conditions. It is recommended that all students with documented disabilities (Emotional, Medical, Physical and/ or Learning) consult the Office of Special Student Services in the Division of Student Affairs. The Office of Special Student Services is located in Shuster Hall, Room 238, Tel. (718) 960-8441, TTY (718) 960-8931.

Grade appeals - If you wish to challenge a grade, you must complete the following:

- Read the policy regarding Grade Appeals in the Graduate Bulletin. Consult the instructor who assigned the grade to attempt to resolve the situation. You must do this no later than the end of the semester, following the semester in which the grade was assigned.
- If resolution is impossible, and if you still wish to challenge the grade, you should consult your program adviser, who will attempt to resolve the situation. (if the adviser is the instructor who issued the original grade, consult the department chair).
- If you wish to challenge the grade further, you should appeal in writing to the chair of your department (if the chair is the instructor who issued the original grade, consult the chair of the department's Personnel and Budget Committee), submitting any and all documents that support your case. The chair will form a grade appeal committee as described in the Graduate Bulletin. The decision of the Graduate Grade Appeal Committee is final.

Class Schedule

Session	Date	Topic	Readings/ Assignments
1	Feb. 1st	Course Overview Overview of Social Determinants of Health	Discussion of factors and conditions that influence health behavior and health outcomes.
2	Feb. 8th	Introduction to Theories of Behavioral and Social Science	Behavioral Change Models Reading distributed
February 15th - No Class			
3	Feb. 22nd	Cont. Theories of Behavioral and Social Science	Behavioral Change Models continued
4	Feb. 29th	Social Determinants of Health – Application to Social & Behavioral Health	CDC – What are Social Determinants of Health? (BB: Readings folder) NAS: Executive Summary, pp.1-16
Biological & Behavioral Factors Affecting Health			
5	March 7th	Bio-behavioral Factors in Health and Disease	NAS: pp. 39-47, pp. 51-53, pp. 55-57
6	March 14th	▫ Long-Term Effects of Stress ▫ **Quiz – first half of class**	NAS: pp. 57-61, 64-70
7	March 21st	▫ Behavioral Risk Factors: Tobacco, Obesity, etc.	NAS: pp. 87-101
8	March 28th	continued – Behavioral Risks Factors: Alcohol, STDs	NAS: pp. 102-113
9	April 4th	The Marketing of Disease Promoting Products	*Ethical implications of target market selection.* Rittenburg, Terri L.; Parthasarathy, Madhavan Journal of Macromarketing, Fall97, Vol. 17 Issue 2, p49, 16p, 2 charts, 3 diagrams (BB Readings folder)

Impact of Socio-Economic Factors and Social Inequities on Health			
10	April 11th	Social Determinants: Socio-Economic Status & Health	NAS: pp. 138-151
11	April 18th	Social Determinants: ▫ Occupation & Health ▫ Social Inequities & Health ▫ **Due: News Watch Paper & Presentation**	NAS: 151-157 NAS:163-166
Individual and Community Assets/Resources for Achieving Social & Behavioral Health			
12	May 2nd	▫ *An ounce of prevention…* ▫ Review: Change Theories	NAS: pp. 113-121
April 25th – May 1st SPRING BREAK			
13	May 9th	Role of Social Networks, Support, and Capital in Health & Wellbeing	*Toward a Theory of Social Support: Closing Conceptual Gap*. Schumacher & Brownell. journal of social issues, vol. 40, no. 4, 1984, pp. 11-3 https://koutsi.files.wordpress.com/2012/08/shumaker-1984.pdf NAS: pp. 145-151, pp.163-166
14	May 16th	Models and Intervention Strategies	▫ *The Role of Social & Behavioral Science in Public Health Practice: A Study of the NYC Dept. of Health*. VanDevanter, N. et al., Jour of Urban Health, V.80, No.40 Dec. 2003 (BB Readings Folder) ▫ NAS: pp. 179-220
15	May 23rd Exam Week	▫ **Results: Presentation Public Awareness Survey** ▫ **Final Paper Due**	

PARTICIPATION RUBRIC

Your class participation will be scored using this Participation Rubric – 10% of grade/

	Strong work (3)	Needs development (2)	Unsatisfactory (1)
Active listening (3 points)	Actively and respectfully listens to peers and instructors; consistently engaged and focused.	Sometimes displays lack of interest; not entirely engaged throughout the session; occasionally checks email, instant/text messages or other noncourse material during class time.	Projects lack of interest during class; apparent visible clues that s/he is not listening to peers or instructors; frequently checks email, instant/text messages or other non-course internet material during class time.
Preparation (3 points)	Arrives to class with questions about reading assignments; active involvement in the journal article breakout sessions, clearly demonstrating that s/he has read/thought about the material	Sometimes arrives unprepared or with only superficial preparation for the journal article breakout sessions	Exhibits little evidence of having read or thought about assigned material
Quality of contributions to class discussions (3 points)	Comments and asks pertinent questions frequently. Expresses thoughts clearly.	Comments and questions sometimes advance the discussion, but sometimes do little to move it forward	Thoughts are not expressed clearly; comments are often off topic; or student does not participate in class discussions
Attendance (3 points)	Arrives to class on time, does not have unexcused absences, and absent $\leq$ 2 times	Usually arrives to class on time; absent $\leq$ 2 times, but only sometimes informs instructors about unavoidable absences.	Arrives consistently late, and/or does not inform instructors about absences, or absent > 2 times.

DEGREE COMPETENCIES

This course will help you to achieve the following core competencies, which are expected of all MPH / MS graduates

Lehman MPH Competencies	**Course Learning Objectives** (that correspond to the MPH Competencies)
This course will help you to achieve the following competencies, which are expected of Community-based Public Health and Health Equity track MPH graduates at Lehman	After successfully completing this course, you are expected to be able to:
Analyze critical health inequalities confronting urban populations by social and economic determinants such as race, ethnicity, income and neighborhood	* Identify and describe the economic, institutional and socio-cultural factors affecting the health and well-being of ethnic and racial communities in the U.S. * Identify and discuss how social determinants (e.g., employment, residential and racial segregation, stress) influence the health of ethnic and racial groups
Identify aspects of public health ethics and values of social justice that affect public health practice and decision-making	* Interpret, analyze and discuss the role of race and structural racism as it influences health and other inequities * Assess and present existing policies and programs to ascertain the extent to which they respond to the needs of these populations and how they can contribute to achieving health equity
Analyze and interpret public health literature	* Cuts across all course objectives

Assessment and Grading

Please see below under **Assignments section** where there is greater detail of the assignments and expectations. Your understanding of the course material will be evaluated through the following student requirements & grading:

- **Attendance** (5%), will be taken at each class.
  Evidence of assigned readings, and
- **Class Participation** (10%)
  (15% of total grade)

- **Essay - The Universal Declaration of Human Rights**
  Significance for Health Equity (300-400 words. See below for more detail)
  DUE: March 1st **(15% of grade)**

- **Student Led Discussion of Reading** **(10% of total Grade)**

- **Analysis of a Neighborhood's Social Determents of Health** (See below for more detail) **(45% of grade)**
  DUE: Draft May 3rd
  Final paper May 24th

- **Poster Preparation** **(10% of grade)**
  DUE: May 24th

- **Poster Presentation of Neighborhood Analysis**
  (5% of grade)
  DUE: May 24th

Please enter assignment due dates in your calendar

Course Policies & Expectations

Ownership - This is your class and your contributions to it will greatly enhance the course for all. For this reason, you are encouraged to question your instructor and classmates in a thoughtful and colleague-like manner that is conductive to the group's learning.

Attendance & Class Participation - Your attendance is crucial to the effectiveness of this course and to your overall grade. If you must be late or absent please call or email me prior to the class. This course is designed to be highly participatory, which requires that students as well as the instructor come to class prepared. The combination of required readings, instructor

presentations, guest lecturers, and field visits is intended to stimulate interactive discussions during the class meetings. Therefore, students will gain the most from this course if they come prepared to class and engage in discussions that are informed by the readings.

Students are expected to demonstrate evidence of preparation by engaging in discussions, raising questions, and participating in exchanges with classmates that are relevant and related to the readings, lectures and course assignments.

Assigned Readings - Course readings have been selected to provide a foundation on which class sessions and lectures are based. As such, to promote in class learning and discussion it is necessary to keep up with the readings that are assigned each week. If you have not read the week's assignment, it will not be possible to participate in the class discussion.

Writing - Writing skills are absolutely essential for public health professionals. Written assignments should be used as an opportunity to sharpen and strengthen the skills you already have. Therefore, please take the time and effort to ensure that your written work is free from misspellings, typos and major grammatical errors. Additionally, students are expected to appropriately cite all references used in presentations or written materials. Work that is not clearly organized and reasonably well written will be returned for a re-write, but nevertheless, will have a half letter graded deducted for the re-submission. Students who need help with research and writing can contact the Academic Center for Excellence at 718.960.8175

Late submission of assignments - All assignments must be submitted in class and email to the instructor on the date they are due. Late assignments will have half a letter grade deducted.

Cell Phone and Laptops/iPads Use - Please keep all cell phones on silent and out of view during class. If you choose to use a Laptop or iPad in class, it should be used exclusively for note taking – not email, surfing the net, etc.

Grade of incomplete – The instructor will only issue a grade of INC under the most extreme circumstances. It is preferred that students complete assignments during the semester that the course is taken. You do not want the burden of an INC when you go on to take other course.

A graduate student who receives a grade of INC (incomplete coursework) has one year from the time the grade was entered on the transcript to make up the work and have a change of grade submitted by the instructor. An INC grade entered in a fall semester, for example, must be completed before the end of the next fall semester. INC grades that are not made up within one year remain permanently on the record as INCs. They may not be made up at any later date unless the student successfully appeals for permission to do so. Permanent incompletes do not count in the Grade Point Average. INC grades cannot be made up after the student graduates.

Grade appeals - If you wish to challenge a grade, you must complete the following:

* Read the policy regarding Grade Appeals in the Graduate Bulletin. Consult the instructor who assigned the grade to attempt to resolve the situation. You must do this no later than the end of the semester, following the semester in which the grade was assigned.
* If resolution is impossible, and if you still wish to challenge the grade, you should consult your program adviser, who will attempt to resolve the situation. (if the adviser is the instructor who issued the original grade, consult the department chair).
* If you wish to challenge the grade further, you should appeal in writing to the chair of your department (if the chair is the instructor who issued the original grade, consult the chair of the department's Personnel and Budget Committee), submitting any and all documents that support your case. The chair will form a grade appeal committee as described in the Graduate Bulletin. The decision of the Graduate Grade Appeal Committee is final.

Office hours:

Office hours are Tuesdays 3pm - 5:30pm, and Wednesdays 3pm – 5:30pm
Or by appointment to meet student's need (see first page for phone number and location).

I encourage you to meet with me to discuss any and all course related issues, assignments and questions you may have. I look forward to providing assistance so that the course results in a genuine learning experience for you.

No extra credit:

There is not an extra credit option for this course. Students' grades are based on the assignments and expectations described in the syllabus.

Institutional Policies

Accessibility - If students with disabilities require accommodations to allow greater accessibility to the academic environment, these students should contact The Office of Special Student Services is located in Shuster Hall, Room 238, 718-960-8441, TTY 718- 960-8931. For more information, visit *www.lehman.edu/vpstud/spstudentserv*.

Academic integrity - Academic Dishonesty is prohibited in The City University of New York and is punishable by penalties, including failing grades, suspension, and expulsion. Please review graduate bulletin for further detail. Additionally, the instructor will use SafeAssign in instances where there is question as to the originality of the material submitted.

Help with research and writing - Students who need help with research and writing can contact the Academic Center for Excellence at 718.960.8175

Assignments

Papers must be submitted via email on the date which they are due. In fairness to students who submit assignments on deadline, late papers will have 2 points deducted.

- **Attendance -** Attendance is required for all classes. In the event you are unable to attend due to justifiable circumstances, please send an email, or call to notify the professor.
  (5% of grade)

- **Class Readings & Participation –** It is essential that students remain current with assigned readings. At the start of each, there will be a discussion asking students the primary "take away" from the readings that week. This entails reading the material and identifying the key issue that captured your attention, and why. **(10% of grade)**

- **Essay - WRITE AN ESSAY OF 300 – 400 WORDS**
  DUE: March 1st **(15% of grade)**

  See Attachment 1 – at the end of the syllabus for guidelines, "*How to Write an Essay – Ten Easy Steps*"

  The Universal Declaration of Human Rights – Significance for Health Equity
  http://www.un.org/en/documents/udhr/

  This document was adopted by the General Assembly of the United Nations in 1948. The implementation and adoption of the principles therein have great significance for achieving social justice and health equity. Please prepare an essay discussing your
  1. Analysis of the document as a blueprint for achieving social justice and/or health equity (i.e., is it feasible, realistic, or other response you may have), and
  2. If you were charged with identifying an Article that would initiate or begin the process of the achieving social justice and/or health equity, which would it be and why?

  The essays should be no more than 500 – 600 words (not counting the reference list); this requires that you be succinct, precise and efficient in discussion so that you remain within the allotted number of words. Do not just fill the pages with description of the Declaration, but assure that the content demonstrates a mastery of the material and demonstrates your ability to analyze and convey your insights and perspective. There will be class discuss for further classification.

- **Student Led Discussion**

  Each student will select a topic of special interest and lead the class discussion

on the main paper assigned under the topic for the class. The discussion will entail an introduction to the topic/paper, and follow with discussions questions that will highlight the major issues, and stimulate student engagement in the discussion and learning process. **(10% of total grade)**

☀ Neighborhood Analysis

"What I hear, I forget. What I see, I remember. What I do, I understand."

Kung Fu Tzu (Confucius)

Analysis of a Neighborhood's Social Determents of Health: Students will partner in teams of 2 to identify and analyze the structural and social factors (social determinants) that are contributing to health inequities in a selected community. This will require that the team select a zip code, school district, or electoral district reflective of a community where **health disparities are apparent** when compared to other neighborhoods in New York City. Identify 2 or 3 health issue/problems that are especially pronounced in the community, and identify how the social and structural conditions of the neighborhood cause or contribute to health problem.

The fact finding process should entail literature, review of relevant documents, interviews with those who work in the community, and field observation by walking in the neighborhood – conduct an **environmental audit** - for information that is not readily available in print. This will be discussed in class with audit sheets distributed.

In preparation for the field study, please read the below on *Critical Thinking* so that you understand what it takes to undertake an analysis of the community, and prepare an analytic paper. This and the process will be reviewed in class.

* Community Tool Box: Section 3. Thinking Critically
http://ctb.ku.edu/en/table-of-contents/analyze/analyze-community-problems-and-solutions/think-critically/main

All three parts of this assignment must demonstrate students' understanding of social determinants and how they are linked to health outcomes, as well as the factors that underlie health inequity. This assignment will be discussed throughout the semester so that you are prepared to carry it out. In addition, outline of paper structure will be distributed.

1. **Paper:**
The fact finding and analysis will be presented in a paper of approximately 8 pages, in addition to a reference list. The paper should contain charts, graphs, maps or any other material that presents the case and demonstrates how the social structures contribute to the health problems in the neighborhood. A draft of the paper will be submitted for faculty review.

DUE: **May 3th - Draft**
May 24th – Final paper **(45% of grade)**

2. **Poster Preparation:**
   a. Using the standard format of a scientific poster for presentation at a professional meeting, students will prepare a poster describing the community, determinants of health analyzed, methods employed, findings, and recommendations. (templates are available on BB)
   b. The poster must be written in such a manner so that the key information is clearly and succinctly stated. The reader must be able to know without question what you did, why, and what you found. Follow the template heading.
   DUE: **May 24th** **(10% of grade)**

   c. The posters must be submitted on deadline so that Donna Covington Hargrove of the MPH Program Staff, may have time to print them.

   POSTER SUBMISSION FOR PRINTING DUE to Donna: May 10th
   Poster template must be submitted to Donna no later than May 10th so that she will have the posters ready for presentations on May

3. **Class Presentation:**

   The posters will be displayed around the classroom so that students may walk around and read each one. Once read, the class will comment on each of the posters with questions, comments, or share comments on common issues/problems observed across the communities studied.

   The class members will have read the posters prepared by each team, therefore, the presentations should discuss the insights gained through the process, lessons learned, and major take away from the experience.
   DUE: **May 24th** **(5% of total grade)**

4. **PAPER IS DUE ON May 24th**

CLASS SCHEDULE		
DATE	**TOPICS**	**ASSIGNMENTS**
Session 1 **February 2nd**	**Topic** **Readings**	▪ **Course Overview** ▪ **Introduction to social determinants of health and health equity** National Research Council. U.S. Health in International Perspective: Shorter Lives, Poorer Health. Washington, DC: The National Academies Press, 2013. EXAM WEEK **May 24th** **Assignment Due:** Neighborhood Assessment Paper and Poster Presentation	**Topic**	**STUDENT PRESENTATIONS** **Neighborhood Analysis of Social Determinants of Health** * **Poster Presentations** * **Student Discussion:** Neighborhood Analysis of Social Determinants of Health

GISc SPECIALIZATION

CUNY SCHOOL OF PUBLIC HEALTH

Lehman College, City University of New York
PHE 717: The Geography of Urban Health
Spring 2016

Catalogue description	A geographical examination of urban health including the historical perspective of health geography; mapping and spatial analysis of health and health impacts; the social and spatial patterning of health; the geography of health inequalities and disparities; health and social/spatial mobility; and the effects of urban segregation, overcrowding, and poverty on disease illustrated through GISc laboratory exercises. Pre-req: PHE 705 or departmental permission
Course meets	Gillet Hall, Room 311 (classroom) Fridays, once per month, from 4:00 – 6:00 PM, dates as noted below.
Instructor	Profs. Juliana Maantay and Andrew Maroko
Email	Juliana.maantay@lehman.cuny.edu Andrew.maroko@lehman.cuny.edu
Phone	718 960-8574 (JAM) 718 960-1830 (ARM)
Office	GIllet Hall, Room 325 (JAM) Gillet Hall, Room 323 (ARM)
Office hours	Wednesdays, 2:00-4:00 PM and by appointment (JAM) Wednesdays, 3:30-5:30 PM and by appointment (ARM)
Required books	- Shaw, Dorling, Mitchell, 2001. Health, Place, and Society (Open Access book - will be available in pdf on Blackboard) - Koch, T., 2005. Cartographies of Disease: Maps, Mapping, and Medicine, ESRI Press - Gatrell, A. and Elliott, S., 2009. Geographies of Health, 2nd Edition, Wiley-Blackwell All other chapters and papers will be provided in pdfs on Blackboard. Each week pertinent websites and blog postings will be provided on Blackboard for further background and introductory information to that week's topic.
Recommended books	N/A
Reserve material	N/A
Other required materials	Access to a computer able to run ArcGIS (windows OS or MAC with a Windows emulator). Administrative rights or ability to install software.

Assessment
Your understanding of the course material will be evaluated through weekly writing assignments, GISc labs, participation during face-to-face meetings as well as online discussion boards, and a final exam.

Course policies [such as]
Grading

		(Dates, if applicable)
35 %	Lab Assignments	
35 %	Written Assignments	
20 %	Final Exam	
10 %	Participation	
100%		

Course Format:
This is a hybrid on-line course, meeting once per month for in-class discussions in a seminar format. On-line assignments include reading, written responses to questions, GISc lab assignments, discussion forum, and web-based research. At the conclusion of the course, there will be a take-home Final Exam, worth 20% of the total final grade for the course.

Grading Policy:
Grades will not be curved, there will be no extra credit, and no grades will be dropped.

Class Participation:
Class participation includes engagement in discussions and answering of questions during the in-class meeting seminars. Since the class meets as a group only once per month, promptness and attendance at these meetings is imperative. Lateness and absence will count against this grade. Class participation also includes appropriate timeliness and proper format in communications, and weekly discussion board submissions, and accounts for 15% of the final grade.

Lab Assignments:
Lab assignments consist of GISc labs or research that may be completed in the GISc Lab during open lab periods, or as take-home work (most likely both). Student copies of the relevant GISc software will be provided to be installed on the home computers. *All assignments must be uploaded to Blackboard by the due date and times stated in the syllabus in order to receive credit.* Labs must be saved as a word
document, an image file, and/or PDF. The documents must be saved as
LastName_FirstName_LabName
(e.g. Smith_Joe_Lab1.doc). Lab assignments count for 35% of the total final grade.

Written Assignments:
Each week there will be questions posted on Blackboard referring to the readings, web-based research, and GISc lab exercises for that week which will require responses from each student that must be uploaded to Blackboard by the due date and time. Responses are to be thorough,

succinct, and answer the question as completely as possible. Written assignments count for 35% of the total final grade.

Final Exam:
The Final Exam consists of essay questions taken directly from the Weekly Written Assignments. Therefore it is a good idea to formulate responses to ALL the Weekly Assignment questions, even though you only will need to write and submit on Blackboard only one response per week.

Student Preparation:
NOTE: Students in GEP 610/PHE 717/EES 79903 have varying levels of GIS skills and background knowledge. To ensure as far as possible that everyone is "on the same page," and to minimize the effort required to understand the topics of spatial analysis, simulation, and modeling to be covered in this course, students are urged to review the following material, especially as necessary to supplement any known or potential area of deficiency.
All students will be expected to have a grasp of the rudiments of map composition and graph design, a familiarity with general GIS theory, a reasonable understanding of basic statistics, and a working knowledge of ArcGIS software and Windows operating system.
For general information on thematic mapping, map composition, and chart design, review ***Cartography: Thematic Map Design***, by Borden Dent, (latest edition), McGraw Hill, New York, NY. See especially Chapters 13, 14, 15 and 18, regarding map composition, use of color, typeface selection, and graphing, and Chapters 4, 5, and 7, regarding thematic mapping. Chapter 6 is an excellent overview of GIS. This

book is available on reserve at the Lehman Library. Another good one on the topic is *Cartography: Visualization of Spatial Data*, by M.J. Kraak and F.J. Orneling, Pearson Education Ltd. Harlow, UK.
For an accessible and clear review of geostatistics, peruse ***An Introduction to Applied Geostatistics***, by
Edward Isaaks and R. M. Srivastava, 1989, Oxford University Press, Oxford, UK Concentrate on Chapters
1 through 4 on descriptive statistics. On reserve at Lehman Library. **Recommended GIS Workbook***:*
Mastering ArcGIS, 2005, McGraw-Hill, NY, NY
For an introduction to GIS theory and concepts, consult ***Geographical Information Systems and Computer Cartography,*** by Christopher Jones, 1997, Addison Wesley Longman, Ltd, Essex, UK; OR ***An Introduction to Geographical Information Systems***, by Ian Heywod, Sarah Cornelius, and Steve Carver, Prentice Hall/Addison Wesley Longman, Ltd., OR ***GIS for the Urban Environment***, by Juliana Maantay and John Ziegler, 2006, ESRI Press, Inc. (on reserve at Lehman Library.)

GISc Lab Etiquette:
The GISc Lab is available ONLY to students enrolled in GISc courses (and other EGGS Dept. courses at Lehman College and EES courses through the Graduate Center). Please be considerate of others when working in the lab. There is no eating or drinking allowed in the lab at any time, and no cell phone use, either. Please be respectful of other students trying to concentrate, and keep idle chatter to a minimum. When you arrive at the lab, sign in on the

sign-in sheet. This is very important in order to demonstrate that students are actually using the lab. Do not save your work to the desktop or hard drive of the computer: it will not be saved after you shut down the computer. Save your work (often!) to a flash drive or external hard drive which you should bring to class every time. At the end of your lab session, please shut down your computer and clean up your workstation area.
The lab is open every weekday and several evenings, (the lab schedule will be posted by the second week of the term) and the GISc Lab manager and GISc lab tutor will be available during some of those hours to help you, if you get stuck. They are NOT to be considered a substitute for learning the software and methods on your own, however, so you must still try to figure things out and not become overly reliant on others for help. And although collaborative work with your classmates is encouraged as a good way to accelerate the learning process and reinforce concepts, we expect individual work products for lab exercises and written assignments.

Course Policies:
Lateness and absences: Lateness or absence will count against your class participation grade unless there is an emergency or it is cleared with the professor in a timely fashion *before* class. If you miss a session, it is your responsibility to check with your classmates for notes and other course materials. Late submission of assignments or exams: Late assignments/exams will generally not be accepted unless it is cleared with the professor *well before the due date*. Under special circumstances, unexcused late assignments may be accepted (at the professor's discretion) but one full letter grade will be subtracted. If there is a medical reason for lateness, please supply documentation.
Blackboard: Blackboard will be used to distribute and update assignments, readings, and other course materials. It is the student's responsibility to check it regularly.
Cell phone use: The use of cell phones and other similar devices are not permitted during in-class seminar sessions.
Computers: Since the in-class seminars and the lab assignment work take place in a computer lab, the following additional rules apply: Monitors must be turned off during discussion seminars; No drinking or eating of any kind in the lab; No printing of any materials without permission from the instructor or the lab manager;
Incompletes: A grade of incomplete will **only** be considered if you are clearly making a good faith effort to complete the course (i.e., completing assignments regularly, participating in seminar discussions) and have a good reason for not completing the work (e.g. medical or family emergency). Lack of time- management skills is not a valid reason to be granted an incomplete. Incompletes must be arranged with the instructor IN ADVANCE of the end of the term, and must be completed by the required date, in accordance with College policy on completing coursework - within the following term for undergrads, and within one year for graduate students. Note that there are specific deadlines for the completion of incomplete grades (NOT merely the end of the next term or year), and you must check the Academic Calendar to find out which apply.
Dropping: The last day to drop the course with the grade of "WD" is February 17th (25% refund); Last day to drop a course with a "W" grade is April 16th (official withdrawal).

Academic dishonesty: Academic dishonesty will not be tolerated. Academic dishonesty includes, but is not limited to, cheating, plagiarizing (including "cutting and pasting" or

paraphrasing information from the internet without proper citation), fabricating information or citations, facilitating acts of academic dishonesty by others, submitting work of another person or papers written for other courses, or tampering with the academic work of other students. Students may be asked to submit their notes and references to prove that their work is their own. For further clarification, please read CUNY's policy on academic integrity at http://www.lehman.edu/provost/documents/academic-integrity.pdf. Violators will be reported to the head of the Department and to the Dean of Student Affairs.

Accommodation for Students with Disabilities:
Lehman College is committed to providing access to all programs and curricula to all students. Students with disabilities who may need classroom accommodations are encouraged to register with the Office of Student Disability Services. For more information, please contact the Office of Student Disability Services, Shuster Hall, Room 238, tel #: 718-960-8441.

The Academic Center for Excellence (ACE) and the Science Learning Center (SLC):
Lehman College has two tutoring centers on campus. The ACE provides appointment-based and drop-in tutoring in the humanities, social sciences and writing, as well as general writing skills. The SLC provides drop-in tutoring for natural and computer science courses. To obtain more information about the ACE and SLC, please visit their website at http://www.lehman.edu/issp, or please call the ACE at 718-960-8175, and the SLC at 718-960-7707.

SCHEDULE

*****In-Class Meeting, 4:00 – 6:00 PM, Friday, January 29th*****

Weekly Class Topics/Readings/Lab Exercises:

1. **History of health geography and the context of urban health – Part 1**

Readings:

- Shaw, Dorling, Mitchell, 2001. *Health, Place, and Society,* Chapter 1, Introduction; and Chapter 2, Health, Place and Society: An Historical Perspective, pp. 1-40.
- Koch, T., 2005. *Cartographies of Disease: Maps, Mapping, and Medicine*, Chapter 1, Mapping and Mapmaking, pp. 1-13.
- Hofrichter, R., ed., 2003. *Health and Social Justice,* Chapter 20, (Geronimus, A.) Addressing Structural Influences on the Health of Urban Populations, pp. 542-556.

Lab Assignment: No Lab

Week 1 Written Assignment Responses due 3:00 PM, Tuesday, February 2nd, and Reaction Comments due 3:00 PM, Wednesday, February 3rd

2. **History of health geography and the context of urban health – Part 2**

Readings:

- Koch, T., 2005. *Cartographies of Disease: Maps, Mapping, and Medicine*, Chapter 2, Medical Mapping: Early Histories; Chapter 3, Mapping and Statistics, 1830-1849; and Chapter 4, John Snow: The London Epidemics, pp. 15-103.
- Gatrell and Elliott, 2009. *Geographies of Health,* Chapter 1, Introducing Geographies of Health, pp. 3-22.

Lab Assignment A: A re-examination of John Snow's cholera map - NOW with MAUP!

Week 2 Written Assignment Responses due 3:00 PM, Tuesday, February 9th, and Reaction Comments due 3:00 PM, Wednesday, February 10th. Lab Assignment A due 3:00 PM Wednesday, February 10th

3. **Exploring and measuring urban exposures/methods – Part 1: Proximity and containment**

Readings:

- Shaw, Dorling, and Mitchell, 2001. *Health, Place, and Society*, Chapter 3, Mapping and Measuring, pp. 41-85.
- Maantay, J.A., 2002. Mapping Environmental Injustices: Pitfalls and Potential of Geographic Information Systems in Assessing Environmental Health and Equity, *Environmental Health Perspectives*, 110 (S2): 161-171.
- Maheswaran and Craglia, 2004. *GIS in Public Health Practice*, Chapter 7, Using GIS for Environmental Exposure Assessment: Experience from the Small Area Health Statistics Unit, pp. 109-124.
- Chakraborty, J., and Maantay, J.A., 2011. Proximity Analysis for Exposure Assessment in Environmental Health Justice Research, in Maantay and McLafferty, eds., *Geospatial Analysis of Environmental Health,* Chapter 5, pp. 111-138.

Lab Assignment B: Analyzing Exposure using Multiple Ring Buffers and Relative Risk

Week 3 Written Assignment Responses due 3:00 PM, Tuesday, February 16th, and Reaction Comments due 3:00 PM, Wednesday, February 17th. Lab Assignment B due 3:00 PM, Wednesday, February 17th

4. Exploring and measuring urban exposures/methods – Part 2: Exploratory Spatial Data Analysis –
interpolation methods and land use regression modeling

Readings:

- Gatrell and Elliott, 2009. *Geographies of Health*, Chapter 3, Method and Technique in the Geography of Health, pp. 49-84.
- Maroko, A., Maantay, J.A., and Grady, K., 2011. Using Geovisualization and Geospatial Analysis to Explore Respiratory Disease and Environmental Health Justice in New York City, Chapter 2 in Maantay, J.A. and McLafferty, S. 2011. *Geospatial Analysis of Environmental Health,* pp. 39-66.
- Maheswaran and Craglia, 2004. *GIS in Public Health Practice*, Chapter 8, Using Modeled Outdoor Air Pollution Data for Health Surveillance, pp. 125-149.
- Setton, E., et al., 2011. Outdoor Air Pollution and Health – A Review of the Contributions of Geotechnologies to Exposure Assessment, in Maantay and McLafferty, eds., *Geospatial Analysis of Environmental Health,* Chapter 3, pp. 67-91.

Lab Assignment C: Exploring Exposure and Environmental Justice using Interpolation

Week 4 Written Assignment Responses due 3:00 PM, Tuesday, February 23rd, and Reaction Comments due 3:00 PM, Wednesday, February 24th (No Lab Assignment due)

*****In-Class Meeting, 4:00 – 6:00 PM, Friday, February 26th*****

5. Issues of Equity: Environmental Justice and Health Disparities

Readings:

- Shaw, Dorling and Mitchell, 2001. *Health, Place, and Society,* Chapter 5, Health Inequalities: Composition or Context? pp. 126-154.
- Gatrell and Elliott, 2009. *Geographies of Health,* Chapter 4, Inequalities in Health Outcomes, pp. 87-123.
- Pastor, M., Sadd, J., Morello-Frosch, R., 2007. *Still Toxic After All These Years: Air Quality and Environmental Justice in the San Francisco Bay Area*. Center for Justice, Tolerance, and Community, University of California, Santa Cruz. 16 pages
- Grady, S., 2011. Housing Quality and Racial Disparities in Low Birth Weight: A GIS Assessment.
  Chapter 15 in Maantay and McLafferty, eds. *Geospatial Analysis of Environmental Health,* pp. 303-318.

Lab Assignment: Lab C Continues - Exploring Exposure and Environmental Justice using Interpolation

Week 5 Written Assignment Responses due 3:00 PM, Tuesday, March 1st, and Reaction Comments due 3:00 PM, Wednesday, March 2nd. Lab Assignment C due 3:00 PM, Wednesday, March 2nd.

6. Social and spatial patterning of health

Readings:

- Shaw, Dorling and Mitchell, 2001. *Health, Place, and Society,* Chapter 4, The Social and Spatial Patterning of Health, pp. 86-123; Chapter 6, Health and Social/Spatial Mobility, pp. 156-181.
- Angeles, G., et al., 2009. The 2005 census and mapping of slums in Bangladesh: design, select results and application. *International Journal of Health Geographics*, 8(32): 1-19.
- Bedi, T., Coudouel, A., Simler, K., eds., 2007. *More Than a Pretty Picture: Using Poverty Maps to Design Better Policies and Interventions,* The World Bank. **[NOTE: read Chapter 1, pages 3-22, and skim some of the country examples, pages 53-286 for the maps and graphic visualizations of data.]**
- Levy, J., et al., 2006. Incorporating concepts of inequality and inequity into health benefits analysis. *International Journal for Equity in Health*, 5(2): 1-19.

Lab Assignment D: GINI Index and Low Birth Weight: Comparing Regional Differences in Health Outcomes

Week 6 Written Assignment Responses due 3:00 PM, Tuesday, March 8th, and Reaction Comments due 3:00 PM, Wednesday, March 9th. Lab Assignment D due 3:00 PM, Wednesday, March 9th

7. **Accessibility to the Benefits of the Urban Environment**

Readings:

- Oliver, L., Schuurman, N., and Hall, A.W., 2007. Comparing circular and network buffers to examine the influence of land use on walking for leisure and errands. *International Journal of Health Geographics,* 6(41): 1-11.
- Miyake, K., Maroko, A., Grady. K., Maantay, J., Arno, P., 2010. Not just a Walk in the Park:
  Methodological Improvements for Determining Environmental Justice Implications of Park Access in New York City for the Promotion of Physical Activity. *Cities and the Environment*, 3(1): Article 8 (17 pages).
- Weiss, R., Maantay, J.A., Fahs, M., 2010. Promoting Active Urban Aging: A Measurement
  Approach to Neighborhood Walkability for Older Adults. *Cities and the Environment*, 3(1):Article 12 (17 pages).
- Rundle, A., Neckerman, K., Lance Freeman, Lovasi, G., Purciel, M., Quinn, J., et al., 2008.
  Neighborhood Food Environment and Walkability Predict Obesity in New York City. *Environmental Health Perspectives,* 117(3): 442-447.

Lab Assignment E: The Relationship between Health and Accessibility to Urban Parks using Network Analysis

Week 7 Written Assignment Responses due 3:00 PM, Tuesday, March 15th, and Reaction Comments due 3:00 PM, Wednesday, March 16th. Lab Assignment E due 3:00 PM, Wednesday, March 16th.

8. **The Influence of Residential Segregation: Using Indices of Segregation**

Readings:

- Laveist, T.A., Gaskin, D., and Trujillo, A.J., 2011. *The Effects of Racial Segregation on Health*
  Inequalities. Joint Center for Political and Economic Studies, 40 pages.
- Massey, D., and Denton, N., 1988. The Dimensions of Residential Segregation. *Social Forces,* 67 (2): 281-315.
- Wong, D., 2005. Formulating a General Spatial Segregation Measure. *The Professional*
  Geographer, 57(2): 285-294.

- Johnston, R., et al., 2009. Research Note – Measuring Ethnic Residential Segregation: Putting Some More Geography In. *Urban Geography*, 30(1): 91–109.

Lab Assignment F: Inter-Urban Comparison using Segregation Indices

Week 8 Written Assignment Responses due 3:00 PM, Tuesday, March 22nd, and Reaction Comments due 3:00 PM, Wednesday, March 23rd (No Lab Assignment Due)

Association of American Geographers (AAG) / International Society of Urban Health (ISUH) Meeting March 29th – April 4th, 2016

9. **Physical and Social Vulnerabilities**

Readings:

- Maantay, J.A., Maroko, A.R., and Culp, G., 2010. Using Geographic Information Science to Estimate Vulnerable Urban Populations for Flood Hazard and Risk Assessment in New York City, in Showalter, P., and Lu, Y. eds., *Geotechnical Contributions to Urban Hazard and Disaster Analysis,* Chapter 5, pp. 71-97, Springer-Verlag.
- Gatrell and Elliott, 2009. *Geographies of Health,* Chapter 9, Health Impacts of Global Environmental Change, pp. 218-35.
- Freudenberg, N., Saegert, S., and Klitzman, S., eds., *Urban Health and Society: Interdisciplinary Approaches to Research and Practice*, Chapter 9, How Vulnerabilities and Capacities Shape Population Health after Disasters, pp. 217-237.
- Maantay, J.A., and Becker, S., 2012. The Health Impacts of Global Climate Change: A Geographic Perspective. *Applied Geography*, 33: 1-3.
- Pearce et al, 2010. Environmental Justice and Health: The Implications of the Socio-Spatial Distribution of Multiple Environmental Deprivation for Health Inequalities in the United Kingdom. *Transactions of the Institute of British Geographers* 35:522-539.
- Tate, E. (2012). Social Vulnerability Indices: A Comparative Assessment Using Uncertainty and Sensitivity Analysis. *Natural Hazards* 63, pp. 325-347.

Lab Assignment: Lab F continues - Inter-Urban Comparison using Segregation Indices

Week 9 Written Assignment Responses due 3:00 PM, Tuesday, April 5th, and Reaction Comments due 3:00 PM, Wednesday, April 6th. Lab Assignment F due 3:00 PM, Wednesday, April 6th.

*****In-Class Meeting 4:00 – 6:00 PM, Friday, April 8th*****

10. **Social and environmental stressors and disease outcomes**

Readings:

- Maantay, 2013. The Collapse of Place: Derelict Land, Deprivation, and Health Inequality in Glasgow, Scotland. *Cities and the Environment*, 6(1):Article 10 – 54 pages.
- Maroko, A.R., Riley, R., et al, 2013. Direct observation of neighborhood stressors and environmental justice in the South Bronx, New York City. *Population and Environment*. (20 pages)
- Ellaway, A., Morris, G., Curtice, J., Robertson, C., Allardice, G., and Robertson, R., 2009. Associations between health and different types of environmental incivility: A Scotland-wide study. *Public Health, 123:* 708–713.
- Downey, L., and Van Willigen, M., 2005. Environmental Stressors: The Mental Health Impacts of Living Near Industrial Activity. *Journal of Health and Social Behavior*, 46(3): 289–305.

Lab Assignment G: Geographically Weighted Regression (GWR) Analysis: Effect of Vacant Land and Deprivation on Mental Health

Week 10 Written Assignment Responses due 3:00 PM, Tuesday, April 12th, and Reaction Comments due 3:00 PM, Wednesday, April 13th (No Lab Assignment Due)

11. **Urban planning and health – "Designing Healthy Communities"**

Readings:

- Maantay, 2004. Industrial Zoning Changes in New York City: A Case Study of "Expulsive Zoning,"*MIT Projections,* pp. 63-108.
- Lauri Andress, 2009. *Healthy Urban Planning: The Concept, Tools, and Application,* pp. 1-48.
- Barton, et al, 2003, *Healthy Urban Planning in Practice: Experience of European Cities,* World Health Organization.
- De Zeeuw, H., 2004. *The Development of Urban Agriculture*. Keynote paper for the International Conference "Urban Agriculture, Agro-Tourism, and City Region Development," Beijing, October 10-14, 2004.
- Ottmann, M., Maantay, J. A., Grady, K., and Fonte, N., 2012. Characterization of Urban Agricultural Practices and Gardeners' Perceptions in Bronx Community Gardens, New York City. *Cities and the Environment,* 5(1): Article 13. (25 pages)

Lab Assignment: Lab G continues - Geographically Weighted Regression (GWR) Analysis: Effect of Vacant Land and Deprivation on Mental Health.

Week 11 Written Assignment Responses due 3:00 PM, Tuesday, April 19th, and Reaction Comments due 3:00 PM, Wednesday, April 20th. Lab Assignment G due 3:00 PM, Wednesday, April 20th

SPRING BREAK, APRIL 22nd – April 30th

12. **Spread of Disease** - **Part 1: Spatial Diffusion, Clustering, and Spatio-temporal Analysis**
Readings:
    - Koch, T., 2005. *Cartographies of Disease,* Chapter 10, Complex Processes: Diffusion and Structure, pp. 240-282.
    - McLafferty and Cromely, 2002. *GIS and Public Health.* Chapter 5, Analyzing Spatial Clustering of Health Events, pp. 130-157; and Chapter 7, Analyzing the Risk and Spread of Infectious Diseases, pp. 188-209.
    - Pathak, E.B., Reader, S., Tanner, J.-P., and Casper, M.L., 2011. Spatial clustering of non- transported cardiac decedents: the results of a point pattern analysis and an inquiry into social environmental correlates. *International Journal of Health Geographics*, 10(46): 1-11.
    - Carlos, H., et al., 2010. Density estimation and adaptive bandwidths: A primer for public health practitioners. *International Journal of Health Geographics,* 9(39): 1-8.
    - Chaikaew, N., et al. 2009. Exploring spatial patterns and hotspots of diarrhea in Chiang Mai, Thailand. *International Journal of Health Geographics,* 8(36): 1-10.

    Lab Assignment H: Exploring the Spatial Variation of Noise Complaints using Cluster Analysis and Kernel Density Estimation.

    Week 12 Written Assignment Responses due 3:00 PM, Tuesday, May 3rd, and Reaction Comments due 3:00 PM, Wednesday, May 4th (No Lab Due)

13. **Spread of Disease - Part 2: Spatial Diffusion, Clustering, and Spatio-temporal Analysis**
Readings:
    - Koch, T., 2005. *Cartographies of Disease,* Chapter 11, GIS and Medical Mapping, pp. 253-326.
    - Gatrell and Loytonen, 1998. *GIS and Health*, Chapter 7, GIS, Time Geography, and Health, pp. 97-110.
    - Qi, F., and Du, F., 2013. Tracking and visualization of space-time activities for a micro-scale flu transmission study. *International Journal of Health Geographics*, 12:6, pp. 1-16.
    - Duczmal L.H., et al. 2011. Voronoi distance based prospective space-time scans for point data sets: a dengue fever cluster analysis in a southeast Brazilian town. *International Journal of Health Geographics,* 10:29 pp. 1-14.
    - Corner, R., et al., 2013. Modelling typhoid risk in Dhaka Metropolitan Area of Bangladesh: the role of socio-economic and environmental factors. *International Journal of Health Geographics*, 12:13, pp. 1-15.

    Lab Assignment: Lab H continues - Exploring the Spatial Variation of Noise Complaints using Cluster Analysis and Kernel Density Estimation.

Week 13 Written Assignment Responses due 3:00 PM, Tuesday, May 10th, and Reaction Comments due 3:00 PM, Wednesday, May 11th Lab Assignment H due 3:00 PM Wednesday, May 11th

*****In-Class Meeting, 4:00 – 6:00 PM, Friday, May 13th*****

14. Analyzing Historical Health Data

Readings:

- Shaw, Dorling, Mitchell, 2001. *Health, Place, and Society,* Chapter 7, Putting Research into Context: From Cholera to Good Health for All, pp. 182-208.
- Kuo, C.-L., and Fukui, H., 2007. Geographical structures and the cholera epidemic in modern Japan: Fukushima prefecture in 1882 and 1895. *International Journal of Health Geographics*, 6:25, pp. 1-10.
- Curtis, A., 2008. Three-dimensional visualization of cultural clusters in the 1878 yellow fever epidemic of New Orleans. *International Journal of Health Geographics*, 7:47, pp. 1-10.
- Séguy, I., et al., 2012. A geographic information system for the study of past epidemics: The 1705 epidemic in Martigues (Bouches-du-Rhône, France), "Historical Studies on Mortality," special issue, Canadian Studies in Population, 39(3–4): 107–122.
- Chandra. S., et al., 2013. A geographic analysis of population density thresholds in the influenza pandemic of 1918– 19. *International Journal of Health Geographics*, 12:9, pp. 1-10.

Lab Assignment: No Lab

Week 14 Written Assignment Responses due 3:00 PM, Tuesday, May 17th, and Reaction Comments due 3:00 PM, Wednesday, May 18th (No Lab Due)

15. Final Exam *(take-home exam, during Final Exam Week)* ***Due Wednesday, May 25th by 3:00PM***

Geographic Information Science Specialization Competencies	Course Learning Objectives	Assessment Methods
This course will help you achieve increased competency in geographic information science. By the time you graduate, you should be able to:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be assessed as part of the following course assignments:
Synthesize theories, methods, and practice of public health GISc	- Review and evaluate peer-review articles concerning GISc and urban health.	All written assignments and lab assignments
3. Interpret and analyze cartographic information	- Perform geographically weighted regression, index creation, and other intermediate and advanced GISc functions to analyze urban health data. - Create and interpret cartographic products using intermediate and advanced GIS methods for urban health	All written assignments and lab assignments
Analyze geographic health data in terms of spatial distribution and associations with other variables	- Create and interpret cartographic products using intermediate and advanced GIS methods for urban health - Perform geographically weighted regression, index creation, and other intermediate and advanced GISc functions to analyze urban health data.	Lab assignments A, B, C, D, E, G, and H
Identify, estimate, and analyze environmental exposures and evaluate their impacts on public health and social inequality	- Perform geographically weighted regression, index creation, and other intermediate and advanced GISc functions to analyze urban health data. - Create and interpret cartographic products using intermediate and advanced GIS methods for urban health	Written assignments for weeks 1, 2, 3, 4, 5, 7, 9, and 10 Lab assignments A, B, C, E, and G
Effectively communicate geographic health information through oral, written and visual presentations	- Create and interpret cartographic products using intermediate and advanced GIS methods for urban health	All written assignments and lab assignments

GISc SPECIALIZATION

CUNY SCHOOL OF PUBLIC HEALTH

PHE 718
Geostatistics & Spatial Analytical Concepts
(3.0 credits, 4.0 hours)
Spring 2016

Catalogue description	Emerging fields of geospatial statistics, applying quantitative techniques to real-world geographic problems. Concepts and application of exploratory spatial data analysis (ESDA), traditional statistics and geospatial statistics within various software packages, including GeoDa, ArcGIS, [R], and Excel.
Course meets	Wednesday 6:00 – 9:30 PM
Instructor	Glen Johnson, PhD, MS, MA
Email	glen.johnson@lehman.cuny.edu (best mode of communication)
Office **Office hours**	322 Gillet Hall, Lehman College Wednesdays from 3:30-5:00 PM and Thursdays from 11:30-1:00 PM or by appointment (email)
Course Format:	This course includes lectures, discussions, computer labs, readings, assignments, quizzes and final exam.
Required books	Geospatial Analysis, 5th Edition. de Smith, Goodchild, Longley (2015). Available for free on-line access at http://www.spatialanalysisonline.com/HTML/index.html Additional readings will be provided via blackboard and other internet web sites.

Assessment

Grading Policy:
Grades will not be curved, there will be no extra credit and no grades will be dropped.

Components of Final Grade:	
5%	class participation
50%	Assignments
30%	Term Project
5%	Mid-Term Quiz
10%	Final Exam
100%	

Class Participation:
Class participation includes engagement in discussions and answering of questions during lecture. Lateness and absence will count against this part of the grade.

Assignments:
Assignments, which account for 50% of the final grade, consist of in-class and take-home work. They include data compilation and analysis using various software, plus interpretation of results. Assignments will be submitted by their respective due dates as brief write-ups with appropriate tables, maps and other graphics as needed.

All assignments must be emailed *before* the scheduled class time on the due date to receive credit. Written assignments must be saved in either PDF format or as a WORD document (.DOC or .DOCX), having 1" margins, 1.5" spacing, 12 point fonts, and be saved as ***LastName_FirstName_AssignmentName*** (e.g. Smith_Joe_Assignment1.doc). The email containing the file should be titled with the course number followed by the student name and assignment name (e.g. **GEP630, Joe Smith, Assignment 1**).

Testing:
A midterm quiz, worth 5% of the final grade, will be done as an open-book, online exercise.
A comprehensive final exam, worth 10% of the final grade, will be taken in-class during final exam week.

Term Project:
The term project counts towards 30% of the final grade. While students are encouraged to work together to help one another, each student is required to present an independent project to the class towards the end of the semester, following a similar format as a conference presentation. All students must also submit their presentation electronically, such as a power point or pdf file. The presentation and supporting documentation must follow the structure of 1) Introduction, 2) Methods, 3) Results, 4) Conclusions 5) Cited references and acknowledgements. Each project will be graded according to the rubric outlined below, for a total of 12 points (12/12 = full grade).

	Beginning 1	Developing 2	Accomplished 3	Exemplary 4
Maps and other Graphics	incomplete or are not relevant to data presented	appropriate, but are lacking accuracy	appropriate for data; overall presentation is acceptable, but with minor errors	appropriate for the data, clearly presented and easy to interpret; with no errors
Statistics	Incomplete, incorrect or inappropriate statistics presented	Appropriate statistical methods, but incorrect results	Appropriate statistical methods and results, but with minor errors	Appropriate statistical methods and results, with no errors
Presentation and/or Report	Incomplete, unorganized, and difficult to follow	Communicates some important information, with major omissions; not organized well	Communicates important information, with acceptable organization	Communicates important information; well organized; clear scientific language used

Course policies

Lateness and absences: Lateness or absence will count against your class participation grade unless there is an emergency or it is cleared with the professor in a timely fashion *before* class. If you miss a session, it is your responsibility to check blackboard and with your classmates for notes and other course materials.

Late submission of assignments or exams: Late assignments/exams will generally not be accepted unless it is cleared with the professor *well before the due date*. Under special circumstances, unexcused late assignments may be accepted (at the professor's discretion) but one full letter grade will be subtracted. If there is a medical reason for lateness, please supply documentation.

Blackboard: Blackboard will be used for announcements and to distribute assignments, readings, and other course materials. It is the student's responsibility to check it regularly.

Use of Personal Communication Devices: The use of cell phones and other portable communication devices are not permitted during class.

Computers: Room 322 Gillet Hall is a computer lab where the following rules apply:

- During lectures, computers can only be used for following the presentation on power point or for taking notes. Non-class uses, such as checking personal email and personal web browsing, will reduce the "class participation" component of your final grade (the instructor will know!).
- No drinking or eating of any kind in the lab.
- **NO PRINTING OF ANY MATERIALS WITHOUT PERMISSION FROM THE INSTRUCTOR OR THE LAB MANAGER!**

Syllabus Modification: The instructor may modify the syllabus and study plan.

Institutional policies

Incompletes: A grade of incomplete will **only** be considered if you are clearly making a good faith effort to complete the course (i.e., attending regularly, participating in discussions) and have a good reason for not completing the work.

Dropping: the last day to drop the course with the grade of "W" is April 16 (no refund)

Academic dishonesty: Academic dishonesty will not be tolerated. Academic dishonesty includes, but is not limited to, cheating, plagiarizing (including "cutting and pasting" or paraphrasing information from the internet without proper citation), fabricating information or citations, facilitating acts of academic dishonesty by others, submitting work of another person or papers written for other courses, or tampering with the academic work of other students. Students may be asked to submit their notes and references to prove that their work is their own. For further clarification, please read CUNY's policy on academic integrity at http://www.lehman.edu/lehman/about/policies_pdf/CUNYAcademicIntegrityPolicy.pdf. Violators will be reported to the head of the Department and to the Dean of Student Affairs.

Accommodation for Students with Disabilities:
Lehman College is committed to providing access to all programs and curricula to all students. Students with disabilities who may need classroom accommodations are encouraged to register with the Office of Student Disability Services. For more information, please contact the Office of Student Disability Services, Shuster Hall, Room 238, tel #: 718-960-8441.

The Academic Center for Excellence (ACE) and the Science Learning Center (SLC):
Lehman College has two tutoring centers on campus. The ACE provides appointment-based and drop-in tutoring in the humanities, social sciences and writing, as well as general writing skills. The SLC provides drop-in tutoring for natural and computer science courses. To obtain more information about the ACE and SLC, please visit their website at http://www.lehman.edu/issp, or call the ACE at 718-960-8175, and the SLC at 718-960-7707.

Important Dates

Feb 4= Last day to drop with 75% tuition refund; **Feb 11**= Last day to drop with 50% tuition refund; **Feb 18** = Last day to drop with 25% tuition refund and last day to drop without the grade of "W"; **April 11** = Last day to withdraw with grade of "W" (no refund)

Schedule:
-Readings are to be done *before* the class for which they are assigned (e.g. the readings for session 3 should be done in advance of session 3, etc.). "GA" refers to "Geospatial Analysis, 5th Edition. de Smith, Goodchild, Longley. (available at http://www.spatialanalysisonline.com/HTML/index.html)
-Assignments are due on the dates that they are posted in the schedule below.
-The schedule, readings, and assignments are *subject to change* by the instructor.

Session	**Date**	**Topic**	**Readings**	**Assignments** (due date)
1	2/3	- Introduction to topic and software - Review of basic statistical concepts		Download / install / familiarize with GeoDa and SatScan
2	2/10	Data quality considerations and Introduction to spatial smoothing methods	GA, Chaps. 1,2,3, 5.1, 5.2, 5.5; Boscoe and Pickle, 2003; Rushton, 2003	Lab 1: ESDA and basic smoothing of thematic maps (due 2/17)
3	2/17	Cluster Detection 1: Point Pattern Analysis	GA, Chaps. 5.4	Lab 2: Point Pattern Analysis (due 2/24)
4	2/24	Cluster Detection 2: Spatial Lattice Patterns	SatScan manual; GA, Chap. 5.2.6;	Lab 3, part 1: Lattice Cluster Analysis (due 3/2)
5	3/2	Cluster Detection 3: Spatio-temporal Patterns	SatScan manual; Kulldorf et al 2005 Recuenco et al 2007	Lab 3, part 2: Lattice Cluster Analysis (due 3/9)
6	3/9	Geostatistcs 1: Variograms	GA, Chap 6.6.1; 6.7.1	Lab 4, part 1: Geostatistics (due 3/16)
7	3/16	Geostatistcs 2: Kriging **Mid-term quiz**	GA, Chap 6.7.2	Lab 4, part 2: Geostatistics (due 3/23)
8	3/23	Measuring Spatial Associations 1: Ordinary Least Squares and Geographically Weighted Regression	GA, Chap 5.6.1; 5.6.2; 5.6.3	Lab 5, part 1: Spatial Regression (due 4/6)
	3/30	**NO CLASS**		
9	4/6	Measuring Spatial Associations 2: Spatial Regression	GA, Chap 5.6.4; Johnson and Lu 2011 Johnson 2004 (optional)	Lab 5, part 2: Spatial Regression (due 4/13)
10	4/13	Measuring Spatial Associations 3: Cluster Detection Revisited (with covariates)		Lab 6: Covariate-adjusted Cluster Detection (due 4/20)
11	4/20	Review		
	4/27	**SPRING BREAK**		
12	5/4	in-class work on term projects and student presentations		
13	5/11	Term Project student presentations		
14	5/18	Term Project student presentations		
15	5/25	**Final Exam**		

Geographic Information Science Specialization Competencies	Course Learning Objectives	Assessment Methods
This course will help you achieve increased competency in geographic information science. By the time you graduate, you should be able to:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be assessed as part of the following course assignments:
Synthesize theories, methods, and practice of public health GISc	Know when and how to apply quantitative geospatial analysis for helping to solve the information needs that arise from real-world challenges, particularly from environmental and public health issues.	Assignments and Term Project
Interpret and analyze cartographic information	Understand the limitations of geospatial analysis, especially the potential for different, conflicting, messages that depend on choice of mapping and analysis parameters	Assignments, Mid-term quiz, Term Project and Final Exam
Analyze geographic health data in terms of spatial distribution and associations with other variables	Identify and apply appropriate statistical methods to accompany maps and other graphical presentations of data in order to objectively determine the significance of geospatial and spatiotemporal patterns and associations	Assignments, Mid-term quiz, Term Project and Final Exam
Create professional maps to present public health information and data in ways that are appropriate to the audience	Clearly present geospatial patterns of quantitative measurements through thematic and other types of symbolic mapping, using appropriate cartographic techniques	Assignments and Term Project
Effectively communicate public health information through oral, written and visual presentations.	Present geospatial analyses through a written paper and/or an oral presentation that clearly and concisely expresses a problem, the methodology to address the problem, the analytical and graphical results, and finally to summarize and explain the meaning of results in plain language for a mixed audience.	Term Project

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS
PHE 770: Supervised Fieldwork in Public Health
3 Credits
Spring 2016

Time and location	Selected Wednesdays, 6-8:40pm Lehman College, location TBA
Instructor	Emma K. Tsui, PhD, MPH emma.tsui@lehman.cuny.edu (preferred mode of communication) 347-577-4038 Gillet Hall, Room 422D
Office hours	Wednesdays 4-5:45pm (walk-in) and other times by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available. Lehman's Academic Center for Excellence (ACE) provides appointment-based and drop-in tutoring and general writing and academic skills workshops. To obtain more information about the ACE, please visit http://www.lehman.edu/issp or call the ACE at 718-960-8175.
Course description	Students carry out 180 hours of supervised fieldwork that is intended to bridge academic preparation and public health practice. Knowledge and skills from the core MPH and specialization courses are applied in a public health agency, community organization or other setting relevant to the student's academic background, specialization and career expectations. This is accomplished under the supervision and guidance of an experienced preceptor. Field-based hours are implemented with classroom and individual meetings along with online communication.
Course prerequisites	For CBPHHE students: PHE 710 and PHE 715 For GIS students: PHE 705 and PHE 706
Course format	Hybrid with 5 in-person meetings
Required reading and resources	Any required readings and resources will be posted on Blackboard.
Suggested reading and resources	Any suggested readings and resources will be posted on Blackboard.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Apply the public health core functions of assessment, policy development and assurance	• Discuss the application of assessment, assurance and/or policy development during the fieldwork experience.	• In-class discussion • Reflection paper
2. Apply theories, concepts, models and methods to the design of public health research, policy and practice	• Demonstrate through self-reflection activities the application of one or more core public health values or techniques through the fieldwork experience.	• In-class discussion • Progress reports • Reflection paper
3. Adhere to ethical and social justice principles and standards	• Apply ethical principles to fieldwork placement (e.g., human subjects' protection principles to data collection). • Assess the degree to which the fieldwork placement agency adheres to ethical principles and standards.	• CITI completion report • Progress reports • Preceptor evaluation of internship form • Student evaluation of internship form
4. Communicate public health information through oral, written, digital and visual presentation	• Prepare written and oral progress and evaluation reports using appropriate professional formats.	• All course assignments

5. Design and evaluate interventions to prevent or control public health problems	• Participate, through the fieldwork experience in developing, carrying out or evaluating a public health program, remediation measure, or policy.	• Reflection paper • Deliverables
6. Engage and collaborate with diverse groups	• Identify different stakeholders and evaluate their roles in the fieldwork project.	• In-class discussion • Progress reports • Reflection paper
7. Apply a framework for the planning, implementation and evaluation of public health programs, policies and interventions	• Explain the difference between key planning constructs and demonstrate the ability to incorporate them in planning, implementing and evaluating the fieldwork project	• Logic models • Reflection paper

Course Assessments
Five aspects of your performance in the course will be assessed. These aspects are described in more detail in the rubric posted to our Blackboard site:

1. Quality of Writing & Communication (30%)
2. On-Time Submission of Assignments (10%)
3. Constructive Resolution of Problems (10%)
4. Participation (20%)
5. Quality of Work for the Site (30%)

I will assess these based on your work and performance in the class sessions and on the course's written assignments. The written assignments for the course are listed below. Forms and guidelines for all of these are available via our Blackboard site:

- Scope of Work (developed by student in consultation with preceptor and internship advisor)
- Letter of Confirmation
- CITI completion report
- 3 Progress Reports
- Internship Logic Models
- "Deliverable(s)" as identified in the Scope of Work
- Internship Reflection Paper
- Student Evaluation of Internship Experience Form
- Preceptor Midpoint & Final Evaluation of Internship Forms

Grading
Evaluation criteria

A rubric on our Blackboard site describes in detail how each of the aspects of performance will be assessed.

The relative weight of each course component is as follows:

Assessment	Weight
Quality of Writing & Communication	30%
On-Time Submission of Assignments	10%
Constructive Resolution of Problems	10%
Participation	20%
Quality of Work for the Site	30%
	100%

The grading system for the course follows guidance in the Graduate Bulletin:

Letter Grade	Quality Points	Percentage
A	4.0	93-100%
A-	3.7	90-92%
B+	3.3	87-89%
B	3.0	83-86%
B-	2.7	80-82%

C+	2.3	77-79%
C	2.0	73-76%
F, WU	0	<72%

Withdrawal

The grade of W (withdrawal without penalty) is assigned only when a graduate student *officially* withdraws from a course. Students must complete the withdrawal process themselves, since the procedure requires a signature. No faculty member or program adviser can withdraw a student from a course. When students withdraw without completing the withdrawal procedure, the grade of WU is assigned for the course. This grade counts as a failure in computing the cumulative Grade Point Average. Graduate students should refer to the Graduate Bulletin and academic calendar for more information.

Grade of incomplete

The grade of INC (incomplete coursework) is awarded only when the course requirement has not been completed for good and sufficient reasons and when there is a reasonable expectation that the student can successfully complete the requirements of the course. For an instructor to grant an INC, the student must have met the instructor's attendance requirements in the course and have a passing semester average. An INC grade that has not been made up will change to a FIN grade (failure to complete coursework), remains permanently on the record, and counts as an F in computing the Grade Point Average. Refer to the Graduate Bulletin for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Program Director in writing giving the factual reasons and basis for the complaint. A student who wishes to appeal a grade must initiate the process in the full semester following the one in which the contested grade was received. For further guidance, refer to the Graduate Bulletin.

Course Policies

Attendance and class participation

All members of the class are expected to actively participate in in-person class sessions and to complete assigned reading and other assigned activities prior to class. If you are going to be late or have to miss a class, please contact me via email as far in advance as possible. Points may be deducted for absences, tardiness, or leaving class early.

Late/incomplete submission of assignments

I expect that all assignments that are not to be completed in class will be submitted to me via email by 11:59pm on the assignment's due date. Assignments handed in after the due date without prior permission will have points deducted. If you anticipate the need to turn in work late, please contact me to negotiate a mutually acceptable submission plan in advance of the assignment's due date. Please do not ask for an extension on the due date of the assignment.

Make-ups, rewrites, and extra credit

There will be no make-ups or extra credit in this course. In the event that it is necessary, rewrites may be allowed.

Expectations of students

I expect the classroom to serve as a space of respect and collaborative learning and that the course assignments will help you to reflect on the skills and experiences you're acquiring at your internship site. To that end, I expect that:

- you will arrive on time and stay for the entire class
- you will not use cell phones during class, except during breaks
- you will visit our Blackboard site frequently, as that will be our primary way of communicating with one another outside of class. Class announcements and supplemental materials will be posted there frequently. Course announcements will also be sent out using the Lehman e-mail system. If you have any questions about your Lehman email address or your password, or if you have any problems accessing the site, please call the computer helpdesk at 718-960-1111.
- your writing for assignments will be of high quality, presented in a readable and consistent manner: double-spaced, typewritten, with one-inch margins all around, and proofread.

Expectations for the instructor

- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during in-class discussions
- Respond to student email within 24 hours Monday through Friday.
- Grading and feedback on assignments within 2 weeks of the due date.

Accessibility

Lehman College is committed to providing access to all programs and curricula to all students. Students with disabilities who may need classroom accommodations are encouraged to register with the Office of Student Disability Services. For more information, please contact the Office of Student Disability Services, Shuster Hall, Room 238, at 718-960-8441.

Academic integrity

The faculty and administration of Lehman College support an environment free from cheating and plagiarism. Each student is responsible for being aware of what constitutes cheating and plagiarism and for avoiding both. The complete text of the CUNY Policy on Academic Integrity and the Lehman College procedure for implementing the policy can be found in the Graduate Bulletin.

Course Schedule
Please note that the schedule and assignments listed below are subject to change. Additional readings and handouts may be provided, and session topics and activities may be altered if necessary. All readings that are not part of the required text will be available via Blackboard. For important dates (e.g., course drop and withdrawal), please refer to Lehman's graduate academic calendar: http://www.lehman.edu/registrar/calendars.php.

	Date	Topic	Readings & Assignments
1	February 3rd	**6-7pm: Introduction to the Internship Course** • Description of processes, sessions, and assignments • Discussing sites and scopes of work • Discussing internship ideas and progress **7-8pm: Individual Meetings**	Scope of Work discussions should be underway or concluded.
2	February 10th	No class—individual meetings as needed	Scope of Work should be ideally submitted to emma.tsui@lehman.cuny.edu.
3	February 17th	No class—individual meetings as needed	
4	February 24th	**6-7pm: Internship Lessons Learned from 3rd Year Students** **7-8pm: Internship Logic Modeling**	1st progress report due via email by 11:59pm on 2/23.
5	March 2nd	No class—individual meetings as needed	
6	March 9th	No class—individual meetings as needed	Internship logic models due via email by 11:59pm on 3/8.

7	March 16th	**6-7pm: Linking Internships to Public Health Practice** • Discussion of where PH core functions, values, and tools fit into your internship. • Understanding personal strengths and challenges **7-8pm: Workplace Ethics** • Discussion of key stakeholders and ethical issues in your internship.	
	March 23rd	No class—classes follow a Friday schedule	2nd progress report and preceptor midpoint evaluation due via email by 11:59pm on 3/22.
8	March 30th	No class—individual meetings as needed	
9	April 6th	No class—individual meetings as needed	
10	April 13th	No class—individual meetings as needed	
11	April 20th	**6-7:30pm: Leveraging your MPH experience professionally** **7:30-8:30pm: Improving presentation skills**	3rd progress report due via email by 11:59pm on 4/19.
	April 27th	No class—spring break	
12	May 4th	No class—individual meetings as needed	
13	May 11th	No class—individual meetings as needed	

14	May 18th	**770 Wrap-Up Session** • Discuss internship progress • Discuss final requirements: preceptor's evaluation of the student, reflection paper, and final self-evaluation. • Preparing for the capstone course • Lessons learned	
15	May 25th	No in-class final	Due by 11:59pm on 5/24: • Reflection paper • Internship deliverable(s) • Preceptor Final Evaluation • Student Evaluation of Internship Experience • CITI completion report

GISc SPECIALIZATION

CUNY SCHOOL OF PUBLIC HEALTH

Lehman College

PHE 791: Workshop in GISc Research for Public Health

Spring 2016

Catalogue description	An advanced examination of mapping and of new computer-aided technologies in the natural and social sciences, including research design and methodology and designing and conducting an independent GIS public health research project, conforming to generally acceptable professional geographical practices and techniques, under the supervision of faculty. Pre-req: PHE 706 or departmental permission
Course meets	Gillet Hall, Room 311; Class Meeting Times: See below; Class participants will meet at least four scheduled times as a class, on Friday evenings, 6:30-9:00 PM, so as not to interfere with other scheduled classes, and individual meetings, as needed.
Instructor	Andrew Maroko, PhD
Email	Andrew.maroko@lehman.cuny.edu – email is the best way to reach me
Phone	(718) 960-1830
Office	Gillet Hall, Room 323
Office hours	Wednesdays, 3:30-5:30pm, and by appointment
Required books	- "An Introduction to Scientific Research Methods in Geography," by D. Montello and P. Sutton, Sage Publications, 2006. (Available at Lehman College Bookstore) - "Research Design and Proposal Writing in Spatial Science," by J. Gatrell, G. Bierly, and R. Jensen, Springer Publications. (Available on Blackboard)
Recommended books	N/A
Reserve material	N/A
Other required materials	Access to a computer which is capable of running ArcGIS in a windows environment (software provided).

Assessment
Your understanding of the course material will be evaluated through written submissions of your interim deliverables including project proposal, study design, preliminary maps as well as final deliverables including an oral presentation, PowerPoint slides, academic poster, and written report.

Course policies
Grading

15%	Week 5 deliverables
15%	Week 9 deliverables
30%	Oral presentation/slides
40%	Written report and poster
100%	

Course Format:
This is a hybrid on-line course, meeting once per month for in-class discussions in a seminar format.

Grading Policy:
Grades will not be curved, there will be no extra credit, and no grades will be dropped.

Student Preparation:
NOTE: Students in PHE 791 may have varying levels of GIS skills and background knowledge. To ensure as far as possible that everyone is "on the same page" students are urged to review the following material, especially as necessary to supplement any known or potential area of deficiency.
All students will be expected to have a grasp of the rudiments of map composition and graph design, a familiarity with general GIS theory, a reasonable understanding of basic statistics, and a working knowledge of ArcGIS software and Windows operating system.
For general information on thematic mapping, map composition, and chart design, review ***Cartography: Thematic Map Design***, by Borden Dent, (latest edition), McGraw Hill, New York, NY. See especially Chapters 13, 14, 15 and 18, regarding map composition, use of color, typeface selection, and graphing, and Chapters 4, 5, and 7, regarding thematic mapping. Chapter 6 is an excellent overview of GIS. This book is available on reserve at the Lehman Library. Another good one on the topic is *Cartography: Visualization of Spatial Data*, by M.J. Kraak and F.J. Orneling, Pearson Education Ltd. Harlow, UK.
For an accessible and clear review of geostatistics, peruse ***An Introduction to Applied Geostatistics***, by
Edward Isaaks and R. M. Srivastava, 1989, Oxford University Press, Oxford, UK Concentrate on Chapters
1 through 4 on descriptive statistics. On reserve at Lehman Library. **Recommended GIS Workbook***:*
Mastering ArcGIS, 2005, McGraw-Hill, NY, NY

For an introduction to GIS theory and concepts, consult ***Geographical Information Systems and Computer Cartography,*** by Christopher Jones, 1997, Addison Wesley Longman, Ltd, Essex, UK; OR ***An Introduction to Geographical Information Systems***, by Ian Heywod, Sarah Cornelius, and Steve Carver, Prentice Hall/Addison Wesley Longman, Ltd., OR ***GIS for the Urban Environment***, by Juliana Maantay and John Ziegler, 2006, ESRI Press, Inc. (on reserve at Lehman Library.)

GISc Lab Etiquette:

The GISc Lab is available ONLY to students enrolled in GISc courses (and other EGGS Dept. courses at Lehman College and EES courses through the Graduate Center). Please be considerate of others when working in the lab. There is no eating or drinking allowed in the lab at any time, and no cell phone use, either. Please be respectful of other students trying to concentrate, and keep idle chatter to a minimum. When you arrive at the lab, sign in on the sign-in sheet. This is very important in order to demonstrate that students are actually using the lab. Do not save your work to the desktop or hard drive of the computer: it will not be saved after you shut down the computer. Save your work (often!) to a flash drive or external hard drive which you should bring to class every time. At the end of your lab session, please shut down your computer and clean up your workstation area.

The lab is open every weekday and several evenings, (the lab schedule will be posted by the second week of the term) and the GISc Lab manager and GISc lab tutor will be available during some of those hours to help you, if you get stuck. They are NOT to be considered a substitute for learning the software and methods on your own, however, so you must still try to figure things out and not become overly reliant on others for help. And although collaborative work with your classmates is encouraged as a good way to accelerate the learning process and reinforce concepts, we expect individual work products for lab exercises and written assignments.

Course Policies:

Lateness and absences: Lateness or absence may count against your grade unless there is an emergency or it is cleared with the professor in a timely fashion *before* class. If you miss a session, it is your responsibility to check with your classmates for notes and other course materials.

Late submission of assignments or exams: Late assignments will not be accepted unless it is cleared with the professor *well before the due date*. Under special circumstances, unexcused late assignments may be accepted (at the professor's discretion) but one full letter grade will be subtracted. If there is a medical reason for lateness, please supply documentation.

Blackboard: Blackboard will be used to distribute and update assignments, readings, and other course materials. It is the student's responsibility to check it regularly.

Cell phone use: The use of cell phones and other similar devices are not permitted during in-class seminar sessions.

Computers: Since the in-class seminars and the lab assignment work take place in a computer lab, the following additional rules apply: Monitors must be turned off during discussion seminars; No drinking or eating of any kind in the lab; No printing of any materials without permission from the instructor or the lab manager;

Incompletes: A grade of incomplete will **only** be considered if you are clearly making a good faith effort to complete the course (i.e., completing assignments regularly, participating in

seminar discussions) and have a good reason for not completing the work (e.g. medical or family emergency). Lack of time-management skills is not a valid reason to be granted an incomplete. Incompletes must be arranged with the instructor IN ADVANCE of the end of the term, and must be completed by the required date, in accordance with College policy on completing coursework - within one year for graduate students. Note that there are specific deadlines for the completion of incomplete grades, and you must check the Academic Calendar to find out which apply.

Dropping: The last day to drop the course with the grade of "WD" is February 17th (25% refund); Last day to drop a course with a "W" grade is April 16th (official withdrawal).

Academic dishonesty: Academic dishonesty will not be tolerated. Academic dishonesty includes, but is not limited to, cheating, plagiarizing (including "cutting and pasting" or paraphrasing information from the internet without proper citation), fabricating information or citations, facilitating acts of academic dishonesty by others, submitting work of another person or papers written for other courses, or tampering with the academic work of other students. Students may be asked to submit their notes and references to prove that their work is their own. For further clarification, please read CUNY's policy on academic integrity at http://www.lehman.edu/provost/documents/academic-integrity.pdf. Violators will be reported to the head of the Department and to the Dean of Student Affairs.

Accommodation for Students with Disabilities:

Lehman College is committed to providing access to all programs and curricula to all students. Students with disabilities who may need classroom accommodations are encouraged to register with the Office of Student Disability Services. For more information, please contact the Office of Student Disability Services, Shuster Hall, Room 238, tel #: 718-960-8441.

The Academic Center for Excellence (ACE) and the Science Learning Center (SLC):

Lehman College has two tutoring centers on campus. The ACE provides appointment-based and drop-in tutoring in the humanities, social sciences and writing, as well as general writing skills. The SLC provides drop-in tutoring for natural and computer science courses. To obtain more information about the ACE and SLC, please visit their website at http://www.lehman.edu/issp, or please call the ACE at 718-960-8175, and the SLC at 718-960-7707.

Schedule

Week 1 – Meet to discuss course requirements, reading materials, and preliminary research concepts – Friday, January 29th, 2016

Weeks 1-4:

- Read: Montello and Sutton, Chapter 1 - Introduction: A Scientific Approach to Geography; Chapter 2 - Fundamental Research Concepts; Chapter 3 - Data Collection in Geography: Overview; Chapter 9 - Statistical Data Analysis; Read: Gatrell et al, Chapter 1 - Spatial Science and its Traditions; Chapter 2 - Literature Reviews; Chapter 3 - Research Questions; Chapter 4 - Data and Methods in Spatial Science.
- Select research topic, and conduct literature review on topic, examine other research on topic;
- Prepare written Initial Research Design, including hypothesis or questions to be answered;
- Conduct a Preliminary Data Needs Assessment and Data Acquisition;

Week 5 – Presentation of Preliminary Research Design and literature review – Friday, February 26th, 2016

WEEK 5 DELIVERABLES:

- One MSWord document uploaded to BB containing the following:
    - Short (one-pager) description of your narrowed-down project, including one or more laser-sharp, pin-pointed research questions;
    - List of data sets needed, including data sources and status of acquisition for each data set;
    - Flow Chart of project design (GIS analysis portion of project only);
- Be prepared to discuss your research design and literature review.

Weeks 5-8:

- Read: Chapter 10 - Data Display: Tables, Graphs, Maps, Visualizations; Chapter 11 - Reliability and Validity; Chapter 12 - Geographic Information Techniques in Research
- Refine research methodology;
- Capture and input necessary data;
- Preliminary data analysis;

Week 9 – Interim Progress Report on research projects – Friday, April 8th, 2016
(Association of American Geographers (AAG) meeting, March 29 – April 4)

WEEK 9 DELIVERABLES:

- One or more *map layouts* and one-pager on *preliminary findings* (uploaded to BB). Please include all maps and text in the same word document and be sure that there is enough text to explain what is being shown on the maps.

Weeks 9-12:

- Read: Chapter 13 - Scientific Communication in Geography; Chapter 14 - Ethics in Scientific Research;
- Analysis of data;
- Map and charts production;
- Prepare draft findings;
- Prepare Power Point or Prezi presentation of project background, methods, analysis, and conclusions.

Week 13 – Presentation of Research Results – Friday, May 13th, 2016

WEEK 13 DELIVERABLES:

- Oral Presentation of Project, via PowerPoint slides, Prezi, or other mode.
- Upload final PowerPoint Presentation of Project to BB.

Week 13-15:

- Prepare final maps and charts and written report of findings;
- Prepare large-format PowerPoint slide of poster of project.

Week 15 – Final Project Due (all materials to be submitted no later than Wednesday, May 25th, 2016)

WEEK 15 DELIVERABLES:

- Final Project Report (uploaded to BB) as a Word document;
- PowerPoint Slide of Large-format Poster of Project (uploaded to BB).

Geographic Information Science Specialization Competencies	Course Learning Objectives	Assessment Methods
This course will help you achieve increased competency in geographic information science. By the time you graduate, you should be able to:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be assessed as part of the following course assignments:
1. Analyze and interpret public health and GISc literature	- Review relevant GISc and public health literature	- Week 5 1-page project description/data needs/flow chart - Week 13 presentation - Week 15 final report and poster
2. Synthesize theories, methods, and practice of public health GISc	- Identify GISc methods appropriate to a public health research question - Design an appropriate research question and methodology	- Week 5 1-page project description/data needs/flow chart - Week 13 presentation - Week 15 final report and poster
3. Interpret and analyze cartographic information	- Review relevant GISc and public health literature	- Week 5 1-page project description/data needs/flow chart - Week 9 cartographic layout and preliminary findings report - Week 13 presentation - Week 15 final report and poster
4. Analyze geographic health data in terms of spatial distribution and associations with other variables	- Design an appropriate research question and methodology - Utilize spatial analysis to examine public health issues	- Week 5 1-page project description/data needs/flow chart - Week 9 cartographic layout and preliminary findings report - Week 13 presentation - Week 15 final report and poster

5. Create professional maps to present public health information and data in ways that are appropriate to the audience	- Create publication-quality cartographic products	- Week 9 cartographic layout and preliminary findings report - Week 13 presentation - Week 15 final report and poster
6. Understand, identify, and analyze health inequalities in terms of health outcomes based on geographic locations, socio-demographics, and economics	- Review relevant GISc and public health literature	Dependent on project
7. Identify, estimate, and analyze environmental exposures and evaluate their impacts on public health and social inequality	- Review relevant GISc and public health literature	Dependent on project
8, Understand, identify and analyze environmental justice issues and their impact on urban public health	- Review relevant GISc and public health literature	Dependent on project
9. Effectively communicate geographic health information through oral, written and visual presentations	- Create publication-quality cartographic products	- Week 5 1-page project description/data needs/flow chart - Week 9 cartographic layout and preliminary findings report - Week 13 presentation - Week 15 final report and poster

DRAFT -- Rev. 11/8/16

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

The Graduate Center
PUBH 801: Interdisciplinary Approaches to Urban Health Research
3 Credits / Spring 2016

Time: Tuesdays 6:30 PM – 8:30 PM, January 29, 2016 – May 28, 2016

Location: GC – 365 5th Avenue room 8202

Instructors and Office Hours:
Nevin Cohen, Ph.D., Associate Professor, CUNY School of Public Health
55 West 125th Street, room 811, New York, NY 10027
212-646-8340 (T) 917-721-8037 (M)
nevin.cohen@sph.cuny.edu (preferred contact)
Wednesdays 3:00 to 6:00 or by appointment

Mary Clare Lennon, Ph.D., MS, Professor, CUNY PhD Program in Sociology and DPH Program in Public Health
365 Fifth Avenue room 6112.13, New York, NY 10016
212-817-8779 (T) 917-922-8942 (M)
mlennon@gc.cuny.edu (preferred contact)
Tuesdays 1:00 to 3:00 or by appointment

Course Website: https://canvas.instructure.com/courses/992123

Support resources: For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are also available.

Course description:
This course prepares students to investigate causes of and solutions to complex urban health problems by bringing together concepts, theories and methods from a variety of disciplines that improve our understanding of urban health. It also focuses on research that contributes to reducing health disparities and promoting well-being in urban communities.

Prerequisites: PUBH 800

Course format: In-class seminar with guest lectures and some online discussions.

Required reading and resources: Required readings are listed in the class schedule.

Suggested reading and resources: Optional readings are listed on the course website.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Identify, develop, evaluate and recommend policy and programmatic interventions to improve population health at individual, community, government and country levels based on empirical evidence of social, political, cultural, biological, economic, historical, behavioral, environmental, and global factors in health and disease. *(Primary Competency)*	• Discuss the value and role of interdisciplinary approaches to measuring and analyzing public health problems. • Identify opportunities to incorporate different interdisciplinary frameworks, theories and methods in your health research. • Evaluate interdisciplinary public health research projects. • Recommend interdisciplinary approaches to policy and programmatic public health interventions.	• Participation in questions/answers and discussions with guest speakers • Online (written) observations about guest speakers and their research • In class discussions of frameworks, theories and methods • Final paper
Assess the mechanisms and pathways by which factors influence individual and population health. *(Primary Competency)*	• Identify the evidence for the mechanisms and pathways that influence health. • Describe and assess how these mechanisms and pathways are measured. • Design interdisciplinary measures of the mechanisms affecting public health. • Describe the methods by which mechanisms and pathways may be assessed.	• Participation in questions/answers and discussions with guest speakers • Online (written) observations about guest speakers and their research • In class discussions of frameworks, theories and methods • Final paper
Synthesize and apply methods, theories and data from multiple disciplines to	• Discuss: the underlying theories or frameworks and data or evidence	• Participation in questions/answers and discussions with guest

understand and solve population health issues. *(Primary Competency)*	presented to answer these questions, and the methods used to produce results and conclusions. • Describe strengths and weaknesses of basic and applied public health research with respect to theory, measurement, reliability and validity. • Assess the contributions and limitations of an interdisciplinary approach to addressing public health issues. • Evaluate the implications of research approaches to the development of intervention strategies.	speakers • Online (written) observations about guest speakers and their research • In class discussions of frameworks, theories and methods • Final paper
Design and conduct etiological, intervention, policy, implementation science and other empirical studies that contribute to new knowledge about population health. *(Reinforcing Competency)*	• Apply theories and methods from different disciplines to research about population health	• Participation in questions/answers and discussions with guest speakers • Online (written) observations about guest speakers and their research • In class discussions of frameworks, theories and methods • Final paper
Generate, translate, communicate, and disseminate population health evidence to diverse audiences. *(Reinforcing Competency)*	• Translate and communicate population health evidence derived from interdisciplinary research.	• Participation in questions/answers and discussions with guest speakers • Online (written) observations about guest speakers and their research • In class discussions of frameworks, theories and methods • Final paper
Demonstrate leadership skills to facilitate the goals of population health research and practice. *(Reinforcing Competency)*	• Organize, lead and convey the work of interdisciplinary teams to address population health	• Participation in questions/answers and discussions with guest speakers

	issues.	• Online (written) observations about guest speakers and their research • In class discussions of frameworks, theories and methods • Final paper

Course Assessments:

Course participation: This is a seminar-style course, which requires your active participation in class (and in online discussions). Each class session will include assigned readings, which we will discuss online and in periodic debriefing classes in which we will discuss the readings in relationship to presentations by guest speakers. Online participation is assessed based on the thoughtfulness of your own comments and the degree to which you engage in back and forth with your colleagues by reacting to, adding to, clarifying, or collegially disagreeing with their comments. In-class participation is assessed based on your verbal contributions, including questions asked, concepts clarified or expanded upon, and reactions to the comments and questions of colleagues. Online and in-person participation is rated categorically (excellent, very good, good, fair, poor/none).

Response Briefs: In addition to online and in-person discussions about the course material, you will be responsible for preparing six (6) concise memos in response to the presentations of 6 of the guest speakers. These memos will be the basis for our in-class or online discussions of the disciplinary, methodological and theoretical issues raised by the speakers. The exact format and style of the memos are up to you, but they should convey the following:

- The questions addressed by the speaker;
- The data or evidence brought to bear on these questions;
- The methods used to study the issue;
- The results and conclusions;
- Strengths and weaknesses of the work presented with respect to theory, measurement, reliability and validity;
- Connections to the course readings;
- The contribution(s) made by an interdisciplinary approach;
- Intervention strategies that derive from the research.

The six memos *together* should be no longer than approximately 5,000 words, meaning that each essay should be, on average, no longer than 4 pages, excluding references. Please use double spacing, 1" margins throughout and a 12-point font.

Final Paper: The final paper is a literature review (maximum 5,000 words) that explores a public health issue that you care deeply about and anticipate addressing in your doctoral research. Throughout the semester, you are expected to search for, read, and take notes on peer-reviewed journal articles from different disciplinary and methodological perspectives that address (define, measure, identify strategies for solving) this issue. Your

literature review will discuss how different disciplines define the issue, the theories they use to explain the issue, the methods they use to measure and describe the issue, efforts at interdisciplinary approaches to the issue, and any outcomes (intervention strategies, policies, impacts). You must discuss at least 2 different methodological/measurement approaches and 2 different conceptual/disciplinary perspectives. In your conclusions and discussion, please assess the contributions of the different approaches, limitations of these approaches in terms of theories, methods, and impacts, and suggestions for different ways to approach the issue. Please post any general questions about the assignment to the designated discussion thread on Canvas so that everyone else in the class is able to see our responses. Of course, if you have specific questions about your work, please feel free to discuss them with us during office hours.

Grading:

Evaluation criteria: Students who perform exceptionally in all aspects of the course will receive an "A." A grade of "B" will reflect adequate work. Any grade below a "B" will indicate that you should be performing better. All assignments must meet professional standards of analysis, presentation, and timeliness. Accurate spelling and grammar, and clear and concise writing, are critical. Assignments will not be accepted after they are due unless you have a compelling reason for being late (e.g., medical or family emergencies) and we agree to an alternate due date. The relative weight of each course component is:

Course Component	*Weight*
Class Participation	20%
Online discussions	20%
Response briefs	30%
Final Paper	30%

The grading system for the course follows guidance in the Graduate Bulletin:

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal: If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are generally permitted to officially withdraw from courses without academic penalty until the 10th week of class, but please check online for specific policies and dates for course withdrawal.

Grade of incomplete: The granting of an incomplete grade is at the discretion of the instructor. Incomplete final grades will not be granted unless the request is justified by

legitimate and documented emergencies. Refer to the Student Handbook for further details.

Grade appeals: When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies:

Attendance and class participation: You are required to attend every class that meets in person and to participate in every online discussion session. This is particularly important as we meet only once per week, and is extra-important in this class as we have invited a number of guest speakers who have given up their time to participate in the class. As noted above, we also expect active participation in class discussions.

Late/incomplete submission of assignments: As noted above, late or incomplete assignments will not be accepted unless you are ill or have a family emergency. If you know you will not be able to meet a deadline contact us as soon as possible to discuss an alternate deadline.

Make-ups, rewrites, and extra credit: The case study will be submitted in segments, as outlined in the course schedule. Each submission will be returned with comments and suggestions, and if these are addressed in the final submission your final grade will reflect your efforts at revising the paper throughout the semester. We do not offer extra credit assignments.

Expectations of students: One of the biggest obstacles to successful learning is not allocating sufficient time to coursework. We realize that DPH students are juggling multiple professional and personal responsibilities (including full time work for some of you) but we expect you to devote the time and energy required to learn the course material and to do a good job on the written projects. We also expect you to be the consummate professionals that you are – showing respect and treating each other collegially. In your interactions with us, please be open and communicative – please tell us if the course is not meeting your expectations so that we can make adjustments if possible. Whatever you do, please let us know if you are having trouble with the course. Other expectations include the following:

- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and the academic calendar.
- Know how to use library resources and citation tools, and if unfamiliar please ask the CUNY librarians for assistance.
- Come to class fully prepared to actively participate in discussion.
- Complete all assignments by their assigned due date. No credit for work completed after the due date unless due to a medical or family emergency.

- No credit for assignments suspected of plagiarism. (See the Academic Integrity section below for the additional consequences of plagiarism.)
- Regularly check the course website and official university email for course correspondence. The readings and schedule are likely to change, and it is your responsibility to keep track.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and should be posted in the designated discussion board so that our responses are shared with the entire class.
- When in doubt, ask questions and clarify course assignments and expectations as far ahead of the due date as possible.

Expectations for the instructors: Our goal is to make this course a valuable learning experience that is intellectually interesting and challenging and relevant to your academic and professional work. You can expect us to be prepared each week, to make ourselves as accessible as possible, to return your work promptly (usually within one week) with comments and suggestions, and to treat each of you with respect and collegiality. We have high expectations and strict standards, but also try to be very reasonable if you express concerns or problems as they arise (and not at the very end of the term). Specifically, we will try to:

- Provide regular announcements, reminders, and suggestions on the course website.
- Monitor, ask follow-up questions, and answer questions presented during discussion.
- Respond to student email within 24 hours Monday through Friday.
- Communicate about grades and progress in the course through the course website.

Accessibility: Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For confidential information about such services, contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity: CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule

This schedule is *likely to change* as the semester progresses because we are accommodating the schedules of a number of guest speakers. Please check the course website for updates, and post a question to the appropriate discussion board if you are unsure about scheduled topics/readings or assignments. Also refer to the current academic calendar for important university-wide dates.

	Date	Topic	Readings/Resources	Assessment
Part I: Introduction to the Course				
1	2/2/16	Personal introductions, overview of the course, and course requirements. Introduction to inter-disciplinarity and trans-disciplinarity, and their significance for urban health research and practice.	Haire-Joshu D, McBride TD, editors. *Transdisciplinary public health: research, education, and practice*. John Wiley & Sons; 2013 *Chapters 1, 5, 8*: • *Transdisciplinary Public Health: Definitions, Core Characteristics, and Strategies for Success*, Daniel Stokols, Kara L. Hall, Amanda L. Vogel • *Transdisciplinary Approaches: Sorting Out the Socioeconomic Determinants of Poverty and Health*, Timothy D. McBride, Lisa M. Pollack, Abigail R. Barker, Leah M. Kemper • *Evidence-Based Decision Making: Transdisciplinary Problem Solving to Improve the Health of the Public*, Ross C. Brownson	Class participation Online discussion
	2/9/16	No classes (Tuesday classes follow Friday schedule)		
2	2/16/16	Guest Speaker: Dean Ayman El-Mohandes Why theoretical frameworks matter: Theories and approaches for measuring describing, explaining, and eliminating health disparities	• El-Mohandes, A. A. E., Kiely, M., Gantz, M. G., & El-Khorazaty, M. N. (2011). Very preterm birth is reduced in women receiving an integrated behavioral intervention: A randomized controlled trial. *Maternal and Child Health Journal*, *15*(1), 19–28. • Joseph, J. G., El-Mohandes, A. A. E., Kiely, M., El-Khorazaty, M. N., Gantz, M. G., Johnson, A. A., … Subramanian, S. (2009). Reducing psychosocial and behavioral pregnancy risk factors: Results of a randomized clinical trial among high-risk pregnant African American women. *American Journal of Public Health*, *99*(6), 1053–1061. • Carpiano, R. M. & Daley, D. M. (2006). A Guide and Glossary on Post-Positivist Theory-Building for Population Health. Journal of Epidemiology & Community Health, *60*(7), 564-570. • Braveman, P. A., Kumanyika, S., Fielding, J., LaVeist, T., Borrell, L. N., Manderscheid, R., & Troutman, A. (2011). Health Disparities and Health Equity: The Issue Is Justice. *American Journal of Public Health*, *101*(S1), S149–S155. • Gravlee, C. C. (2009). How race becomes biology: Embodiment of social inequality. *American Journal of Physical Anthropology*, *139*(1), 47–57.	Class participation Online discussion

3	2/23/16	Guest Speaker: Elena Vesselinov and Mary Clare Lennon Applying a measure of neighborhood income mix to better understand child well-being.	• Vesselinov, E., Lennon, M.C. Draft: Is it all in the eye of the beholder? Mixed-income neighborhoods' advantage in the context of mortgage foreclosures", under review in *Journal of Urban Affairs* (3 reviews included as Vesselinov et al) • Lennon, M.C. & Vesselinov, E. (2015) "Do children benefit of living in mixed-income neighborhoods compared to other types of neighborhoods? Letter of intent to the William T Grant Foundation re • Krieger, N., Waterman, P. D., Spasojevic, J., Li, W., Maduro, G., & Van Wye, G. (2015). Public Health Monitoring of Privilege and Deprivation With the Index of Concentration at the Extremes. *American Journal of Public Health*, e1–e8. • Gatrell, A. C., Popay, J., & Thomas, C. (2004). Mapping the determinants of health inequalities in social space: can Bourdieu help us? Health & Place, 10(3), 245–57. • Reardon SF,& Bischoff, K. 2011. More unequal and more separate: growth in the residential segregation of families by income, 1970-2009. New York: Russell Sage Foundation. http://www.scribd.com/doc/72915429/Growth-in-the-Residential-Segregation-of-Families-by-Income-1970-2009	Class participation Online discussion
4	3/1/16	Guest Speaker: Diana Romero Measuring health-related phenomena: The Different Contributions of Qualitative and Quantitative Approaches	• Romero, D., Kwan, A., Swearington, J. Nestler, S., Cohen, N. (2012). Impact of the Closure of a Large Urban Medical Center: A Qualitative Assessment (Part I) *J Community Health, 37*:982–994. • Romero,D., Kwan, A., Nestler, S. & Cohen, N. (2012). Impact of the Closure of a Large Urban Medical Center: A Quantitative Assessment (Part II) *J Community Health, 37*: 995–1005 • Small, M. L. (2011). How to Conduct a Mixed Methods Study: Recent Trends in a Rapidly Growing Literature. Annual Review of Sociology, 37(1), 57–86.	Class participation Online discussion
Part II: Measuring the Spatial, Social, and Temporal Dimensions of Health Stressors				
5	3/8/16	Guest Speakers: Juliana Maantay and Andrew Moroko. What are the strengths and weaknesses of different approaches to measuring the relationship between the distribution of environmental stressors and	• Maantay, J.A. (2007). Asthma and air pollution in the Bronx: Methodological and data considerations in using GIS for environmental justice and health research. *Health and Place*, 13:32-56. Special issue: Linking population health, critical theory, and geographical information science. Maantay, J., & Maroko, A. (2015). "At-risk" places: inequities in the distribution of environmental stressors and prescription rates of mental health medications in Glasgow, Scotland. *Environmental Research Letters*, *10*(11) • Grady, S. (2011). Housing quality and racial disparities in low birth weight: A GIS assessment. Chapter 15 in Maantay, J.A. and McLafferty, S., eds. Geospatial Analysis of Environmental Health:.303-318. • Pathak, E.B., Reader, S., Tanner, J.-P., and Casper,	Class participation Online discussion

		health?	M.L. (2011). Spatial clustering of non- transported cardiac decedents: The results of a point pattern analysis and an inquiry into social environmental correlates. *International Journal of Health Geographics, 10*(46): 1-11. • Oliver, L., Schuurman, N., and Hall, A.W. (2007). Comparing circular and network buffers to examine the influence of land use on walking for leisure and errands. *International Journal of Health Geographics, 6*(41): 1-11. • Curtis, A. (2008). Three-dimensional visualization of cultural clusters in the 1878 yellow fever epidemic of New Orleans. *International Journal of Health Geographics, 7*:(47): 1-10.	
6	3/15/16	Guest Speaker: Yoko Nomura. Measuring the effects of psychosocial stress on health outcomes across the life course	• Nomura Y, Marks DJ, Grossman B, Yoon M, Loudon H, Stone J, Halperin JM. (2012). Exposure to gestational diabetes mellitus and low socioeconomic status: effects on neurocognitive development and risk of attention deficit/heperactivity disorder in offspring. *JAMA Pediatrics* (former *Arch Pediatr Adolesc Med*), *166*(4), 337-43. • Glover V. (2011). Annual Research Review: Prenatal stress and the origins of psychopathology: an evolutionary perspective. *Journal of Child Psychology and Psychiatry*, *52*(4), 356-367	Class participation Online discussion
7	3/22/16	Guest Speaker: Jeremy Porter Geographical Sociology and Public Health	• Butts, J. A., Roman, C. G., Bostwick, L., & Porter, J. R. (2015). Cure Violence: A Public Health Model to Reduce Gun Violence. Annual Review of Public Health, 36(1), 39–53. • Galster GC. The mechanism (s) of neighbourhood effects: Theory, evidence, and policy implications. In *Neighbourhood effects research: New perspectives* 2012 Jan 1 (pp. 23-56). Springer Netherlands. • Small ML, Feldman J. Ethnographic evidence, heterogeneity, and neighbourhood effects after moving to opportunity. In *Neighbourhood effects research: New perspectives* 2012 Jan 1 (pp. 57-77). Springer Netherlands.	Class participation Online discussion
8	3/29/16	Recap: Reconnecting planning and public health influencing the contextual factors that influence disease and health.	• Pastor, M., & Morello-Frosch, R. (2014). Integrating Public Health And Community Development To Tackle Neighborhood Distress And Promote Well-Being. *Health Affairs*, *33*(11), 1890–1896. • Corburn, J., Curl, S., Arredondo, G., & Malagon, J. (2015). Making Health Equity Planning Work: A Relational Approach in Richmond, California. Journal of Planning Education and Research.	Class participation Online discussion

CUNY SCHOOL OF PUBLIC HEALTH

Graduate Center – Rm. 6495

PUBH 806 – Qualitative Research Methods with Applications to Urban Health

3 credits

Spring 2015

Catalogue description	This course will introduce students to approaches in designing and conducting qualitative research in topics of relevance to public health. It is intended to provide doctoral students with a foundation in the various qualitative data collection and analysis methods, focusing on their application to public health practice and research. It will cover elements of qualitative research design, data collection, analysis, and writing for publication. This will be integrated with the main assignment in which students develop a proposal for a qualitative research project tailored to address a specific public health research question.
Course meets	Mondays, 6:30-8:30 pm, Rm. 6495
Instructor	Diana Romero, PhD, MA
Email	diana.romero@hunter.cuny.edu
Phone	212-396-7743
Office	Silberman Bldg, Hunter College, CUNY School of Public Health 2180 Third Ave @ 119th St, Rm. 542
Office hours	By appointment
Required books	- Ritchie J, Lewis J. *Qualitative Research Practice: A Guide for Social Science Students and Researchers*. London: Sage; 2003. **OR** - Ritchie J, Lewis J, Nicholls CM, Ormston R. *Qualitative Research Practice: A Guide for Social Science Students and Researchers*. London: Sage; 2014. - Morgan DL. *Focus Groups as Qualitative Research*. 2nd ed. Thousand Oaks, CA: Sage; 1997. - Auerbach C, Silverstein LB. *Qualitative Data: An Introduction to Coding and Analysis*. New York: New York University Press; 2003.
Recommended books	Corbin JM, Strauss AL. *Basics of Qualitative Research: Techniques and Procedures for Developing Grounded Theory*. 3rd ed. Los Angeles: Sage; 2008. Miles MB, Huberman AM, Saldada J. *Qualitative Data Analysis: A Methods Sourcebook*. 3rd ed. Thousand Oaks, CA: Sage; 2013.
Reserve material	Texts available in the Library's Reserve Reading Room or online

Other required materials	Readings from the literature, noted on the syllabus (below), on Blackboard (Bb) and/or on reserve

Course Structure

Throughout this course, teaching and learning will take place through interactive lecturing utilizing seminar-like discussion of course material, presentations from guest faculty/researchers, and class exercises. To effectively learn and master the course material requires a class-by-class sequential approach that builds on skills and concepts. Therefore, students are expected to be prepared for each class by carefully reading the texts and doing the assignments. Students should be "active learners" ready to pose questions to the faculty and their classmates, as well as respond to questions asked of them. Attendance at all classes is required; therefore, students should notify the instructor if they anticipate any absences.

The goal of the course is to provide students with a context in which they can further hone their understanding of qualitative research methods and study designs, and key considerations to be taken into account when deciding on using a qualitative research approach to address a specific research question. Guest speakers will make presentations of their research, with a strong focus on methodology. This will provide an "applied" basis upon which students will begin identifying the use and contribution of qualitative methods to public health practice and research. Class projects on qualitative methods will be undertaken including an initial project proposal with a brief literature review to inform specification of the (1) central research focus, (2) significance of the public health problem to be addressed (i.e., rationale for the project), (3) why a qualitative research approach is the most appropriate for the project, and (4) what specific data collection approach will be utilized. Students will then carry out their projects (or analyze existing data) during the semester and the final paper will be a manuscript following the standard format for report of a research study.

Assessment

Students' understanding of the course material will be evaluated through a combination of in-class activities and participation, written assignments, and presentations described below.

Grading

Required (cannot do class research project without this)	CITI Certificate: The CITI is an online training program (www.citiprogram.org) that provides certification for human subjects research. Students must complete the Basic Module by the second class session and upload their certificate to the Bb folder. Please do not leave this until the "last minute" as the Basic Module requires approximately 3-4 hours to complete. (Note: it is divided into several sections that can be done at different times.)
5%	Reflexive Memo: A 1-2 page memo in which you reflect on how your social, economic, gender, educational and other positions/identities may influence, constrain, and shape your research question and how these understandings, assumptions, and points of reference may inform your work as you collect and analyze data for your research project.
10%	Quantitative-Qualitative Questions Exercise: Identification and critique of two close-ended questions
Hypothetical Grade	Central Research Focus and Methods Proposal (draft): A short (3-4 pp) proposal of the public health research topic you would like to investigate, the qualitative method you will use, and why it is best suited for this research project.
15%	Research Proposal: Revised proposal and with logistical details and timeline added.
10%	Data Collection Guide/Instrument.

15%	Index/code book, data display, *or* analytic memo: Submit only 1 of 3 of these "steps" in the qualitative analysis process. (Depends on where the student is in the process.)
10%	Final Presentation: In-class presentation of project (data collection, analysis, and results).
25%	Final Paper: A complete write-up of the research question, methods, and results of the final project.
10%	Class Attendance and Participation: This pertains to an expectation of perfect attendance and *active class participation*.
100%	

Assignments are to be submitted in class on the day that they are due, unless the instructor has set up a folder on Blackboard where the assignment can be submitted *before* the start of class. Final grades are based on the sum of assignment scores as described above. There will be no opportunity to do additional work for extra credit.

Graduate Center Grade Policy
A (plus or minus) - Excellent
B (plus or minus) - Good
C (plus or minus) - Fair (lowest passing mark)
F - Failure
W - Withdrew without academic penalty. This is a student-initiated grade, which may be requested from the 4th through the 10th week of the semester. Under no circumstances can a student withdraw and receive a "W" grade after the 10th week of the semester without the written permission of the course instructor and the Executive Officer, and the approval of the Vice President for Student Affairs. This grade carries tuition liability.

Course Policies

Attendance and class participation
Students are expected to attend *every* class session and complete the readings *prior to* each of the class sessions so as to be able to participate fully during the class. Students should also be prepared to be selected at random to lead class discussions on assigned readings and other course materials. The instructor should be notified in person or by email if an absence is unavoidable; excessive lateness may be considered equivalent to absence from class. It is the student's responsibility to obtain missed class notes and related information from a colleague. Assignments must be received by the due dates regardless of class attendance.

Late submission of assignments
Assignments are due on the date indicated in this syllabus. A *full grade* will be deducted for each week an assignment is late. In case of emergency, please contact the instructor. Incomplete final grades for this course will NOT be granted unless the request is justified by a legitimate and documented emergency.

Guidelines for Written Assignments
All papers should be typed, double-spaced, spell-checked and proofread. Please use 1-inch margins all around and 11- or 12-point font. For identification purposes, please include your name, title of the assignment, course, term, and date. Print copies should be submitted for all assignments unless otherwise instructed. Use only AMA style for citing references. You may consult this link at guidelines on how to cite using the AMA style: http://www.lib.jmu.edu/citation/amaguide.pdf.

Use of Blackboard (Bb)
All assignments and course documents will be posted on Blackboard. Bb announcements and/or email will used to communicate new information and/or changes. It is the student's responsibility to check Bb frequently for such announcements. In addition, students should be aware that emails sent by the instructor via Bb will be automatically sent to the email address in the Bb system.

Use of Qualitative Software

For individuals who choose to utilize qualitative software, they may take advantage of the free offering of both Atlas.ti (version 7.0) and QSR Nvivo (Version 10.0) for all Graduate Center students. By logging onto the GC Remote Student Portal on Citrix [https://remote.gc.cuny.edu/], you can access either aforementioned software by clicking on the 'Statistics' folder upon logging in. If you choose to use software, please use software with which you are comfortable; you will be responsible for your own interpretations and work. The instructor recommends using Dedoose (Dedoose.com) which comes with a free one-month trial period and then can be continued at approx. $10/month.

Course/syllabus changes
This syllabus is a *guide* for the course and is subject to change, particularly given the advanced-level of the course. Changes will be announced in class and/or will be posted on the course Blackboard site.

Class citizenship & rules of conduct
Cellphones and other electronic devices
Use of any electronic devices in class must be limited to accessing the course materials under discussion in that session and taking notes. Under no circumstances should these devices be used for communication with others *within or outside of the classroom*. Students are expected to be fully engaged with and participating in the class; thus, use of any devices that distract the student(s), instructor(s), and/or guest(s) will be considered intrusive and in violation of expected standards of conduct in the classroom. As such, the student may be asked to discontinue use of the device.

Email correspondence
The instructor will try to respond to emails within a 24-hour period during the standard Monday through Friday work week. Students should not wait until a Friday to send an email if a response is needed before the following Monday. The instructor may respond over the weekend but it is not guaranteed. Responses that take more than a day during the work week may be due to special circumstances, such as the instructor is attending an out-of-town conference, the student's query is of a complex nature that requires consultation with others/obtaining additional information, etc.

Institutional Policies
Accessibility
Among other responsibilities, the CUNY Graduate Center Vice President for Student Affairs has overall responsibility for Student Disability Services and is the 504/ADA Coordinator.

Contact information:
Matthew G. Schoengood, Vice President for Student Affairs, Rm: 7301, Telephone: 212-817-7400
Email: studentaffairs@gc.cuny.edu

Academic integrity

The Graduate Center outlines a clear definition of Academic Honesty and the DPH program expects students to know and follow the CUNY Academic Integrity Policy. Both can be found in the GC Student Handbook as well as a link to the GC Avoiding and Detecting Plagiarism guide.
http://www.gc.cuny.edu/CUNY_GC/media/CUNY-Graduate-Center/PDF/Publications/Student_Handbook_web.pdf?ext=.pdf

Help with research and writing
Librarians at the CUNY GC Mina Rees Library are available to help students with using research databases and citation software in person or remotely by phone, chat or email. Contact information can be found on the library's research website at: http://library.gc.cuny.edu/research-help/

The GC Wellness Center provides academic consultation services to help keep students on track with their academic work by working on the obstacles to progress and developing strategies to overcome them. More information can be found on the GC Wellness Center's website at:
http://www.gc.cuny.edu/Prospective-Current-Students/Student-Life/Health-Wellness/Counseling-Services/Academic-Health

Last day to drop the course with the grade of "W": April 16, 2015
http://www.gc.cuny.edu/Public-Programming/Calendar/Academic-Calendar-2014-15?page=2

Grade of Incomplete (INC) and Graduate Center Policies
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergency. Only students averaging a C or above in the course are eligible to request an incomplete course grade. According to Graduate Center policy updated 7/11/2011, to resolve incomplete grades, students must fulfill their obligations within one calendar year after the INC grade is assigned. After one year, an incomplete grade (''INC'') will become a permanent incomplete. Extensions will be granted only in exceptional circumstances upon written application and with the permission of the faculty member, the Executive Officer, and the Vice President for Student Affairs. Permanent incompletes will accrue no credit. Students with more than two incomplete courses will be brought to the attention of their Executive Officer to determine whether or not they are making satisfactory progress. Students will not normally be regarded as making satisfactory progress toward their degrees if they have more than two "INC"s on their records. Students should be aware that continued registration and most financial aid awards are conditional upon satisfactory progress. Students should also note that credits for which they have an "INC" as of the end of the third week of classes of a given semester are not counted toward advancement to the next level for that semester.

Grade appeals
The doctoral faculty as a whole and, more specifically, the faculty of a doctoral program are responsible for determining the requirements and standards of performance for courses and for qualifying examinations. A course instructor retains considerable discretion in these matters. The instructor is under obligation, however, to ensure that the course syllabus is consonant with the goals of the curriculum of the degree program. The expected level of performance in a given course shall reflect levels of difficulty relevant to the educational objective of the program. In addition, the instructor has an obligation to students to make clear the basis of evaluation (e.g., reading assignments, papers, contributions to seminar discussions, experimental work) at the start of each course so that students are not surprised by unexpected or untimely demands. Grades on examinations or for work in a course are the responsibility of the instructor. Specific information pertaining to the procedures for an official grade appeal through the GC can be found in the GC student handbook at:

http://www.gc.cuny.edu/CUNY_GC/media/CUNY-Graduate-Center/PDF/Publications/Student_Handbook_web.pdf?ext=.pdf

Class Schedule

Class	Date	Topic	Readings and Assignments
1	2/2/15	Course overview and introduction: Qualitative research and its methodological tools	Ritchie & Lewis, Ch 1: Foundations of Qualitative Research Auerbach & Silverstein, Ch 1: Introducing Qualitative Hypothesis-Generating Research Peshkin, Alan. The goodness of qualitative research. *Educational Researcher.* 1993;22:23-29. Recommended: Ragin CC, Nagel J, White P. *Workshop on Scientific Foundations of Qualitative Research (7/11-12/03*). Washington, DC, National Science Foundation, 2004. http://www.nsf.gov/pubs/2004/nsf04219/nsf04219.pdf **DUE**: In a few sentences, post to Bb a research idea/question that you have that can be explored via a qualitative research method.
2	2/9/15	Qualitative Study Design I: Research Questions	Ritchie & Lewis, Ch 2: The Applications of Qualitative Research Auerbach & Silverstein, Ch 2: Designing Hypothesis-Generating Research Auerbach & Silverstein, Ch 3: Qual and Quant Research as Complementary Strategies Recommended: Corbin & Strauss, Ch 2: Practical Considerations **DUE:** Reflexive Memo and CITI certification
3	2/18/15 (Wed – follows Mon schedule)	Qualitative Study Design II: Sampling Strategies **- Class held online (asynchronous using Bb)** **- Get going with Morgan book (FGs)**	Ritchie & Lewis, Ch 3: Design Issues Ritchie & Lewis, Ch 4: Designing and Selecting Samples Recommended: Small ML. 'How many cases do I need?' On science and the logic of case selection in field-based research. *Ethnography*. 2009; 10(1): 5-38. **DUE**: Quantitative-Qualitative Questions Exercise (student pairs)
4	2/23/15	Introduction to Data Collection Methods and	Ritchie & Lewis, Ch 5: Designing Fieldwork Strategies and Materials (IDIs and FGs)

		Asking Open-Ended Questions	<u>Recommended:</u> Ulin, Robinson & Tolley, Ch 4: Collecting Qualitative Data **DUE**: Central research focus and methods proposal draft
5	3/2/15	Data Collection I: Focus Groups	Morgan DL. *Focus Groups as Qualitative Research*. 2nd ed. Thousand Oaks, CA: Sage; 1997. [the *complete* handbook] Romero D, Kwan A, Swearingen J, Nestler S, Cohen N. Impact of the closure of a large urban medical center: A qualitative assessment. *Journal of Community Health*. 2012;37:982-994. <u>Recommended</u>: Ritchie & Lewis, Ch 7: Focus Groups Morgan DL. Reconsidering the role of interaction in analyzing and reportinging focus groups. *Qual Health Res.* 2010;20:718-722. Shelley D, Cantrell MJ, Moon-Howard J, Ramjohn DQ, Vandevanter N. The $5 man: the underground economic response to a large cigarette tax increase in New York City. *Am J Public Health*. 2007;97(8):1483-8. Goudet SM, Faiz S, Bogin BA, Griffiths PL. Pregnant women's and community health workers' perceptions of root causes of malnutrition among infants and young children in the slums of Dhaka, Bangladesh. *Am J Public Health*. 2011;101(7):1225-33. Paz MG, Fry D. Bringing the Global to the Local: Using Participatory Research to Address Sexual Violence with Immigrant Comunities in NYC. 2008. *(participatory research, focus groups with pictoral/image instruments)* *Qualitative Health Research* special issue on focus groups methods: May 2010; 20(5).
6	3/9/15	Data Collection II: In-Depth Interviews	Ritchie & Lewis, Ch 6: In-depth Interviews Edin K, Kefalas M. *Promises I Can Keep: Why Poor Women Put Motherhood Before Marriage*. Berkeley, CA: University of California Press; 2005. (Ch 1: Introduction, p. 1-26; App. A: City, neighborhood, family characteristics, and research methods, p. 225-247; App. B: Interview Guide) [In class: Field Logistics—SPAFF project: training materials, sampling, etc]

			Recommended: Merry L, Clausen C, Gagnon AJ, et al. Improving qualitative interviews with newly arrived migrant women. *Qual Health Res*. 2011;21:976-86. Grineski S. Childhood asthma, public housing, and environmental control: Differences between families renting with section 8 vouchers and those living in the projects. *J Pov*. 2008;12:432-55. Ghose T, Swendeman DT, George SM. The role of brothels in reducing HIV risk in Sonagachi, India. *Qual Health Res*. 2011;21:587-600. Grossman D, Holt K, Peña M, et al. Self-induction of abortion among women in the United States. *Reprod Health Matters*. 2010;18(36):136-46. **DUE:** *REVISED* Research question and methods proposal
7	3/16/15	Data Collection III: Participant/Field Observation, Ethnography	Ritchie et al (2014), Ch 9: Observation Shuler S, Sypher BD. Seeking emotional labor: When managing the heart enhances the work experience. *Management Communication Quarterly.* 2000;14:50-89. [Triangulated participant observation, interviews, and 911 call data]. Hirsch JS, Higgins J, Bentley ME, Nathanson CA. The social constructions of sexuality: marital infidelity and sexually transmitted disease-HIV risk in a Mexican migrant community. *Am J Public Health*. 2002;92(8):1227-37. Recommended: Lopez I. *Matter of Choice: Puerto Rican Women's Struggle for Reproductive Freedom*. New Brunswick, NJ: Rutgers University Press; 2008. [sterilization] Fadiman A. *The Spirit Catches You and You Fall Down: A Hmong Child, Her American Doctors, and the Collision of Two Cultures*. New York: Farrar, Straus, and Giroux; 1998. Rapp R. *Testing Women, Testing the Fetus: The Social Impact of Amniocentesis in America*. New York: Routledge; 1999. Ch. 1: How Methodology Bleeds into Daily Life, pp. 1-22. **DUE**: Data collection guide/instrument
8	3/23/15	Data Collection IV: Document Review, Content Analysis	Borzekowski DL, Schenk S, Wilson JL, Peebles R. e-Ana and e-Mia: A content analysis of pro-eating disorder Web sites. *Am J Public Health*. 2010;100:1526-34.

			Ray JL, Smith AD. Using photographs to research organizations: Evidence, considerations, and application in a field study. *Organizational Research Methods.* 2012;15:288-315. [visual methods] Latimer AE, Green KE, Schmid K, et al. The identification of framed messages in the New York State Smokers' Quitline materials. *Health Educ Res*. 2010;25(1):54-60. Hussain H, Omer SB, Manganello JA, et al. Immunization safety in US print media, 1995-2005. *Pediatrics*. 2011;127 Suppl 1:S100-6. <u>Recommended</u>: Offen N, Smith EA, Malone RE. "Willful misconduct": how the US government prevented tobacco-disabled veterans from obtaining disability pensions. *Am J Public Health*. 2010;100:1166-73. Almeida-Filho N, Kawachi I, Filho AP, Dachs JN. Research on Health Inequalities in Latin America and the Caribbean: Bibliometric Analysis (1971-2000) and Descriptive Content Analysis (1971-1995). *Am J Public Health*. 2003;93:2037-2043. Gilmore A, Collin J, Townsend J. Transnational tobacco company influence on tax policy during privatization of a state monopoly: British American Tobacco and Uzbekistan*. 9	3/30/15	Qualitative Data Analysis I: Approaches & Techniques	Auerbach & Silverstein, Ch 4: Coding 1—The Basic Ideas Corbin & Strauss, Ch 6: Memos & Diagrams
No Class	4/6/15	SPRING RECESS	Work on individual/group research projects
10	4/13/15	Qualitative Data Analysis II: From Data Reduction & Analysis to Results	Auerbach & Silverstein, Ch 5: Coding 2—The Mechanics *(Phase 1: Making the Text Manageable)* Auerbach & Silverstein, Ch 6: Coding 2—The Mechanics *(Phase 2: Hearing What Was Said)* Auerbach & Silverstein, Ch 7: Coding 2—The Mechanics *(Phase 3: Developing Theory)* <u>Recommended</u>: Miles, Huberman, Saldana Ch 11: Making Good Sense: Drawing and Verifying Conclusions, p. 275-322 **DUE**: Index/code book (***or*** 1 of 2 other options due next week)

11	4/20/15	Qualitative Data Analysis III: Writing	Ritchie & Lewis, Ch 11: Reporting & Presenting Qualitative Data Miller DL, Creswell JW, Olander LS. Writing and retelling multiple ethnographic tales of a soup kitchen for the homeless. *Qualitative Inquiry.* 1998;4:469-491. [Ethnography; Writing <-> Interpretation; different yet non-contradictory findings] <u>Recommended</u>: Ulin, Robinson & Tolley, Ch 7: Putting It Into Words: Reporting Qualitative Research Results Corbin & Strauss, Ch 13: Writing thesis, monographs, & giving talks, p. 275-295. Wolcott HF. *Writing Up Qualitative Research*. 3rd ed. Los Angeles: Sage; 2009. **DUE**: Data display or analytic memo (***if*** did not submit index/codebook last week)
12	4/27/15	Generalization and Validity (a.k.a. Credibility, Truthfulness)	Auerbach & Silverstein, Ch 8: Convincing Other People: The Issues Formerly Known as Reliability, Validity and Generalizability Ritchie & Lewis, Ch 10: Generalising from Qualitative Research Maxwell JA. Understanding and validity in qualitative research (Ch. 2). In Huberman AM, Miles MB, eds. *The Qualitative Researcher's Companion*. Thousand Oaks, CA: Sage; 2002.
13	5/4/15	Dissemination of Findings, Research Ethics, and Other Reflections on Qualitative Research	Ulin, Robinson & Tolley, Ch 8: Disseminating Qualitative Research Ritchie et al (2014), Ch 4: Ethics Baum F. Researching public health: behind the qualitative-quantitative methodological debate. *Soc Sci Med*. 1995;40:459-68. Newman KS. Qualitative research on the frontlines of controversy. *Soc Meth Res*. 2002; 31:123-130. <u>Recommended</u>: Babbie E. Laud Humphreys and research ethics. *International Journal of Sociology and Social Policy*. 2004; 24: 12-19. Nardi PM. "The Breastplate of Righteousness": Twenty-five years after Laud Humphreys' tearoom trade: Impersonal sex in public places. *J Homosexuality*. 1995;30:1-9.

			Glesne C. But is it ethical? Learning to do it right. (Ch. 6). *Becoming Qualitative Researchers: An Introduction*. 3rd ed. Boston: Pearson, 2006.
14	5/11/15	Student Research Projects	**DUE:** Student Presentations (10 min)
15	5/18/15	Student Research Projects	**DUE:** Student Presentations (10 min) **FINAL PAPER DUE MAY 22, 2015**

PUBH 806 – Spring 2015: Assignment Schedule

Session	Due Date	Assignment
Session 1	2/2/15	- Assigned readings - Post research idea on Bb
Session 2	2/9/15	- Assigned readings - Reflexive Memo and CITI completion certificate
Session 3	2/18/15 (Online - Bb) (Morgan handbook)	- Assigned readings - Quantitative questions exercise (student pairs)
Session 4	2/23/15	- Assigned readings - Central Research Focus and Methods Proposal (draft)
Session 5	3/2/15	- Assigned readings
Session 6	3/9/15	- Assigned readings - Central Research Focus and Methods Proposal (revised)
Session 7	3/16/15	- Assigned readings - Data Collection Guide/Instrument
Session 8	3/23/15	- Assigned readings
Session 9	3/30/15	- Assigned readings
SPRING RECESS	4/6/15	- Work on individual/group research projects
Session 10	4/13/15 (Choose **either** this assignment **or** 1 of the 2 for next week)	- Assigned readings - Index/Code Book (code families and sub-code definitions developed *up to this point)*
Session 11	4/20/15	- Assigned readings - Data Display *or* Analytic Memo (types of data analysis processes, for where ever you are *at this point*)
Session 12	4/27/15	- Assigned readings
Session 13	5/4/15	- Assigned readings
Session 14	5/11/15	Final Project Presentations (10 min)
Session 15	5/18/15	Final Project Presentations (10 min) **FINAL PAPER DUE 5/22/2015**

Degree Program Competencies	Course Learning Objectives	Most relevant sessions and assignments (objectives may also be touched upon in other sessions)
This course will help you to achieve the following core competencies, which are expected of all DPH graduates	**After successfully completing this course, you are expected to be able to:**	
Synthesize and apply methods, theories and data from multiple disciplines to understand and solve population health issues	• Describe the strengths and limitations of 4 different approaches to qualitative research (focus groups, in-depth interviews, observational methods, content/document analysis) • Identify the various limitations associated with close-ended data collection items (questions) and revise such items to open-ended formats	1-8; Quantitative-Qualitative Questions Exercise; Reflexivity Memo; Research Proposal
Design and conduct etiological, intervention, policy, implementation science and other empirical studies that contribute to new knowledge about population health	• Design a study on a public health topic of interest that uses one of the qualitative methods described above • Implement a pilot version of the study using an qualitative sampling approach and data collection method appropriate to the central research focus	2-8; Quantitative-Qualitative Questions Exercise; Research Proposal; Codebook; Data Display/Analytic Memo
Implement professional and organizational ethical guidelines in population health research and practice.	• Evaluate a qualitative study design to determine its compliance with established standards for the conduct of research with human subjects	13; CITI certification; Research Proposal; Final Presentation (14-15); Final Paper
Generate, translate, communicate, and disseminate population health evidence to diverse audiences	• Analyze qualitative (text-based data) using inductive (ground theory) methodology to make data-supported claims • Synthesize research findings in the form of a final written report and oral presentation	9-13; Final Presentation (14-15); Final Paper

CUNY SCHOOL OF PUBLIC HEALTH

COURSE SYLLABUS

The Graduate Center
PUBH 80700 Practicum Project
3 Credits
Spring 2016

Time and location	This course will not meet.
Instructor	Daliah Heller, PhD MPH daliah.heller@sph.cuny.edu
Office hours	By appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	The DPH Practicum Project is a planned, supervised and evaluated experience that allows students to apply the knowledge and skills that they have acquired through learning experiences in a practice setting. The DPH Practicum Project requires 180 practicum hours that can be completed in a range of organizations across New York City or elsewhere. Students must document how the 180 practicum hours are spent. The student must complete a detailed learning plan, a summary report (that includes objectives), a self-evaluation, and a final report.
Course prerequisites	PUBH 800, PUBH 801
Course format	The pedagogical component of this course will be administered online, including all assignments. The student will meet individually with the Course Instructor at least twice during the semester (Practicum Project period).
Required reading and resources	N.a.
Suggested reading and resources	N.a.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
Identify, develop, evaluate and recommend policy and programmatic interventions to improve population health at individual, community, government and country levels based on empirical evidence of social, political, cultural, biological, economic, historical, behavioral, environmental, and global factors in health and disease.	Apply public health knowledge and skills to design, implement monitor, and assess health-related interventions.	• Learning Plan • Progress Report • Final Report
Assess the mechanisms and pathways by which factors influence individual and population health.		
Synthesize and apply methods, theories and data from multiple disciplines to understand and solve population health issues.	Demonstrate the application of cross-disciplinary methods, theories, and data in public health practice.	• Final Report
Generate, translate, communicate, and disseminate population health evidence to diverse audiences	Present and discuss public health research and practice in diverse settings and audiences.	• Final Report • Project-related products • Self-reflection paper
Demonstrate leadership skills to facilitate the goals of population health research and practice.		
Design and deliver innovative educational experiences that promote learning about population health in academic and practice-based settings	Apply public health research and practice innovation to a wide array of settings and situations	• Learning Plan
Implement professional and organizational ethical guidelines in population health research and practice.	Thoroughly articulate and address ethical issues in public health research and practice.	• Self-reflection paper

Secure resources to conduct population health research and practice	Identify sources of funding and material support for public health research and practice.	• Self-reflection paper

Course Assessments

Over the course of the semester, the student is required to submit four assessments: a detailed Learning Plan, a Progress Report, a Final Report, and a Self-Evaluation paper. Though not graded, the Project Preceptor must also complete and submit a Student Evaluation Report at the end of the Project.

Grading

Evaluation criteria

Student progress in the Practicum will be measured with the documents submitted over the course of the semester. A rubric is posted with each Assignment on the Blackboard course website, detailing the measures by which it will be assessed.

The relative weight of each course component is as follows:

Assessment	Weight
Learning Plan	15%
Progress Report	10%
Final Report	60%
Preceptor Evaluation	Not graded
Self-Evaluation	15%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

The final course grade will be determined using the performance assessment described above, and resulting in a Pass (70% or higher) or a Fail (less than 70%) grade.

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course.

Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

While the program discourages students from taking Incompletes, under some circumstances, an Incomplete may be the only option for completing the Practicum Project. **A request for an Incomplete must be approved by the Course Instructor, and the incomplete grade must be resolved by the end of the subsequent semester.**

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation

No class will be given for this course. Students must submit Assignments to the course Blackboard site by the deadline posted. Students will be required to meet with the Course Instructor at least twice during the semester.

Late/incomplete submission of assignments

Late assignments will not be accepted unless approved by the Course Instructor, and with sufficient documentation describing the reason for lateness.

Make-ups, rewrites, and extra credit

No make-ups, rewrites, or assignments for extra credit will be offered.

Expectations of students

Students are expected to submit Assignments on time, to participate respectfully on the course Blackboard website, and to communicate with the Course Instructor on progress and problems related to the Practicum Project, as soon as issues arise.

Expectations for the instructor

The Course Instructor will grade Assignments and post results within five days of submission. The Course Instructor will respond to all emails from students within 48 hours of receipt, and will arrange face-to-face meetings with students as requested, and with Preceptors, as necessary.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule

This course schedule is subject to change.

For important dates in the semester process, please refer to the current academic calendar.

Session	Date	Topic	Assignment
1	February 1	Introduction and review of Practicum Project expectations	ONLINE PARTICIPATION: Students must log on to the Blackboard course, and on the Discussion topic provided, create a new thread introducing themselves and providing a 2-3 sentence description of their Practicum Project. Students must comment on at least one other student's posting. **DUE: By February 8**
2	February 1 thru February 12	Individual meeting with Course Instructor	IN-PERSON MEETING: Schedule and meet with Course Instructor to review Practicum Project work-plan and discuss detailed Learning Plan.
3	February 15	Learning Plan assignment	ASSIGNMENT SUBMISSION: **DUE: By February 14** Prepare a detailed Learning Plan for your Practicum Project, and submit to Blackboard
4	March 7	Progress Report assignment	ASSIGNMENT SUBMISSION: **DUE: By March 13** Prepare a progress report on your Practicum Project work to date, and submit to Blackboard and to your Practicum Sponsor.
5	May 2 thru May 13	Individual meeting with Course Instructor	IN-PERSON MEETING: Schedule and meet with Course Instructor to review Practicum Project progress and discuss plans for Final Report.

6	May 16	Final Report assignment	ASSIGNMENT SUBMISSION: **DUE: By May 16** Submit a comprehensive final report on your Practicum Project, demonstrating how the Project objectives were achieved. Submit via Blackboard, and include any attachments produced for the Project.
7	May 16	Practicum Sponsor evaluation of student	EVALUATION SUBMISSION (not graded): **DUE: By May 19** Practicum Sponsor must email a completed, co-signed evaluation form to Course Instructor. *Student should also upload the completed evaluation form to the Final Report submission on Blackboard.
8	May 16	Self-reflection	ASSIGNMENT SUBMISSION: **DUE: By May 20** Via Blackboard, submit a final self-evaluation of your work on the Practicum Project.

DPH CSH SPECIALIZATION

CUNY SCHOOL OF PUBLIC HEALTH

PUBH 810: Community Health Interventions: Theory and Methods
Spring 2016

Catalogue description	This course prepares students to lead research/intervention teams that plan, implement and evaluate community health interventions in community settings.
Course meets	Online (asynchronous) plus 4 in-person seminars at 55 W. 125th Street
Instructor	Professor Terry Huang, PhD, MPH, CPH
Email	terry.huang@sph.cuny.edu [email is the best way to reach me]
Phone	646-664-8358
Office	55 W. 125th Street, Room 803, New York, NY 10027
Office hours	By email appointment
Pre-Requisite	PUBH 811
Required books	Brownson RC, Colditz GA, Proctor EK. Dissemination and Implementation Research in Health: Translating Science to Practice. New York, NY: Oxford University Press, 2012. **[hereafter referred to as DIRH]** http://www.amazon.com/Dissemination-Implementation-Research-Health-Translating/dp/0199751870/ref=sr_1_1?ie=UTF8&qid=1419372460&sr=8-1&keywords=dissemination+implementation+research+health Brownson RC, Baker EA, Leet TL, Gillepsie KN, True WR. Evidence-Based Public Health (2nd ed). New York, NY: Oxford University Press, 2011. **[hereafter referred to as EBPH]** http://www.amazon.com/Evidence-Based-Public-Health-Ross-Brownson/dp/0195397894/ref=sr_1_fkmr0_2?ie=UTF8&qid=1419372762&sr=8-2-fkmr0&keywords=Evidence-Based+Public+Health++%282nd++ed%29.+New+York%2C+NY%3A+Oxford+University+Press%2C+2011.
Recommended books	Institute of Medicine. Bridging the Evidence Gap in Obesity Prevention: A Framework to Inform Decision Making. Washington DC: The National Academies Press, 2010 http://www.iom.edu/Reports/2010/Bridging-the-Evidence-Gap-in-Obesity-Prevention-A-Framework-to-Inform-Decision-Making.aspx
Reserve material	N/A
Other required materials	N/A

Course Assessment
Your understanding of the course material will be evaluated through online discussion boards, hands-on survey development and fieldwork, active participation in in-person seminars, and a group intervention implementation design proposal.

Discussion Boards (20%; 5% for each discussion board)
The instructor will initiate the first discussion board. Subsequently, each student in the class will be responsible for initiating/leading one discussion in the typical graduate seminar style except that the discussion will be conducted on Blackboard. Each discussion will include the student's synthesis/reflection on the readings assigned that week. In addition, the student is expected to introduce a new article to the class pertaining to the topics of the month (approximately one discussion board per month). Depending on the size of the class, more than one student may be tasked to initiate/lead a discussion for each discussion board. Students leading the discussion should prepare the readings at least one week ahead of time so that all students are able to participate in the discussion the following week. New articles should be emailed to the instructor for posting on Blackboard before the beginning of a discussion board. Grading for each student will be based on the following:

- When leading a discussion, timely initiation of discussion and posting of article on 1 discussion board
- Quality of participation/comments on discussion boards

Development of Community Survey (10%)
Using an online Wiki or document sharing environment, students in the class will draw on readings and additional literature review to co-develop a short interview survey to be deployed in the field as part of the course project (see Proposal below). The class will reach consensus on the final survey to be used across communities. Grading will be based on:

- Active participation in the online exchange (5%)
- Original contributions to the class product (5%)

Proposal (60%)
Students will be randomly divided into small groups. Each small group will select certain communities as its focus (to be defined once the course commences). We will use the typical NIH grant proposal format. The proposal is divided into 5 parts:

- Significance of the Problem and Community Brief (2-3 pages single-spaced): nature of the implementation problem; assessment of barriers/enablers for the optimization of intervention strategies undertaken in the selected communities; public domain data should be used where appropriate (10%);
- Summary of Fieldwork (1-2 pages single-spaced): summary of field research findings informing the implementation design (field observations, interviews, surveys etc. to be drawn from course materials and literature); this typically goes into the "preliminary findings" section of grant proposal (20%);

- Intervention Implementation Plan (3-4 pages single-spaced): design of intervention strategies to enhance enablers and/or overcome barriers (15%);
- Evaluation Plan (2-3 pages single-spaced): strategies to measure the success or failure of proposed strategies (5%);
- Sustainability and dissemination plan (1-2 pages single spaced): strategies to increase the sustainability of what is proposed for implementation and strategies to scale up (i.e., expand, made more comprehensive, increase the reach or systematize) or diffuse (i.e., spread to other settings or populations) (15%).
- Final proposal overall improvement (5%)

A logic/theoretical model should accompany the intervention and evaluation plan. Additional tables and figures are welcome (maximum 4). Your final proposal should be 12 pages single-spaced (standard Arial font 12 and 1-inch margins on all sides). Feedback will be provided in writing and/or during seminar along the way to give each group the opportunity to refine the proposal and present the best product possible at the end of the semester.

In-Person Seminars (8%; 2% each)

New tools and special topics will be covered during seminars. We will also use part of the class time to trouble-shoot the various components of the course project. Attendance is mandatory. Grading will be based on:

- Attendance (1%)
- Active participation (1%)

Grading

		(Dates, if applicable)
2%	Personal Profile	2/7
20%	Discussion Boards 1-4	Varied (see below)
10%	Development of Community Survey	2/28
60%	Proposal	
	Significance/Community Brief (10%)	2/21
	Summary of Fieldwork (20%)	4/17
	Intervention Implementation Design (15%)	
	Evaluation Plan (5%)	4/17
	Sustainability/Dissemination Plan (5%)	5/15
	Final Proposal Overall Improvement (5%)	5/15
8%	In-Person Seminars (2% each)	Varied (see below)
100%		

The grading scale is as follows:

A+	97.5%-100%		**B-**	80.0 – 82.4%
A	92.5 – 97.4%		**C+**	77.5 – 79.9%
A-	90.0 – 92.4%		**C**	72.5 – 77.4%
B+	87.5 – 89.9%		**C-**	70.0 – 72.4%
B	82.5 – 87.4%		**F**	0.0 – 69.9%

Attendance and class participation

Each student is expected to participate fully in all online discussions, in-person seminars, and assignments. This course is designed to be online plus 4 in-person seminars. Dates for in-person seminars will be arranged once the course begins. Although the course is mostly asynchronously online, students are responsible for following weekly sessions via Blackboard. In each weekly folder, there are specific readings, assignments, information, and other tasks that need to be completed. Students must keep up with the Blackboard course from week to week. Students are expected to log into online discussion at least every other day to stay on top of any discussion or respond to comments. For group projects, all students must contribute equally.

Remember, it takes effort to succeed in an online course. Online courses are not merely didactic; rather, students are expected to discover and generate new knowledge through a variety of materials, assignments, projects and group interaction.

Lateness and absences

Not applicable to online components. In-person seminars are mandatory and graded.

Late submission of assignments

Late homework submission will not be graded. Exceptions can only be made in extreme situations such as illness or death in the family. Should this occur, students are expected to notify the instructors at the earliest moment possible. Failure to complete required weekly activities will result in no scores for those activities missed.

Class citizenship & rules of conduct

When communicating or completing your assignments online via Blackboard, pay attention to the following:

1. Check before you post. Always check whether a similar question that has been posted and answered on the discussion board to avoid duplicated messages and responses.
2. Use a descriptive subject line that reflects the content of your message. It makes the discussion/communication more efficient.
3. Write in short paragraphs or use bullets to break down your ideas into smaller chunks of information. This will make your postings easier to read. Avoid using more than 200 words per post.
4. Do not write in all uppercase. USING ALL CAPS MEANS YOU ARE SHOUTING although you may not mean it.
5. Avoid using sarcasm as it often is interpreted as rude and hurtful.
6. Do not edit or change message content when someone has already responded to you. If you have something to add or change, simply add a follow-up message.
7. People in this course may come from places around the world, so be respectful to diverse perspectives, cultures, and languages.
8. Be professional and engage with others respectfully.

Email correspondence

Email correspondence with instructors is preferred. Any problems you encounter during the course should be communicated to the instructors by email as soon as possible. We also welcome your email feedback on how we can improve your experience in the course. The instructors will generally respond to email within two business days.

Institutional policies (provide website link)

Accessibility

Among other responsibilities, the CUNY Graduate Center Vice President for Student Affairs has overall responsibility for Student Disability Services and is the 504/ADA Coordinator.
Vice President for Student Affairs - Matthew G. Schoengood
Room: GC 7301; telephone: 212-817-7400; e-mail: studentaffairs@gc.cuny.edu

Academic integrity

While you are encouraged to discuss ideas with each other to facilitate your learning experiences, the work that is turned in must be your own. For example, allowing someone to copy your work, passing or sharing your answers to others, and/or doing work for others (including computer assignments) are examples of violations of Academic Integrity. For more information please visit and read the University of California Davis website (http://sja.ucdavis.edu/academic-integrity.html) or visit the Center for Academic Integrity at Clemson University (http://www.academicintegrity.org) for a detailed description of academic integrity. One of the more common and destructive breaches of academic integrity is plagiarism. Visit the Plagiarism.org Learning Center (http://www.plagiarism.org) for more information on how to avoid plagiarism. The concerns and guidelines provided in these websites will be seriously applied in this course. Please see also the section on "Academic Honesty" in the GC Student Handbook (p.58).

Help with research and writing

Writing tutorials can be found at: http://jjc.jjay.cuny.edu/erc/writing/.

Last day to drop the course with the grade of "W"

The last day to drop the course is Feb. 19, 2016.

Grade of incomplete

See the section "Incomplete Grades" in the GC Student Handbook (p.52).

Grade appeals

See the section "Academic Disputes Concerning Grades" in the GC Student Handbook (p.64).

Schedule

Session	Date	Topic	Readings	Assignments
1	Feb 1 – Feb 7	Case Study: Community Parks Initiative Review of Models and Theories Introduction to Program Planning: Precede-Proceed	EBPH Ch. 9 Handout on Precede-Proceed Additional readings for those who have not taken an MPH-level community health intervention course or want a refresher	Personal Profile (brief bio + picture) (2/7)
2	Feb 8 – 14	Community Change Process Community Readiness Model	http://ctb.ku.edu/en/get-started http://ctb.ku.edu/en/best-change-processes http://triethniccenter.colostate.edu/communityReadiness_home.htm	Discussion Board 1 (Initiated by 2/8)
3	Feb 15 – 21	Assessing Community Barriers/Enablers for Intervention Implementation Public mobilization and integrating top-down and bottom-up approaches	EBPH Ch. 4, 5, 10 http://ctb.ku.edu/en/table-of-contents/assessment/assessing-community-needs-and-resources http://www.thelancet.com/pdfs/journals/lancet/PIIS0140-6736(14)61743-8.pdf	COMMUNITY BRIEF DUE (2/21)
4	Feb 22 – 28	Seminar #1		COMMUNITY INTERCEPT SURVEY FINALIZED & DEPLOYED (2/28)
5	Feb 29 – Mar 6	Implementation & Dissemination Research I	DIRH Ch. 1, 2, 3, 9

15	May 16 – 22	Seminar #4		

DPH Competencies	Course Learning Objectives	Assessment Methods
This course will help you achieve increased competency in community, society and health. By the time you graduate, you should be able to:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be assessed as follows:
4. Apply concepts, theories and methods from two or more disciplines to the study of urban health	• Articulate individual, social, environmental, and policy enablers and barriers to the implementation of community interventions. • Describe contemporary issues in implementation and dissemination research.	Discussion boards Proposal development
5. Design intervention or policy research studies that contribute to new knowledge about urban health	• Develop a community intervention with particular emphasis on implementation using a methodical approach.	Fieldwork Proposal development
6. Select methods and theories from diverse disciplinary perspectives to apply to the study of urban health and demonstrate a capacity to combine methods and disciplines in order to achieve fuller understanding of urban health issues	• Apply program planning models, community change frameworks, and evaluation frameworks from public health, social sciences, and management to the design of community interventions.	Survey development Proposal development
9. Demonstrate proficiency in each of the following areas and advanced skills in at least two of the following areas: (1) written communication with diverse constituencies, (2) collection and analysis of data on population health, (3) familiarity with health-related cultural beliefs and practices of at least two populations, (4) management of complex health projects, (5) teaching public health and (6) policy analysis and advocacy	• Synthesize original research from the literature that offers new insights into the design, implementation, evaluation, dissemination, and sustainability of community interventions. • Develop an intervention proposal modeled after a typical grant format that can be directly translated to a real-life community context. • Provide a plan on the management and operations of a community intervention in a real-life setting.	Discussion boards Proposal development Seminars

Specialization/ Track Competencies	**Course Learning Objectives**	**Assessments**
This course will help you to achieve the following track specific competencies, which are expected of Community, Society and Health track DPH graduates	After successfully completing this course, you are expected to be able to:	
1. Assess community needs, assets and capacity to promote health.	• Conduct needs assessment of a community to ascertain intervention implementation enablers and barriers. • Incorporate social determinants in the assessment of community needs.	Discussion boards Survey development Fieldwork Proposal development Seminars
2. Apply quantitative and qualitative or, when appropriate, mixed methods to community health research and evaluation.	• Propose how methods and theories from at least three disciplines (e.g., psychology, public health, management) complement each other to enhance the design of a community intervention. • Integrate diverse models, theories and frameworks in the evaluation design of an intervention. • Describe how the implementation, dissemination and sustainability of an intervention designed in the course can be optimized in a real-life context.	Proposal development Discussion boards Seminars
3. Investigate through multidisciplinary methods the potential implications and impact of policies and politics in health, education, justice, housing, welfare, child and family services and other sectors on individual and community health.	• Demonstrate how policy barriers can be overcome and how policy enablers can be enhanced for the implementation or dissemination of community interventions.	Proposal development Discussion boards
4. Develop and teach educational curricula on community health using theories and methods from the social sciences and public health disciplines.	• Incorporate a plan for how community residents would be engaged in the implementation of an intervention.	Proposal development

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

PUBH 82000 Epidemiological Methods 1
3 Credits
Spring 2016

Time and location	Silberman, 322 (and C05), Wed 6:05-7:50
Instructor	Professor C Mary Schooling, PhD Email: mschooli@hunter.cuny.edu Phone: 212 396 7753
Office hours	Wednesdays 4:00pm – 6:00pm, by appointment or walk-in Silberman 545
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course will provide an in depth understanding of the design and conduct of epidemiological studies, including causal inferences, measurement, major study designs and threats to validity
Course prerequisites	
Course format	Lecture/Seminar
Required reading and resources	Aschengrau A & Seage GR. *Essentials of Epidemiology in Public Health*, 2nd edition, Jones and Bartlett publishers, 2008 And reading on blackboard, see schedule
Suggested reading and resources	Susser E, Schwartz S, Morabia A, & Bromet EJ. Psychiatric Epidemiology, 1st edition, Oxford University Press, 2006

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Identify key sources of data for epidemiologic purposes	1. Describe the design of major US surveys (NHANES) and explain how this affects analysis of the survey	Worksheet 1
2. Use measures of disease frequency and association to appropriately describe the distribution and determinants of disease, and appropriately characterize statistical uncertainty around such estimates	2. Distinguish between incidence and prevalence 3. Compare the role of causal factors and predictors in public health 4. Explain the scientific process and the role of refutation in epidemiology 5. Explain the relation between different measures of association 6. Compare the interpretation of absolute and relative risk 7. Test hypotheses regarding associations of health with environmental, demographic, social and economic factors	Worksheet 1 Worksheet 1 Worksheet 1 Worksheet 2 Worksheet 2 Midterm and Final
2. Select epidemiologic study designs, data collection techniques, and analytic approaches suitable for different scientific inquiries	1. Evaluate the relevance of the Bradford Hill criteria to the scientific method 2. Draw a directed acyclic graph for a research question using an RCT, a cohort study and a case-control study	Worksheet 3 Worksheet 4

	3. Compare the biases generated by selection bias and confounders 4. Describe the uses of instrumental variable analysis in public health 5. Explain the "Table 2" problem 6. Compare inferences that can be made from cohort study and RCT 7. Compare and contrast different types of case-control studies, and the measures they generate 8. Compare different methods for identifying confounders 9. Evaluate a study against the relevant checklist 10. Explain how to assess internal and external validity 11. Explain additive and multiplicative effect modification 12. Explain mediation 13. Evaluate a screening test 14. Calculate NPV, PPV and explain their determinants 15. Identify and communicate the limitations of specific research projects 16. Explain why most research findings are false 17. Design a study	Worksheet 4 Worksheet 4 Worksheet 5 Worksheet 5 Worksheet 7 Worksheet 8 Worksheet 9 Worksheet 11 Worksheet 12 Worksheet 13 Worksheet 14 Paper Study design Midterm and Final
3. Use statistical software to collect, retrieve, analyze and summarize epidemiologic data	1. Implement descriptive and analytic analyses in SAS 2. Select appropriate statistical methods for the data type and the research question	Computer assignments Midterm and Final

Course Assessments

The course will be assessed based on a two written assignments, 3 computer assignments, 12 worksheets, a midterm and a final.

Grading

Evaluation criteria

Written Assignments:

1) **Paper:** Students are asked to write a position paper discussing the levels of evidence needed for policy. Specifically: What level of evidence do you need for policy? Your paper should include a discussion about what we mean by a cause in epidemiology (definition), how we conceptualize causes and try to identify them in epidemiology, with specific reference to the thinking behind the RCT, cohort and case control study designs, and the limitations of epidemiology in identifying causes? The purpose of the position paper is to help students organize their thoughts on a topic of importance in epidemiology and develop an informed argument to support their ideas. The paper should begin with a clear statement of the student's position, or thesis, followed by a structured argument supporting that thesis, describing and discussing the limitations of the counter-arguments.
2) **Study Design:** Students are asked to design a study to assess the effect of a dietary element on cardiovascular events

The written assignments should be no more than 5 pages long, single spaced, 12-point font with 1 inch margins. Please ensure all statements of fact are referenced.

Grading rubrics for the written assignments

	(A+ to A-)	(B+ to B-)	(C+ to C)	(F)
Paper	Provides a comprehensive synthesis of the topic with appropriate examples and discussion of the implications for practice	Identifies the implications of the key points in the topic, provides some examples and relevance to practise	Describes the main concepts in the topic	Inability to identify and describe the main concepts
Study Design	Provides a comprehensive and detailed design for a feasible and cost-effective study	Provides a thorough design for a feasible study	Provides a design for a workable study	Inability to design a feasible study

Students are to complete 3 computer assignments, these are computer exercises.

Students are to complete 12 worksheets of mainly short answer questions about the topics covered in the lectures.

Midterm Exam: Students will have a take home midterm exam to complete in 1 week, consisting of short answer questions about topics covered during class lectures and in readings. Students must work independently and not discuss the exam with classmates.

Final Exam: The final exam will be a take-home computer assignment involving statistical analysis in SPSS of an analytic question, and students are expected to analyze the provided data, interpret findings in the context of the literature, and draw conclusions. The exam must be completed independently and students may not discuss the exam with classmates. Students will be given the questions 1 week before the exam is due.

The relative weight of each course component is as follows:

Assessment	Weight
Written Assignment	40
Computer Assignments	20
Worksheets	24
final	20
Midterm	16
	120

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty

generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation
Attendance is mandatory and class participation may generate extra credit.

Late/incomplete submission of assignments
Late or incomplete assignments will be accepted at the discretion of the instructor

Make-ups, rewrites, and extra credit
Make-ups and not available, but rewrites are allowed.

Expectations of students
- You must sign up for Blackboard so that you can receive course readings, updates and obtain lecture notes and other handouts. For instructions on registering for a portal account in order to access Blackboard, go to: https://portal.cuny.edu/portal/site/cuny/index.jsp?epi-content=LOGIN.
- Please forward your CUNY e-mail to your most frequently checked e-mail address. Check your e-mail regularly so that you can receive emergency communications and periodic updates about the class.
- You are expected to complete readings and written assignments prior to class.
- Any written assignments should be uploaded to blackboard by 4pm on the day of the class.
- Students are expected to participate in class discussions, treating their classmates and the instructor with respect.

Statistical analysis will be conducting using SAS. Students should be aware that they can bring their laptop computers to the CUNY School of Public Health library and get SAS software loaded for their home use. SAS has an excellent help menu and that there is a large amount of SAS code available online easily accessible through Google..

Expectations for the instructor
- Power Point lecture slides will be available for download on Blackboard after class.

- The instructor is available during office hours and by appointment to assist students with assignments, course material, and exam preparation. The preferred method of communication with the instructor is e-mail.
- Grades for each piece of work will be uploaded to blackboard within a week.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule

The schedule is subject to change throughout the semester.

- Please refer to the current academic calendar for important dates (for example: holidays, course drop, course withdrawal).

Course schedule

Session	Date	Topic	Reading	
1	3feb16	Introduction and review	None	
2	10feb16	Review measures of effect and data analysis	Assigned Readings: 1. Aschengrau text Ch. 2 & 3. 2. Northridge ME. Annotation: public health methods—Attributable risk as a link between causality and public health action. *American Journal of Public Health* 1995; 85:1202-1204. 3. Morabia A. The Essential Tension Between Absolute and Relative Causality *American Journal of Public Health* 2001; 91(3): 335-336 4. Davies HT, Crombie IK, Tavakoli M. When can odds ratios mislead? British Medical Journal 1998; 316: 989-991. Recommended readings: 1. Zhang J, Yu KF. What's the relative risk? A method of correcting the odds ratio in cohort studies of common outcomes. *JAMA* 1998; 280: 1690-1691. 2. Schwartz LM, Woloshin S, Dvorin EL, Welch HG. CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

PUBH 822 Epidemiology Methods III
3.0 Credits
Spring 2016

Time and location	The Graduate Center (34th Street & 5th Avenue) room C01 Wednesdays 6:30-8:30pm
Instructor	Associate Professor, Elizabeth Kelvin, PhD, MPH Silberman building (2180 Third Avenue on 119th Street), Room 543 E-mail: ekelvin@hunter.cuny.edu Phone: 212-396-7751 Email is preferred method of communication
Office hours	Indicate days and times (adhere to College specific guidance on office hours)
Course website	Black Board: https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This seminar exposes students to emerging concepts and methods in epidemiologic research and provides students with an opportunity to consider how these strategies complement, and advance the more commonly used strategies in epidemiology.
Course prerequisites	PUBH821 or EPI751 with a grade of B or better or an equivalent course. Some SAS proficiency is assumed
Course format	This class is taught as a combination of lecture, student presentation/student-led group discussion, computer-based data analyses, and short analytic papers. In general, the first hour of class will be used for lecture and discussion of the readings, and the second hour will be used to work on either a computer-based exercise or a case study. The computer based exercises provide an opportunity to practice applying methodologies discussed, and case studies provide an opportunity to understand how the methods are used to address a real world challenge.
Required reading and resources	• Rothman, KJ and Greenland, S. Modern Epidemiology, 3nd edition. Lippincott-Raven, 2008 • Hernan M. Causal Inference, 1st edition. Chapman & Hall/CRC, 2011. Draft chapters available at: http://www.hsph.harvard.edu/faculty/miguel-hernan/causal-inference-book/ • Additional readings as described below
Suggested	For help with SAS programming, goggle is usually very helpful, but

reading and resources	students may also consider referring to the following suggested textbooks: (1) Delwiche, LD & Slaughter, SJ. 2008. The Little SAS Book: A Primer (4th edition). Cary, NC: SAS Institute, Inc. (2) Cody, RP & Smith, JK. 2005. Applied Statistics and the SAS Programming Language (5th edition). Upper Saddle River, NJ: Prentice Hall.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Determine the influence of social, cultural, historical, behavioral and biological factors in population health.	• Conduct in-depth epidemiologic analyses using data from local and public use datasets • Recognize how epidemiologic studies can build upon routine or mandatory administrative data sources	• Papers and student presentations
2. Operationalize studies of the complex interactions between multiple determinants of population health in a variety of settings, exploiting the differences between settings as a source of insight.	• Use descriptive statistics to characterize disease states in the context of an analytic study. • Develop testable research hypotheses using principles from causal theory, including causal diagrams • Operationalize hypotheses into statistical testing strategies	• Papers & student presentations
3. Design and implement research projects that: a. Quantify health and the burden of disease in populations b. Perform surveys and risk factor analyses c. Apply causal inference to study design, study implementation and data analysis d. Identify vulnerable populations and their attributes; apply rigorous methods to examine and monitor health disparities	• Use descriptive statistics to characterize disease states in the context of an analytic study. • Develop testable research hypotheses using principles from causal theory, including causal diagrams • Operationalize hypotheses	• Papers and student presentations

e. Identify effective interventions to improve population health equitably f. Evaluate the effectiveness of interventions designed to improve population health g. Give appropriate attention to the potential for bias, as well as exposure and outcome measurement issues	into statistical testing strategies	
4. Conduct public health surveillance of diseases, events, and health states, as well as their risk factors and drivers.	• Use descriptive statistics to characterize disease states in the context of an analytic study	• Papers and presentations
5. Demonstrate mastery of causal inference and apply these techniques to scientific questions relevant to at least two current public health issues or population groups that are relevant to the student's substantive content interests.	• Develop testable research hypotheses using principles from causal theory, including causal diagrams • Recognize key sources of bias and measurement error in published literature and their potential effects	• Papers and student presentations
6. Identify and apply appropriate biostatistical approaches to analyses that address epidemiological questions in public health research and practice	• Develop capacity to complete in-depth epidemiologic and statistical analyses using SAS	• Papers and student presentations

Course Assessments

Short analytic papers: Students will complete three papers presenting the results of data analysis. All short papers should be 6-8 pages of text (double-spaced, 12-point font, 1 inch margins). Papers must be handed in on paper on the assigned day. If a student is unable to attend class on the day when a paper is due, the paper may e-mail it to the class instructor. The e-mail must be sent before the beginning of the class when the paper is due (i.e. by 6:30 pm). Students e-mailing papers will be sent an acknowledgement of receipt. If you do not receive an acknowledgement within 24 hours of e-mailing the paper, contact the instructor to make sure that the e-mail went through. Late papers will have 5 points deducted for each day they are late (including holidays and weekends. Papers should roughly be organized according to the following format:

Brief introduction/Literature review	(1-2 page)
Methodology	(2-3 pages)
Results	(1-2 pages)
Discussion	(1-2 pages)
Tables & Figures	(1-5, not included in the 10 page limit)
List of Citations	(As many as necessary)
Appendix with annotated SAS syntax	(as many as necessary)

Students may submit as many tables and figures as they wish to accompany this paper to demonstrate their systematic analysis strategy, but recall the power of parsimonious presentation (fewer is sometimes better). Tables may be in formats that are more work-in-progress than typically seen in published journals (for example, explorations of confounding or interaction can be shown). All tables and figures should be numbered and include self-explanatory titles and labels and go at the end of the paper. Tables and figures should be references in the text by table/figure number.

All analysis strategies should involve the following, when appropriate:

a) Basic descriptive epidemiology
b) Univariate analysis
c) Analysis for confounding
d) Analysis for interaction
e) Multivariable model building

Citations MUST be inserted into the paper using citation software (Endnote, Refworks, Zotero), which are available online (Graduate Center: http://libguides.gc.cuny.edu/c.php?g=159565&p=1045007 Hunter: http://library.hunter.cuny.edu/citation-tools). It is strongly suggested that students download (when appropriate) the software and start working with is in the very beginning of the semester to ensure that they are comfortable with the program by the time they start working on papers for the course. Five points will be deducted from papers that do not have the citations inserted using Endnote.

Individual presentations: Students will present the methods and results of each paper so that the different approaches taken can be compared and discussed. Missing a scheduled presentation will results in a zero grade for that presentation.

Group Session: Students will be randomly assigned into teams of 2-3. Each team will be responsible for teaching one class. While the responsible student team will present the material and lead the discussion, it is expected that ALL students will be prepared for and actively participate in the discussion, and participation grades will reflect the level of engagement in these discussions. If a student misses his/her scheduled presentation a grade of zero will be assigned for that component of the grade.

Attendance & class participation: Each student is expected to attend and actively participate in each class. Two absences are allowed with no effect on the participation grade

Grading

Evaluation criteria

The relative weight of each course component is as follows:

Assessment	Weight
Paper 1	25%
Paper 2	25%
Paper 3	25%
Presentation 1	5%
Presentation2	5%
Presentation 3	5%
Group Session	5%
Attendance & Participation	5%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation

Two absences are allowed with no effect on the participation grade

Late/incomplete submission of assignments

- Late papers will have 5 points (out of 100) deducted for each day they are late (including holidays and weekends
- Students who miss their scheduled presentation (individual or group) will receive a grade of zero which will be averaged into their course grade.

Make-ups, rewrites, and extra credit

There are no make-ups, rewrites, or extra credit assignments. This is an advanced graduate level course and as such it is assumed that students are able to manage their time and complete assignments at the high level expected for such a course.

Expectations of students

• This is an advanced, doctoral level epidemiology methods course. It is assumed that by this point students feel relatively comfortable writing research-style papers and conducting statistical analysis using SAS. Hunter students should be aware that they can bring their laptop computers to the CUNY School of Public Health library and get SAS software loaded for their home use. GC students can access SAS through the

intranet (contact It for support). SAS has an excellent help menu and that there is a large amount of SAS code available online easily accessible through Google. In addition, many publicly available data websites (e.g. the NYCDOH) provide sample SAS code for analyzing data collected using their complex sampling methods. Students should not expect to be given all the SAS code they will need to analyze the data for their papers and should plan to spend time searching for examples of the code they need.

- There are two software packages you will need to have access to in this class: (1) SAS and (2) citation software. Students should arrange access to the software and start using it early in the semester so s to be prepared when they start working on the assigned papers. The software for this course will also be available for student use at the following locations (1) on the laptop computers in the library in the Silberman building should have SAS and Endnote (2) the computer labs at 68th Street should have SAS and Endnote (hours can be found at this link: http://www.hunter.cuny.edu/it/it-services/computer-labs-alias), and the computers in the GC library should have this software. Most students will likely have to schedule time to come to their campus or some other computer lab to complete the class assignments. Students should keep this in mind when deciding when to take this class and in planning their schedules throughout the semester. Not having access to software is not a valid excuse for turning-in an assignment that is incomplete (e.g. does not have citations) or late.
- If a student will not be able to attend a class, assignments due on that day should be e-mailed to the instructor or, when appropriate, posted on BB before the class begins (e.g. before 6:30pm the day of the class) to receive full credit. The instructor will reply when a document is received via e-mail. If a reply is not received by the student he/she should contact the instructor to be sure that the assignment was sent correctly. Students should keep their sent e-mail to demonstrate that the assignment was turned-in and when, in the event that the instructor has a questions about this. Late assignments will receive a penalty in the form of a grade reduction.
- Students must turn in their own, independently written papers. However, students are encouraged to discuss their data analysis approaches and papers with colleagues.

Expectations for the instructor

- Power Point lecture slides will be available for download on Blackboard prior to class.
- Students can expect the instructor to start and end class on-time and give feedback on assignments in a constructive way.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule

The course schedule is subject to change throughout the semester.

COURSE SCHEDULE			
Date	**Lecture and Discussion Topics**	**Lab**	**Assignments Due (see below for readings)**
Class 1: Feb 3, 2016	Introduction & statistics review	Review of data analysis with SAS I	
Class 2: Feb 10, 2016	Causality & DAGS	Discussion	
Class 3: Feb 17, 2016	Developing and testing hypotheses & sampling	Data analysis of complex samples in SAS	
Class 4: Feb 24, 2016	Confounding & effect modification	Lab to explore confounding and effect modification	
Class 5: March 2, 2016	Cohort Analysis	Lab to explore person time	PAPER 1 DUE: DESCRITIVE ANALYSIS & HYPOTHESIS TESTING OF A CROSS SECTIONAL STUDY
Class 6: March 9, 2016	Student Presentations More on DAGS	Discussion	Student Presentations
Class 7: March 16, 2016	Model Development & DAGS	Lab to explore modeling	
March 23, 2016 follows a Friday schedule			
Class 8: March 29, 2016	Multilevel models	Lab I to explore neighborhood and multilevel models	
Class 9: April 6, 2016	More on Multilevel Models	Lab II to explore neighborhood and multilevel models	PAPER 2 DUE: ANALYSIS OF DATA FROM A COHORT STUDY
Class 10: April 13, 2016	Student presentation of paper 2 Analysis of case control study data	Lab to explore case control study data with without matching	Student Presentation

	with and without matching		
Class 11: April 20, 2016	Missing Data & Multiple Imputation Guest Lecture by: Matthew Romo, DPharm, MPH	Lab to explore multiple imputation in SAS	
April 22-30, spring recess			
Class 12: May 4, 2016	Internal validity and sensitivity analysis	Lab to explore sensitivity analysis	
Class 13: May 11, 2016	Other topic of interest TBD by class		
Class 14: May 18, 2016	Student presentations of paper 3 Putting it all together	Discussion	Presentation on paper 3
Class 15: May 25, 2016	NO CLASS MEETING		PAPER 3 DUE: NEIGHBORHOOD ANALYSIS

READING ASSIGNMENTS

Class 2 (February 10, 2016): Causality & DAGS
Required readings:
(1) Rothman Text Ch. 2 (Causality) & 6(Causal Diagrams)
(2) Hernan Website Ch. 1 (A Definition of Cause and Effect), Ch. 3 (Observational Studies) & Ch. 6 (Graphical representation of causal effects)
(3) Cornfield J et al. "Smoking and lung cancer: recent evidence and a discussion of some questions" JNCI 1959 (reprint IJE 2009; 38: 1175- 1191)

Recommended readings:
(1) Cox DR. "Commentary smoking and lung cancer: reflections on a pioneering paper" IJE 2009; 38: 1192-1193.
(2) Greenhouse JB. "Commentary: Cornfield, epidemiology and causality" IJE 2009; 38: 1199-1201.
(3) Vandenbroucke JB. "Commentary: 'Smoking and lung cancer'—the embryogenesis of modern epidemiology" IJE 2009; 38: 1193-1196.
(4) Zwahlen M. "'Commentary: Cornfield on cigarette smoking and lung cancer and how to assess causality" IJE 2009; 38: 1197-1198.

Class 3 (February 17, 2016): Developing and Testing Hypotheses & sampling
Required readings:
(1) Rothman Text Ch. 4, pp.51-62 (Measures of Effect), Ch. 10 (Precision) & Ch. 13, pp. 213-219 (Fundamentals of Analysis)
(4) Sakshaug JW & West BT. Important considerations when analyzing health survey data collected using a complex sample design. American Journal of Public Health 2014, 104(1): 15-16.
(5) Martin K. Analyzing Data from Complex Samples Using PROC SURVEYFREQ in SAS® 9.2. Available at: http://www.wuss.org/proceedings10/HOC/Analyzing%20Data%20from%20Complex%20Samples%20Using%20PROC%20SURVEYFREQ%20in%20SAS%C2%AE%209.2.pdf.

Class 4 (February 24, 2016): Confounding & effect modification
Required readings:
(1) Rothman Text Ch. 7 (confounding), Ch. 9 (Validity), Ch. 15 (Introduction to Stratified Analysis)
& Ch. 5 (concepts of Interaction)
(2) Hernan Website Ch. 7 (confounding) , Ch. 4 (Effect Modification) & Ch. 5 (Interaction)
(3) Sun X, Briel M, Walter SD, Guyatt GH. Is a subgroup effect believable? Updating criteria to evaluate the credibility of subgroup analyses. BMJ 2010; 340: 850-855.

Class 5 (March 2, 2016): Cohort Analysis Methods
Required readings:
(1) Rothman Text Ch, 7 (Cohort Studies)
Recommended readings:
(1) Hernan Website Ch. 17 (Causal survival Analysis)
(2) Samet JA. Perspective: cohort studies Epidemiol Rev 1998; 20(1): 135-6.
(3) Doll, Richard 2004 “Cohort studies: history of the method I. prospective cohort studies” pp. 75-86 in A history of epidemiologic methods and concepts, edited by A Morabia.

Class 7 (March 16, 2016): Model Development & DAGS

Required readings:
(1) Rothman Text Ch. 20 (Regression Models)
(2) Rothman Text Ch. 21 (Regression Modeling)
Recommended readings:
(1) Hernan Website Ch. 11 (Why Model?)
(1) Donders AR, van der Heijden GJ, Stijnen T, Moons KG. Review: a gentle introduction to imputation of missing values. J Clin Epidemiol 2006;59:1087-1091.

Class 8 (March 29, 2016): Multilevel Analysis
Required readings:
(1) Merlo J, Chaix B, Yang M, Lynch J, Rastam L. A brief conceptual tutorial of multilevel analysis in social epidemiology: linking the statistical concept of clustering to the idea of contextual phenomenon. J Epidemiol Community Health 2005;59:443–449..
(2) Diez-Roux A. The Study of Group-Level Factors in Epidemiology: Rethinking Variables, Study Designs, and Analytical Approaches. Epi Reviews 2004, 26: 104-11
(3) Theall KP et al. Impact of small group size on neighborhood influences in multilevel models. JECH 2010 May 27.
Recommended readings:
(1) Hubbard AE et al. To GEE or not to GEE: comparing population average and mixed models for estimating the associations between neighborhood risk factors and health. Epidemiology. 2010 Jul;21(4):467-74.
(2) Boone-Heinonen J et al. Where can they play? Outdoor spaces and physical activity among adolescents in U.S. urbanized areas. Prev Med. 2010 Jul 22

Class 9 (April 6, 2016): More on Multilevel Models
Required readings:
(1) Merlo J, Chaix B, Ohlsson H, Beckman A, Johnell K, Hjerpe P, Rastam L, Larsen K. A brief conceptual tutorial of multilevel analysis in social epidemiology: using measures of clustering in multilevel logistic regression to investigate contextual phenomena. J Epidemiol Community Health 2006;60:290–297.

Class 10 (April 13, 2016): Case-control analysis methods
Required readings:
(1) Rothman Text Ch. 8 (Case-Control Studies)
(2) Hernan Website Ch. 2 (RCT) & Ch. 3 (Observational Studies)
Recommended readings:
(1) Paneth N and Susser M 2004 “Origins and early development of the case-control study: part 2, The case-control study from Lane-Claypon to 1950” p. 360-365 in A history of epidemiologic methods and concepts, edited by A Morabia.

Class 11 (April 20, 2016): Multiple imputation with SAS
Required Readings
TBD

Class 12 (May , 2016): Internal validity & sensitivity analysis

Required readings:
(1) Hernan Website Ch. 8 (Selection Bias)
(2) Hernan Website Ch 8 (Selection Bias) & 9 (Measurement Bias)
(3) Cole SR et al. Illustrating bias due to conditioning on a collider. IJE 2010; 39:417-420
(4) Greenland S. Basic methods for sensitivity analysis of biases. Int J Epi 1996;2:1107-1116.
Recommended readings:
(1) Bodnar LM, Tang G, Ness RB, Harger G, Roberts JM. Periconceptual vitamin use reduces the risk of preeclampsia. Am J Epidemiol 2006;164:470-477.
(2) Hernán MA, Cole SR. Invited Commentary: Causal diagrams and measurement bias. Am J Epidemiol. 2009 Oct 15;170(8):959-962
(3) Shahar E. "Shahar Responds to ''Causal Diagrams and Measurement Bias'' Am J Epidemiol. 2009 Oct 15;170(8):963-964.

Class 13 (May 11, 2016):
Assigned Readings
TBD

NOTE: Additional readings may be added throughout the semester.

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

PUBH 824: Applied Biostatistics I
3 Credits
Spring 2016

Time and location	Thursday, 6:05-7:50 pm, Silberman (2180 3rd Ave), Room C05/C06
Instructor	Hongbin Zhang, PhD CUNY School of Public Health and Health Policy 55 West 125th Street, Room 806 Phone 646-664-8375 hongbin.zhang@sph.cuny.edu (preferred contact)
Office hours	I by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	For public health professionals to be effective, they must be able to ensure that policies and interventions are most effective in promoting healthy individuals, families and societies. Biostatistics provides epidemiologists with the necessary tool kit to appropriately analyze public health data. The emphasis of this class is on acquiring a set of foundational tools in regression models to apply to public health research questions and data. Topics include simple and multiple linear regression, ordinal and polytomous regression and model building techniques including assessing for multi-collinearity, effect measure modification, non-linearity and model fit statistics
Course prerequisites	Graduate-level introductory biostatistics course
Course format	This course is taught with a combination of lectures and in-class computer exercises using SAS. All materials are available on the course website.
Required reading and resources	Ford AC, et al. 2005. *American Journal of Epidemiology* 162:454-460. Hall SL, Greendale GA, 1998. *Calcified Tissue International* 63:183-189. Simanek AM, Dowd JB, Aiello AE. 2009. *International Journal of Epidemiology* 38:775-787. Wisborg K, et al. 2001. *American Journal of Epidemiology* 154:322-327.
Suggested reading and resources	Fox J. *Applied Regression Analysis and Generalized Linear Models. Third Edition*. Sage Publications; 2015. ISBN-10: 1452205663, ISBN-13: 978-1452205663. (Second Edition is also all right.)

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Determine the influence of social, cultural, historical, behavioral and biological factors in population health.	• Discuss planning and evaluating epidemiologic studies, threats to validity and value of the inferences drawn from these studies	• Research Notes 1 & 2
2. Operationalize studies of the complex interactions between multiple determinants of population health in a variety of settings, exploiting the differences between settings as a source of insight.	• Apply methods to determine effect modification, including homogeneity and expected versus observed • Evaluate the predictive accuracy and reliability of the results; and examine if the results are consistent with the statistical assumptions of the methods and models	• Homework 1 & 2 • Research Notes 1 & 2
3. Design and implement research projects that: 1. Quantify health and the burden of disease in populations 2. Perform surveys and risk factor analyses 3. Apply causal inference to study design, study implementation and data analysis 4. Identify vulnerable populations and their attributes; apply rigorous methods to examine and monitor health disparities 5. Identify effective interventions to improve population health equitably	• Describe and explain the model equations, assumptions of linear regression and logistic regression • Understand the difference of estimation procedures of linear regression and logistic regression	• Mid-term and Final Examinations • Homework 1 & 2

6. Evaluate the effectiveness of interventions designed to improve population health Give appropriate attention to the potential for bias, as well as exposure and outcome measurement issues		
Demonstrate mastery of causal inference and apply these techniques to scientific questions relevant to at least two current public health issues or population groups that are relevant to the student's substantive content interests.	• Understand the difference between continuous outcome and binary outcome; • Able to decide the type of model to use for confounding model or for prediction model; • Compare different methods for identifying confounders	• Mid-term and Final Examinations • Homework 1 & 2 • Research Notes 1 & 2
Identify and apply appropriate biostatistical approaches to analyses that address epidemiological questions in public health research and practice.	• Interpret results of linear regression and logistic regression analyses; assess the extent to which the results support the initially proposed hypothesis; • Compare the interpretation of absolute and relative risk	• Mid-term and Final Examinations • Homework 1 & 2 • Research Notes 1 & 2
Present empiric findings persuasively to a wide array of audiences (oral and written)	• Write scientific reports of linear regression and logistic regression analyses, with properly formatted and labeled tables and figures; • Write scientific reports of linear regression and logistic regression analyses, with essential components	• Research Notes 1 & 2
Work with colleagues to translate epidemiologic findings into practicable interventions	• Discuss planning and evaluating epidemiologic studies, threats to validity and value of the	• Research Notes 1 & 2

	inferences drawn from these studies	
Teaching epidemiologic methods to students, more junior colleagues or others in public health	• Describe and explain the model equations, assumptions of linear regression and logistic regression • Understand the difference of estimation procedures of linear regression and logistic regression	• Research Notes 1 & 2

Course Assessments

Descriptions on details about the assignments and grading criteria will be shown on the course website

Mid-term Examination: Students will take an in-class examination, solving technical and computational problems that are mostly related to linear regression analysis.

Final Examination: Students will take an in-class examination, solving technical and computational problems that are mostly related to logistic regression analysis.

Homework 1: Students will solve a set of technical and computational problems that are mostly related to linear regression analysis and submit the answers.

Homework 2: Students will solve a set of technical and computational problems that are mostly related to logistic regression analysis and submit the answers.

Research Note 1: A subset of data from a health survey will be provided. Each student will develop a hypothesis that could be investigated with the data, analyze the data using linear regression, and write a research report.

Research Note 2: A subset of data from a health survey will be provided. Each student will develop a hypothesis that could be investigated with the data, analyze the data using logistic regression, and write a research report.

In-class Computer Exercises: During the last 30~40 minutes of most classes, students will do computer exercises using computer terminals in C08, and upload their output files onto the assigned location of Discussion Board of the course website or submit them to the instructor by email after the class. The output files may be edited to remove results with errors.

Class Participation: Students should actively participate in the classes by asking questions to the instructor and orally responding to questions from the instructor during the lecture and in-class exercise.

Grading

<u>Evaluation criteria</u>

Evaluation criteria for research notes are described in the assignment instructions, which will be posted on the course website. Homework and in-class examinations are assessed primarily with respect to the accuracy of answers and the appropriateness of the approach adopted to solve the problems. Class participation is assessed in terms of the quality and frequency of questions and replies; and the in-class computer exercises completeness.

The relative weight of each course component is as follows:

Assessment	Weight
Mid-term in-class examination	20%
Final in-class examination	20%
Research note 1	20%
Research note 2	20%
Homework 1	3%
Homework 2	3%
Homework 3	4%
In-class exercise and class participation	10%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation

Attendance is required. No student will get a full point for "in-class exercise and class participation" if s/he misses more than 3 classes or the number of in-class exercise outputs that are not submitted in time is 3 or more.

Late/incomplete submission of assignments

Late/incomplete submission of Research Notes is not accepted. Late submission of Homework is not accepted. In-class exercise outputs are accepted if they are submitted by the end of the class or within 4 days after the class.

Make-ups, rewrites, and extra credit

With permission of the instructor, students may be allowed to resubmit research notes, homework assignments, and in-class computer exercise outputs before the due date.

Expectations of students

- Be familiar with college academic policies and deadlines, including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Know how to use library resources and citation tools.
- Show respect to everyone in the course.
- Classes are offered in a computer laboratory. During the class, NEVER do any email work or website browsing unrelated to the class.
- Complete all assignments by their assigned due date.
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Regularly check the course website and official university email for course correspondence.
- There is no group discussion in this course, but students are expected to participate actively in the classes, by asking scientific and technical questions to the instructor if there are any unclear issues, and by responding to questions from the instructor.
- Contact the professor directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.
- Because in-class exercise outputs and homework assignments 1 and 2 are not returned with corrections or comments, students are expected to compare their outputs and answers with the model scripts/outputs and answer keys that will be posted on the course website.

Expectations for the instructor

- Provide course materials (including presentation files, data files, computer programs, assignment instructions, copies of or links to articles in the required reading list), regular announcements, reminders, suggestions on the course website.
- Answer questions asked by students during the class.
- Respond to students' email inquiries within 2 days.
- Provide students with individualized in-person instructions during their appointment visits.
- Communication about grades and progress in the course will be given through the course website.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule

- This schedule may change as the semester progresses. Refer to the current academic calendar for important dates.
-

Session	Date	Topic	Readings/Resources	Assessment
1	2/4	Introduction to multiple linear regression 1: Basic models and partial regression coefficients (Part 1)	JF 5	ICE
2	2/11	Introduction to multiple linear regression 1: Basic models and partial regression coefficients (Part 2)	JF 5; HG	ICE
	2/18	Last day to drop without a grade of "W"		
3	2/25	Introduction to multiple linear regression 2: Categorical independent variables	JF 7.1-2	ICE
4	3/3	Introduction to multiple linear regression 3: Ordinary least squares and R^2	JF 5	ICE
5	3/10	Introduction to multiple linear regression 4: Statistical inference.	JF 6.1-2	ICE Homework 1 assigned
6	3/17	Issues in regression analyses 1: Examination of hypotheses on causal relationships I. Explanation of RN1. HW1 answers	JF 6.3 & 1.2	Homework 1 due Research Note 1 assigned
7	3/24	Issues in regression analyses 2: Nonlinearity (Mid-term in-class examination)	JF 12.3	Mid-term in-class examination
8	3/31	Introduction to logistic regression 1: Basic models	JF 14.1	ICE
9	4/7	Introduction to logistic regression 2: Adjusted odds ratio	JF 14.1; AF; KW	ICE Research Note 1 due
	4/11	Last day to withdraw with a grade of 'W'		
10	4/14	Issues in regression analyses 3: Interaction	JF 7.3	ICE
11	4/21	Introduction to logistic regression 3: Maximum likelihood estimation.	JF 14.1.4-5	
	4/28	Spring Recess (no class)		
12	5/5	Issues in regression analyses 4: Examination of hypotheses on causal relationships II.	SDA	ICE Homework 2 assigned

				Research Note 2,3 assigned
13	5/12	Introduction to logistic regression 4: Ordinal and polytomous logistic regression.	JF 14.2	ICE Homework 2, 3 due
14	5/19	(Final in-class examination)		Final in-class examination
15	5/26	Issues in regression analyses 5: Multi-collinearity, stepwise regression, partial and part correlation	JF 13	ICE
	5/28			Research Note 2 due

- Keys: AF = Ford et al. 2005; HG = Hall & Greendale 1998; ICE = In-class computer exercise; JF = recommended textbook by John Fox; KW = Wisborg et al. 2001; SDA = Simanek Dowd & Aiello 2008.

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

PUBH 826: Applied Biostatistics III

3 Credits
Spring 2016

Time and location	Tuesdays 4.15-6.15 pm Room C196.02 (Graduate Center)
Instructor	Katarzyna Wyka, PhD: kwyka@hunter.cuny.edu (response time 24-48 hours)
Office hours	Mondays 4.30-6PM (room 537, Silberman Building) or by appointment
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	This course covers intermediate statistical methods that are increasingly used in public health research. Topics include extensions of generalized linear models to correlated data (Generalized Estimating Equations and Generalized Linear Mixed Models) and application of instrumental variables to causal inference. Missing data imputation methods are also discussed. Focus on practical applications, utilizing statistical software.
Course prerequisites	PUBH 825 or its equivalent
Course format	This is a lecture-lab course. Topics are presented by the instructor and labs are completed by students during class. All materials are posted on Blackboard. Students complete data analysis projects and present their analyses in class.
Required reading and resources	Data Analysis Using Regression and Multilevel/Hierarchical Models by Andrew Gelman and Jennifer Hill. Paperback: 648 pages Publisher: Cambridge University Press; 1 edition (December 18, 2006) ISBN-10: 052168689X ISBN-13: 978-0521686891 Price on Amazon.com: $55.20
Suggested reading and resources	Access to SAS and R statistical software. Additional readings are listed under Course Schedule on p. 5.

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be assessed as part of the following course assignments:
Determine the influence of social, cultural, historical, behavioral and biological factors in population health.	• Identify research questions posed in published reports • Critique the analytic approach and data presentation in published research • Reflect intelligently on the limitations inherent in both the data under study as well as the statistical methods used to analyze the data • Compare and contrast the similarities and difference of intermediate - statistical methods and their use in addressing various research questions	Reports 1, 2 and 3
Identify and apply appropriate biostatistical approaches to analyses that address epidemiological questions in public health research and practice.	• Show competency in techniques related to the analysis of correlated public health data • Explain the assumptions necessary for statistical inference in Generalized Estimating Equations (GEE), Generalized Linear Mixed Models and instrumental variable framework • Implement and interpret a meta-analysis • Apply statistical techniques related to missing data problem • Show competency in assessing model fit and model building • Master the use of statistical software for analysis of public health data • Interpret computer output from GEE, mixed models and instrumental variable analyses • Interpret computer output from missing data imputation problems	Reports 1, 2 and 3
Demonstrate mastery of causal inference and apply these techniques to scientific questions relevant to at least two current public health issues or population groups that are relevant to the student's substantive content interests.	• Implement instrumental variable analysis and propensity score matching analysis and explain their relevance to causal inference	Reports 1, 2 and 3
Present empiric findings persuasively to a wide array of audiences (oral and written)	• Produce data analysis reports of the highest quality as to their conciseness, readability and cohesion • Create appropriate tables and figures that adequately convey the key points of statistical analysis • Present your findings orally clearly and effectively • Incorporate feedback into an improved data analysis report after in class "peer review"	Reports 1, 2 and 3

Last updated 1.29.15

Course Assessments

Your understanding of the course material will be evaluated through a total of three (3) data analysis reports. Each report will consist of 3 problems. Doctoral level students must solve all 3 problems. Each student will be expected to present his/her results in class and actively participate in the constructive critique/review of the work of his/her peers. You will have the chance to revise and resubmit each report after the first round of critique/review. This will give you the chance to deepen your analysis and bolster your mastery of the statistical methods.

Grading

Evaluation criteria
All assignments will be evaluated based upon rubrics found on the course website.

The relative weight of each course component is as follows:

Assessment	Weight
Report 1	30%
Report 2	30%
Report 3	30%
Attendance and class participation	10%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Points	Percentage
A+	4.0	100-98
A	4.0	97-93
A-	3.7	92-90
B+	3.3	89-88
B	3.0	87-83
B-	2.7	82-80
C+	2.3	79-78
C	2.0	77 - 73
C-	1.7	72-70
F	0	<70

Withdrawal
If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete
Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals
When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Last updated 1.29.15

Course Policies

Attendance and class participation

Regular weekly attendance is strongly advised. Your absence is detrimental not only to your performance but also to that of your colleagues, who benefit from your important feedback during in-class discussions.

Late/incomplete submission of assignments
- Late reports will not be accepted under any circumstance.
- A full letter grade will be deducted if a student fails to show up on the day his/her data analysis presentation is scheduled.

Make-ups, rewrites, and extra credit
There are no make-ups, rewrites, or extra credit allowed.

Expectations of students
- Check email and Blackboard announcements on weekly basis
- Access course materials on weekly basis
- Complete and submit reports on time
- Participate in class discussion board

Expectations for the instructor
- Provide regular announcements and reminders on the course website and via email
- Respond to student email within 24-48 hours Monday through Friday
- Grade and provide feedback on assignments within 1 week of the due date
- Communicate grades and progress through Blackboard (My Grades)

Accessibility
Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity
CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Last updated 1.29.15

Course Schedule

The preliminary schedule of lectures below is meant to serve as a guide. Depending on the class needs, interests, and progress during the semester, some topics may be given more or less class time than others. Accordingly, the scheduling of in-class presentations and the due dates of reports may vary.

Important dates

- LAST DAY TO DROP CLASS WITH THE GRADE OF "W": February 18th
- LAST DAY TO DROP CLASS WITH THE GRADE OF "W": April 11th

Refer to the academic calendar for other important dates.

Date	Lecture	Topic	Reading & Assignments
2/2	#1	**Models for correlated data** Extending GLM: Generalized Estimating Equations (GEE) • Models for Continuous outcomes • Models for Binary outcomes Generalized Linear Mixed Models (GLMM) • Variance components • Random intercept model	Gelman & Hill chapter 12 Diez-Roux AV. Multilevel analysis in public health research. Annual Review of Public Health 2000; 21:171-92. Hubbard AE, Ahern J, Fleischer NL, Van der Laan M, Lippman SA, et al. To GEE or Not to GEE. Comparing population average and mixed models for estimating the associations between neighborhood risk factors and health. Epidemiology 2010; 21:467-474. Online resources for GLMM
2/16	#2	**Models for correlated data** Generalized Linear Mixed Models (GLMM) • Random intercept and slope • Strategies for Model Building	Gelman & Hill chapter 13.1-13.2, 13.4-13.5 Singer J. Using SAS Proc Mixed to fit multilevel models, hierarchical models, and individual growth models. Journal of Educational and Behavioral Statistics 1998; 24:323-355. Gary-Webb TL, Baptiste-Roberts K, Pham L, Wesche-Thobaben J, Patricio J, et al. Neighborhood and weight-related health behaviors in the Look AHEAD (Action for Health in Diabetes) Study. BMC Public Health 2010; 10: 312.
2/23	#3	**Models for correlated data** Generalized linear mixed models (GLMM) • Multilevel logistic regression • Diagnostics for GLMM	Gelman & Hill chapter 14.1-14.2 Ene M, Leighton EA, Blue GL, Bell BA. Multilevel Models for Categorical Data Using SAS Proc GLIMMIX: SESUG 2014, Paper 134-2014.
3/1	#4	**Models for correlated data** Generalized linear mixed models (GLMM) • Models for longitudinal data • Mediation analysis	Gelman & Hill chapter 11.3 Landerman RL, Mustillo SA, Land KC. Modeling repeated measures of dichotomous data: testing whether the within-person trajectory of change varies across levels of between-person factors.

			Social Sciences Research 2011; 40(5), 1456-1464. Valeri L, VanderWeele TJ. Mediation analysis allowing for exposure-mediator interactions and causal interpretation: theoretical assumptions and implementation with SAS and SPSS macros. Psychological Methods 2014; 18(2): 137-150.
3/8	#5	**Meta-Analysis** • Fixed vs. random effects models • Reporting the results of meta-analysis • Criticism of meta-analysis	Vandenbroucke JP, von Elm E, Altman DG, Gotzsche PC, Mulrow CD, et al. Strengthening the reporting of observational studies in epidemiology (STROBE): Explanation and elaboration. Annals of Internal Medicine 2007; 147:163-194. PUBLIC HEALTH ECONOMICS
DOCTOR OF PUBLIC HEALTH PROGRAM
CUNY - GRADUATE CENTER

PUBH 842
Public Health Economics
3 credits

Catalogue Description	The broad literature on health economics to improve the understanding of issues related to public health. The emphasis of on acquiring a set of devices from the economic theory and a framework within which to organize empirical analysis to inform policy. Analysis of the overall health market, demand for health, health care and insurance; the supply of health care and insurance; the market structure of the health care sector; and performance of the health care sector.
Course Meets	Tuesdays from 6:30 to 8:30 pm Room TBD
Instructor	Juan J. DelaCruz, PhD Associate Professor Department of Economics and Business Lehman College - CUNY E-mail: JDelaCruz@gc.cuny.edu Phone: 718-960-8159 & 917-676-1721
Office	Room 3317 – Graduate Center
Office Hours	Tuesdays from 5:00 to 6:30 pm or by appointment
Pre-requisites	N/A

Overview

Public Health Economics is an advanced graduate-level course covering selected topics in the intersection of two major disciplines, economics and public health. A solid understanding of microeconomic theory and basic econometrics will be sufficient for understanding the main concepts and ideas in the lectures and readings; such basic theory will be addressed briefly in the lectures. In some cases a more advanced treatment of topics is appropriate, in which cases the relevant concepts or methodologies will be taught alongside the applied material. The **expectations** for written assignments and examinations are for exposition at the level of one prepared accordingly in microeconomics. Students who are unsure about their methodological

preparedness for the course are encouraged to discuss this with Prof. DelaCruz at an early date, via e-mail or Skype (ID: juanjc147).

Required Textbook

- Sloan, F. and Hsieh, CR, Health Economics, MIT Press, (mandatory), ISBN: 9780262016766 (hardcover), ISBN: 9780262301879 (E-Book). This book is available for online purchase at the MIT Press website (https://mitpress.mit.edu/books/health-economics)
- Varian, Hal R, Intermediate Microeconomics: A Modern Approach, 8th Edition, WW Norton (Publisher). Only for selected chapters (I can share my copy)
- Folland, Sherman; Goodman, Allen and Stano, Miron, "The Economics of Health and Health Care", 7th Edition, Pearson, ISBN: 0-13-277369-4 (suggested complement)
- Other readings, video-presentations and related materials will be posted on Blackboard

CUNY School of Public Health HPM Competencies and Course Learning Objectives to Attain Competencies

Health Policy and Management Track Program Competencies	Course Learning Objectives	Assessment Methods
Assess and analyze the impact of public policy interventions within the various domains of public health, the theoretical motivations for undertaking them, the influence of the political, bureaucratic, and social environmental in which policy decisions are made, the consequences of such decisions.	a) Contextualize the role of economics as an analytical tool to study issues related to population health and in the decision-making process of health markets	a) In-class discussion b) Written reflections (formal or informal) c) Wrappers using reflective questions
Understand and analyze the policy environment for healthcare organizations.	b) Understand the mechanisms of supply and demand of health care, emphasizing the key role of stakeholders such as patients, physicians, hospitals, nurses and pharmaceutical manufacturers in health markets	a) In-class discussion b) Problem sets on microeconomics and health economics c) Online learning modules in the course managing system (Blackboard)
For healthcare and public health organizations, discuss how each of the following affect organizational behavior and service delivery: organizational structure, motivation and incentives, individual and group behavior, group decision making,	c) Analyze the different market structures (monopoly, oligopoly, and monopolistic competition) and potential market failures (asymmetric information, adverse selection, public goods, etc.) influencing the provision of	a) In-class discussion b) Written reflections (formal or informal) c) Individual presentations d) Problem sets on microeconomics and

quality measurement and improvement, and organizational relations with their environments. Develop interventions to change at least 3 of the above to improve health care and public health service delivery and health outcomes.	health care across individuals	health economics
Understand and appropriately apply analytical strategies used in health policy research, such as costing analysis, cost effectiveness and cost benefit analysis.	c) Examine issues associated with economic evaluation methods in healthcare (cost-benefit, cost-effectiveness)	a) In-class discussion b) Baseline assessment on student's research interest c) Investigative project
Develop familiarity with and critically analyze federal, state, and municipal laws/regulations and their historical context as relevant to public health management and policy decisions.	d) Describe the links between government and determinants of demand for health, health care services and private health insurance	a) In-class discussion b) Investigative project c) Research portfolio
Formulate alternative options for resolving problems in health policy or management, evaluate their economic, practical, ethical, legal, administrative, and technical feasibility and recommend preferred options based on and supported by your analysis.	e) Provide evidence-based and background approaches on health economics that relates to student's area of research	a) In-class discussion b) Final paper relating the student's research line with economics c) Use of statistical methods or a good understanding of the methodology is strongly advised

Assignments and Assessment

The class is lecture style (instructor and possibly guest speakers) as well as participatory discussion, commentary. The course is also reading-intensive (mandatory, for discussion and complementary). Each week there will be a set of readings or assignments listed in the syllabus or to be posted on Blackboard. Many will be drawn from the bibliography listed below. Notice that not all assigned readings will be covered during the lectures but that students are responsible for covering such readings in their preparation for examinations, and final paper.

Given the fast-changing, dynamic nature of the health and healthcare systems, students are strongly encouraged to read regularly the health-related reporting in publications like peer-reviewed journals and media outlets such as *The Wall Street Journal, CNN, Bloomberg News, Foxnews* and others.

1. (25% of semester grade): 2 paper presentation with meaningful analysis taken from the additional readings list in each class. You are expected to read a paper and summarize the goals, main findings and methodological approach, including a brief description of statistical devises.
2. (25% of semester grade): A comprehensive **midterm exam** based on the lectures and readings stated in the first part of the syllabus. The time and place for the final exam will be announced.
3. (25% of semester grade): A comprehensive **final exam** based on the lectures and readings stated in the second part of the syllabus. The time and place for the final exam will be announced.
4. (25% of semester grade): **Final Paper.** The student must indicate, among other things, what topic is being addressed and why the selected paper is (or is not) an important contribution to the topic area. A clear inclusion of a methods section with statistical analysis and underlying theory is entirely appropriate and encouraged. The paper will be graded on the basis of its arguments and quality of exposition. If in doubt about the suitability of a paper, or if you would like some guidance on selecting a topic, please contact Prof. DelaCruz. **This paper is due not later than Tuesday May 17th, 2016, 8:30 PM EST**. Since it is possible to begin work on this paper at any time during the semester, there will be **no accommodations** for late papers **for any reason**. Papers handed in after the due date will have their grades **reduced by 10%** for each day the paper is late. The paper must be submitted both electronically (uploaded in Blackboard) and in a hardcopy.

Class citizenship & rules of conduct
Please turn your cell phones off prior to class. If you have an emergency that warrants your being available to persons outside the class, such as a family emergency, please let me know at the beginning of class. Then, turn your cell phone to silent mode and leave class if you need to take a call. If you bring a laptop to class with you, please use it ONLY to take notes or for related purposes.

Email correspondence
I ask that when you write to the instructor or teaching assistant, you include a full descriptive subject line for your emails, since we have an enormous volume of email correspondence each day. I will return your email as quickly as possible.

Academic Integrity
Cheating and plagiarism are serious offenses. Cheating is the attempted or unauthorized use of materials, information, notes, study aids, devices or communication during an academic exercise. Plagiarism is the act of presenting another person's ideas, research or writing (including material drawn from websites) as your own:

1. Copying another person's actual words without the use of quotation marks and footnotes (a functional limit is four or more words taken from the work of another)
2. Presenting another person's ideas or theories in your own words without acknowledging them.
3. Using information that is not considered common knowledge without acknowledging the source.
4. Failure to acknowledge collaborators on homework and laboratory assignments.

My policy is to give a failing grade to any assignment that has been plagiarized and your final grade will be reduced by the percentage the assignment was worth. There are several free online resources to address plagiarism and ways to avoid it. A simple Google search will be helpful to identify those sources.

Schedule

Date	Topic	Additional Readings:
2/02	1) Introductory remarks to Public Health Economics	Sloan, FA & Hsieh, CR, Health Economics, MIT Press, 2012, chapter 1 (mandatory) Grossman, M (2000), The Human Capital Model, in the Handbook of Health Economics, Vol. 1, Elsevier Mankiw/Rommer/Weil (1992), A Contribution to the Empirics of Economic Growth, The Quarterly Journal of Economics, Vol. 107, No. 2 Barro, Robert (1996), Health, Human Capital and Economic Growth, Pan-American Health Organization (PAHO) Becker, GS, Philipson, TJ and Soares, RR, 2005, "The Quantity and Quality of Life and the Evolution of World Inequality", American Economic Review, 95 (1), pp. 277-291 Cutler, D, Deaton, A and Lleras-Muney, A, (2006), "The Determinants of Mortality", Journal of Economic Perspectives, 20 (3), pp. 97-120
2/16	2) The Demand for Health Care I	Sloan, FA & Hsieh, CR, Health Economics, MIT Press, 2012, chapter 2-4 (mandatory) Buchmueller, TC. 2006. "Consumer Demand for Health Insurance." NBER Reporter Research Summary, Summer 2006: Cambridge, MA: NBER. Cockx, B and Brasseur, CB, 2003, "The Demand for Physician Services: Evidence from a Natural Experiment", Journal of Health Economics, 22 (6), pp. 881-913 Goldman, DP, et al, 2004, "Pharmacy Benefits and the Use of Drugs by the Chronically Ill" Journal of the American medical Association, 291 (19) pp. 2344-2350
2/23	3) The Demand for Health Care II	Sloan, FA & Hsieh, CR, Health Economics, MIT Press, 2012, chapter 2-4 (mandatory)

		Finkelstein, A and McGarry, K, 2006, "Multiple Dimension of Private Information: Evidence from the Long Term Care Insurance Market", American Economic Review, 96 (4), pp. 938-958 Aviva Aron-Dine, Liran Einav, Amy Finkelstein, and Mark Cullen, "Moral Hazard in Health Insurance: Do Dynamic Incentives Matter?", Review of Economics and Statistics, 97(4): 725-741 Acton, JP (1975), "Nonmonetary Factors in the Demand for Medical Services", Journal of Political Economy 83: 595-614
3/01	4) The Supply of Health Care I * Physicians * Hospitals	Sloan, FA & Hsieh, CR, Health Economics, MIT Press, 2012, chapter 5-6 (mandatory) Scholz, S Graf Von Schulemburg, JM and Greiner, W (2015), Regional Differences of Outpatient Physician Supply as a Theoretical Economic and Empirical Generalized Linear Model, Human Resources Health, Nov 17; 13(1):85 Gorey, KM et al (2015), "Colon cancer care and survival: income and insurance are more predictive in the USA, community primary care physician supply more so in Canada", Oct 29; 14(1):109 Stabile, M et al (2013), "Health care cost containment strategies used in four other high-income countries hold lessons for the United States", Health Affairs, 32(4):643-652
3/08	5) The Supply of Health Care II * Quality of care *Nurses and LT care	Sloan, FA & Hsieh, CR, Health Economics, MIT Press, 2012, chapter 7-8 (mandatory) Cawley, J, Grabowski, DC and Hirth, R, 2006, "Factor Substitution in Nursing Homes", Journal of Health Economics, 25 (2), pp 234-247 Chou, SY, 2002, "Asymmetric Information, Ownership and Quality of Care: An Empirical Analysis of Nursing Homes", Journal of Health Economics, 21 (2), pp. 293-311
3/15	6) The Supply of Health Care III * Pharmaceutical * Private Insurance	Sloan, FA & Hsieh, CR, Health Economics, MIT Press, 2012, chapter 9-10 (mandatory) Danzon, PM and Furukawa, MF, 2003, "Prices and Availability of Pharmaceuticals: Evidence from Nine Countries", Health

		Affairs Web Exclusive, W3:521-536 Philipson, TJ and Sun, E, 2008, "Is the Food and Drug Administration Safe and Effective?", Journal of Economic Perspectives, 22 (1):85-102 Ridley, DB, Grabowski, HG and Moe, J, 2006, "Developing Drugs for Developing Countries", Health Affairs, 25 (2):313-324 Berndt, E. and J.P. Newhouse. 2010. "Pricing and Reimbursement in U.S. Pharmaceutical Markets." NBER W.P. 16297. 4
3/22	First Comprehensive Test	Chapters 2 - 10
3/29	8) Market Structures in Health Care I * Private Financing * Monopoly * Monopoly Behavior	Sloan, FA & Hsieh, CR, Health Economics, MIT Press, 2012, chapter 11 (mandatory) Varian, Hal R., Intermediate Microeconomics: A Modern Approach, 8th Edition, WW Norton (Chapters 25 and 26)
4/05	9) Market Structures in Health Care II * Government Financing * Oligopoly * Externalities	Sloan, FA & Hsieh, CR, Health Economics, MIT Press, 2012, chapter 12 (mandatory) Varian, Hal R., Intermediate Microeconomics: A Modern Approach, 8th Edition, WW Norton (Chapters 28 and 35)
4/12	10) Market Structures in Health Care III * Public Supply and Financing * Public Goods * Asymmetric	Sloan, FA & Hsieh, CR, Health Economics, MIT Press, 2012, chapter 13 (mandatory) Varian, Hal R., Intermediate Microeconomics: A Modern Approach, 8th Edition, WW Norton (Chapters 37 and 38)

	Information	
4/19	11) Cost and Cost-Effectiveness Analysis	Sloan, FA & Hsieh, CR, Health Economics, MIT Press, 2012, chapter 14 (mandatory) Goldie, SJ et al, 2006, "Cost-Effectiveness of HIV Treatment in Resource-Poor Settings: The Case of Cote D'Ivoire", New England Journal of Medicine, 355 (11), pp. 1141-1153 Goldie, SJ, et al, 2007, "Cost-Effectiveness of HPV 16, Vaccination in Brazil", Vaccine, 25 (33), pp. 6257-6270 Khan, J, Marseille, E and Auvert, B, 2006, "Cost-Effectiveness of Male Circumcision for HIV Prevention in South African Setting" PLoS Medicine, 3 (12), pp. 2349-2358
5/03	12) Measuring Benefits and Cost-Benefits	Sloan, FA & Hsieh, CR, Health Economics, MIT Press, 2012, chapter 15 (mandatory) Hirth, RA et al, 2000, "Willingness to Pay for a Quality Adjusted Life Year: In Search of a Standard", Medical Decision Making, 20 (3), pp. 332-342 Jeuland, M et al, 2009, "A Cost-Benefit Analysis of Cholera Vaccination Programs in Beira, Mozambique" World Bank Economic Review, 24 (1), pp. 89-124 Viscusi, WK and Aldy, JE, 2003, "The Value of a Statistical Life: A Critical Review of Market Estimates through the World", Journal of Risk and Uncertainty, 27 (1), pp. 5-76
5/10	13) Health and Economic Growth	Sloan, FA & Hsieh, CR, Health Economics, MIT Press, 2012, chapter 16 (mandatory) Bhattacharya, J and Lakdawalla, D, 2006, "Does Medicare Benefit the Poor? Journal of Public Economics, 90 (1-2), pp. 277-292 Chou, SY, Lui, JT and Hammitt, JK, 2003, National Health Insurance and Precautionary Savings: Evidence from Taiwan", Journal of Public Economics, 87 (9-10), pp. 1873-1894 Hoel, M, 2007, "What Should (Public) Health Insurance Cover?", Journal of Health Economics, 26 (2), pp. 251-262

		McClellan, M and Skinner, J. 2006, "The Incidence of Medicare", Journal of Public Economics, 90 (1-2), pp. 257-276
5/17	14) Final Comprehensive Test	Chapters 11-16
5/24	15) Final paper and individual presentations	

DPH HPM SPECIALIZATION

CUNY SCHOOL OF PUBLIC HEALTH

Graduate Center
PUBH 851 - Health and Social Policy Research for Social Justice
3 credits
Spring 2016

Catalogue description	This seminar-format course will help participants to shape a research idea, find appropriate data sources, perform statistical analyses, and draft a manuscript for submission to a scholarly journal. The focus will be on quantitative research methods. It will also touch on how to gain public attention for the findings after publication, and advocate and organize for appropriate policy changes.
Course meets	Location, Monday 6:30-8:30
Instructor	Professors Steffie Woolhandler, MD, MPH and David Himmelstein M.D.
Email	swoolhan@hunter.cuny.edu and dhimmels@hunter.cuny.edu
Phone	212-289-0630 (prefer email)
Office	Room number & location
Office hours	Woolhandler: Monday 5:30-6:25 pm at GC 3317 by appointment Himmelstein: Monday 5:30-6:25 pm at GC 3317 by appointment
Required books	None
Recommended books	None
Reserve material	None
Other required materials	None
Pre-requisites	N/A

Assessment
Your understanding of the course material will be evaluated through class participation and in-class presentations of your own (or your team's) work.

Attendance and class participation: Students are expected to attend class regularly, participate actively, supportively and critically in discussions, and to be prepared to present the results of their literature reviews and analyses.

Lateness and absences: More than one absence per semester requires specific permission from the instructors. We expect all students to be present throughout the class session.

Late submission of assignments: Discuss with Instructors

Class citizenship & rules of conduct: Active and supportive participation in discussions is expected

Cellphones – Off please

Institutional policies (see: http://www.gc.cuny.edu/CUNY_GC/media/CUNY-Graduate-Center/PDF/Publications/Student_Handbook_web.pdf)

Accessibility; In compliance with the American Disability Act of 1990 (ADA) and with Section 504 of the Rehabilitation Act of 1973, Hunter College is committed to ensuring educational parity and accommodations for all students with documented disabilities and/or medical conditions. It is recommended that all students with documented disabilities (Emotional, Medical, Physical, and/or Learning) consult the Office of AccessABILITY, located in Room E1214B, to secure necessary academic accommodations. For further information and assistance, please call: (212) 772- 4857 or (212) 650-3230. http://www.hunter.cuny.edu/studentservices/access.

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. Those eligible include students with mobility, visual and hearing impairments. It also includes students with learning disabilities, psychiatric disorders or any medical condition that limits one or more of life's basic functions.

Academic integrity:
Academic dishonesty is prohibited in The City University of New York. Penalties for academic dishonesty include academic sanctions, such as failing or otherwise reduced grades, and/or disciplinary sanctions, including suspension or expulsion. Please see the Student Handbook at the website indicated above for detailed definitions and procedures.

Help with research and writing – Techniques for research and writing will be discussed throughout the seminar,

Last day to drop the course with the grade of "W": Wednesday, September 17

Grade of incomplete: THERE IS NO ABSOLUTE RIGHT TO A GRADE OF INCOMPLETE. Only students averaging B or above in a course are eligible to request an incomplete course grade. Graduate students have one academic year in which to submit the missing work otherwise the IN grade is permanent on the college transcript. A specific, written agreement between the instructor and the student that details the requirements for making up the incomplete is also required. *This is a schoolwide policy.*

Grade appeals:
A student believing himself or herself aggrieved by a grade given for nonacademic reasons should first informally discuss the matter with the instructor.

If the matter is not informally resolved, the student shall, within 30 days of receiving written notification of the failure to reach a resolution, request in writing that a determination be made by the Executive Committee of the program. The student may submit any evidence or argument in writing to the committee and may, if he or she chooses, be heard in person. The committee shall consider the matter de novo and make such investigation as it deems necessary. It shall advise the student within a reasonable time of its determination.

A student may appeal the Executive Committee's determination to the Provost's Office within 30 days of receiving written notification of the determination. The Provost's Office shall review the record and make a determination thereon, which shall be final.

Schedule - Tentative

Session	Date	Topic	Readings and Assignments
1	February 2	Introduction to seminar participants and their research interests	
2	February 16	Student presentations	To be assigned based on student research interests and topic, for this and all subsequent sessions

Health Policy and Management Specialization Competencies	Course Learning Objectives	Sessions
This course will help you achieve increased competency in health policy and management. By the time you graduate, you should be able to:	After successfully completing this course, you are expected to be able to:	Competencies and learning objectives will be addressed as part of the following course sessions:
1. Describe the role of social, political, biological, economic, historical, behavioral and environmental factors in health and disease in urban settings and identify opportunities for interventions to improve population health at individual, community, city and policy levels	To critique and design studies investigating these factors	All
2. Explain the mechanisms and pathways by which urban conditions affect health and the roles of various urban systems in promoting health and preventing disease	To critique and design studies investingating these mechanisms and pathways	All
3. Explain the value and limitations of multi-level, ecological models in the study of urban health and apply such models to the investigation of specific health problems	Examples of multilevel models will be reviewed and critiqued	One or two sessions, depending on student presentations and interests
4. Apply concepts, theories and methods from two or more disciplines to the study of urban health	Understand analysis of large databases . Understand how insights from qualitative research and/or public health practice can be explored quantitatively	All
5. Design etiological intervention or policy research studies that contribute to new knowledge about urban health	Critique and design policy research studies	All
6. Select methods and theories from diverse disciplinary perspectives to apply to the study of urban health and demonstrate a capacity to combine methods and disciplines in order to achieve fuller understanding of urban health issues	Understand and critique biomedical and policy studies, and understand their intersections	All
7. Describe principal historical developments, theories, current intellectual conflicts and research questions within one specialization area (CSH, EPI, EOH or HPM)	Understand historical roots of current health and social policieis	Various sessions, depending on student presentations and interests.
8. Demonstrate familiarity with scientific and professional literature and main scientific questions for at least two current public health issues or populations groups	Familiarize the student with the scientific and professional literature in areas appropriate to the students professional goals and research interests	All session
9. Demonstrate proficiency in each of the following areas and advanced skills in at least two of the following areas: (1) written	Write a research abstract	Last two sessions

Specialization/ Track Competencies	**Course Learning Objectives**	**Most relevant sessions and assignments[1]**
This course will help you to achieve the following track specific competencies, which are expected of Health Policy and Management track DPH graduates	After successfully completing this course, you are expected to be able to:	
1. Contribute to new knowledge about the mechanisms that influence the delivery of health services and public health programs and the development of health policy in urban settings	Critique and design studies to explore these mechanisms	All sesions
2. Develop and manage initiatives to strengthen the functioning of health systems, health care organizations and public health agencies and programs	Critique and design studies to evaluate the effectiveness of health systems and programs	All sessions
3. Develop, advocate for and implement health care and public health policies	Understand the concepts and practice of research based advocacy	All sessions
4. Analyze the impact of health and non-health policies on population health	Critique and design studies to analyze the effects of policies on population health	All sessions
5. Teach students and professionals about the social determinants of health, health interventions health policy, health management and health disparities in urban settings.	Critique and design studies to assess social determinant of health	All sessions

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

PUBH 851 -- Public Health Ethics
3 Credits
Spring 2016

Time and location	Thursdays, 6:30 – 8:30
Instructor	Betty Wolder Levin, PhD Professor, Community Health and Social Science CUNY GSPHHP Professor, Health and Nutrition Sciences, Brooklyn College Professor, Public Health, Graduate Center BWLevin@Brooklyn.cuny.edu e-mail is the best way to reach me Please put PUBH 811 at the beginning of the subject line
Office hours	Office Hours: Thursdays, 4:30 – 6:00 DPH Program Office: (212) 817-7986
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance..
Course description	Identification and analysis of ethical problems in public health using principles, concepts, theories and frameworks from bioethics, social justice and human rights. Examination of ways to apply such analyses to the resolution of dilemmas in research, policy and practice. Critical discussion of challenges involved in respecting the rights of individual and the values of culturally diverse communities while applying ethical standards and protecting and improving the health of populations. Meets methodology elective requirement for DPH students.
Course prerequisites	Matriculated student in a doctoral program at the Graduate Center or permission of the Instructor.
Course format	Seminar Course

Required reading and resources	All required readings will be posted on Blackboard
Suggested reading and resources	Some optional readings and other learning resources will also be posted on Blackboard

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Understand the ethical dilemmas posed by many public health issues and apply the highest ethical standards to their own public health research and practice	• Analyze ethical issues posed by dilemmas and multiple public health disciplines • Discuss ethical issues encounter in their own public health work and their resolution	• Class discussions • Discussion posts • Reflection papers
2. Describe the role of social, political, biological, economic, historical, behavioral and environmental factors in health and disease in urban settings and identify opportunities for interventions to improve population health at individual, community, city and policy levels	• Identify factors affecting the presentation of ethical issues from multiple perspectives • Propose interventions to resolve dilemmas at multiple levels	• Class discussion and/or • Reflection papers and/or • Term paper
3. Apply concepts, theories and methods from two or more disciplines to the study of urban health	• Apply concepts and frameworks from bioethics to the resolution of public dilemmas • Apply concepts and frameworks from human rights to the resolution of public health dilemmas	• Class discussion and/or • Reflection papers and/or • Term paper

Course Assessments

All students in the class will be expected to participate actively in class discussions and contribute at least 5 posts to the discussion boards. Each student will write 2 reflection papers of at least 3 pages discussing course readings, which may be supplemented with other material. At least one reflection paper should address issues in your area of public health work. Each student will also write a 12 – 20 page seminar paper presenting an in-depth analysis of an ethical issue in public health. More information on the assessments and evaluation criteria will be posted on Blackboard.

Grading

Evaluation criteria

Will be addressed in assessment descriptions on Blackboard.

The relative weight of each course component is as follows:

Assessment	Weight
Class Participation	25
Discussion posts	5
Reflection Papers	20
Term Paper	50
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation

All students are expected to attend regularly and participate actively in the class. If you will not be attending a class, please e-mail the instructor at least an hour before class.

Late/incomplete submission of assignments

Points may be deducted from grades if assignments are not submitted on time.

Make-ups, rewrites, and extra credit

Students will have an opportunity to re-write reflections papers.
All students will submit a term paper topic, a proposal, a first draft and a final draft of their seminar paper.

Expectations of students

All students are expected to engage with the readings and ideas discussed in the class. Of course, all the usual expectations of public health students apply: Respect other students. We will discuss controversial ideas – please feel free to critique ideas but do not insult others. Please keep material discussed in class confidential unless the speaker agrees to discussion in other setting. No cell phones (except in emergencies); computer work only for class related work during class sessions, etc.

Expectations for the instructor

Provide relevant readings and assignments, conduct classes to promote discussion, and provide individual attention to the work of each student during class, during office hours and by appointment.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student

Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule

The schedule is subject to change throughout the semester. The "Last Updated" Date in the header of the syllabus is meant to reference the current version of the syllabus.

See the current academic calendar for important dates (for example: holidays, course drop, course withdrawal). http://www.cuny.edu/academics/calendars/spring-2016.html

CUNY SCHOOL OF PUBLIC HEALTH

Graduate Center
PUBH870 – Maternal, Child, Reproductive and Sexual Health in Context
3 credits
Spring 2016

Catalogue description	A critical overview of public health issues, approaches and concerns in the area of Maternal, Child, Reproductive and Sexual Health. Topics will include the medicalization of maternity care and infancy/childhood; the consequences of 'risk' as a dominant ideology for Maternal, Child, Reproductive and Sexual Health care; issues in reproductive justice, with particular attention to race and class, and the historic and contemporary influence of eugenics in public health; the history of midwifery and global trends in midwifery care; and the role of public health interventions in infant care; sexual health and gender identity.
Course meets	Wednesday, 6:30 – 8:30
Pre-Reqs	N/A
Instructor	Barbara Katz Rothman, Ph.D.
Email	BKatzRothman@gc.cuny.edu
Phone	212 817 8796
Office	GC rm 6421
Office hours	Before or after class, or by appt
Required books	Required readings listed in course schedule below
Recommended books	Recommended readings listed in course schedule below
Reserve material	distributed to class members

Other required materials

Assessment
Your understanding of the course material will be evaluated through a paper, due at the end of the semester, on one clearly defined topic in maternal and child health, in consultation with the class and professor. In this paper, you will compare and contrast the presentation of that topic in the Public Health literature with its presentation in popular media, including as the student so chooses, print and on-line sources. Students will consult in groups as panels, but each will do his/her own individual paper and presentation.

Graduate Center Grade Policy:
A (plus or minus) - Excellent
B (plus or minus) - Good
C (plus or minus) - Fair (lowest passing mark)
F - Failure
W - Withdrew without academic penalty. This is a student-initiated grade, which may be requested from the 4th through the 10th week of the semester. Under no circumstances can a student withdraw and receive a "W" grade after the 10th week of the semester without the written permission of the course instructor and the Executive Officer, and the approval of the Vice President for Student Affairs. This grade carries tuition liability.

Course policies:

Attendance and class participation
Students are expected to attend *every* class session and complete the readings *prior to* each of the class sessions so as to be able to participate fully during the class. The instructors should be notified by email or voicemail if an absence is unavoidable; excessive lateness may be considered equivalent to absence from class. It is the student's responsibility to obtain missed class notes and related information from a colleague. Assignments must be received by the due dates regardless of class attendance.

Lateness and absences

Late submission of assignments
Assignments are due on the date indicated in this syllabus. A *full grade* will be deducted for each week an assignment is late. In case of emergency, please contact the instructor. Incomplete final grades for this course will NOT be granted unless the request is justified by a legitimate and documented emergency.

Class citizenship & rules of conduct
Cellphones and other electronic devices
Use of any electronic devices in class must be limited to accessing the course materials under discussion in that session and taking notes. Under no circumstances should these devices be used for communication with others *within or outside of the classroom*. Students are expected to be

fully engaged with and participating in the class; thus, use of any devices that distract the student(s), instructor(s), and/or guest(s) will be considered intrusive and in violation of expected standards of conduct in the classroom. As such, the student may be asked to discontinue use of the device.

Email correspondence
The instructors will try to respond to emails within a 24-hour period during the standard Monday through Friday work week. Students should not wait until a Friday to send an email if a response is needed before the following Monday. The instructors may respond over the weekend but it is not guaranteed. Responses that take more than a day during the work week may be due to special circumstances, such as the instructor is attending an out-of-town conference, the student's query is of a complex nature that requires consultation with others/obtaining additional information, etc.

Institutional policies:

Accessibility
Among other responsibilities, the CUNY Graduate Center Vice President for Student Affairs has overall responsibility for Student Disability Services and is the 504/ADA Coordinator.

Contact information:
Matthew G. Schoengood, Vice President for Student Affairs, Rm: 7301, Telephone: 212-817-7400
Email: studentaffairs@gc.cuny.edu

Academic integrity
The Graduate Center outlines a clear definition of Academic Honesty and the DPH program expects students to know and follow the CUNY Academic Integrity Policy. Both can be found in the GC Student Handbook as well as a link to the GC Avoiding and Detecting Plagiarism guide. http://www.gc.cuny.edu/CUNY_GC/media/CUNY-Graduate-Center/PDF/Publications/Student_Handbook_web.pdf?ext=.pdf

Help with research and writing
Librarians at the CUNY GC Mina Rees Library are available to help students with using research databases and citation software in person or remotely by phone, chat or email. Contact information can be found on the library's research website at: http://library.gc.cuny.edu/research-help/

The GC Wellness Center provides academic consultation services to help keep students on track with their academic work by working on the obstacles to progress and developing strategies to overcome them. More information can be found on the GC Wellness Center's website at: http://www.gc.cuny.edu/Prospective-Current-Students/Student-Life/Health-Wellness/Counseling-Services/Academic-Health

Last day to drop the course with the grade of "W": April 16, 2016

http://www.gc.cuny.edu/Public-Programming/Calendar/Academic-Calendar-2014-15?page=2

Grade of Incomplete (INC) and Graduate Center Policies

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergency. Only students averaging a C or above in the course are eligible to request an incomplete course grade.

According to Graduate Center policy updated 7/11/2011, to resolve incomplete grades, students must fulfill their obligations within one calendar year after the INC grade is assigned. After one year, an incomplete grade (''INC'') will become a permanent incomplete. Extensions will be granted only in exceptional circumstances upon written application and with the permission of the faculty member, the Executive Officer, and the Vice President for Student Affairs. Permanent incompletes will accrue no credit. Students with more than two incomplete courses will be brought to the attention of their Executive Officer to determine whether or not they are making satisfactory progress. Students will not normally be regarded as making satisfactory progress toward their degrees if they have more than two "INC"s on their records. Students should be aware that continued registration and most financial aid awards are conditional upon satisfactory progress. Students should also note that credits for which they have an "INC" as of the end of the third week of classes of a given semester are not counted toward advancement to the next level for that semester.

Grade appeals

The doctoral faculty as a whole and, more specifically, the faculty of a doctoral program are responsible for determining the requirements and standards of performance for courses and for qualifying examinations. A course instructor retains considerable discretion in these matters. The instructor is under obligation, however, to ensure that the course syllabus is consonant with the goals of the curriculum of the degree program. The expected level of performance in a given course shall reflect levels of difficulty relevant to the educational objective of the program. In addition, the instructor has an obligation to students to make clear the basis of evaluation (e.g., reading assignments, papers, contributions to seminar discussions, experimental work) at the start of each course so that students are not surprised by unexpected or untimely demands. Grades on examinations or for work in a course are the responsibility of the instructor. Specific information pertaining to the procedures for an official grade appeal through the GC can be found in the GC student handbook at: http://www.gc.cuny.edu/CUNY_GC/media/CUNY-Graduate-Center/PDF/Publications/Student_Handbook_web.pdf?ext=.pdf

Schedule (suggested format)

Session	Date	Topic	Readings and Assignments
1	2/3	Introductions Maternal and Child health in context part 1, From Medicalization to Risk	"Medicine as an Institution of Social Control," The Sociological Review, Volume20 # 4, 1972, pp 487-504 http://onlinelibrary.wiley.com/doi/10.1111/j.1467-954X.1972.tb00220.x/pdf excerpts from: Petersen and Lupton, THE NEW PUBLIC HEALTH, 1996, 2000 reprint, excerpts from Elizabeth M. Community, Society and Health Specialization Competencies	Assessment Methods
This course will help you achieve increased competency in community, society and health. By the time you graduate, you should be able to:	Competencies and learning objectives will be evaluated as part of the following assessment methods:
Describe the historical development of public health work in maternal, child, reproductive and sexual health	Term project and class participation
Analyze the role of race and racism in maternal, child, reproductive and sexual health, and understand the difference between a reproductive choice and a reproductive justice approach.	Term project and class participation
Identify the major economic, political, environmental and social forces that influence maternal and infant morbidity and mortality, and sexual health.	Term project and class participation
Identify and understand life course theory and use its concepts to explain differences in health and illness as it relates to maternal, child, reproductive and sexual health.	Term project and class participation
Describe the elements of the life course theory that apply to disparities in health outcomes.	Term project and class participation
Identify major economic, political, and environmental forces that shape the health of U.S. populations.	Term project and class participation

CUNY GRADUATE SCHOOL OF PUBLIC HEALTH AND HEALTH POLICY

COURSE SYLLABUS

PUBH 89100_23327 (GC)
Advanced Research Seminar II
3 Credits
Last Updated: February 8, 2016
Spring 2016

Time and location	Graduate Center, Room 5382, Mondays, 4:15-6:15 pm
Instructor	Nicholas Freudenberg, Dr.PH Community Health and Social Sciences Distinguished Professor of Public Health Nick.freudenberg@sph.cuny.edu Silberman and 125th Street 212-396-7738 Sandra E. Echeverria, PhD, MPH Associate Professor Community Health and Social Sciences Sandra.Echeverria@hunter.cuny.edu (best way to reach me) Silberman Room 529 (212) 396-7740
Office hours	By apppointmnet
Course website	https://bbhosted.cuny.edu
Support resources	For technical assistance, contact the Helpdesk. Academic support services and writing skills assistance are available.
Course description	Guides advanced students in the completion of their dissertation proposal and, if needed, Institutional Review Board (IRB) application for dissertation research. Faculty assist students to refine the research design, to fully develop appropriate research methods and analytic strategies and to provide protection for human subjects in their dissertation research.
Course prerequisites	All coursework; Successful defense of the Second Exam
Course format	Seminar/ lecture
Required reading and resources	Kuhn, Thomas. *The Structure of Scientific Revolutions.* U of Chicago Press. 2012 (4th edition); Materials posted via Blackboard
Suggested reading and resources	, 2 Dissertations in the student's subject or methods area

Program Competencies	Course Learning Objectives	Assessment Methods
This course will help you to:	*After successfully completing this course, you are expected to be able to:*	*Competencies and learning objectives will be assessed as part of the following course assignments:*
1. Assess the mechanisms and pathways by which factors influence individual and population health.	• Describe specific research questions to be answered in the proposal;	• Participation in class discussions based on assignments
2. Design and conduct etiological, intervention, policy, implementation science and other empirical studies that contribute to new knowledge about population health	• Define Specific Aims	• Oral presentations
3. Synthesize and apply methods, theories and data from multiple disciplines to understand and solve population health issues	• Engage faculty in a dissertation committee	• Written assignments
Generate, translate, communicate, and disseminate population health evidence to diverse audiences	• Identify data sources and explain methods proposed to answer these questions;	• Final draft dissertation proposal
3. Implement professional and organizational ethical guidelines in population health research and practice.	• Assess the strengths and weaknesses of these methods	• Oral presentations
Secure resources to conduct population health research and practice	• Describe obstacles likely to be encountered in a dissertation project and propose strategies to overcome these obstacles;	• Final draft dissertation proposal
	• Prepare a written draft dissertation proposal and present orally.	• Final draft dissertation proposal

Course Assessments

Participation in class discussion based on assignments (This includes written assignments throughout the semester)	30%
Complete draft dissertation proposal	70%.

Grading

Evaluation criteria

The relative weight of each course component is as follows:

Assessment	Weight
Class Participation	15%
Attendance at GC Seminars	15%
Completed Dissertation Proposal (including drafts of sections)	70%
	100%

The grading system for the course follows guidance in the Graduate Bulletin.

Letter Grade	Quality Point Value	Percentage
A+	4.00	100-98
A	4.00	97-93
A-	3.70	92-90
B+	3.30	89-88
B	3.00	87-83
B-	2.70	82-80
C+	2.30	79-78
C	2.00	77-73
C-	1.70	72-70
F	0.00	<70

Withdrawal

If an emergency arises, the student must immediately notify the instructor and agree upon a course of action, especially if the student is unable to complete the course. Students are permitted to officially withdraw from courses without academic penalty generally up until the 10th week of class. The specific policies and dates for course withdrawal are available online.

Grade of incomplete

Incomplete final grades will not be granted unless the request is justified by legitimate and documented emergencies. The granting of an incomplete grade is at the discretion of the instructor. Refer to the Student Handbook for further details.

Grade appeals

When a student considers a final course grade unsatisfactory, the student should first confer with the instructor. If the student is still not satisfied, the student should promptly

contact the Executive Officer of the DPH program in writing giving the factual reasons and basis for the complaint. Details about the academic appeals procedures can be found in the Student Handbook.

Course Policies

Attendance and class participation

Attendance and class participation are required. Expect to actively contribute to the discussion and complete and submit all assignments by posted due dates. Missed assignments or lack of discussion participation not only affect the individual student, but they also affect the class as a whole due to the high degree of interaction within the course.

Late/incomplete submission of assignments

Acceptance of late/incomplete assignments due to unavoidable delays in research progress must be pre-approved by the instructor.

Make-ups, rewrites, and extra credit

The nature of this seminar requires numerous rewrites as the student progresses toward a defendable proposal, with full committee engagement.

Additional Graduate Center Policy on INC Grades

To resolve incomplete grades, students must fulfill their obligations within one calendar year after completion of the course. After one year, an incomplete ("INC") will automatically be transformed into an "INP'' (permanent incomplete); extensions will be granted only in exceptional circumstances upon written application and with the permission of the faculty member, the Executive Officer, and the Vice President for Student Affairs. Permanent incompletes will accrue no credit. Incomplete grades cannot be changed to letter grades after a student has been advanced to candidacy and has been moved to Level III.

Students with more than two incomplete courses will be brought to the attention of their Executive Officer to determine whether or not they are making satisfactory progress. Students will not normally be regarded as making satisfactory progress toward their degrees if they have more than two INCs on their records. (Please refer to "Standards for Retention," below, and to page 63 of this handbook.) Students should be aware that continued registration and most financial aid awards are conditional upon satisfactory progress. Students should also note that credits for which they have an INC as of the end of the third week of classes of a given semester are not counted toward advancement to the next level for that semester.

Expectations of students

- Be familiar with Graduate Center and DPH program requirements including but not limited to policies regarding academic standing, academic integrity, grading, and academic calendar.
- Know how to use GC library resources, including dissertation searches, and citation managers
- Show respect to everyone in the course.
- Be fully prepared to actively participate in discussion.
- Complete all assignments by their assigned due date.
- No credit for assignments suspected of plagiarism or cheating.
- Be held accountable for all material assigned/covered in the course.
- Regularly check Blackboard and official university email for course correspondence.
- Questions dealing with the course (course content, assignments) may be generally relevant to others in the class and can be posted in the discussion board.
- Contact the professor directly with personal questions and concerns related to the course.
- When in doubt, ask questions and clarify course assignments and expectations.
- Develop and maintain contact with dissertation committee sponsor – and individual committee members as advised by sponsor.

Expectations for the instructor

- Provide regular announcements, reminders, and suggestions on the course website
- Monitor, ask follow-up questions, and answer questions presented during discussion
- Respond to student email within 48 hours Monday through Friday.
- Grading and feedback on assignments within 1 week of the due date.
- Individual sessions with the instructor to overcome perceived barriers to dissertation proposal progress
- Communication about course progress given through the course website.

Accessibility

Support services and accommodations are available to provide students with disabilities greater accessibility to the academic environment. The Vice President for Student Affairs is the 504/ADA Coordinator (Room 7301; 817-7400). For more information (with confidentiality) contact Sharon Lerner or Elise Perram (212-817-7400 or disabilityservices@gc.cuny.edu).

Academic integrity

CUNY regards acts of academic dishonesty (e.g. plagiarism, cheating on exams, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. CUNY is committed to enforcing the Policy on Academic Integrity and will pursue cases of academic dishonesty according to established procedures. Refer to the CUNY Policy on Academic Integrity, the Graduate Center Guide, and other sources for definitions and examples of academic dishonesty.

Course Schedule

Session	Date	Topic	Readings and Assignments
1	Feb 1	Introductions and Course Overview	None
2	Feb 8	Overview of NIH grant components and Specific Aims Students brief presentation of their topic (10 minutes)	Lecture: Echeverria/ Freudenberg In Class: Review and critique students' specific aims page **Readings**: 1-page Specific Aims of each class member
	Feb 15	**NO CLASS- President's Day**	
3	Feb 22	**DPH Grand Rounds**	S. Bertozzi, MD, PhD. Using Bigger Data Better to Improve Population Health
4	Feb 29	Scientific Inquiry and the Development of Conceptual Models and Study Questions	Lecture: Echeverria In Class: Critique Summary of strengths and limitations of similar dissertations - organization, clarity of aims, contribution to existing literature, linking conceptual framework to analytic approach **Readings: Kuhn; 2 dissertation proposals with similar topic (Pro Quest)**
5	Mar 7	Life Course Concepts and Models	Guest Lecture: Teresa Janevic, PhD, MPH In Class: Critical discussion of topic **Readings: See Blackboard**
6	Mar 14	Conceptual and analytic approaches to change over time	Lecture: Echeverria In Class: Critical discussion of topic **Readings: See Blackboard**
7	Mar 21	Use of administrative datasets: Strengths and limitations	Guest Lecture: TBD In Class: Critical discussion of topic **Readings: See Blackboard**

8	Mar 28	Revised Specific Aims Discuss Methods Issues of Student Proposals	Lecture: Students present for 15 minutes In Class: Critical review of student work **DUE: Revised Specific Aims**
9	Apr 4	**DPH Grand Rounds**	Ronald Labonté, PhD, FCAHS, HonFFPH. Topic TBD.
10	Apr 11	Integrating quantitative and qualitative approaches in public health research	Lecture: Echeverria/ Freudenberg In Class: Critical discussion of Methods for Dissertation **Readings: See Blackboard**
11	Apr 18	Dissertation Proposal	Lecture: Students Present All Components of Dissertation Proposal (15 min) ***DUE: Full Draft of Dissertation Proposal***
	Apr 25	**SPRING BREAK- NO CLASS**	
12	May 2	Meet with faculty 1-on-1	Discuss comments/ gaps for final draft
13	May 9	**DPH GRAND ROUNDS**	Speaker and Topic TBD
14	May 16	Student Presentations	Final presentation of Dissertation proposal and timeline for defense (30 minutes each)
15	May 23	Student Presentations/ Course Wrap Up (Cont'd- last day of course)	Final presentation of Dissertation proposal and timeline for defense (30 minutes each)

PASS

Name:

Degree/Program: MPH with concentration in Epidemiology & Biostatistics

Fieldwork Organization: The Dave Nee Foundation

Address: P.O. Box 231487, New York, NY 10023

Purpose: To conduct research and data analysis relevant to the organization's needs.

Preceptor: Rachael Barrett, MBA (with Katherine Bender, PhD as data analysis supervisor)

Dates: February–December 2015

Reflection Summary:

My completed coursework at the CUNY School of Public Health provided a good foundation upon which my fieldwork experience was built. As with most jobs, this fieldwork placement required interpersonal and organizational skills on one hand and technical skills on the other. With regard to the former, the fieldwork called for a great deal of organizational ability, good communication skills, and knowledge of how to work well independently while contributing to a collective work product. Technical skills that I drew upon in completing this placement included working with computers and databases, and ability to conduct statistical analysis.

My responsibilities as an intern at the Dave Nee Foundation included researching information on similar nonprofits throughout the nation; entering, analyzing, and reporting on data pertaining to the organization's Uncommon Counsel program; and conducting a preliminary analysis of data from the Survey of Law Student Wellbeing. Nonprofit research involved use of the Internet to identify organizations working in the field of suicide prevention, documenting information about these organizations in a database, and contacting organizations electronically

and/or by phone to obtain missing information. For Uncommon Counsel, a mental health educational program aimed at law students and members of the legal community, I entered data from feedback forms completed by attendees into SPSS, ran statistics using the data, and helped prepare reports explaining our findings to school administrators, an audience not always familiar with statistical analysis. I closely examined and ran preliminary statistics using data from the Survey of Law Student Wellbeing (SLSW), stored in SPSS format as well. With the consent of Dr. Bender and the study principal investigators, I plan to submit an abstract to the 2016 New York City Epidemiology Forum and write my master's essay using these data.

I received adequate supervision as part of my fieldwork. Both Ms. Barrett and Dr. Bender were responsive to any questions I had, and most of our communication took place via email and phone. Of the two, Dr. Bender provided me with more feedback, encouraging me occasionally to make suggestions as to a better way a particular task should be handled. This made me feel that my opinion was valued. Because all paid and unpaid employees of the organization work remotely, there was less communication and supervision then there would have been in an organization with a physical office. I did not view it as problematic, however, because I am good at independent work.

I encountered several obstacles in the course of my fieldwork experience. The biggest obstacle was a lack of time to devote to fieldwork. Because of that, I had to extend the deadline for completing my fieldwork hours several times. In addition, I had hoped to do work on the Healthy Minds study dataset but had to focus on SLSWB instead because one of the Healthy Minds study staff decided to go back to law school and thus had an interest in analyzing and publishing the Healthy Minds data first. Another challenge, which I encountered while working on the Uncommon Counsel component of my fieldwork, was an occasional reluctance of

employees of other nonprofits to give out information that I was looking for. I did my best to address the problem by initiating our communication electronically and then following up via phone, several times if necessary.

Despite these drawbacks, my fieldwork experience was a positive one: it helped further my career and allowed me to gain new skills, knowledge, and experiences. In terms of my career, this fieldwork was the first time I got to work for a mental health nonprofit. It benefitted me academically, allowing me potentially to present and also to use SLSWB data for my master's essay. Given these positives, I made the decision to continue to volunteer with the Foundation after my formal fieldwork period is over. Working for an organization with only two paid employees was a new experience, allowing me to feel I was in my own right a representative of the Foundation while I communicated with the nonprofits I was researching. The fieldwork sharpened both my interpersonal and research skills and let me appreciate the importance of blending both when one works for such a small organization.

The fieldwork placement offered several general lessons and helped identify a few opportunities for improving this experience for other public health students in our school. It helped me see the benefits of considering non-traditional employment opportunities and of hard work and persistence, which were necessary to do well in this placement. To improve the fieldwork experience, I would recommend simplifying directions for students completing fieldwork deliverables by excluding any unnecessary or repetitive information. It is also worth considering allowing students to pursue fieldwork placements that are not completely defined by their specialization, as their previous core and elective courses already train them well in their chosen track of study. I would recommend other students interested in an experience similar to mine to have their fieldwork placement with the Dave Nee Foundation, considering that it is an

organization with a worthy mission and a receptiveness to new ideas and talent.

Reasons for Low Uptake of Pre-exposure Prophylaxis in New York City

PUBH 806; Spring 2015

Abstract

Background: Pre-exposure Prophylaxis (PrEP) has the potential to reduce one's risk of acquiring HIV, and PrEP scale-up is being encouraged locally. Yet, awareness and uptake of the prescription remain low in New York City (NYC).

Methods: To assess reasons for low awareness and uptake of PrEP, three focus groups were conducted with gay men residing in NYC and aged 21-32 years. Transcripts were reviewed to identify themes and coded accordingly.

Results: Seven (7) men participated in focus group discussions. All participants expressed positive attitudes toward the use of PrEP for HIV prevention. I identified five constructs related to reasons for low awareness and uptake: PrEP unaware, shame, low HIV-risk perception, low accessibility of PrEP, and PrEP use concerns. The most common themes were related to shame and stigma surrounding the use of PrEP. Participants expressed that colleges and general practitioners offices would be good venues for marketing PrEP. These five constructs were used to create a framework for increasing the use of PrEP.

Discussion: These data indicate that PrEP implementation programs should consider addressing PrEP-related shame and that student health clinics and college newsletters may be an efficient way to market PrEP to young adults. General practitioners should discuss PrEP with patients at annual visits, especially with patients seeking STD screening. For widespread scale-up of PrEP to be successful, the concerns of potential PrEP users need to be addressed, and the proposed framework could be useful as health departments scale up PrEP programs.

Background

More persons are diagnosed with HIV in New York City (NYC) than in any other United States city (1). In 2013, there were 3,007 NYC residents diagnosed with HIV (1). The majority of new HIV diagnoses were among men who have sex with men (MSM) (57%) and young persons (60% diagnosed <49) (1). Novel HIV prevention methods are needed to control the spread of HIV.

In July of 2012, the Food and Drug Administration approved the first drug for the prevention of HIV infection. When taken once a day, pre-exposure prophylaxis (PrEP) can reduce the risk of HIV infection by 92% (2). Biomedical interventions, such as PrEP, expand the package of services available for the prevention of HIV, and widespread scale up is being encouraged at the federal and local levels (3-4). In the spring of 2014, the New York City (NYC) Health Department conducted surveys at two public sexually transmitted disease clinics with 389 patients at risk for HIV acquisition (5). Nearly 60% of respondents were unaware of PrEP, and none had used PrEP (5). Encouragingly, after learning about PrEP 70% of respondents indicated they were somewhat or very likely to take PrEP (5).

NYC has one of the largest HIV epidemics in the country, and PrEP has the potential to reduce one's risk of acquiring HIV (1-2). Yet, awareness and uptake of the prescription remain low in NYC (5). PrEP is currently indicated for men who have sex with (MSM) at substantial risk for HIV infection based on risky sexual and drug use behaviors (6). The aim of this research was to understand why awareness and uptake of PrEP remain low among young gay men in NYC.

Methods

Data Collection

Three focus groups were conducted to explore the topic of PrEP awareness and uptake in NYC. The focus groups occurred in small group pairs or triads. Focus groups are particularly

useful for attitudinal research, as explaining or accounting for attitudes is easier for people when they hear different perspectives (7). In this case, I was interested in attitudes related to the use of PrEP. Additionally, group dynamics are useful when there is a social context within which a phenomenon is experienced (7), and PrEP is recommended for groups of people based on sexual and injection drug use behaviors.

As a result of the relationship between PrEP use and sexual and drug use behaviors, the topic of PrEP is somewhat sensitive. However, if people have similar experience of the issue, sensitive topics can be explored in-group settings (7). Additionally, it is helpful for there to be some commonality between participants' sociodemographic or other characteristics most relevant to the research topic, which is why the groups were comprised of persons with similar sexual orientation and of age. Small groups pairs were used because they allow for participants to draw comparisons with and hear from others, but they are a more private forum and are particularly useful when participants might feel the subject matter is personal or intimidating (e.g., exploring views of complex public issue such as PrEP).

Commented [DR1]: very good presentation of the methodological considerations in this paragraph

Standard focus group procedures were employed for the collection of data. Before beginning the discussion, the purpose of the project was described to the participants, and select demographic characteristics were recorded via a brief, anonymous questionnaire. The group discussion was moderated, audio-recorded and lasted approximately one hour.

Commented [DR2]: domains/categories in/description of content of FG Topic Guide ?

Recruitment

Purposive sampling methods were used to recruit young gay men residing in New York City. To be eligible for inclusion in the study, a participant needed to identify as gay and male and be 18-35 years of age. I chose to limit recruitment to young gay men because gay men are a priority population for prevention with PrEP (5) and because gay men, in addition to young persons, are disproportionately diagnosed with HIV in NYC. I went with a homogenous sample

approach, as this gives a detailed picture of a process (PrEP awareness and PrEP use) for individuals who belong to the same subculture (7). I recruited participants from my social network and via friends within my social network.

Analytic Plan

Notes taken during the discussion were used to assist with transcription. Transcripts were reviewed to identify important themes and then coded accordingly; themes were further grouped into larger constructs (7). Generally, the group-to-group validation technique guided the reporting out of the focus group results (8). Three factors influenced how much emphasis a given topic received in this report: how many groups mentioned the topic/theme, how many people within each group mentioned the topic, and how much enthusiasm/energy the topic generated among the participants (8). Given the small scale of this project, I also reported out a couple themes that were only mentioned by one group. I did so because I thought the themes deserved to be in the final report, as they brought a unique point of view to the findings. Analyses were conducted in Dedoose.

Commented [DR3]: Recall that 'different' or 'minority view' results are oftentimes as impt in qual research as 'majority views' if they appear to provide a deeper/more complete understanding of the concepts. (This should be referenced.) Also, with your small n, it's possible that these 'lesser' views might actually reach saturation/greater importance if you had a moe appropriate sample size.

Results

Seven persons participated in three focus group discussions. The participants were aged 21-32 years at the time of the focus group. Three of the participants were still in college. Two participants were British, and the remaining five were Americans. Four persons were aware of the existence of PrEP, and none had used PrEP. All participants (N = 7) expressed positive attitudes toward using PrEP for the prevention of HIV. This comment from a 32-year-old, male participant seemed to capture the general feeling: "There's no reason not to allow it [PrEP]… I think since there's something out there [to prevent HIV infection], then it should be encouraged."

Commented [DR4]: You want to 'identify' your verbatims in a way that helps the reader with the context from which the statement (data) is coming. Obviously, I made this up as an example.

Reasons for low awareness and uptake of PrEP

I identified five constructs related to reasons for low awareness and uptake of PrEP. Table 1 lists the constructs and the themes that were included in each construct and illustrative quotes that were coded in each theme. The first construct was PrEP unaware, which was defined as having minimal knowledge of PrEP at the individual and/or at the community level. This construct was made up of four themes. The first theme was being unaware that PrEP existed on the market. The remaining three themes included in this construct were not necessarily endorsements of being unaware of PrEP; however, they were included because they contributed to a lack of awareness of PrEP. For example, participants talked about how their general practitioners do not discuss PrEP with them at medical appointments.

The second construct was shame and stigma as they relate to HIV and PrEP. This construct was comprised of three themes. The first theme was stigma related to HIV, and the remaining two themes were based on shame related to PrEP. All of the participants expressed concerns of increased risk-taking behavior while taking PrEP. This was explained by one participant as analogous to the Australian experience of "introducing rabbits into Australia, where they are trying to get rid of some pest, and then you've got a problem with rabbits… You have a new problem, maybe sexually transmitted diseases, which aren't seen as bad because - oh it's an infection that you get rid of *with another pill."*

Nearly all the participants expressed that taking a pill to prevent HIV infection says something about you as a person. For example, "They [people considering to take PrEP] might be embarrassed to take it. They would be embarrassed for people to know that they are at-risk."

The third construct was participants expressing they perceived themselves at low-risk for HIV infection, as they were already taking steps to prevent HIV (e.g., condoms or monogamy) or they didn't believe they would get HIV. The fourth and fifth constructs were related to the actual prescription of PrEP: the belief that getting a PrEP prescription would be difficult and

Commented [DR5]: numerals not used for the preceding three constructs

concerns about aspects of using PrEP. The belief that getting a PrEP prescription was difficult was comprised of three themes: 1) financial issues limit access to PrEP; 2) health care providers limit access to PrEP or 3) insurance limits access to medical care. Persons concerned about aspects of PrEP use mentioned either drug safety or adherence concerns.

Table 1. Reasons for low awareness and uptake of PrEP

Construct	Definition	Sub-Themes Contributing to the Construct	Illustrative Example
PrEP Unaware	Minimal knowledge of PrEP at the individual and/or community level	1) Unaware of PrEP	"I've never heard of PrEP"
		2) General practitioners do not discuss PrEP with patients	"The doctors should just talk to you about it. They should just give you information."
		3) Sex education should include information on PrEP*	"As part of sex-ed, [PrEP] should be discussed when you talk about HIV"
		4) PrEP is not marketed in the right way	"Brochures should be available at the general practicioner"
Shame	Concerns about shame and stigma as it relates to HIV infection and to getting a PrEP prescription.	1) HIV as a stigmatized disease	"It's obviously a really horrible thing [HIV]. I wouldn't wish it on anyone."
		2) Concerns of increased risk-taking behaviors while taking PrEP	"Some people see this as 'oh I can be less careful in using condoms' "
		3) Taking a pill to prevent HIV infection says something about you as a person	"If I was sleeping with one person, and I put myself on it. That says something to your partner. You're worried about the relationship"
Low HIV Risk Perception	Belief that he won't get HIV or isn't at risk for infection	1) Already taking precautions to prevent HIV	"I've been in a committed relationship for the past two years"
		2) Doesn't perceive himself to be at-risk for infection	"I don't see myself as being in a situation where I'm likely to be exposed to HIV"
Low Accessibility of PrEP	Belief that getting a PrEP prescription will be difficult	1) Financial issues limit access to PrEP	"As a student, how long can you afford to be buying this monthly?"
		2) Access to PrEP is limited because of issues related to their health care providers	"I imagine my doctor knows about this pill. But I'm not so sure."
		3) Access to medical care may be limited because of insurance**	"And I just got kicked off my parent's health insurance so for me [the major barrier is] insurance."
PrEP Use Concerns	Concerned about aspects of using PrEP	1) Concerned about drug safety of PrEP	"I am worried about putting that [PREP] into my body. It's new"
		2) Concerned about ability to take a pill everyday	"Or if you miss a pill. Adhering is something I would worry about."

*Theme was only mentioned by British participants

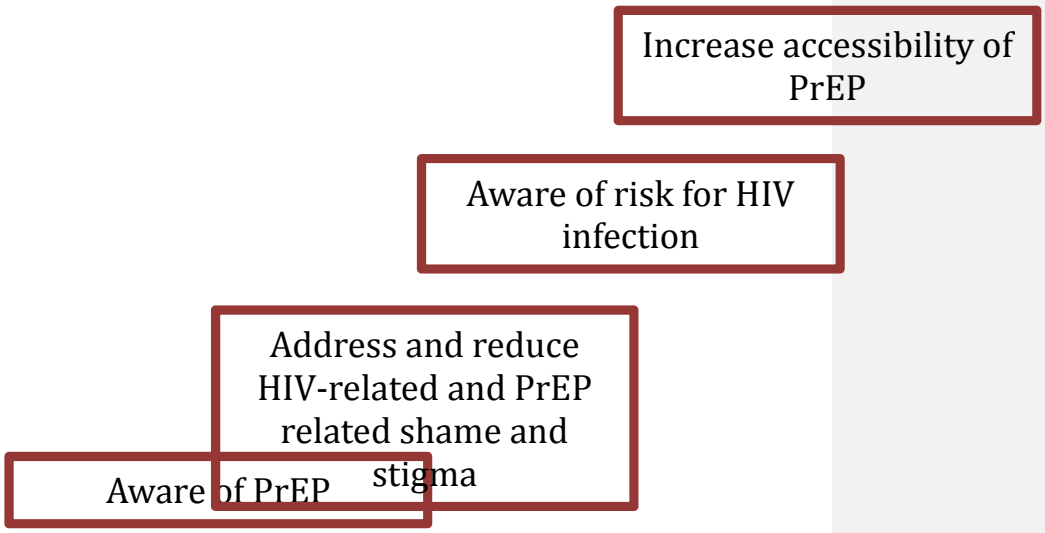
**Theme was only mentioned by American students

Differences between British and American participants

Only British participants discussed sex education as a way to increase awareness of PrEP. The two British participants assumed that once the next generation went through sex education that the general population would know about the existence of PrEP. “This is just a problem until the next gen has been taught [about PrEP] in sex ed.” Even after the American participants were probed about ways to increase awareness of PrEP, none mentioned sex education. However, the participants still in college mentioned that student health clinics would be an ideal venue to receive information about PrEP for HIV prevention, and that students regularly receive information from the clinic providers about other risk-behaviors (e.g., drug and alcohol use) that increase their risk for sexually transmitted diseases.

The second difference based on nationality was related to insurance. Only Americans, specifically the college students, expressed that access to medical care may be limited because of insurance. When the British participants were asked if this was related to having the National Health Service, one replied, “Oh. I don’t know. I wouldn’t have thought of it like that. I guess it could be [related to having the NHS]. I do find medical care here [NYC] a bit confusing so I often try see the doc when I’m in London.”

Conceptual model for increasing the use of PrEP



Based on the five constructs, I created a model for increasing the use of PrEP (Figure 1). The Steps to PrEP Use model addresses the barriers mentioned by participants in a sequential series of (?) steps. The idea for sequential steps that limit a person’s access to PrEP came about from a participant’s comment.

> “Weirdly, I think the first barrier is getting people to talk about it [HIV]. First of all you have to work off the stigmatism [sic] around the disease. People think ‘oh, that’s not me, that’s not my lifestyle.’ And you put yourself in a box. And you think, that person

over there, he's at-risk. So, second, you have to get that awareness out there. There is something you can do [to prevent HIV], but don't think that it's fool proof. Don't think that, 'oh it wouldn't happen to me'. Getting people to understand that this thing [HIV] is more widespread than they think. And then telling them how you prevent it from spreading."

Figure 1. Steps to PrEP Use model

Commented [DR6]: nice to get to the point of a possible 'intervention model' but seems like it involved a bit of a 'leap' that needs to be bridged with your data/findings. An important intermediate step would be to 'map' your themes/constructs to the different elements of this model (ie, how the model explicitly addresses the themes in your findings. This intermediate step would be facilitated by your having first developed a graphic framework of your findings.

The order of the steps does not exactly match the participant's suggestion; however, I created the order based on what I heard throughout the focus group discussions. Thus, the first step requires being aware of PrEP; second is reducing HIV-related and PrEP-related stigma and shame; third is making sure people have an accurate understanding of their risk for HIV

Commented [DR7]: wouldn't expect it to, as 'results' of research should be based on the whole of the data collected and your analysis/'processing' of it in the larger context of the filed (eg, how does this align or not with other related intervention frameworks?)

infection; fourth is increasing accessibility to PrEP and last is to reduce concerns related to the use of PrEP.

Discussion

All the participants had positive attitudes toward the use of PrEP for HIV prevention. I identified five constructs related to reasons for low awareness and uptake of PrEP among gay men who reside in NYC: PrEP unaware, shame, low HIV-risk perception, low accessibility of PrEP, and PrEP use concerns (Table 1). These constructs were used to create a framework through which awareness and uptake of PrEP could be increased (Figure 1). The first step is to make people more aware of PrEP, as access to PrEP necessarily requires that a person has heard about PrEP. One policy recommendation is to have general practitioners discuss PrEP with patients at annual visits, especially if the patients are being screened for sexually transmitted diseases (STD). This may increase the awareness of PrEP among persons seeking medical care.

The most common themes that people expressed were related to shame and PrEP. To the best of my knowledge, this is the first study to identify PrEP-related shame as a barrier to using PrEP for HIV prevention (9). Thus, the second step is to reduce HIV-related and PrEP-related shame and stigma. Some participants expressed that they didn't think they would be at-risk for HIV infection. While this may be true, I believe it is important for people to have an accurate perception of their risk for infection, which is the basis for the third step. The last two steps are related to using PrEP: accessibility of a PrEP prescription and concerns about using PrEP. PrEP marketing should include information on drug safety and adherence. For widespread scale-up of PrEP to be successful, the concerns of potential PrEP users need to be addressed, and this framework could be useful as the NYC Department of Health and Mental Hygiene scales up biomedical HIV prevention methods throughout the city.

Only British participants discussed sex education as a way to increase a person's awareness of PrEP. Sex education in American schools is a contentious topic. Thus, while I would recommend that PrEP for HIV prevention be taught to students in schools that have comprehensive sex education programs, I'm not sure that sex education is a feasible way to increase the awareness of PrEP at the population level. The college students pointed out that student health would be an ideal venue for them to receive information about PrEP for HIV prevention, and I agree with this assertion. College students represent a cohort of individuals who are attending the same health clinics and are often living in the same neighborhoods and buildings, which may make marketing of PrEP easier. Providing information about PrEP for HIV prevention to college students via student emails and newsletters or at student health clinics may be a feasible way to increase the awareness of PrEP for HIV prevention among young persons.

Many insurance plans, including Medicaid, cover PrEP (10). However, insurance type or the lack of insurance will remain an important barrier to getting a prescription for PrEP. The PrEP drug is estimated to cost $8,000 to $14,000 for one year, which doesn't include laboratory tests or the four medical check-ups that would be required for a one-year prescription (10). British participants did not mention insurance as a concern, which may have been related to being used to having the NHS as a payer of medical services. The American participants were concerned about how health insurance, or the lack of insurance, would impact their ability to get a prescription. PrEP programs should consider addressing this barrier in protocols and developing policies to assist with drug costs.

Commented [DR8]: this language already suggests it's a *possibility*, not a certainty. Including "may not" is not necessary and actually undermines an *informed* , *plausible* explanation for the difference.

I have spent time talking with colleagues, friends, and family about the usefulness of and increasing access to PrEP. Thus, I approached this research question with a handful of preconceived ideas about existing barriers. For instance, I have heard and one small study has

shown that people often do not perceive themselves to be at-risk for HIV acquisition, despite being engaged in high-risk behavior (9). While conducting this study, I did not specifically ask about perception of risk for HIV. That being said, after I listened to my first focus group discussion I thought that some of my probing questions were a little leading, and I tried to correct this and be a more unbiased moderator in the last two focus groups.

Commented [DR9]: Section on strengths/Limitations of research?

Conclusions

I identified five constructs related to reasons for low awareness and uptake of PrEP among gay men who reside in NYC. These constructs were used to create a framework to increase awareness and use of PrEP (Figure 1). The most common themes that emerged were related to shame and stigma surrounding the use of PrEP. To the best of my knowledge, this is the first study to show that PrEP-related shame may be a barrier to PrEP uptake (9). These data indicate that PrEP implementation programs should consider addressing PrEP-related shame and that student health clinics and college newsletters may be an efficient way to market PrEP to young adults. General practitioners should discuss PrEP with patients at annual visits, especially with patients seeking STD screening. For widespread scale-up of PrEP to be successful, the concerns of potential PrEP users need to be addressed, and the proposed Steps to PrEP Use framework could be useful as health departments scale up biomedical HIV prevention programs.

nice work; as noted above, would be considered more "complete" with further development of a (graphic) framework of your findings (eg, showing the inter-relationships/connections) that could then be 'mapped' to your proposed intervention.

Paper grade: 23/25

Evaluating the Impact of a Mindfulness-based Study to Reduce the Risk of Childhood Obesity in Underserved Urban Middle School Youth in NYC.

Abstract

This study evaluates a mindfulness-based intervention aimed at promoting positive dietary and physical activity behaviors among under-served, middle-school youth in NYC. Through in-depth interviews with participants and key-informants the researchers found that participants at the end of the program had a high level of knowledge of mindfulness and mindful eating and that such concepts started to affect behavior change. This intervention can become an effective afterschool program that tackles not only childhood obesity, but also improves interpersonal relationships, management of stressful situations, and academic performance.

Overall Project

Introduction

Urban youth residing in low-income neighborhoods are at higher risk of obesity and have elevated environmental stressors compared to more economically advantaged peers,[1] which can result in long-term emotional, physical, and academic problems.[2] The high rates of crime and violence in these neighborhoods often prevent youth from engaging in physical activity outdoors and reduce mobility.[3] Hence, these youth tend to adopt more sedentary behaviors, further increasing their risk of being overweight and obese.[4]

Mindfulness interventions have been shown to be effective in reducing obesity and related disease risks through improved dietary behaviors in adults.[5] So far, most mindfulness-based interventions have targeted older individuals while only a few of these interventions were conducted in the youth population, mainly aiming at reducing mental stressors, such as anxiety and depression and improving self-esteem.[6] One different study has also shown promising results

in the impact of an Ashtanga yoga intervention to reduce weight among Hispanic youth at risk for type 2 diabetes.[7] The findings of these studies combined highlight the potential significance of mindfulness-based interventions as a tool to fight childhood obesity. However, further research is needed to better understand the impact of mindfulness techniques on dietary habits and physical activity behaviors among under-served young people, which is the reason why this study was developed. A program that educates on mindful eating, yoga, and stress reductions techniques could provide a unique opportunity to tackle the childhood obesity problem through a different angle, potentially increasing participants' overall well-being.

Intervention Format & Objectives

This quasi-experimental study included six weekly sessions of 75 minutes co-taught by a mindfulness-yoga instructor and a Public Health educator. The intervention's curriculum was articulated in the following components: (i) physical activity: when the youth were taught yoga-inspired moves and postures (ii) mindful eating and nutrition: which consisted of discussion and activities pertaining to all five domains of mindful eating (disinhibition, awareness, external cues, emotional response, and distraction)[8], and (iii) stress reduction: that consisted of breathing techniques and guided mindfulness practice to reduce stress and calm the mind.

The purpose of this qualitative research was to explore the impact of this intervention on psycho-social variables related to dietary and physical activity behaviors associated with childhood obesity and measures of mental well-being in low-income, urban middle-school youth. The specific objectives were to evaluate if a mindfulness-based intervention leads to: (i) changes in dietary and physical activity behaviors associated with childhood obesity, (ii) improved measures of mindful eating, (iii) decreased levels of perceived stress and improved levels of resilience.

Background and Significance

Increases in overweight and obesity have become a major public health problem and the rates are particularly alarming among children and youth. In the US, over the last three decades the rate of childhood obesity has tripled[9] and in New York City alone, nearly 40% of public school children in grades K-8 are overweight or obese.[10]

Biologically, overweight and obesity are a result of an energy imbalance where food intake exceeds energy expenditure. However, there are myriad social, economical, cultural, and political factors that lead to obesity and end up disproportionately affecting low-income youth and children.[11] Indeed, although babies and very young children are capable of self-adjusting their intake to match their outflow, as we grow up we lose this ability[12] so that food intake becomes influenced by external factors, such as: increase in number of fast food meals, low availability of nutritious food, increase in sugar beverage consumption, increase in portion size, etc.[13] Moreover, low-income individuals also have fewer opportunities to expend energy as poor neighborhoods have fewer parks and recreational centers[14] and violence and fear of crime discourage walking and biking.[15] Finally, people with low SES also tend to have less family meals, watch more TV, and feel the stress associated with poverty, which alone can lead to over-eating[16]

Methodology

Study population

A total of 24 urban youth residing in the low-income NYC neighborhood of Inwood were recruited. The study used a homogeneous sampling strategy in order to capture the experience of underserved, low-income, middle-school youth in NYC. Both genders and all ethnicities were recruited among participants of the Inwood Community Services Afterschool Program, and the

total number of participants includes both case and control groups.

Recruitment Strategies: The Principal Investigator of the study had established a deep relationship with Inwood Community Services (ICS), which is a not-for-profit community-based organization that provides, among other services, comprehensive after school programs for children in this community. The ICS site director for youth programs provided potential candidates for the program that were assigned either to the intervention or control groups. All recruited participants gave written informed consent and parental permission. The participants were provided with small incentives: 20$ Amazon gift card for all participants plus a yoga mat for case participants.

Measures and Instruments

The primary outcome variables of this study were psycho-social variables associated with dietary and physical activity obesity-related behaviors, while its secondary measures included mindful eating, perceived stress, and resilience.

The qualitative portion of the study collected data through in-depth interviews with intervention participants and four key informants. This specific method of data collection was chosen because of its powerful ability to make the participants' point of view intelligible to the researcher[17]. Although we acknowledge critiques of this method, which state that the interaction that takes place between researcher and participant during an interview might somehow shape the responses and the direction of the conversation, we firmly believe that it is still an extremely potent tool to understand participants' ideas, opinions, and understanding of events. This structured "conversation" allows the researcher to ask about specific issues that concern the research topic and, at the same time, gather insight and gain knowledge of themes, preoccupations, and suggestions that go beyond what s/he originally anticipated. Finally,

Commented [DR1]: should provide ref(s)

Commented [DR2]: that's the *intention* of the methods

Commented [DR3]: what you "firmly believe" will not pass muster with a peer reviewer – need to provide ref(s) as well as state that *all* methods of data collection have the potential to "direct/lead" respondents

interviews also allow the researcher to take into account tone, expressions, and body language as additional silent information.[18]

Commented [DR4]: which is, by the way, "observation" (which you tried to distinguish this research from, above)

The chosen key informants were the site coordinator and manager at Inwood Community Services, and the co-instructors of the program. Interviews took place one day after the end of the intervention; three were conducted in person and one by telephone.

Through the interview with the instructors we aimed to assess: (i) the feasibility of the program, (ii) ease of implementation, (iii) their perspective on the children's acceptability of the program, and (iv) perceived impact. The goal of the interviews with the site coordinator and manager was to consider: (i) if the participants mentioned the program and, if yes, in what ways, (ii) if they believed that the program could have a meaningful impact on this population, and (iii) the feasibility of the program as an after-school activity.

The goal of the interview with the children was to assess: (i) perceived impact, (ii) knowledge, (iii) behavior change and (iv) intended behavior change.

Process evaluation measures included: reach (number of youth attending each session), implementation (number of sessions conducted), and fidelity (extent to which the intervention was delivered as intended).

Data Collection and Analysis

Quantitative data was measured at pre- and post-test using a self-report questionnaire that included the Mindful Eating Questionnaire[19] and the 10-item version of the Perceived Stress Scale[20]. Process evaluation measures were monitored throughout the intervention's duration with a weekly questionnaire and field notes taken by the project coordinator and research assistant.

Qualitative data were collected through semi-structured in-depth interviews, which occurred at the intervention site after the end of the program.

The interview guide for the participants included 8 open-ended questions and for instructors and site coordinators it included 5 and 6 questions, respectively (see Appendices A, B and C for interview guides). All interviews were digitally recorded and later transcribed. Transcripts were uploaded and analyzed using Dedoose software.

The data were interpreted through a thematic analysis approach, following the general steps of data management as outlined by Ritchie et al.[21] Within the initial phase – *familiarization* – the researcher immerged herself in the data by reading all transcripts several days after the interview, with an extremely open mind, and without taking any notes. During the second read of the transcripts the researcher started identifying the portions of the text that were relevant to the research questions and creating large and encompassing codes. With the support of Dedoose software, the researcher entered the second phase of the analysis by *constructing an initial thematic framework.* This framework was created through the refinement of the first codes into different and more specific ones and the creation of different child-codes. In the *indexing and sorting* stage of the analysis, main themes were created and codes were merged within their umbrella. While *reviewing data extracts* the researcher reexamined all of the selected excerpts and, if necessary, reassigned them to more appropriate themes. Finally, in an effort to create an intelligible *data summary and display,* the researcher created a Codebook that showed the themes, codes, child-codes, their description, and related quotes in a set of matrices (see Appendix D)

Results

Three main themes emerged from the analysis of the transcribed interviews: benefits, obstacles and intervention assessment.

Benefits: Throughout the interviews participants mentioned several kinds of benefits that

were either related to concepts taught during the program or to the use of new skills that were gained through the intervention. In regards to notions that were learned in class, participants specifically articulated their perception of the benefits of mindfulness and of mindful eating. The concept of mindfulness seemed to resonate the most with the children in its "kindness" dimension. With expressions such as: *"[mindfulness]… would help us because it would help us not to hurt ourselves or anybody else"*, the children highlighted how mindfulness could help them be more kind and positive towards themselves and others. This finding was further corroborated by the fact that most children identified the "kindness exercise" of the program (in which they had to send kind and positive messages to themselves, relatives, and friends) as their favorite and most powerful one. Regarding mindful eating, recurrent benefits shared by most participants were the ability to eat healthier and/or less. As a female 7th grader explains, *"when you're mindfully eating you pay attention if it's junk food or if it's good for your body,"* and as her classmate added *"it helps you eat right at the point that your body is comfortable."* The ability to apply mindful eating in their daily lives was also mentioned by most participants as a benefit of the program. The children specifically described different situations in which they applied mindful eating showing comfortable familiarity with this concept and a clear idea of its benefits. Several participants identified practicing mindful eating with eating at a slower pace, and consequently, savoring their meals: *"before it was kind of a [eating] race between me and my siblings, now I don't really care if I'm second, or third, or last - I would eat the food and actually enjoy it"*. The other specific benefits of the intervention that were identified by the participants were: improved interpersonal skills, managing stressful situations, and school performance improvement. The participants' use of mindfulness techniques in their relations with others seemed to be one of the greatest benefits the children received from the program, and

it was also noted by two key informants, who further explained the importance of social relationships at the children's specific age. Participants also provided several examples of how breathing and thinking before reacting is now helping them in stressful situations. Some of them mentioned *"not getting into too much trouble"* after the program and *"taking the situation one step at the time instead of just hitting it head on"*, and these statements were supported by the after school program director, who saw a clear improvement in the children's ability to deal with stressful and uncomfortable situations in after-school. Finally, although the focus of the study was on behavior change in the areas of nutrition and physical activity, the participants' answers showed that the intervention content could be very useful in the academic context. Participants shared their experiences in applying mindfulness techniques in class or while doing their homework and emphasized how it's helping them improve their school performance. As one young 7th grader explained: *"after I did my test I mindfully looked over all my questions and the steps and I actually got a pretty good grade on that one"*.

Obstacles: The instructors foresaw obstacles in the actual application of the mindfulness concepts – mainly because children are not very introspective at this age and because the intervention wasn't long enough to actually make them develop a habit – but only two participants identified obstacles in the children's daily lives that would hinder mindful practice. Both of them mentioned that family represents the biggest barrier to the practical application of the concepts that were taught during the program. A young girl supports her point by sharing that *"[when]… we all start eating and I try to take my sweet time and then my mom is always telling me to hurry up"*.

Intervention Assessment: This final theme included specific problems and feasibility issues that the key-informants found during the program implementation and suggestions for

Commented [DR5]: This one, long paragraph reads like a list and doesn't seem to organize (or at least present) the categories (in yellow) in a way that incorporates the researcher's (your) analysis and *prioritization* of the findings. Hard to know what the main findings are/message is. It's, I think, partly a problem of presentation/organization (in separate, thematic paragraphs) and partly that your analysis has to go deeper and discern relative importance among (and, ideally, relationships between/across) the themes.

Commented [DR6]: Was nothing else discussed re obstacles??

improvement of the intervention by all respondents. The instructors identified communication with the site and duration of the class as the main problems they encountered, but were very adamant in saying that *"once the kids were here and we were all here I think we had very effective classes. Everything went smoothly, we didn't have any issues with anyone so I think being in the class was the easiest part".* Both instructors and children wished the sessions were longer, and when asked about suggestions for improvement, many said *"I would make it longer"* and *"I would build up the concepts more in depth".* Key informants and instructors also unanimously recommended to start this intervention with younger kids, even at kindergarten age since, as the after-school director explains: *"A lot of times we don't think that little kids are stressed out but they really are and we don't know what they are going through at home so I think that the younger, the earlier you can teach them the better".*

Discussion & Conclusion

The experiences and opinions that were shared by the participants seem to describe an overall successful intervention. There were concerns that this positive feedback was due to social desirability bias since the children might not have felt comfortable sharing negative opinions about the program with the interviewer, as she was present at all intervention sessions and was identified as one of the program organizers. In order to address this concern, the interviewer highlighted several times the importance of the children's honesty in their responses and how their comments could improve the classes and thus benefit other children.

Commented [DR7]: this might be better placed in the Strengths and Limitations section

The interview data allowed the researchers to assess the feasibility, shortcomings, and benefits of the intervention. As noted by the respondents, specifically by the instructors, the structure of the program needs to be slightly modified as to include more time dedicated to discussion activities within the mindful eating component.

One of the most interesting findings is the potential ability of this program to improve academic performance. Although this is not the main focus of the intervention, this benefit was overwhelmingly shared so many children – and one key informant – that it needs to be taken into account when designing future interventions of this kind. Academic performance seemed to have improved not only because of the use of breathing techniques during tests, but also because children were provided with tools to manage stressful situations, which can directly or indirectly affect school grades. Besides from a few participants specifically mentioning being able to have better relationships with teachers, many of them shared that the general sense of relaxation and tranquility they felt after the program was more conducive for homework and studying. A future intervention that specifically targets academic performance through mindfulness practice might increase funding opportunities as the program would be more "marketable" as an afterschool activity, and would become a more comprehensive and well-rounded program that not only tackles different dimensions of physical and mental well being, but academic performance as well.

Finally, a few respondents mentioned that their families represent their biggest obstacles to applying mindfulness concepts at home. Although this opinion was not expressed by the majority of the participants, it is still important to take it into account as it is aligned with most of the literature in this field, which identifies parental inclusion as a key factor in the treatment of childhood obesity.[22] Future interventions, besides from including longer sessions, a more detailed mindful eating component, and specific techniques for academic improvement, could ideally include three groups – control, "standard" intervention, and intervention with family inclusion – to more specifically examine the role that parents/families might play in helping or hindering children's use of mindfulness concepts in their daily lives.

Commented [DR8]: objective ?

Commented [DR9]: where's the reference to support this statement?

Commented [DR10]: should also justify on the basis of qual's research interest in identifying not just 'majority' experiences but rather the *range* of experiences and uncovering the potential importance in/contribution from learning about less common experiences/attitudes, etc – this should also be referenced from the course readings

Final Report
PUBH 806

The initial findings of this study suggest that an after-school program based on mindfulness concepts can potentially tackle the issue of childhood obesity from a different perspective and provide the children with a comprehensive intervention on their mental and physical health.

Olivia, you did a very good job with the research but I think you ran out of steam with the next level (deeper) of analysis and the write up. This report doesn't do justice to the analyses you presented in earlier assignments but it does require more analytic effort to get to more *interpretive* analysis that explores/uncovers potential relationships/asscociations/processes. Development of graphic representations of the themes/codes helps with this level of analysis. Also, very important, benefits, obstacles, and program assessment are **not** "themes" from your findings – you started out with these 'neutral categories' in your data collection due to the study focus (you decided on them *a priori*) . **Themes** are what you find *about these categories*, or something else that you didn't necessarily set out to find.

Paper grade: 22/25

APPENDIX A

Semi-Structured Interview Guide - Participants

I. Introduction

First of all I would like to thank you again for participating in our study. I would like to ask you some questions about our program, what you felt during and after the sessions and what you like and didn't like about them. Feel free to say whatever you want and take as long as you want to answer a question. Don't feel bad if you have negative things to say about this project, because your feedback will really help us make it better for other children. Everything you say here will be private. If you don't want to talk about something or feel uncomfortable answering any questions, you don't have to. Just let me know you would like to skip that part.
I will have this recorder on so we can go back and listen to our conversation if we need to. It is much easier than trying to write everything down as we go along. Is that ok with you?
Do you have any questions before we start?

II. Interview Questions

Now I would like to start asking you a few questions, is that okay?

1. How do you think that mindfulness can help you in your daily life?
2. What are some situations in which it might be helpful to use mindfulness?
    a. For example, now how would you handle a situation like getting into an argument with a friend?
    b. Or trying to focus before a test?
3. What do you think are the benefits of mindful eating?
4. After participating in the program some kids changed the way they eat and some didn't. How was it for you?
    a. Any other eating habits that you changed?
5. How has participating in the program affected the way you think things through before making decisions?
    a. How so?
    b. Can you give me an example? Another one?
6. What did you like the most about the program?
    a. *If participant answered a part related to the "yoga" component ask what he liked about the "mindful eating" and vice-versa*
    b. Anything else?
7. What didn't you like about the program?
    a. *If participant answered a part related to the "yoga" component ask what he didn't like about the "mindful eating" and vice-versa*
    b. Anything else?
8. How would you improve the program?
    a. Any other suggestions?

III. Closing

That's all the time we have. Thanks for taking the time to talk to me. Before we finish, is there anything else you'd like to tell or ask me?

APPENDIX B

Semi-Structured Interview Guide – Instructors

I. Introduction

I would like to thank you again for helping us with our study. Your work was crucial to our project and I feel that the children really liked you and your teaching style. I would like to ask you some questions about the program; your opinions on the impact of this intervention and its feasibility. Feel free to say whatever you want and take as long as you want to answer a question. Don't feel bad if you have negative things to say because your feedback will help us improve the intervention. Everything you say here will be private. If you don't want to talk about something or feel uncomfortable answering any questions, you don't have to. Just let me know you would like to skip that part.

I will have this recorder on so we can go back and listen to our conversation if we need to. It is much easier than trying to write everything down as we go along. Is that ok with you? Do you have any questions before we start?

II. Interview Questions

Now I would like to start asking you a few questions, is that okay?

1. How would you evaluate the feasibility of this program?
2. How would you assess the ease of implementation of the program?
    a. What was the hardest part to implement?
    b. And the easiest?
3. How do you think the students accepted the program?
4. How has the program affected changes in the kids' behavior?
    a. Can you share some examples?
5. What do you think is the age range of participants that could benefit from this program?

III. Closing

That's all the time we have. Thanks for taking the time to talk to me. Before we finish, is there anything else you'd like to tell or ask me?

APPENDIX B

Semi-Structured Interview Guide – Site Coordinator & Manager

I. Introduction

I would like to thank you again for helping us with our study; your support was crucial to our project. I would like to ask you some questions about the program, your opinions on the impact of this intervention and its feasibility. Feel free to say whatever you want and take as long as you want to answer a question. Don't feel bad if you have negative things to say because your feedback will help us improve the intervention. Everything you say here will be private. If you don't want to talk about something or feel uncomfortable answering any questions, you don't have to. Just let me know you would like to skip that part.

I will have this recorder on so we can go back and listen to our conversation if we need to. It is much easier than trying to write everything down as we go along. Is that ok with you? Do you have any questions before we start?

II. Interview Questions

Now I would like to start asking you a few questions, is that okay?

1. I know that some children have mentioned the program outside of class and some haven't. What have you heard from them about this intervention?
    a. *(if they heard mention of the program)* In what ways?
    b. When would they mention it?
2. What about other people mentioning his program? (parents, other children…)
    a. In what ways?
3. In your opinion, how can this program have a meaningful impact?
    a. Can you be more specific?
4. In your opinion, how have the children benefited from participating in this program?
    a. In what ways?
    b. Any examples?
5. How feasible is this intervention as an after-school activity?
6. What do you think is the age range of participants that could benefit from this program?

III. Closing

That's all the time we have. Thanks for taking the time to talk to me. Before we finish, is there anything else you'd like to tell or ask me?

APPENDIX D - CodeBook

Theme	Code	Child Code	Description	Quotes
Benefits	Benefits of the Program	Applied Mindful Eating	Participants' application of the concepts of mindful eating in their daily lives	*"before it was kind of a race between me and my siblings, now I don't really care if I'm second, or third, or last - I would eat the food and actually enjoy it"*
		Improved Interpersonal Skills	Participants use of mindfulness techniques in their relations with others	*"I think that's where they are thinking about applying [mindfulness] the most: in how they respond versus react to other people"*
		Managing Stressful Situations	Participants' ability to use mindfulness techniques in stressful and/or uncomfortable situations	*"when I'm mad at somebody I first think at the consequences before doing anything irrational" / "now I take the situation one step at the time instead of just hitting it head on"*
		School Performance Improvement	Participants ability to use mindfulness techniques for academic purposes	*"after I did my test I mindfully looked over all my questions and the steps and I actually got a pretty good grade on that one" / "I don't care that I don't do homework here because I go home and I have the calmness that I need to sit down and do it"*
	Benefits of Mindful Eating	N/A	Participants articulate on their perception of the benefits of mindful eating	*"when you're mindfully eating you pay attention if it's junk food or if it's good for your body" / "it helps you eat right at the point that your body is comfortable"*

	Benefits of Mindfulness	N/A	Participants articulate on their perception of the benefits of mindfulness	*"it would help us because it would help us not to hurt ourselves or anybody else; it would give us a piece of mind" / "it help us make the right choices"*
Obstacles	Difficulties in Applying Concepts	N/A	Identified obstacles in the daily lives of the respondents' that would hinder mindful practice	*"the introspective mindful practice personal part is a little more difficult for this age group because they are so social at this age" / "we all start eating and I try to take my sweet time and then my mom is always telling me to hurry up"*
Intervention Assessment	Program Implementation	Feasibility	How easy or difficult was the actual implementation of the program (key-informants only)	*"Once the kids were here and we were all here I think we had very effective classes. Everything went smoothly, we didn't have any issues with anyone so I think being in the class was the easiest part"*
		Problems	What obstacles did instructors encounter in the implementation of the intervention (key-informants only)	*"I think that the mindful eating [component] could have been built out a little bit more in depth for them to be thinking about it in a deeper way" / "I think timing was probably the most difficult and also having the kids actually show up"*
	Future Intervention	Suggestions for Improvement	Participants and key informants provided recommendations to improve the program	"*I would make it longer" / "I would build up the concepts more in depth" / "I would definitely include the parents"*
		Target Population	Key informants identified what age range could benefit form this kind of public	*"A lot of times we don't think that little kids are stressed out but they really are and we don't know what they are going through at home so I think that the younger, the earlier you can teach them the better"*

	Mention of the program	N/A	Mention of the program by participants outside of class, by parents, other school teachers, etc.	*"they mentioned it a lot, actually going home and telling their moms to get their yoga mats"*

Introduction

How individuals think about and plan for having children is of interest to researchers from diverse disciplines. For example, intentions about the timing of children and desired number of children may have important implications for population projections (Demography), for population health (Public Health), labor force participation (Economics), and use of social welfare (Public Policy). In Public Health, these intentions, particularly around the timing of children, have important health implications both for individuals and for the population as a whole. As women delay their first birth they may experience difficulty achieving pregnancy and carrying to term, they may have more complicated pregnancies due to "advanced maternal age" which may require more intensive and expensive medical interventions, and they may turn to assistance from infertility treatments in getting pregnant such as in-vitro fertilization, which may have health effects for both the mother and child. This paper will examine the interplay between fertility intentions and age, with a particular eye towards women of "advanced maternal age" and whether and how fertility intentions change as women age and reproductive technologies become more common and sophisticated. This paper will also examine fertility intentions at both the population and individual levels.

Understanding Fertility Intentions

Fertility intentions[1] are future plans regarding having or adopting children. These are frequently operationalized as the desire to have children and intended number of children (family size) and are commonly examined in social science research. They are less frequently operationalized to look at timing of pregnancy, such as ideal age to have a child ( ). Fertility intentions may be hypothetical and are distinctly different from pregnancy intentions, which focus on outcomes of pregnancies after the pregnancy has occurred (Santelli et al 2009).

Theory Behind Fertility Intentions

Theory of Reasoned Action

Research on the meaning and implications of fertility intentions draws on the Theory of Reasoned Action (Ajzen & Fishbein, 1980; Fishbein & Ajzen, 1975; See Figure 1) and the

[1]Although here I use the term intentions when referring to whether and how many children a respondent wants, Hagewan and Morgan note that respondents in nationally representative surveys do not typically differentiate between intended and expected when asked about their fertility intentions (Hagewan and Morgan, 2005).

Theory of Planned Behavior (see Figure 2). In both of these models, individual intentions are central to performing a behavior. In the Theory of Reasoned Action (Figure 1) intentions are a precursor to performing a behavior and are influenced by attitudes about that behavior and subjective norms surrounding the behavior. In this model behaviors also "feedback" into attitudes and norms, creating a cycle in which these intentions and behaviors exist. According to Ajzen & Fishbein (1975) intentions involve four elements: the behavior, the target at which the behavior is directed, the situation in which the behavior is to be performed, and the time at which the behavior is to be performed. In early work on the Theory of Reasoned Action (Ajzen and Fishbein, 1977 and noted in Rindfuss et al 1988) they note that attitudes and behaviors are strongly related when the following criteria are met: the relative action is unambiguous, and the target, context, and time of the action are specified (Ajzen and Fishbein, 1977 and noted in Rindfuss et al 1988).

Theory of Planned Behavior

The Theory of Reasoned Action was later refined in the development of the Theory of Planned Behavior (Figure 2). In discussion of the Theory of Planned Behavior, Ajzen notes that intentions are "indicators of how hard people are willing to try, of how much of an effort they are planning to exert, in order to perform the behavior" (Ajzen 1991). Intentions are positively related to the likelihood of performing that behavior, and stronger intentions are associated with increased likelihood (Ajzen 1991). However, as Ajzen & Fishbein (1975;1980) and Ajzen (1991) note, intentions lead to behavior only when the behavior is able to be controlled by the individual and the required opportunities and resources are available for the individual to success (A&F (2 citations); Ajzen 1991). In other words, actual behavior is a function of intentions and what Fishbein & Ajzen call "perceived behavioral control," or how much internal control an individual feels she/he has over the behavior (1975; 1980). In the Theory of Planned Behavior subjective norms also exert an influence on behavior. Ajzen (1991) defines subjective norm as "perceived social pressure to perform or not to perform the behavior" and suggests that a favorable attitude toward the behavior, favorable norms with respect to the behavior and a high level of perceived behavioral control lead to a greater likelihood that the individual will perform the behavior.

Theory of Planned Behavior Applied to Fertility Intentions

Many of the components in the Theory of Planned Behavior map nicely with factors examined in fertility intentions research. For example, subjective norms around child bearing, particularly the

timing of first child and family size, are an important consideration in thinking about fertility intentions, and behavior and norms around child bearing are frequently studied in tandem with intentions. Ajzen and Klobas (2013) have applied the Theory of Planned Behavior to fertility intentions (Figure 3) to aide in our understanding of how intentions lead to fertility outcomes. In this model, attitudes towards having children, subjective norms around having children,and perceived control operate synergistically to create individual intentions. These intentions only then lead to the intended behavior if there is actual control over the behavior. This theory also makes note of a significant number of background factors that contribute to attitudes, norms, and perceived control and exert influence on intentions (Ajzen and Klobas, 2013). As Mencarini and colleagues note this is a multi-factor paradigm where "fertility outcomes...are seen as depending directly on fertility intentions, which in turn depend directly on attitudes (related to the perceived benefits and/or costs of reproduction), subjective norms (related to the social approval of behavior from relevant others), and perceived behavioral control. Possible constraints can further intervene from the time the fertility intention was formed and the subsequent behavior (such as a disruption of the couple's relationship or changes in individuals' health conditions or job status) (Mencarini et al, 2015).

Attitudes

Research into fertility intentions has noted the influence of these theories in how we think about and study fertility intentions. Attitudes about having a child are based on behavior beliefs about the outcome of having a child. In fertility intentions research, this includes questions about the perceived benefits and detriments for having a child. As Azjen and Klobas (2013) note, these can include items like measuring agreement with statements such as "I believe having a child is a necessary part of being an adult" or "I believe a child would restrict my freedom to do the things I enjoy". As noted in discussion of the current state of research on fertility intentions, there is relatively less focus on attitudinal items as compared to behaviors (?).

Commented [DR1]: not really sure what this sentence is saying

Commented [DR2]: awkward/unclear term; may need to just "write it out" more so it's clear

Commented [DR3]: redundant with beginning of sentence

Subjective Norms

Norms concerning fertility intentions, according to Ajzen and Klobas (2013) pertain to injunctive norms and descriptive norms. Injunctive norms come from being told or inferring what others (such as partners, parents, friends) want us to do. Descriptive norms are more easily measured and these include items like the number of siblings in the respondent's family. These norms can be subtly different from beliefs; Ajzen and Klobas give the example that the behavioral belief that "my partner would be pleased if I had a child" is different from the normative belief that "my partner wants me to have a child". In the latter, pressure is exerted from outside the individual

and may influence his/her intention around having children. There is a fair amount of research on fertility intentions that has addressed the effects of norms and ideals on intentions. Researchers acknowledge that fertility intentions may be highly influenced by fertility ideals, which reflect the normative context around which fertility decisions are made (Hagewan and Morgan, 2005) and that these social norms produce a strong push/pull on individuals as they make these choices (Morgan and Rackin, 2010).

Perceived Control

Perceived control in terms of fertility intentions focuses on the "resources and obstacles that can facilitate or interfere with having a child" (Azjen and Klobas, 2013). In fertility intentions research, this focuses on factors that contribute to the decision to have a child, such as the availability of childcare and housing, which are items found in the Generations and Gender Survey across Europe. These factors are also explored in qualitative work on childbearing such as work by Edin and Kefalas (2005) and Hewlett (2003).

Fertility Intentions and Links to Behavior

In addition to using the Theory of Planned Behavior to understand how intentions relate to behaviors, researchers have empirically examined the connection thanks to longitudinal studies of individuals throughout their reproductive years. Westoff and Ryder examined what they call the 'predictive validity of reproductive intentions'. Using data on more than 2,300 white married women in the U.S. from the National Fertility Study conducted in 1970 and 1975, they found that reproductive intentions tend to overestimate the number of future births (40.5 percent had intended more in 1970 and by 1975 only 34.0 percent had an additional birth). They also found that intentions were more likely revised downward than revised upward, a finding later confirmed by Morgan in 1982. An important note here is that Westoff and Ryder view intentions as a tool useful for population projections, not necessarily as an interesting phenomenon themselves. They conclude that "reproductive intentions are tailored to conditions at time of interview and, thus, share the same possibilities of misinterpretation as other period indices. In brief, we are skeptical of the usefulness of reproductive intentions, at least for short-range population projection purposes." (Westoff and Ryder, 1977)

Following Westoff and Ryder's work, Rindfuss and colleagues (1988) examined ways in which fertility intentions are related to behavior. In this work they looked at the stability of childless

intentions and unanticipated delay in having children. Using data from the National Longitudinal Study of the High School Class of 1972, the authors were able to follow respondents from 1973 to 1979 to examine the stability of childless intentions and found that they were very unstable at the individual level. They postulate that this is partly because the question about ever having a child is not time bound, but forces young adults to think decades into the future and they are unlikely to be able to say with any real certainty. Using the same data, they also examined the consistency between intentions and behavior, particularly focusing on unanticipated delay, or the group of respondents who intended to have a child in 1976 but did not yet have one by 1979. They found that this delay was related to lower parental SES (females) and lower employment levels (males) but no real pattern emerged. They propose that the delay is not consequential for a group this young (age 22-25 at the time of the last round of data) and it is still socially acceptable to delay parenthood (Rindfuss et al 1988).

Schoen and colleagues used data from the National Survey of Families and Households to examine the relationship between fertility intentions and behavior, using a sample of over 2,800 non-Hispanic whites interviewed in 1987-1988 and again from 1992 to 1994. This sample included non-sterilized adults ages 16-39. The authors found that individual intentions regarding future fertility and their certainty are an important predictor of future fertility behavior (Schoen R, Astone NM, et al 1999). They examined the relationship between intentions, behavior and time and found that the effect of intentions on behavior are 'remarkably persistent' though they are less consistent over time. Schoen and colleagues compare their findings to Rindfuss and colleagues noting that they found that certainty of intentions was more important than timing expectations. Schoen and colleagues found that expectations about the timing of fertility were significantly associated with behavior only in the short term. Among other variables and their relationship to fertility behavior, marital status was the most important. Importantly, the authors also discuss where fertility intentions operate in relation to other variables, noting that intentions "do not mediate the effects of other variables" but that they are important in their own right. The authors conclude that "fertility is a purposive behavior that is based on intentions, integrated into the life course, and modified when (?) unexpected developments occur". (Schoen R, Astone NM, et al 1999)

Others have found that fertility intentions such as intended family size are a proximate determinant of actual fertility behavior (Hagewan and Morgan) but that behavior is influenced by a number of other factors. Using data from the 1979 National Longitudinal Survey of Youth,

Morgan and Rackin (2010) examined the correspondence between intended family size as reported in earlier surveys and observed fertility among men and women in the 1957-1964 birth cohort. The authors found that discrepancies between fertility intentions and actual fertility were common. In particular, having a child before age 24 (women) and 29 (men) led to individuals overachieving their intended parity while having children later more often led to underachieving, even when controlling for potential confounders (Morgan and Rackin, 2010). This is an important finding in relation to trends in first birth in the U.S. If women delay their first births they may underachieve their desired parity due to 'aging out' of their reproductive years (Monnier, Leridon citations)

Monnier, using data from the National Institute for Demographic Studies (France) examined intentions and behavior for 2,000 women over the period 1974-1979 (1974, 1976, 1979). He found that consistency between intention (as measured in 1974) and behavior (as measured in 1979) was about 80% for women with one child who intended to have a second and 76% for women who had two or more children and did not want to have an additional child. He found that for women with one child who reported that they did not want to have a second, consistency was lower at 62% and notes that perhaps women felt pressured to keep with social norms of having a two-child family. Another finding from this work is that the consistency between intention and behavior was much stronger for women whose intentions remained the same in 1974 and 1976, suggesting that the strength and/or certainty plays a role (similar to the findings of Schoen et al.) , and the longer an intention has been held the more "robust", according to Monnier. Related to age and intentions, Monnier notes

> "...it should be noted that time has opposite effects on intentions and behaviour of women who wished to have a child. With the passing of the years, their intentions tend to change, but, at the same time, the degree of consistency between intention and behaviour becomes stronger. This contradiction is a reflection of the underlying selection procedure: women who, in 1976 or 1979, had still not produced the child they desired in 1974 undoubtedly experienced greater difficulty in conceiving or, more generally, were subject to conditions which were less favourable to a birth. Revising their original intentions down-wards can, therefore, be interpreted as an acknowledgement of their difficulty or even inability to conceive (Monnier, 1989)

The "mere-measurement effect" refers to the fact that when intentions are measured they can be influenced, or that when you ask an individual about his or her intentions just asking about the intentions makes acting upon those intentions more likely. Thaler and Sunstein (2008) call this a 'nudge' and note that social scientists have found this to be true in many contexts. (Thaler and Sunstein, 2008)

Commented [DR4]: also referred to as a "study effect" (eg, Hawthorne effect in organizational settings), described as one of many threats to validity by Cook and Campbell. More of a *methodologic* issue; maybe weaved into appropriate section further down?

Commented [5]: not sure where to put this

Fertility Intentions, Age and Health

In Ajzen and Klobas' model, they note two important components in thinking about fertility intentions as they relate to advanced maternal age and the use of assisted reproductive technologies: perceived control over having a child and beliefs about enabling or interfering factors. The increase in the availability and sophistication of fertility treatments coupled with shifting norms in parts of U.S. society about parental age and delaying first birth have led to an interesting moment to re-examine fertility intentions and what these intentions mean for the health of a population. Fertility intentions and their relation to age have important implications for public health. The mean age at first birth among women has steadily risen in the U.S., from 21.4 years in 1970 to 25 years in 2006 and in some states the mean age is now above 27. (Mathews and Hamilton, 2009) This trend is important since older women attempting to conceive may have difficulty due to advanced age (defined as >34 years). Although the use of fertility treatments such as IVF and ICSI have increased (SART annual report, 2013) by more than 60,000 cycles from 2003 to 2013, corresponding research on the long-term health effects of such technologies has not kept pace. The use of fertility treatments and assisted reproductive technologies to conceive may influence the health of the mother and/or child in ways that are not yet fully understood. (Halpert J. no date)

Infertility is estimated to affect 7.4% of married women 15-44 in the U.S. (Almeling RA. 2007) or, according to the American Society for Reproductive Medicine, about 10% of women of reproductive age overall. (Centers for Disease Control and Prevention, 2008) Women having difficulty conceiving may turn to infertility treatments in order to have a child. Infertility treatments include three levels:

Level I: ovarian stimulation including the use of medications such as clomiphene

Level II: use of gonadotrophins to stimulate the ovaries; may include intrauterine insemination (IUI)

Level III: assisted reproductive technologies, including in-vitro fertilization (IVF).

Women starting infertility treatments may progress through the levels before reaching pregnancy, which can take 2-3 years (Gleicher, 2000). If women under 35 wait to begin treatment until one year of having unprotected sex without conceiving, as recommended by the National Institutes of Health (https://www.nichd.nih.gov/health/topics/infertility/conditioninfo/Pages/consult.aspx), or women older than 35 wait six months before seeking treatment, then women will be progressing through

their less fecund years[2] while moving through the fertility levels. This likely makes conceiving more challenging due to age-related decline in fecundity. Leridon, using historical data from France to simulate natural fertility, estimates that if a woman postpones birth from age 30 to 35, she reduces her chance of conceiving by 9% and the use of ART can compensate for 4% of that lost fertility. For a woman who postpones from 35 to 40, she reduces her chance of conceiving from by 25% and ART compensates for only 7%. (Leridon, 2004). In other words, the use of ART can compensate for some of the fertility lost to delaying age at first birth, but some women will still not be able to achieve a conception (Leridon, 2004). Women over 30 are the majority users of ART in the US, accounting for almost 89% of all assisted reproductive technology procedures performed in the US in 2002 (Bitler 2011).

Fertility Knowledge and Age

Despite the increased age at first birth and growing use of fertility treatments, there is limited research on what women know about fertility and age-related fertility decline. One study, examining knowledge of fertility decline among women in Canada who had already had a live birth found that women had knowledge of the conception difficulties associated with advanced maternal age but had limited knowledge of the health risks associated with childbearing at later stages.(Tough et al 2006) A study of university students in Sweden found that both men and women had 'overly optimistic' perceptions of a woman's ability to become pregnant at later ages, with almost half of women in the sample intending to have children after 35 without an understanding of the decline in fertility that begins in the mid-30s. (Lampic et al 2006) Another study examining fertility knowledge among childless women 20-50 years across Canada found that despite women having high knowledge of fertility decline and factors that affect fertility, more than 70% believed that for women over 30 overall health and fitness level was more important than age in its effect on fertility (Daniluk, 2011). Another study in the UK confirmed the finding that women erroneously believe that healthy habits are very important in achieving pregnancy (Bunting, 2008). There appears to be very limited recent (post 1970) research examining fertility knowledge among women in the U.S. generally. A 2009 nationally representative study of 1800 young adults 18-29 focused on fertility knowledge as it relates to unplanned pregnancy. Specific fertility questions focused on contraceptive use and failure rates. One noteworthy finding from this study was that 19% of females and 14% of males responded that it was "quite likely" or "extremely likely" that they are infertile, which is

[2] Beginning around 32 and increasing rapidly around 37, as per the American College of Obstetricians and Gynecologists, 2008

Commented [DR6]: don't know if you get to this later but might 'evidence' of older mothers in society fuel this belief in the absence of specific knowledge of whether ART was used/needed by those individuals?

Commented [DR7]: I have a **scathing** critique of that study – can fill you in when we chat

Commented [8]: There was a problematic (in my opinion) national study in 2009 (conducted by the NCPTUP and Guttmacher) of young adults that included 'knowledge' Qs. See: https://thenationalcampaign.org/resource/fog-zone I'm happy to discuss it, as it also points to problems with quant vs. qual approaches, as well as ingrained assumptions among researchers and lack of considering historical context

statistically unlikely (NCPTP 2009 and Almeling). Follow-up questions to discern why female respondents believed they are infertile included whether a doctor had told them (25% yes), a relative is/was infertile (24% yes), or they have unprotected sex and have not gotten pregnant (35%) yes (NCPTP 2009). Other studies examining fertility knowledge in the U.S. appear to be narrowly focused on a specific demographic, such as cancer patients. If we assume that knowledge in the U.S. is similar or less than that of respondents from the UK and Canada, then this lack of knowledge is startling especially given the large shifts in age at birth in the U.S. with births to women above 30 growing steadily (Figure 4, Martin et al 2015) and shifts among some subgroups, such as among Asian and Pacific Islanders where the age at first birth is now well over 28. (Hamilton, 2009).

Commented [9]: i want to reference this since it exists but not sure how to talk about problems with it, or if this isn't the place to discuss that

Commented [DR10]: this has been found in other studies, particularly among AA women (not sure about Latinas) – let's discuss

Literature Review of Fertility Intentions and Age

There is limited research to date on the influence of age on fertility intentions. Previous research has examined how fertility intentions differ by age, gender, and parity in the UK. This study, using data from the British Household Survey (a panel study), found that women tended to reduce their intended family size as they aged (Berrington, 2004). This study also found that childless women grew more uncertain about their intentions with age. An important finding was that among the oldest group of women, 44 percent did not have the child they originally intended. Berrington notes that "for many of these women the increase in sub- and in-fecundity with age means that time will be running out" (Berrington, 2004). In a sub-sample of childless women, Berrington found that age is strongly related to the probability of intention to start a family, as is education level, but partner status is not significantly associated with intention. Berrington suggests that women who postpone childbearing into their 30s but intend to have children have high levels of education and high earnings. Further sub-sample analyses, specifying three different models, were carried out with older childless women (in 1992) who went on to have a child in the following six years. The first model included demographic and socioeconomic characteristics, the second model included those characteristics included in model one and added women's intention (Yes, no, don't know). The third model included those characteristics in model one and added joint fertility intentions to test the effect of a partner with similarly positive intentions. In all three models age was a key factor in predicting that the woman would have a birth. In model 1 a one year increase in age was associated with 0.73 lower odds of having a child in the next six years ($p<.01$) In model 2, fertility intentions had a strong, positive independent effect on actual fertility (odds ratio = 7.22). In model 3, women with a partner who also intended to have a child were 36% more likely to achieve a birth (Berrington,

Commented [DR11]: I assume? need to specify the *direction*

2004). Berrington notes in her conclusion that further research is needed to examine the "perpetual postponers" (those who postponed childbearing into their 30s but intend to start a family) and whether those who do not achieve a birth are restricted by biological, social and/or financial constraints (Berrington, 2004).

In the US, Morgan (1981) examined fertility intentions in relation to the "later stage of childbearing" but defined that late stage not by age, but by whether woman intended to have fewer than two additional children (i.e., they were nearing the end of their desired parity). The focus of this research was not focused on how age relates to intentions per se, but on the uncertainty surrounding intentions and it made the case for treating intentions as more refined than a yes/no dichotomous variable. However, this study did show that certainty around intentions does vary by age and parity and this certainty decreases as women get older (Morgan, 1981). Morgan posits that uncertainty is a transitional stage between childbearing and post-childbearing stages and that once women reach 'minimal acceptable' family size, the interval between children grows too large, or they develop non-familial interests that "compete with the desire for more children" they revise their intentions downward (Morgan, 1981). This study is one example of where either qualitative research or additional survey questions that probed on some of these issues could shed some light and provide a more nuanced understanding of the factors that affect fertility intentions. Although it focused on pregnancy intentions and age, not fertility intentions, a study by Keeton and Hayward (2007) used data from the Pregnancy Risk Assessment Monitoring System (PRAMS) to look at the relationship between poor birth outcomes (including low birth weight and NICU admissions) and pregnancy intention. The authors, to their surprise, found that intention was associated with poor outcomes at a young age. They suggest that this finding could be the result of retrospective intentions being revised once an infant is born, or social desirability bias of reporting a child in the NICU as unintended (Keeton and Hayward, 2007). The Generations & Gender Programme (GGP) Survey conducted in countries across Europe is an example of a large scale (multi)national survey that also collects additional, more detailed information about fertility decisions. (http://www.ggp-i.org/) The GGP is a longitudinal survey of adults 18-79 living across Europe that aims "improve our understanding of the various factors - including public policy and programme interventions - which affect the relationships between parents and children (generations) and between partners (gender)". The GGP includes quantitative survey questions on what components go into making the decision to have a(nother) child including whether and to what magnitude the decision depends on other factors (GGP website). These factors include:

Commented [DR12]: new paragrpah

Commented [DR13]: why surprising? I think you need to say a little more about this, including whether age was treated categorically (eg, age group 15-19 yo) OR continuously (eg, *relatively* younger mothers had worse outcomes on the order of….)

financial situation; work; housing conditions; health; having a suitable partner; partner's/spouse's work; partner's/spouse's health; availability of childcare; opportunity for parental/care leave (GGP website). This type of data is often absent from large cross-sectional surveys, but found in qualitative research such as in-depth interviews, where the opportunity to probe responses may lead to information on *how* a respondent arrives as a decision to have a child, for example, not just the outcome of that decision. The Social Position and Family Formation (SPAFF) data set (D'Amore 2013; Nell, 2013) is an example of the kind of rich qualitative data that can be developed to aid in understanding the nuance in fertility intentions, including how young adults make decisions about when to have children and what factors contribute to the timing of these decisions. The SPAFF dataset also provides much needed diversity in this information, since the quantitative literature focuses predominantly on white (often married) women (such as the sample used in Morgan, 1982, Morgan 1981, Rindfuss and Westoff, and Schoen et al 1999).

Commented [DR14]: let's add the Methods paper, submitting by next week: Romero and Kwan – will provide details

Quantitative Data for Examining Fertility Intentions

Fertility intentions are often examined at the population level using data from cross-sectional surveys including the Demographic and Health Surveys (developing countries) and National Survey of Family Growth (US). These surveys yield responses to questions such as how many children an individual intends to have and whether an individual wants to have a(nother) child (Table 1).

The literature on fertility intentions includes much research on desire to have a child and intended number of children among women in the U.S. using data from the NSFG. Articles that examine fertility intentions in the U.S. tend to fall into a few specific categories: measurement and theory, trends in intentions over time or across subpopulations, and in-depth examination of factors thought to be related to these decisions, such as religiosity and education.

Regarding measurement and theory, in addition to those items addressed in the previous sections on the link between fertility intention and behavior, S. Philip Morgan has written extensively on fertility intentions among women in the U.S. Starting in the early 1980s, he examined intentions in the later stages of childbearing using data from the National Fertility Survey in 1965 and 1970[3], finding that the uncertainty of intentions is related to both parity and

[3] The National Fertility Survey was fielded in 1965, 1970 and 1975. The surveys were quite different: The NFS 1965 included currently married women born after 1910 and living with their husbands; the NFS

age and that women with more children are more likely to consider revising intentions downward once they have reached the 'minimally acceptable' family size (Morgan, 1981). Later Morgan examined ideal family size and its relation to age, suggesting that delayed fertility that is due to period-specific factors and influences may lead to fertility foregone and that uncertainty about fertility intentions is often a transitional stage between delaying pregnancy and fertility foregone (Morgan 1982). He also found that intentions are subject to revision and that intentions may be "revised downward" once the two-child ideal has been reached. In this paper, he also made the claim for including infertile/infecund women in analyses of fertility intentions (Morgan 1982).

Fertility intentions are often studied in relation to trends. Chen and Morgan (1991) examined trends in the timing of first births and the relationship with intentions among women in the U.S. over the period 1970-1987 using vital registration data. They found that there was a clear shift towards parenting at older ages, including a substantial increase in first births to older women. They also found childlessness was for the majority of women not the result of a conscious decision, but the result of postponement of childbearing, which eventually became fertility foregone (Chen and Morgan, 1991). It is important to note that this study was conducted at a time when the availability of assisted reproductive technologies was very new and treatments for infertility were limited. It wasn't until 1992 that the Centers for Disease Control and Prevention (CDC) began surveilling clinics providing these technologies so the data on actual usage in the late 1980s is not available. (http://www.cdc.gov/art/reports/index.html).

One study examining fertility intentions and religiosity and is of particular interest for my research due to its use of the NSFG and intention to have a child as the outcome of interest. This article used data from the 2002 NSFG and examined intention to have a child as the dependent variable. The main independent variable of interest was religiosity. A main finding is that women who report that religion is 'very important' have higher intended and realized fertility than those who report that religion is 'somewhat important' or 'not important' (Hayford and Morgan, 2008). Other research has examined the effect of education, social policies, and economic opportunities on fertility intentions. Heiland and colleagues, using data from West Germany (1998, 1994/5) and the EU 15 countries (2001) found that increases in education were

1970 included ever-married women born after 1925; the NFS 1975 reinterviewed women interviewed in the NFS 1970 who were 1) white, 2) continuously married in first marriage, 3) married less than 25 yrs, 4) married before age 25, and 5) husband married only once. The NFS 1975 also included a sample of new interviewees who were married after 1970. (Office of Population Research, Princeton: http://opr.princeton.edu/archive/nfs/)

associated with wanting three or more children (Heiland et al 2005). Liefbroer and Corjin (1999) to the contrary found that among Flemish and Dutch young adults born between 1961 and 1965, educational attainment had a strong negative effect on women's entry into parenthood but not on men's. Neyer and colleagues (2011) found that cultural norms surrounding fertility had a greater effect on fertility intentions compared to regional economic circumstances. This study used the Generations and Gender Survey, a longitudinal Survey of 18-79 year olds in 19 countries across Europe (cite http://www.ggp-i.org/) to explore how the economic, social and cultural environment influences fertility intentions (Neyer, Vignoli, Lappegard, 2011).

In the quantitative literature examining fertility intentions there is a noticeable lack of diversity among respondents. Due to the structure of the NSFG and the analytical techniques used to analyze the data, the majority of studies focus on (often married or coupled) white women. A study by East (1998) is a notable exception. In this study, using a racially and ethnically diverse sample of 574 young adolescent females (mean age 12.9) in the U.S., East found that birth expectations varied among subgroups. Hispanics were more likely to desire having children younger and Southeast Asians were more likely to desire having children later. She also found that for all groups optimistic school and job aspirations were tied to later desired age at first birth (East, 1998).

Qualitative Data for Examining Fertility Intentions

Although data from nationally representative surveys are extremely useful for making inferences about a population, the nature of surveys masks some nuance, which may be very important in truly understanding how, when, and why these decisions are made. As Edin and Kefalas note (2005) "social science currently tells us much more about what doesn't explain the trend than what does" (Edin and Kefalas, 2005). They note that social science depends too heavily on survey methodology which tells us very little about perspective and life experiences of the populations in question (Edin and Kefalas, 2005). Qualitative methods may be extremely helpful for both getting at this nuance and also for allowing researchers to better understand how individual-level decisions are made. In public health, this nuance is very important in designing programs and policies that are aimed at changing individual-level behavior such as programs that may aim to educate individuals about fertility and age and encourage a shift away from delayed childbearing, such as programs found in some Nordic countries (Hoem, 2005). For example, as mentioned in the intentions and NICU admissions study by Keeton and Hayward (2007), the authors reported a surprising finding that intention was associated with poor

outcomes at a young age. This is a good example of where qualitative data could be used to further explore and explain a phenomenon.

Studies looking at individual fertility intentions alone are rarely found in the qualitative literature, but more commonly included in studies examining how fertility intentions are influenced by other factors such as HIV status (Laher et al 2009, Harrington, et al 2012) or focusing on the qualitative aspects of pregnancy intentions (Kendall et al, 2005). Sassler et al (2009) conducted a qualitative study of fertility intentions of cohabiting couples to better understand how decisions around fertility are made. Questions focused on how a (hypothetical) pregnancy at that moment might be resolved and examined perceptions of the couple's future and how their contraceptive use related to those plans (Sassler, 2009). Augustine, Nelson and Edin (2009), in one of the few fertility intentions studies focusing on men, examined intentions among low-income, noncustodial fathers in and around Philadelphia. This research examined retrospective intentions around the birth of their child(ren). They found that a continuum of intentionality is more reflective of the experience of this group rather than a dichotomous view of intentionality (Augustine et al 2009). One study examining women's experiences with waning fertility as they approached menopause, used a phenomenological approach, with the aim of understanding the subjective experience of waning fertility. In this study, the authors found that when individuals were asked to look back on their fertility, some who were childless reported that they had never intended to have children and others reported that they had just never had the 'right' circumstances. In addition to retrospective views of their fertility, the authors asked about their prospective views: women reported uncertainty about their intention to have a(nother) child, including uncertainty in general and a re-examination of previous decisions to not have a(nother) child as the door to have children began to close (Jarrett & Lethbridge, 1994). As one woman (age 42) noted, the decision to have a child was competing with the decision to go to school: "within the last 4.5 years, I've really wanted to have a kid, but working it around school and new interests...and so the tentative plan is to interview for school this January or February. If I don't get in- get pregnant. If I do get in- get pregnant the second year" (Jarrett & Lethbridge, 1994). An interesting finding from this study that is important to my research is how the delay in first birth affects how women think about approaching menopause. The authors found that women who had children in their late 30s and early 40s "were not able to conceptualize a time when their life would be their own again" compared to women who had children earlier. The women who had children earlier viewed 'the emancipation of their children' as a marker for midlife and the freedom that would come with it (Jarrett & Lethbridge, 1994).

Commented [DR15]: not sure if these are 2 sentences or if something is missing

Commented [DR16]: need to further unpack – your linking the biological process/phase of "menopause" to women's thinking about "freedom" when empty-nesters, is not totally clear

Other important qualitative literature on family formation has focused on women and the decision to have children, but from the vantage point of already having children. This work, by Edin and Kefalas (2005) was developed partly in response to the popular culture's focus on how highly educated, wealthy women thought about the timing of pregnancies after the book *Creating a Life: Professional Women and the Quest for Children* was published in 2002. That book, which was part interviews and part self-help, focused on women "taking back their lives" and achieving their goals of motherhood while still maintaining high level and high paying professional lives. *Creating a Life* also focused on telling the "real stats behind IVF" so that women could make informed decisions. The qualitative data presented in this book focused on nine "high-achieving women from the breakthrough generation" (Hewlett, 2002). Shortly after the media storm calling for attention to how wealthy professional women think about and seek motherhood, Edin and Kefalas began a multi-year anthropology-inspired study of over 160 low-income women living in areas of Philadelphia and Camden. In this work, the authors explore common misperceptions about low-income women and motherhood, such as the claim that low-income mothers get pregnant based on lapses in judgment or that childbearing out of wedlock is the sign of poor planning on the part of these women. Of importance to my topics, they note that many of these women do not understand how women could delay childbirth until their 30s by choice expressing a preference for or ideal of childbearing at younger ages. In terms of fertility intentions, many of these women do not report explicitly trying to become pregnant, but aren't attempting to prevent pregnancy either. Having a child when you are young and unmarried can be advantageous and for a relationship and strategic for a woman's career since she can 'get it over with' before turning her attention to school and a professional life. In these communities, having a child marks adulthood and comes with a level of responsibility and respect that may not come from being in school and working (Edin and Kefalas, 2005).

Commented [DR17]: FYI, researcher's response to the 'analysis' in this book was published in a paper called "Creating a Lie" (I think within/about a year later)

Commented [DR18]: ?

In previous research undertaken as a doctoral student, Diana Romero and I used data from the SPAFF study to examine ideal age at first birth and how individuals conceptualize the factors that contribute to a particular age being ideal. Using data from 200 in-depth interviews with males and females of diverse socioeconomic and ethnic background aged 18-34 in New York City and Northern New Jersey, we found that early 30s were most often cited as ideal (32% of the sample). Among those who gave a particular ideal in response to the questions "what is the ideal age to have a child" the mean was 29.3 years.( ). We found that factors associated with

ideal age fell into four categories: structural/social position related, interpersonal, age pressure, and aspirational.

Analyzing Data on Fertility Intentions

Quantitative Methods

Approach

Quantitative data on fertility intentions often focuses on responses to two questions that address 1) wanting a child; and 2) desired number of children. These data tend to come from cross-sectional surveys. Analyses of these data typically use multivariate regression in order to control for a number of factors that are theoretically believed to be related to fertility intentions such as race/ethnicity, education, income, poverty level, employment situation, place of residence, and religiosity. Independent variables are often included in these regression models based on their influence in the model during univariate analyses (such as in Hall et al x2). However, Wu's important paper on using generalized linear models in family studies (2005) makes a compelling argument for only including independent variables based on theory (Wu, 2005). In his example we should begin adding variables to a model if their inclusion is supported by prior research. Variables should not automatically be removed from the model if they are insignificant based on bivariate analyses, but the theory and reasoning behind their inclusion should be considered. As an example, he notes that in research aimed at testing the idea that the effects of living alone change with marital status, he notes that an interaction term of marital status and living alone should remain in the model even if it does not improve model fit since this interaction is a key component of the research aim (Wu, 2005). Berry & Feldman (1985) make a similar argument in their discussion of specification error, asserting that "the best to whether a variable is irrelevant is theory" (Berry & Feldman, 1985).

Commented [DR19]: was interested in taking a look at this ref but not in biblio (yet)

Multivariate Regression (Linear)

Multivariate regression is a method for explaining a dependent variable (y) as a function of a continuous independent variable (x) , controlling for factors that may simultaneously affect the dependent variable. Multivariate regression allows for the inclusion of other (measurable) variables of interest to be included in the regression model, whereas in simple regression they would have been part of the error term. Multivariate regression does not limit the number of independent variables that may the researcher feels may be associated with the dependent

Commented [DR20]: what are you referring to here? what is 'simple regression"?

variable. Essentially, it allows researchers who work with non-experimental data to mimic the kind of research that is done in laboratory settings by holding factors constant (Wooldridge, 2006). The multivariate regression model is as follows:

a. $$y= \beta0+ \beta1x1+\beta2x2+ \beta3x3...+\beta kxk+ \mu$$

Where β0 is the intercept, β1 is the parameter estimate associated with *x*1 and *μ* is the error term.

A simple multivariate regression model for fertility intentions may look like this:

b. $$\text{Intend}=\beta0+ \beta1\text{age}+ \beta2\ \text{parity}+\mu$$

Where intentions are a function of age and parity, plus an error term. In this model, β1 estimates the effect of age on intention to have a child, holding parity constant and β2 estimates the effect of parity on intentions, holding age constant. In social science research ordinary least squares (OLS) regression is frequently used for its focus on reducing the sum of squares of the residuals. OLS chooses the estimate that provides the smallest sum of squares of the residuals. This means that it chooses the estimate that is the "best fit" for the model by selecting the one where the residuals (difference between observed and predicted values) are the smallest (Wooldridge, 2006).

It is important to be selective in determining which independent variables to include in the analysis so as to specify the most parsimonious model possible. Although it is tempting to consider myriad factors related to the research question and, thus, add many variables to a model, inclusion of irrelevant variables can bias the *variances* of the OLS estimates (though not the OLS estimates themselves) (Wooldridge, 2006). An equally important issue is neglecting to include an important variable in the model, which can bias the variables included in the model in either direction (Wooldridge, 2006). Both of these situations refer to model specification error (Berry & Feldman, 1985).[4] Moreover, thoughtful a priori consideration of independent variables is important when specifying the analytic model given that the output from analyses of different models does not inform as to missing variables (ie, potentially relevant factors). It is somewhat

Commented [DR21]: saying essentially the same thing as originally written (,e, with the 'and')

[4] A third component of specification error (measurement errors in variables) will not be discussed here.

easier to statistically identify when an unrelated variable was erroneously included by examining the R^2 (ie, estimate of overall model-fit) and by running the model again without that variable. But as Wu (2005) and Berry & Feldman (1985) stress, variables with theoretical significance should be retained even if their inclusion reduces model fit. Box 1 includes four criteria used to guide decisions around whether to drop a variable from a model.

Commented [DR22]: should probably describe briefly in the narrative

In multivariate regression of data from cross-sectional surveys (with random sampling) there are a number of assumptions that must be considered, which are known as the Gauss-Markov assumptions as shown in Box 2 (Wooldridge, 2006). These are useful to consider in the development of model building and are essential for testing the validity of a model at the analysis stage. If any of these assumptions are not met, one may have increased risk for Type I (rejecting a null hypothesis when the null is true) and Type II (failure to reject a null hypothesis) errors.

Commented [DR23]: ditto re Box 1

Logistic Regression

Thus far I have been discussing regression models for continuous data which are often analyzed using models such as that shown in equation A. Linear models are based on assumptions that may not be relevant for fertility intentions data, including that the dependent variable is continuous and normally distributed and the relationship between the dependent and independent variables is linear (Wu 2005). The assumptions are not met in examining fertility intentions (as in equation B above) where intentions are a categorical variable, measured frequently as Yes, No, and Don't Know. The nature of the responses to this question and the types of questions in Table 1 lend themselves to different regression methods that, although they conceptually share many qualities with linear models, allow for these types of dependent variables. These include logistic regression (for binary response categories such as yes/no responses) and Poisson and negative binomial regression (for count responses).

Logistic regression is used to relate a binary outcome (y) to a predictor (x) using a linear equation. Predictors can be continuous, binary, or categorical (UCLA ats) This linear equation relates the ln(odds) of y to x (UCLA ats). The simple logistic regression model equation is as follows:

c. $$\text{logit}(p)=\log(p1\text{-}p) = \beta 0+ \beta 1x1$$

In this equation, p is the proportion (probability) of y=1, β_0 is the intercept, and β_1 is the difference in ln(odds) between the two groups (UCLA ats). Slopes calculated from logistic regression can be exponentiated to produce odds ratios (UCLA ats). In fertility intentions, a simple logistic regression model might look like this:

d. $$\text{Intend} = \beta 0 + \beta 1 \text{age}$$

or

e. $$\ln(\text{odds of intending a child}) = \beta 0 + \beta 1 \text{age}$$

Where *intend* (ln(p/1-p)) is the probability of intending a child for a given age.

Since the Gauss-Markov assumptions shown in Box 2 cannot be used for logistic regression, there are other statistics that can be used for evaluating the fit of the model including the model Chi-Sq and the pseudo-R2 to see if the overall specified model is statistically significant.

Results from logistic regression are often expressed as odds ratios, where the coefficients are exponentiated to produce odds ratios. The interpretation of ordinary (binary) logistic regression is as follows (Gould ats ucla ref):

$$\frac{\text{odds (if the corresponding variable is incremented by 1)}}{\text{odds (if variable not incremented)}}$$

For example (using the model shown in d above), if the exponentiated coefficient for age is 0.5, then the odds of intending a(nother) child halve for each yearly increases in age (assuming age is measured continuously) (Gould ats-ucla ref). This can be interpreted as for each additional year in age, an individual has 0.5 less odds of intending a(another) child.

Multivariate Regression of Fertility Intentions Data in Practice

Although statistically it may be most appropriate to use logistic regression or other regression models in fertility intentions research with dichotomous outcomes, in the literature some researchers also use OLS and provide methodological explanations for this choice. For example, in Bitler et al (2011), for a study of the effects of insurance mandates on the use of infertility treatments using pooled data from the NSFG, the authors used OLS for ease of interpretation despite having a binary dependent variable. They also include results from logistic regression (including marginal effects) of the same model, demonstrating that the results from OLS are robust. Similarly, Hayford and Morgan (2008) in their study of the influence of

Commented [DR24]: I think this needs fixing

Commented [DR25]: ditto

Commented [DR26]: in relation to what? statistical significance is usually applied to measures of difference between 2 variables. Need to word differently if you're talking about a model.

Commented [DR27]: redundant

religiosity on fertility intentions, use OLS and note that “Poisson or negative binomial models might technically be more appropriate for this analysis….(however) our results were robust to the specification of the model, and chose to use linear regression for the convenience of the interpretation of the coefficients” (Hayford and Morgan 2008). As compared to logistic regression, results from OLS are more easily interpreted. Logistic regression transforms the y variable into a log odds, so interpreting results from logistic regression requires an understanding of odds and what makes odds different from probability. For example, in Bitler and Schmidt’s paper they analyze data using both OLS and logistic regression but focused on the OLS results in the write up. In noting a coefficient of 0.041 from OLS examining the insurance mandate, age at least 30, and at least some college, they write “This suggests that for highly educated older women, living in a mandate state is associated with a 4.1 percentage point increase in the probability of ever having had sought medical help to get pregnant”. Results from the same model using logistic regression (presented in table format in the paper) would interpreted as “for highly educated older women, living in a mandate state is associated with a 1.948 odds of having had sought medical help to get pregnant” which is less easily understood, especially if the results are at aimed at non-researchers such as policy makers and the media. Logistic regression also makes it more difficult to detect potential errors that may make the model a less good fit, such as heteroscedasticity, whichrefers to uneven variance in the errors terms.

In the fertility literature, there are options regarding how to treat intentions when they are the dependent variable, which has an impact on the type of logistic regression that is best suited for the analysis. In Morgan’s work from the early 1980s, he makes the case for treating ‘don’t know’ and other uncertain responses as uniquely different from missing data, as valid and meaningful responses about an individual’s fertility intentions (Morgan, 1982, Morgan, 1982). In his earlier work (1981) he found that capturing this uncertainty was especially important for women nearing the end of their childbearing (in terms of parity). For example, using data from the NSFG in 1976, he found that for women with two children, there were an equal number of women who “don’t know” their intentions for another child as compared to those who said yes, they intended to have a(nother) child (Morgan, 1981). In including uncertainty as a crucial part of the intentions variable, the methods must be adjusted according. For example, in his papers on intention and uncertainty at later stages of childbearing (1981) and parity-specific fertility intentions (1982), the variable ‘do you and your husband intend to have a(nother) child?’ is treated not as a binary variable, but one with multiple categories requiring the use of multinomial

logistic regression in the case when they are not ranked, for example, when Morgan (1981) created three categories: Yes; No; Don't know. In 1982, he further refined this to a 'ranked' or ordered categorical structure including four categories for the dependent variable: Yes, 2+ more; Yes, 1 more; Don't Know; No (Morgan, 1982). In both of these treatments of the response to the question of intending a(nother) child, the responses are treated at a greater level of specificity than yes/no. This is supported by qualitative data, such as that from Augustine et al (2009), which found that among low-income, noncustodial fathers, reflections of intention to have a child operated on more of a continuum of wanting versus not wanting, rather than a dichotomous view of intentionality.

Qualitative Methods

Approach

As discussed, there are limited qualitative data examining fertility intentions but the data that do exist focus on a deeper understanding of the context in which decisions are made. These type of data often come from in-depth interviews, where a researcher has a one-on-one interview with a participant that explores a limited number of topics and often includes "probing" or "drilling down" on topics of particular relevance to the research question (Boyce and Neal, 2006). This type of data collection allows for the researchers to explore a topic in-depth and to allow the participant to fully respond to questions beyond predetermined answer categories such as in a survey. One advantage to using qualitative methods such as in-depth interviews as compared to surveys is that in addition to acquiring answers to questions the researchers identified in advance, the data may also provide insight and answers to questions the researcher did not think to ask (Beer, 1997). This type of data collection is often used in pilot or formative research to identify potential questions and topics for quantitative data collection at a later date, but is also used to collect the type of data such as collected in SPAFF that is not easily captured in surveys because it is either too complex or too delicate (Ritchie and Lewis, 2003).

Despite the advantages to using qualitative methods such as in-depth interviews, there are some drawbacks that limit their use. Compared to cross-sectional surveys, in-depth interviews include far fewer individuals, which reduces the generalizability of the findings to larger populations, which is useful for understanding population-level intentions for purposes such as population projections. This is a common critique of qualitative data collection among researchers evaluating it through a quantitative lens. In looking at fertility intentions research, an area dominated by demographers and sociologists, quantitative methods are seen as superior

to qualitative methods since the goal is often generalizing to large populations (Small, 2009). However, this is not the goal of qualitative researchers who instead of seeing individual cases as representative of a larger group (as individuals in a cross sectional survey would be representative of some larger group based on sampling weight) we view cases as a single case (Small, 2009). In qualitative work we are not seeking representativeness or a sample large enough so that potential biases can be 'controlled away' as Small (2009) puts it. Instead we are intentionally seeking not a 'sample' in the traditional (quantitative) sense, but a selection of individuals from which we can learn about a specific research question or phenomenon (Small 2009).

Commented [DR28]: very important and should probably further explain/describe the goal as identifying **factors/variables** relevant to the phenomenon (presented nicely by Auerbach and Silverstein)

This re-orientation away from the quantitative/statistical lens requires some adjustment on the part of the researcher. The methods utilize to collect and analyze the data are also quite different. In-depth interviews, as compared to cross-sectional surveys, may be more time and labor intensive and produce a large amount of text that must then be analyzed using methods that require a different approach to the data than quantitative methods, and require the researcher to be reflexive (Auerbach and Silverstein, YEAR). In depth-interviews are not simply survey questions read aloud to a participant, but requires a breadth and depth of questions to map content and to mine content, and a range of potential probing questions (Ritchie and Lewis, 2003). In fertility intentions research the type of dichotomous questions typically asked about wanting a child would be replaced by more open-ended questions about attitudes and desires around childbearing, and probing questions to address the factors that contribute to these individual attitudes and desires.

Commented [DR29]: process/role of reflexivity should not be an "add-on" like this; best to describe it in its own right, with more detail; crucial to addressing the claim of 'subjectivity' often lodged toward qual research. I also have a ref on reflexivity you may want to look at

Commented [DR30]: ? vague

Qualitative Analysis

As opposed to quantitative data analysis, which is deductive and focused on testing a researcher's theory of a phenomenon, the analytic approach with qualitative data is inductive, ie, without a priori hypotheses, thus, allowing for themes and topics to emerge from the data. This draws heavily on grounded theory methodology, an approach developed by Glaser and Strauss (1967) and refined by Strauss and Corbin (1994). Grounded theory methodology is an analytic approach to qualitative data that identifies important themes/concepts related to the phenomenon under study grounded in open-ended and contextualized data from respondents (S&C, 1994). This is accomplished by applying codes to the data, grouping these codes into categories/themes and then refining these categories into concepts/constructs using a

repeating/iterative process. This involves open coding where the data are "broken open" as LaRossa describes, and transcripts are closely examined and questions are developed about the phenomenon in question. The next step is axial coding, where a researcher digs deeper into one topic or code and looks for how to relate categories to subcategories (Strauss and Corbin, 1994). The third coding step is selective coding, or as LaRossa puts it "the main story underlying analysis". This step is more focused and refined, with a clear view toward the question you are trying to answer. Together these concepts may lead to a theory about the phenomenon or research question (S&C, 1994). In previous qualitative research, my approach to the analysis of in-depth interviews has also been influenced by the subsequent (and arguably more "step-wise/pragmatic" application of the Grounded Theory method) work of Auerbach and Silverstein, who advocate for using a coding procedure that involves a series of steps, grouping repeating ideas/themes and eliminating less common ones, and progressing to higher levels of abstraction that may approach theoretical propositions (Auerbach and Silverstein, 2003). These levels include, first, identifying text-based primary categories and subcategories ("relevant text"), second, grouping of the text-based categories into larger themes ("repeating ideas"), and third, organizing themes into more abstract theoretical constructs. During the initial approach to the data, the researcher is also developing analytic logs (Memos") to map shifts in thinking about the focus of the analysis as well as to guide the development of schematics and tables that may become useful in developing theory. The initial coding approach is what Ritchie and Lewis (2003) refer to as a 'code and retrieve' method whereby categories are developed and codes are applied across all data. However, this is an iterative process and although some codes and categories may seem appropriate after reading 20 transcripts, by transcript 100 they may have changed substantially. One advantage to the 'code and retrieve' method is that it applies a somewhat systematic review to take stock of the data (Ritchie and Lewis, 2003).

An additional tool that aides in thinking systematically about the data is the creation of visual tools such as matrices, which encourage making comparisons, seeing patterns, and identifying differences in the data that may lead you to see you data differently (Miles, Huberman, and Saldana, 2013). As Miles et al note, the "matrix is a tabular format that collects and arranges data for easy viewing in one place, permits detailed analysis, and sets the stage for later cross-case analysis with other comparable cases or sites". This type of visual allows the researcher to see how the data is shaping up and identify areas for comparison. It also aides in theory-building, since often many factors that may together be part of a conceptual framework may

appear in your matrix and it may become apparent how they intersect and interact to influence the phenomenon at the center of your inquiry (Miles et al, 2013).

Commented [DR31]: nice

Qualitative Methods and Fertility Intentions Data in Practice

In research on fertility intentions qualitative data may be very helpful for understanding factors related to the desire and timing of children that are not captured by cross-sectional surveys. For example, cross-sectional surveys capture data on a number of variables that may be considered independent variables in a regression model including education level, marital status, parity, and income level. However, information about desires around the timing of a child and how an individual's thinking about having a child is influenced by those factors is not able to be captured in survey form. In the SPAFF data set, we see the value of these type of data in interviews where respondents are asked about their ideal age to have a child and then probed for what factors make for an "age ideal." Beyond answering the interviewer's question, respondents went beyond and talked about things such as the order of events or their aspirations for their personal life before having a baby. One important thing that emerged from these data that was not directly asked was some individual's ideal timing and how that contrasts with biological realities. For example, Keisha is a single, 32-year old. If her timing works out she will be 35 or 36 at the earliest when she tries to start a family:

> *Of course, marriage first, then once we figure if I'm married, let's just say between two and three years, because I want to get to at least enjoy it with no kids. After that, go to school and from there get a degree and then kids come along. Even while I'm in school, I wouldn't mind being pregnant then. I would definitely want to at least be married first. From then on, of course the house. First and foremost I think I would want to be married first. (Keisha, single, age 32)*

In the analysis of this data, we looked at themes including structural/position related factors associated with the ideal age to have a child ("school", "degree"), interpersonal factors ("married"), aspirational ("I want to get to at least enjoy it with no kids"), and financial ("housing"). We also looked at how old Keisha was at the time of the interview, her situation at the time in terms of partnership status and educational level, and her timeline to examine the cognitive dissonance between what she is saying about her desire to have a child and her reality in terms of timing and her own fertility if she waits for all of these factors to fall into place before attempting to conceive. This is what is sometimes referred to as a quasi-variable approach, in which some variables such as demographic variables like age, race/ethnicity and

income level are examined in cooperation with conceptual categories coded within the data (Ritchie and Lewis, 2003).

In practice, it is more difficult to find specific details on the analysis used in many qualitative research studies. Often articles will tell you about the approach to the data and level of coding, but not to the extent that you could recreate the research step by step, the way you might be able to recreate research explained in quantitative studies. For example, in a study of self-induction for abortion, the authors describe their research methods as "We aimed to identify recurring patterns and outliers of the varying situations in which women attempted self-induction" (Grossman, 2010). X et al's study of low-income non-custodial fathers describes the analyses quite simply noting that "we coded these transcripts using standard qualitative methods…we then retrieved coded material for more refined qualitative coding and analysis" (Augustine, Nelson and Edin, 2009). This is partly due to the difference in approach in that qualitative research relies on the active participation of the researcher in a way that is foreign to quantitative research. However, there are some studies that have provided insight into how the data were analyzed. Edin and Kefalas, although they focus on pregnancy intentions in their discussion of the coding and analysis approach, describe coding each transcript it its entirety and coded relevant text into predetermined or emergent topics. They then describe a final product that was organized "like a quantitative dataset, in a case-by-variable" format (Edin and Kefalas, 2005).

Gaps in the Literature and Future Research

There is a notable lack of research in the U.S. on fertility knowledge, particularly how it relates to age. This is a remarkable absence in the face of the considerable research and attention (i.e., publicity, funding) given to sexuality education and in particular abstinence education for young adults. Young adults often have required sex education that focuses on preventing pregnancy, sexually transmitted infections and HIV, but may graduate from that education without any understanding of their own fertility, and in particular how fertility declines with age. This lack of knowledge combined with upward trends in the age at first birth may mean that many young adults have unrealistic expectations about their own fertility. When they do attempt to conceive and essentially 'flip the switch' from preventing pregnancy to encouraging it, they may need to turn to ART to aide in achieving a live birth. ART has grown more sophisticated and more common, with more than 60,000 cycles from 2003 to 2013 (SART annual report, 2013) but research on the effects of ART, and in particular on the long-term

effects of these technologies on both women receiving the treatments and other actors such as egg donors, has not kept pace. We have very limited information on the long terms effects and safety of these procedures; yet, their growth continues.

Given the interesting shifts in age at first birth coupled with the increasing availability of ART, one could postulate that the social norms surrounding both age at first birth and the use of ART are changing too, which may result in interesting cohort trends over time. For example, do women who were in the mid-30s in the 1970s differ significantly from women in their mid-30s today in their intentions and expectations around childbearing? We might expect to see that with the change in social norms comes a change in fertility intentions, with more women being confident about their ability to postpone childbearing until an 'ideal' time without having to self-limit the number of children they desire. Data from the NSFG would allow for this kind of comparison, using pooled data sets from the 1970s to the most recent round of the NSFG in 2011-2013.

A notable deficiency in fertility intentions research to-date is the lack of attention paid to male intentions around fertility and to intentions of minority populations, ie, those who are *not* female, partnered, white, (and often, middle class) at the time of the survey. Qualitative methods have taken on these groups that have been seemingly neglected by cross-sectional surveys, and have provided an interesting counterexample to the narrative put forth by demographers when it comes to discussions of fertility intentions in the U.S. However, there is still much more work to do. Currently, we see representation of these groups typically in small, focused studies, such as the work of Edin and Kefalas looking at how low-income women, often non-white, in inner city Philadelphia make decisions about childbearing. While these studies are very important for providing the viewpoint of these often neglected groups, we need additional research in order to shed a light on how other groups make decisions around whether, when and how to have children. We should push for more inclusive studies in two ways: 1) cross-sectional and longitudinal surveys that are nationally representative, but perhaps with oversampling of some groups in order to have enough statistical power to make comparisons across groups; and 2) qualitative studies that include participants from diverse backgrounds and from different races/ethnicities rather than splitting these groups into separate 'niche' studies.

Commented [DR32]: NSFG does do this

parking lot

As discussed in Ajzen and Klobas (2013) fertility intentions are stable and predictive at the population level, (Hagewen and Morgan 2005) but may not be stable and predictive at individual level. Bumpass and Westoff (1969) suggest that the difference between the stability and predictiveness of aggregate intentions versus individual intentions can be explained by unwanted births being balanced by unrealized intended births (Ajzen and Klobas, 2013).

; as Morgan and Rackin noted:

> "...fertility intentions... [are] both highly contingent and highly constrained. Fertility intentions are highly contingent because they are imbedded within an unfolding life course that intersects with historical time (i.e., period factors). Intentions and attempts to realize them are also highly constrained because of subfecundity or infecundity, structural obstacles (e.g., difficulty finding a spouse or full employment), and social norms. (Morgan and Rackin, 2010).

Table 1. Fertility Intentions as Measured in Cross- Sectional[5] National Surveys

Data Source	Question	Answer Categories
National Survey of Family Growth (1973; 1976; 1982; 1988; 1995; 2002; 2006-2010; 2011-2013)	Looking to the future, do you intend to have (a/nother) baby at some time (after this pregnancy is over)?	Numeric (Yes; No; NR/DK)
	(Not counting your current pregnancy,) how many (more) babies do you intend to have?	Continuous/Scale Response
Demographic and Health Surveys (years vary by country)	Now I have some questions about the future. Would you like to have (a/another) child, or would you prefer not to have any (more) children?	Numeric (Have another child; No More; NR/DK)
	If you could go back to the time you did not have any children and could choose exactly the number of children to have in your whole life, how many would that be? (women with living children)	Continuous/Scale Response
	If you could choose exactly the number of children to have in your whole life, how many would that be? (women with no living children)	Continuous/Scale Response
Eurobarometer (special edition on Childbearing Preferences and Family Issues in Europe) (2006)	And for you personally, what would be the ideal number of children you would like to have or would have liked to have had?	Continuous/Scale Response
	How many children do you (still) intend to have?	Continuous/Scale Response
	In your opinion, what is the ideal age for a woman to have her first child?	Continuous/Scale Response

[5] Fertility intentions are also measured in some panel studies such as the British Household Panel Survey (UK), the Generations & Gender Programme Survey (Europe) and the National Longitudinal Study of Youth (US) but these are outside the scope of this exam.

Overall comments:

From LORNA – nice work! I think you are close to completion on the methodological pieces, and they hang together very nicely in this new format. Also your section on chronic stress is quite strong, with some minor exceptions. I would concentrate your efforts mostly on section 1, which still needs tightening of text and more synthesizing what is known/not known. Part of your challenge is that "nativity" as you have articulated it is a very broad "exposure" to explore….encompassing genetic/ethnicity differences, SES variability, a range of acculturation experiences, and vastly different prior lifecourse exposures. Coupled with the multiple outcomes being examined, you've got a complicated mission! But I think you are almost there. Take a look at our comments and contact us if you have any questions. Keep up the excellent work and pace!

From JENN-—very nice revision. I concur with Lorna's thoughts above concerning drawing out more of the take-home messages in section 1, and some additional small comments are in the text. Good work.

From HEIDI – I agree with both Jenn and Lorna above – very nice revision. Excellent job incorporating the previous round of comments. I do think that the first two sections could be tightened and shortened. I don't think you need to go into quite the level of detail that you currently do on individual study findings (it makes it harder for the reader to get the main points). I've made a few additional small changes in the document itself. Do be careful with looking at confounding within the context of interaction (see comments in that section). Excellent job!

Table of Contents

I. Maternal health outcomes in immigrant women
- i. Review of the literature
  - a. Introduction
  - b. Gestational diabetes mellitus
  - c. Maternal morbidity in the peripartum period
  - d. Postpartum depression
  - e. Maternal mortality
  - f. Explanations/hypotheses of immigrant maternal health
- ii. Limitations

Commented [CHC2]: HJ – I agree with Lorna, note if you program the headers in Word correctly, Word will do the page numbering for you automatically.

I. MATERNAL HEALTH OUTCOMES IN IMMIGRANT WOMEN

i. Literature review

a. *Introduction*

Over the past four decades, patterns of immigration have changed rapidly, with the most dramatic changes observed in female immigration. In 2006, 12.5% of the United States (US) population was foreign-born, but the foreign-born accounted for 44% of the growth in the US population (Hedderson 2010). The proportion of immigrants that are female is also increasing: in 2000, females accounted for 55% of all immigrants, a much higher proportion than in previous immigration waves. Immigrant women are also more diverse in type and region of origin than in the past. Female immigrants now include family-sponsored migrants, independent labor migrants, refugees and asylees, and undocumented migrants. Since the 1980s, immigration from Latin America and Asia has accounted for 85% of total female immigration (Zhou 2002). Related to that trend, the proportion of births to foreign-born women has grown steadily, from 15% in 1990 to 24% in 2004, a 60% change (Livingston 2010).

While the "immigrant paradox", a term that refers to favorable birth/infant outcomes among immigrant women despite high levels of socio-economic disadvantage, has been well studied, less is known about whether this pattern holds for maternal health (Braun 2011). This literature review focuses on maternal morbidities and mortality among immigrant women and differential outcomes between immigrant women and native-born women. The review concentrates on outcomes in immigrant women emigrating from less developed countries to more developed countries in the Western hemisphere (predominantly in North America). To provide a comprehensive epidemiological profile of immigrant women, the outcomes span three periods across the periconceptional continuum: the antepartum period, the peripartum period, and the postpartum period. The antepartum period covers the period from conception to birth. Adverse conditions and outcomes that arise in this period are closely linked to preconceptional health. The peripartum period covers a briefer period from immediately before labor until immediately after delivery. The postpartum period typically covers the period from delivery to 1-2 years after delivery. This review concentrates on four adverse outcomes that are relatively prevalent and/or

Commented [LT3]: From LORNA: Generally good introduction. Some minor edit suggestions.

Commented [LT4]: From LORNA: Minor….Suggest avoiding use of the term "the foreign-born", as may come across pejorative (like "the homeless, etc). Also – 44% of the growth when? Easy to give what was historical female contribution to immigrant waves?

severely compromise the health of mothers in the US: gestational diabetes mellitus (antepartum), maternal morbidity (peripartum), postpartum depression (postpartum), and maternal mortality (antepartum, peripartum and postpartum).

In addition to describing and evaluating the occurrence of these key outcomes among immigrant women and the risks associated with nativity status, this review highlights several common methodological challenges, including appropriate comparison groups, conceptualization of causal pathways, lack of necessary adjustment for confounding, and non-representative samples. Comparison groups are particularly important when examining differences between immigrant and native-born women. The literature is mainly divided between studies using all native-born women as the reference group to all foreign-born women and studies employing within stratum comparisons (e.g. comparing US-born Hispanic women to foreign-born Hispanic women, or more specifically, Mexican-born women to US-born women of Mexican descent). While the choice of comparison group depends partly on the research question, finer categorizations of immigrant women and within stratum comparisons might be most appropriate, especially when interested in the effects of the post-migration environment, such as the effects of acculturation (e.g. time since migration, language proficiency) and social support. Confounding, in general, is a particular concern in studies of the effects of nativity due to the social, economic, and obstetric differences between native-born and foreign-born women and their potentially strong effects on the outcomes reviewed here. Studies also differ in their conceptualization of covariates and potential causal pathways. Some authors envision key factors, such as socio-economic status, as confounders of the relationship between nativity and maternal health. Yet others characterize these same covariates (e.g. SES, social support) as intermediaries in the pathway from nativity to maternal health outcomes. While most studies treat obstetric-related risk factors (e.g. maternal age, parity, receipt of prenatal care) as confounders, there is less uniformity regarding social determinant risk factors. Lastly, non-representative samples are subject to selection biases and may not be representative of either foreign-born or native-born populations.

Commented [CHC5]: From HEIDI: I love this new section, think your intro reads very well – agree with Lorna's suggestion for re-ordering

Commented [LT6]: From LORNA: My thought here is that a re-ordering may make sense: (1) studies differ in conceptualization and pathways; (2) comparison groups; (3) confounding; (4) representative samples

b. *Gestational diabetes mellitus*

Gestational diabetes mellitus (GDM), defined as carbohydrate intolerance with onset or first diagnosis in pregnancy, is a growing concern in the US. The most recent national estimate of GDM is 3.7% (as of 2001 from the National Hospital Discharge Survey) and has increased across all racial and ethnic groups in the US in the past decade (Adams 2009s, Hedderson 2010). Gestational diabetes is linked to a 10-50% higher risk of maternal type-2 diabetes in the 5 years after birth and several poor birth outcomes, including macrosomnia and preterm birth. Risk of GDM is highest among older women (35 years and more), women with a low socio-economic status, Native-American women and women from Asia and the Middle East (Adams 2009).

A handful of studies have examined the prevalence of GDM among foreign-born women in the United States. Two studies have reported fairly consistent results among immigrant women in different regions of (?) the US. One study conducted among Kaiser Permanente participants in Northern California reported a prevalence of 8.5% among foreign-born women (Hedderson 2010). Another population-based study reported a similar prevalence of 7.5% among foreign-born women in New York City (Savitz 2008). Prevalence estimates among immigrant women in the US vary considerably by race/ethnicity and region/country of origin. For example, in a large, population-based study of US births, the prevalence of GDM was highest in Asian Indian women (6.5%) and lowest in Japanese women (1.9%) [Keiffer 1999]. Two other regional studies in the US found a similar pattern of highest prevalence among Asian Indian women and lowest prevalence among Japanese women (cite). A NYC population-based study was able to look at finer categorizations of country of birth for regions other than Asia and the Pacific Islands. The authors found the highest GDM prevalence among South Central Asian women (14.5%, includes Indian women who had a 11.9% prevalence). The lowest GDM prevalence was observed among Ecuadorean and Panamanian women (each 4.4%). It should be noted that within the East and (?) Southeast Asian foreign-born sub-group (6.4%), the authors could only estimate the prevalence in Chinese women (6.3%) due to small numbers in other nationalities including Japanese (Savitz 2008).

Commented [LT7]: From LORNA: I believe this section still needs more synthesizing, beginning with paragraph 2 – hard to see the forest. It might help to say something like in the US there has been one nationally representative study, 4 regionally representative studies, and a handful of non-representative ones…. The range of estimates for overall prevalence among FB women has been X% to X%. All studies have, however, identified variation in GD prevalence between foreign-born groups, and for the most part these country-specific estimates have been similar across studies…..

Commented [CHC8]: From Heidi, you have done a nice job being clearer about comparison groups and presenting associations adjusted for confounding. I agree with Lorna, that the final icing on the cake, will be to help the reader understand the take home messages and feel less like they are wading through the data. One approach may be to start paragraphs with summarizing sentences of patterns seen in studies. Substantiate these sentences with data from individual studies (although sometimes not all of the estimates themselves need to be presented), and summarizing at the end– it is still a bit hard in this section to glean the big picture.

Commented [LT9]: From LORNA: Was overall prevalence in this study similar to Hedderson and Savitz?

Commented [LT10]: From LORNA: Unclear

Due to the considerable variation in GDM prevalence by ethnicity/region of origin, most US studies have compared subgroups of foreign-born women to their native-born counterparts and thus report odds ratios for the nativity-GDM relationship stratified by ethnicity or region of origin (Savitz 2008, Hedderson 2010, Keiffer 1999, Chu 2009, Ramadhani). These studies have found general consistency: within strata of ethnicity, foreign-born women have higher risk of GDM than their US-born counterparts; and there is variation in the nativity-GDM relationship by ethnicity/region of origin. For example, adjusting for age, Braun and colleagues reported a 13% greater odds of GDM among Mexican-born women compared to US-born, Hispanic women in Colorado (it was unclear whether the women who identified as US-born Hispanics were of predominantly Mexican origin). After adjustment for education, the significance of the association was attenuated to the null (Braun 2011). Ramadhani and colleagues reported an odds ratio of 2.2 (95% CI 1.4-3.7) in foreign-born Hispanic women versus US-born Hispanic women adjusted for age, smoking and drinking status (Ramadhani 2011). Hedderson and colleagues found a 35% greater odds of GDM among foreign-born Mexican women compared to their US-born counterparts in a multivariable model adjusting for age, parity, education, maternal weight gain during pregnancy, and gestational age at weight assessment (Hedderson 2010). Another study found slightly higher odds among Central/South American and Puerto Rican foreign-born women [aOR (95% CI)=1.07(1.01-1.13) and 1.07(1.04-1.10) respectively], but a decreased odds among Mexican foreign-born women compared to their US-born counterparts, adjusted for age, prenatal care, education, marital status and parity (aOR=0.91, 95% CI 0.90-0.92) [Keiffer 1999]. A NYC population-based study found a significant increased risk, adjusted for age, parity, education, pre-pregnancy weight, and smoking, among foreign-born Puerto Rican, Dominican, Mexican and South American women compared to their US-born counterparts [aOR (95% CI)=1.2(1.1-1.2), 1.2(1.1-1.4), 1.5(1.2-1.9), and 1.7(1.7-2.0) respectively] [Savitz 2008].

Commented [LT11]: From LORNA: From what I can see, you address the impact of adjusting for education and other potential confounders in a later paragraph. Should you save this for later?

Studies comparing foreign-born and US-born women of African descent are less consistent. Studies that have adjusted for various demographic and obstetric factors, have reported 14% (aOR=1.14,

95% CI 1.12-1.16) and 80% (aOR=1.78, 95% CI 1.46-2.18) higher odds of GDM among foreign-born Black women compared to US-born counterparts (Keiffer 1999, Hedderson 2010). However, a national study comparing all foreign-born Black women to their US-born counterparts reported a decreased though non-significant odds of GDM adjusting for age and smoking/drinking status (aOR=0.8, 95% CI 0.2-1.8) [Ramadhani 2011]. Another study employed within region of origin comparisons and found that foreign-born non-Hispanic Caribbean women had a significantly higher adjusted odds of GDM than their US-born counterparts (aOR=1.4, 95% CI 1.2-1.6). Further disaggregation by national origin showed that foreign-born Haitian women had a higher adjusted odds of GDM (aOR=1.5, 95% CI 1.1-2.2), while foreign-born Jamaican women had a non-significant adjusted odds of GDM (aOR=1.1, 95% CI 0.8-1.5 respectively). Sub-Saharan African women had a non-significant increased adjusted odds of GDM compared to their US-born counterparts (aOR=1.6, 95% CI 0.8-3.1) [Savitz 2008].

Studies have also found considerable variation by country of origin amongst Asian and Pacific Islanders. Keiffer and colleagues' study of US births, found a higher odds of GDM in foreign-born Filipina and Indian women [aOR (95% CI)=1.1 (1.01-1.13), 1.3 (1.2-1.4) respectively] than their US-born counterparts (Keiffer 1999). Similarly, in a NYC population-based study, foreign-born Chinese, Filipina, and Indian women had greater odds of GDM [aOR (95% CI)=1.3 (1.1-1.5), 1.9 (1.2-2.8), 1.7 (1.2-2.2) respectively] than their US-born counterparts (Savitz 2008). Chu and colleagues found that with the exception of Japanese and Korean women, foreign-born Asian and Pacific Islander women (e.g. Chinese, Filipina, Indian, Korean, Pacific Islander, and other Asian) had higher age-adjusted rates of GDM than their US-born counterparts (p=0.05) [Chu 2009]. Another study reported similar results: foreign-born Indian, Chinese, and Filipina women had greater adjusted odds of GDM [aOR (95% CI)=1.84 (1.02-3.34), 1.51 (1.46-2.18), 1.78 (1.482.15)], while foreign-born Japanese and Korean women had a 60% and 50% decreased adjusted odds of GDM [aOR (95% CI)=0.63 (0.40, 1.00), 0.48 (0.25,0.92)] [Hedderson 2010].

Few studies have examined variability in known risk factors among immigrant and native-born women in the US or abroad. The few that have examined these associations have found that immigrant

Commented [LT12]: From LORNA: Again, this paragraph can be summarized more concisely. What is the pattern, moreso than what does each study find?

women have lower prevalence of traditional obstetric risk factors such as pre-pregnancy obesity? and pregnancy weight gain than US-born (Hedderson 2010, Ramadhani). However, researchers have noted that immigrant women are more likely to be older at the time of pregnancy than their US-born counterparts; older age is a strong risk factor for GDM. Three US studies found that adjustment for maternal age attenuated, but did not remove the association between nativity and GDM (Keiffer 1999, Hedderson 2010, Braun 2011). These findings suggest that maternal age only partially explains the difference in risk of GDM observed between many immigrant and US-born women. Two studies have shown that additional adjustment for socio-economic status, timing of prenatal care, and parity further attenuated (compared to age-adjusted model), but did *not* remove the association between nativity and GDM (Keiffer 1999, Hedderson 2010). However, the magnitude and significance of the associations after full adjustment differed by ethnicity (i.e. for some ethnicities, such as Cuban and Samoan, the significance of the association disappeared with full adjustment) [Keiffer 1999, Hedderson 2010]. In contrast, in a study of Hispanic women, adjustment for educational differences, removed the association between Mexican-born and US-born Hispanic women in Colorado (Braun 2011). These findings suggest that the relative contribution of demographic and obstetric differences differs by region of origin/ethnicity and underscore the importance of examining these associations stratified by region of origin/ethnicity. Only one study adjusted for BMI during pregnancy; this study found that further adjustment for anthropomorphic differences strengthened the association between nativity and GDM among some ethnic groups: non-Hispanic white, Black, Chinese, Indian, Filipina, Pacific Islander, and Mexican women (Hedderson 2010).

Conclusions: This review of GDM studies shows considerable variability in GDM risk both across racial/ethnic groups and regions of origin. Some immigrant subpopulations (e.g. South Asians and Filipinas) show consistently higher rates of GDM compared to their US-born counterparts, while a smaller subset of other subpopulations show lower rates (e.g. Japanese and Korean). The findings for some populations are inconclusive, as the magnitude and direction of the association within these subgroups varies widely from study to study (e.g. women of African decent and Mexicans). Differences

Commented [LT13]: From LORNA: Do you feel confident to make some partial summary statements? For example, is there a general patterns of higher GDM among foreign-born compared to US-born women? Do you think elevated levels among Latina women are perhaps more driven by SES than among Asian women? Do any factors consistently account for some of the observed differences?

in the risk of GDM among subgroups might be due to differences in time since migration or to differences in the prevalence of risk factors in the country of origin (Chu 2099). Other inconsistencies could arise from comparison group differences. While more in-depth studies that examine variation in risk factors are needed, some evidence suggests that the influence of traditional GDM risk factors, such as obesity and age, might vary between foreign-born and US-born women by region of origin. Traditional anthropomorphic risk factors seem to be less significant predictors of GDM risk among certain subgroups of immigrant women, most notably in Asian and Pacific Islanders (Chu 2009, Hedderson 2010). The extent to which innate genetic differences that affect glucose metabolism, migration-related selection factors, and post-migration acculturation-related factors affect risk of GDM in immigrant women is unknown. Furthermore, it is likely that these factors (particularly genetic and post-migration environmental factors) interact with one other. More studies are needed to identify the cause(s) of variation in GDM risk observed among subgroups of immigrant women.

Commented [JD14]: One explanation you haven't mentioned the life course/developmental hypotheses about early life programming predisposing those born in deprived environments to metabolic problems when they later encounter calorie-rich environment. See for example work by Chris Kuzawa, Mary Schooling…

c. *Maternal morbidity in the peripartum period*

A broad category, peripartum maternal morbidity encompasses numerous conditions that occur immediately before or after delivery, including preeclampsia, perineal lacerations, and placental disorders. The prevalence of peripartum morbidity varies by condition: the prevalence of immediate postpartum hemmorhage was 2.1% in 2001, while hospital-based prevalence estimates of perineal laceration ranged from 2.2-19.9% in the US (Adams 2009s). Only a few studies have examined maternal morbidities of the peripartum period among immigrant women and compared immigrant women to their native-born counterparts. Two studies have been conducted in the US and have reported similar results. In a retrospective cohort study of births at an inner-city hospital in Atlanta, foreign-born women had a nearly 2-fold higher risk of perineal laceration than US-born women (OR=1.7, 95% CI 1.7-1.8). When stratified by region of origin, all foreign-born subgroups had higher risks than US-born women; however, the association was strongest among foreign-born Asian and African women compared to all US-born women (RR=2.2, 95% CI 2.0-2.4 and RR=2.0, 95% CI 1.4-2.9). Foreign-born women also had slight and marginally significant increased risk of postpartum hemorrhage (RR=1.10, 95% CI 1.0-1.2). Stratification

Commented [LT15]: From LORNA: Perhaps a sentence about generally recognized risk factors for these conditions?

by region of origin revealed that only African foreign-born women had a statistically significant risk (no relative risk reported) compared to US-born women (Forna 2003). A population-based study of births in Washington State reported an increased risk of placenta previa and febrile illness among foreign-born Southeast Asian women compared to US-born, non-Hispanic white women. Specifically, foreign-born Cambodian and Vietnamese women had 70% (OR=1.71, 95% CI 1.19-2.44) and 100% (OR=2.06, 95% CI 1.65-2.58) greater risks of placenta previa compared to US-born white women. They also had a 45% (aOR=1.45, 95% CI 1.10-1.91) and 100% (aOR=2.02, 95% CI 1.73-2.37) greater risk of febrile illness, adjusted for gestational age, birth weight, and method of delivery (Cripe 2011).

One Canadian, population-based retrospective cohort study examined the relationship between recent immigration and maternal placental syndrome, defined as preeclampsia/eclamspsia, placental abruption or placental infarction at the index delivery. The reference group included those residing in Ontario for more than 5 years, which included both women born in Ontario and those who immigrated more than 5 years prior to delivery. The authors found a progressively lower adjusted risk of placental syndrome associated with recent immigration in models adjusted for age, income, pre-existing hypertension, diabetes, multiple gestation, and receipt of prenatal ultrasonography at 12-24 weeks gestation. For example, those who immigrated 3 months prior to delivery had an 89% decreased adjusted risk of placental syndrome, with the risk rising in a graded manner with longer time since migration. More recent immigrants in this study also had lower rates of independent risk factors for placental syndrome, such as of obesity and hypertension, than longer residing immigrants and native-born women. The graded effect of duration was also observed within strata of income, suggesting that socio-economic factors did not fully explain risk associated with duration (Ray 2007).

Conclusions: Far from definitive, the limited body of US-based literature is suggestive of an increased risk of maternal morbidity among foreign-born vs. US-born women. Risk of peripartum morbidity seems to be strongest among women from Africa and Asia. However, an important limitation exists within the US studies: lack of adjustment for potential confounders. At a bare minimum, these studies should adjust for differences in age and parity (two maternal characteristics associated with both

Commented [JD16]: What were the hypothesized reasons for this?

Commented [LT17]: From LORNA: Any comment on why?

peripartum morbidity and nativity). Residual confounding by other maternal obstetric risk factors, such as small pelvic size, genital cutting, and history of prior maternal morbidities (e.g. GDM) might have also led to biased estimates. Notably, the comparison groups used in the two US studies were US-born women and US-born white women. These comparison groups might be useful in ranking the peripartum risk of subpopulations. On the other hand, such comparisons have limited utility for addressing questions about the role of acculturation or adaptation in the post-migration environment. Acculturation-related factors, particularly language preference and proficiency, might be a fruitful avenue for future research. Communication barriers specifically in the second stage of labor might result in prolonged labor leading to greater risk of hemorrhage and laceration (Forna 2003). The Canadian study suggests deteriorating health with increasing duration of residence. However, the study might not be generalizable to the US context, in which differences in access to prenatal care and migration-related selection might have different impact on findings.

Commented [JD18]: These seem like mediators rather than confounders to me—thus not leading to "bias" but explanation.

d. *Postpartum depression*

Commented [LT19]: From LORNA: This section is also a bit hard to weed out the patterns. One suggestion might be to start with the consistent Canadian study results, and then move into the less consistent US-based results. I would also encourage you to highlight/call out the better designed studies, so the reader knows when you are placing more clout in certain studies over others.

When you put the literature all together, would it be fair to say that there is a consistent pattern of elevated risk for postpartum depression in certain FB subgroups?

Postpartum depression, a clinical depressive condition that can affect women up to a year after delivery, is the most common complication of childbearing (Wisner 2002). Mothers with a history of postpartum depression are at risk for a number of poor health and social outcomes, including, recurrent episodes of depression either related or not related to childbirth (Miller), family discord and loss of income (Wisner 2002). Ten to fifteen percent of new mothers in the US develop symptoms indicative of depression in the postpartum period (CDC, year?). Prevalence estimates of depressive symptomatology among immigrant women range from 8% to 38% (Goyal 2006, Miranda 2005, Bjerke 2008, Ahmed 2008, Stewart 2008, Zelkowitz 2008, Mechakra-Tahiri 2007, Sword 2006, Huang 2007, Ganan 2011, Lansakara 2009). Most studies in the US and other developed Western nations have found higher levels of postpartum depression among immigrant women than native-born women (Goyal 2006, Bjerke, Ahmed 2008, Stewart 2008, Zelkowitz 2008, Mechakra-Tahiri 2007, Sword 2006, Ganan 2011, Lansakara 2009). However, studies which have examined the association between nativity and postpartum depression across racial/ethnic strata have found variable results (Huang 2007, Foss 2004). Comparison across

studies is complicated by a number of methodological issues, some of which are similar to those identified in the earlier gestational diabetes section. Many studies do not use representative samples. Even when representative samples are employed, sparse cell bias may occur especially when immigrant and native-born women are disaggregated by race/ethnicity. Risk of residual confounding due to differences in socio-economic status and the amount and quality of social support is also a consistent issue , and adjustment for these factors varies widely from study to study.

Most US-based studies lack either direct (Diaz 2007, Goyal 2006, Miranda 2005) or adjusted comparisons between immigrant and native-born women (Foss 2004, Huang 2007). One nationally representative study in the US used a population-based sample, and found that US-born women had a slightly higher level of any depressive symptomatology (i.e. mild, moderate and severe symptoms) than foreign-born women: 42.0% (95% CI 40.0-44.0) in US-born women vs. 36.1% (95% CI 32.7-39.5) in foreign-born women. US-born women had a significantly higher level of depressive symptomatology within Black, White, Hispanic groups but not Asian and Pacific Islanders. Foreign-born Asian women had a higher level of depressive symptomatology than US-born Asian women: 41.2% (95% CI 37.5-44.9) in foreign-born vs. 32.3% (95%19.5-45.1) in US-born. Foreign-born Pacific Islander women had a higher level of depressive symptomatology than US-born Pacific Islander women: 51.0% (95% CI 20.4-79.8) in foreign-born vs. 32.5% (95% CI 7.8-57.2) in US-born. These studies involved small sample sizesfor Asian and Pacific Islanders limiting their power to detect differences in these subpopulations. In contrast, Hispanic and Black foreign-born mothers had a slightly lower prevalence of depressive symptoms than their US-counterparts despite greater rates of poverty. The authors noted that greater social support and lower rates of teenage birth among foreign-born, Hispanic and Black mothers might counter the harmful effects of socio-economic strain (Huang 2007).

In another non-population-based US study, the authors directly compared US-born women of any race/ethnicity to three groups of foreign-born women (Vietnamese, Congolese, and Hmong) and examined the relationship between depression and infant development. All three groups share a history of social violence and colonization in which Western concepts were introduced and have large refugee

Commented [JD20]: Confounding?

Commented [LT21]: From LORNA: Unclear

populations in the US. Using the depression subscale of the Hopkins Symptoms Checklist-25, the study found higher mean scores of distress in Congolese (2.15) and Hmong (1.44) women than US-born women (1.35). The mean score for Congolese women was indicative of clinical depression, while the mean scores for Hmong and US-born women was below the cut-off score for preclinical distress (1.75). Vietnamese women (1.32) had a mean score comparable to that of US-born women (Foss 2004).

Commented [LT22]: From LORNA: I think you can summarize this more clearly. Only the Congolese women had mean scores above the cut-of for preclinical distress...

Two well-designed studies conducted in Canada found considerable differences between foreign- and Canadian-born women. One population-based study of postpartum depressive symptoms reported that 25% of immigrants from minority groups (i.e. born in a country outside of Europe or outside of a country with major English ancestry) vs. 11% of Canadian-born women and 8.3% of immigrant women from majority groups (i.e. born in Europe and other country with major English ancestry) experienced high levels of depressive symptoms on the Center for Epidemiologic Studies Depression Scale (CES-D) (Mechakra-Tahiri 2007). A similar Canadian study examined postpartum depressive symptoms using the Edinburgh Postnatal Depression Scale (EPDS) in various subgroups of immigrant women (categorized by entry status-refugee, political asylum seeker and non-refugee) and Canadian-born women. This study found elevated levels of depressive symptoms among non-refugee immigrant women (35%), asylum seekers (31%) and refugees (26%) compared to Canadian-born women (8%). After adjusting for prenatal care and visible minority status, immigrant women still had a 4-fold greater odds of having postpartum depressive symptoms compared to Canadian-born women (Stewart 2008).

While these studies suggest higher incidence of postpartum depression among certain sub-groups of (?) foreign-born women compared to their native-born counterparts, few studies have examined variability in risk factors to help elucidate potential causes behind these patterns and adjust for potential confounding. One of the Canadian studies described above found a significant inverse association between self-rated health and postpartum depression symptoms among Canadian-born women in a multivariable analysis adjusting for income and education, but not among immigrant groups. Immigrant women from minority-status groups had a higher probability of depressive symptoms regardless of their self-rated health. The authors concluded that Canadian-born women might be more likely to incorporate

mental health into their conceptualization of general health than immigrant women (Mechakra-Tahiri 2007).

A recent cross-sectional analysis of a sample of pregnant women from a cohort study conducted in Canada found higher prevalence odds of depressive symptoms in foreign-born than Canadian-born women independent of length of stay in Canada. The authors were interested in the potential mediating roles of socio-economic and social support in the relationship between length of stay and postpartum depression. The authors found that after adjusting for socioeconomic factors, such as education, language at home, and lack of money, differences in odds of depressive symptoms between foreign-born and Canadian-born women were attenuated. The association between immigration status and depressive symptoms was further attenuated after adjusting for social support (measured as partnership status, number of people who can help, and number of people to talk to). In their final multivariable model, intermediate-term immigrants (i.e. 3-8 years residing in Canada) had a 6% greater odds (aOR=1.06, 95% CI 0.79-1.22) of depressive symptoms than Canadian-born women compared to 35% greater odds (aOR=1.35, 95% CI 1.03-1.77) in the model with socioeconomic factors and 61% greater odds (OR=1.61, 95% CI 1.28-2.03) in the unadjusted model. Similar attenuation was found across models for recent (fewer than 2 years) and long-term (9 or more years) immigrants. However, the magnitude of the attenuation after adjusting for socio-economic status was greatest among long-term immigrants, whereas attenuation was greatest among recent immigrants after further adjusting for social support (Miszkurka 2010).

These results suggest that differences in the occurrence of depressive symptoms by nativity status may be related to differences in social support and socio-economic status, but patterns are difficult to confirm due to demonstrated variability by region/ethnicity and a limited body of studies. Socio-economic status seems to have a greater influence among longer-term immigrants, while social support seems to have a greater influence among shorter-term immigrants. Socio-economic difficulties may persist and become exacerbated many years after arrival (Miszkurka 2010). Social support, on the other hand, might be a particularly salient risk factor for depression among recently migrating women who have

Commented [LT23]: From LORNA: Can you say anything about the US probability study – did adjustments for potential confounders reduce the observed associations – which ones?

Commented [JD24]: So this implies that immigrant women had LOWER social support? Is this typical? I was under the impression at least with Hispanics that it went the other way.

Commented [LT25]: From LORNA: You can probably synthesize this more concisely – instead of telling the pattern, then describing the data, try combining. Makes for less repetitive reading.

experienced recent disruptions in their social networks and might not have had the time or resources to reform new ties in their host countries.

A handful of studies have examined acculturation factors (e.g. language, duration of residence) and postpartum depression. In general, these studies have not found a consistent relationship between various measures of acculturation and higher levels of depression. Studies conducted in the US have focused exclusively on the Latina population. One study using a convenience sample of pregnant and postpartum Latinas from public clinics in San Antonio, Texas, found that US-nativity and English preference were associated with elevated levels of depressive symptoms using the EPDS in bivariable analysis (Davila 2009). Another US study using a validated acculturation scale (the Short Acculturation Scale) found no significant relationship between acculturation status and postpartum depression (Beck 2005). It should be noted that although acculturation is a complex, multidimensional construct, studies to date have used crude measures of acculturation (even the validated scale was based solely on language preference). In addition, most studies examining acculturation lack adjustment for potentially confounding variables, such as socio-economic status and social support.

Conclusions: While a consistent pattern of higher risk among foreign-born women and specific subgroups of foreign-born women (e.g. minority status) emerged from a series of Canadian studies, the limited US literature is inconsistent and has several limitations. Similar comparative studies have not been conducted in the US and there is a need for studies that examine differences in traditional risk factors for postpartum depression between immigrant and US-born women. In particular, studies should examine whether or not variations in social support and SES might explain observed nativity-depression associations. In addition, acculturation-related factors are important as potential modifiers, and studies to date have been limited in their exploration of acculturation influences. Questions remain regarding the impact of different acculturation-related factors, such as age at migration, duration of residence, language preference, on depression in the postpartum period. In addition, the interplay between acculturation status and key social determinants (e.g. SES and social support) has not been studied in the US.

e. *Maternal mortality*

Commented [CHC26]: So do you think of social support as a mediator or an effect modifier?

Commented [LT27]: From LORNA: Are you prepared to say this based on one study? Perhaps qualify a little…?

Commented [LT28]: From LORNA: On what sample?

Commented [LT29]: From LORNA: Do you feel any ability to summarize differences across subgroups based on the limited literature?

Commented [LT30]: From LORNA: Unclear

Commented [LT31]: From LORNA: Do you mean well-established?

Commented [CHC32]: So these are mediators

Maternal mortality is rare in Western, developed countries, largely reflecting a high level of general health and adequate access to medical care (Adams 2009, Bollini 2010). Maternal deaths are sentinel events that are thought to correspond with maternal morbidity. Not only medically determined, maternal deaths are also related to larger social and economic conditions of the mother or group to which she belongs (Bollini 2010). Maternal deaths are classified as direct (resulting directly from the pregnancy) or indirect (resulting because pregnancy exacerbates a pre-existing condition or illness) [Adams 2009]. The US has one of the highest levels of maternal mortality among developed regions; in the US, the maternal mortality ratio was 15.1 per 100,000 live births in 2005 (Johnson 2011). Only two studies, to the best of my knowledge, have examined maternal mortality in immigrant women in the US, and comprehensive US-based studies of maternal mortality and nativity are lacking. One earlier report found a significantly higher mortality ratio amongst foreign-born Hispanic and Asian women compared to their US-born counterparts from 1991-1997. Specifically, foreign-born Hispanic women had a 50% greater pregnancy-related maternal mortality ratio than their US-born counterparts (11.8 v. 8.0 per 100,000 live births). Asian-Pacific Islanders had an 80% greater pregnancy-related maternal mortality ratio than their US-born counterparts (12.7 v 6.1 per 100,000). However, the authors noted that the US-born ratio for Asian-Pacific Islanders should be interpreted with caution due to instability of the estimate (fewer than 7 events occurred in this subgroup). Mortality ratios did not differ between foreign-born and US-born Black women (CDC MMWR 2001). Another hospital-based study in Georgia found a non-significantly, elevated risk of maternal mortality among foreign-born women compared to US-born women (RR=1.16, 95% CI 0.53-2.53). The wide confidence interval was due to the small number of maternal deaths that occurred from 1991-2001 (Forna 2003).

Commented [JD33]: I'm a little confused about the numbers here—the ratio would be comparing the rate in one group to another, correct, so comparing mortality ratios doesn't make sense to me?

Most studies that have focused on the immigrant subpopulation have been conducted in Europe. These studies have consistently found a pattern of higher mortality among immigrant women from less developed regions than native-born women. One of the earliest studies to document higher maternal mortality in immigrant women was conducted in England. Examining deaths from 1970-1985, Ibison and colleagues reported a 2-fold increased risk of maternal death among women born in Asia, and a 5-fold

increased risk among women born in Africa and the Caribbean, after adjusting for age and year of death, compared to their English born counterparts (Ibison 1996). Foreign-born and native-born women were similar in parity and social class; these factors likely did not explain differences in mortality between the two groups (Ibison 1996). In a more recent population-based, case-control study conducted in Spain, Luque-Fernandez and colleagues found that odds of maternal deaths was 87% greater among foreign-born women compared to Spanish women between 1999-2006, adjusted for age (95% CI 1.0-3.3). The attributable risk of maternal death due to foreign-born status was 45.3% (95% CI 2.0-88.8%) [Luque-Fernandez 2010]. A population-based, case-control study conducted in the Netherlands reported significantly elevated odds of death among non-Western immigrants, women from Surinam/Dutch Antilles, and other immigrants (from Africa and Asia). Non-western immigrants were two times as likely to have a maternal death (OR=2.1, 95% CI 1.6-2.7), and immigrants from Surinam/Dutch Antilles and other immigrant were approximately three times as likely to have a maternal death as Dutch-born women (OR=2.7, 95% CI 1.7-4.3 and OR=3.3, 95% CI 2.3-4.8 respectively) [Schutte 2009].

Another European study found that the relationship between maternal mortality and nativity status was not static through time. This population-based, case-control study conducted in Switzerland examined trends in maternal mortality among Swiss-born and foreign-born women over a nearly four-decade period, from 1969-2006. Bollini and colleagues (Bollini 2010) found that the risk of maternal death was 35% higher among foreign-born women compared to Swiss-born women overall (OR=1.3, 95% CI 1.0-1.8). However, the odds ratio varied over four time periods. In 1969-1979, the risk of maternal death was lower, though non-significant among foreign-born women. By 2000-2006, foreign-born women had a 4-fold increased risk of death compared to Swiss born women (OR=4.4, 95% CI 1.9-10.6). The maternal mortality rate dropped dramatically in Swiss-born women over the 4-decade period, with the greatest improvement observed from the 1970s period to the 1980s (MMR=19.2 in 1970s v. 5.8 in 1980s). In contrast, the rate among foreign-born women dropped from the 1970s to the 1980s, was stable in 1990s, and then rose in the first decade of the 21st century (Bollini 2010). Changes in the relationship between nativity and maternal death over the decades examined might stem from selection of

immigrants (e.g. more asylees entering in later decades who might have been exposed to various health-compromising events, more immigrants from less developed regions such as Eastern Europe, Africa, and Asia in later decades) or underreporting before 1970 due to a restrictive family re-unification policy that might have led to unregistered deaths (i.e. death was not registered in the Swiss vital records system). Due to restrictive policies, wives/partners residing in Switzerland were declared as visitors to avoid sanctions (visitor deaths not registered) (Bollini 2010).

Researchers have suggested that substandard care is a main determinant of differential mortality in immigrant and native-born women. One follow up study examining sub-standard care in the Netherlands was conducted on 101 direct maternal deaths. Refusing medical advice, delay in general practictioner's (GP's) recognition of symptoms, delay referral by GP, inadequate antenatal care by midwife were all more likely to occur among foreign-born than Dutch-born women (p <.05). For preeclampsia cases only, insufficient treatment of hypertension and seizures were more likely to occur in foreign-born than Dutch-born women (p=<.05 and <.01 respectively) [van Roosmalen 2002].

Conclusions: These findings from Europe suggest a consistent pattern of increased risk of maternal death in immigrant women compared to their native born counterparts. These findings are consistent across region of origin, and there is some evidence from specific countries that the increased risk among foreign-born women is growing (see Bollini 2010). Studies in the US are quite limited and small in sample size, although there is some evidence from a national sample that mortality may differ between US-born and foreign-born women within racial/ethnic strata. Maternal mortality is a rare event in developed regions. Two factors might be contributing to differential mortality between immigrant and native-born women: poorer health status of immigrants from developed regions and poor quality of care due to cultural incompetence, interpretation issues etc. There is some evidence that suggests that poor quality of care might be driving greater risk of death in foreign-born women in the Netherlands and in other European countries (van Rossmalen 2009). More studies are needed to determine which factors play a role in higher risk of maternal death among immigrant women in the US.

f. *Explanations/hypotheses of immigrant maternal health*

Commented [JD34]: Given all of these issues, are these trends really interpretable?

Commented [LT35]: From LORNA: Characterize direction

Commented [CHC36]: Insurance status?

Commented [LT37]: From LORNA: Good section. You might be able to speculate a bit on which of these factors may be playing particularly prominent roles in the health topics you examined (GD, PPD, MM, etc)

Researchers have offered various explanations for the observed relationships between nativity status and various maternal health outcomes explored in this literature review. Clearly, a complex set of factors determines maternal health outcomes in immigrant women. However, several overarching themes emerged in this review. These themes, briefly summarized below, are biological factors, health care access and quality of care, culturally-determined attitudes and practices in pregnancy/postpartum, and migration-related experiences, including pre- and post-migration factors and the adjustment process associated with migration.

Biological factors: Some researchers have suggested that biological and genetic factors may account for differences in maternal health outcomes observed in immigrant and native-born women. For example, in regards to peripartum morbidities, some have noted that larger placentas and prolonged labor due to smaller pelvis size among Asian women might contribute to the higher prevalence of certain morbidities such as perineal laceration (Cripe 2011). Researchers have also suggested a role for genetic factors specifically in regards to GDM (Braun 2011, Keiffer 1999, Hedderson 2010, Chu 2009, Ibison 1996). For example, the "thrifty gene hypothesis" posits that diabetic genotypes confer a survival advantage in times of famine by maximizing excess food energy, but increase the risk of obesity and diabetes in times of abundance (Chu 2009). Furthermore, malnutrition during fetal development results in impaired *beta*-cell functioning (important for glucose metabolism). Consequently, immigrant women from countries where under-nutrition is prevalent might be pre-programmed to develop GDM when exposed to food abundance and physical inactivity (Hedderson 2010). While biological factors may play a role in increasing susceptibility to certain maternal conditions, it is important to consider the combined effects of biological factors and the environment. For example, having a certain genotype, such as the thrifty genotype, does not, in and of itself, predict or explain disease. Instead, it is the interplay between the genotype and the environment (as well as health behaviors such as dietary changes) that might lead to disease. In addition, underlying genetic/biological factors cannot explain differences in outcome by region of origin (since women with shared ancestry are presumed to share similar genetic profiles).

Commented [JD38]: Yes, but the thrifty gene and developmental plasticity hypothesis are somewhat distinct—genes are fixed, but the fetal programming could apply to any genotype.

Health care access and quality of care: Immigrant women face numerous barriers to accessing appropriate and culturally competent health services. These barriers are related to income, legal immigration status, language, culture, and lack of interpretation services (Bollini 2010, Forna 2003, Lansakara 2009, Lara-Cinisimo). Not only do these barriers potentially prevent or delay immigrant women from obtaining health care, but they also impact the quality of care they receive when accessing services (Kramer 1999). Some studies in this literature review have documented cases of substandard care, particularly in obstetric care during or immediately after delivery. Interestingly, the authors asserted that language and communication difficulties, social distance and isolation could all affect the substandard care observed among immigrant women (Schutte 2009, van Roosmalen 2002).

Culturally-determined attitudes and practices in pregnancy/postpartum: Cultural attitudes and practices have special importance during pregnancy and the postpartum period (Collins, Griorgardis 2007, Fung 2010). Researchers have suggested that the disruption of postpartum rituals (i.e. practices and beliefs surrounding childbirth and the postpartum period) and the related disruption of relationships with key family members who are important sources of support, guidance and knowledge in the postpartum period, during and after migration might put immigrant women in a particularly vulnerable state (Griorgardis 2007, Morrow). Immigrant women might also be expected to carry out traditional practices even in the absence of necessary social support from family and community members who share common beliefs and practices, which might create greater strain for new mothers (Griorgardis 2007). Furthermore, expectations around motherhood may differ between the native and host country; thus, immigrant women may experience unfamiliar and culturally incongruent standards and norms (Morrow).

Migration-related factors, including acculturative stress: Immigration and childbearing are interconnected processes. Immigrant women tend to have high rates of childbearing after immigration (Parrado 2011). Migration related factors include pre-migration factors, post-migration factors and the impact of economic, social, and cultural changes associated with immigration (Edberg 2010). Examples of pre-migration factors affecting the morbidities and mortality discussed in this review include trauma in the country of origin stemming from experiences of war and socio-political upheaval (Fung 2010), female-

Commented [LT39]: From LORNA: Need to integrate better. Are these pathways through which immigrant women receive substandard care?

Probably helpful to specify in this section that you are speaking about access to care during and after pregnancy in new country of origin, correct?

Commented [JD40]: Year?

genital cutting (Forna 2003, Bollini 2010), and the health status in the country of origin (e.g. malnutrition, diabetes) [Chu 2009]. Trauma from violence and social upheaval might predispose immigrant women to mental health issues (Fung 2010). One study found an association between pre-migration stress and depression occurring in the postpartum period but not the prenatal period (Zelkowitz 2008). In terms of female genital cutting, authors have suggested that higher rates of 4th-degreee perineal laceration and postpartum hemorrhage might occur among women with scarring and obstruction from female genital cutting (Forna 2003). Finally, endemic malnourishment or other poor nutrition patterns in sending countries might lead to higher prevalence of GDM among some immigrant groups (Braun 2011, Keiffer 1999).

Commented [LT41]: From LORNA: What about pre-pregnancy reproductive health in country of origin – STI, other infections, poor prior prenatal care or post natal care, HIV, family planning??

In addition, post-migration experiences often involve exposure to multiple stressors that might affect maternal health, such as language and cultural barriers, concerns over legal status, unemployment, homelessness, social isolation, lack of access to education and health care, separation from family and marital strain, and discrimination (Ceballos 2010, Fung 2010). Some immigrant women often experience overlapping life transitions migrating to a new and unfamiliar country and adjusting to life with a new infant. These dual transitions may produce high levels of stress, which is compounded when one does not speak English, has financial difficulties, faces discrimination and social isolation, or lacks familiarity with the host country's health care practices and delivery system (Foss 2004, Zelkowitz 2008, Fung 2010). Moreover, migration is associated with increases in physical inactivity, psychosocial stress, and changes in diet. These changes put additional stress on beta cells and might interact with metabolic susceptibility to diabetes (Hedderson 2010, Keiffer 1999).

The "healthy immigrant effect" and "acculturation paradox" are important explanations of immigrant health (Ray 2007, Edberg 2010, Kramer 1999, Ceballos 2010). The "healthy immigrant effect" refers to the generally better health status of immigrants who recently immigrate compared to US-born individuals. However, immigrants' health may deteriorate over time as immigrants adopt unhealthy behaviors and experience difficulties and barriers to health care; this deterioration in health is known as the "acculturation paradox" (Edberg 2010, Ceballos 2010). The "acculturation paradox" might account

for the relationship seen between time since immigration and maternal health outcomes, as observed by Ray and colleagues in their study of placental syndrome (Ray 2007). Another explanation of deteriorating health is selective return migration (i.e. healthier immigrants returning to their country of origin). As healthier immigrant return to their home country, the immigrant population remaining in the US has poorer health, which might account for the relationship between duration and poorer maternal outcomes. A recent simulation study found that acculturation had a greater effect on birth outcomes over longer durations, while the effect of selective return migration was greater at shorter duration (Ceballos 2011). It is not know whether these associations hold for maternal health outcomes.

ii. Limitations

Several notable limitations exist in this literature and cut across the maternal outcomes discussed in this review. One important limitation is the availability of data. Data on region or country of birth, entry date, age at migration, duration of residence, language proficiency, and other acculturation-related factors are not routinely collected. Consequently, their relationships (individually or collectively) to maternal health have been understudied (Cripe 2011). Due to considerable within-group variation, treating immigrant women as a homogeneous group is not warranted and can lead to the masking of important subgroup effects. Furthermore, acculturation factors might be important potential mediators/moderators of adverse outcomes, and multidimensional measures are needed to ensure adequate construct and content validity. Studies that have used one-dimensional measures are inclusive and hard to interpret. In addition, there has been little examination of pre-migration factors and their impact on maternal health. Only one study in this review examined pre-migration factors and its relationship to postpartum depressive symptomatology (Zelkowitz 2008). The pre-migration period might overlap with preconception/interconception periods: health status and social conditions during preconceptional and interconceptional periods have been recognized as having an equal role in determining maternal health outcomes. Lastly, there are three main limitations related to study design. First, bias from differential outcome ascertainment is a concern, particularly in the maternal mortality literature. For example, due to delays in the initiation of prenatal care, language barriers, and complex

Commented [JD42]: This isn't intuitive to me. In the broader Hispanic paradox literature, sick people go back to their home countries to die, but I realize this is a different age group.

Commented [LT43]: From LORNA: Clarify.....simulation study?

Commented [LT44]: From LORNA: Acknowledge potential lifecourse influences?

health systems, immigrant women's pregnancy status might not be known at the time of death. As a result, cause of death might be incorrectly classified as a non-maternal code (Bollini 2010). Second, an important methodological limitation is the predominance of non-random, convenience samples. With such designs, it is difficult to know the extent to which findings are representative for either native-born or immigrant women. Third, retrospective study designs are subject to recall bias. Recall in the postpartum period might be related to the birth experience: those with poorer birth experiences or outcomes might be more likely to report adverse exposure during pregnancy.

iii. Conclusions and future directions

In sum, this review has shown that across several conditions, some subgroups of immigrant women experience worse outcomes than their native-born counterparts. The evidence of poorer outcomes among immigrant women seems strongest for GDM; however, there is considerable variation by ethnicity and region of origin. On the other hand, the evidence from the US is not as consistent for postpartum depression. Studies on peripartum morbidity and maternal mortality among immigrants in the US are suggestive of worse outcomes, but inconclusive due to their small number and considerable methodological flaws. A consistent theme throughout the maternal health literature is heterogeneity in risk within immigrant women. This review clearly highlights the importance of differentiating immigrant women by country of birth, time since migration, and other factors that could potentially affect exposures and outcomes. Furthermore, the associations between nativity and various maternal health outcomes might not be static across time, as changes in immigration policy and the socio-political climate and population health in sending countries affect the demographic composition and health status of migrants entering the US. There is a need for richer and larger data sets that allow for stratification by important immigration-related factors.

A complex, constellation of contributing factors potentially affect maternal outcomes and differences in outcomes between immigrant and native-born women. Clearly, immigrants face multiple challenges during migration and in adjusting to life in a new country (Fung 2010). These myriad challenges might compromise their health specifically during the vulnerable period of pregnancy and

Commented [LT45]: From LORNA: I would consider re-ordering, so that the limitation specific to maternal mortality be last. Also, what about residual confounding?

Commented [LT46]: From LORNA: Nicely written first paragraph. Second paragraph is key to reminding reader why this is all is interesting and may need some re-writing. Consider possibly starting para #2 with the sharp contrast to birth outcome literature.

might interact with pre-existing biological susceptibility and psychosocial morbidities. Interestingly, the findings of this review are in sharp contrast to the better outcomes generally observed among infants born to immigrant mothers. However, it is important to note that the observed health advantage found in perinatal and other health outcomes among immigrants might be confounded by changes in immigration policy (e.g. stricter health requirements for entrants) and adverse non-genetic exposure (e.g. unhealthy American diet) [Ray 2007].

Commented [JD47]: Sorry to harp, but again doesn't seem like confounding to me but mechanism.

Lastly, a glaring gap in this literature is the absence of studies of maternal mortality among immigrant women from less developed regions conducted in the US. Since maternal mortality in developed nations is considered a barometer of the social and economic environment and the quality and responsiveness of the health care system, differential outcomes by nativity status are likely, as has been observed in several European studies. Research has documented well-known differences between immigrant and native-born women's access to health care and their social and economic resources and support, it is thus imperative to examine maternal mortality within immigrant groups and between immigrants and native-born residents in the US.

II. CHRONIC STRESS AND BIRTH OUTCOMES

i. Review of the literature

a. *Key concepts and definitions*

Commented [LT48]: From LORNA: Good.

Given the high prevalence of adverse birth outcomes, such as preterm birth (PTB), small for gestational (SGA) and low birth weight (LBW), and their potential impact on long-term health, contributing factors to these birth outcomes have received considerable attention. Psychosocial stress has been widely recognized as a potential risk factor for multiple adverse birth outcomes (Hobel 2008). Stress is a multidimensional construct that consists of three component parts: the stressor, appraisal of the stressor, and response to the stressor (Beydoun 2008, Harville 2009, Lobel 1994). In a general model outlining how stress leads to adverse health, stress is conceptualized as an imbalance between environmental demands (both acute and chronic) and individual resources (e.g. personality, financial conditions, social support). This imbalance leads to increased stress perception and maladaptive emotional response, such as anxiety and depression. In turn, maladaptive emotional response leads to behavior change and increased risk of adverse health events (Beydoun 2008, Lobel 1994). In this model, stress is viewed as a person-environment transaction (Harville 2009).

Initial studies of the impact of stress on birth outcomes, typically defined stress as stressful life events during pregnancy. However, there are a couple of disadvantages to this definition. The frequency of stressful life events in pregnancy is low and their effects cannot be easily disentangled from those of chronic stress (Hobel 2008, Chen 2011). Furthermore, chronic and daily stressors seem to be more predictive of poor health conditions than one-time, infrequent life events (Paarlberg 1995). For these reasons, in recent years, researchers have broadened their definitions of stress to include chronic stress. Chronic stress is measured by multiple exposures including anxiety and depression, household strain, daily hassles, pregnancy-related anxiety and intendedness, racism/discrimination, neighborhood context, and stress of acculturation (Chen 2011, Hobel 2008, Beydoun 2008). The proceeding literature review will focus on non-contextual stressors (e.g. daily hassles) as well as contextual stressors (e.g. racism).

b. *Theoretical models linking stress to poor birth outcomes*

Three models detailing the biological mechanisms by which stress affects birth outcomes predominate the literature: neuroendocrine response, immune suppression, and allostasis. One model describes neuroendocrine responses to stress as follows: external stressors trigger the release of corticotropin releasing hormone (CRH), frequently referred to as a mediator of stress response. CHR stimulates adreno-corticotropin hormone, which in turn stimulates cortisol production (Hobel 2008). Placental CHR gene expression is stimulated by maternal plasma cortisol and can regulate delivery late in pregnancy, while glucocorticoids seem to link prenatal stressors and birth weight and intrauterine growth (Bolten year?). In the second model, maternal stress may induce suppression of maternal immune function (Bolten). Impaired immunity may result in maternal infections, such as bacterial vaginosis, which can trigger early, spontaneous delivery (Beydoun 2008). The third, allostatic model posits that accumulation of stressors over the life course (i.e. lifelong chronic stress) impairs the body's physiological functioning. Allostatic load is assessed via biological markers of stressors and stress response over the life course. High allostatic load refers to a situation in which the body's response to stressors is no longer adaptive and negatively impacts somatic functioning over time. Normally, the body's release of cortisol shuts down the acute stress response; however, with chronic exposure, the stress response fails to shut down and blood cortisol levels are perpetually high. Chronic stressors, such as low socio-economic status, racism, and trauma, may all lead to high allostatic load and ultimately poor birth outcomes (Hobel 2008). Related to the allostatic load model, the weathering hypothesis posits that ongoing social and economic inequities (e.g. discrimination, residential segregation, life adversity) result in premature aging and deteriorating among Black women, leading to growing racial disparities in adulthood (Rich-Edwards 2005, Geronimus 1996). In this model, maternal age interacts with social and economic factors to produce poor perinatal outcomes amongst groups experiencing socio-economic inequities (Rich-Edwards 2005).

Commented [JD49]: Citations for allostatic load? McEwen should be here somewhere…

c. *The effects of chronic stress on preterm and low-weight birth*

Non-contextual chronic stress: Studies of non-contextual, chronic stress have employed a plethora of exposure measures? including household strain, perceived stress, lack of control in daily life, childhood

trauma, social support, and pregnancy anxiety. These studies are quite heterogeneous in terms of their conceptualization and operationalization of chronic stress, as well as in their sampling and analytic methods (see limitations section). Nevertheless, most of the studies show positive associations between measures of chronic stress and adverse birth outcomes; however, the effects of chronic stress are usually attenuated by adjustment for other pertinent factors (e.g. socio-demographic, obstetric).

Commented [LT50]: From LORNA: Partially? Fully?

Studies in the US using mostly low-income samples have found positive associations between chronic stress and adverse birth outcomes (Ghosh 2010, Bryant-Borders 2007). In a matched case-control study of live singleton births to women residing in Los Angeles, , high chronic stress was associated with a 46% increased odds of PTB (aOR=1.46 95% CI 1.11-1.92) in a multivariable analysis controlling for age, race/ethnicity, marital status, and paternal support. Although not the main chronic stress exposure, two measures of pregnancy-related anxiety, confidence in a normal birth and fear for the health of the baby, were also significantly associated with PTB in adjusted analyses (aOR=1.57, 95% CI 1.17-2.12 and aOR=1.67, 95% CI 1.30-2.14 respectively) [Ghosh 2010].

In the same study, Ghosh and colleagues found significant multiplicative interactions between nativity and chronic stress and between paternal support and chronic stress. Specifically, high levels of chronic stress were significantly associated with increased odds of PTB in US-born Latinas but a non-significant increased odds of PTB in immigrant Latinas (p=0.17 for the interaction term) [note: the authors did not present absolute values of PTB in US-born and foreign-born participants]. Similarly, among those reporting little to no support from the baby's father, high levels of chronic stress were associated with a significantly increased odds of PTB , while there was no significant increased risk of PTB associated with chronic stress among those with moderate to higher paternal support (p=0.14 for interaction term) [Ghosh 2010]. These findings suggest that there might be important subgroup differences in the relationship between chronic stress and adverse birth outcomes.

Commented [LT51]: From LORNA: Or residual unmeasured chronic stress in certain subgroups?

Another US study conducted with a longitudinal cohort of TANF participants in Illinois found positive associations with various chronic stressors and low-weight birth. Bryant-Borders and colleagues used a multi-dimensional measure of chronic stress, which they segmented into four components: 1)

external stressors: hardships in home environment, food insecurity, child with chronic illness, home crowding, unemployment, hardship obtaining medical care, stressful life events); 2) buffers of stress: social support, coping skills, community group involvement, church attendance; 3) enhancers of stress: depression, need for mental health treatment in past year, 4) perceived stress: economic hardship, self-rated health, neighborhood safety. In separate multivariable analyses adjusted for maternal age, food insecurity (OR=2.6, 95% CI 1.7-3.5), child with chronic illness (OR=3.1, 95% CI 2.3-4.0), unemployment (OR=3.7, 95% CI 2.7-4.7), and poor coping skills (OR=4.0, 95% CI 3.1-4.9) were all associated with LBW. These findings indicate that among a low-income sample of women, both chronic stressors and compromised coping skills (suggesting lack of stressor buffering) are associated with LBW (Bryant-Borders 2007).

Contextual chronic stress: More recently, examination of chronic stress has been extended to contextual factors, such as racism/discrimination and neighborhood safety and access to resources. Previous studies that have ignored context are limited because contextual factors may contribute to maternal adaptive responses to various stressors (Nkanash-Amankra). The few studies that have examined contextual, chronic stressors have found a *relatively* consistent pattern of positive associations with poor birth outcomes. In a seminal article on racial disparities in LBW, Geronimus used age as a proxy for chronic psychosocial stress (i.e. cumulative stress exposures over the life course) to explore the weathering hypothesis among Black and White Michigan women of reproductive age (15-34 years). Geronimus found that the size of excess LBW among Blacks compared to Whites was higher in the young and middle adulthood than it is in the teenage years (e.g. the LBW rate ratio of black/white women is 1.8 among teen and 2.9 among 30-34 year olds). Furthermore, the proportion of 'high-risk' pregnancies increased more steeply with age among black women than among white women. Regarding the second hypothesis, Geronimus found a more graded effect of age on birth weight among women of lower socio-economic status than higher socio-economic status (at the highest socio-economic status, there was no significant relationship between age and LBW). The findings suggests a differential relationship between age and birth weight among black and white women, largely due to differences in distributions of

Commented [LT52]: From LORNA: Unclear

preconceptional maternal health characteristics. At the same time, socio-economic disadvantage was strongly associated with the graded effect of age on birth weight among black women, indicating that economic difficulties related to social inequity may be related to adverse outcomes in this subgroup (Geronimus 1996). Together, the findings seem to suggest that there is a weathering effect, using advancing age as a proxy measure, on health among black women. However, similar studies have been conducted in New York and Chicago have found that the age-gradient in poor birth outcomes among Black women was related to differences in socio-economic risk factors (the Chicago study had found the strongest association) (Rich-Edwards 2010).

Commented [LT53]: From LORNA: Clarify better

In a more recent study, Parker-Dominguez and colleagues examined the roles of stress due to racism, general stress and pregnancy-related stress in racial disparities in birth weight among women with singleton pregnancies recruited from a large medical center in LA county. The authors used multiple measures of chronic stress, including racism, allowing for comparisons of the independent effects of various sub-components of chronic stress. Racism, the main exposure of interest, was measured as perceived personal and vicarious (i.e. through a close family member or friend) racism in childhood and adulthood. In a multivariable model controlling for medical risk, gestational age, recruitment site and parents' education level, perceived lifetime racism was marginally associated and childhood vicarious racism was strongly associated with birth weight. Neither general stress (measured as perceived stress and stressful life events during pregnancy), nor pregnancy-related stress (measures as anxiety about pregnancy and pregnancy intendedness) was independently associated with birth weight in this model. In multivariable models with race and racism product terms, none of the product terms (race x lifetime perceived racism, race x childhood vicarious perceived racism, and race x childhood direct perceived racism) were significant, when controlling for medical risk, gestational age, recruitment site and parents' education level (Parker-Dominguez 2003 2003). Interestingly, only childhood vicarious racism was independently associated with birth weight, underscoring the importance of considering the timing of exposure. Clearly, there may be sensitive periods in which the effect of racism might be more predictive of adverse health.

Chronic stress related to neighborhood context may also play an important role in adverse birth outcomes. Relatively few studies have focused on the neighborhood-related stressors (i.e. stressors that stem from the physical or social environment of a neighborhood). Neighborhood-related stress is commonly operationalized as group-level measures of socio-economic disadvantage, racial/ethnic composition and stratification, residential segregation, as well as disorder (e.g. crime), deterioration, and access to neighborhood resources (e.g. number of outdoor places for recreational activities) [Schempf 2009, Nkanash-Amankra 2010]. The few that have examined these relationships have found somewhat inconsistent results (Nkanash-Amankra 2010). For example, a multi-level study using South Carolina PRAMS and US Census data, examined whether neighborhood context (measured as % living in census tracts under the federal poverty line, racial composition, household crowding, and neighborhood education level for adults) modified the relationship between stressful life events and PTB and LBW. The authors found that neighborhood contextual factors were independently associated with PTB and LBW when controlling for maternal demographic characteristics; however, the significance of the effects of the neighborhood factors differed between the two outcomes. Neighborhood high poverty, predominantly African-American neighborhood, household crowding, and low neighborhood education level each were associated with LBW via mediation by the stressful life event domains, when controlling for maternal demographic covariates (age, income, race etc). Only predominantly African-American neighborhood and the lowest neighborhood education level were associated with PTB via stressors. For both LBW and PTB, the addition of stressful life event domains to models with maternal covariates strengthened the associations between the aforementioned neighborhood contextual factors and LBW/PTB. Lastly, neighborhood contextual factors modified the relationship between stressful life events and LBW/PTB: a significantly stronger association between maternal stress and adverse birth outcomes was observed among mothers living in less advantaged census tracts, pointing to a possible role through which social and other physical resources mitigate stressors within neighborhoods (Nkanash-Amankra 2010).

Another study conducted among a low-income sample of women delivering at one hospital in Baltimore, examined the relationship between neighborhood context (using a neighborhood risk index)

and birth weight and the potential mediating effects of psychosocial (social support, locus of control, chronic stress due to daily difficulties and demands during pregnancy), behavioral (substance use, timing of prenatal care) and biomedical (hypertension, infection, pre-pregnancy weight and weight gain) factors, when controlling for individual socio-demographic factors and residential mobility. The neighborhood risk index was developed through principal component analysis to identify distinct components of structural neighborhood disadvantage, and included racial and economic stratification, social disorder (violent crime rate per 1000 residents) and physical deterioration (% boarded up houses). In multilevel models, neighborhood risk was associated with LBW when controlling for individual socio-demographic factors (the base model): one SD increase in neighborhood risk was associated with 76-gram decrease in birth weight (p=0.01). When potential mediators were sequentially added to the base model, psychosocial factors reduced the effect of neighborhood risk by 12%, behavioral factors reduced the effect by another 30% (the association was no longer significant), and biomedical factors reduced the risk by another 10%. These findings might suggest that the neighborhood context is associated with birth weight, independent from the effects of individual socio-demographic factors, but that behavioral factors accounted for the largest proportion of observed neighborhood risk effect on birth weight. In contrast, psychosocial factors were not independently associated with neighborhood risk and their mediating effects on the neighborhood risk-birth weight relationship were relatively weak (Schempf 2009). This last finding could be due to imprecisely measured stress variables (Nkanash-Amankra 2010).

Commented [JD54]: Behavioral factors can also be influenced by psychosocial factors

In sum, both studies found independent effects when controlling for individual-level demographics; however, they were inconsistent on mediation by other types of stressors. One study identified acute stressors as potential mediators, and the other study found psychosocial stressors (e.g. social support, locus of control, daily hassles) to be only weakly mediating. The different stress definitions and measures (one study used acute stress measures and the other used chronic stress measures) could account for differences in mediation.

iii. Limitations

Commented [LT55]: From LORNA: Excellent section

Several limitations in the chronic stress and adverse birth outcomes literature exist. Chief among these limitations, due to its broad implications on comparability of studies, is heterogeneity in definitions and operationalization of chronic stress (Paarlberg 1995, Lobel 1994, Chen 2011, Hobel 2008). As one can glean from the review of the literature, numerous sub-components and different relationships between and among the sub-components of chronic stress are explored. While it is widely recognized and articulated that chronic stress is a multi-dimensional construct, in practice, most researchers either do not or are not able to examine multiple sub-components of the construct of stress. Specifically, few studies have utilized measures corresponding to the three main components of the stress model: stressors, appraisal, and response. Studies that employ single measures of specific sub-components of the stress model lack content validity. Within the literature, examination of external stressors seems be slightly more common than examination of perception/response to stressors (perhaps because these latter sub-components are not as well defined or easily measured). However, stressors cannot capture how individuals perceive or respond to stress (whether they use coping mechanisms, change behavior, experience depressed mood etc). In the general model of stress, appraisal and response are critical steps along the pathway to adverse health outcomes (see Appendix); they are intermediaries between the occurrence of external stressors and the ultimate change in health status or outcome. Another drawback of single measures is the inability to examine the relative contributions of specific stressors or sub-components of the stress model. Researchers also implicitly employ different definitions of chronicity. For some, chronic refers to the entire duration of pregnancy; for others, it refers to the life course from early childhood to adulthood.

Commented [LT56]: From LORNA: Which are most actionable?

The use of small and non-random samples is another limitation. Relatively few studies have used random or population based samples of mothers and infants; most use convenience sample drawn from highly selected populations from prenatal clinics and hospitals. In small samples, it is certainly harder to detect small associations. Residual confounding is a significant concern even when multivariable analysis and a sufficiently sized sample is used. Smoking, for example, is a strong risk factor for PTB, LBW, and SGA. Lack of adjustment for smoking could lead to spurious associations. On the other hand, some see

smoking and other health behaviors as mediators in the stress model; in this case, the extent to which smoking contributes to the association between stress and birth outcomes needs to be taken under consideration (Paarlberg 1995, Lobel 1994). Seldomly examined, weight gain and energy expenditure are two variables that could confound the relationship between stress and poor birth outcomes, particularly the relationship with LBW (Hobel 2008). Examination of the role of social support is also important in the study of effects of chronic stress because of the strong buffering effect of social network and type of support. Social support can reduce stress levels, facilitate the adoption of healthy behaviors, and provide materials and resources to the pregnant women (Hobel 2008). Social support may mediate or moderate the association between chronic stress and birth outcomes (depending on the underlying causal model).

Stress is certainly not a random exposure, as it is not evenly distributed within a population. Stressors, both chronic and acute, tend to concentrate in the most marginalized strata of the population (e.g. low socio-economic status and low social position). Subgroups within a population might have highly different probabilities of being exposed. Consequently, even when stressors are well measured, it is difficult to disentangle the effects of stress, including low-social support, from the effects of low social status and economic hardship. What types of study designs might help get around this?

Commented [JD57]: Yes-good.

Timing of exposure assessment is an important consideration in stress studies (Lobel 1994). Even though the studies reviewed here measured *chronic* stress, most assessed the exposure at one time point (i.e. cross-sectionally). Most did not employ repeated measures throughout pregnancy, and thus could not assess for changes in associations across time. Furthermore, one-time postpartum assessment can lead to recall bias. For example, women who have experienced an adverse birth outcome may be more likely to recall chronic stress and attribute it to the birth outcome (Lobel 1994). Differential recall can lead to differential misclassification of the exposure and consequently spurious positive associations between stress and poor birth outcomes (Lobel 1994).

iv. Conclusions and future directions

Ultimately, different methods and definitions/measures of stress make it difficult to digest these studies as one cohesive, comprehensive body of literature. Nevertheless, a pattern of positive associations

between chronic stress measures and poor birth outcomes is emerging. Both direct effects and effects through mediation by health-related behaviors such as smoking have been observed. The studies reviewed here had relatively consistent findings for non-contextual stress/stressors. Significant positive relationships between chronic stress and PTB/LBW were found for both general measures of chronic stress (i.e. perceived stress scores), as well as more specific dimensions for stress (e.g. food insecurity, unemployment). Studies that have employed multidimensional measures of chronic stress have the advantage of being able to disentangle the effects of various subcomponents of the stress construct. These studies have found that the strength of the association between stress and PTB/LBW differ among subcomponents. Most of the non-contextual stress studies used low-income samples. While restriction is one strategy for minimizing confounding by SES, it also limits generalizability to mixed income populations. Studies of contextual chronic stress suggest positive relationships between racism/discrimination and neighborhood context and poor birth outcomes, even after controlling for individual socio-demographic factors. The independence of the neighborhood contextual stressors was a major conclusion for both studies reviewed here. However, discussions of the independence of effects should be nuanced by the fact that neighborhood factors have to operate through individual level variables in order to impact individual-level health outcomes (Schempf 2009). Several questions remain. One question is whether the effects of non-contextual stress in the general population (with attention to potential confounding effects of SES, social support etc). Another question is whether the effects of chronic stress differ by outcome (PTB v. LBW), as has been shown in studies outside of the US. The effect of chronic stress differed between outcomes, in one study--the only study to examine both LBW and PTB simultaneously (Nkanash 2005, Paarlberg 1995).

Commented [JD58]: ?

Commented [JD59]: where?

Researchers must be explicit about their definitions and conceptualizations of chronic stress and mindful of the potential limits of the actual measures that are used to reflect the underlying construct. To achieve adequate construct and content validity, future studies should employ multiple measures of stress, preferably measures that tap into each of the sub-components of Lazarus' model of stressor, appraisal and response. Combining measures will allow for a more comprehensive and robust operationalization of the

construct of chronic stress (i.e. better construct validity) and ultimately for a more powerful test of the relationship between chronic stress and birth outcomes (Lobel 1994). Future studies should incorporate measures of social support and coping and test for potential mediation/effect modification by these variables.

There is also a need for more longitudinal studies and datasets (Paarlberg 1995) that can better establish temporal patterns in the relationships between stress exposures and outcomes. Furthermore, several studies have suggested that timing of stress exposures over the life course (Parker-Dominguez 2003) and across micro time scales (i.e. across pregnancy-see Pritchard 1999) are important. Longitudinal designs might allow for a more comprehensive examination of the effect of the timing of exposure. In addition to accumulation of stress, critical periods of stress should also be considered (e.g. stress in childhood might have a different impact on birth outcomes than stress during adulthood). A consideration of critical periods necessitates the collection of repeated measures of stress exposures over the life course.

Another key issue in the study of chronic stress and birth outcomes is the uneven distribution of the exposure in the population; propensity score methods might help to overcome some of issues with confounding and independence of stress exposure and other risk factors (e.g. socio-economic disadvantage). The propensity score is the probability of being exposed for a participant conditional on the participant's pre-exposure covariates. Propensity score methods correct imbalances between exposures groups that limit exchangeability and remove the association between exposure and confounder. Researchers can then make inferences about observed differences in outcomes, based on the assumption that differences are due to exposure alone (Oakes 2006). Since the covariates must predate the exposure, this method might be most applicable to studies of chronic stress during pregnancy.

I. GENERALIZED LINEAR MODEL FOR CATEGORICAL RESPONSE DATA

Commented [LT60]: From LORNA: Excellent rewrite! I have very few comments.

i. Description of method

a. *Overview*

Generalized linear models (GLMs) are a general class of models for observations that are independent. GLMs consist of three components: 1) the random component which identifies the response variable and defines its distribution (e.g. binomial); 2) the systematic component which identifies the explanatory variables (linear predictors); 3) the link function which specifies the function that links the random (the mean of the outcome's probability distribution) and systematic components (the linear predictors) (Preisser 1997, Agresti 2007). The selection of the type of GLM depends largely on the nature of the categorical response variable (e.g. ordered, binary, or an event count). The GLMs for categorical responses reviewed here include logistic regression, Poisson regression, and cumulative logit regression.

b. *Summary table of regression models for categorical response variables*

Model	Nature of outcome	Distribution	Link	Key Assumptions
Logistic	Log odds of a binary variable	Binomial	Logit	- Linear relationship between the log odds of the response and continuous explanatory variables (Fleiss 1986, Koch 1982) - Requires large sample for valid inferences
Poisson	Log mean of a count variable or log of the rate [mean/index of size (e.g. time, space)]	Poisson	Log	- The mean equals the variance - Requires large sample for valid inferences
Cumulative logit	Log odds of being at or below a certain category of the response variable for two different levels of the explanatory variable (when the explanatory variable is binary) (Hastie 1989).	Multinomial	Cumulative logit	- The same proportionality constant applies to each cumulative probability; log odds does not depend on response category (Agresti 2007, HOSMER 2000) - Requires large sample for valid inferences

c. *Testing the model assumptions*

Commented [LT61]: Do you want to comment on the large sample requirement here?

The models described above have several important assumptions that should be tested before or during model building. In general, if the assumptions are violated, estimates and standard errors might not be valid. In logistic regression, a key assumption is a linear relationship between the log odds of the response and continuous explanatory variables (Fleiss 1996, Koch 1982). This relationship can be examined visually by graphing the exposure and outcome (e.g. a scatter plot of the exposure on the x-axis and the outcome on the y-axis or a lowess plot of the smoothed logits). If there is a non-linear relationship between the exposure and outcome, then the explanatory variable should be transformed. For example,

say the exposure variable, age, is not linearly associated with GDM (i.e. the GDM risk is low-moderate at young age, decreases slightly in the early 20s, increases slowly in late 20s-early 30s and then increases more sharply in the mid-30s and beyond), age should be transformed. Common transformations are dichotomous (e.g. median split), polytomous (e.g. 5-year age groups), and quadratic forms (e.g. including age-squared). The AIC values corresponding to the models with each form of the exposure variable can be compared (with the lowest AIC value supporting the best fit for the model to the data). Alternatively, one could re-plot the exposure and outcome and examine the shape of the plot to check for normality.

A key assumption of the Poisson regression model is equality between the mean and the variance. However, frequently data vary more than if the Poisson distribution were truly applicable. Data that have larger variability than would be expected in a true Poisson distribution are overdispersed. In the presence of overdispersion, the standard errors for the parameter estimates are underestimated and the confidence intervals are overly narrow. Heterogeneity among observations is a common cause of overdispersion. Negative binomial regression can be applied in a situation in which the variance is greater than the mean. This model has an extra parameter for overdispersion and thus allows the variance to exceed the mean. (Agresti 2007). To test for overdispersion, one should calculate and compare the sample mean and variance at each level of the exposure variable (if categorical) [Agresti 2007]. Alternatively, one could apply a likelihood ratio test to a Poisson model and a negative binomial model, as follows: -2LL(poisson) -2LL (negative binomial), where LL=log likelihood. If the likelihood ratio test statistic is significant, then the null hypothesis (i.e. the mean=variance) can be rejected; the variance does exceed the mean and the negative binomial model should be used (Asmail 2007).

ii. Model building

A multiple regression model allows for the examination of the relationship between a response variable and more than one explanatory variable. In such a model, the parameter beta refers to the effect of the main explanatory variable on the log odds of the outcome occurring, holding constant the other explanatory variables in the model (Agresti 2007). Model building is a process that involves the selection

of covariates and assessment of the adequacy of the multivariable model in regards to its individual variables and its overall fit (Hosmer 2000).

There are two main issues in variable selection: how many covariates and which covariates to include in the model. There is a limit to the number of explanatory variables to include in any model. When data are unbalanced on the outcome (i.e. when there are very few observations with disease or with no disease), the number of explanatory variables that the model can estimate accurately is reduced. Consequently, the estimates might be biased and the standard errors poor (i.e. sparse data bias). As a general rule, there should be 10 observations for every covariate in the model (Agresti 2007).

Determining which variables to include in a model is central to model building. Variable selection should be guided by theory regarding the underlying causal model (shaped by the existing literature) as well as by statistical assessment. Therefore, one might include covariates that have been identified in the literature as potential risk factors for the outcome and believed to be associated with the exposure regardless of their statistical significance. This approach provides a more complete control of confounding compared to selecting based on significance alone (Hosmer 2000). Statistical assessment of the covariates should include bivariable analyses, in which the relationships between the covariate and exposure and the covariate and outcome are determined. Covariates that have a statistically significant relationship with the exposure in the source population and with the outcome among the unexposed, but which are not thought to be in the causal pathway nor a common effect of the exposure and the outcome, should be included in the model (this assessment approach adheres to Rothman definition of a confounder [Rothman 2008]). After variables have been selected and the multivariable model fitted, each covariate should be examined for its significance (i.e. confidence intervals and p-value for the Wald test) and the change in the estimated coefficients of the main exposure of interest and the covariate from the model with only that covariate to the multivariable model (i.e. comparing coefficients in the crude and multivariable models).

As an example, in a study of nativity and postpartum depression, bivariable analyses are performed as described above with all potential confounders (including age, socio-economic status,

race/ethnicity, parity, marital status, labor complications). Covariates for the multivariable model are selected that meet the confounder criteria described above, as well as any covariates known from the literature to be associated with postpartum depression. In this example, the bivariable analyses showed that age, socio-economic status, race/ethnicity and labor complications were significantly associated with both nativity status and postpartum depression at alpha-level of 0.05-these variables are selected for the multivariable model. In addition, marital status is selected based on subject knowledge (and to improve comparability with previous studies), even though it had a non-significant association with postpartum depression in the sample (Simons, unpublished data). Once the preliminary model has been fitted, one would examine the covariates more closely; covariates could be removed from the multivariable model if they are non-significant and/or if there is no appreciable change in the estimates from the crude to adjusted model (Hosmer 2000).

Commented [LT62]: From LORNA: Are you referring to the influence of a covariate on thwe exposure-outcome association here in particular?

Commented [CHC63]: Not sure I agree here, you might still include them in your model, depends on the context, also don't forget that you are looking to see if the covariates are highly correlated, as they may be measuring the same underlying construct, in which case you have to choose which measure you think is the better one to keep in your model. – Oops – I say this is in the next paragraph

An important issue that arises in model building is multicollinearity, which results when two or more explanatory variables that are correlated with each other are entered into the model. Multicollinearity can result in null associations between the explanatory variables and outcome because of the overlap with other explanatory variables in the model. It will also inflate the standard errors of parameter estimates (Agresti 2007); the confidence intervals will be wider and type II errors may result. To address multicollinearity, one should first confirm that there are no obvious errors (e.g. incorrect dummy coding). If the covariates are thought to tap into one underlying construct, then one might create a sum or scale from the covariates. Another option is to drop variables; one covariate might be chosen to represent the construct (Schroeder 1990). An example of a set of multicollinear variables is maternal education, paternal education, and household income. These variables are likely to be highly correlated with one another and reflect the larger construct of socio-economic status or social position. However, if there is evidence of multicollinearity (e.g. inflated standard errors, high correlation among the variables), one might choose one to represent the underlying construct of socio-economic status. Alternatively, one could create an index as Huang and colleagues did in their study of depressive symptomatology in US-born and immigrant women. Their index consisted of the three components: paternal

education/occupation, maternal education/occupation, and household income. The index was a 5-category ordinal variable (categories represented quintiles of the SES index) [Huang 2007].

Similarly, interaction terms add complexity to the model and can reduce precision and accuracy in the parameter and confidence interval estimates. In typical epidemiological studies, the power to detect interaction effects will be an order of magnitude less than the power to detect main effects. Consequently, there is more variance in interaction estimates than variance in estimates of main-effects alone. Larger study samples are necessary to study interaction effects (Greenland 1993). Greenlander has shown that failure to reject additive or multiplicative models (i.e. erroneously concluding that there is no additive or multiplicative interaction) is common in studies with small to moderate sized samples (Greenland 1983). In these cases, spare-data or exact methods, such as conditional maximum likelihood, should be used (Rothman 2008).

iii. Application to topical areas

As noted by Preisser and Koch, public health research is often concerned with the relationships between a categorical response and one or more explanatory variables. In a multi-causation framework, the importance of modeling that can accommodate multiple explanatory variables is apparent. Clearly, the outcomes examined in the previous topical sections-postpartum depression, gestational diabetes, peripartum maternal morbidity, maternal mortality, and key birth outcomes (e.g. preterm birth)-are thought to arise from a complex and dynamic constellation of potential causes. Not unexpectedly, much of research in these areas utilizes multiple-regression modeling to elucidate the multiple relationships between and among various risk factors and the periconceptual outcomes of interest. Second, most research studies in maternal and child health use observational designs. Observational studies are common in maternal and child health due to the logistical and ethical concerns surrounding randomization of exposures in pregnancy. Adjustment for inherent differences in comparison groups is especially important in observational studies that lack randomization (Koch 1982). Adjustment for confounding is a necessary component of maternal health research because of the strong effects of certain immutable maternal characteristics, such as parity and age at first birth, on maternal and infant health outcomes.

These maternal characteristics are usually not the main explanatory variables of interest and they introduce non-equivalence in comparison groups.

Commented [CHC64]: Nice work, Hannah, this section is much clearer now.

IV. ASSESSMENT OF INTERACTION/EFFECT MEASURE? MODIFICATION

Commented [LT65]: From LORNA: Very nice.

i. Definition of interaction/effect modification in epidemiology

Commented [LT66]: From LORNA: You might want to clarify to the reader somewhere why you are invoking both terms

Epidemiologists use the term effect modification to indicate a situation in which the association between an exposure and an outcome varies across different strata of a third exposure (VanderWeele and Robins 2007). In other words, exposures interact with one another when one modifies the effect the other has on the occurrence of disease (Thompson 1991). A key concept in interaction/effect modification is how the two exposures interact with one another. Qualitative effect measure modification refers to average causal effects in the strata of the third variable that are of opposite direction (e.g. in Z=1, the risk ratio is > 1.0; in Z=2, the risk ratio is < 1.0). When there is qualitative effect modification, multiplicative effect modification implies additive effect modification and vice versa. However, when there is quantitative effect modification (i.e. the average causal effects in both/each strata of the third variable are in the same direction), there can be effect modification on one scale but not the other. This phenomenon is called scale dependence; some authors prefer to use effect measure modification to highlight the dependence on the effect measure used (Hernan 2011, Rothman 2008).

Commented [CHC67]: In general, I like the term 'effect measure modification' over 'effect modification' as it suggests that it is related to the 'measure' itself which we know to be true – i.e. whether we are assessing on the multiplicative or additive scale

Commented [CHC68]: Ok – I see you put it here☺

There are two main concepts of interaction in epidemiology: statistical interaction and biologic interaction. Statistical interaction typically refers to the inclusion of a product term (main exposure x third variable) in a statistical regression model. Common criticisms of statistical interaction are that it is disconnected from the underlying causal models on the biological level and that it is completely dependent of the type of statistical model that one uses (i.e. a log-linear model could show no evidence of interaction, whereas the equivalent linear model could show evidence of interaction) [Greenland 1993]. Biologic interaction takes into account underlying causal effects (in contrast to statistical interaction which refers to association whether causal or not [Rothman 2008]). There are two related definitions of biologic (causal) interaction based on the sufficient component cause model and the counterfactual model. Biologic interaction within the sufficient cause framework refers to two component causes co-existing within a sufficient cause; the causes act together in the same causal mechanism and there is synergism between the two (VanderWeele 2007). Utilizing the counter-factual framework, there is interaction

between two treatments (or exposures in absence of randomization), A and E, if the causal effect of A on the outcome, Y, after a joint intervention that sets E to 1 is different from the causal effect of A on Y after a joint intervention that sets E to 0 (Hernan 2011).

ii. Assessment and measurement of interaction

Several methods for assessing interaction exist. Stratification is the natural, first step to identify interaction/effect measure modification. One examines the magnitude and direction of the association between the exposure and outcome in each level of the potential effect modifier (before adjusting for any potential confounders) (Hernan 2011). In multivariable analysis, the test for product term (main exposure x third variable) is a common method for assessing statistical interaction. The Wald-test tests whether the beta coefficient of the product term is statistically different from zero (if so, then there is evidence of interaction on either the multiplicative or additive scale depending on the type of regression model used). The likelihood ratio test assesses whether the fit of the model with the product term is significantly better than fit of the main effects model without the product term (Knol 2009).

In addition, several measures of additive risk within multiplicative models, such as logistic or Poisson, have been proposed: the relative excess risk due to interaction (RERI), attributable proportion due to interaction (AP), and the synergy index (SI). The RERI is calculated as the difference between the expected effects based on the addition of the individuals effects of the two exposures of interest and the observed effect in the joint exposure category (deJager 2011). If the effects of the exposures are monotonic (i.e. the exposures never prevent disease), a RERI >0 implies sufficient-cause interaction. If monotonicity cannot be assumed, a RERI >1 implies sufficient-cause interaction (VanderWeele 2007). Interpreted as the proportion of events that is due to interaction, the AP is calculated as RERI divided by risk ratio in the joint effect category. The SI is interpreted as the excess risk from exposure to both exposures when interaction is present relative to the risk from exposure when interaction is not present (deJager 2011). It is important that authors clearly indicate the assessment of additive and/or multiplicative interaction and the underlying scale of the model (e.g. log-linear vs. linear model).

iii. Additive vs. multiplicative interaction

Interaction can be assessed on an additive or multiplicative scale. For example, when the amount that the main exposure, X, multiplies the risk is less in one stratum of a third variable, Z, than in another, then there is said to be effect modification on the risk ratio scale (i.e. multiplicative scale). If the risk differences for the main exposure change across levels of a third variable, Z, then there is said to be effect modification on the risk difference scale (i.e. the additive scale); the combined effect of the main exposure, X, and the third variable, Z, on risk is greater/less than the risk computed by simply adding the separate risk differences for X and Z alone (Rothman 2008). Other measures of additive and multiplicative interaction utilize the risk ratio as follows: in an additive model, the amount of change in the main exposure, X, from x=1 to x=2, is measured by the amount that the change *adds* to the RR; in a multiplicative model, the amount of change in the main exposure, X, from x=1 to x=2, is measured by the amount that the change *multiplies* the RR (Greenland 1983).

Many believe that the additive model is of greater public health importance because of its ability to identify subgroups that would most benefit from intervention (Thompson 1991, Greenland 2007). Departures from additivity (i.e. non-additivity of the risk differences) indicate the group in which the greatest *absolute* risk reduction would occur, which may or may not be the group with the highest risk group (Greenland 2009). Similarly, many suggest that additive interaction is most aligned with biologic interaction. Non-additivity of risk differences implies the presence of interaction types-where we cannot say what the effect of one exposure would be without knowing the value of the other exposure-or causal interdependence (Rothman 2008, VanderWeele and Robins 2007).

iv. Recommendations and rationale for testing interaction

The assessment of interaction in epidemiology has stemmed significant debate regarding its appropriate application and reporting in research studies and the non-correspondence between concepts of statistical and biologic interaction. Nevertheless, it is important to test for statistical interaction because of its enhanced ability to detect effects and prediction of disease based on individuals' risk profiles, as well as its practical implications for targeting interventions (Thompson 1991). Sound techniques should be applied when testing for interaction. The following recommendations for detecting 2-way interaction are

Commented [LT69]: From LORNA: spawned?

presented: 1) stratification by the potential effect modifier; 2) building and comparison of a main effects model and a model with relevant interactions terms; 3) calculation of an additional measure of interaction such as the RERI with 95% CIs to test for additivity using effect measures from multiplicative models (e.g. logistic regression). Before beginning an assessment of interaction, it is important to have an a priori hypothesis about the underlying causal mechanisms involved and the expected direction of the difference in associations.

Commented [CHC70]: Important to note here, that this would be in the model already adjusting for confounding, and that you need to include interaction terms between the effect modifier and all potential confounders to also test whether confounding works the same way within each strata (those that are not significant can be dropped from your model – meaning confounding worked the same way across strata).

Stratification of the bivariable association allows for a brief examination of crude associations in levels of the potential effect modifier. Adjusted stratum-specific estimates should be compared to one another, with attention to both their magnitude and direction. Though stratification is an important first step, formal tests for interaction-the most appropriate statistical test for heterogeneity between or among subgroups-are necessary. The main effects model should be built including all relevant covariate including the potential effect modifier. A second interaction model should then be built with all relevant covariates and an interaction term between the exposure of interest and the effect modifier (i.e. the Wald-test for product term). The significance of the p-value should be assessed, using a p-value of <0.15 to indicate significant *multiplicative* interaction (i.e. deviations from multiplicativity). The likelihood ratio test may be used to compare the fit of the main effects and interaction models (i.e. to test the difference in log likelihood between the two models on their chi-square distributions). A significant p-value (< 0.05) for the likelihood ratio test would indicate that the interaction term is needed in the model. If interaction between the exposure and effect modifier is confirmed, then the results should be presented with a common reference group-the reference group being those not exposure to either factor (Kaufman 2009).

Commented [CHC71]: Here it's important to add that step of testing for interaction between your confounders and your effect modifier.

Lastly, *additive* interaction should also be tested because of its adherence to theories of causation and ability to identify subpopulations who would most benefit from intervention. A few additive tests for use in models with underlying multiplicative scales have been suggested-the most common being RERI and SI. The RERI has a major drawback when used in multiplicative models, such as logistic regression models: its calculation is only exact and valid for models that do not include other variables over which the RERI might vary (Knol 2009, VanderWeele 2009). Anticipating that my future analyses will include

Commented [CHC72]: Exactly meaning only works when the confounders work in the same way across strata

adjustment for multiple confounders, SI for additivity is the best choice as it is more resistant to variation over confounders (Knol 2009, deJager 2011). A SI of 1.0 would indicate no departures from additivity (in practice, a 95% CI would be calculated and if 1.0 were within the interval, the null hypothesis of non-additivity would be accepted) [deJager 2011].

v. Application to topical areas

Assessment of interaction is an important component of a comprehensive analysis of both nativity and maternal health outcomes and chronic stress and birth outcomes. As Geronimus points out, risk factors may not operate in the same way across sub-populations (Geronimus 1996). In terms of maternal health outcomes in immigrant women, subgroup differences are expected due to the considerable heterogeneity among immigrant women. For example, in Chu and colleagues' study of gestational diabetes among Asian Pacific Islanders, country of origin modified the relationship between nativity and diabetes; in women of Japanese/Korean ancestry, US-born status conferred an increased risk of gestational diabetes, while in every other Asian nationality examined, US-born status conferred a decreased risk of gestational diabetes (Chu 2009). In addition to country of origin, time since migration is another important potential effect modifier of the relationship between nativity and birth outcomes. Researchers have suggested that not accounting for time since migration can mask disparities in outcomes between immigrant and native-born women (the average effect) and between subgroups of immigrants by time since immigration (Uroquia 2010). Within the maternal stress and birth outcomes literature, researchers have suggested that timing and chronicity of stress impacts the magnitude of the association between stress and birth outcomes. For example, stressors that occur before or early in pregnancy might have stronger effects on birth outcomes then stressors that arise later in pregnancy (Cammock 2011). Another potential interaction is between stress and social support, with social support modifying the association between stress and birth outcomes (Ghosh 2010). It is important that both factors' independent and joint effects are examined in studies of birth outcomes. Lastly, as noted previously, a main strength in interaction assessment is its application to targeting of interventions. However, few studies in the topical areas have assessed additive interaction.

Introduction

How individuals think about and plan for having children is of interest to researchers from diverse disciplines. For example, intentions about the timing of children and desired number of children may have important implications for population projections (Demography), for population health (Public Health), labor force participation (Economics), and use of social welfare (Public Policy). In Public Health, these intentions, particularly around the timing of children, have important health implications both for individuals and for the population as a whole. As women delay their first birth they may experience difficulty achieving pregnancy and carrying to term, they may have more complicated pregnancies due to "advanced maternal age" which may require more intensive and expensive medical interventions, and they may turn to assistance from infertility treatments in getting pregnant such as in-vitro fertilization, which may have health effects for both the mother and child. This paper will examine the interplay between fertility intentions and age, with a particular eye towards women of "advanced maternal age" and whether and how fertility intentions change as women age and reproductive technologies become more common and sophisticated. This paper will also examine fertility intentions at both the population and individual levels.

Understanding Fertility Intentions

Fertility intentions[a] are future plans regarding having or adopting children. These are frequently operationalized as the desire to have children and intended number of children (family size) and are commonly examined in social science research. They are less frequently operationalized to look at timing of pregnancy, such as ideal age to have a child.[1] Fertility intentions may be hypothetical and are distinctly different from pregnancy intentions, which focus on outcomes of pregnancies after the pregnancy has occurred.[2]

Theory Behind Fertility Intentions

Theory of Reasoned Action

Research on the meaning and implications of fertility intentions draws on the Theory of Reasoned Action[3,4] (See Figure 1) and the Theory of Planned Behavior (see Figure 2). In both of these models, individual intentions are central to performing a behavior. In the Theory of

[a]Although here I use the term intentions when referring to whether and how many children a respondent wants, Hagewen and Morgan note that respondents in nationally representative surveys do not typically differentiate between intended and expected when asked about their fertility intentions.[10]

Reasoned Action (Figure 1) intentions are a precursor to performing a behavior and are influenced by attitudes about that behavior and subjective norms surrounding the behavior. In this model behaviors also "feedback" into attitudes and norms, creating a cycle in which these intentions and behaviors exist. According to Ajzen and Fishbein (1975) intentions involve four elements: the behavior, the target at which the behavior is directed, the situation in which the behavior is to be performed, and the time at which the behavior is to be performed.[3] In early work on the Theory of Reasoned Action[5] (and noted in Rindfuss et al 1988[6]) they note that attitudes and behaviors are strongly related when the following criteria are met: the relative action is unambiguous, and the target, context, and time of the action are specified. [5,6]

Theory of Planned Behavior

The Theory of Reasoned Action was later refined in the development of the Theory of Planned Behavior (Figure 2). In discussion of the Theory of Planned Behavior, Ajzen states that intentions are "indicators of how hard people are willing to try, of how much of an effort they are planning to exert, in order to perform the behavior".[7] Intentions are positively related to the likelihood of performing that behavior, and stronger intentions are associated with increased likelihood.[7] However, as Ajzen and Fishbein[3,4] and Ajzen[7] note, intentions lead to behavior only when the behavior is able to be controlled by the individual and the required opportunities and resources are available for the individual to succeed.[3,4,7] In other words, actual behavior is a function of intentions and what Fishbein and Ajzen call "perceived behavioral control," or how much internal control an individual feels she/he has over the behavior.[3,4] In the Theory of Planned Behavior subjective norms also exert an influence on behavior. Ajzen (1991) defines subjective norms as "perceived social pressure to perform or not to perform the behavior" and suggests that a favorable attitude toward the behavior, favorable norms with respect to the behavior, and a high level of perceived behavioral control lead to a greater likelihood that the individual will perform the behavior. [7]

Theory of Planned Behavior Applied to Fertility Intentions

Many of the components in the Theory of Planned Behavior map nicely with factors examined in fertility intentions research. For example, subjective norms around child bearing, particularly the timing of first child and family size, are an important consideration in thinking about fertility intentions, and behavior and norms around child bearing are frequently studied in tandem with intentions. Ajzen and Klobas (2013) have applied the Theory of Planned Behavior to fertility

intentions (Figure 3) to aid in our understanding of how intentions lead to fertility outcomes.[8] In this model, attitudes towards having children, subjective norms around having children, and perceived control operate synergistically to create individual intentions. These intentions only then lead to the intended behavior if there is actual control over the behavior. This theory also makes note of a significant number of background factors that contribute to attitudes, norms, and perceived control and exert influence on intentions.[9] As Mencarini and colleagues (2015) note this is a multi-factor paradigm where "fertility outcomes...are seen as depending directly on fertility intentions, which in turn depend directly on attitudes (related to the perceived benefits and/or costs of reproduction), subjective norms (related to the social approval of behavior from relevant others), and perceived behavioral control.[9] Possible constraints can further intervene from the time the fertility intention was formed and the subsequent behavior (such as a disruption of the couple's relationship or changes in individuals' health conditions or job status).[9]

Attitudes

Attitudes about having a child are based on behavior beliefs, or the subjective probability that a behavior will produce a particular outcome,[8] about the outcome of having a child. In fertility intentions research, this includes questions about the perceived benefits and detriments for having a child. As Azjen and Klobas (2013) note, these can include items like measuring agreement with statements such as "I believe having a child is a necessary part of being an adult" or "I believe a child would restrict my freedom to do the things I enjoy".[8] As noted in discussion of the current state of research on fertility intentions, there is relatively less focus on attitudinal items as compared to behaviors.

Subjective Norms

Norms concerning fertility intentions, according to Ajzen and Klobas (2013) pertain to injunctive norms and descriptive norms. Injunctive norms come from being told or inferring what others (such as partners, parents, or friends) want us to do.[8] Descriptive norms are more easily measured and these include items like the number of siblings in the respondent's family. These norms can be subtly different from beliefs; Ajzen and Klobas give the example that the behavioral belief that "my partner would be pleased if I had a child" is different from the normative belief that "my partner wants me to have a child".[8] In the latter, pressure is exerted from outside the individual and may influence his/her intention around having children. There is a fair amount of research on fertility intentions that has addressed the effects of norms and ideals on intentions.[10] Researchers acknowledge that fertility intentions may be highly

influenced by fertility ideals, which reflect the normative context around which fertility decisions are made[10] and that these social norms produce a strong push/pull on individuals as they make these choices.[10,11]

Perceived Control

Perceived control in terms of fertility intentions focuses on the "resources and obstacles that can facilitate or interfere with having a child".[8] In fertility intentions research, the focus is on factors that contribute to the decision to have a child, such as the availability of childcare and housing, which are items found in the Generations and Gender Survey across Europe. These factors are also explored in qualitative work on childbearing such as work by Edin and Kefalas (2005) and Hewlett (2003).[12,13]

Fertility Intentions and Links to Behavior

In addition to using the Theory of Planned Behavior to understand how intentions relate to behaviors, researchers have empirically examined the connection thanks to longitudinal studies of individuals throughout their reproductive years. Westoff and Ryder (1977) examined what they call the 'predictive validity of reproductive intentions'. Using data on more than 2,300 white, married women in the U.S. from the National Fertility Study conducted in 1970 and 1975, they found that reproductive intentions tend to overestimate the number of future births (40.5 percent had intended more in 1970 and by 1975 only 34.0 percent had an additional birth).[14] They also found that intentions were more likely revised downward than revised upward, a finding later confirmed by Morgan in 1982.[15] An important note here is that Westoff and Ryder view intentions as a tool useful for population projections, not necessarily as an interesting phenomenon themselves.[14] They conclude that "reproductive intentions are tailored to conditions at time of interview and, thus, share the same possibilities of misinterpretation as other period indices. In brief, we are skeptical of the usefulness of reproductive intentions, at least for short-range population projection purposes."[14]

Following Westoff and Ryder's work, Rindfuss and colleagues (1988) examined ways in which fertility intentions are related to behavior.[6] In this work they looked at the stability of childless intentions and unanticipated delay in having children. Using data from the National Longitudinal Study of the High School Class of 1972, the authors were able to follow respondents from 1973 to 1979 to examine the stability of childless intentions and found that they were very unstable at the individual level. They postulate that this is partly because the question about ever having a

child is not time bound, but forces young adults to think decades into the future and they are unlikely to be able to say with any real certainty. Using the same data, they also examined the consistency between intentions and behavior, particularly focusing on unanticipated delay, or the group of respondents who intended to have a child in 1976 but did not yet have one by 1979. They found that this delay was related to lower parental SES (females) and lower employment levels (males) but no real pattern emerged. They propose that the delay is not consequential for a group this young (age 22-25 at the time of the last round of data) as it is still socially acceptable to delay parenthood.[6]

Schoen and colleagues (1999) used data from the National Survey of Families and Households to examine the relationship between fertility intentions and behavior, using a sample of over 2,800 non-Hispanic whites interviewed in 1987-1988 and again from 1992 to 1994. This sample included non-sterilized adults ages 16-39. The authors found that individual intentions regarding future fertility and their certainty are an important predictor of future fertility behavior.[16] They examined the relationship between intentions, behavior, and time and found that the effect of intentions on behavior is 'remarkably persistent' though the effect is less consistent over time.[16] Schoen and colleagues compare their findings to Rindfuss and colleagues noting that they found that *certainty* of intentions was more important than *timing* expectations. Schoen and colleagues found that expectations about the timing of fertility were significantly associated with behavior only in the short term. Among other variables and their relationship to fertility behavior, marital status was the most important. Importantly, the authors also discuss where fertility intentions operate in relation to other variables, noting that intentions "do not mediate the effects of other variables" but that they are important in their own right. The authors conclude that "fertility is a purposive behavior that is based on intentions, integrated into the life course, and modified when unexpected developments occur".[16]

Others have found that fertility intentions such as intended family size are a proximate determinant of actual fertility behavior[10] but that behavior is influenced by a number of other factors. Using data from the 1979 National Longitudinal Survey of Youth, Morgan and Rackin (2010) examined the correspondence between intended family size as reported in earlier surveys and observed fertility among men and women in the 1957-1964 birth cohort.[11] The authors found that discrepancies between fertility intentions and actual fertility were common. In particular, having a child before age 24 (women) and 29 (men) led to individuals overachieving

their intended parity while having children later more often led to underachieving, even when controlling for potential confounders.[11] This is an important finding in relation to trends in first birth in the U.S. If women delay their first births they may underachieve their desired parity due to 'aging out' of their reproductive years.[17,18]

Monnier, using data from the National Institute for Demographic Studies (France) examined intentions and behavior for 2,000 women over the period 1974-1979 (1974, 1976, 1979).[17] He found that consistency between intention (as measured in 1974) and behavior (as measured in 1979) was about 80% for women with one child who intended to have a second and 76% for women who had two or more children and did not want to have an additional child. He also found that for women with one child who reported that they did not want to have a second, consistency was lower (62%) and notes that perhaps women felt pressured to keep with social norms of having a two-child family. Another finding from this work is that the consistency between intention and behavior was much stronger for women whose intentions remained the same in 1974 and 1976, suggesting that the strength and/or certainty of an intention plays a role (similar to the findings of Schoen et al.[16]), and the longer an intention has been held the more "robust". Related to increasing age and intentions, Monnier notes:

> "...it should be noted that time has opposite effects on intentions and behaviour of women who wished to have a child. With the passing of the years, their intentions tend to change, but, at the same time, the degree of consistency between intention and behaviour becomes stronger. This contradiction is a reflection of the underlying selection procedure: women who, in 1976 or 1979, had still not produced the child they desired in 1974 undoubtedly experienced greater difficulty in conceiving or, more generally, were subject to conditions which were less favourable to a birth. Revising their original intentions down-wards can, therefore, be interpreted as an acknowledgement of their difficulty or even inability to conceive.[17]

Monnier's mention of intentions being revised downward with age is confirmed by findings from Morgan[15] which will be discussed in the Literature Review of Fertility Intentions and Age section.

Fertility Intentions, Age, and Health

In Ajzen and Klobas' model,[8] they note two important components in thinking about fertility intentions as they relate to advanced maternal age and the use of assisted reproductive technologies: perceived control over having a child and beliefs about enabling or interfering factors. The increase in the availability and sophistication of fertility treatments coupled with shifting norms in parts of U.S. society about parental age and delaying first birth have led to an

interesting moment to re-examine fertility intentions and what these intentions mean for the health of a population. Fertility intentions and their relation to age have important implications for public health. The mean age at first birth among women has steadily risen in the U.S., from 21.4 years in 1970 to 25 years in 2006 and in some states the mean age is now above 27.[19] This trend is important since older women attempting to conceive may have difficulty due to advanced age (defined as >34 years). Although the use of fertility treatments such as in-vitro fertilization (IVF) and intra-cytoplasmic sperm injection (ICSI) have increased[20] by more than 60,000 cycles from 2003 to 2013, corresponding research on the long-term health effects of such technologies has not kept pace. The use of fertility treatments and assisted reproductive technologies to conceive may influence the health of the mother and/or child in ways that are not yet fully understood.[21]

Infertility is estimated to affect 7.4% of married women 15-44 in the U.S.[22] or, according to the American Society for Reproductive Medicine, about 10% of women of reproductive age overall.[23] Women having difficulty conceiving may turn to infertility treatments in order to have a child. Infertility treatments include three levels:

Level I: ovarian stimulation including the use of medications such as clomiphene;

Level II: use of gonadotrophins to stimulate the ovaries; may include intrauterine insemination (IUI);

Level III: assisted reproductive technologies, including in-vitro fertilization (IVF).

Women starting infertility treatments may progress through the levels before reaching pregnancy, which can take 2-3 years.[24] If women under 35 wait to begin treatment until one year of having unprotected sex without conceiving, as recommended by the National Institutes of Health[25] or women older than 35 wait six months before seeking treatment, then women will be progressing through their less fecund years[b] while moving through the fertility levels. This likely makes conceiving more challenging due to age-related decline in fecundity. Leridon, using historical data from France to simulate natural fertility, estimates that if a woman postpones birth from age 30 to 35, she reduces her chance of conceiving by 9% and the use of assisted reproductive technologies (ART) can compensate for 4% of that lost fertility. For a woman who postpones from 35 to 40, she reduces her chance of conceiving from by 25% and ART

[b] Beginning around 32 and increasing rapidly around 37, as per the American College of Obstetricians and Gynecologists, 2008

compensates for only 7%.[18] In other words, the use of ART can compensate for some of the fertility lost to delaying age at first birth, but some women will still not be able to achieve a conception.[18] Women over 30 are the majority users of ART in the US, accounting for almost 89% of all assisted reproductive technology procedures performed in the US in 2002.[26]

In addition to age-related decline in fecundity, research has found that advanced maternal age (defined as >35 years of age) is associated with increased risk of stillbirth,[27] increases in NICU admission,[28] low birth weight,[29–31] Autism,[32] and Down Syndrome,[33] compared to women of younger ages (typically compared to 25-29 year olds in research studies). Researchers have also found risks for those above 30: birth weight increases with maternal age until age 30, when it begins to decline,[30] and the effect of age >30 on low birth weight is strongest for African American women;[29] stillbirth rates are approximately 25% higher in nulliparous 30-34 year olds compared to those 25-29;[34,35] and women over 30 are significantly more likely to have negative obstetric outcomes such as preeclampsia and postpartum hemorrhage compared to those 25-29 years of age.[36]

Fertility Knowledge and Age

Despite the increased age at first birth and growing use of fertility treatments, there is limited research on what women know about fertility and age-related fertility decline. One study, examining knowledge of fertility decline among women in Canada who had already had a live birth found that women had knowledge of the conception difficulties associated with advanced maternal age but had limited knowledge of the health risks associated with childbearing at later stages.[37] A study of university students in Sweden found that both men and women had 'overly optimistic' perceptions of a woman's ability to become pregnant at later ages, with almost half of women in the sample intending to have children after 35 without an understanding of the decline in fertility that begins in the mid-30s.[38] This may be due, in part, to the high age at first birth in Sweden (29.1 years)[39] and social norms around mothering which may contribute to misconceptions about fertility and age. Another study examining fertility knowledge among childless women age 20-50 years across Canada found that despite women having high knowledge of fertility decline and factors that affect fertility, more than 70% believed that for women over 30 overall health and fitness level was more important than age in its effect on fertility.[40] Another study in the UK confirmed the finding that women erroneously believe that healthy habits are very important in achieving pregnancy.[41] There appears to be very limited recent (post 1970) research examining fertility knowledge among women in the U.S. generally.

A 2009 nationally representative study of 1800 young adults 18-29 focused on fertility knowledge as it relates to unplanned pregnancy. Specific fertility questions focused on contraceptive use and failure rates. One noteworthy finding from this study was that 19% of females and 14% of males responded that it was "quite likely" or "extremely likely" that they are infertile, which is statistically unlikely.[22,23] Follow-up questions to discern why female respondents believed they are infertile included whether a doctor had told them (25% yes), a relative is/was infertile (24% yes), or they have unprotected sex and have not gotten pregnant (35%) yes.[42] Other studies examining fertility knowledge in the U.S. appear to be narrowly focused on a specific demographic, such as cancer patients.[43,44] If we assume that knowledge in the U.S. is similar or less than that of respondents from the UK and Canada, then this lack of knowledge is startling especially given the large shifts in age at birth in the U.S. with births to women above 30 growing steadily (Figure 4)[45] and shifts among some subgroups, such as among Asian and Pacific Islanders where the age at first birth is now well over 28.[19]

Literature Review of Fertility Intentions and Age

There is limited research to-date on the influence of age on fertility intentions. Previous research has examined how fertility intentions differ by age, gender, and parity in the UK. This study, using data from the British Household Survey (a panel study), found that women tended to reduce their intended family size as they aged.[46] This study also found that childless women grew more uncertain about their intentions with age. An important finding was that among the oldest group of women (35-39 years of age), 44 percent did not have the child they originally intended. Berrington notes that "for many of these women the increase in sub- and in-fecundity with age means that time will be running out".[46] In a sub-sample of childless women, Berrington found that age is strongly related to the probability of intention to start a family, as is education level, but partner status is not significantly associated with intention. Berrington suggests that women who postpone childbearing into their 30s but intend to have children have high levels of education and high earnings. Further sub-sample analyses, specifying three different models, were carried out with older childless women (in 1992) who went on to have a child in the following six years. The first model included demographic and socioeconomic characteristics; the second model included those characteristics included in model one and added women's intention (Yes, no, don't know); and the third model included those characteristics in model one and added joint fertility intentions to test the effect of a partner with similarly positive intentions. In all three models age was a key factor in predicting that the woman would have a birth. In

model 1 a one year increase in age was associated with 0.73 lower odds of having a child in the next six years ($p<.01$). In model 2, fertility intentions had a strong, positive, independent effect on actual fertility (odds ratio = 7.22). In model 3, women with a partner who also intended to have a child were 36% more likely to achieve a birth.[46] Berrington notes in her conclusion that further research is needed to examine the "perpetual postponers" (those who postponed childbearing into their 30s but intend to start a family) and whether those who do not achieve a birth are restricted by biological, social and/or financial constraints.[46]

In the US, Morgan[47] examined fertility intentions in relation to the "later stage of childbearing" but defined that late stage not by age, but by whether woman intended to have fewer than two additional children (i.e., they were nearing the end of their desired parity). The focus of this research was not on how age relates to intentions per se, but on the uncertainty surrounding intentions and it made the case for treating intentions as more refined than a yes/no dichotomous variable. However, this study did show that certainty around intentions does vary by age and parity and this certainty decreases as women get older.[47] Morgan posits that uncertainty is a transitional stage between childbearing and post-childbearing stages and that once women reach 'minimal acceptable' family size, the interval between children grows too large, or they develop non-familial interests that "compete with the desire for more children" they revise their intentions downward.[47] This study is one example of where either qualitative research or additional survey questions that probed on some of these issues could shed some light and provide a more nuanced understanding of the factors that affect fertility intentions.

Although it focused on pregnancy intentions and age, not fertility intentions, a study by Keeton and Hayward[48] used data from the Pregnancy Risk Assessment Monitoring System (PRAMS) to look at the relationship between poor birth outcomes (including low birth weight and NICU admissions) and pregnancy intention. The authors measured age categorically and devised age categories a priori (they were 12-15; 16-19; 20-24; 25-29; 30-34; 35-44). The authors' initial hypothesis was that intention would be associated with positive outcomes. To their surprise, they found that intention was associated with greater risk of low birth weight or NICU admission for white adolescents and blacks of all ages. They suggest that this finding could be the result of retrospective intentions being revised once an infant is born, or social desirability bias of reporting a child in the NICU as unintended.[48]

The Generations & Gender Programme (GGP) Survey conducted in countries across Europe (wave 1 in 2004; at least 19 countries have conducted wave 1 and many have completed two waves) is an example of a large scale (multi)national survey that also collects additional, more detailed information about fertility decisions.[49] The GGP is a longitudinal survey of adults 18-79 living across Europe that aims "improve our understanding of the various factors - including public policy and programme interventions - which affect the relationships between parents and children (generations) and between partners (gender)".[49] The GGP includes quantitative survey questions on what components influence the decision to have a(nother) child including whether and to what magnitude the decision depends on other factors.[49,c] These factors include: financial situation; work; housing conditions; health; having a suitable partner; partner's/spouse's work; partner's/spouse's health; availability of childcare; opportunity for parental/care leave.[40] This type of data is often absent from large cross-sectional surveys, but found in qualitative research such as in-depth interviews, where the opportunity to probe responses may lead to information on *how* a respondent arrives as a decision to have a child, for example, not just the outcome of that decision. The Social Position and Family Formation (SPAFF) data set[1,50,51] is an example of the kind of rich qualitative data that can be developed to aid in understanding the nuance in fertility intentions, including how young adults make decisions about when to have children and what factors contribute to the timing of these decisions. The SPAFF dataset also provides much needed diversity in this information, since the quantitative literature focuses predominantly on white (often married) women (such as the samples used in Morgan 1982, Morgan 1981, Rindfuss et al 1988, and Schoen et al 1999).[6,15,16,47]

Quantitative Data for Examining Fertility Intentions

Fertility intentions are often examined at the population level using data from cross-sectional surveys including the Demographic and Health Surveys (developing countries) and National Survey of Family Growth (NSFG) (US). These surveys yield responses to questions such as how many children an individual intends to have and whether an individual wants to have a(nother) child (Table 1).

[c] There have been numerous research publications from these data and a complete listing may be found here: http://www.ggp-i.org/bibliography.html)]

The literature on fertility intentions includes much research on the desire to have a child and intended number of children among women in the U.S. using data from the NSFG. Articles that examine fertility intentions in the U.S. tend to fall into a few specific categories: measurement and theory, trends in intentions over time or across subpopulations, and in-depth examination of factors thought to be related to these decisions, such as religiosity and education.

Regarding measurement and theory, in addition to those items addressed in the previous sections on the link between fertility intention and behavior, S. Philip Morgan has written extensively on fertility intentions among women in the U.S. Starting in the early 1980s, he examined intentions in the later stages of childbearing using data from the National Fertility Survey in 1965 and 1970[d], finding that the uncertainty of intentions is related to both parity and age and that women with more children are more likely to consider revising intentions downward once they have reached the 'minimally acceptable' family size.[47] Later Morgan examined ideal family size and its relation to age, suggesting that delayed fertility that is due to period-specific factors and influences may lead to fertility foregone and that uncertainty about fertility intentions is often a transitional stage between delaying pregnancy and fertility foregone.[15] He also found that intentions are subject to revision and that intentions may be revised downward once the two-child ideal has been reached. In this paper, he also made the claim for including infertile/infecund women in analyses of fertility intentions.[15]

Fertility intentions are often studied in relation to trends. Chen and Morgan (1991) examined trends in the timing of first births and the relationship with intentions among women in the U.S. over the period 1970-1987 using vital registration data. They found that there was a clear shift towards parenting at older ages, including a substantial increase in first births to older women.[52] They also found childlessness was, for the majority of women, not the result of a conscious decision, but the result of postponement of childbearing, which eventually became fertility foregone.[52] It is important to note that this study was conducted at a time when ART was relatively new and the availability treatments for infertility were limited. It wasn't until 1992 that

[d] The National Fertility Survey was fielded in 1965, 1970 and 1975. The surveys were quite different: The NFS 1965 included currently married women born after 1910 and living with their husbands; the NFS 1970 included ever-married women born after 1925; the NFS 1975 reinterviewed women interviewed in the NFS 1970 who were 1) white, 2) continuously married in first marriage, 3) married less than 25 yrs, 4) married before age 25, and 5) husband married only once. The NFS 1975 also included a sample of new interviewees who were married after 1970. (Office of Population Research, Princeton: http://opr.princeton.edu/archive/nfs/)

the Centers for Disease Control and Prevention (CDC) began surveilling clinics providing these technologies so the data on actual usage in the late 1980s is not available.[53]

One study examining fertility intentions and religiosity and is methodologically of particular interest for my research due to its use of the NSFG and intention to have a child as the outcome of interest. This article used data from the 2002 NSFG and examined intention to have a child as the dependent variable; the predictor variable was religiosity. A main finding is that women who report that religion is 'very important' have higher intended and realized fertility than those who report that religion is 'somewhat important' or 'not important'.[54] Other research has examined the effect of education, social policies, and economic opportunities on fertility intentions. Heiland and colleagues, using data from West Germany (1998, 1994/5) and the EU 15 countries (2001) found that increases in education were associated with wanting three or more children.[55] Liefbroer and Corjin (1999) to the contrary found that among Flemish and Dutch young adults born between 1961 and 1965, educational attainment had a strong negative effect on women's entry into parenthood but not on men's.[56] Neyer and colleagues (2011) found that cultural norms surrounding fertility had a greater effect on fertility intentions compared to regional economic circumstances.[57] This study used the Generations and Gender Survey, a longitudinal Survey of 18-79 year olds in 19 countries across Europe[49] to explore how the economic, social and cultural environment influences fertility intentions.[57]

In the quantitative literature examining fertility intentions there is a noticeable lack of diversity among respondents.[58] Although some studies have look at differences between Whites and Blacks,[11] and between Whites and Hispanics,[58] including men is less common (Hartnett[58], Hagewan & Morgan,[10] and Morgan and Rackin[11] are notable exceptions). This may be due in part to the structure and composition of the NSFG (which began interviewing males in 2002) and the analytical techniques used to analyze the data. In focusing on women, it may be that since data from the NSFG and DHS are available in separate files by sex and although many variables exist in both data sets, not all do, some researchers focus on women only. In terms of focusing on whites, researchers often cite a lack of sample size. For example, Schoen and colleagues note that their sample included only non-Hispanic whites because there were too few blacks, Hispanics, and members of other groups to analyze separately.[16] Hartnett, since her study focused on the comparison of fertility intentions and outcomes between whites and Hispanics, excluded blacks, non-Hispanic blacks, and those of 'other' ethnicity in order to

"simplify the analysis".[58] A study by East (1998) is an example of a study of research in this area that focuses on inclusion of more groups in the analysis. In this study, using a racially and ethnically diverse sample of 574 young adolescent females (mean age 12.9) in the U.S., East found that birth expectations varied among subgroups.[59] Hispanics were more likely to desire having children younger and Southeast Asians were more likely to desire having children later. She also found that for all groups optimistic school and job aspirations were tied to later desired age at first birth.[59]

Qualitative Data for Examining Fertility Intentions

Although data from nationally representative surveys are extremely useful for making inferences about a population, the nature of surveys masks some nuance, which may be very important in truly understanding how, when, and why these decisions are made. As Edin and Kefalas note (2005) "social science currently tells us much more about what doesn't explain the trend than what does".[12] They note that social science depends too heavily on survey methodology which tells us very little about perspective and life experiences of the populations in question.[12] Qualitative methods may be extremely helpful for both getting at this nuance and also for allowing researchers to better understand how individual-level decisions are made. In public health, this nuance is very important in designing programs and policies that are aimed at changing individual-level behavior such as programs that may aim to educate individuals about fertility and age and encourage a shift away from delayed childbearing, such as programs found in some Nordic countries.[60] For example, as mentioned in the intentions and NICU admissions study by Keeton and Hayward (2007), the authors reported a surprising finding that intention was associated with poor outcomes at younger ages among white adolescents and blacks of all ages.[48] This is a good example of where qualitative data could be used to further explore and explain a phenomenon.

Studies looking at individual fertility intentions alone are rarely found in the qualitative literature, but more commonly included in studies examining how fertility intentions are influenced by other factors such as HIV status[61,62] or focusing on the qualitative aspects of pregnancy intentions.[63] Sassler and colleagues (2009) conducted a qualitative study of fertility intentions of cohabiting couples to better understand how decisions around fertility are made.[64] Questions focused on how a (hypothetical) pregnancy at that moment might be resolved and examined perceptions of the couple's future and how their contraceptive use related to those plans.[64] Augustine, Nelson and Edin (2009), in one of the few fertility intentions studies focusing on men, examined

intentions among low-income, noncustodial fathers in and around Philadelphia.[65] This research examined retrospective intentions around the birth of their child(ren). They found that a continuum of intentionality is more reflective of the experience of this group rather than a dichotomous view of intentionality.[65] One study examining women's experiences with waning fertility as they approached menopause used a phenomenological approach, with the aim of understanding the subjective experience of waning fertility. In this study, the authors found that when individuals were asked to look back on their fertility, some who were childless reported that they had never intended to have children and others reported that they had just never had the 'right' circumstances.[64] In addition to retrospective views of their fertility, the authors asked about their prospective views: women reported uncertainty about their intention to have a(nother) child, including uncertainty in general and a re-examination of previous decisions to not have a(nother) child as the door to have children began to close.[66] As one woman (age 42) noted, the decision to have a child was competing with the decision to go to school: "within the last 4.5 years, I've really wanted to have a kid, but working it around school and new interests...and so the tentative plan is to interview for school this January or February. If I don't get in- get pregnant. If I do get in- get pregnant the second year".[66] An interesting finding from this study is how the delay in first birth affects how women think about getting older and the experience of waning fertility. The authors found that women who had children in their late 30s and early 40s "were not able to conceptualize a time when their life would be their own again" compared to women who had children earlier. The women who had children earlier viewed "the emancipation of their children" as a marker for midlife and the freedom that would come with it.[66] For my research, which aims to examine the increasing age at first birth and a change in social norms around older mothers at first birth, it may become more common for women approaching menopause to still have young children living at home.

Other important qualitative literature on family formation and fertility intentions have focused on women and the decision to have children, but from the vantage point of already having children or already expecting. Edin and Kefalas (2005) developed their project partly in response to the popular culture's focus on how highly educated, wealthy women thought about the timing of pregnancies after the book *Creating a Life: Professional Women and the Quest for Children* was published in 2002.[12] That book, which was part interviews and part self-help, focused on women "taking back their lives" and achieving their goals of motherhood while still maintaining high level and high paying professional lives.[13] *Creating a Life* also focused on telling the "real

stats behind IVF" so that women could make informed decisions. The qualitative data presented in this book, which were the focus of intense critique following publication,[67] focused on nine "high-achieving women from the breakthrough generation".[13] Shortly after the media storm calling for attention to how wealthy professional women think about and seek motherhood, Edin and Kefalas began a multi-year anthropology-inspired study of over 160 low-income women living in areas of Philadelphia and Camden. In this work, the authors explore common misperceptions about low-income women and motherhood, such as the claim that low-income mothers get pregnant based on lapses in judgment or that childbearing out of wedlock is the sign of poor planning on the part of these women. Of importance to my topics, they note that many of these women do not understand how women could delay childbirth until their 30s by choice expressing a preference for, or ideal of, childbearing at younger ages. In terms of fertility intentions, many of these women do not report explicitly trying to become pregnant, but are not attempting to prevent pregnancy either. This research found that having a child when you are young and unmarried can be advantageous for a relationship (for example, making it more serious and demonstrating commitment) and strategic for a woman's career since she can "'get it over with" before turning her attention to school and a professional life. In these communities, having a child marks adulthood and comes with a level of responsibility and respect that may not come from being in school and working.[12] The work of Arline Geronimus focuses on low income African American adolescents (1996) and explores what motivates young women to become mothers and whether and how these motivations differ for low income African American teens as compared to whites. She notes that this qualitative work interviewing young mothers or mothers-to-be was inspired by exploring the quantitative data on fertility patterns for low income African American women and wanting to better understand women's motivations for having children.[68] Among the most interesting findings are that postponing childbearing to later ages means missing in-house support both from family members in raising that child and from that child when he/she is older and able to help care for his/her mother when she needs it, which some suggested was as early as the mid-30s.[68] As she notes being "future oriented" about having children may be a luxury for women who are not from persistently impoverished populations where living a long life is not a given.[68]

In previous research undertaken as a doctoral student, I, along with Diana Romero, used data from the SPAFF study to examine ideal age at first birth and how individuals conceptualize the factors that contribute to a particular age being ideal. Using data from 200 in-depth interviews

with males and females of diverse socioeconomic and ethnic background aged 18-34 in New York City and Northern New Jersey, we found that early 30s were most often cited as ideal (32% of the sample). Among those who gave a particular ideal in response to the questions "what is the ideal age to have a child" the mean was 29.3 years and the median was 30.[1] We found that factors associated with ideal age fell into four categories: structural/social position related, interpersonal, age pressure, and aspirational.

Analyzing Data on Fertility Intentions

Quantitative Methods

Approach

Quantitative data on fertility intentions often focuses on responses to two questions that address 1) wanting a child; and 2) desired number of children. These data tend to come from cross-sectional surveys. Analyses of these data typically use multivariate regression in order to control for a number of factors that are theoretically believed to be related to fertility intentions such as race/ethnicity, education, income, poverty level, employment situation, place of residence, and religiosity. Independent variables are often included in these regression models based on their influence in the model during univariate analyses.[69,70] However, Wu's important paper on using generalized linear models in family studies (2005) makes a compelling argument for only including independent variables based on theory.[71] In his example we should begin adding variables to a model if their inclusion is supported by prior research. Variables should not automatically be removed from the model if they are insignificant based on bivariate analyses, but the theory and reasoning behind their inclusion should be considered. As an example, he notes that in research aimed at testing the idea that the effects of living alone change with marital status, he notes that an interaction term of marital status and living alone should remain in the model even if it does not improve model fit since this interaction is a key component of the research aim.[71] Berry & Feldman (1985) make a similar argument in their discussion of specification error, asserting that "the best to whether a variable is irrelevant is theory".[72]

Multivariate Regression (Linear)

Multivariate regression is a method for explaining a dependent variable (y) as a function of a continuous or categorical independent variable (x), controlling for factors that may

simultaneously affect the dependent variable. Multivariate regression allows for the inclusion of other (measurable) variables of interest to be included in the regression model, whereas in simple regression, or regression with a single explanatory variable, they would have been part of the error term. Multivariate regression does not limit the number of independent variables that the researcher hypothesizes are associated with the dependent variable. Essentially, it allows researchers who work with non-experimental data to control for other variables that may confound the exposure and disease relationship by holding these factors constant.[73] The multivariate regression model (for a population) is as follows:

a. $$y= \beta0+ \beta1x1+\beta2x2+ \beta3x3...+\beta kxk+ \mu$$

Where β0 is the intercept, β1 is the parameter estimate associated with *x*1 and *μ* is the error term.

A multivariate linear regression model for fertility intentions (if measured as a continuous indicator) may look like this:

b. $$\text{Intend}=\beta0+ \beta1\text{age}+ \beta2\ \text{parity}+\mu$$

Where intentions are a function of age and parity, plus an error term. In this model, intend is a continuous variable such as intended parity (as in Hartnett[58]), $\beta0$ is the intercept, β1 estimates the effect of age on intention to have a child, holding parity constant and β2 estimates the effect of parity on intentions, holding age constant. In social science research ordinary least squares (OLS) regression is frequently used for its focus on reducing the sum of squares of the residuals. OLS provides the estimate that provides the smallest sum of squares of the residuals. This means that it chooses the estimate that is the "best fit" for the model by selecting the one where the residuals (difference between observed and predicted values) are the smallest.[73]

It is important to be selective in determining which independent variables to include in the analysis so as to specify the most parsimonious model possible. Although it is tempting to consider myriad factors related to the research question and, thus, add many variables to a model, inclusion of irrelevant variables can bias the *variances* of the OLS estimates (though not

the OLS estimates themselves).[73] However, inclusion of a collider variable, or a variable that (is caused by both the exposure and outcome) will bias the estimate.[74][e] An equally important issue is neglecting to include a relevant variable (or a variable related to the outcome and exposure of interest) in the model, which can bias estimated regression coefficient in either direction.[73] Both of these situations refer to model specification error.[72,f] Moreover, thoughtful a priori consideration of independent variables is important when specifying the analytic model given that the output from analyses of different models cannot identify when a relevant variable is missing. It is somewhat easier to statistically identify when an unrelated variable was erroneously included by examining the R^2 (i.e., estimate of overall model-fit) and by running the model again without that variable. But as Wu (2005) and Berry & Feldman (1985) stress, variables with theoretical significance should be retained even if their inclusion reduces model fit.[71,72] Box 1 includes four criteria used to guide decisions around whether to drop a variable from a model. These include whether the variable's inclusion is based on theory, whether the overall model is more robust when this variable is included, and how this variable's inclusion affects other variables. These are meant to be useful rules of thumb for including a variable, not hard and fast rules per se. [75]

In multivariate regression of data from cross-sectional surveys (with random sampling) there are a number of assumptions that must be considered, which are known as the Gauss-Markov assumptions as shown in Box 2.[73] These assumptions include that sampling was random, there is no collinearity between variables, and that there is no heteroscedasticity, or uneven variance in the errors terms. These are useful to consider in the development of model building and are essential for testing the validity of a model at the analysis stage. If any of these assumptions are not met, one may have increased risk for Type I (rejecting a null hypothesis when the null is true) and Type II (failure to reject a null hypothesis) errors.[73]

Logistic Regression

Thus far I have been discussing regression models for continuous data which are often analyzed using models such as that shown in equation a. Linear models are based on assumptions that may not be relevant for fertility intentions data, including that the dependent

[e] Distinguishing between a collider and a confounder is done by examining theory and directed acyclic graphs (Elwert & Winship, 2014)

[f] A third component of specification error (measurement errors in variables) will not be discussed here.

variable is continuous and normally distributed and the relationship between the dependent and independent variables is linear.[71] The assumptions are not met in examining fertility intentions (as in equation b above) where intentions are a dichotomous categorical variable, measured frequently as Yes/No. The nature of the responses to this question and the types of questions in Table 1 lend themselves to different regression methods that, although they conceptually share many qualities with linear models, allow for these types of dependent variables. These include logistic regression (for categories such as yes/no responses) and Poisson and negative binomial regression (for count data). Here I will focus on logistic regression with a dichotomous variable since it was more commonly found in the literature review of fertility intentions methods.[64,69,70]

Logistic regression is used to relate a predictor (x) to a binary outcome (y) using log linear model. Predictors can be continuous, binary, or categorical.[76] The logit function is used to link the linear equation to the ln(odds) of y to x.[76] The logistic regression model equation is as follows:

c. $$\text{logit}(y) = \beta 0 + \beta 1 x1 + \ldots \beta k x k$$

Taking the natural log of the odds of a variable y [ln(odds)=ln(p/1-p)] gives us a more interpretable odds ratio (OR) to work with. Slopes calculated from logistic regression can be exponentiated to produce odds ratios.[76] In fertility intentions, a simple logistic regression model might look like this:

d. $$\text{Intend} = \beta 0 + \beta 1 \text{age}$$

or

e. $$\text{ln(odds of intending a child)} = \beta 0 + \beta 1 \text{age}$$

Where *intend* (ln(p/1-p)) is the probability of intending a child for a given age.

Since the Gauss-Markov assumptions shown in Box 2 are violated in dichotomous logistic regression (for example, linearity), there are other statistics that can be used for evaluating the fit of the model including the model Chi-Sq, the pseudo-R^2 and global and focused fit indices[77] to see if the overall specified model is a 'good fit' for the data.

The interpretation of the exponentiated form of the log-odds coefficient from binary logistic regression[76] is as follows (assuming the variable is coded 1=Yes, 0= No or absence of outcome):

$$\text{OR} = \frac{\text{odds (success) or Yes}}{\text{odds (1-success) or No}}$$

For example (using the model shown in d above), if β1is -0.69 this can be interpreted as for each additional unit increase in age, the expected change in the log odds is -0.69. If we exponentiate the log odds so that we can interpret the results on the multiplicative, rather than loglinear scale, we can interpret the results as women have half the odds of intending to have a child with each one year increase in age (or women are half as likely to want kids with every one year increase in age) ($e^{\beta 1} = e^{-0.69} = 0.50$). [77,78]

Multivariate Regression of Fertility Intentions Data in Practice

Although statistically it may be most appropriate to use logistic regression or other regression models in fertility intentions research with dichotomous outcomes, in the literature some researchers also use OLS and provide methodological explanations for this choice. For example, in Bitler and Schmidt (2011),[26] for a study of the effects of insurance mandates on the use of infertility treatments using pooled data from the NSFG, the authors used OLS (linear probability models) for ease of interpretation despite having a binary dependent variable. They also include results from logistic regression (including marginal effects) of the same model, demonstrating that the results from OLS are robust.[26] Similarly, Hayford and Morgan (2008) in their study of the influence of religiosity on fertility intentions, use OLS and note that "Poisson or negative binomial models might technically be more appropriate for this analysis….(however) our results were robust to the specification of the model, and chose to use linear regression for the convenience of the interpretation of the coefficients".[54] As compared to logistic regression, results from OLS may be more easily interpreted. Logistic regression transforms the y variable in to a log odds, so interpreting results from logistic regression requires an understanding of odds and what makes odds different from probability. For example, in Bitler and Schmidt's paper they analyze data using both OLS and logistic regression but focused on the OLS results in the results section. In noting a coefficient of 0.041 from OLS examining the insurance mandate, age at least 30, and at least some college, they write "This suggests that for highly educated older women, living in a mandate state is associated with a 4.1 percentage point increase in the probability of ever having had sought medical help to get pregnant".[26] Results

from the same model using logistic regression (presented in table format in the paper) would be interpreted as "for highly educated older women, living in a mandate state is associated with a 1.948 higher likelihood (nearly a 2-fold increase) of having had sought medical help to get pregnant" which may be less easily understood, especially if the results are at aimed at non-researchers such as policy makers and the media. OLS (linear probability models) and logistic regression may produce very similar results when applied to the same data set (with dependent variable coded 0, 1) as Pohlman and Leitner (2003) note.[79] However, they suggest that if testing relationships is the goal, either OLS or logistic regression can be used, but if estimating probabilities is desired, logistic regression should be used. [79] Logistic regression also makes it more difficult to detect potential errors that may make the model a less good fit, such as heteroscedasticity.[73]

In the fertility literature, there are options regarding how to treat intentions when they are the dependent variable, which has an impact on the type of logistic regression that is best suited for the analysis. In Morgan's work from the early 1980s, he makes the case for treating 'don't know' and other uncertain responses as uniquely different from missing data, as valid and meaningful responses about an individual's fertility intentions.[15] In his earlier work[47] he found that capturing this uncertainty was especially important for women nearing the end of their childbearing (in terms of parity). For example, using data from the NSFG in 1976, he found that for women with two children, there were an equal number of women who "don't know" their intentions for another child as compared to those who said yes, they intended to have a(nother) child.[47] In including uncertainty as a crucial part of the intentions variable, the methods must be adjusted accordingly. For example, in his paper on intention and uncertainty at later stages of childbearing[47] and parity-specific fertility intentions,[15] the variable 'do you and your husband intend to have a(nother) child?' is treated not as a binary variable, but one with multiple categories requiring the use of multinomial logistic regression in the case when they are not ranked, for example, when Morgan[47] created three categories: Yes; No; Don't know. In the later paper[15], he further refined this to a 'ranked' or ordered categorical structure including four categories for the dependent variable: Yes, 2+ more; Yes, 1 more; Don't Know. In both of these treatments of the response to the question of intending a(nother) child, the responses are treated at a greater level of specificity than yes/no. This is supported by qualitative data, such as that from Augustine et al,[65] which found that among low-income, noncustodial fathers,

reflections of intention to have a child operated on more of a continuum of wanting versus not wanting, rather than a dichotomous view of intentionality.

Another methodological challenge in measuring fertility intentions, which applies to both quantitative measurements such as survey data and qualitative measurement such as through in-depth interviews is the "mere-measurement effect" which refers to the fact that when intentions are measured they can be influenced, or that when you ask an individual about his or her intentions just asking about the intentions makes acting upon those intentions more likely. Thaler and Sunstein (2008) call this a 'nudge' and note that social scientists have found this to be true in many contexts.[80]

Qualitative Methods

Approach

As discussed, there are limited qualitative data examining fertility intentions but the data that do exist focus on a deeper understanding of the context in which decisions are made. These type of data often come from in-depth interviews, where a researcher has a one-on-one interview with a participant that explores a limited number of topics and often includes "probing" or "drilling down" on topics of particular relevance to the research question.[81] This type of data collection allows for the researchers to explore a topic in-depth and to allow the participant to fully respond to questions beyond predetermined answer categories such as in a survey. One advantage to using qualitative methods such as in-depth interviews as compared to surveys is that in addition to acquiring answers to questions the researchers identified in advance, the data may also provide insight and answers to questions the researcher did not think to ask.[82] This type of data collection is often used in pilot or formative research to identify potential questions and topics for quantitative data collection at a later date, but is also used to collect the type of data such as collected in SPAFF that is not easily captured in surveys because it is either too complex or too delicate.[83]

Despite the advantages to using qualitative methods such as in-depth interviews, there are some drawbacks that limit their use. Compared to cross-sectional surveys, in-depth interviews include far fewer individuals, which reduces the generalizability of the findings to larger populations, which is useful for understanding population-level intentions for purposes such as

population projections. This is a common critique of qualitative data collection among researchers evaluating it through a quantitative lens. In looking at fertility intentions research, an area dominated by demographers and sociologists, quantitative methods are seen as superior to qualitative methods since the goal is often generalizing to large populations.[84] However, this is not the goal of qualitative researchers who, instead of seeing individual cases as representative of a larger group (as individuals in a cross sectional survey would be representative of some larger group based on sampling weight), we view cases as a single case.[84] In qualitative work we are not seeking representativeness or a sample large enough so that potential biases can be 'controlled away' as Small puts it.[84] Instead we are intentionally seeking not a 'sample' in the traditional (quantitative) sense, but a selection of individuals from which we can learn about a specific research question or phenomenon.[84] As Auerbach and Silverstein put it "your research concern is to learn about their lived experience"[85] not about testing hypotheses. They note that in quantitative research "human phenomena are studied scientifically by converting them into numerically measurable independent and dependent variables" but for qualitative researchers, restricting data into known variables is too limiting.[85] In order to find a sample that gives the researcher the best opportunity to understand an issue or phenomenon, Auerbach and Silverstein advocate for theoretical sampling, which is the "process of choosing a sample in order to extend and refine a theory". The total number of cases is known only when the researcher has reached theoretical saturation.[85]

This re-orientation away from the quantitative/statistical lens requires some adjustment on the part of the researcher. The methods utilize to collect and analyze the data are also quite different. In-depth interviews, as compared to cross-sectional surveys, may be more time and labor intensive and produce a large amount of text that must then be analyzed using methods that require a different approach to the data than quantitative methods.[85] In depth-interviews are not simply survey questions read aloud to a participant, but requires a breadth and depth of questions to both explore a topic broadly and to dig in to certain aspects of a topic. The latter requires a range of potential probing questions and that the interviewer have significant interpersonal skills including excellent listening skills, the ability to read a situation, and empathy.[83] In fertility intentions research the type of dichotomous questions typically asked about wanting a child would be replaced by more open-ended questions about attitudes and desires around childbearing, and probing questions to address the factors that contribute to these individual attitudes and desires.

Qualitative methods also require researchers to be reflexive, or able to examine oneself and one's relationship to the data, in a way that is different from conducting quantitative research. Researchers using qualitative methods benefit from a deep and personal connection with the data. Analyzing qualitative data requires that researchers take stock of their own biases, feelings, and thoughts that may be influencing how they are seeing the data.[86] As Breuer and colleagues (2002) note, the sciences 'try to create the impression that the results of their research have objective character…(and) are—or at least should be – independent from the person who produced the knowledge, e.g., from the single researcher.'[86] Qualitative research, according to the authors, "makes the impact of the researcher far more obvious than in its quantitative counterpart" and qualitative researchers cope with this by engaging with the nature of their interaction with the data and being reflexive.[86] This is an orientation that can require some adjustment for those steeped in a quantitative approach, and is a skill that can be refined and improved as noted by Watt.[87]

Qualitative Analysis

As opposed to quantitative data analysis, which is deductive and focused on testing a researcher's theory of a phenomenon, the analytic approach with qualitative data is inductive, i.e., without a priori hypotheses, thus, allowing for themes and topics to emerge from the data. This draws heavily on grounded theory methodology, an approach developed by Glaser and Strauss (1967) and refined by Strauss and Corbin (1994).[88,89] Grounded theory methodology is an analytic approach to qualitative data that identifies important themes/concepts related to the phenomenon under study that are grounded in open-ended and contextualized data from respondents.[89] This is accomplished by applying codes to the data, grouping these codes into categories/themes and then refining these categories into concepts/constructs using a repeating/iterative process. This involves open coding where the data are "broken open" as LaRossa describes, and transcripts are closely examined and questions are developed about the phenomenon in question. The next step is axial coding, where a researcher digs deeper into one topic or code and looks for how to relate categories to subcategories.[89] The third coding step is selective coding, or as LaRossa puts it "the main story underlying analysis".[90] This step is more focused and refined, with a clear view toward the question you are trying to answer. Together these concepts may lead to a theory about the phenomenon or research question.[89] In previous qualitative research, my approach to the analysis of in-depth interviews has also been

influenced by the subsequent (and arguably more "step-wise/pragmatic" application of the Grounded Theory method) work of Auerbach and Silverstein, who advocate for using a coding procedure that involves a series of steps, grouping repeating ideas/themes and eliminating less common ones, and progressing to higher levels of abstraction that may approach theoretical propositions.[85] These levels include: first, identifying text-based primary categories and subcategories ("relevant text"); second, grouping of the text-based categories into larger themes ("repeating ideas"); and third, organizing themes into more abstract theoretical constructs. During the initial approach to the data, the researcher is also developing analytic logs ("memos") to map shifts in thinking about the focus of the analysis as well as to guide the development of schematics and tables that may become useful in developing theory. The initial coding approach is what Ritchie and Lewis (2003) refer to as a 'code and retrieve' method whereby categories are developed and codes are applied across all data.[83] However, this is an iterative process and although some codes and categories may seem appropriate after reading 20 transcripts, by transcript 100 they may have changed substantially. One advantage to the 'code and retrieve' method is that it applies a somewhat systematic review to take stock of the data.[83]

An additional tool that aids in thinking systematically about the data is the creation of visual tools such as matrices, which encourage making comparisons, seeing patterns, and identifying differences in the data that may lead you to see you data differently.[91] As Miles and colleagues note, the "matrix is a tabular format that collects and arranges data for easy viewing in one place, permits detailed analysis, and sets the stage for later cross-case analysis with other comparable cases or sites".[91] This type of visual allows the researcher to see how the data are shaping up and identify areas for comparison. It also aids in theory-building, since often many factors that may together be part of a conceptual framework may appear in your matrix and it may become apparent how they intersect and interact to influence the phenomenon at the center of your inquiry.[91]

Qualitative Methods and Fertility Intentions Data in Practice

In research on fertility intentions qualitative data may be very helpful for understanding factors related to the desire and timing of children that are not captured by cross-sectional surveys. For example, cross-sectional surveys capture data on a number of variables that may be considered independent variables in a regression model including education level, marital status, parity, and

income level. However, information about desires around the timing of a child and how an individual's thinking about having a child is influenced by those factors are not easily captured in survey form. In the SPAFF data set, we see the value of these types of data in interviews where respondents are asked about their ideal age to have a child and then probed for what factors make for an "age ideal." Beyond answering the interviewer's question, respondents went further and talked about things such as the order of events or their aspirations for their personal life before having a baby. One important thing that emerged from these data that was not directly asked was some individual's ideal timing and how that contrasts with biological realities. For example, Keisha is a single, 32-year old. If her timing works out she will be 35 or 36 at the earliest when she tries to start a family:

> *Of course, marriage first, then once we figure if I'm married, let's just say between two and three years, because I want to get to at least enjoy it with no kids. After that, go to school and from there get a degree and then kids come along. Even while I'm in school, I wouldn't mind being pregnant then. I would definitely want to at least be married first. From then on, of course the house. First and foremost I think I would want to be married first. (Keisha, single, age 32)*

In the analysis of these data, we looked at themes including structural/position related factors associated with the ideal age to have a child ("school", "degree"), interpersonal factors ("married"), aspirational ("I want to get to at least enjoy it with no kids"), and financial ("housing"). We also looked at how old Keisha was at the time of the interview, her situation at the time in terms of partnership status and educational level, and her timeline to examine the cognitive dissonance between what she is saying about her desire to have a child and her reality in terms of timing and her own fertility if she waits for all of these factors to fall into place before attempting to conceive. This is what is sometimes referred to as a quasi-variable approach, in which some variables such as demographic variables like age, race/ethnicity and income level are examined in cooperation with conceptual categories coded within the data; for example, a researcher may stratify codes by age and examine the qualitative results separately for those >35 as compared to those <35.[83]

In practice, it is more difficult to find specific details on the analyses used in many qualitative research studies. Often articles will tell you about the approach to the data and level of coding, but not to the extent that you could recreate the research step by step, the way you might be able to recreate research explained in quantitative studies. For example, in a study of self-induction for abortion, the authors describe their research methods as "We aimed to identify

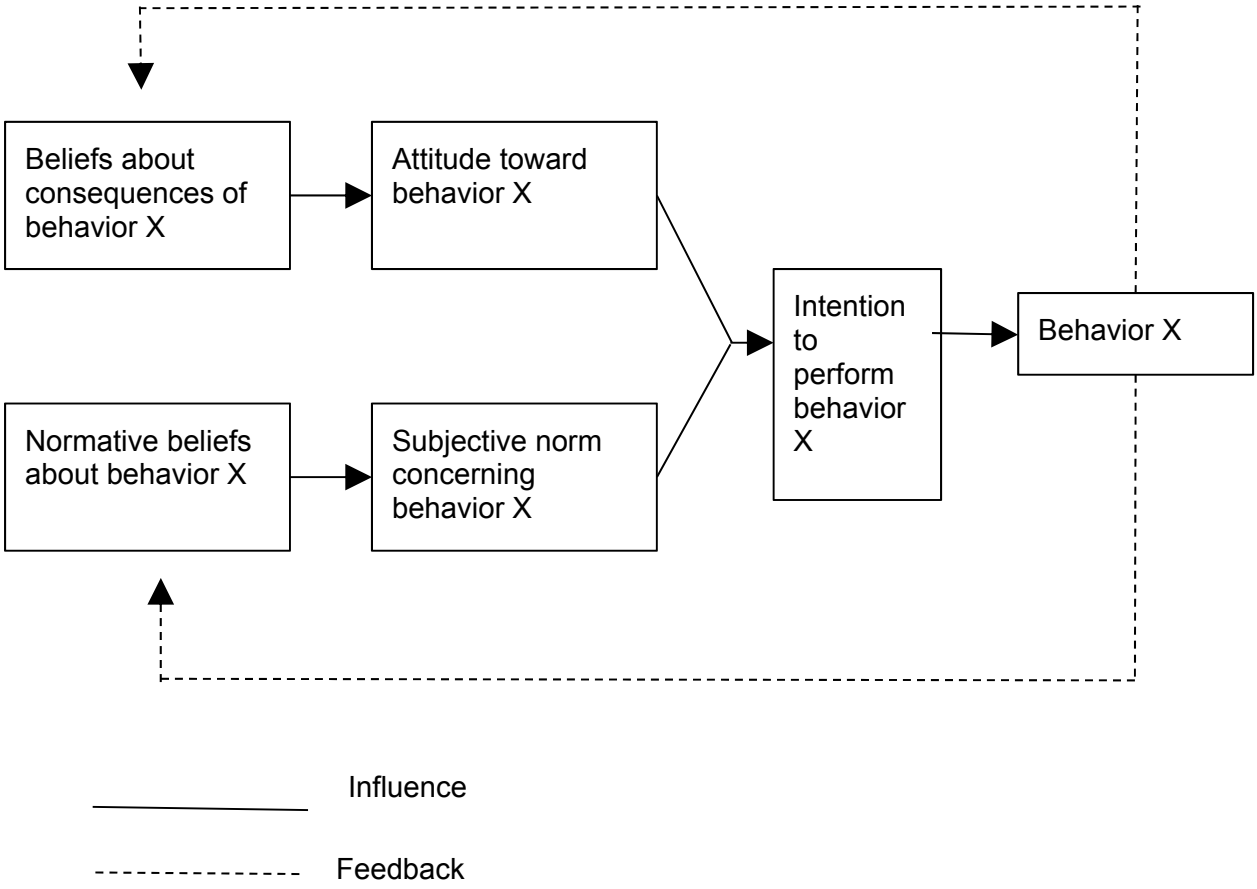
recurring patterns and outliers of the varying situations in which women attempted self-induction".[92] Augustine and colleagues' study of low-income non-custodial fathers describes the analyses quite simply noting that "we coded these transcripts using standard qualitative methods…we then retrieved coded material for more refined qualitative coding and analysis".[65] This is partly due to the difference in approach in that qualitative research relies on the active participation/reflexivity of the researcher in a way that is foreign to quantitative research. However, there are some studies that have provided insight into how the data were analyzed. Edin and Kefalas, although they focus on pregnancy intentions in their discussion of the coding and analysis approach, describe coding each transcript it its entirety and coding relevant text into predetermined or emergent topics. They then describe a final product that was organized "like a quantitative dataset, in a case-by-variable" format.[12]

Gaps in the Literature and Future Research

There is a notable lack of research in the U.S. on fertility knowledge, particularly how it relates to age. This is a remarkable absence in the face of the considerable research and attention (i.e., publicity, funding) given to sexuality education and in particular abstinence education for young adults. Young adults often have required sex education that focuses on preventing pregnancy, sexually transmitted infections and HIV, but may graduate from that education without any understanding of their own fertility, and in particular how fertility declines with age. This lack of knowledge combined with upward trends in the age at first birth may mean that many young adults have unrealistic expectations about their own fertility. When they do attempt to conceive and essentially 'flip the switch' from preventing pregnancy to encouraging it, they may need to turn to ART to aid in achieving a live birth. ART has grown more sophisticated and more common, with more than 60,000 cycles from 2003 to 2013[53] but research on the effects of ART, and in particular on the long-term effects of these technologies on both women receiving the treatments and other actors such as egg donors, has not kept pace. We have very limited information on the long terms effects and safety of these procedures; yet, their growth continues.

Given the interesting shifts in age at first birth coupled with the increasing availability of ART, one could postulate that the social norms surrounding both age at first birth and the use of ART

are changing too, which may result in interesting cohort trends over time. For example, do women who were in the mid-30s in the 1970s differ significantly from women in their mid-30s today in their intentions and expectations around childbearing? We might expect to see that with the change in social norms comes a change in fertility intentions, with more women being confident about their ability to postpone childbearing until an 'ideal' time without having to self-limit the number of children they desire. Data from the NSFG would allow for this kind of comparison, using pooled data sets from when the survey began in the 1970s through to the last iteration in 2011-2013.



A notable deficiency in fertility intentions research to-date is the lack of attention paid to male intentions around fertility and to intentions of minority populations, i.e., those who are *not* female, partnered, white, (and often, middle class) at the time of the survey. Qualitative methods have taken on these groups that have been seemingly neglected by cross-sectional surveys, and have provided an interesting counterexample to the narrative put forth by demographers when it comes to discussions of fertility intentions in the U.S. However, there is still much more work to do. Currently, we see representation of these groups typically in small, focused studies, such as the work of Edin and Kefalas looking at how low-income women, often non-white, in inner city Philadelphia make decisions about childbearing. While these studies are very important for providing the viewpoint of these often neglected groups, we need additional research in order to shed a light on how other groups make decisions around whether, when and how to have children. We should push for more inclusive studies in two ways: 1) cross-sectional and longitudinal surveys that are nationally representative, but perhaps with oversampling of some groups traditionally under-represented in this type of research, in order to have enough statistical power to make comparisons across groups (Note: although the NSFG does oversample non-whites, after stratifying by certain variables of interest (e.g., parity, relationship status) sample sizes often get too small to work with reliably); and 2) qualitative studies that include participants from diverse backgrounds and from different races/ethnicities rather than splitting these groups into separate 'niche' studies.

In closing, fertility intentions have persisted as a topic of interest to researchers from diverse disciplines for at least the past four decades for good reason: they are universal (when asked we all have some intentions about whether or not to have children); they may be useful for predicting larger social trends (labor force participation; population growth); and they are

methodologically and theoretically challenging in their complexity. This paper has provided me an opportunity to think critically about fertility intentions and how they relate to age and changes in social trends in age at first birth, take stock of and critically appraise the research that has been done to-date, and consider where my future research fits in this body of work.

t-test: Is the variable's estimated coefficient significant in the expected direction?

R^2: Does the model fit improve when the variable is included?

Bias: Do other variables' coefficient change significantly when the variable is included?

Source: Studenmund AH. Using Econometrics: A Practical Guide. 2000. New York: Pearson.

Box 2. Gauss-Markov Assumptions (for cross sectional survey data)

MLR1: *Linear in parameters*
The model can be written as in equation *a* above

MLR2: *Random sampling*
We have a random sample of n observations that we can use to estimate the model

MLR3: *No perfect collinearity*
No variables in the sample are constant and there is no exact linear relationship between independent variables

MLR4: *Zero conditional mean*
The error term has an expected value of zero, given any values of y

MLR5: *Homoscedasticity*
The variance of the error term does not vary given any value of x

Source: Adapted from Wooldridge, 2006

Table 1. Fertility Intentions as Measured in Cross- Sectional[g] National Surveys

Data Source	Question	Answer Categories
National Survey of Family Growth (1973; 1976; 1982; 1988; 1995; 2002; 2006-2010; 2011-2013)	Looking to the future, do you intend to have (a/nother) baby at some time (after this pregnancy is over)?	Numeric (Yes; No; NR/DK)
	(Not counting your current pregnancy,) how many (more) babies do you intend to have?	Continuous/Scale Response
Demographic and Health Surveys (years vary by country)	Now I have some questions about the future. Would you like to have (a/another) child, or would you prefer not to have any (more) children?	Numeric (Have another child; No More; NR/DK)
	If you could go back to the time you did not have any children and could choose exactly the number of children to have in your whole life, how many would that be? (women with living children)	Continuous/Scale Response
	If you could choose exactly the number of children to have in your whole life, how many would that be? (women with no living children)	Continuous/Scale Response
Eurobarometer (special edition on Childbearing Preferences and Family Issues in Europe) (2006)	And for you personally, what would be the ideal number of children you would like to have or would have liked to have had?	Continuous/Scale Response
	How many children do you (still) intend to have?	Continuous/Scale Response
	In your opinion, what is the ideal age for a woman to have her first child?	Continuous/Scale Response

[g] Fertility intentions are also measured in some panel studies such as the British Household Panel Survey (UK), the Generations & Gender Programme Survey (Europe) and the National Longitudinal Study of Youth (US) but these are outside the scope of this exam.

I. MATERNAL HEALTH OUTCOMES IN IMMIGRANT WOMEN

i. Literature review

a. *Introduction*

Over the past four decades, patterns of immigration have changed rapidly, with the most dramatic changes observed in female immigration. In 2006, 12.5% of the United States (US) population was foreign-born (1), but foreign-born individuals accounted for over a third of the growth in the US population in the last 30 years (2). The proportion of immigrants that are female is also increasing: in 2000, females accounted for 55% of all immigrants, a much higher proportion than in previous immigration waves. Immigrant women are also more diverse in type and region of origin than in the past. Female immigrants now include family-sponsored migrants, independent labor migrants, refugees and asylees, and undocumented migrants. Since the 1980s, immigration from Latin America and Asia has accounted for 85% of total female immigration (2). Related to that trend, the proportion of births to foreign-born women has grown steadily, from 15% in 1990 to 24% in 2004, a 60% change (3).

While the "immigrant paradox", a term that refers to favorable birth/infant outcomes among immigrant women despite high levels of socio-economic disadvantage, has been well studied, less is known about whether this pattern holds for maternal health (4). This literature review focuses on maternal morbidities and mortality among immigrant women and differential outcomes between immigrant women and native-born women. The review concentrates on outcomes in immigrant women emigrating from less developed countries to more developed countries in the Western hemisphere (predominantly in North America). To provide a comprehensive epidemiological profile of immigrant women, the outcomes span three periods across the periconceptional continuum: the antepartum period, the peripartum period, and the postpartum period. The antepartum period covers the period from conception to birth. Adverse conditions and outcomes that arise in this period are closely linked to preconception health. The peripartum period covers a briefer period from immediately before labor until immediately after delivery. The postpartum period typically covers the period from delivery to 1-2 years after delivery. This review concentrates on four adverse outcomes that are relatively prevalent and/or severely compromise the health

of mothers in the US: gestational diabetes mellitus (antepartum), maternal morbidity (peripartum), postpartum depression (postpartum), and maternal mortality (antepartum, peripartum and postpartum).

In addition to describing and evaluating the occurrence of these key outcomes among immigrant women and the risks associated with nativity status, this review highlights several common methodological challenges, including conceptualization of causal pathways, appropriate comparison groups, lack of necessary adjustment for confounding, and non-representative samples. Studies differ in their conceptualization of covariates and potential causal pathways. Some authors envision key factors, such as socio-economic status, as confounders of the relationship between nativity and maternal health. Yet others characterize these same covariates (e.g. SES, social support) as intermediaries in the pathway from nativity to maternal health outcomes. While most studies treat obstetric-related risk factors (e.g. maternal age, parity, receipt of prenatal care) as confounders, there is less uniformity regarding social determinant risk factors. Comparison groups are particularly important when examining differences between immigrant and native-born women. The literature is mainly divided between studies using all native-born women as the reference group to all foreign-born women and studies employing within stratum comparisons (e.g. comparing US-born Hispanic women to foreign-born Hispanic women, or more specifically, Mexican-born women to US-born women of Mexican descent). While the choice of comparison group depends partly on the research question, finer categorizations of immigrant women and within stratum comparisons might be most appropriate, especially when interested in the effects of the post-migration environment, such as the effects of acculturation (e.g. time since migration, language proficiency) and social support. Confounding, in general, is a particular concern in studies of the effects of nativity due to the social, economic, and obstetric differences between native-born and foreign-born women and their potentially strong effects on the outcomes reviewed here. Lastly, non-representative samples are subject to selection biases and may not be representative of either foreign-born or native-born populations.

b. *Gestational diabetes mellitus*

Gestational diabetes mellitus (GDM), defined as carbohydrate intolerance with onset or first diagnosis in pregnancy, is a growing concern in the US. The most recent national estimate of GDM is 3.7% (as of 2001 from the National Hospital Discharge Survey) and has increased across all racial and ethnic groups in the US in the past decade (1,5). Gestational diabetes is linked to a 10-50% higher risk of maternal type-2 diabetes in the 5 years after birth and several poor birth outcomes, including macrosomnia and preterm birth. Risk of GDM is highest among older women (35 years and more), women with a low socio-economic status, Native-American women and women from Asia and the Middle East (5).

Several studies have examined the prevalence of GDM among foreign-born women in the United States. There has been one nationally representative study, 4 regionally representative studies, and a handful of smaller, non-representative ones. Studies have reported a range of estimates for overall prevalence among foreign-born women: from 3.0% to 8.5% (1, 6, 7). All studies have, however, identified variation in GDM prevalence between foreign-born subgroups, and for the most part these country-specific estimates have been similar across studies. For example, in a large, population-based study of US births, the prevalence of GDM was highest in Asian Indian women (6.5%) and lowest in Japanese women (1.9%) [6]. Two other regional studies in the US found a similar pattern of highest prevalence among Asian Indian women and lowest prevalence among Japanese women (1, 8). A NYC population-based study was able to look at finer categorizations of country of birth for regions outside of Asia. The authors found the highest GDM prevalence among Indian women, who had a prevalence of 11.9%, and the lowest prevalence amongst Ecuadorean and Panamanian women (each 4.4%) [7].

Due to the considerable variation in GDM prevalence by region of origin, most US studies have compared subgroups of foreign-born women to their US-born counterparts and thus report odds ratios for the nativity-GDM relationship stratified by ethnicity or region of origin (1, 6-9). These studies have found general consistency: within strata of ethnicity, foreign-born women have higher risk of GDM than their

US-born counterparts; and there is variation in the nativity-GDM relationship by ethnicity/region of origin.

Although Hispanic foreign-born women tend to have elevated risk of GDM compared to their US-born counterparts, the relationship between GDM and nativity varies by country of origin. Ramadhani and colleagues reported an odds ratio of 2.2 in foreign-born Hispanic women versus US-born Hispanic women adjusted for age, smoking and drinking status (9). Amongst Mexican women, the relationship between nativity and GDM has not been consistent across studies. Adjusting for age, Braun and colleagues reported a 13% greater odds of GDM among Mexican-born women compared to US-born, Hispanic women in Colorado (it was unclear whether the women who identified as US-born Hispanics were of predominantly Mexican origin) [4]. Two regionally representative studies found a 25% and 50% greater odds of GDM among foreign-born Mexican women compared to their US-born counterparts adjusting for multiple demographic and obstetric factors (e.g. pregnancy weight gain, prenatal care) [1, 7]. However, a nationally representative study reported a decreased odds among Mexican foreign-born women compared to their US-born counterparts, adjusted for age, prenatal care, education, marital status and parity (aOR=0.91, 95% CI 0.90-0.92) [6]. For other Hispanic nationalities (e.g. Puerto-Rican, Dominican, Central and South American), studies report significantly higher prevalence among foreign-born women compared to their US-born counterparts, although there is variation in magnitude between studies (i.e. aOR/aRR ranges from 1.07-1.20 for Caribbean Hispanic and 1.07-1.70 for Central/South Americans) [6, 7].

Studies comparing foreign-born and US-born women of African descent are less consistent. Studies that have adjusted for various demographic and obstetric factors, have reported 14% (aOR=1.1, 95% CI 1.1-1.2) and 80% (aOR=1.8, 95% CI 1.5-2.2) higher odds of GDM among foreign-born Black women compared to US-born counterparts (1, 6). However, a national study comparing foreign-born Black women to their US-born counterparts reported a decreased though non-significant odds of GDM adjusting for age and smoking/drinking status (aOR=0.8, 95% CI 0.2-1.8) [9]. One regionally representative study with within region of origin comparisons found that foreign-born non-Hispanic

Caribbean women had a 40% higher adjusted risk of GDM than their US-born counterparts, while sub-Saharan African women had a non-significant 60% higher adjusted risk of GDM compared to their US-born counterparts. Further disaggregation of the Caribbean group by national origin showed that foreign-born Haitian women had a 50% greater adjusted risk of GDM, while foreign-born Jamaican women had a non-significant 10% greater adjusted odds of GDM (7).

Studies have also found considerable variation by country of origin amongst Asian and Pacific Islanders. Several studies have reported higher adjusted odds of GDM among foreign-born than US-born women in the following country of origin groups: Filipina (aOR=1.1, 1.8, 1.9), Indian (aOR=1.3, 1.7, 1.8), Chinese (aOR=1.3, 1.5) and Pacific Islanders (aOR=1.5) [1, 6-8]. In contrast, studies have reported lower adjusted odds of GDM among foreign-born Japanese and Korean women compared to their US-born counterparts (1, 8).

Few studies have examined variability in known risk factors among immigrant and native-born women in the US or abroad. The few that have examined these associations have found that immigrant women have lower prevalence of traditional obstetric risk factors such as pre-pregnancy overweight/obesity and pregnancy weight gain than US-born women (1, 9). However, researchers have noted that immigrant women are more likely to be older at the time of pregnancy than their US-born counterparts; older age is a strong risk factor for GDM. Three US studies found that adjustment for maternal age attenuated, but did not remove the association between nativity and GDM for most regions/countries of origin (4, 6, 9). These findings suggest that maternal age only partially explains the difference in risk of GDM observed between many immigrant and US-born women. Two studies have shown that additional adjustment for socio-economic status, timing of prenatal care, and parity further attenuated (compared to age-adjusted model), but did *not* remove the association between nativity and GDM. However, the magnitude and significance of the associations after full adjustment differed by nationality (see Appendix) [1, 6]. In contrast, in a study of Hispanic women in Colorado, adjustment for educational differences removed the association between Mexican-born and US-born Hispanic women (4). Only one study adjusted for BMI during pregnancy; this study found that further adjustment for

anthropomorphic differences strengthened the positive associations between nativity and GDM among some ethnic groups: non-Hispanic white, Black, Chinese, Indian, Filipina, Pacific Islander, and Mexican women (1). These findings suggest that the relative contribution of demographic and obstetric differences differs by region of origin/ethnicity and underscore the importance of examining stratified associations.

Conclusions: This review of GDM studies shows considerable variability in GDM risk both across racial/ethnic groups and regions of origin. Some immigrant subpopulations (e.g. South Asians and Filipinas) show consistently higher rates of GDM compared to their US-born counterparts, while a smaller subset of other subpopulations show lower rates (e.g. Japanese and Korean). The findings for some populations are inconclusive, as the magnitude and direction of the association within these subgroups varies from study to study (e.g. women of African decent and Mexicans). Differences in the risk of GDM among subgroups might be due to differences in time since migration or to differences in the prevalence of risk factors in the country of origin (8). Other inconsistencies could arise from comparison group differences.

While more in-depth studies that examine variation in risk factors are needed, some evidence suggests that the influence of traditional GDM risk factors, such as obesity and age, might vary between foreign-born and US-born women by region of origin. Traditional anthropomorphic risk factors seem to be less significant predictors of GDM risk among certain subgroups of immigrant women, most notably in Asian and Pacific Islanders (1, 8). Socio-economic factors, on the other hand, might explain differences by nativity status among Hispanic women in particular. The extent to which innate genetic differences that affect glucose metabolism, migration-related selection factors, and post-migration acculturation-related factors affect risk of GDM in immigrant women is unknown. Furthermore, it is likely that these factors (particularly genetic and post-migration environmental factors) interact with one other. One interesting, alternative explanation of nativity-related differences in GDM risk is the early life programming hypothesis, which posits that a poor (i.e. calorie restricted) environment *in utero* and in the early postpartum period predisposes individuals to metabolic syndrome in adulthood when these individuals experience food abundant environments. Poor prenatal nutritional environment changes

postnatal metabolism and thus programs individuals to store fat, leading to a greater risk of diabetes (10, 11). More studies are needed to identify the cause(s) of variation in GDM risk observed among subgroups of immigrant women.

c. *Maternal morbidity in the peripartum period*

A broad category, peripartum maternal morbidity encompasses numerous conditions that occur immediately before or after delivery, including preeclampsia, perineal lacerations, and placental disorders. General risk factors for peripartum maternal morbidity include older maternal age (≥ 35 years), parity (e.g. higher parity for placental abruption and nulliparity for laceration), and history of the condition in a preceding pregnancy as well as pre-pregnancy conditions (e.g. hypertension, GDM). The prevalence of peripartum morbidity varies by condition: the prevalence of immediate postpartum hemmorhage was 2.1% in 2001, while hospital-based prevalence estimates of perineal laceration ranged from 2.2-19.9% in the US (5).

Only a few studies have examined maternal morbidities of the peripartum period among immigrant women and compared immigrant women to their native-born counterparts. Two studies have been conducted in the US and have reported similar results. In a retrospective cohort study of births at an inner-city hospital in Atlanta, foreign-born women had a nearly 2-fold higher risk of perineal laceration than US-born women (OR=1.7, 95% CI 1.7-1.8). When stratified by region of origin, all foreign-born subgroups had higher risks than US-born women; however, the association was strongest among foreign-born Asian and African women compared to all US-born women (RR=2.2, 95% CI 2.0-2.4 and RR=2.0, 95% CI 1.4-2.9). Only African foreign-born women had a statistically significant risk (no relative risk reported) of hemorrhage compared to US-born women, possibly due to higher prevalence of female genital cutting and its associated scarring and obstruction (12). A population-based study of births in Washington State reported an increased risk of placenta previa and febrile illness among foreign-born Southeast Asian (SEA) women compared to US-born, non-Hispanic white women. Specifically, foreign-born Cambodian and Vietnamese women had 70% (OR=1.7, 95% CI 1.2-2.4) and 100% (OR=2.0, 95% CI 1.7-2.6) greater risks of placenta previa compared to US-born white women, adjusted for gestational

age, birth weight, and method of delivery. All groups had a lower risk of preeclampsia compared to that of US-born white women. Higher risk of placenta previa in SEA women might be due to abnormal placental migration and larger placenta (known to be associated with higher parity) [13].

One Canadian, population-based retrospective cohort study examined the relationship between recent immigration and maternal placental syndrome, defined as preeclampsia/eclamspsia, placental abruption or placental infarction at the index delivery. The reference group included those residing in Ontario for more than 5 years, which included both women born in Ontario and those who immigrated more than 5 years prior to delivery. The authors found a progressively lower adjusted risk of placental syndrome associated with recent immigration in models adjusted for age, income, pre-existing hypertension, diabetes, multiple gestation, and receipt of prenatal ultrasonography at 12-24 weeks gestation. For example, those who immigrated 3 months prior to delivery had a 89% decreased adjusted risk of placental syndrome, with the risk rising in a graded manner with longer time since migration. More recent immigrants in this study also had lower rates of independent risk factors for placental syndrome, such as of obesity and hypertension, than longer residing immigrants and Canadian-born women. The graded effect of duration was also observed within strata of income, suggesting that socio-economic factors did not fully explain risk associated with duration (14).

Conclusions: Far from definitive, the limited body of US-based literature is suggestive of an increased risk of some maternal morbidities among foreign-born vs. US-born women. Risk of peripartum morbidities, such as perineal laceration, seems to be strongest among women from Africa and Asia. However, an important limitation exists within the US studies: lack of adjustment for potential confounders. At a bare minimum, these studies should adjust for differences in age and parity (two maternal characteristics associated with both peripartum morbidity and nativity). Other maternal obstetric risk factors, such as small pelvic size, genital cutting, history of prior maternal morbidities (e.g. GDM), and method of delivery, might have mediated or confounded the relationship between nativity status and peripartum morbidity. Notably, the comparison groups used in the two US studies were US-born women and US-born white women. These comparison groups might be useful in ranking the peripartum risk of

subpopulations. On the other hand, such comparisons have limited utility for addressing questions about the role of acculturation or adaptation in the post-migration environment. Acculturation-related factors, particularly language preference and proficiency, might be a fruitful avenue for future research. Communication barriers specifically in the second stage of labor might result in prolonged labor leading to greater risk of hemorrhage and laceration (12). The Canadian study suggests deteriorating health with increasing duration of residence (14); however, the study might not be generalizable to the US context, in which differences in access to prenatal care and migration-related selection might have different impact on findings.

d. *Postpartum depression*

Postpartum depression, a clinical depressive condition that can affect women up to a year after delivery, is the most common complication of childbearing (15). Mothers with a history of postpartum depression are at risk for a number of poor health and social outcomes, including, recurrent episodes of depression either related or not related to childbirth (16), family discord and loss of income (15). Ten to fifteen percent of new mothers in the US develop symptoms indicative of depression in the postpartum period (17). Prevalence estimates of depressive symptomatology among immigrant women range from 8% to 38% (18-28). Most studies in the US and other developed Western nations have found higher levels of postpartum depression among immigrant women than native-born women (18, 20-25, 27, 28). However, studies that have examined the association between nativity and postpartum depression across racial/ethnic strata have found variable results (26, 29). Comparison across studies is complicated by a number of methodological issues, some of which are similar to those identified in the earlier gestational diabetes section. Many studies do not use representative samples. Even when representative samples are employed, sparse cell bias may occur especially when immigrant and native-born women are disaggregated by race/ethnicity. Socio-economic status and the amount and quality of social support might also help explain the relationship between nativity status and postpartum depression (as intermediary variables); however, inclusion of these factors in multivariable models varies widely from study to study.

Canadian studies have consistently found higher rates of depression among immigrant women compared to those born in Canada, with particularly high rates among those from non-English speaking countries in developing regions. Two well-designed studies conducted in Canada found considerable differences between foreign- and Canadian-born women. One population-based study of postpartum depressive symptoms reported that 25% of immigrants from minority groups (i.e. born in a country outside of Europe or outside of a country with major English ancestry) vs. 11% of Canadian-born women and 8.3% of immigrant women from majority groups (i.e. born in Europe or country with major English ancestry) experienced high levels of depressive symptoms on the Center for Epidemiologic Studies Depression Scale (CES-D) (24). A similar Canadian study examined postpartum depressive symptoms using the Edinburgh Postnatal Depression Scale (EPDS) in subgroups of immigrant women by entry status and Canadian-born women. This study found elevated levels of depressive symptoms among non-refugee immigrant women (35%), asylum seekers (31%) and refugees (26%) compared to Canadian-born women (8%). After adjusting for prenatal care and visible minority status, immigrant women still had a 4-fold greater odds of having postpartum depressive symptoms compared to Canadian-born women (22).

While these studies suggest higher incidence of postpartum depression among foreign-born women compared to their native-born counterparts, few studies have examined variability in risk factors to help elucidate potential causes behind these patterns and adjust for potential confounding. Researchers have identified several factors that may predispose immigrant women to postpartum depression including established risk factors such as stressful events, low social support and marital strain as well as immigration-specific factors such as discrimination in the host country in single group studies (i.e. immigrants only) and smaller two-group studies (i.e. bivariable associations between nativity and potential risk factors) [23, 30]. Only two well-designed, Canadian studies have used multivariable analysis to examine risk factors in immigrant and non-immigrant women. One of the Canadian studies found a significant inverse association between self-rated health and postpartum depression symptoms among Canadian-born women, adjusting for income and education, but not among immigrant groups. Immigrant women from minority-status groups had a higher probability of depressive symptoms

regardless of their self-rated health. The authors concluded that Canadian-born women might be more likely to incorporate mental health into their conceptualization of general health than immigrant women (24).

A recent cross-sectional analysis of a sample of pregnant Canadian women, examining the potential mediating roles of socio-economic and social support in the relationship between length of stay and postpartum depression, found higher prevalence odds of depressive symptoms in foreign-born than Canadian-born women independent of length of stay. After adjusting for socioeconomic factors, differences in odds of depressive symptoms between foreign-born and Canadian-born women were attenuated. For example, intermediate-term immigrants (i.e. 3-8 years residing in Canada) had a 35% greater odds (aOR=1.35, 95% CI 1.03-1.77) of depressive symptoms than Canadian-born women in the model with socioeconomic factors compared to 61% greater odds (OR=1.61, 95% CI 1.28-2.03) in the unadjusted model. The association between immigration status and depressive symptoms was further attenuated after adjusting for social support [e.g. for intermediate-term immigrants: 6% greater adjusted odds (95% CI 0.79-1.22) of depressive symptoms than Canadian-born women]. Similar attenuation was found across models for recent (fewer than 2 years) and long-term (9 or more years) immigrants. However, the magnitude of the attenuation after adjusting for socio-economic status was greatest among long-term immigrants, whereas attenuation was greatest among recent immigrants after further adjusting for social support (31). These results suggest that differences in the occurrence of depressive symptoms by nativity status may be related to differences in social support and socio-economic status, but patterns are difficult to confirm due to demonstrated variability by region/ethnicity and a limited body of studies.

In contrast to the Canadian studies, most US-based studies lack either direct (18, 19, 32) or adjusted comparisons between immigrant and native-born women (26, 29). One nationally representative study in the US used a population-based sample, and found that US-born women had a slightly higher level of any depressive symptomatology than foreign-born women: 42.0% (95% CI 40.0-44.0) in US-born women vs. 36.1% (95% CI 32.7-39.5) in foreign-born women. US-born women had a significantly higher level of depressive symptomatology within Black, White, Hispanic groups but not Asian and

Pacific Islanders. For example, foreign-born Asian women had a higher level of depressive symptomatology than US-born Asian women: 41.2% (95% CI 37.5-44.9) in foreign-born vs. 32.3% (95% CI 19.5-45.1) in US-born. This study involved small sample sizes for Asian and Pacific Islanders limiting their power to detect differences in these subpopulations. In contrast, Hispanic and Black foreign-born mothers had a slightly lower prevalence of depressive symptoms than their US-counterparts despite greater rates of poverty. The authors noted that greater social support (measured as the presence of a partner at home) and lower rates of teenage birth among foreign-born, Hispanic and Black mothers might counter the harmful effects of socio-economic strain; however, they did not perform multivariable analyses to explore the relative contribution of these factors (26).

In a non-population-based US study, the authors directly compared US-born women of any race/ethnicity to three groups of foreign-born women (Vietnamese, Congolese, and Hmong) and examined the relationship between depression and infant development. All three groups share a history of social violence, colonization, and have large refugee populations in the US. Using the depression subscale of the Hopkins Symptoms Checklist-25, only Congolese women had a mean score indicative of clinical distress (2.15) [29].

A handful of studies have examined acculturation factors (e.g. language, duration of residence) and postpartum depression. In general, these studies have not found a consistent relationship between various measures of acculturation and higher levels of depression. Studies conducted in the US have focused exclusively on the Latina population. One study using a convenience sample of pregnant and postpartum Latinas from public clinics in San Antonio, Texas, found that US-nativity and English preference were associated with elevated levels of depressive symptoms using the EPDS in bivariable analysis (33). Another US study using a brief acculturation scale validated in a mixed-gendered Hispanic sample (the Short Acculturation Scale) found no significant relationship between acculturation status and postpartum depression (34). It should be noted that although acculturation is a complex, multidimensional construct, studies to date have used crude measures of acculturation (even the validated scale was based

solely on language preference). In addition, most studies examining acculturation lack adjustment for potentially confounding variables.

Conclusions: While a consistent pattern of higher risk among foreign-born women and specific subgroups of foreign-born women (e.g. from non-English speaking developing countries) emerged from a series of Canadian studies, the limited US literature is inconsistent and has several limitations. Similar comparative studies have not been conducted in the US and there is a need for studies that examine differences in well-established risk factors for postpartum depression between immigrant and US-born women. In particular, studies should examine whether or not variations in social support and SES might explain observed nativity-depression associations. In addition, acculturation-related factors are important as potential modifiers, and studies to date have been limited in their exploration of acculturation influences. Questions remain regarding the impact of different acculturation-related factors, such as age at migration, duration of residence, language preference, on depression in the postpartum period. In addition, the interplay between acculturation status and key social determinants (e.g. SES and social support) has not been studied in the US.

e. *Maternal mortality*

Maternal mortality is rare in Western, developed countries, largely reflecting a high level of general health and adequate access to medical care (5,35). Maternal deaths are sentinel events that are thought to correspond with maternal morbidity. Not only medically determined, maternal deaths are also related to larger social and economic conditions of the mother or group to which she belongs (35). Maternal deaths are classified as direct (resulting directly from the pregnancy) or indirect (resulting because pregnancy exacerbates a pre-existing condition or illness) [5]. The US has one of the highest levels of maternal mortality among developed regions; in the US, the maternal mortality ratio [defined as the number of pregnancy-related deaths in a year/number of live births in a year x 100,000 (5)] was 15.1 per 100,000 live births in 2005 (36). Only two studies, to the best of my knowledge, have examined maternal mortality in immigrant women in the US, and comprehensive US-based studies of maternal mortality and nativity are lacking. One earlier report found a significantly higher mortality ratio amongst

foreign-born Hispanic and Asian women compared to their US-born counterparts from 1991-1997. Specifically, foreign-born Hispanic women had a 50% greater pregnancy-related maternal mortality ratio than their US-born counterparts (11.8 v. 8.0 per 100,000 live births). Asian-Pacific Islanders had an 80% greater pregnancy-related maternal mortality ratio than their US-born counterparts (12.7 v 6.1 per 100,000). However, the authors noted that the US-born ratio for Asian-Pacific Islanders should be interpreted with caution due to instability of the estimate (fewer than 7 events occurred in this subgroup). Mortality ratios did not differ between foreign-born and US-born Black women (37). Another hospital-based study in Georgia found a non-significantly, elevated risk of maternal mortality among foreign-born women compared to US-born women (RR=1.2, 95% CI 0.5-2.5). The wide confidence interval was due to the small number of maternal deaths that occurred from 1991-2001 (12).

Most studies that have focused on the immigrant subpopulation have been conducted in Europe. These studies have consistently found a pattern of higher mortality among immigrant women from less developed regions than native-born women. Using data from 1970-1985 in one of the earliest studies to document higher maternal mortality in immigrant women, Ibison and colleagues reported a 2-fold increased risk of maternal death among women born in Asia, and a 5-fold increased risk among women born in Africa and the Caribbean, after adjusting for age and year of death, compared to their English-born counterparts. Foreign-born and native-born women were similar in parity and social class; these factors likely did not explain differences in mortality between the two groups (38). One recent population-based, case-control studies conducted in the Netherlands reported highly elevated odds of death among non-Western immigrants (OR=2.1, 95% CI 1.6-2.7), women from Surinam/Dutch Antilles (OR=2.7, 95% CI 1.7-4.3), and other immigrants from Africa and Asia (OR=3.3, 95% CI 2.3-4.8) compared to their Dutch-born counterparts (39); and another population-based, case control study in Spain reported a high age-adjusted odds of death among immigrant women compared to Spanish-born women (aOR=1.9, 95% CI 1.0-3.3) [40].

Researchers have suggested that substandard care is a main determinant of differential mortality in immigrant and native-born women. One follow up study examining sub-standard care in the

Netherlands was conducted on 101 direct maternal deaths. Refusing medical advice, delay in general practictioner's (GP's) recognition of symptoms, delay referral by GP, inadequate antenatal care by midwife were all more likely to occur among foreign-born than Dutch-born women (p <.05). For preeclampsia cases only, insufficient treatment of hypertension and seizures were more likely to occur in foreign-born than Dutch-born women (p=<.05 and <.01 respectively) [41].

Conclusions: These findings from Europe suggest a consistent pattern of increased risk of maternal death in immigrant women compared to their native born counterparts. These findings are consistent across region of origin, and there is some evidence from European countries that the increased risk among foreign-born women is growing (see 35). While studies in the US are quite limited and small in sample size, there is some evidence from a national sample that maternal mortality ratio may be higher in foreign-born women than US-born women in certain racial/ethnic strata (e.g. Hispanic women). Maternal mortality is a rare event in developed regions. Two factors might be contributing to differential mortality between immigrant and native-born women: poorer health status of immigrants from developed regions and poor quality of care due to cultural incompetence, interpretation issues etc. Additionally, in the US, differences in insurance status might explain higher mortality in foreign-born women. There is some evidence that suggests that poor quality of care might be driving greater risk of death in foreign-born women in the Netherlands and in other European countries (41). More studies are needed to determine which factors play a role in the potentially higher risk of maternal death among immigrant women in the US.

f. *Explanations/hypotheses of immigrant maternal health*

Researchers have offered various explanations for the observed relationships between nativity status and the maternal health outcomes explored in this review. Several overarching themes emerged in this review, which are summarized below: biological factors, health care access and quality of care, culturally determined attitudes and practices in pregnancy/postpartum, and migration-related experiences.

Biological factors: Some researchers have suggested that biological and genetic factors may account for differences in maternal health outcomes observed in immigrant and native-born women. Biological

explanations are most applicable to the peripartum morbidity and GDM literature. For example, in regards to peripartum morbidities, some have noted that larger placentas and prolonged labor due to smaller pelvis size among Asian women might contribute to the higher prevalence of certain morbidities such as perineal laceration (13). Researchers have also suggested a role for genetic factors specifically in regards to GDM (1, 4, 6, 8, 38). For example, the "thrifty gene hypothesis" posits that diabetic genotypes confer a survival advantage in times of famine by maximizing excess food energy, but increase the risk of obesity and diabetes in times of abundance (8). In addition, as mentioned in the GDM subsection, the early-life programming hypothesis asserts that malnutrition during fetal development (regardless of the specific genotype) results in impaired pancreatic *beta*-cell functioning (important for glucose metabolism) [10, 11]. Consequently, immigrant women from countries where under-nutrition is prevalent might be pre-programmed to develop GDM when exposed to food abundance and physical inactivity (1). While biological factors may play a role in increasing susceptibility to certain maternal conditions, it is important to consider the combined effects of biological factors and the environment. For example, having a certain genotype, such as the thrifty genotype, does not, in and of itself, predict or explain disease. Instead, it is the interplay between the genotype and the environment (as well as health behaviors such as dietary changes) that might lead to disease. In addition, underlying genetic/biological factors cannot explain differences in outcome by region of origin (since women with shared ancestry are presumed to share similar genetic profiles).

Health care access and quality of care: In host countries, immigrant women face numerous barriers to accessing appropriate and culturally competent health services. These barriers are related to income, legal immigration status, language and lack of interpretation services, and culture (12, 28, 35, 42). Not only do these barriers potentially prevent or delay immigrant women from obtaining health care, but they also impact the quality of care they receive when accessing services (43). Health care access and quality explanations are particularly salient to peripartum morbidity and maternal mortality. In addition, experiences with barriers to care and inadequate care might be more common for recent immigrants, those who belong to more recent immigrant waves (presumably less established subgroups), and those without

legal status to reside in the host country. Some studies in this literature review have documented cases of substandard care, particularly in obstetric care during or immediately after delivery. Interestingly, authors have asserted that language and communication difficulties, social distance and isolation could all affect the substandard care observed among immigrant women (39, 40). Communication issues as well as isolation might be potential intermediaries through which immigrant women receive sub-standard care in their host country due to undetected early symptoms or misunderstanding regarding treatment (44).

Culturally-determined attitudes and practices in pregnancy/postpartum: Cultural attitudes and practices have special importance during pregnancy and the postpartum period (30, 45, 46). Researchers have suggested that the disruption of postpartum rituals (i.e. practices and beliefs surrounding childbirth and the postpartum period) and the related disruption of relationships with key family members, who are important sources of support, guidance and knowledge in the postpartum period, might put immigrant women in a particularly vulnerable state during and after migration (45, 47). Immigrant women might also be expected to carry out traditional practices even in the absence of necessary social support from family and community members who share common beliefs and practices, which might create greater strain for new mothers (45). Furthermore, expectations around motherhood may differ between the native and host country; thus, immigrant women may experience unfamiliar and culturally incongruent standards and norms (47). Socio-cultural attitudes and practices are likely to play an important role in the development of mood disorders, possibly more so than in the other maternal outcomes discussed in this review.

Migration-related factors, including acculturative stress: Immigration and childbearing are interconnected processes. Immigrant women tend to have high rates of childbearing after immigration (48). Migration related factors include pre-migration factors, post-migration factors and the impact of economic, social, and cultural changes associated with immigration (49). Examples of pre-migration factors affecting the morbidities and mortality discussed in this review include trauma in the country of origin stemming from experiences of war and socio-political upheaval (46), female-genital cutting (12, 35), the health status of the country of origin (e.g. malnutrition, diabetes) [8], and pre- or inter-pregnancy conditions (e.g. STIs

and other infections, family planning, inadequate prenatal care in previous pregnancies). Trauma from violence and social upheaval might predispose immigrant women to mental health issues (23, 46). Female genital cutting might account for higher rates of 4th-degreee perineal laceration and postpartum hemorrhage, which might occur more frequently among women with scarring and obstruction from female genital cutting (12). Finally, endemic malnourishment or other poor nutrition patterns in sending countries might lead to higher prevalence of GDM among some immigrant groups (4, 6).

In addition, post-migration experiences often involve exposure to multiple stressors that might affect maternal health, such as language and cultural barriers, concerns over legal status, unemployment, homelessness, social isolation, lack of access to education and health care, separation from family and marital strain, and discrimination (46, 50). Some immigrant women experience overlapping life transitions migrating to a new and unfamiliar country and adjusting to life with a new infant. These dual transitions may produce high levels of stress, which is compounded when one does not speak English, has financial difficulties, faces discrimination and social isolation, or lacks familiarity with the host country's health care practices and delivery system (23, 29, 46). Moreover, migration is associated with increases in physical inactivity, psychosocial stress, and changes in diet that might put additional stress on beta cells and interact with metabolic susceptibility to diabetes (1, 6).

The "healthy immigrant effect" and "acculturation paradox" are important explanations of immigrant health (14, 43, 49, 50). The "healthy immigrant effect" refers to the generally better health status of immigrants who recently immigrate compared to US-born individuals. However, immigrants' health may deteriorate over time as immigrants adopt unhealthy behaviors and experience difficulties and barriers to health care; this deterioration in health is known as the "acculturation paradox" (49, 50). The "acculturation paradox" might account for the relationship seen between time since immigration and maternal health outcomes, as observed by Ray and colleagues in their study of placental syndrome (14). Another explanation of deteriorating health is selective return migration (i.e. healthier immigrants returning to their country of origin). Ceballos and colleagues note that relatively young, reproductive aged women have different reasons for staying in the host country or migrating home than elderly individuals

who may return to their home countries to die (51). Sicker immigrant women may remain if they perceive better quality of care for themselves and their infant in the host country (50), which might account for the relationship between duration and poorer maternal outcomes. A recent simulation study, utilizing hypothetical probabilistic models based on the assumptions of both acculturation and return migration hypotheses, found that acculturation had a greater effect on birth outcomes over longer durations, while the effect of selective return migration was greater at shorter duration (51). It is not know whether these associations hold for maternal health outcomes.

ii. Limitations

Several notable limitations exist in this literature and cut across the maternal outcomes discussed in this review. One important limitation is the availability of data. Data on region or country of birth, entry date, age at migration, duration of residence, language proficiency, and other acculturation-related factors are not routinely collected. Consequently, their relationships (individually or collectively) to maternal health have been understudied (13). Due to considerable within-group variation, treating immigrant women as a homogeneous group is not warranted and can lead to the masking of important subgroup effects. Furthermore, acculturation factors might be important potential mediators/moderators of adverse outcomes, and multidimensional measures are needed to ensure adequate construct and content validity. In addition, with one exception in the postpartum depression literature (23), there has been little examination of pre-migration factors and their impact on maternal health. Health status and social conditions during preconceptional and interconceptional periods have been recognized as having an equal role in determining maternal health outcomes, and the pre-migration period might overlap with preconception/interconception periods. An examination of pre-migration factors also allows for a broader conceptualization of health across the life course, both the accumulation of adverse exposure as well as exposure in critical periods (such as fetal development) *before* migration might impact the health of pregnant and postpartum immigrant women once in the host country.

Lastly, there are four main limitations related to study design. First, an important methodological limitation is the predominance of non-random, convenience samples. With such designs, it is difficult to

know the extent to which findings are representative for either native-born or immigrant women. Second, retrospective study designs are subject to recall bias. Recall in the postpartum period might be related to the birth experience: those with poorer birth experiences or outcomes might be more likely to report adverse exposure during pregnancy. Third, residual confounding particularly by uncontrolled obstetric factors, such as age, may bias estimates of the nativity-maternal health relationship. Fourth, bias from differential outcome ascertainment is a concern, particularly in the maternal mortality literature. For example, due to delays in the initiation of prenatal care, language barriers, and complex health systems, immigrant women's pregnancy status might not be known at the time of death. As a result, cause of death might be incorrectly classified as a non-maternal code (35).

iii. Conclusions and future directions

In sum, this review has shown that across several conditions, some subgroups of immigrant women experience worse outcomes than their native-born counterparts. The evidence of poorer outcomes among immigrant women seems strongest for GDM; however, there is considerable variation by ethnicity and region of origin. On the other hand, the evidence from the US is not as consistent for postpartum depression. Studies on peripartum morbidity and maternal mortality among immigrants in the US are suggestive of worse outcomes, but inconclusive due to their small number and considerable methodological flaws. A consistent theme throughout the maternal health literature is heterogeneity in risk within immigrant women. This review clearly highlights the importance of differentiating immigrant women by country of birth, time since migration, and other factors that could potentially affect exposures and outcomes. Furthermore, the associations between nativity and various maternal health outcomes might not be static across time, as changes in immigration policy and the socio-political climate and population health in sending countries affect the demographic composition and health status of migrants entering the US. There is a need for richer and larger data sets that allow for stratification by important immigration-related factors.

Interestingly, the findings of this review are in sharp contrast to the better outcomes generally observed among infants born to immigrant mothers. However, it is important to note that the observed

health advantage found in perinatal (e.g. low birth weight, perinatal mortality) and other health outcomes among immigrants might be confounded by changes in immigration policy (e.g. stricter health requirements for entrants) [14] or modified by time since migration. On the other hand, infant outcomes typically associated with the maternal conditions reviewed here (e.g. macrosomnia for GDM, birth injury for perineal laceration) are under-studied in immigrant populations (thus, it is not known whether infants born to immigrant women fare worse on these particular outcomes). A complex, constellation of contributing factors potentially affect maternal outcomes and differences in outcomes between immigrant and native-born women. Clearly, immigrants may face multiple challenges during migration and in adjusting to life in a new country (44, 46). These myriad challenges might compromise their health specifically during the vulnerable period of pregnancy and might interact with pre-existing biological susceptibility and psychosocial morbidities. Lastly, a glaring gap in this literature is the dearth of studies of maternal mortality among immigrant women from less developed regions conducted in the US. Since maternal mortality in developed nations is considered a barometer of the social and economic environment and the quality and responsiveness of the health care system, differential outcomes by nativity status are likely, as has been observed in several European studies. Research has documented well-known differences between immigrant and native-born women's access to health care and their social and economic resources and support, it is thus imperative to examine maternal mortality within immigrant groups and between immigrants and native-born residents in the US.

II. CHRONIC STRESS AND BIRTH OUTCOMES

i. Review of the literature

a. *Key concepts and definitions*

Given the high prevalence of adverse birth outcomes, such as preterm birth (PTB), small for gestational (SGA) and low birth weight (LBW), and their potential impact on long-term health, contributing factors to these birth outcomes have received considerable attention. Psychosocial stress has been widely recognized as a potential risk factor for multiple adverse birth outcomes (52). Stress is a multidimensional construct that consists of three component parts: the stressor, appraisal of the stressor, and response to the stressor (53-55). In a general model outlining how stress leads to adverse health, stress is conceptualized as an imbalance between environmental demands (both acute and chronic) and individual resources (e.g. personality, financial conditions, social support). This imbalance leads to increased stress perception and maladaptive emotional response, such as anxiety and depression. In turn, maladaptive emotional response leads to behavior change and increased risk of adverse health events (53, 55). In this model, stress is viewed as a person-environment transaction (54).

Initial studies of the impact of stress on birth outcomes, typically defined stress as stressful life events during pregnancy. However, there are a couple of disadvantages to this definition. The frequency of stressful life events in pregnancy is low and their effects cannot be easily disentangled from those of chronic stress (52, 56). Furthermore, chronic and daily stressors seem to be more predictive of poor health conditions than one-time, infrequent life events (57). For these reasons, in recent years, researchers have broadened their definitions of stress to include chronic stress. Chronic stress is measured by multiple exposures including anxiety and depression, household strain, daily hassles, pregnancy-related anxiety and intendedness, racism/discrimination, neighborhood context, and stress of acculturation (52, 53, 56). The proceeding literature review will focus on non-contextual and contextual stressors.

b. *Theoretical models linking stress to poor birth outcomes*

Three models detailing the biological mechanisms by which stress affects birth outcomes predominate the literature: neuroendocrine response, immune suppression, and allostasis. One model

describes neuroendocrine responses to stress as follows: external stressors trigger the release of corticotropin releasing hormone (CRH), frequently referred to as a mediator of stress response. CHR stimulates adreno-corticotropin hormone, which in turn stimulates cortisol production (52). Placental CHR gene expression is stimulated by maternal plasma cortisol and can regulate delivery late in pregnancy, while glucocorticoids seem to link prenatal stressors and birth weight and intrauterine growth (58). In the second model, maternal stress may induce suppression of maternal immune function (58). Impaired immunity may result in maternal infections, such as bacterial vaginosis, which can trigger early, spontaneous delivery (53). The third, allostatic model posits that accumulation of stressors over the life course (i.e. lifelong chronic stress) impairs the body's physiological functioning. Allostatic load is assessed via biological markers of stressors and stress response over the life course. High allostatic load or allostatic overload refers to a situation in which the body's response to stressors is no longer adaptive and negatively impacts somatic functioning over time (52, 59). Normally, the body's release of cortisol shuts down the acute stress response; however, with chronic exposure, the stress response fails to shut down and blood cortisol levels are perpetually high. Chronic stressors, such as low socio-economic status, racism, and trauma, may all lead to high allostatic load and ultimately poor birth outcomes (52). Related to the allostatic load model, the weathering hypothesis posits that ongoing social and economic inequities (e.g. discrimination, residential segregation, life adversity) result in premature aging and deteriorating among Black women, leading to growing racial disparities in adulthood (60, 61). In this model, maternal age interacts with social and economic factors to produce poor perinatal outcomes amongst groups experiencing socio-economic inequities (60).

c. *The effects of chronic stress on preterm and low-weight birth*

Non-contextual chronic stress: Studies of non-contextual, chronic stress have employed a plethora of exposure measures including household strain, perceived stress, lack of control in daily life, childhood trauma, social support, and pregnancy anxiety. These studies are quite heterogeneous in terms of their conceptualization and operationalization of chronic stress, as well as in their sampling and analytic methods (see limitations section). Nevertheless, most of the studies show positive associations between

measures of chronic stress and adverse birth outcomes; however, the effects of chronic stress are usually attenuated partially by adjustment for other pertinent factors (e.g. socio-demographic, obstetric).

Studies in the US using mostly low-income samples have found positive associations between chronic stress and adverse birth outcomes (62, 63). In a matched case-control study of singleton births to women residing in Los Angeles, high chronic stress was associated with a 50% increased odds of PTB (aOR=1.5 95% CI 1.1-1.9) in a multivariable analysis controlling for age, race/ethnicity, marital status, and paternal support. Ghosh and colleagues found significant multiplicative interactions between nativity and chronic stress and between paternal support and chronic stress. High levels of chronic stress were significantly associated with increased odds of PTB in US-born Latinas but a non-significantly increased odds of PTB in immigrant Latinas (p=0.17 for the interaction term) [note: the authors did not present absolute values of PTB in US-born and foreign-born participants]. Similarly, among those reporting little to no support from the baby's father, high levels of chronic stress were associated with a significantly increased odds of PTB, while there was no significant increased risk of PTB associated with chronic stress among those with moderate to higher paternal support (p=0.14 for interaction term) [62]. These findings suggest that there might be important subgroup differences in the relationship between chronic stress and adverse birth outcomes. Alternatively, residual confounding of chronic stress might exist in certain subgroups.

Another US study conducted with a longitudinal cohort of TANF participants in Illinois found positive associations with various chronic stressors and LBW. Bryant-Borders and colleagues used a multi-dimensional measure of chronic stress, segmented into four components: 1) external stressors (e.g. food insecurity, child with chronic illness, unemployment); 2) buffers of stress (e.g. social support, coping skills); 3) enhancers of stress (e.g. depression, need for mental health treatment in past year); 4) perceived stress (e.g. economic hardship, self-rated health). In separate multivariable analyses adjusted for maternal age, food insecurity (aOR=2.6, 95% CI 1.7-3.5), child with chronic illness (aOR=3.1, 95% CI 2.3-4.0), unemployment (aOR=3.7, 95% CI 2.7-4.7), and poor coping skills (aOR=4.0, 95% CI 3.1-4.9) were all associated with LBW. These findings indicate that among a low-income sample of women, both chronic

stressors and compromised coping skills (suggesting lack of stressor buffering) are associated with LBW (63).

Contextual chronic stress: More recently, examination of chronic stress has been extended to contextual factors, such as racism/discrimination and neighborhood safety. The few studies that have examined contextual, chronic stressors have found a *relatively* consistent pattern of positive associations with poor birth outcomes. In a seminal article on racial disparities in LBW, Geronimus used age as a proxy for chronic psychosocial stress (i.e. cumulative stress exposures over the life course) to explore the weathering hypothesis among Black and White Michigan women of reproductive age. Geronimus found that the size of excess LBW among Blacks compared to Whites was higher in the young and middle adulthood than it was in the teenage years. Furthermore, the proportion of 'high-risk' pregnancies increased more steeply with age among black women than among white women. Among black women, Geronimus found a more graded effect of age on birth weight among women of lower socio-economic status than higher socio-economic status (at the highest socio-economic status, there was no significant relationship between age and LBW). The findings suggests a differential relationship between age and birth weight among black and white women, largely due to differences in distributions of preconceptional maternal health characteristics. Among black women, economic difficulties stemming from social inequity may be related to adverse outcomes (61). Together, the findings seem to suggest that there is a weathering effect, using advancing age as a proxy measure, on health among black women. Similar studies that have been conducted in New York and Chicago have found age-gradients in poor birth outcomes among Black women related to differences in socio-economic risk factors (60).

In a more recent study, Parker-Dominguez and colleagues examined the roles of stress due to racism, general stress and pregnancy-related stress in racial disparities in birth weight among women with singleton pregnancies recruited from a large medical center in Los Angeles county. The authors used multiple measures of chronic stress, including racism, allowing for comparisons of the independent effects of various sub-components of chronic stress. Racism was measured as perceived personal and vicarious (i.e. through a close family member or friend) racism in childhood and adulthood. In a

multivariable model controlling for medical risk, gestational age, recruitment site and parents' education level, perceived lifetime racism was marginally associated and childhood vicarious racism was strongly associated with birth weight. Neither general stress (measured as perceived stress and stressful life events during pregnancy), nor pregnancy-related stress (measured as anxiety about pregnancy and pregnancy intendedness) was independently associated with birth weight in this model. Interestingly, only childhood vicarious racism was independently associated with birth weight, underscoring the importance of considering the timing of exposure (64). Clearly, there may be sensitive periods in which the effect of racism might be more predictive of adverse health.

Chronic stress related to neighborhood context may also play an important role in adverse birth outcomes. Relatively few studies have focused on the neighborhood-related stressors (i.e. stressors that stem from the physical or social environment of a neighborhood). Neighborhood-related stress is commonly operationalized as group-level measures of socio-economic disadvantage, racial/ethnic composition and stratification, as well as disorder (e.g. crime), deterioration, and access to neighborhood resources (e.g. number of outdoor places for recreational activities) [65,66]. The few that have examined these relationships have found somewhat inconsistent results (66). For example, a multi-level study using South Carolina PRAMS and US Census data, examined the relationships among neighborhood context (measured as % living in census tracts under the federal poverty line, racial composition, household crowding, and neighborhood education level for adults), stressful life events, and PTB and LBW. The authors found that neighborhood contextual factors were independently associated with PTB and LBW when controlling for maternal demographic characteristics; however, the significance of the effects of the neighborhood factors differed between the two outcomes. Neighborhood high poverty, predominantly African-American neighborhood, household crowding, and low neighborhood education level each were associated with LBW via mediation by stressful life event domain, when controlling for maternal demographic covariates. Only predominantly African-American neighborhood and the lowest neighborhood education level were associated with PTB via stressors. For both LBW and PTB, the addition of stressful life event domains to models with maternal covariates strengthened the associations

between the aforementioned neighborhood contextual factors and LBW/PTB. Lastly, neighborhood contextual factors modified the relationship between stressful life events and LBW/PTB: a significantly stronger association between maternal stress and adverse birth outcomes was observed among mothers living in less advantaged census tracts, pointing to a possible role through which social and other physical resources mitigate stressors within neighborhoods (66).

Another study conducted among a low-income sample of women delivering at one hospital in Baltimore, examined the relationship between structural neighborhood disadvantage (using a neighborhood risk index) and birth weight and the potential mediating effects of psychosocial (social support, locus of control, chronic stress due to daily difficulties and demands during pregnancy), behavioral (substance use, timing of prenatal care) and biomedical (hypertension, infection, pre-pregnancy weight and weight gain) factors. The neighborhood risk index included racial and economic stratification, social disorder (violent crime rate per 1000 residents) and physical deterioration (% boarded up houses). In multilevel models, neighborhood risk was associated with LBW when controlling for individual socio-demographic factors (the base model). When potential mediators were sequentially added to the base model, psychosocial factors reduced the effect of neighborhood risk by 12%, behavioral factors reduced the effect by another 30% (the association was no longer significant), and biomedical factors reduced the risk by another 10%. These findings might suggest that the neighborhood context is associated with birth weight, when controlling the effects of individual socio-demographic factors, but that behavioral factors accounted for the largest proportion of observed neighborhood risk effect on birth weight. In contrast, psychosocial factors were not independently associated with neighborhood risk and their mediating effects on the neighborhood risk-birth weight relationship were relatively weak (65); however, psychosocial factors might also impact the behavioral factors examined in this study. This last finding could be due to imprecisely measured stress variables (66).

In sum, both studies found independent effects when controlling for individual-level demographics; however, they were inconsistent on mediation by other types of stressors. One study identified acute stressors as potential mediators, and the other study found psychosocial stressors (e.g.

social support, locus of control) to be only weakly mediating. The different stress definitions and measures (one study used acute stress measures and the other used chronic stress measures) could account for differences in mediation.

ii. Limitations

Several limitations in the chronic stress and adverse birth outcomes literature exist. Chief among these limitations, due to its broad implications on comparability of studies, is heterogeneity in definitions and operationalization of chronic stress (52, 55-57). As one can glean from the review of the literature, numerous sub-components and different relationships between and among the sub-components of chronic stress are explored. While it is widely recognized and articulated that chronic stress is a multi-dimensional construct, in practice, most researchers either do not or are not able to examine multiple sub-components of the construct of stress. Specifically, few studies have utilized measures corresponding to the three main components of the stress model: stressors, appraisal, and response. Studies that employ single measures of specific sub-components of the stress model lack content validity. Within the literature, examination of external stressors seems be slightly more common than examination of perception/response to stressors (perhaps because these latter sub-components are not as well defined or easily measured). However, stressors cannot capture how individuals perceive or respond to stress (whether they use coping mechanisms, change behavior, experience depressed mood etc). In the general model of stress, appraisal and response are critical steps along the pathway to adverse health outcomes (see Appendix); they are intermediaries between the occurrence of external stressors and the ultimate change in health status or outcome. Another drawback of single measures is the inability to examine the relative contributions of specific stressors or sub-components of the stress model. Researchers also implicitly employ different definitions of chronicity. For some, chronic refers to the entire duration of pregnancy; for others, it refers to the life course from early childhood to adulthood.

The use of small and non-random samples is another limitation. Relatively few studies have used random or population based samples of mothers and infants; most use convenience sample drawn from highly selected populations from prenatal clinics and hospitals. In small samples, it is certainly harder to

detect small associations. Residual confounding is a significant concern even when researchers use multivariable analysis and sufficiently sized samples. Smoking, for example, is a strong risk factor for PTB, LBW, and SGA. Lack of adjustment for smoking could lead to spurious associations. On the other hand, some see smoking and other health behaviors as mediators in the stress model; in this case, the extent to which smoking contributes to the association between stress and birth outcomes needs to be taken into consideration (55, 57). Seldom examined, weight gain and energy expenditure are two variables that could confound the relationship between stress and poor birth outcomes, particularly the relationship with LBW (52). Examination of the role of social support is also important in the study of effects of chronic stress because of the strong buffering effect of social network and type of support. Social support can reduce stress levels, facilitate the adoption of healthy behaviors, and provide materials and resources to the pregnant women (52). Social support may mediate or moderate the association between chronic stress and birth outcomes (depending on the underlying causal model).

Stress is certainly not a random exposure, as it is not evenly distributed within a population. Stressors, both chronic and acute, tend to concentrate in the most marginalized strata of the population (e.g. low socio-economic status and low social position). Subgroups within a population might have highly different probabilities of being exposed. Consequently, even when stressors are well measured, it is difficult to disentangle the effects of stress, including low-social support, from the effects of low social status and economic hardship (see section iv for study designs/methods that address this issue).

Timing of exposure assessment is an important consideration in stress studies (55). Even though the studies reviewed here measured *chronic* stress, most assessed the exposure at one time point (i.e. cross-sectionally). Most did not employ repeated measures throughout pregnancy, and thus could not assess for changes in associations across time. Furthermore, one-time postpartum assessment can lead to recall bias. For example, women who have experienced an adverse birth outcome may be more likely to recall chronic stress and attribute it to the birth outcome. Differential recall can lead to differential misclassification of the exposure and consequently spurious positive associations between stress and poor birth outcomes (55).

iv. Conclusions and future directions

Ultimately, different methods and definitions/measures of stress make it difficult to digest these studies as one cohesive, comprehensive body of literature. Nevertheless, a pattern of positive associations between chronic stress measures and poor birth outcomes is emerging. Both direct effects and effects through mediation by health-related behaviors such as smoking have been observed. The studies reviewed here had relatively consistent findings for non-contextual stress/stressors. Significant positive relationships between chronic stress and PTB/LBW were found for both general measures of chronic stress (i.e. perceived stress scores), as well as more specific dimensions for stress (e.g. food insecurity, unemployment). Studies that have employed multidimensional measures of chronic stress have the advantage of being able to disentangle the effects of various subcomponents of the stress construct. These studies have found that the strength of the association between stress and PTB/LBW differ among subcomponents. Most of the non-contextual stress studies used low-income samples. While restriction is one strategy for minimizing confounding by SES, it also limits generalizability to mixed income populations.

Studies of contextual chronic stress suggest positive relationships between racism/discrimination and neighborhood context and poor birth outcomes, even after controlling for individual socio-demographic factors. The independence of the neighborhood contextual stressors was a major conclusion for both studies reviewed here. However, discussions of the independence of effects should be nuanced by the fact that neighborhood factors have to operate through individual level variables in order to impact individual-level health outcomes (65). Several questions remain. One question is whether the effect of non-contextual stress is similar in general, mixed income populations (with attention to potential confounding effects of SES, social support etc), since studies of non-contextual stress in the US to date have restricted their samples to low-income groups. Another question is whether the effects of chronic stress differ by outcome (PTB v. LBW), as has been shown in studies outside of the US (57). The effect of different subcomponents of chronic stress differed between outcomes in one study conducted among a

population-based sample of South Carolina women, the only study to examine both LBW and PTB simultaneously (66).

Researchers must be explicit about their definitions and conceptualizations of chronic stress and mindful of the potential limits of the actual measures that are used to reflect the underlying construct. To achieve adequate construct and content validity, future studies should employ multiple measures of stress, preferably measures that tap into each of the sub-components of Lazarus' model of stressor, appraisal and response. Combining measures will allow for a more comprehensive and robust operationalization of the construct of chronic stress (i.e. better construct validity) and ultimately for a more powerful test of the relationship between chronic stress and birth outcomes (55). Future studies should incorporate measures of social support and coping and test for potential mediation/effect-measure modification by these variables.

There is also a need for more longitudinal studies and datasets (57) that can better establish temporal patterns in the relationships between stress exposures and outcomes. Furthermore, several studies have suggested that timing of stress exposures over the life course (64) and across micro time scales (i.e. across pregnancy-see 67) are important. Longitudinal designs might allow for a more comprehensive examination of the effect of the timing of exposure. In addition to accumulation of stress, critical periods of stress should also be considered (e.g. stress in childhood might have a different impact on birth outcomes than stress during adulthood). A consideration of critical periods necessitates the collection of repeated measures of stress exposures over the life course.

Another key issue in the study of chronic stress and birth outcomes is the uneven distribution of the exposure in the population; propensity score methods might help to overcome some of issues with confounding and independence of stress exposure and other risk factors (e.g. socio-economic disadvantage). The propensity score is the probability of being exposed for a participant conditional on the participant's pre-exposure covariates. Propensity score methods correct imbalances between exposures groups that limit exchangeability and remove the association between exposure and confounder. Researchers can then make inferences about observed differences in outcomes, based on the

assumption that differences are due to exposure alone (68). Since the covariates must predate the exposure, this method might be most applicable to studies of chronic stress during pregnancy.

III. GENERALIZED LINEAR MODEL FOR CATEGORICAL RESPONSE DATA

i. Description of method

a. *Overview*

Generalized linear models (GLMs) are a general class of models for observations that are independent. GLMs consist of three components: 1) the random component which identifies the response variable and defines its distribution (e.g. binomial); 2) the systematic component which identifies the explanatory variables (linear predictors); 3) the link function which specifies the function that links the random (the mean of the outcome's probability distribution) and systematic components (the linear predictors) (69, 70). The selection of the type of GLM depends largely on the nature of the categorical response variable (e.g. ordered, binary, or an event count). The GLMs for categorical responses reviewed here include logistic regression, Poisson regression, and cumulative logit regression.

b. *Summary table of regression models for categorical response variables*

Model	Nature of outcome	Distribution	Link	Key Assumptions
Logistic	Log odds of a binary variable	Binomial	Logit	- Linear relationship between the log odds of the response and continuous explanatory variables (71, 72) - Requires large sample for valid inferences (69)
Poisson	Log mean of a count variable or log of the rate [mean/index of size (e.g. time, space)]	Poisson	Log	- The mean equals the variance (70) - Requires large sample for valid inferences (69)
Cumulative logit	Log odds of being at or below a certain category of the response variable for two different levels of the explanatory variable (when the explanatory variable is binary) (74).	Multinomial	Cumulative logit	- The same proportionality constant applies to each cumulative probability; log odds does not depend on response category (70,73) - Requires large sample for valid inferences (69)

c. *Testing the model assumptions*

The models described above have several important assumptions that should be tested before or during model building. In general, if the assumptions are violated, estimates and standard errors might not be valid. In logistic regression, a key assumption is a linear relationship between the log odds of the response and continuous explanatory variables (71, 72). This relationship can be examined visually by graphing the exposure and outcome (e.g. a scatter plot of the exposure on the x-axis and the outcome on the y-axis or a lowess plot of the smoothed logits). If there is a non-linear relationship between the exposure and outcome, then the explanatory variable should be transformed. For example, say the exposure variable, age, is not linearly associated with GDM (i.e. the GDM risk is low-moderate at young

age, decreases slightly in the early 20s, increases slowly in late 20s-early 30s and then increases more sharply in the mid-30s and beyond), age should be transformed. Common transformations are dichotomous (e.g. median split), polytomous (e.g. 5-year age groups), and quadratic forms (e.g. age-squared). The AIC values corresponding to the models with each form of the exposure variable can be compared (with the lowest AIC value supporting the best fit for the model to the data). Alternatively, one could re-plot the exposure and outcome and examine the shape of the plot to check for normality.

A key assumption of the Poisson regression model is equality between the mean and the variance. However, frequently data vary more than if the Poisson distribution were truly applicable. Data that have larger variability than would be expected in a true Poisson distribution are overdispersed. In the presence of overdispersion, the standard errors for the parameter estimates are underestimated and the confidence intervals are overly narrow. Heterogeneity among observations is a common cause of overdispersion. Negative binomial regression can be applied in a situation in which the variance is greater than the mean. This model has an extra parameter for overdispersion and thus allows the variance to exceed the mean. (70). To test for overdispersion, one should calculate and compare the sample mean and variance at each level of the exposure variable (if categorical) [70]. Alternatively, one could apply a likelihood ratio test to a Poisson model and a negative binomial model, as follows: -2LL(poisson) -2LL (negative binomial), where LL=log likelihood. If the likelihood ratio test statistic is significant, then the null hypothesis (i.e. the mean=variance) can be rejected; the variance does exceed the mean and the negative binomial model should be used (75).

Lastly, large sample theory requires that the overall sample be reasonably large as data are assumed to be representative of some larger population in a simple random sampling frame. Testing and inferences require sufficiently large samples so that the parameter estimates are normally distributed and the statistical tests follow chi-square (for likelihood ratio tests) and normal distributions (for Wald tests) [73]. Violations, such as small samples and highly skewed table margins, might lead to erroneous estimates and inference (69). One central question is: are there adequate data to fit a multivariable model? Determining the adequacy as the data involves an examination of number of events per covariate (see

next section on model building) [73]. In addition, one can calculate a rough estimate of the necessary sample size for a multivariable regression by dividing Hsieh's formula for one-sided tests by the estimated association between the exposure and covariate(s) of interest. However, this formula relies on crude estimates of the magnitude of the exposure-confounder association as well as the size of the effect (e.g. odds ratio) in Hsieh's formula (70, 73). When large sample size assumptions are violated, one can apply conditional exact or bootstrapping methods (involving repeated sampling from the study population) [69].

ii. Model building

A multiple regression model allows for the examination of the relationship between a response variable and more than one explanatory variable. In such a model, the parameter beta refers to the effect of the main explanatory variable on the log odds of the outcome occurring, holding constant the other explanatory variables in the model (70). Model building is a process that involves the selection of covariates and assessment of the adequacy of the multivariable model in regards to its individual variables and its overall fit (73).

There are two main issues in variable selection: how many covariates and which covariates to include in the model. There is a limit to the number of explanatory variables to include in any model. When data are unbalanced on the outcome (i.e. when there are very few observations with disease or with no disease), the number of explanatory variables that the model can estimate accurately is reduced. Consequently, the estimates might be biased and the standard errors poor (i.e. sparse data bias). As a general rule, there should be 10 observations for every covariate in the model (70).

Determining which variables to include in a model is central to model building. Variable selection should be guided by theory regarding the underlying causal model (shaped by the existing literature) as well as by statistical assessment. Therefore, one might include covariates that have been identified in the literature as potential risk factors for the outcome and believed to be associated with the exposure regardless of their statistical significance. This approach provides a more complete control of confounding compared to selecting based on significance alone (73). Statistical assessment of the

covariates should include bivariable analyses, in which the relationships between the covariate and exposure and the covariate and outcome are determined. Covariates that have a statistically significant relationship with the exposure in the source population and with the outcome among the unexposed, but which are not thought to be in the causal pathway nor a common effect of the exposure and the outcome, should be included in the model [this assessment approach adheres to Rothman definition of a confounder (76)]. After variables have been selected and the multivariable model fitted, each covariate should be examined for its significance (i.e. confidence intervals and p-value for the Wald test) and the change in the estimated coefficients of the main exposure of interest and the covariate from the model with only that covariate to the multivariable model (73) and the change in the coefficients from the crude to the multivariable model.

As an example, in a study of nativity and postpartum depression, bivariable analyses are performed, as described above with all potential confounders (including age, socio-economic status, race/ethnicity, parity, marital status, labor complications). Covariates for the multivariable model are selected that meet the confounder criteria described above, as well as any covariates known from the literature to be associated with postpartum depression. In this example, the bivariable analyses showed that age, socio-economic status, race/ethnicity and labor complications were significantly associated with both nativity status and postpartum depression at alpha-level of 0.05-these variables are selected for the multivariable model. In addition, marital status is selected based on subject knowledge (and to improve comparability with previous studies), even though it had a non-significant association with postpartum depression in the sample (77). Once the preliminary model has been fitted, one would examine the covariates more closely and consider the removal of covariates from the multivariable model that are non-significant and/or show no appreciable change in the estimate of the exposure-outcome relationship from the crude to adjusted model (73). However, there are situations in which one might retain covariates whose presence does not show an appreciable change in the exposure-outcome association if they are thought to be clinically important or are consistently included in previous studies (for comparability).

An important issue that arises in model building is multicollinearity, which results when two or more explanatory variables that are correlated with each other are entered into the model. Multicollinearity can result in null associations between the explanatory variables and outcome because of the overlap with other explanatory variables in the model. It will also inflate the standard errors of parameter estimates (70); the confidence intervals will be wider and type II errors may result. To address multicollinearity, one should first confirm that there are no obvious errors (e.g. incorrect dummy coding). If the covariates are thought to tap into one underlying construct, then one might create a sum or scale from the covariates. Another option is to drop variables; one covariate might be chosen to represent the construct (78). An example of a set of multicollinear variables is maternal education, paternal education, and household income. These variables are likely to be highly correlated with one another and reflect the larger construct of socio-economic status or social position. However, if there is evidence of multicollinearity (e.g. inflated standard errors, high correlation among the variables), one might choose one to represent the underlying construct of socio-economic status. Alternatively, one could create an index as Huang and colleagues did in their study of depressive symptomatology in US-born and immigrant women. Their index consisted of the three components: paternal education/occupation, maternal education/occupation, and household income. The index was a 5-category ordinal variable (categories represented quintiles of the SES index) [26].

Similarly, interaction terms add complexity to the model and can reduce precision and accuracy in the parameter and confidence interval estimates. In typical epidemiological studies, the power to detect interaction effects will be an order of magnitude less than the power to detect main effects. Consequently, there is more variance in interaction estimates than variance in estimates of main-effects alone. Larger study samples are necessary to study interaction effects (79). Greenlander has shown that failure to reject additive or multiplicative models (i.e. erroneously concluding that there is no additive or multiplicative interaction) is common in studies with small to moderate sized samples (79). In these cases, spare-data or exact methods, such as conditional maximum likelihood, should be used (76).

iii. Application to topical areas

As noted by Preisser and Koch, public health research is often concerned with the relationships between a categorical response and one or more explanatory variables (69, 72). In a multi-causation framework, the importance of modeling that can accommodate multiple explanatory variables is apparent. Clearly, the outcomes examined in the previous topical sections-postpartum depression, gestational diabetes, peripartum maternal morbidity, maternal mortality, and key birth outcomes (e.g. preterm birth)-are thought to arise from a complex and dynamic constellation of potential causes. Not unexpectedly, much of research in these areas utilizes multiple-regression modeling to elucidate the multiple relationships between and among various risk factors and the periconceptual outcomes of interest. Second, most research studies in maternal and child health use observational designs. Observational studies are common in maternal and child health due to the logistical and ethical concerns surrounding randomization of exposures in pregnancy. Adjustment for inherent differences in comparison groups is especially important in observational studies that lack randomization (72). Adjustment for confounding is a necessary component of maternal health research because of the strong effects of certain immutable maternal characteristics, such as parity and age at first birth, on maternal and infant health outcomes. These maternal characteristics are usually not the main explanatory variables of interest and they introduce non-equivalence in comparison groups.

IV. ASSESSMENT OF INTERACTION/EFFECT-MEASURE MODIFICATION

i. Definition of interaction/effect-measure modification in epidemiology

Epidemiologists use the term effect-measure modification to indicate a situation in which the association between an exposure and an outcome varies across different strata of a third exposure (80). In other words, exposures interact with one another when one modifies the effect the other has on the occurrence of disease (81). A key concept in interaction/effect measure modification is how the two exposures interact with one another. Qualitative effect-measure modification refers to average causal effects in the strata of the third variable that are of opposite direction (e.g. in Z=1, the risk ratio is > 1.0; in Z=2, the risk ratio is < 1.0). When there is qualitative effect-measure modification, multiplicative effect-measure modification implies additive effect modification and vice versa. However, when there is quantitative effect-measure modification (i.e. the average causal effects in both/each strata of the third variable are in the same direction), there can be effect modification on one scale but not the other. This phenomenon is called scale dependence; some authors prefer to use effect measure modification to highlight the dependence on the effect measure used (76, 82).

There are two main concepts of interaction in epidemiology: statistical interaction and biologic interaction. Statistical interaction (most akin to definitions of effect-measure modification-see Rothman) typically refers to the inclusion of a product term (main exposure x third variable) in a statistical regression model. Common criticisms of statistical interaction are that it is disconnected from the underlying causal models on the biological level and that it is completely dependent of the type of statistical model that one uses (i.e. a log-linear model could show no evidence of interaction, whereas the equivalent linear model could show evidence of interaction) [79]. Biologic interaction takes into account underlying causal effects (in contrast to statistical interaction which refers to association whether causal or not [76]). There are two related definitions of biologic (causal) interaction based on the sufficient component cause model and the counterfactual model. Biologic interaction within the sufficient cause framework refers to two component causes co-existing within a sufficient cause; the causes act together in the same causal mechanism and there is synergism between the two (83). Utilizing the counter-factual

framework, there is interaction between two treatments (or exposures in absence of randomization), A and E, if the causal effect of A on the outcome, Y, after a joint intervention that sets E to 1 is different from the causal effect of A on Y after a joint intervention that sets E to 0 (82).

ii. Assessment and measurement of interaction

Several methods for assessing interaction exist. Stratification is the natural, first step to identify interaction/effect measure modification. One examines the magnitude and direction of the association between the exposure and outcome in each level of the potential effect modifier (before adjusting for any potential confounders) (82). In multivariable analysis, the test for product term (main exposure x third variable) is a common method for assessing statistical interaction. The Wald-test tests whether the beta coefficient of the product term is statistically different from zero (if so, then there is evidence of interaction on either the multiplicative or additive scale depending on the type of regression model used). The likelihood ratio test assesses whether the fit of the model with the product term is significantly better than fit of the main effects model without the product term (84).

In addition, several measures of additive risk within multiplicative models, such as logistic or Poisson, have been proposed: the relative excess risk due to interaction (RERI), attributable proportion due to interaction (AP), and the synergy index (SI). The RERI is calculated as the difference between the expected effects based on the addition of the individuals effects of the two exposures of interest and the observed effect in the joint exposure category (85). If the effects of the exposures are monotonic (i.e. the exposures never prevent disease), a RERI >0 implies sufficient-cause interaction. If monotonicity cannot be assumed, a RERI >1 implies sufficient-cause interaction (83). Interpreted as the proportion of events that is due to interaction, the AP is calculated as RERI divided by risk ratio in the joint effect category. The SI is interpreted as the excess risk from exposure to both exposures when interaction is present relative to the risk from exposure when interaction is not present (85). It is important that authors clearly indicate the assessment of additive and/or multiplicative interaction and the underlying scale of the model (e.g. log-linear vs. linear model).

iii. Additive vs. multiplicative interaction

Interaction can be assessed on an additive or multiplicative scale. For example, when the amount that the main exposure, X, multiplies the risk is less in one stratum of a third variable, Z, than in another, then there is said to be effect modification on the risk ratio scale (i.e. multiplicative scale). If the risk differences for the main exposure change across levels of a third variable, Z, then there is said to be effect modification on the risk difference scale (i.e. the additive scale); the combined effect of the main exposure, X, and the third variable, Z, on risk is greater/less than the risk computed by simply adding the separate risk differences for X and Z alone (76). Other measures of additive and multiplicative interaction utilize the risk ratio as follows: in an additive model, the amount of change in the main exposure, X, from x=1 to x=2, is measured by the amount that the change *adds* to the RR; in a multiplicative model, the amount of change in the main exposure, X, from x=1 to x=2, is measured by the amount that the change *multiplies* the RR (86).

Many believe that the additive model is of greater public health importance because of its ability to identify subgroups that would most benefit from intervention (81, 87). Departures from additivity (i.e. non-additivity of the risk differences) indicate the group in which the greatest *absolute* risk reduction would occur, which may or may not be the group with the highest risk group (87). Similarly, many suggest that additive interaction is most aligned with biologic interaction. Non-additivity of risk differences implies the presence of interaction types-where we cannot say what the effect of one exposure would be without knowing the value of the other exposure-or causal interdependence (76, 80).

iv. Recommendations and rationale for testing interaction

The assessment of interaction in epidemiology has spawned significant debate regarding its appropriate application and reporting in research studies and the non-correspondence between concepts of statistical and biologic interaction. Nevertheless, it is important to test for statistical interaction because of its enhanced ability to detect effects and prediction of disease based on individuals' risk profiles, as well as its practical implications for targeting interventions (81). Sound techniques should be applied when testing for interaction. The following recommendations for detecting 2-way interaction are presented: 1) stratification by the potential effect modifier; 2) building and comparison of a main effects model (i.e. the

multivariable model without any interaction terms) and a model with relevant interactions terms; 3) calculation of an additional measure of interaction such as the RERI or SI with 95% CIs to test for additivity using effect measures from multiplicative models (e.g. logistic regression). Before beginning an assessment of interaction, it is important to have an a priori hypothesis about the underlying causal mechanisms involved and the expected direction of the difference in associations.

Stratification of the bivariable association allows for a brief examination of crude associations in levels of the potential effect modifier. Adjusted stratum-specific estimates should be compared to one another, with attention to both their magnitude and direction. Though stratification is an important first step, formal tests for interaction-the most appropriate statistical test for heterogeneity between or among subgroups-are necessary. The main effects model should be built including all relevant covariate including the potential effect modifier. A second interaction model should then be built with all relevant covariates and an interaction term between the exposure of interest and the effect modifier (i.e. the Wald-test for product term) as well as interaction terms between the confounders and the effect modifier. The latter interaction terms allow one to determine whether there is variation in confounding across strata of the modifier (non-significant terms can be dropped in the final model). The significance of the p-value of the main exposure-effect modifier product term should be assessed, using a p-value of <0.15 to indicate significant *multiplicative* interaction (i.e. deviations from multiplicativity). The likelihood ratio test may be used to compare the fit of the main effects and interaction models (i.e. to test the difference in log likelihood between the two models on their chi-square distributions). A significant p-value (< 0.05) for the likelihood ratio test would indicate that the interaction term is needed in the model. If interaction between the exposure and effect modifier is confirmed, then the results should be presented with a common reference group-the reference group being those not exposure to either factor (88).

Lastly, *additive* interaction should also be tested because of its adherence to theories of causation and ability to identify subpopulations that would most benefit from intervention. A few additive tests for use in models with underlying multiplicative scales have been suggested-the most common being RERI and SI. The RERI has a major drawback when used in multiplicative models, such as logistic regression

models: its calculation is only exact and valid for models that do not include other variables over which the RERI might vary (83, 84). Anticipating that my future analyses will include adjustment for multiple confounders, SI for additivity is the best choice as it is more resistant to variation over confounders (84, 85). A SI of 1.0 would indicate no departures from additivity (in practice, a 95% CI would be calculated and if 1.0 were within the interval, the null hypothesis of non-additivity would be accepted) [85].

v. Application to topical areas

Assessment of interaction is an important component of a comprehensive analysis of both nativity and maternal health outcomes and chronic stress and birth outcomes. As Geronimus points out, risk factors may not operate in the same way across sub-populations (61). In terms of maternal health outcomes in immigrant women, subgroup differences are expected due to the considerable heterogeneity among immigrant women. For example, in Chu and colleagues' study of gestational diabetes among Asian Pacific Islanders, country of origin modified the relationship between nativity and diabetes; in women of Japanese/Korean ancestry, US-born status conferred an increased risk of gestational diabetes, while in every other Asian nationality examined, US-born status conferred a decreased risk of gestational diabetes (8). In addition to country of origin, time since migration is another important potential effect modifier of the relationship between nativity and birth outcomes. Researchers have suggested that not accounting for time since migration can mask disparities in outcomes between immigrant and native-born women (the average effect) and between subgroups of immigrants by time since immigration (90). Within the maternal stress and birth outcomes literature, researchers have suggested that timing and chronicity of stress impacts the magnitude of the association between stress and birth outcomes. For example, stressors that occur before or early in pregnancy might have stronger effects on birth outcomes then stressors that arise later in pregnancy (91). Another potential interaction is between stress and social support, with social support modifying the association between stress and birth outcomes (62). It is important that both factors' independent and joint effects are examined in studies of birth outcomes. Lastly, as noted previously, a main strength in interaction assessment is its application to targeting of interventions. However, few studies in these topical areas have assessed additive interaction.

Community Board Three: Queens Profile Paper II

The population of district 3 of Queens increased to 178, 022 people in 2013.[1] Comprised of three neighborhoods, East Elmhurst, Jackson Heights and North Corona, this district is largely inhabited by Hispanic residents who make up 64% of the population.[1] This community possesses a plethora of assets, such as different denominations of churches, small businesses, several public and private schools and easily accessible public transportation. Nevertheless, District 3 faces a number of public health concerns. The three neighborhoods rank first in percent of adults without health insurance throughout New York City.[1] Thirty-eight percent of the population has no access to health care or preventive services which in turn influences the rate of avoidable hospitalizations in the district as people turn to emergency rooms for treatment. Furthermore, the closest hospital that serves this community is located, in a different district, 20 minutes away on public transportation from East Elmhurst.

One of the needs of Queens Community District 3 is for sexually transmitted disease (STD) clinics and services. Currently, there is only one clinic that serves this purpose in the community and it does not offer any physician services. Likewise, only one walk-in immunization center is present in the community, and thus access for adults is limited.[2] Poor quality diet and physical inactivity are health concerns related to obesity, diabetes and heart diseases. Residents of District 3 consume more sugary beverages than residents of Queens and NYC in general. The community lacks recreational centers, green spaces and healthy food options, enabling sedentary lifestyles and unhealthy food decisions. These behaviors lead to an increased risk for diabetes which is the 7th leading cause of death in the district.[1] Diabetes leads to cases of blindness, amputations and contributes to the community's leading cause of death, heart disease. People with diabetes are more likely to die from the flu and pneumonia, the third

Commented [m1]: From what? This makes it sounds as though all 178,00 are new.

leading cause of death in District 3 than in? NYC as a whole.[1,3] It is estimated that 1 in every 2 Hispanic/Latino children born in the United States, will develop diabetes in their lifetime.[3] It is an alarming statistic for our community made primarily of Hispanic residents. In this paper, we will address the impact of diabetes in this community and establish program objectives to reduce the burden of this condition in District 3.

Commented [m2]: Keep discussion of same topics together. Move this up to where you talk about diabetes

What is diabetes and how can I manage it?

Diabetes is a chronic illness caused by the malfunction of the pancreas. Glucose in the blood prompts the beta cells in the pancreas to secrete insulin that will then transport the glucose from the blood and attaches it to the receptors of the body cells.[4] The New York City Department of Health and Mental Hygiene lists three types of diabetes: Type I (insulin-dependent), Type II (non-insulin dependent), and gestational diabetes.[5] Type I is an autoimmune disease which affects 5-10% of diabetes cases, and while the cause is unknown, it could be due to genetics or environmental triggers.[5-8] With no cure or preventative measures, injected insulin and a restricted diet are necessary for survival.[5-8]

Unlike type I, type II diabetes affects 90-95% of diabetic cases.[4] The cause of this form of diabetes is not definitive but risk factors include obesity, family history of disease, sedentary lifestyle, hypertension, high cholesterol, being older than 45, and being a member of a racial/ethnic minority.[5] If left untreated or poorly managed, complications arise, such as heart attack, stroke, blindness, renal failure, nerve damage, foot infections, limb amputations, and dental disease.[4-8] The estimated 86 million pre-diabetics must make a lifestyle change in order to prevent the onset of disease.[6]

Gestational diabetes is a temporary condition affecting 5% of pregnant women in New York City but will put these women at increased risk for developing type II diabetes later.[5] The

excess blood glucose causes the babies to store more fat, resulting in large newborns that are now at risk for neonatal hypoglycemia, respiratory problems, and obesity.[7,8] Asians, Hispanics, African-Americans, and women that are over 35 and/or overweight are at increased risk.[5] Following birth, women must monitor their diet and remain active to prevent type II diabetes.[7]

Aside from the enormous physical toll, the economic toll is stupefying. In 2012, treating the 29.1 million diabetics in the U.S. – 8.1 million of whom were unaware of their status – cost a total of $245 billion, with $176 billion spent on direct medical expenses, and $69 billion on indirect expenses, such as loss of productivity and disability.[6] Twenty percent of federal health care dollars go towards diabetes care.[5-8] In 2013, the CDC reported that NY had 1,625,044 diabetics, and it costs about $11,744 to treat a single diabetic.[6,8]

As shown in Figure 1, Community District 3 has a diabetes prevalence of 9.1-12.4%.[9] The most alarming fact is the overwhelming impact diabetes has on minorities when compared to White residents. The National Diabetes Statistics Report states that diabetes is much more prevalent among minority groups than whites.[6] According to Table 1, 15.9% of American Indians/Alaska Natives, 12.8% of Hispanics, 13.2% of African American, and 9.0% of Asians have diabetes, as opposed to 7.6% of whites.[6] Among Hispanics, the highest prevalence is in Puerto Ricans (14.8%) and Mexican Americans (13.9%).[6,10] This showcases why a focus on diabetes is imperative, as District 3's majority racial population is of Latino/Hispanic descent.

While there is no cure, type II diabetes can be managed through a healthy diet, frequent exercise, medication, daily monitoring of blood glucose levels, cessation of smoking, controlling blood pressure and cholesterol, and ensuring that feet are dry and free of sores.[5-8] The most crucial component of diabetes management is education. People must understand diabetes and its severity i.e. the high physical and economic cost. High risk groups, such as minorities, should be

tested for the disease. There must be a clear, easy-to-follow plan between physicians and patients on how to manage symptoms and complications. Pre-diabetics and type II diabetics must understand how nutrition and exercise impact this disease. To become wiser consumers, they should inspect nutrition labels, understand the differences between unsaturated, saturated, and trans-fat, avoid highly processed foods, and determine the best exercise regimen that will help control weight. Additionally, when dining outside the home, it is important to inform either the server or the host of this condition.

Commented [m3]: Nicely written and informative section

Evaluations of New York City Diabetes Interventions

Creating a healthy educational atmosphere is a priority in New York City. In 2010, Mayor Michael Bloomberg created an Obesity Task Force, in response to the growing epidemic and its health effects on residents of the city. This Task Force was made up of eleven city agencies and political representatives and their goals were to combat the rise in obesity in New York City via a number of city-wide initiatives.[11, 12] These initiatives were implemented as intervention methods in an effort to decrease the rise in obesity and to promote healthy living within the city.

Commented [m4]: reword

To highlight attempted obesity interventions, we will focus on two interventions executed by the Obesity Task Force. Move-To-Improve, or MTI, was a program that was implemented in New York City public schools to increase the amount of physical activity of students in a classroom setting.[13] The goal was to train Kindergarten through 5th grade teachers on how to integrate physical activities, and therefore physical education, in their classroom. This strategy was created to get children in New York City to the CDC recommended physical activity goal of one hour, or 60 minutes, per day.[13]

In a 2012 study, the efficacy of Move-To-Improve was evaluated over a two-month time period. The program was funded by the New York City Department of Education and the Department of Health and Mental Hygiene. This analysis compared the outcomes of MTI trained teachers versus untrained teachers and how this manifested in the quantity and quality of classroom-based physical activity.[13] Thirty-nine schools were observed, consisting of 150 classrooms. The outcomes of the study were that classrooms with MTI trained teachers had significant increases in physical activity.[13] A critique of the MTI program was that it was not cost effective due to the amount of schools in New York City, all with varying financial and educational needs. This highlights the main limitations of this study – which are tied to the difficulty of implementing a city-wide public school program due to cost?.[13]

Commented [m5]: how many in the intervention vs. control groups?

Commented [m6]: Compared to baseline or compared to the control group?

Another program implemented was the "New York City Green Cart" initiative, in 2007, which aimed to bring fresh produce into low-income neighborhoods, as well as creating jobs for residents of the community.[11,14] The program is comprised of 500 fresh produce vendors that are located in nutritionally underserved communities. There are 1000 Green Cart permits for all five boroughs of New York City, 100 of them located in Queens. In the press release for the announcement of the initiative, Health Commissioner Dr. Thomas Frieden said, "In some neighborhoods, rates of obesity and diabetes are 50 percent higher than the citywide average. To tackle this problem, and help prevent diabetes, heart disease, and cancer, we must change our environment and make healthy food more available".[14] This program was created to tackle the growing prevalence of obesity and diabetes in New York City.

The goal of the Green Carts program was to target neighborhoods with 'food deserts' or little access to fresh produce. Additionally, these neighborhood designations were in low-income communities due to the relationship between obesity, diabetes and other nutrition related

diseases and high poverty rates. Although there were many successes in regard to the outcome of the initiative, which is still operational, one particular limitation needs assessment. Several hundred Green Carts are scattered over the five boroughs, however, some neighborhoods in need of access to fresh produce are underserved, especially locations near public housing.[15] The city is still committed to the Green Carts program and strives to bring fresh fruits and vegetables to communities in need.

Commented [m7]: unclear

Effective programs promoting healthy foods within bodegas would increase communal access to fresh produce and make it much easier for residents to lead healthier lives. Bodegas are often less likely to have fresh produce and are instead loaded with convenience items that are high in calories.[19] An example of a healthy bodega program is the Healthy Bodegas Initiative in NYC, which has been successful in over 1000 bodegas in neighborhoods with high poverty rates.[19] Providing store owners with monetary incentives and recommendations for stocking and promoting healthy foods, guidelines for interacting with customers, and nutritional education would lead to an increase in purchases of healthy foods.[19] Implementing this program in community District 3 would provide residents with greater food accessibility and help reduce incidents of health diseases such as diabetes.

Program Objectives

The American Diabetes Association suggests comprehensive diabetes assessments for diabetics, including a physical examination, medical history, laboratory tests, and regular eye and dental care.[16] Census records show a surge in the amount of foreign-born residents from 2000-2011. Queens' total population of 2.2 million is 49% immigrant (1.09 million), the largest immigrant concentration in NYC.[17] Because of district three's large immigrant population,

effective health communication is vital to help this vulnerable population, and the other members of the community.

Since District 3 is not made up solely of immigrants, a population-based intervention should be applied to focus on everyone impacted by diabetes. One of our objectives is to increase the number of people who live well with diabetes and successfully manage their disease to avoid or delay difficulties and improve quality of life. Stanford Patient Education Research Center created a Diabetes Self-Management workshop that is given 2½ hours once a week for six weeks in churches and community spaces, where groups of 12-16 type II diabetics attend. Two leaders, at least one being a diabetic, would facilitate the workshop.[18]

Commented [m8]: needs to be more specific & measurable. Increase by how much and by when?

We would add trained leaders from each of the immigrant populations within district three, and have education materials available in all the languages spoken within the district. The Diabetes Self-Management workshop uses some of the following topics: (1) Skills to handle the indications of diabetes, (2) Exercise for sustaining and improving endurance and strength, (3) Healthy eating, (4) Correct use of medication, and (5) Working efficiently with health care providers.[18] Participants will make weekly action plans, share experiences, and assist each other.[18] Health professionals and educators, both at Stanford and in the community, have reviewed all materials in the workshop and handle all medical inquiries; should any of the material conflict with teachings they received elsewhere, they are urged to follow their physician's orders and discuss those differences.[18] This process is effective because of member participation, where shared support and accomplishment build the participants' confidence in their ability to handle their health and retain active and satisfying lives.[18]

Increasing access to healthy foods can greatly reduce the burden of diabetes in Queens Community District 3. Providing farmers markets and bodegas that have fresh produce allows

residents to have much healthier food choices. Community district 3 has supermarkets that have specialty foods due to the dominant populations, which are Hispanic and Asian. In contrast, there is only one farmers market in Jackson Heights. There are far too many fast food outlets throughout this district, which are associated with an increased risk of obesity and a variety of other health issues.[19]

Healthy food incentive programs at farmers markets would greatly increase fresh fruit and vegetable consumption in low income neighborhoods. Health Bucks is a farmer's market incentive program that aims to reduce food insecurity among NYC residents by increasing access to fresh produce.[20] Health Bucks was established in 2005 by the NYC DOHMH.[20] The District Public Health Offices (DPHOs) hands out $2 coupons, also known as "Health Bucks" that can be used for purchasing locally grown fresh fruits and vegetables at farmers market in North and Central Brooklyn, East and Central Harlem, and the South Bronx (DPHO areas).[20] This program would be expanded to include Queens Community District 3. In addition, SNAP recipients have an added incentive: for every $5 in EBT purchases, an additional $2 Health Bucks coupon is provided.[20] Since high prices are a major reason why healthy food consumption is low, these incentive programs would increase affordability and lead to healthier purchases. Another program to aid the vast immigrant population in district 3 is Grow NYC, a nonprofit organization that sponsors more than 50 farmers market and trains immigrant farmers to combat the decline in farmers.[21] GrowNYC also provides job opportunities for immigrants and encourages them to make healthy food choices that could have a lasting influence on their own communities.

Staten Island Community District 1 Community Profile II

a. Primary Health Concerns in Community District 1

When one examines Staten Island's Community District 1 (SI CD1) health and epidemiologic profile, several major public health concerns are immediately made apparent. HIV is the ninth leading cause of death for SI CD1, with 24.1 newly diagnosed cases of HIV per year per 100,000 people, more than double the rate for Staten Island.[1] In spite of this, SI CD1 has only one sexually transmitted disease (STD) clinic to serve its approximately 175,000 residents' for prevention and screening needs.[2,3] Hospitalizations due to injuries resulting from assaults are high in SI CD1, over 40% higher than New York City's (NYC) rate.[1] Tobacco use is a tremendous problem in SI CD1, as it has the largest percentage (22%) of smokers in any community district in NYC.[1] SI CD1 also has a very high rate of mortality due to heart disease, with 277.4 deaths per 100,000 people, over 1.5 times the average rate for the U.S. as a whole.[1, 5] Finally, many SI CD1 residents struggle with chronic diseases related to nutrition and weight status, one of SI CD1's most serious public health problems.

Nutrition and weight status, one of the topics included in "Healthy People 2020," are the most pressing problems in SI CD1 for several reasons.[4] Thirty-three percent of SI CD1 residents are obese, the 10th highest prevalence amongst NYC's community districts. Obesity significantly increases one's risk of developing Type 2 diabetes, especially if weight is carried around one's middle, known as visceral adiposity.[6] Visceral adiposity also increases one's risk of hypertension, heart attack, and mortality.[7] Diabetes is the fourth leading cause of death in SI CD1 and 9% of adult residents in SI CD1 are diabetic.[1] Of great concern are SI CD1's avoidable hospitalizations due to diabetes, with 415 per 100,000 adult residents hospitalized for preventable diabetes-related problems, a rate more than 1.5 times that for Staten Island as a

whole and 33% higher than the average rate for NYC.[1] High rates of avoidable hospitalizations due to diabetes likely signifies many diabetics in SI CD1 have poorly controlled diabetes, which increases risk of serious complications such as diabetic retinopathy, diabetic nephropathy (the U.S.'s leading cause of kidney failure), diabetic neuropathy (which can require amputation of portions of the lower extremities), and cardiovascular disease.[8]

Commented [m1]: Good demonstration of why obesity & diabetes are primary health concerns in this district

Many of these chronic diseases are modifiable through changes in nutrition and weight status.[9] Research suggests that very low-fat, vegan, refined-sugar free, plant-based diets can prevent and reverse heart disease, and mediate a host of other chronic illnesses, such as diabetes and hypertension.[9-11] Lipids from fatty foods cause buildup of plaque in arterial walls: as the liver is unable to eliminate excess LDL cholesterol from the body, it circulates in the blood and adheres to the endothelial walls.[12] Excess sugar intake further exacerbates this process, as hyperinsulinemia prompts the liver to produce additional cholesterol.[12]

Weight status problems and the prevalence of many chronic diseases in SI CD1 may be closely tied with the lack of easy accessibility to nutritious food in SI CD1. Sources of fresh fruits and vegetables in SI CD1 are limited: a few large supermarkets and one farmer's market, the St. George Greenmarket, open Saturdays mornings, provide the fresh fruits and vegetables for approximately 175,000 SI CD1 residents.[6] There is a profusion of small local bodegas in SI CD1, which offer little to no fresh fruit and vegetable options and an abundance of processed and canned foods. Canned vegetables, often high in salt, are not a good food option for a population already grappling with hypertension, the 10th leading cause of death in SI CD1.[1] Approximately 14.5% of SI CD1 residents report eating no fruits or vegetables in a given day, and 32% report consuming one or more 12-ounce sugary drinks per day.[1, 12] Thus, though nutrition and weight status are not among SI CD1's leading causes of death, chronic diseases

and nutritional disorders that can be mediated or eliminated through nutritional changes are indeed one of the most pressing concerns that should be addressed in the district.

b. Review of Existing Literature

A nutritional disorder that exacerbates many chronic conditions, obesity refers to an excess of fat.[15] Obesity is usually assessed by the relationship between height and weight, which gives an estimate of body fat for clinical purposes. Body mass index (BMI) is the standard measure of overweight and obesity for people two years of age and older.[15] BMI is calculated by dividing the body weight (kilograms) by the height (meters) squared. Adults with a BMI between 25-30 are considered to be overweight and over 30 are considered to be obese.[15]

Type 2 diabetes mellitus (T2DM), the most common type of diabetes in adults, is characterized by high blood sugar, insulin resistance and impairment in insulin secretion by the pancreas.[16,17] One of the criteria for diagnosis of T2DM in patients that are asymptomatic is measuring by blood test hemoglobin A1C over 6.5%.[17] Common symptoms of hyperglycemia include increased urination, increased thirst, nighttime urination, blurred vision and, rarely, weight loss.[18] Obesity may cause insulin resistance and decrease the pancreas' sensitivity to glucose.[15,17] Causes of obesity include excess caloric intake and sedentary lifestyle lacking in proper exercise.[15] There are many ways of treating T2DM, which include lifestyle changes, medications, and patient education, which aim to decrease cardiovascular and other long-term complications.[20] One imperative treatment goal for diabetes is to control and lower glucose levels to mediate the risk of microvascular complications.[19]

For people with T2DM who are overweight or obese, decreasing caloric intake, maintaining medication regimens and increasing physical activity are key to achieving weight

loss, thus helping to improve control of blood sugar.[19] The methods by which insulin medication works include: stimulating insulin release from the pancreas, inhibiting reuptake of glucose in kidneys, reducing blood glucose levels, and increasing insulin sensitivity.[17,19] There are effective treatments for diabetes, but some patients may not tolerate medications well due to side effects, which may include severe hypoglycemia, increased risk of cardiovascular events such as heart failure, and weight gain, among others.[16,17]

Commented [m2]: Nice review of the literature

c. Review of Past Intervention Studies

Interventions that seek to address nutrition disorders, such as obesity, and chronic diseases, such as diabetes, can be difficult to organize and implement due to the interconnection of the root causes that result in poor nutrition and difficulties in treating their complications. Examining two interventions, a food co-op in East New York and a school-based program, Choice, Control & Change, we can better understand two, divergent tactics employed to combat obesity and promote healthy nutrition habits. These interventions illustrate two different types of interventions and focus our scope on interventions implemented within NYC, where the SI CD1 population resides.

The East New York Food Co-op aimed to provide economic opportunity to and increased wellness in Brooklyn Community District Five. A food cooperative is an autonomous membership organization that puts buying power in the hands of the community, enabling members to purchase discounted goods in bulk, direct from wholesalers and farmers, and cuts organizational overhead through requiring member labor.[25] In this style of market, fruits and vegetables offer the biggest savings and thus are naturally incentivized to members.[25] Funded by the NIH, starting in 2005, the East New

York co-op's goals included providing alternative food options, cooking and nutrition classes, as well as collaborating with Mount Sinai to provide free health screenings.[21]

Kimberly Morland studied the East New York Co-op over a three-year period analyzing the study population, which included community, health care partners and other major stakeholders involved with the co-op.[21] Morland concluded that the model for the co-op was not organized with the intention for success for a number of reasons. Members found the co-op space was beyond financial capacity and could not be maintained by the resources at hand.[21] This problem was compounded by the failure to consistently meet benchmark sale levels.[21] The co-op was unable to reach established goals due to lack of experience and instability of organizational leadership.[21] Although co-ops can be successfully sustained in some communities, they require organizational maintenance and structure. Organizational issues that can arise unfortunately surfaced as limitations to the intervention design in East New York, and although funding was hefty, the Co-op was closed in 2008.[21]

Commented [m3]: What were the limitations of her analysis? Was the community involved in the development of the co-op?

As compared to a macro-level, community intervention such as the East New York Food Co-op, more specific, field-based interventions are more heavily represented in the literature. For example, the Choice, Control, Change program aims to teach middle school students how biology and the world around them have an impact on nutrition and health outcomes.[22,23] Students in five schools learned through hands-on projects in the classroom, which provided a greater understanding of how food environment and choices had an impact on how they ate and felt throughout the day.[22] Studied over the 2006-2007 school year, students were evaluated with a pre- and post-test to see if they met the goals of increasing fruit and vegetable intake and physical activity.[22,23] This intervention did not explicitly involve the community around the schools, but used a "teacher- implementation" study

design, which may have resulted in limited student reception, as post-test outcomes improved when outside representatives initiated the program. Funding was provided by NIH as well as the National Center for Research Resources and was quoted by program organizers to be substantial and sufficient.[22,23] Overall, results supported the notion that this education-based intervention succeeded, as students in the post test consumed fewer sugary beverages and less fast food, while increasing both physical activity and healthy food consumption.[22,23]

Commented [m4]: What about limitations of the study?

d. Proposed Program and Objectives

As mentioned above, due to the lack of retail options for fresh produce in SI CD1, current nutrition initiatives and food justice programs in Staten Island include citywide initiatives and community initiatives. Citywide initiatives include: mobile produce carts named Green Carts stationed in NYC food deserts, Green Markets, and City Harvest's Healthy Neighborhoods program, all of which are currently working to change food attitudes and behaviors in SI CD1. Concurrently, community-led interventions include initiatives like Community Health Action food pantry, a pantry that provides cooking and nutrition classes and Staten Island Partnership for Community Wellness and Staten Island Foundation's Take Care Staten Island.[14] Like the St. George Greenmarket, many programs of both types are limited in their scope and availability.[24] While other boroughs are allotted 100 to 175 Green Carts, NYC only allots 50 Green Cart permits to SI CD1, suggesting perhaps that low walkability of the area may significantly decrease likelihood of Green Cart utilization, a successful intervention in other boroughs.[25] City Harvest, a nonprofit that works in neighborhoods throughout NYC to combat food insecurity, has chosen the North Shore Neighborhood (SI CD1) as one of six "Healthy Neighborhoods" to provide emergency food assistance, educate residents on nutrition and enable community

organizations to provide healthy foods to residents.[26] Over the last year, City Harvest has hosted over 24 food markets, providing food for over 2,300 people every two weeks.[27] City Harvest depends on private donations for 99% of its budget.[27] Similarly, two salient points regarding the limitations of the Green Markets and Green Carts programs are their limited hours and dependence on city government funding, which may indicate impermanence.

As SI CD1 is a nutritious food desert, we propose that a food co-op intervention using a social ecological model target the social, economic, environmental and individual roots of nutrition disparity and address both the immediate and underlying issues at hand. Modeling our intervention after the Healthy New York campaign, which outlines objectives for healthy nutrition initiatives at the community intervention level, proposed program objectives include: increasing retail availability of healthy foods, adopting policies to reduce overconsumption of sugary drinks, implementing practices to increase access to affordable healthy foods for individuals, and investing in evidence-based community programs for improved nutrition.[28] Starting at the individual level, while working at the co-op members may gain new skills, social capital, and confidence, which could lead to paid employment and foster an environment of inclusion and community.[29] Interacting with community members equally interested in maintaining their own and the community's health and wellbeing may decrease social isolation.[26,28] Policies may take decades to change, and NYC has had particular difficulty in implementing policies to change the consumption of sugary drinks, however, the co-operative could embed this objective into its purchasing decisions with member support.[27] Should the co-op members choose to do so, a partnership with Island Charter, a charter bus company, could provide shuttle transport to the co-op from nursing homes, adult homes and public housing that would increase co-op access to individuals with mobility challenges, the elderly and residents of

public housing located in SI CD1.[30,31] By strategically locating the co-op at the New Stapleton Waterfront, we would already increase the proximity of affordable healthy foods to individuals living in the neighborhood's public housing.

The literature suggests that a food cooperative will need a wealth of support from primary, secondary and potential building blocks in order to succeed.[21] Partnering with existing healthy restaurants and community programs, our food co-op could bolster healthy options throughout SI CD1 by offering healthy takeout prepared foods, increasing partners' consumer base and healthy option awareness. Start-up grants from community organizations like Staten Island Foundation and national corporations like Community Cooperative Fund as well as consultancies from Staten Island Small Business Development Center would help the co-op to be well-organized and maintained in order to avoid the pitfalls that befell the East New York co-op. Due to prevalent health problems and inadequate healthy options, SI CD1 requires a nutrition intervention that can provide longstanding support. A food cooperative would not only empower the community to drive the market and the food environment in a healthy direction, but also would amplify the current food culture revolution happening throughout NYC as a whole.

Commented [m5]: Need two specific and measurable objectives

Commented [m6]: Nice conclusion

GRADE: 14.5/15

Birth Tourism and Caribbean Women

Professor Meredith Manze
COMHE 770.85
Final Paper
7/8/2012

Abstract: The paper presents the results of a qualitative study based on Caribbean women's (who come to the United States solely for giving birth) childbirth experience in the U.S. and their native country. The paper contributes to the understanding of birth tourism by shedding light on the reasons for women coming to the U.S. to give birth and the factors that enabled to make that decision.

INTRODUCTION

In the wake of globalization, many people now have the opportunity to travel to many previously unreachable foreign destinations. As such, there is a growing phenomenon known as medical tourism, which is understood as traveling abroad with the intention of obtaining non-emergency medical services, but little is known about its scope.[12-14] Likewise, so is "birth tourism", used interchangeable with "maternity tourism", which is also becoming a growing industry within medical tourism.[8,11,13] In recent years, there has been an increase in advertised packages for doctors, insurance, and postpartum care by businesses located in China, Mexico, and South Korea.[1,6,7] Birth tourism clinics have appeared throughout the U.S., including states, such as New York, where a Turkish-owned hotel on the Upper East Side of New York City has advertised month-long "baby stays" that come with a stroller.[1,2] These businesses have made a lucrative practice of arranging birthing accommodations in the U.S. for wealthy pregnant women (often documented as Asians -- Chinese and Koreans, respectively) from overseas who are entering the country for the sole purpose of attaining U.S. citizenship for their children.[1,4,6]

Commented [MD1]: Add definition to clarify (even though it's sort of obvious) that this means traveling solely for the purposes of giving birth in a different country.

As such, birth tourism is commonly perceived and popularly depicted as an economic issue, both at the system and individual levels, yet the decision to engage in such tourism is more complex.[8] Some of these women decide that travelling is in their best interest, as they prefer to be closer to family for the birth. Other women may decide that they do not mind travelling in order to give birth with a particular doctor or at a particular facility. Still, others choose to travel abroad to give birth due to personal preference or for private reasons beyond obtainment of an American citizenship for their baby, such as seeking a safer birthing experience due to poor healthcare in their native country. However, there is no data documenting these reasons. Moreover, the focus has been largely on Asian and Mexican pregnant women, omitting women

Commented [MD2]: Need citations

from other backgrounds, such as the Caribbean, in this discourse. Furthermore, there is lack of data on traditional birth tourism (i.e., non-advertised packaged), but the reliance of existing social networks –-family and friends and the use of regular medical facilities (e.g., hospitals and clinics), often public. Therefore, the aim of this study is to better understand the scope of birth tourism by examining the experiences of Caribbean women. Thus, the research question is: What are Caribbean primiparous or multiparous women's (who come to the United States solely for giving birth) perceptions are prior to coming to the U.S., their reasons, and their experiences of childbirth in the U.S., compared to their native country?

Commented [MD3]: This is a term I'd use more for a quantitatively oriented study that wanted to asses prevalence.

Commented [MD4]: Well written intro demonstrating the significance of the problem and need for this research

METHODS

Study Participants

Eligibility

To be eligible to participate in the study, participants were required to be a cis female, born and currently living in the Caribbean region. Participants had to have given birth at least once in their native country. In addition, participants had to have given birth at least once in the United States of America within the past 10 years and had to have come here solely for giving birth. All participants' births (between native country and the U.S.) had to be less than 10 years apart.

Recruitment

For the study, two (2) women from the Caribbean region (Trinidad and Tobago and Grenada, respectively) were recruited to participate in an interview. All participants were recruited using the snowball approach, with my personal social networks of family and friends as the initial point of entry. Recruitment consisted of family and friends providing potential participants with brief information about my educational background and the purpose of my

research (i.e., needed to complete a summer class). If any eligible woman was interested in participating, either she was given my contact information or I was given hers. The snowball strategy was adopted to make recruitment easier, given the time constraint of the study, as well as the nature of the study. Although, I had told 5 personal contacts, I do not know how many potential participants were informed. I received immediate interest by one potential participant and shortly another response through a personal contact. However, shortly before the interview, the latter participant could not conduct the interview for unknown reasons. A third person was contacted, who agreed to an interview.

Data collection and analysis

Data Collection

Semi-structured, in-depth interviews based on a topic guide, which include a brief survey, were used to enable a detailed exploration of women's' views and experiences using a flexible and responsive approach. The in-depth interviews were conducted over the internet using Skype -- a freemium voice-over-IP service and instant messaging client software, roughly between 30 and 35 minutes, over the weekend of June 21 – 22, 2014. All interviews were recorded with the permission of the women being interviewed using the Smart Voice Recorder mobile app. After the interviews, the recordings were transcribed into computer files using Microsoft Words. I assured the participants that they would not be identifiable in any subsequent report by letting them know prior to the interview that all information shared and expressed during the interview would be kept confidential. I also used pseudonyms in the transcripts to protect the confidentiality of parents and children. Once the final research report was written, the recordings from the interviews were permanently deleted.

Data Analysis

For the analysis, the interview transcripts were thoroughly read and coded in the style of a grounded theory approach to data analysis, which helps identify patterns within the data (i.e., interview transcripts). The interview transcripts were indexed and mapped based on recurring themes. Twenty-one codes were generated and five category headings were generated from the data and under these all of the data were accounted for. Four independent researchers (i.e., 1 professor and 3 classmates) were asked to verify the seeming accuracy of the category system by providing critical and analytic feedback, and after reviewing their feedback, modifications were made to the categories. Table 1. presents the demographic characteristics of participants and their children.

TABLE 1. Demographic of participants

Participant's ID	**0023**	**0069**
Age	37	35
Nationality	Trinidad and Tobago	Trinidad and Tobago
Number of children	3	2
Gender/Age of children	1st birth: Girl and Boy (twins)/13 2nd birth: Girl/8	1st birth: Girl/15 2nd birth: Boy/ 7
Type of labor	1st birth: induced 2nd birth: induced	1st Birth: spontaneous 2nd birth: induced
Type of Delivery	1st birth: vaginal 2nd birth: vaginal	1st birth: vaginal 2nd birth: vaginal

Commented [MD5]: Really nice detail of the methods

Commented [MD6]: Would help to add the country of birth for each child

RESULTS

The findings are presented according to the key themes and subthemes: (i) the influence of a planned vs. unplanned pregnancy in the decision to travel (ii) The role of family in birth tourism (iii) dualities of native country U.S. healthcare system (iv) cultural pain management norms and (v) birthing expectations of pregnant women. Throughout this section, participant's id number is used to identify the quote's source.

Commented [MD7]: Nice intro

i. The influence of a planned vs. unplanned pregnancy in the decision to travel

Commented [MD8]: A theme name like "Unplanned pregnancy prohibits birth tourism" would be more descriptive for the reader to understand the main point of this finding.

The study participants said that their decision to travel abroad was influence by whether their pregnancy was unplanned or planned. The participants said that the reason for not giving birth in the U.S. with their first pregnancy was due to the pregnancy being unplanned. Thus, they were unable to make adequate travel and birthing arrangements in a timely fashion. Moreover, participants mentioned that when they had considered traveling abroad, their bellies would have also been too visible, which could have been grounds for an immigration officer to prevent them from entering the U.S. Participant 0069 states, "…my stomach was too big at seven months to travel to the States. That's why my daughter was born in T n T [Trinidad and Tobago]." As a result, participants chose to give birth in their native country. However, with their second pregnancy, participants mentioned that it was planned, thus they were able to travel to give birth before their stomachs became visible. On average, the participants travelled when they at five months pregnant.

ii. The role of family in birth tourism

Commented [MD9]: Same comment as above. A name like "Family Needed in U.S." would add more detail

When asked about other reasons that abetted their decision to travel and what informational resources were consulted, participants mentioned that they relied on their family members, living abroad in the U.S. Participants said that it was family members; primarily

women (e.g., mother, aunt, cousin) who provided them with the information, such as the procedures and protocols for obtaining the government funded maternity insurance coverage. In addition, family members provided them with shelter during their stay in the U.S.

iii. Dualities of native country and U.S. healthcare system

Commented [MD10]: Or "Seeking advanced technology and professional providers"

Although the study participants' native country of Trinidad and Tobago has socialized medicine (i.e., free or nominal cost of healthcare), which provides free maternal services, ranging from prenatal care to services incurred during labor and delivery, participants mentioned that they were dissatisfied with certain aspects of the healthcare system. Two common areas that they expressed dissatisfaction with are the lack of advanced medical technology and the unprofessionalism of healthcare providers, especially nurses, whom "seem like they never knew how to fully comprehend their reasons for being nurse" and "needed a lot of people relations training and skills workshop". The participants blamed the lack of advanced medical technology, but particularly the lack of professionalism for the high rates of infant mortality. They also mentioned that the high infant mortality rate in their native country also bolstered their decision to give birth in the United States with their second pregnancy.

On the contrary, participants lauded the U.S. healthcare system in these areas. The participants were highly impressed by the level of care that they received during their pregnancy by healthcare providers, particularly nurses, whose level of professional competence was "exceptionally excellent". For instance, participants shared that the constant availability, presence, and support of nurses at the time of their hospitalization made their birthing experience much better than their native country, despite their respective pregnancy complications and the admittance of their baby in the intensive care unit. They emphasized that the combination of professionalism and the use of advanced medical technology they encountered in the U.S. played

a significant role in their baby's health outcome following their subsequent care after birth in the intensive care unit, which exceeded more than two days for each participant.

When participant 0023 was asked to recount her birthing experiences, she states,

> "…During the entire time [while giving birth for my1st pregnancy], I was screaming. I was in a lot of pain. When baby #2 finally was delivered, she was not breathing. It was just terrible and heart breaking. But with my last pregnancy [in the U.S.], it went really well. It was completely different than my first with the twins."

Participant 0023 said that despite being hospitalized for an entire week prior to giving birth and receiving a potentially lethal medication that could have harmed her unborn child as a means to help induce her labor, the constant monitoring and professionalism by doctors and nurses helped mitigate her concerns.

Although, study participants had different birthing experiences in their native country, they agreed that their pregnancy and birthing experience was exceptionally different in the U.S. from their native country due to advanced medical technology and the high-level professionalism of healthcare workers**.**

iv. Cultural Pain Management Norms

When participants were asked about labor management and coping techniques, participants shared that they bared the pain for both pregnancies, as it was a "cultural norm". The participants mentioned that with their first pregnancy in their native country, epidural was not a customary procedure since it was relatively new to the region in the late 90s and early 00s. The participants also mentioned that pregnant women, as well as doctors, mostly in public hospitals did not grant epidurals due to the risks involved, such as the fear of a woman losing her ability to walk; however, participants stated that they were given other forms of pain relief medications

then. However, even with the perceived safety of epidural during their second pregnancy in the mid-00s in the U.S., the study participants still opted from being given an epidural. As participant 0069 states, "Yes, it was a personal decision [not to have an epidural]. It's customary in my culture for women to give birth without getting an epidural. I did not see the need to have an epidural with my son, given that I had delivered my daughter without one." Nonetheless, participants received other forms of pain relief medications. Moreover, they also discussed that the support of attending nurse's helped ease their pains while giving birth.

Commented [MD11]: This is an interesting finding but I'm not sure it's related to decisions about coming to the US to deliver.

v. Expecting a Healthy Baby

Because of their adverse birth outcomes with their first pregnancy, study participants conveyed being equally as stress with their second pregnancy, albeit being in the U.S. They expressed fears of unborn child dying, being injured during birth, or being born with a health condition. As a result, their only birthing expectation was to have a birth outcome that resulted in the delivery of a "healthy and normal baby". For instance, during their first pregnancy, participant 0069's baby was diagnosed with a tetralogy of fallot, a rare congenital heart defect, whereas, one of participant 0023's twin's foot was damaged during delivery due to the baby being in a transverse presentation (i.e., breech). Therefore, the study participants only wished for a viable and healthy child with their second pregnancy. As 0023 states, "…my daughter is now a happy and spontaneous 8 year old that is very much vibrant." Further supporting that the study participants only hope was for a normal child.

Commented [MD12]: Nice description of findings

DISSCUSSION

The results from this study suggest that there are various reasons for women coming to the United States to give birth besides the premise that they solely want an American child. The findings reveal that women are opting to travel abroad in hope for a safer birth outcome due to

their native country's poor quality of healthcare. However, the decision to make that choice involves many factors, such as having a planned pregnancy and the resources that will enable them to travel (e.g., money and a passport). Additionally, the women have to make sure that they have secured a place to stay before they arrive in the U.S.; therefore, it is critical that they have an existing and reliable social network of family and friends. Furthermore, they also have to be knowledgeable on how to obtain maternity health coverage and informed on how to maneuver the healthcare system once they arrive in the U.S.

Most importantly, the findings show that the professionalism of healthcare providers is critical in a woman's pregnancy and subsequent experience with labor and delivery. The study shows that these contacts determine the woman's birth outcomes to a great degree. It was most certainly apparent that birthing support by healthcare providers, specifically nurses was essential in calming and empowering the women while giving birth and overall determines their childbirth experiences.

Consequently, the implications of the findings suggest that countries within the Caribbean region need to improve their healthcare system, particularly in the quality of their maternity services, starting from prenatal care to labor management and delivery care. More so, that the focus should be specifically on training their healthcare workers to be more cognizant of the needs of pregnant women and the manner in which they interact with them, given their vulnerable state. In addition, these countries within the Caribbean region should take the necessary measures to ensure that healthcare professionals are knowledgeable and skilled to carry out the duties involved with maternal and child health care services, such as how to handle breech births that would not result in the harming of mother, baby, or both. Moreover, the

findings suggest that the healthcare system needs modernizing through the incorporation and use of the latest medical technologies to ensure a safe birth or post-delivery care.

In interpreting the findings of this study, it is important to acknowledge its limitations. The sample size was small and derived from women who had not given birth within the past 5 years and thus their birthing experience may not be reflective of recent and current changes in maternal services and practices (whether good or bad) in their native country and the U.S. In addition, the participants were also from the same country – Trinidad and Tobago, therefore, the study may not be a very accurate representation of women from the Caribbean region. As a result, the size and homogeneity of the sample may have limited the generalizability of the study's findings. Another limitation is that the interview guide's questions and probes, in retrospect, may not have been refined enough to illicit better responses from the participants.

Nonetheless, the findings provide information that has been lacking in the literature in regards to the inclusion of other women within the discourse of birth tourism in the U.S. Moreover, the study provides detailed information on the experiences of pregnant women both in their native country and in the U.S., in similarities and differences, as well as the nuances of each participant's pregnancies. Furthermore, the findings may help future studies expound on the different experiences of women by examining birth tourism more closely among women of other regions of the world. Future research may consider examining the phenomenon by studying traditional birth tourism, juxtapose to the burgeoning businesses that are offering all-inclusive packaged deals for wealthier women. Additionally, future studies may reveal if the findings in this study among this particular demographic of women is still prevalent.

Commented [MD13]: Nice synthesis of findings, limitations and recommendations for practice

GRADE: 20/20

The PIMCO Foundation
650 Newport Center Dr.
Newport Beach, CA
92660-6398

Dear PIMCO Foundation,

Catholic Charities of Brooklyn and Queens (CCBQ) is extremely excited by the possibility of PIMCO supporting the development of a program that not only will educate the Coney Island community on healthy eating but also increase food security by providing them practical knowledge that will help residents obtain employment. **We request consideration of an Engage grant of $75,000 over 1 year to support Employment through Nutrition at the Our Lady of Solace food pantry for FY2016.** Please see the enclosed proposal for information on what the program entails and why it is so vital to the Coney Island community.

Within the past three years, rates of poverty, unemployment, and obesity have increased and resources for help have decreased on the island. It is our mission to support members of the community by empowering and educating them. Employment through Nutrition will address food security while providing skills to increase employment as peer nutrition educators.

We are confident that a grant from PIMCO will allow this program to live up to its full potential and benefit hundreds of lives. We hope by the end of this proposal the dire need for this program will be evident and how it will not only help the program participants but the entire community. We look forward to hearing from you in the future and would love for you to help us take on this venture. Thank you for the consideration of pursuing this grant with CCBQ.

Sincerely,

Catholic Charities

EXECUTIVE SUMMARY

Coney Island, located in Brooklyn, New York, is comprised of a large hard working immigrant population that has access to minimal resources with more than half of the food pantries unable to meet the demands of the people. Poverty is a major issue for residents and has been caused by lack of employment resulting in food insecurity and obesity. The rate of food insecurity is higher than the national average and more than half of the residents are overweight or obese, resulting in high rates of chronic diet-related disease among residents.

Commented [m2]: Need references

In hopes of reducing diet related diseases, Lady of Solace food pantry –an extension of Catholic Charities- is creating a program, **Employment through Nutrition** that addresses the root causes of food-related diseases. The program will both educate members of the community on nutrition and provide them with job skills to make them more marketable within the workforce.

Commented [m3]: Be mindful of implying that educating a community addresses the root cause. Food-related diseases are more likely to come from poor availability of healthy food (geographically & financially) vs. not knowing what's healthy

Employment through Nutrition will be a 6-month program made up of 24 culturally competent weekly sessions that are 2 hours each. Half of the sessions will focus on nutrition, and half will focus on job readiness skills. Their will be 3 variations of the class; English, Mandarin and Russian, with 30 participants each. At the end, 90 participants will have been directly affected, but countless community members will benefit as knowledge spreads and increased employment creates economic growth.

To allow Employment through Nutrition to help the Coney Island community, we are requesting $75,000. This money will help us hire qualified employees and provide participants with quality resources. Catholic Charities, established in 1899, has multiple sources of funding and has helped 17,488 individuals within the past year through its countless outreach programs.

Employment through Nutrition looks forward to enhance Catholic Charities, Lady of Solace food pantry, and the Coney Island community.

Commented [m4]: How does this program align with PIMCO's mission?

STATEMENT OF NEED

The dual issue of food insecurity and obesity is a growing public health concern in the United States.[1,2] It has been well established in the literature that socioeconomic status contributes to disparities in food insecurity and subsequent diet-related diseases.[2,3] Coney Island, a vibrant and diverse community located on southwest peninsula of Brooklyn, is a microcosm of such issues.

Coney Island has a significant senior population and a large immigrant community. Eighteen percent of the neighborhood's population is 65 years and older and almost half of residents are foreign born (49%).[4,5] For many Coney Island residents, English is not their primary language. At home, around 36% of residents speak Russian and 14% speak Asian languages including Mandarin and Urdu.[4] Poverty is also a salient issue for Coney Island residents. In 2012, 21% of residents lived in poverty and 9% of the labor force was unemployed. In Coney Island, the median household income is approximately $32,000, which is $12,000 less than the median of Brooklyn as a whole. Housing is also a growing concern, with increases in the median gross rent and half of all renters paying more than thirty percent of their total income on rent.[3]

Poverty is a key determinant of food insecurity and obesity, as food quality and quantity are compromised when household food budgets fall too short to meet adequate nutrition needs.[3] In many neighborhoods, including Coney Island, unhealthy, high-energy dense foods are aggressively marketed, highly accessible, and inexpensive.[6] Subsequently, Coney Island residents also experience numerous health challenges. Rates of food insecurity in Coney Island

are at 20%, compared to 14% nationwide.[7,8] Over half of Coney Island residents are overweight (28%) or obese (32%). In addition, 9% of residents are diabetic and one in three have hypertension.[9] A Needs Assessment conducted by Coney Island Hospital identified diabetes, heart disease and obesity as priority needs.[10]

With high rates of unemployment and rising costs of living, more residents are finding themselves unable to purchase foods that meet the adequate nutrition requirements necessary to prevent these key diet-related diseases. Food Assistance programs are also struggling to meet the growing demand. 91% of food pantries and soup kitchens in Brooklyn reported a growing demand for services since 2010, and more than half indicated not having enough food and resources to meet the increasing needs of residents.[11] Given the increase in demand for safety-net food providers, it is critical that food assistance programs develop services to address the root causes of food insecurity and diet-related disease beyond food access. Previous studies have suggested that food assistance programs may be well positioned to integrate nutrition and financial education and support into existing services in order to meet the complex needs of communities.[12, 13]

Catholic Charities is a community-based organization that currently runs 20 food pantries in high-need areas of Brooklyn and Queens. Last year, the food assistance program helped distribute more than 1 million meals to over 115,000 people.[14] Taking into consideration the community's needs and existing resources, food pantries in Brooklyn can be leveraged to implement a program that addresses the interrelated issues of obesity, food insecurity, and unemployment.

Commented [m5]: Nice demonstration of need

PROJECT DESCRIPTION

Project Goals/Objectives. Understanding Coney Island's priority needs areas, we propose a skills-based program that will integrate nutrition knowledge, cooking skills and job readiness in order to address the root causes of food insecurity. Program goals and objectives are dependent on program implementation and participant enrollment in the 6-month program. We will implement a total of 24 culturally competent program weekly sessions (2 hours each) tailored to the Russian and Chinese populations in Coney Island. We will conduct 3 versions of the program in English, Mandarin, and Russian and aim to recruit 30 participants in each language cohort; 90 participants overall. In order for participants to obtain optimal benefits from the program activities, they must attend 75% (18/24) of the total weekly sessions. It is anticipated that 24/30 participants will meet the minimum attendance requirement for graduation.

Goal 1: Increase nutrition knowledge and healthy eating behaviors in Coney Island.

- Objective 1: At the end of the 6-month program, 80% of participants will have increased knowledge about adequate nutrition, healthy cooking skills, and how food choices relate to diet-related diseases.
- Objective 2: At the end of the 6-month program, 50% of participants will meet the recommended 2010 dietary guidelines for fruit and vegetable intake; 5 servings of vegetables per day and 3 servings of fruit per day, and continue to meet it for at least one year.
- Objective 3: At the end of the 6-month program, 60% of participants will have increased knowledge of the 2010 dietary guidelines recommendations for physical activity; 30 minutes per day.

Commented [m6]: This is ambitious.

Commented [m7]: This phrase doesn't make sense with the rest of the sentence. The first part was just about knowledge. Clarify if you mean they will actually do the recommended amount

Goal 2: Increase food security on Coney Island through the use of community and state resources

- Objective 1: At the end of the 6-month program, 80% of participants who qualify for Supplemental Nutrition Assistance Program (SNAP) will have applied or renewed their application to receive maximum benefits.
- Objective 2: At the end of the 6-month program, 80% of participants will have planed an individualized, 1 week, budget friendly meal plan.

Goal 3: Increase participants' job readiness skills and decrease unemployment rates on Coney Island

- Objective 1: At the end of the 6-month program, 75% of participants will be aware of nutrition-related employment opportunities within Coney Island and the surrounding areas accessible by public transportation.
- Objective 2: At the end of the 6-month program, 75% of participants will gain skills to aid them in obtaining a job including interview skills, resume building skills, and guidelines for professional attire.
- Objective 3: At the end of the 6-month program, 80% of participants will have met program requirements for graduation and receive a certificate of completion for employment opportunities in the food and nutrition field.
- Objective 4: Within one year of completion of the program, 15% of participants will be employed.

Commented [m8]: Are there enough resources for those who do apply? The need statement referenced many food banks feeling under resourced

Commented [m9]: Consider expanding the scope of potential employment

The goals of the proposed program are well aligned with PIMCO's indicated priority areas for 2015, which aim to fund programs that address issues of food insecurity and enhance workforce development opportunities in underserved communities.

Commented [m10]: Move this to executive summary

Methods. Catholic Charities will implement Employment through Nutrition over a one-year period and run three language-specific versions of the program. Months 1-2 will focus on hiring, training and recruitment. The program for English speakers will launch in month 3, followed by the Mandarin cohort in month 4 and the Russian cohort in month 5. Months 11 & 12 will focus on evaluation. Each language cohort will receive a similar 6-month program with some culturally appropriate variations. Participants will attend 24 two-hour sessions following the food pantry's Monday hours based on language cohort. Sessions will rotate between nutrition education and job readiness skills. All classes will end with an interactive cooking component. Employment through Nutrition is open to all food pantry clients over the age of 16. To address immediate food insecurity needs, staff will help qualifying participants apply for or renew applications to receive maximum SNAP benefits.

The nutrition curriculum will cover healthy diet and physical activity guidelines and address links between diet and chronic disease prevention and management. In addition, participants will learn about food safety and develop meal plans and food budgets. In the cooking skills segment, participants will prepare a healthy recipe using foods available at the food pantry. This component will often focus on how to modify culturally relevant recipes to increase nutritional value. All recipes will be budget friendly and easy to prepare.

The job readiness skills curriculum will cover interview strategies and resume and cover letter writing. Participants will also learn to lead and facilitate culturally competent nutrition

education and cooking skills programs. Participants who successfully complete the program will receive a certification of achievement. The certificate demonstrates participants' mastery of this skill set and can be an additional credential for job applications. Upon completion, the program will connect participants to other community-based nutrition organizations for potential employment opportunities as nutrition peer educators or advocates.

Evaluation. Evaluation is the primary mechanism to determine the success of the program. The stated goals and objectives are dependent on participant enrollment and engagement in the 6-month program. In order for participants to obtain optimal program benefits, they must attend 75% (18/24) of the total weekly sessions. We will track attendance in order to determine the number of participants that meet the minimum dosage (18/24 sessions) but also to engage participants who may be in danger or not graduating due to excessive absence. Attendance data will help the program determine whether participant enrollment and engagement targets were met. The following performance metrics will be assessed among those who meet the minimum dosage requirement.

A major goal of the program is to increase participants' healthy eating knowledge and behaviors. In order to assess changes in knowledge and behavior we will collect pre-post surveys. The surveys will assess baseline knowledge of adequate nutrition, healthy cooking skills, diet-related diseases, and dietary guidelines for fruit and vegetable in-take and physical activity. Changes in self-reported fruit and vegetable intake will also be assessed using the pre-post survey.

The second goal is to increase food security through the use of community and state resources. Program staff will be required to document the total number of eligible participants who enrolled in SNAP or who renewed their benefits during the program period. Another

program goal is to ensure that all participants develop a weekly food budget. Participants will be asked to submit a copy of their food budgets in order to discuss with staff and to document completion rates.

Finally, the program aims to increase job readiness skills and employment rates among participants. Changes in these areas will also be determined using a pre-post survey. The survey will allow us to determine baseline rates of employment and knowledge regarding key job skills such as interviews, resumes, and guidelines regarding professional attire. This data will also allow staff to tailor program sessions based on needs or knowledge gaps that emerge from the survey. The program will track the number of graduates who are linked to other community-based organizations for employment opportunities immediately upon graduation. The program will also have a system in place to follow-up with program alumni and document the number of participants employed in the food or nutrition field one-year after the program.

The above quantitative measures will allow us to clearly determine whether program activities successfully achieved the stated outcomes. The program will also collect qualitative data in order to ensure that the program is meeting participants' needs. The program will administer satisfaction surveys at the mid-way and end point of the program. Program staff will also conduct exit-interviews in order to discuss individual progress and to connect participants to potential employment opportunities. Participant feedback on the program will also aid in quality improvement efforts both during and after the program.

Commented [m11]: Nice evaluation plan that matches program objectives

Sustainability. With diverse funding streams, Catholic Charities is well prepared for sustainable growth and continual support of successful programs. In 2012, Catholic Charities received funding through foundation grants and contributions from corporations and the Brooklyn and Queens Dioceses.[15] The organization also received revenue from rental properties,

investments, and service fees from the government and third party reimbursement.[15] Catholic Charities is committed to transparency and efficiency; 91 cents of every dollar donated goes directly to programs.[16]

Commented [m12]: This is ok but doesn't leave me encouraged that this program can be easily sustained once the money runs out.

ORGANIZATION INFORMATION

Since 1899, Catholic Charities in the Diocese of Brooklyn and Queens, guided by the principles of the Catholic Social Teaching, has been serving and empowering Brooklyn and Queens' diverse communities. Catholic Charities Brooklyn and Queens (CCBQ) mission is to "translate[s] the Gospel of Jesus Christ into action by affirming the dignity and value of every person, especially the most vulnerable members of our diverse society. Catholic Charities develops effective responses to human need and joins with all people of good will in advocating for a social order which promotes justice and embraces human development."[17]

Initially formed in order to outreach and care for the orphan children in its communities, as more needs emerged the organization expanded its outreach and services. In order to provide additional and more diverse services, the organization widened its areas of programming, becoming one of the leading organizations in the nation. Today, CCBQ offers more than 160 programs and services, reaching all segments of Brooklyn and Queens' communities: adults, seniors, children and youth, as well as the disabled and mentally ill. The organizations' programs include: Parish and Community Outreach, Behavioral Health Services, Early Childhood Services, Family Services, Older Adult Services, Housing Services, Developmental Disability Services, and Affiliated Agencies.[17]

During this past year, CCBQ Parish and Community Outreach services program provided services to 17,488 individuals through its two community centers in Brooklyn and Queens, and its 16 satellite sites located in areas of high need. The two community centers, one in Brooklyn

and one in Queens, provide on-site emergency food assistance, financial assistance, continuing education opportunities, such as GED, ESL and computer classes, guidance for employment, immigration and bereavement services, as well as referrals and access to other needed services. In addition, this past year, CCBQ Parish and Community Outreach services program awarded emergency funds to 433 families who received a total of $115,437 to prevent utility shut offs, 155 individuals received $36,600 for assistance with energy and heating utility bills, and 380 families received a total of $221, 315 in rent assistance. Through its network of 20 Food Pantries located in 17 perishes, 1,071,072 meals were distributed to 119,000 community members, and health bucks to purchase produce at nearby farmer's markets were given to individuals in order to promote healthy eating. [18]

CCBQ is comprised of 14 senior staff members, 47 board members and junior board members, young professional volunteers, who assist with CCBQ projects and initiatives in Brooklyn and Queens' communities. This past year, 130 volunteers provided assistance in many different CCBQ Parish and Community Outreach services projects. Richard Slizeski, who has been working with CCBQ for more than a decade, directs parish and Community Outreach and Services program. Mr. Slizeski received his Bachelor of Arts degree in Journalism and Spanish from the University of Wyoming, holds a Master of Divinity degree from the Washington Theological Union, a Master of Social Work from Fordham University, and a New York State Master of Social Work License. Prior to joining CCBQ, Mr. Slizenski gained broad experience at several social service agencies and pastoral services as well.[17]

CCBQ Parish and Community Outreach service program is also able to provide its extensive vast services as a result of its strong established collaborations with fellow strategic partnering organizations. Some of these include: Catholic Migration Services, Fidelis Care of

NY, St. John's University, St. Joseph's College, DeSales Media Group, Inc, LifeWay Network Inc, Human Resource Administration, Cornell University Cooperative Extension, NYC Department of Education, ConEd and National Grid, Visiting Nurse Services, etc.[18]

Commented [m13]: Nice description of org.

CONCLUSION

Food insecurity caused by poverty can lead to many co-morbidities including obesity, hypertension and diabetes. On Coney Island, the median income is shockingly less than the median of Brooklyn as a whole. Many of the residents are unemployed, inhibiting them from having access to healthy and nutritious meals.

Employment through Nutrition's undertaking is to empower and educate community members so they can take full advantage of employment opportunities and lead healthy lives. Within the first 6 months of the program, 90 participants will be directly affected and a countless number of people will have benefited. As participants learn about accessible, healthy eating they will teach their friends and family members. Similarly, as they become employed they will bring money to the local economy, which will benefit thousands. We strongly look forward to PIMCO helping us change lives and bring vitality to a much-needed community.

Total			**$74,983**

Commented [m14]: Fringe not normally given to hourly employees (educators)

Commented [m15]: This is a lot of money to serve <100 people

BUDGET JUSTIFICATION

Personnel Costs:

Project Coordinator- An existing staff member in the Parish and Community Outreach Division of Catholic Charities will spend half her time coordinating Employment through Nutrition and the remaining half on existing programs. The Project Coordinator will be responsible for program logistics and coordination between the host site, the nutrition educators and Catholic Charities. The Project Coordinator will train the nutrition educators on the program curriculum, assist in participant recruitment, ensure that the nutrition educators have the necessary supplies each week, and lead the project evaluation.

Parish and Community Outreach Director- The Parish and Community Outreach Director, NAME REDACTED, is responsible for all programs within Parish and Community Outreach. He will spend 10% of his time on Employment through Nutrition. NAME REDACTED will supervise the Project Coordinator and Nutrition Educators and ensure that the project aligns with the overall mission and goals of the Parish and Community Outreach division.

Nutrition Educators- Three part-time Nutrition Educators will be hired to facilitate Employment through Nutrition on a weekly basis. Nutrition Educators will be responsible for set-up, leading class activities and cooking demonstrations, and clean up. Nutrition Educators' time is estimated at four hours a week for 14 weeks (12 weeks of facilitation, plus a week of training and a week for project wrap-up).

Commented [m16]: I thought the program was 6 months (24 weeks)?

4 hours X 14 weeks = 56 hours per educator but the budget says 104 hours per educator

Fringe Benefits- Fringe Benefits for all five personnel were calculated at a rate of 22 percent. Benefits include payroll taxes and medical benefits.

Other Direct Costs:

Printing and duplication and general office supplies- Printing and duplication costs will cover printing and copying all program fliers, registration materials, class session sign-in sheets and handouts, and evaluation materials throughout the program. Printing costs will include certificates of achievements for participants who graduate from the program. General office supplies will include flip charts, pens, pencils, markers folders, and other general office supplies for the Nutrition Educators and program participants to use throughout the program.

Cooking equipment- For the cooking skills component, the program will purchase enough small kitchen appliances for two language cohort classes to run simultaneously. The program will purchase hot plates (20 double burners hot plates at $35 each), blenders (20 blenders at $25 each) and electric griddles (20 at $30 each) as well as smaller cooking equipment including measuring cups, utensils, knives, pots, mixing bowls, cutting boards, etc.

Food- The Program Coordinator will be responsible for purchasing food for each session related to the food currently available at the food pantry for the cooking demonstrations and cooking skills program components. Estimated total costs are $6,480 = $3/per serving x 90 participants x 24 sessions.

Educational materials: This includes educational books, handouts and other materials for the Nutrition Educator to share with participants throughout the program. Educational materials will include healthy recipes, cooking safety tips, and meal planning and budgeting tools. Estimated total costs are $810 = 3 items at $3/each x 90 participants.

Rent/utilities- Rent and utilities expenses are being provided in kind by the program host site, Our Lady of Solace food pantry.

Indirect costs- Indirect costs were calculated at a rate of 24%.

Commented [m17]: Budget says 22%

, V.P., Global Grants Manager State Street Foundation

1 Lincoln Street
Boston, MA 02111-2900

Dear

I am writing to submit a proposal to the State Street Foundation. We are requesting a grant of $268,517 to provide English as a Second Language classes, GED classes, and job skills training to the underserved, low income population between the ages of 16 and 44 in Brooklyn, New York. These programs will allow capable participants of Reaching-Out Community Service's (RCS) food pantry the opportunity to improve their economic status so that they no longer need to rely on RCS' services.

We understand that your foundation primarily donates to programs seeking to improve community sustainability through education and job force development programs. We would like to improve the conditions in our neighborhood by providing education and skills training to our participants. We hope that you will be able to help us achieve some of our goals in the upcoming year.

We believe this grant of $268,517 will be paramount to our success and can allow us to expand our range of services. Please call our office at (718) 373-4565 if you have any questions.

Sincerely,

Executive Director

Reaching-Out Community Services
A Request for Funding to State Street Foundation

EXECUTIVE SUMMARY:

Reaching-Out Community Services (RCS) is a multi-functional service organization located in the Bensonhurst neighborhood of Brooklyn, New York. It was established in 1989 and incorporated as a 501(c)(3) in 1992 by Thomas Neve, a Brooklyn native who recognized that his neighbors needed a helping hand. From its humble beginnings handing out food and clothing from a van, RCS has grown into a supermarket-style client-choice food pantry and social service referral organization serving over 3,000 individuals in the Brooklyn community.

In the United States, unemployment affects over four million people between the ages of 16 and 44. In Brooklyn, 196,635 people are unemployed, of which 70% are between 16 and 44 years old. RCS has identified poor English skills and low education levels as significant barriers to attaining employment in this community. Long-term unemployment has negative health consequences such as depression, anxiety, and other stress-related conditions, as well as an 83% increase in conditions such as hypertension and diabetes. Therefore, we hope to address the unemployment problem by providing training to current clients aged 16-44 in English proficiency, General Education Development (GED), and job readiness. Our *Level Up* program will give our clients the skills and training they need to attain employment and break free from dependency.

It is our belief that with the training and skills provided by RCS, our clients can become more proficient in reading, writing, and conversational English. Coupled with training in both GED classes and job readiness skills, they will have the tools they need to succeed in the job force. We are asking for $268,517 from the State Street Foundation in order to implement this program. With this generous grant, we will be able to serve 250 people over two years. We believe that a partnership between the State Street Foundation and RCS will truly help our community.

Commented [m1]: This entire section needs references

STATEMENT OF NEED:

In the United States (US), 5.5% of the population ages 16 years and over are unemployed, representing a staggering 8.7 million individuals.[1] Adults ranging from ages 16 to 44 comprise the majority (52.9%) of unemployed individuals in the US, whereas this same age demographic represents 70% of the unemployed in Brooklyn, New York, equating to over 137,000 people.[2] Studies have shown that as education decreases, weekly earnings decrease and unemployment increases.[3] Nearly 70% of Brooklyn residents do not have a college education.[2] While the education levels are low, of far greater concern is the prevalence of low English proficiency, largely due to a high foreign born population. 50% of residents in Brooklyn speak a language other than English and more than half consider their English speaking "less than very well."[2] Studies have suggested poor English is often accompanied by low education levels and jointly serve as significant barriers for most individuals to attain employment.[4, 5] Reaching-Out Community Services (RCS) aims to address the needs of unemployed young and middle aged adults in low-income communities in Brooklyn by providing job training, advancing education, and offering English as a Second Language (ESL) courses.

Long-term unemployment can have detrimental effects in terms of future productivity, overall health, retention of job skills, and the ability to secure future employment.[6,7] In a systematic review, being unemployed led to a breadth of poor health outcomes related to the inability to afford care or stress-related conditions such as depression, anxiety, and even suicide.[8] Added financial strain, updating one's résumé, job searching, and interviewing can lead to self-defeating cognition and negatively impact long-term mental health.[7,8] Beyond psychological health, unemployed individuals face greater physical health issues with an 83% increase in forming new conditions such as hypertension, arthritis, and diabetes.[8,9] Additionally, foreign born individuals and minorities experience larger health inequalities, leading to poorer health

outcomes and higher mortality rates compared to a native population.[5] Furthermore, unemployment insurance programs alone cost $520 billion in 2012, not accounting for indirect costs of physical or mental health issues due to unemployment.[10]

According to Wanberg et al., reemployment success is dependent on the labor market's need, the individuals' human capital, defined as his/her job-related knowledge and ability, and social capital, which is the ability for individuals to access information on career opportunities.[11,12] Based on this model, employment-related programs that enhance job readiness skills and assist in establishing social capital could be beneficial to unemployed individuals. One featured program that has been well-researched is the JOBS program, from the University of Michigan, which aimed to improve job search skills and was found to demonstrate higher levels of employment, higher monthly income, and lower levels of depression after a two year follow up.[8] Overall, a significant drawback of current interventions is that very few programs, if any, actually focus on skill upgrading, and the majority lack assistance with culture, language, and education barriers. Several studies have noted that differences in employment across racial and ethnic groups may occur as a result of differential skills.[8] Thus, interventions would need to be tailored by offering ESL courses jointly with job readiness to cater to the Brooklyn demographic to improve reemployment rates and living conditions by minimizing racial disparities in health.[13]

RCS aims to address the barriers faced by the low-income communities of Brooklyn, equipping them with marketable workforce skills, and providing them with exposure to potential employment opportunities. Numerous young and middle aged people (of age ranges 16 to 44 years old) are currently reliant on RCS' food pantry due to unemployment. Training and placement for those who are unskilled or lacking resources will aid individuals to "level-up" and become self-sustainable and thus reduce their reliance on current food pantry services.

Commented [m2]: How many?

PROJECT GOALS/OBJECTIVES:

To reduce the unemployment rate among individuals who use the RCS pantry, RCS has created a program titled *Level Up*. *Level Up* offers educational resources such as English as a Second Language(ESL), General Education Development (GED), and job readiness classes to help decrease the perpetual cycle of unemployment due to lack of adequate resources in low-income communities in Brooklyn, New York. With the aid of educational instructors and equipment, clients will not only learn technical and educational skills but also develop self-confidence to aid in achieving future success.

Goal 1: To increase English language proficiency among class participants via ESL classes offered by RCS

Objectives:

- Enroll 25 participants in each ESL class for each semester
- Increase in proficiency among 50% of participants in writing and reading English by non-native English speakers after completion of one semester of the program
- Improve conversational English among 75% of participants after completion of one semester of the program

Goal 2: To increase the number of participants who attain high school credentials through GED courses offered by RCS

Objective:

- Enroll 25 participants in each GED course for each semester
- 50% of participants obtaining GED or high school equivalency within 1 year after completion of GED course

Goal 3: To increase job readiness skills for participants through job training course offered by RCS

Objectives:

- Enroll 25 participants in each job training course for each semester
- Develop resume among 100% of participants with updated relevant skills after the first semester
- Increase in job searching ability among 75% of participants through the completion of at least 10 job applications per month by the end of the second semester
- Obtain a minimum of 3 interviews among 75% of participants after completion of both semesters to demonstrate interview preparedness (e.g. simulated interviews, appropriate apparel, professional etiquette)

METHODS:

To apply for these classes, participants must be within the age range of 16 to 44 years old, as this age range constitutes the greatest unemployment rates in Brooklyn. In order to ensure that all students are given individual attention, there would be a maximum student to teacher ratio of 20:1.[14] RCS will work in partnership with several local organizations and educational institutions—libraries, The People's United Community Foundation, Inc.—to obtain both educational and administrative resources—instructors, donated space at schools, and printing. Three to four instructors will be recruited with two part-time program coordinators to efficiently administer each class. Courses will be offered on a semester basis, allowing participants to register for the following semester upon completing one course. Upon completion, students will be awarded a $100 gift card.

Commented [m3]: Why would you need 6 people to conduct each class?

The *Level Up* program will include an ESL, GED, and job readiness course.

1. The ESL course will be held twice a week for 1.5 hours over a 15-week semester. This will help prospective students of the ESL program improve their levels of English, adapt to life and culture in America and increase their self-confidence. In this class, students will learn conversational English, grammar, reading/writing, listening comprehension, and

Commented [m4]: People are busy so it may be easier to have one longer session once a week

vocabulary. The course will enable students to converse proficiently in English, improve their writing ability, and increase self-confidence in English as a whole.

2. The GED course will be held twice a week for 3 hours over a 15-week semester to help individuals who did not complete high school to obtain high school credentials. The class will cover: Social Studies, Writing, Language Arts/Reading, and Mathematics.[15,16] Pretests will be administered to students to gauge any areas that need improvement. Two subjects will be covered in each class. The GED tests will enable qualified participants to pursue a higher education, obtain a job or job promotions, enlist in the military, and achieve personal goals.[17,18]
3. The job readiness course will be held once a week for 1 hour over two 15-week semesters. This course will cover: résumé writing, mock interviews, and dressing for interview success. This class will help participants gain self-confidence through professional apparel, obtain new job skills, develop résumés and career plans, improve job searching skills via search engine training, and improve their interviewing techniques via simulated interviews.[19]

Commented [m5]: Can the same student come to each course? If so, this is a lot of $ to ask for 25 participants

EVALUATION:

Level Up is designed to give clients equal opportunity to participate in all courses of the program to ensure job readiness. It therefore measures the effectiveness of the program through its participants' progress. In order to appropriately match RCS participants with the most valuable skillset, an initial assessment will be given to all incoming RCS participants to determine their current skillset and register them in the most suitable class. Surveys will be administered and topics will include current interests and previous job experiences the participants enjoyed, and future career aspirations and coursework participants are interested in.

Attendance will be taken at the beginning of each class across all three courses. Upon entry, students will be given a reading comprehension, written, and oral exam to determine

reading, writing, comprehension, and ability to converse in English. Mid-term and final assessments will be given to confirm that students have made progress from their baseline assessments. RCS will request a copy of formal GED certifications to account for which students obtained their GED. Instructors will ensure that each participant has a current resume updated with relevant skills after the first semester. To evaluate the job readiness class, the program coordinator will keep track of job applications submitted per month for each participant. Instructors will have a designated checklist of interview skills, and will evaluate each participant on demonstrated interview preparedness through mock interviews. The program coordinator will keep track of scheduled and attended job interviews for each participant. Overall, long-term psychological benefits and mental health outcomes of this program will be evaluated at the two year mark, using the Behavioral Risk Factor Surveillance System (BRFSS).[20]

Commented [m6]: How long after the program ends?

Commented [m7]: Needs corresponding objective

Course evaluations will be conducted with participants at the middle and end of each semester to assess their perceptions of course content, instructor capabilities and self-confidence levels in each area learned by participants to fulfill the qualitative aspect of the program.

To ensure that instructors are suitable to teach at *Level Up*, annual assessments will be conducted to gauge strengths and areas that require improvement by the instructors. This assessment, likened to participants' initial assessment, will include testing to attest for each instructor's ability to teach their courses.

SUSTAINABILITY:

As *Level Up* seeks to enhance education levels and one's confidence in finding and obtaining a job, the program's contributors are well invested in the program's mission. In addition to their certifications before their work with *Level Up*, volunteers and staff are required to enrich their qualifications through independent online training. In this manner, they remain

current on new teaching techniques and refresh their knowledge in their respective field to provide the best for their students. However, your generosity to aid *Level Up* will also assist with training incoming staff. All certified instructors teaching each course will be trained and will then train incoming volunteers. This in-house training will decrease the need for funding for future training in the subsequent years.

With supplementary help from The People's United Community Foundation, Inc., *Level Up* plans to run a two-year program with the indicated number of participants. As our evaluations from the participants will be conducted mid and post year, we will be able to note our areas of weakness and begin to rectify them before the new year begins. A contribution from your foundation will enable *Level Up* to offer GED, ESL and job readiness courses twice a day in the following years as the demand for the courses increases due to the rising number of applicants and their revolving schedules. Although there will be more classes, there will not be a need for new staff as courses will be offered after 5 P.M., allowing the current staff to maintain their current schedules with minor adjustments.

Level Up also wishes to collaborate with local high schools. In an attempt to resolve the issues before they progress, local high schools will work in tandem with at-risk youth, their parents, guidance counselors and *Level Up* program coordinators to discuss possible placement in the program. The schools will donate resources such as old textbooks and library books, decreasing our need for resources while increasing the productivity of its participants.

RCS' *Level Up* aims to enable people of low-income, those lacking skills and resources, with the skills to become self-sufficient so that they may become confident, active members of society. Your assistance will give hope and confidence to people, thus reducing the burden of the economically disadvantaged, fostering development and empowerment.

Commented [m8]: Nice demonstration of sustainability

ORGANIZATION INFORMATION:

In 1989, Thomas Neve recognized that the homeless of Bensonhurst, New York, were in need of services and had nowhere to turn. He purchased a van and began meeting some of these needs daily in a mobile out-reach program, serving meals, giving out clothing, and referring his neighbors to shelters and programs. As demand for services increased, he rented a storefront to operate out of, storing food and developing more services. In 1992, Reaching-Out Community Services (RCS) was formed and incorporated as a 501(c)3.[21] By 1996, the food bank portion had become the first client choice supermarket-style pantry. Rather than distribute uniform packages determined by staff, RCS understands that clients come from all backgrounds and gives them the opportunity to choose foods they would like to serve in their homes. In 2007, RCS opened its new location on New Utrecht Avenue, where it remains today though its doors are bursting with increasing demand. Currently, RCS serves over 3,300 low-income families and individuals from over 16 different postal codes. RCS operates five days a week and the food pantry is open late on Thursdays to accommodate working clients.[21] Thomas Neve remains at the helm of this organization and you can often find him working directly with clients, distributing food or connecting them with other services. RCS is committed to providing services in a dignified and humane manner. Services include:

- Supermarket-style food pantry—clients choose the food they receive from the pantry
- Social Service assistance—referrals provided to Medicare, Medicaid, housing assistance (Section 8), Access-a-Ride, Home Energy Assistance Program, and more
- Electronic Food Stamp Submission Site—clients do not have to visit a food stamp office but can apply electronically at RCS
- Free tax preparation assistance—provided by IRS certified volunteers

- Workshops—nutrition and health education, computer skills, free blood pressure screenings
- Family Support Fund—connects families in need of essential items, beds, furniture, with people who donate such items
- Summer tutoring—for grades 2-8, 3 days a week, 2 hours per day
- Seasonal activities—includes giving children back-to-school supplies, providing Thanksgiving dinner to families, and acquiring Christmas gifts for children

RCS relies heavily on 18 dedicated volunteers who perform tasks ranging from restocking pantry shelves, assisting clients in choosing food, bagging food, and office work such as preparing mailings, copying, and other administrative duties. There are three full-time employees including Tom, the executive director. The board of directors and trustees include attorneys, bank managers, and web developers.[21]

Mission Statement: "*Reaching-Out Community Services in Brooklyn, New York leads the effort to eliminate hunger in our community by providing food, a food bank pantry, social services and programs that inspire self-reliance and community empowerment in a dignified manner.*" [21]

Commented [m9]: Nice overview of org

RCS recognizes the need and potential for clients to "level-up," wherein these clients who have the capacity to learn new skills can do so in order to improve their economic status and break free of the need for food pantry and social services.

CONCLUSION:

Reaching-Out Community Services already meets several needs of the Brooklyn community, and meets them with compassion and dignity. Though we have a great relationship with our clients, we would love to see the day that they no longer rely on us for food, clothing, or social services. It is clear how dedicated we are to our mission because of our strong volunteer base and our founder, Thomas Neve. Through our *Level Up* program, we believe that our current and capable community will gain the skills they need to free themselves from dependency. Not only will they gain proficiency in English, job skills, and knowledge, they will gain self-confidence and empowerment to achieve their goals.

A generous grant of $268,517 from the State Street Foundation would allow us to extend our hand a little further and bring our clients into a life of self-reliance. Together we can break the cycle of financial insecurity and create a sustainable community. We hope you will join us as we lay down the foundation for a brighter future in Brooklyn.

BUDGET:

ITEM	Salary	%effort	COST	Year 1 Total (2 semesters) 15 weeks x 2	Year 2 Total (2 semesters) 15 weeks x 2	Year 2 Total (4 semesters)

Commented [m10]: You list personnel under "non-personnel" category

Last column isn't clear- should just be "total" not year 2 total

It's a lot of $ to help 75 people at most (maybe even as few as 25 if they can take all 3 courses)

BUDGET JUSTIFICATION:

Personnel: **Program Coordinator:** Program Coordinator will be full time (35 hours, yearly salary $45,000) and hold a bachelor's degree. Because of the vast range of Brooklyn residents served, coordinator must be at least bilingual in English and Spanish in order to cater to this target population. He or she will direct the overall operation of the *Level Up* program and oversee, implementation of project activities, coordination with other agencies, organizations, schools or programs, registration of students, hiring the instructors for all three courses, and creating schedules for classes and instructors. Fringe benefits for the program coordinator are calculated at 25.9% ($23,310 for years 1 and 2) and include health insurance, unemployment compensation, and retirement.

Commented [m11]: If this person isn't involved in running the actual sessions, it likely won't take 100% of his/her time.

Non-Personnel:

Commented [m12]: These are personnel! They're just not full time.

- **ESL Instructor**: ESL instructor will be part-time ($17.50 per hour) and must have an ESL certificate and a minimum of two years of experience teaching basic skills to adults. He or she must be bilingual. Payment will increase in year 2 for additional classes.
- **GED Instructor**: GED instructor will be part-time ($20.00 per hour) and must have a bachelor's degree and a minimum of two years of experience teaching basic skills to young adults. Must have experience in creative curriculum planning and development. He or she must be bilingual. Payment will increase in year 2 for additional classes.
- **Job Readiness Instructor:** Job Readiness instructor will be part-time ($17.50 per hour) and must have a bachelor's degree and a minimum of three years of prior group teaching or training experience, of which at least one year must have been with adult students in underserved neighborhoods. He or she must be bilingual. Payment will increase in year 2 for additional classes.

Commented [m13]: It's unclear from looking at the budget why the cost doubles in year 2. It doesn't look like the program is being offered more often.

Other Direct Cost:

Phone: Phone will be available for students to make phone calls with.

Postage: To mail out any necessary documents for the program or students.

Office Supplies: Pens, pencils, printing paper, computer supplies etc. to be used by staff members to carry out daily activities.[22]

Educational Material: Student workbooks, booklets, textbooks, teacher's manual, exam material for GED and ESL courses and worksheets for the Job Readiness Course.

Copy/Printer: To carry out grant activities and support the work being done for *Level Up*.

8 laptops: One laptop for the program coordinator, and 2 laptops for volunteers assisting the program coordinator to be used for general program related duties, including email and Internet access. Three laptops will be for job readiness course students to create resumes, write cover letters, search for jobs, send emails, etc., and one for general use.

Office furniture: To purchase desks and chairs to use as student workstations.

Metro card vouchers: To distribute round trip Metro Card ($5.50) to cover traveling expenses.[23]

Advertising Material: To cover expenses of making copies of fliers or pamphlets at Kinko's.

Incentives: Each student will receive a $100 gift card upon completion of their courses.

IT support: For on-call IT support.

Other: Electricity, Gas, Rent [24]

APPENDIX 1:

Board of Directors and Officers

Name	**Title**
Kimberly Fasano	Chairperson
Francine Russo	Vice Chair
Bob Aronson	Secretary
Rosemarie Gentiliaco	Treasurer
Jerry Albano	Trustee
Ilene Sacco	Trustee
Brian Chin	Trustee
James Tartamella	Trustee
Bobby Giurintano	Trustee

Are rates of obesity among participants in the *2013 NYC Community Health Survey* significantly different for those who consume less than 12 ounces of soda versus 12 ounces or more?

Commented [m1]: Excel spreadsheet not uploaded or emailed by the deadline

Methods:

For our research, we used the 2013 NYC Community Health Survey (CHS). This is an annual survey conducted by the NYC DOHMH in order to better understand the health and risk behaviors of New York City residents while tracking key indicators of said behaviors over time.[1] The survey population included adults 18 and over with a household landline or cell phone. The questions included were based on the following topics: mental health, general health status, access to care, cardiovascular health, alcohol consumptions, smoking, HIV, and more. [1] Upon obtaining this information, the CHS uses a stratified random sample to create neighborhood and citywide estimates.[1]

Commented [m2]: Add # of participants

The nutrition section of the CHS asked various questions about consumption of sweetened beverages such as "Average number of sodas per day, drink two or more sodas per day, average number of *other* sugar-sweetened beverages per day, and etc."[3] However, to narrow down to our research question, we focused broadly on the CHS question of what size of sugar sweetened soda do participants usually drink. This gives us a better idea on the impact portion sizes have on BMI. As for the BMI component, the height and weight were self-reported by participants. The NYC Community Health Survey coded BMI in different ways such as one variable would include very obese and another variable would include under/ normal category together. For our area of interest, we sorted and categorized the BMI into obese and not obese categories. Nevertheless, some of the BMIs were close to 30, indicating that he/she may be at risk to obesity, which should also be considered for health purposes.

As per the CHS data, we will use the estimates to conduct an analysis on the rates of obesity based on participants self-reported Body Mass Index(BMI) and soda consumption. The Center for Disease Control and Prevention (CDC) website recommends no more than 8 ounces of soda consumption.[2] In this analysis, 12 ounces of soda consumption will serve as the recommended amount and baseline for our research. For the BMI guidelines, we used the CDC website as a reference to classify participants' with a BMI of 30 or higher into the "obese" category and participants with a BMI of 29.9 or lower into the "not obese" categories. This does not include participants who did not respond or responded with "blank" for BMI and size of sweetened soda consumed.

The research study was conducted using a two-by-two contingency table to classify the responses to one question from the 2013 CHS - "When you drink sugar-sweetened soda, what size do you usually drink?" Respondents were given the option of less than 12 ounces, 12, 16, 20, 32 ounces, or more than 32 ounces. When looking at the exposure status for this study, respondents were classified as "obese" or "not obese" based on their BMI. The determination of what is obese versus not obese was made by consulting the Center for Disease Control and Prevention (CDC) Body Mass Index chart.[2] The second exposure status was sugar-sweetened soda consumption (SSB). Respondents would be categorized based on their consumption of "less than 12 ounces of soda" or "more that 12 ounces of soda." Despite there being more options for soda consumption, to simplify our statistical analysis, responses were grouped as mentioned.

We chose this statistical test because our variables were categorical. This allowed us to determine the significance of our results and easily identify any differences between the observed and expected values. In other words, we were able to determine if there is a significant

Commented [m3]: But I thought you changed your analysis so this included those who reported drinking 12 oz. (as per the feedback to all on your oral presentation, and your title indicates)

Commented [m4]: This section has the right information but it jumps around a lot from talking about obesity variable to the soda variable; keep mention of each in the same place

association between the two variables - obesity and ounces of soda consumed. Our null hypothesis, is that there is no significant difference between the amount (less or more than 12 ounces) of sugar-sweetened soda consumed, in relation to obesity. Our alternative hypothesis, is that there is a significant difference between the amount (less or more than 12 ounces) of sugar-sweetened soda consumed, in relation to obesity.

Results:

Descriptive results shows that 33% of the sample drank less than 12 ounces of soda, whereas 67% of the sample drank more than 12 ounces of soda(Table 1, Figures 1 and 2). The descriptive results also show that 31 % of those who are obese drank less than 12 ounces of soda, and 67% of all those who are not obese drank more than 12 ounces of soda (Table 2). Additionally, 69% of those who are obese drank more than 12 ounces of soda and 33% of those who are not obese drank less than 12 ounces of soda (Table 2). This results are important because it shows that among the obese, people who drank more than 12 ounces of soda represent the 69% which indicates that there is a relationship between obesity and amount of soda consumption (>12 ounces).

Commented [m5]: So it's looking like you didn't take the feedback to include those who responded that they drank 12 oz. of soda into one of these groups; this leaves out important information and may change the results

Commented [m6]: I gave feedback on the oral presentation that this comparison doesn't make sense. Needed to updated to compare the same variable across the comparison groups

The Chi square test (Figure 3), gave us a P-value of 0.387 which is greater than the alpha, 0.05. Hence, we accept the null hypothesis. There is not enough evidence to suggest that there is a significance difference in rates of obesity by amount of soda consumption. In addition, there was not enough difference in percentages based on the descriptive results: Those who consumed less than 12 ounces of soda were 31% obese and 33% not obese. Those who consumed more than 12 ounces of soda were 69% obese and 67% not obese (Table 2).

Assuming that the amount of soda consumption had no effect on the rates of obesity, we would obtain the observed difference or more in 39% of the study due to chance.

Discussion:

Reflecting on our study's results of the test of significance, we have not found a link between soda consumption and obesity rates in the sample of adults in NYC. However, our descriptive results suggest that there might be a link between obesity and soda consumption since a greater percentage of soda consumption of 12 or more ounces was observed among obese participants compared to those who were not obese. In other words, our study shows that soda intake might be a risk factor for obesity among adults. Similar to these results, extensive literature has also reported that soda consumption is positively associated with obesity, and hence, it is a risk factor for obesity among American adults. Research including a number of cross-sectional, experimental, prospective cohort and other studies revealed this positive relationship between obesity and soda consumption.[3,4,5,6,7,8] For instance, three studies have illustrated that higher sugary drink intake during early years of life (childhood/adolescence) provoked excess weight development in adulthood.[3, 4,5] A 2009 study actually found that adult population consuming one or additional sodas or other sugar-sweetened beverages on a daily basis have a twenty-seven percent higher likelihood of suffering from being overweight or obese.[6] Furthermore, a study conducted over 20 years using 120,000 males and females reported that individuals who raised their sugar-sweetened beverage (e.g. soda) intake by single 12-ounce serving per day experienced greater weight gain or an additional pound every 4 years, over the course of the study's duration.[7] One other group of researchers investigated whether reducing soda intake would actually promote weight loss among obese adults.[8] Interestingly, they found that a decrease in sugar-sweetened drink consumption of 1 serving per day was linked with a weight reduction -0.49 kg at 6 months and 0.65 kg at 18 months of intervention. [8]

Based on the results of our statistical test and existing literature on the topic of sugar-

Commented [m7]: Feedback given on the oral presentation that 2% difference is not enough to suggest any real difference.

sweetened beverage consumption and obesity, there are several recommendations that can be made. There is existing literature that states sugar-sweetened soda consumption as a risk factor for obesity.[3,4,5,6,7,8] In contradiction, there are studies that didn't find a significant difference in obesity rates based on sugar-sweetened soda consumption and hence, concluded that soda intake is in fact not a risk factor for obesity.[9,10] Moreover, a group of researchers claimed that certain studies reporting positive relationship between soda intake and body weight did not control for critical confounders (e.g. physical activity) and/or utilized untrustworthy dietary assessment techniques.[11] Further research on this topic will help clarify the risk factor(s) and present ways to effectively address them. It can lead to new and/or improved intervention programs, tactics for health education and promotion, and also increase public knowledge of the topic.

Alongside further research on sugar-sweetened beverage consumption, there is a need for research on individually sugar-sweetened beverages and its link to obesity. For example, a lay person may conclude that SSBs only consists of sugar-sweetened soda. Why? Because many existing public health intervention programs make sodas the forefront of their marketing. There are other sugar-sweetened beverages such as iced teas, sports drinks, and energy drinks that are rapidly growing in consumer markets and have the potential to be risk factors for obesity. New research on individual SSBs will provide further detail on what specific beverages create the highest risk for obesity and which do not.

Lastly, increasing the duration of research trials on SSB consumption and obesity will ensure the validity of the studies. A systematic review on sugar-sweetened beverage intake and weight gain states that short term trials of a year or less, result is soda consumption increasing the risk for obesity.[12] In the same review, it states that some long term trials did not show this

risk factor.[12] By increasing the duration of research trials, it will create a more reliable consensus of risk factors for obesity based on BMI.

It can be noted that obesity research in public health is becoming increasingly popular. Many even refer to obesity as the "new smoking" among the public health field's concern. [13] Smith Ward states in his article, "Obesity is associated with a 36% increase in health care spending."[14] Statistics such as these increase public policy to address these issues because it is causing disease burden among adults and children along with increasing the cost of health care. Some public policy approaches that are seeking to address this concern are the new nutrition fact labels, which make nutrition labels such as those found on sugar-sweetened beverages, easier to read by the lay person. One other conversation that is currently happening within public health and policies is increasing the taxes on sugar-sweetened beverages while simultaneously decreasing the costs of healthier beverages. This is an implication for policy because advocates are debating the validity and necessity for this change. Nevertheless, it may increase healthier food choices among the public because neighborhoods, such as low-income neighborhoods, will have easier access to these options - thus reducing the risks for obesity.

Obesity being an epidemic; alongside the lack of detailed literature on how food and/or sugar-sweetened beverage intake plays a role - rates will continue to soar. In terms of the correlation of sugar - sweetened beverages to obesity, there can be an issue with identifying valid risk factors and increasing awareness on obesity. For example, this study concluded that sugar-sweetened soda consumption is a risk factor for obesity which allowed it to fit in with the existing literature but also oppose to some others. This is the crucial factor which determines that there needs to be more research done. As previously stated, obesity is noted as the "new smoking," which can be defined as a topic of high interest and controversy. The results of this

Commented [m8]: Good recommendations

Commented [m9]: This could be paraphrased vs. direct quote

Commented [m10]: Statistics don't increase policy but should influence policy

Commented [m11]: reword

Commented [m12]: this isn't a sentence

statistical analysis are one of many hoping to provide more insight and effectively address this topic from a public health perspective.

Commented [m13]: You included most of the relevant information, but unfortunately the paper doesn't sound like it was written in the same voice. I imagine this is a result of the lack of effective group work. I also gave specific, detailed feedback on the oral presentations for you to incorporate in this final analysis that was largely ignored.

Tables:

Table 1: Obese/Not obese people by soda consumption.

		Obesity based on BMI: Yes 30.0 and above, No 29.9 and less.			
		Obese (Yes)	Obese (No)	TOTAL N	% of total sample.
Risk factor: Soda consumption by ounces: >12 and <12.	<12 ounces of soda	229	751	980	33%
	>12 ounces of soda	498	1509	2007	67%
Number of Total		727	2260	2987	
% of total sample		24%	76%

GRADE: 22/25

How are Hispanics affected by gentrification financially and residentially in Bushwick, Brooklyn, New York within the past decade?

COMHE770

1. Introduction

Secondary displacement, or what is known as gentrification, occurs when rising market rents or new developments in a neighborhood cause existing, lower-income residents to relocate.[1] Often, landlords seeking to develop more profitable units may force residents out of their dwellings[1]. Further, displacement can occur when one ethnic group succeeds another in an urban neighborhood, and forces residents to relocate when living conditions become either impossible or unaffordable[1,2]. Gentrification and displacement are common in urban areas where population dynamics and economics are constantly changing.

Commented [MD1]: The connection between ethnicity and income should be made explicit

For instance, the population dynamics, real estate, and crime rates are changing in Bushwick, Brooklyn, New York. The majority, 65% of the Bushwick population was of Hispanic origin in 2010[3]. Overall, the borough has seen a 7.9% population increase over the past decade[3]. Within that rise, white non-Hispanic populations have increased 216.1%, Hispanic populations of all origins have increased by 5%, and other minority groups have all declined between 8.7-42%[3]. Interestingly, Hispanics have declined by 25% and 20%, respectively, in the North Side-South Side, and in East Williamsburg (east of Bushwick)[4]. Within many parts of Brooklyn, new businesses, housing developments, restaurants, bars, and cafes are on the rise, and crime rates have declined. In merely one year, the median sales price for new homes in Bushwick has increased by 28.9% and over the past 5 years by 118.8%[5]. Concurrently, Bushwick, known as the 83rd precinct to the police department has seen a 74.3% decrease in total crime rates since 1990[6]. These patterns are characteristic of gentrifying neighborhoods, and often affect the minority groups within them.

Quantitative data exists about changing demographics and real estate in Bushwick, for example, the cost of rent or neighborhood safety. Yet, data examining the opinions and feelings

of residents has not yet been collected. Researchers know based on government data that Hispanic populations are at least sustaining (and slightly increasing) in Bushwick compared to the tremendous increase in Caucasian populations[3]. However, it is not clear why this is, or how gentrification over the past decade has truly affected the lives of current Hispanic residents financially and residentially. Therefore, it would be meaningful to conduct analysis of how gentrification has affected them thus far, and whether the consequences are positive or negative. It appears as if there are a number of positive features including safer neighborhoods and new developments. However, as tenants and residents report being bought out or sold out and the cost of living quickly rising, these additions could be costing current residents not only financial insecurities, but also housing insecurities. Researchers set out to find: how are Hispanic residents affected by gentrification financially and residentially in Bushwick, Brooklyn, New York over the past decade?

Commented [MD2]: Ok this is what I was looking for in my other comment (now below, #3). This section belongs in the Introduction

Commented [MD3]: You gave a nice background of gentrification and what it means & how it's impacted NYC, but there is no lit review of what is known so far about how gentrification impacts communities.

Commented [MD4]: Add citation

2. Methods

~~Quantitative data exists about changing demographics and real estate in Bushwick, for example, the cost of rent or neighborhood safety. Yet, data examining the opinions and feelings of residents has not yet been collected. Researchers know based on government data that Hispanic populations are at least sustaining (and slightly increasing) in Bushwick compared to the tremendous increase in Caucasian populations[3]. However, it is not clear why this is, or how gentrification over the past decade has truly affected the lives of current Hispanic residents financially and residentially.~~ In order to explore the effects of gentrification, first, quantitative data was collected via secondary sources such as government statistics, censuses, and community maps. After researchers learned about current and past statistics concerning demographics and real estate as well as neighborhood boundaries, researchers set out to collect qualitative data.

Data collection tools included semi-structured interviews with current Bushwick residents. Participants (P.) were recruited from the Bushwick neighborhood, Community Board no. 4[3]. Researchers used a homogeneous sample of Hispanic (Puerto Rican) residents of the neighborhood. Participants were considered eligible if there were of Hispanic origin, 30 years or older, had been living in Bushwick for 8 or more years, and were born in Brooklyn, NY. Study data used in analysis was obtained via audio-recorded and ~~transcripted~~ transcribed interviews with at total of 2 participants. ~~These are~~The participants recruited were both single, working males in their mid 30's who are currently renting apartments in Bushwick. After data was coded, several themes and sub-themes emerged from repeating ideas and codes. These themes were consistent with theoretical framework and guided data analysis.

Commented [MD5]: Why was 8 yrs chosen as the defining criteria?

Commented [MD6]: How were participants recruited? Where was interview conducted?

Commented [MD7]: Add mention of the type of analytic technique (grounded theory)

3. Results

A ~~Combing through the two interviewees transcripts, a~~ few themes ~~came to surface~~emerged when Hispanic participants were asked about their experience living in Bushwick: gentrification, attractions and luxuries present, positive changes in the community, and comfort of remaining in a place where they grew up. A few sub-themes arose such as changing demographics, displacement, increased cost of living and increased neighborhood safety.

Formatted: Indent: First line: 0.5"

Commented [MD8]: Same comment as in oral presentation that Gentrification as it stands isn't really a theme since that's the topic of the research. Needs to be more descriptive.

3.1 Gentrification is present in Bushwick, Brooklyn, New York.

Neighborhoods were said to be gentrified when they experienced a shift or displacement of populations, when residents were forced out of dwellings by landlords seeking higher profits from rent, and when the overall cost of living in the neighborhood became increased[1].

Commented [MD9]: Is this the formal definition? If so belongs only in the Intro. Here present what the participants defined as gentrification.

Demographics were shifted in Bushwick because of gentrification. P.001 described the historical population of Bushwick compared to the most currently dominating population type:

Commented [MD10]: Move to Intro.

> P.001: And then they moved out and the Puerto Ricans and the minorities took over... …Yeah, it has definitely (changed). A lot of White, um, how do you say White professionally? Caucasian people?

~~Participant~~ He implies that a once minority-dominated neighborhood is now seeing a shift towards predominantly White inhabitants.

Next, P.002 spoke of being forced out of his building, evident that displacement is part of gentrification. When asked about his experience renting in Bushwick, P.002 explained;

> P.002: I have to move out first. They want to renovate it and change it completely…So rather than fight it and do all this, I'd rather take what he gives me and move out. And then he'll probably double the rent from what I pay.

The participant is faced with displacement due to his landlord seeking a higher profit on rent. The process described by the participant is a prime example of what is occurring all over the neighborhood.

Not surprisingly, both interviewees report that gentrification causes an increase in the cost of living, a sub-theme dominant throughout the interviews. Gentrification, and thus, increases in rent have steadily crept their way east of Williamsburg and into Bushwick. P. 001 explains why this is occurring:

> P.001: Because Manhattan's getting even more pricier. So everybody's coming over here and they figure 'hey let's raise the rent here as well'.

Therefore, between increased rent and or cost of real estate, current tenants are displaced for renovations and a new population and demographic is taking over the neighborhood. Often found

as a result of changing demographics is increased neighborhood safety or perceived safety as a sub-theme. P.002 spoke of this:

> P.002: You know, my neighborhood's not the safest neighborhood, but it's changed now, so it's a little safer… 'Cause it got more congregated. It got way more people, way more establishments, and then, you know, of course in the beginning what's always going to happen is the kids from the neighborhood who wanna make a quick buck are gonna try rob someone's house or rob someone walking to the train. So now there's more police police presence. They'll always be a cop at the station driving around. So when neighborhoods change like that, police activity tends to go up.

Where there were nicer establishments and increased cost of living, police activity quickly increased.

Commented [MD11]: Something about Safer neighborhoods might then be a theme?

3.2 New, trendy neighborhood attractions are a sign of gentrification

Both participants mentioned an influx of new attractions and trends in their neighborhood. For instance, P.002 describes:

> P.002: Back in 2007 it was changing, but it already had changed. It already had lofts, galleries, uh, restaurants. That's when you know a neighborhood really changed. Like, you can have all the out of town-ers you want. You can have all the White, blue, green, people. But, until you start getting like, restaurants, and you know, cafes, that's when you really know your neighborhood changed.

Furthermore, these attractions appeal to a certain demographic. P.002 hints that the new attractions present in his neighborhood influence and ultimately attract a certain population type:

> P.002: So if there's a new establishment on the corner, you know, some new, some urban, some new trendy restaurant you're not going to get people who grew up here eating there. Maybe the kids, maybe the ones that are cool that transition, but, uh, yeah, most likely you won't get the neighborhood people frequenting your establishments… they'd rather go to the, to Whole Foods or to some nutrition deli that has what they prefer.

Therefore, placement of establishments is key if the neighborhood is to appeal to a certain demographic, and certain establishments may not attract minorities or those who grew up there. Interestingly, despite changing population demographics and relocation, Hispanics living in Bushwick did not want to move, or leave Brooklyn.

3.3 Minorities, especially Hispanics living in Bushwick feel comfortable living in the place where they were born and raised, among one another

Hispanics and other minorities have been living in Bushwick before changes arose, and for most, if not all of their lives. When asked whether participants thought minorities are still living in Bushwick and why, P.001, of Puerto Rican decent, responded:

> P.001: Yeah, we all still live here. Nobody wants to move out…'Cause this is where we were born and raised. Like, you can go wherever you want in the world. But you're always gonna come back here.

Within this idea, it became clear that comfort is key for these populations. P.001further explains:

> P.001: It's my comfort zone. Like, I feel comfortable here…'Cause everybody knows me here for not being a, a thief, or a lowlife or nothing.

Despite neighborhood changes, Hispanics do not want to leave due to a certain level of comfort they feel living in a neighborhood where they all grew up and know one another.

3.4 Despite some negative consequences, gentrification also benefits minorities

Though some Hispanics living in Bushwick may be negatively affected by the increased cost of living and displacement, they also benefit from many of the changes. For example, P.001 admits when asked about changes he has seen:

> P.001: When I was growing up, it wasn't kid friendly in Bushwick. It wasn't kid friendly. The parks was beat up, the slides was… (pause). It wasn't kid friendly. Now when you go to a park, it looks nice.

Once one, or a few elements of a neighborhood become nicer, other facets of the neighborhood followed suit. Besides better care of parks, participants also spoke about increased culture and arts, lower rates of crime, and more things to do in the neighborhood.

Commented [MD12]: Nice review of findings and illustrative quotes

Discussion

Shortly after the new millennium, many Brooklyn neighborhoods started changing. Some of these neighborhoods included Fort Green, Williamsburg, Bedstuy, Crown Heights, and Bushwick. Some of these changes included shifting demographics, displacement, increased cost of living, increased neighborhood attractions, and increased neighborhood security. Not all of the changes current Hispanic residents face who have been living there most or all of their lives are negative. In fact, some of the changes benefit them as well. This study of gentrification through example neighborhood Bushwick, Brooklyn, New York, highlights the positives and negatives of gentrification for Hispanic and minority populations, and the financial and residential affects. The Diffusion of Innovations Theory explains how new ideas, products, and social practices spread within organizations, communities, or societies, and how innovations are communicated

over time[9]. Therefore, those who can keep up, or adapt, so to say, might be able to benefit from the positive changes and avoid the negative consequences.

Perhaps the biggest and most severe consequence of gentrification participants mentioned was displacement. Both participants expressed concern that residents who faced displacement might not be able to afford to stay in the neighborhood once bought out.

> P.001: …people might wanna buy a building and buy you out, but the problem with that is, once they buy you out, and you move somewhere else out where you grew up in, and you can't afford that rent from where they put you in, you're going to the street. So you lost what you grew up in.

Though participants admitted how expensive the neighborhood has become, and that they or friends they knew were victims of relocation, participants mentioned a strong desire to remain living in the neighborhood where they felt comfortable among their own type of people. It seems as if one really wanted to 'make it', and really enjoyed living in the neighborhood, one would ensure they procured the means necessary to remain living there. For example, one participant mentioned working two jobs while another mentioned he is an artist and networks with other artists in the area. Limitations arise from this sample, as both males interviewed are single and do not have any children, thus, lessening the amount of financial responsibility placed upon them.

One of the more positive neighborhood changes includes new attractions and luxuries. Luxuries are defined by researchers in this study as items working class neighborhoods might not have access to. These include an abundance of dogs, restaurants, galleries, lofts, studios, and cafes. Upscale restaurants, cafes, and stores arise as highly visible signs of gentrification in cities all over the world[7]. Participants said they liked these changes, and the fact that they did not have to go far or even leave their neighborhoods to enjoy certain luxuries. Both also recognized that

Commented [MD13]: No new findings should be presented in the Discussion (or quotes). This section is to synthesize and interpret the findings already presented.

increased neighborhood safety was a result of new establishments, and newly renovated homes. Bushwick had once been a town that was crime ridden. ~~:~~

~~P.002: …and years ago this was like, crime ridden area and those were the kind of people, (Blacks and Hispanics), well, not to say those are the kinda people, but they were the kind of people in the neighborhood, so anyone that was here was just, not minding about any of that. Years ago, nobody would have lived here for that.~~

Therefore, there is less tolerance in Bushwick currently for violent behavior and crime, changes anyone should likely welcome.

Formatted: Don't add space between paragraphs of the same style, Line spacing: Double

As one participant mentioned, current residents might not be likely to frequent new establishments, but those who do make the transition will benefit—those who take advantage of innovations, or the positive changes associated with gentrification will benefit. It was evident that P.002 may be an early adapter, versus P.001 who may still be part of the late majority. P. 001 explains his view on changing demographics:

Commented [MD14]: The discussion of how the findings relate to the DOI is really thoughtful but should be kept together. Right now it feels like it's jumping around a bit.

~~P. 001: …that's the newest people I'm used to seeing now. I gotta hafta get used to seeing.~~

~~Versus P.002 when asked about how he feels about changes:~~

~~P. 002: Um, I mean, I like the changes, I'm not gonna lie.~~

While P. 002 seems to be taking advantage of and enjoying the new attractions brought into the neighborhood as a result of gentrification, P.001, who has been living in the neighborhood since he was born seems to still need some getting used to them.

Though the neighborhood has seen many positive changes, there are still further improvements needed in Bushwick. One participant speaks of the need for recreation centers, or places where kids can feel safe until parents arrive home from work. Both participants voice

concern for displaced residents who will not be able to afford new dwellings. Most recent minutes from Community Board No. 4 meeting highlight the need for affordable housing, continued development of parks, and high-quality educators in schools[10]. Data from the 2010 Survey Atlas suggest that the community is also battling obesity, lack of physical activity, and lack of health insurance[11]. Innovations need to have meaning in order to powerfully influence populations, and it seems current innovations such as trendy attractions might only be targeting the needs one population group[12]. Perhaps other future neighborhood additions could be more relevant to minority groups like Hispanics. Perhaps what the community needs is not only more trendy attractions, but interventions to help improve the health and well-being of its most underserved residents.

Overall, study findings suggest there are some not so pleasant affects of gentrification in neighborhoods like Bushwick especially for those who cannot afford to remain living where they would like. However, the neighborhood seems to at least benefit from other changes in safety and increased attractions. This study was limited by small sample size and a homogenous ethnic selection. With more time and funding, it would be interesting to hear about how other ethnicities and even other age groups are affected by these changes. Nevertheless, through data analysis, perhaps public health professionals will be able to learn how to better focus on improving issues its underserved communities are facing that could be currently masked by the positive effects of gentrification.

Does race/ethnicity modify the association of physical activity and alcohol consumption?

INTRODUCTION

Modifiable risk behaviors during adolescence, such as alcohol consumption, can have a profound effect on morbidity and mortality throughout life. In fact, alcohol consumption during ages 10 to 24 is the most important risk factor for decreasing disability-adjusted life-years.[1] Estimates from the 2013 national Youth Risk Behavior Survey (YRBS) show that 30 days before the survey, 34.9% of youth had consumed alcohol.[2] While the overall prevalence of alcohol use has been decreasing, alcohol remains one of the six leading causes of morbidity and mortality among youth and adults in the United States.[2] Alcohol consumption during late adolescence is associated with alcohol dependence during adulthood, premature death, and compromised work capacity.[3,4] Thus, understanding the factors that affect alcohol consumption during adolescence is important for developing appropriate interventions.

Health behaviors tend to correlate with one another. Research suggests that physical activity protects against participating in certain risk behaviors, such as smoking, and negative health outcomes, such as heart disease, but has been associated with increased alcohol use.[5,6] The link between physical activity and alcohol use is hypothesized to be through common personality, biological, and social mechanisms.[7] One possible explanation is that impulsivity is a shared cause of physical activity and drinking.[8] That is, impulsivity has been connected to sensation seeking, which is associated with increases in both physical activity and alcohol consumption.

Additionally, when assessing physical activity levels in studies, a social-sports effect is likely as well. It has been found that adults who are part of sports clubs are more likely to engage in heavy alcohol consumption.[9] In the U.S., a study specifically among high school and college students found that participation in sports was linked to higher rates of alcohol consumption.[10]

However, the positive association between physical activity and alcohol use is not consistent across studies. Studies in Finland found no association between physical activity and alcohol consumption among adults,[11,12] and a longitudinal twin study in Finland found no association between baseline physical activity and weekly alcohol consumption among adolescents.[13] A study among eleventh and twelfth graders in Florida also found no association between physical activity and alcohol use.[14] In this study, most of the students were White (45%) or Black (26%), all attended the same suburban high school, and the sample size was small (N=822).[14] In contrast, other studies, including a literature review, have found a positive association between alcohol consumption and physical activity among adolescents.[15-17] Higgins et al. (2003) found that among a nationally representative sample of 12,120 Canadian youth aged 12 – 24, alcohol was positively related to physical activity among both males and females.[15] Among 11,741 individuals from the senior classes in American high schools from 1986–2001, Terry-McElrath et al. (2011) found that engagement in higher levels of participation in sports, athletics, and exercise was associated with increased alcohol consumption.[17]

Commented [f1]: This is not really small

A plausible explanation for inconsistent findings is that the association between physical activity and alcohol use might be dependent on certain socio-demographic or

cultural characteristics, which can vary across study samples.[18] Some possible ~~moderators~~ modifiers of the relationship between physical activity and alcohol use have been examined. A study among a representative sample of U.S. adolescents found that students who consumed one or more alcoholic beverages in the past 30 days were less likely to be low active than those who consumed no alcoholic beverages. However, after adjustments, this association was found among females, and not among males.[19] A study by Lisha et al. (2011) found that age appears to modify the relationship between vigorous physical activity and alcohol use, and gender appears to moderate the relationship between moderate physical activity and alcohol use~~,~~ among American adults.[18]

Based on estimates from the 2013 YRBS, prevalence of many health-risk behaviors differ by race/ethnicity.[2] The relationship between physical activity and alcohol use may differ by race/ethnicity for several reasons. In 2014, a study found that Whites and Hispanics were significantly more likely than African Americans to have consumed alcohol in the previous year.[20] A study that included Asian Americans found that they also reported significantly lower alcohol use compared to other racial/ethnic groups, ~~while~~ with Hispanic youths reported the highest level of alcohol use.[21] Physical activity also differs by race; results from a nationally representative sample suggest that physical activity is significantly lower among Blacks, Hispanics, and other racial groups.[22]

There is an important gap in the literature in that no one has looked at possible differences in the relationship between physical activity and alcohol consumption by race/ethnicity among adolescents. Two studies began to explore the relationship by race and did not find evidence of interaction between alcohol use and physical activity;[19,23] however, they did not include Asians and neither had the diversity of the New York City

Commented [f2]: By moderate, you also mean modify, right? Not mediate. In Epi we usually use the terms mediate and modify (moderate seems to be used in psychology but not so much in epi)

Commented [f3]: I would delete this and just start describing the racial differences in alcohol and then suggest this may be a modifier

Commented [f4]: Among teens?

population.[19,23] One of the studies was conducted among a college-based population in southern U.S.; 49% of the participants were White, while 45% were Black.[23] New York City is a multicultural city, where 1 in 10 residents are Asian,[24] and a high proportion of residents are foreign born.[25] This diversity allows for the exploration of race/ethnicity as modifiers of the physical activity-alcohol consumption association.[26] This population also allows us to consider nativity as a covariate since 37% of the New York City population, including 8.2% of adolescents, are considered foreign-born.[25,27] Further, nativity has been shown to effect alcohol consumption.[28]

Commented [f5]: And what did that study find? What was the population of the other study?

The present study used cross sectional data from the 2013 New York City Youth Risk Behavior Survey to examine the relationship between exercise habits and alcohol consumption among high school students in New York City. In addition, we looked at whether race/ethnicity is an effect modifier of the physical activity-alcohol consumption association.

METHODS

Data

The data from this study come from the 2013 New York City Youth Risk Behavior Survey (YRBS), which is a cross sectional study conducted by the New York City Department of Health and Mental Hygiene (DOHMH) in an ongoing partnership with the New York City Department of Education (DOE). The NYC YRBS is part of the Centers for Disease Control and Prevention's National Youth Risk Behavior Surveillance System. The NYC YRBS used a stratified, two-stage cluster sample aimed at producing a representative sample of students. In the first stage, schools were randomly selected with probability proportional to school enrollment. In the second stage, classrooms in a

designated period or class were listed in a classroom-level sampling frame, and then were selected randomly for each school. One week prior to the survey, parents were sent a letter with an opt-out form that could be used if they decide. The study participants include enrolled students in the selected classes who were in attendance the day of the survey. English as a Second Language (ESL) and special education classes in selected high schools were excluded. During the fall of 2013, 9,439 students in 81 public high schools in New York City completed the 2013 YRBS. The school response rate was 89%, the student response rate was 79%, and the overall response rate was 71%. The results are representative of all students in grades 9 through 12.[27] After the survey was administered, ~~the responses were~~ weights were calculated~~ed~~ to adjust for nonresponse and probabilities of selection.[27]

Measures

The primary independent variable of interest was physical activity not conducted in physical education (PE) class. Determination of physical activity status was made from the following survey question: "Outside of PE classes, in an average week during the school year, on how many weekdays do you play sports or do other physical activities that increase your heart rate or breathing?" Those who reported fewer than 2 days were classified as low active, those who reported 2 and 3 days were considered moderately active, and those who reported 4 or 5 days of exercise were considered high active. This measure was informed by the federal government guidelines for recommended exercise.[29]

The outcome, alcohol consumption, was assessed with the question: "During the past 30 days, on how many days did you have at least one drink of alcohol?" Alcohol consumption was dichotomized into an indicator for having had at least 1 drink of alcohol

during the past 30 days.

Covariates

Socio-demographic characteristics examined included students' age, sex, race/ethnicity, and nativity. These were included based on previous literature.[18,19,22] Age was dichotomized to those who are 16 and older ~~and to those who are~~versus under 16. Nativity was based on response to the following question: "How long have you lived in the United States?" The options included: (1) I have always lived in the United States; (2) Less than 1 year; (3) 1 to 3 years; (4) 4 to 6 years; and (5) More than 6 years but not my whole life. Those who always lived in the Unites States were considered U.S. born, while all other responses were categorized as foreign born. Two questions determined race/ethnicity, "What is your race?" Respondents could choose from the following choices: (1) American Indian or Alaska Native; (2) Asian; (3) Black or African American; (4) Native Hawaiian or Other Pacific Islander; and (5) White. Respondents also indicated whether they were of Hispanic origin. Race/ethnicity was then categorized by the YRBS as White, Black, Hispanic, Asian, and Other (American Indian, Native Hawaiian/other Pacific Islander and multiple).

Statistical Analysis

All statistical analyses were conducted using SAS 9.4, and all analyses took the sampling methods into account and adjusted for the sampling weights. The analysis proceeded in 5 steps. First, we used descriptive statistics to describe the distribution of physical activity and all covariates for the total sample, and then separately by ~~no~~ alcohol consumption status. We used a chi square test to assess the significance of differences by alcohol consumption. Second, unadjusted odds ratios (ORs) using logistic regression

Commented [f6]: You can delete this since you discussed the literature in the introduction

Commented [f7]: Hmm , do they not ask where you were born? By this definition I would be classified as not US born (and would have been even in high school) since I was born in the US but then spent my first year in the UK.

analysis were ~~used~~ estimated to examine the crude associations between alcohol consumption and physical activity, as well as all covariates.

Third, we ran a multivariate logistic regression model ~~of~~ looking at physical activity, age, sex, race/ethnicity, and nativity as predictors of alcohol consumption.

~~Interaction~~ Forth,

t~~T~~o explore whether race/ethnicity was an effect measure modifier, an interaction term for physical activity times the race categories was added to the multivariate model. If physical activity showed significant interaction with race/ethnicity, in the fifth step separate logistic regression models were run stratified on race to estimate the group-specific association between physical activity and alcohol consumption. The significance level for all tests was set at value of $p<0.05$.

RESULTS

Table 1 provides descriptive statistics for the total sample, including unweighted frequencies and weighted percents, and by alcohol consumption for the ~~9,439~~ sample of 9,439 youth. For the entire sample, the majority of the participants were male (50.78%), Hispanic (38.30%), born in the U.S. (72.12%) and under 16 years of age (52.61%). Approximately 14% of the youth were white, 30.49% were black, 15.88% were Asian, and 1.58% were of other races. Those who were classified as high active represented 25.86% of the sample while those were considered moderately active constituted 26.67%. Nearly 25% of the participants reported drinking at least one alcoholic beverage in the last 30 days. Females were more likely to report alcohol use than males (26.49% vs. 22.72%, P=<0.01), and those who were 16 and above were also more likely to report alcohol use than those under 16 (31.03% vs. 18.85%, P=<0.001). Further, Whites were

Formatted: Widow/Orphan control, Adjust space between Latin and Asian text, Adjust space between Asian text and numbers

Formatted: Indent: First line: 0"

the most likely to report alcohol use compared to all the other races (31.79%, P=<0.001). We found no differences in alcohol use by physical activity or nativity (Table 1).

Commented [f8]: Give the range for other races

Results from the univariate logistic regression models are presented in Table 2. ~~In the univariate logistic regression model, we did not find~~There was no statistically significant associations ~~between those who were moderately~~moderate ~~active~~ (OR: 1.05, P=0.711), ~~those who were high~~or high ~~active~~ (OR: 1.08, P=0.492) activity and alcohol use. ~~, and nativity (OR: 0.93, P=0.348) with alcohol consumption. We found that~~ ~~m~~Males had lower odds of ~~reported~~ alcohol use than females (OR: 0.82, P=0.01), and those who were 16 and above had higher odds of ~~reported~~ alcohol consumption (OR: 1.94, P=<0.001). ~~We found significant differences by race/ethnicity:~~ Blacks had 0.66 times the odds of consuming alcohol ~~than~~ compared to Whites (P=<0.001); Asians had 0.27 times the odds of consuming alcohol compared to Whites (P=<0.001); and those of other races had 0.68 times the odds of consuming alcohol compared to Whites (P=0.044). The association between Hispanics and reported alcohol consumption in comparison to Whites was not statistically significant and nativity was not significantly associated with alcohol use~~.~~

Commented [f9]: Not

Results from the multivariate logistic model also showed that being moderately active (AOR: 1.03, P=0.839) ~~and~~ or highly active (AOR: 1.05, P=0.690) were not ~~statistically~~ significantly associated with alcohol consumption. All the results that were significant in the univariate models remained significant after adjustments, with the exception of those of other races and males (Table 2). Blacks had 0.61 lower odds of ~~reported~~ alcohol consumption than Whites (P=<0.01) and Asians had 0.25 lower odds of ~~reported~~ alcohol consumption than Whites (P=<0.001), after adjustments. Those who

were 16 or older had 2.07 times the odds of reported alcohol consumption than those under 16 (P=<0.001).

Interaction Results

When adding the interaction term to the multivariate model, we found that the race and physical activity interaction term was statistically significant (P=<0.001, not shown). After stratifying by race, among Whites, those who were moderately active had 1.75 times the odds of reported alcohol use than those who were low active~~, after adjustments~~ (P=0.047), and ~~. Among Whites,~~ those who were highly active had 1.94 times the odds of reported alcohol use than those who were classified as low active~~, after adjustments~~ (P=0.013). Among those of other races, those who were classified as moderately active had 2.17 times the odds of reporting alcohol use than those who were low active (p-value: .027). ~~The associations for physical activity were not significant for Black, Hispanic, or Asian youth. However, though not statistically significant, those~~among Asians, ~~who~~those who were highly active had 1.85 times the odds of alcohol consumption than those who were low active, ~~among Asians and after adjustments~~although the association was only of borderline significance (P=0.06~~). ~~). Physical activity was not associated with alcohol use among black and Hispanic students. ~~Finally, among all categories of race but those of other races, those who were 16 and above had a greater odds of alcohol consumption than those who were under 16 years of age (Table 3).~~ However, b~~B~~eing foreign born was not statistically significant in the stratified models with one exception: among Hispanics, those who were foreign born had 1.39 times the odds of consuming alcohol than those who were born in the U.S. (P=<0.01).

Commented [f10]: Report the actual p-values

DISCUSSION

We believe this study to be one of the first to examine how race modifies the relationship between physical activity and alcohol consumption ~~when considering~~that includes Asians. The results show that among white youth, those who are high active or moderately active have a greater odds of alcohol consumption compared to those who are low active. Additionally, among those of other races, those who are moderately active have increased odds of alcohol consumption, and among Asians there was an association between high physical activity and alcohol consumption that was of borderline significance. We found no association between physical activity and alcohol consumption among ~~Asians, b~~Blacks or Hispanics.

Our finding that the association between physical activity and alcohol consumption is modified by race suggests that cultural and ethnic differences affect this association. Another example of this is the finding that being foreign born was only associated with alcohol consumption among Hispanics. Our results add to previous research that have found a positive association between physical activity and alcohol consumption when considering the modifying effects of socio-demographic variables[18,19] and t~~T~~he effect modification by race/ethnicity may explain why some previous studies ~~found no~~failed to find this association ~~between physical activity and alcohol~~.[14]

The relationship between physical activity and alcohol consumption is potentially linked because of social influences; students who ~~are prone to exercising~~participate in physical activity, especially on sport teams, ~~are~~ may be more ~~likely to be~~ attracted to ~~consume alcohol in~~ social settings that often presents opportunity for alcohol consumption, and may be more influenced by~~due to~~ peer norms and social pressure to

drink as a form of comeraderie.[10] The social influences that affect drinking wais further explained byfound in a previous study conducted among a sample of predominately white (83%) high school athletes. This study found that expecting positive alcohol outcomes (e.g. "I would be outgoing") was associated with higher levels of risky drinking.[30] A possible explanation for our moderation findings that race/ethnicity modifies the association between physical activity and alcohol use among teens is that social factors, such as peer pressure, and cultural perceptions that influence the physical activity-alcohol consumption association also differ by race. In fact, a previous study found that white youth are more vulnerable to descriptive norms (e.g. "how often you think your close friends drink alcohol") than Blacks in relation to binge drinking.[31] Further, a previous study found differences between non-Latino and Latino youth in the social influences, such as perceived social norms, that affect drinking.[32] Social expectations and norms may have a greater influence on white youth who participate in sports. More studies are needed that clarify why the physical activity-alcohol relationship differs by race/ethnicity.

Commented [f11]: I am not sure I understand this

Though the association among Asians was not statistically significant, it was suggestive and the association of physical activity and alcohol use should be explored with larger samplesfurther given that the p-value was close to significant. Although Asians have been found to have the lowest rates of drinking compared to other races, previous studies conducted in East Asia found that Asian college students who participated in both moderate and vigorous physical activity had greater odds of heavy drinking.[21,33] Asians who participate in sports teams may feel social pressure to engage in alcohol consumption. A previous study found that among Asian youth in California, peer

substance use was the strongest predictor of ~~youth's~~ the participant's own substance use.[34]

Alcohol consumption remains a leading cause of death,[2] and understanding the characteristics associated with alcohol misuse is essential for designing effective interventions. Previous studies have acknowledged the importance of understanding student subgroups for targeted interventions.[35] This study suggests that white adolescents as well as those of other or mixed race and Asians who are high or moderately active ~~should b~~might be a ~~the~~ focus ~~of~~ for interventions that target the peer norms associated with drinking.[31]

Limitations

This study has several limitations. First, the observed association should be interpreted with caution given that this study involves cross-sectional data~~,~~ and, as a result, we cannot make inferences on temporal order. Future research that employs a longitudinal design could assess whether youth who begin engaging in sports or physical activity also later consume more alcohol than those who did not begin. Second, all measures were self-reported, which could lead to misclassification errors. Finally, the measures used by the YRBS may not have caught all the aspects of these variables, since the 2013 YRBS did not report if students participated in school sports teams. Consequently, future studies should test the hypothesis that participation in school sports teams may be related to increased alcohol consumption overall and among students of different race/ethnicities~~s~~ as opposed to ~~physical activity in general which includes individual physical activity as well as group sports~~other forms of physical activity.

Conclusions

However, within the limitations of the study design, we believe this study revealed an important modifying factor between physical activity and alcohol consumption. These findings provide support for additional research and initiatives focused on understanding the association between physical activity involvement and alcohol consumption when considering the effects of demographic characteristics. Exploring this relationship further and how it is affected by cultural differences will be important for preventing this modifiable risk behavior. It would also be advisable for health professional to screen for alcohol use among active white youth.

APPENDIX:

Table 1: Demographic characteristics of total population and by alcohol consumption For High School students in the 2013 Youth Risk Behavior Survey, n = 9,439

	Points Allowed	Comments on draft	Comments on final	Grade
OVERALL	Excellent paper. I think for publication you might try AJPH of JAMA pediatrics as a first attempt (it is a reach, but I think the topic is of interest). Other second tier options include Journal of Adolescent Health (http://www.jahonline.org/), Tobacco Control (http://tobaccocontrol.bmj.com/site/about/) or The American journal of drug and alcohol abuse.			
Introduction	20	Very well written	Good	20
Methods	20	Good, but see comments	Good	20
Results	20	Good, but we do not usually report the parameters from a model with an interaction term (other than the p-value for the interaction term). Also, I wonder if it might not make more sense to stratify on e-cig risk perception rather than on intent to quit smoking? In table 1, I would report row percents (usually we want to know the percent within exposure group that has the outcome, not vice versa). Finally, for your class statements,	Good	20

		the syntax should read like: class sex (ref=first param=ref); You need to add the param=ref part as in one case in table 2 your p-value and CI give different conclusions.		
Discussion	20	Good, but ends a bit abruptly. Also, a more detailed discussion of the literature might be helpful.	Good	20
Other (endnote codes, grammar, etc.	20	Good	Good	20

Electronic Cigarette Use Among Adolescent Smokers: Interaction between Perceptions of E-Cigarette Harmfulness And Intention of Quit Smoking

INTRODUCTION

The majority of adult cigarette smokers begin smoking before the age of 18.[1] Cigarette smoking amongst adolescents has been on a steady decline for many years.[2] However, the electronic cigarette, a non-tobacco product that dispenses vaporized nicotine from a battery-powered cartridge, has recently enjoyed increasing popularity amongst teens, with a 2012 study estimating that 10% of high school students had used the product.[3-6] Given the firmly established addictiveness of nicotine, concerns have been raised that e-cigarettes may reverse the population-wide declining trend in nicotine use by addicting new generations of young people.[7,8]

Commented [f1]: OK, just personal preference but I use among instead of amongst as it sounds more modern (see: http://www.dailywritingtips.com/among-vs-amongst/), but it is, of course, up to you.

Many e-cigarette companies have marketed their products with ads that present e-cigarettes as risk-free. Other ads ~~suggest~~ recommend e-cigarettes as a smoking cessation tool.[9,10] These two characterizations are qualitatively distinct, but perceptions of the relative harmlessness of e-cigarettes may reinforce notions that e-cigarettes can be an appropriate smoking cessation treatment. Thus the perception of e-cigarettes as risk free may influence the smoking cessation tools that adolescents who want to quit smoking adopt, encouraging them to use e-cigarettes rather than other smoking cessation tools. This is the focus of the present analysis.

While the FDA has sent warning letters to e-cigarette companies regarding health-related advertising content,[11] the fact remains that currently no nationwide regulations are in place around this product and its advertising. This has given e-cigarette manufacturers a wide berth to mix unproven medical claims in with their marketing. Such efforts to paint a picture of their

product as safe appear to have successfully influenced public opinion among adults and adolescents alike.[10,12,13,13-15]

The health impacts of e-cigarette use are still under investigation. Some studies have focused on the potential for e-cigarettes to play a harm reduction role in relation to conventional cigarettes.[16,17,18] Others have focused on establishing short-term adverse effects, such as nausea, vomiting, headache, or inflammation, or longer term effects such as gene expression alteration and lung cancer.[3,19,20] Still other authors have investigated the device primarily as a smoking cessation tool, experimentally and observationally. Such results have varied markedly.[18,21,22,23,24,25] It remains unclear if e-cigarettes encourage non-smokers to take up smoking, [4,6] if there is no association,[21,26] or whether e-cigarettes assist with cessation.[14,27]

Much remains to be studied, including adolescent perception and use of electronic cigarettes. Some studies have suggested that many teens believe that e-cigarettes are less dangerous than regular cigarettes,[6] with prospective study results suggesting that such beliefs predict e-cigarette use. [14,28-30,31]

On the other hand, results have been mixed regarding whether teen cigarette smokers may be using e-cigarettes for cessation.[6,26] Analysis of the 2011 National Youth Tobacco Survey found that current adolescent cigarette smokers who had experience using e-cigarettes were more likely to intend to quit smoking within 12 months (OR = 1.53; 95% CI, 1.03 – 2.28).[6] Other studies have not consistently found a quantitative association.[5,26] There is some qualitative evidence that young adults use e-cigarettes to quit smoking, with participants citing the behavioral similarity between smoking and e-cigarette use.[17] Teen e-cigarette users have largely emphasized motivations other than smoking cessation, including the relative low risk perception

of e-cigarettes.[30] However, belief about the relative safety of e-cigarettes has not been thoroughly examined in studies investigating teen use of the product for smoking cessation.[5,6,14,29,32,33]

The present analysis ~~will~~ examines the associations between smoking cessation intention, e-cigarette use, and e-cigarette risk perception. We ~~will~~ investigate what role beliefs about the risk and safety of e-cigarettes may play in teen smokers' decisions to use them as a cessation tool. We predicted that both intent to quit and low e-cigarette risk perception ~~will have~~would have significant positive associations with e-cigarette usage, and that the effect of low risk perception ~~will~~ would be more pronounced amongst those teen smokers who intend to quit smoking in the near future.

METHODS

Data Collection and Participants

For this study, we ~~conducted secondary data analysis of~~analyzed data from the 2013 National Youth Tobacco Survey (NYTS). NYTS is conducted by the US Centers for Disease Control and Prevention (CDC) to provide data necessary to inform the development, execution and evaluation of tobacco prevention and control programs.[34,35]

Commented [f2]: No need to say secondary data analysis as these surveys are not hypothesis driven so there are no primary versus secondary analyses.

The survey uses a stratified, 3-stage cluster sample designed to generate a nationally representative cross-sectional sample of U.S. middle school and high school students in public and private schools. The strata ensure adequate representation across categories of urbanicity and racial/ethnic ~~minority~~ group ~~concentration~~. The three stages are primary sampling units (PSUs - approximately county-sized areas), schools within PSUs, and then students within schools. Non-Hispanic black and Hispanic students were oversampled. Excluded from this survey are alternative and special education schools, Department of Defense-operated schools, vocational

schools that serve only pull-out populations, students unable to complete the questionnaire without special assistance, as well as students whose parents did not consent to their participation.[36]

The survey is voluntary at the school level, and schools determine their own active or passive parental consent procedures. This means that some schools required parents to sign and return a permission slip to allow their child to participate (active consent), while others sent home a form parents would only need to return if they wanted to opt their child out of participation (passive consent).

At the student level, the survey is anonymous and voluntary, and is self-administered using pencil and paper. The final sample consisted of 250 schools, 187 of which participated, for a school participation rate of 74.8%. The survey produced 18,406 completed student questionnaires out of a sample of 20,301 students for a student participation rate of 90.7%. The overall participation rate was 67.8%. All human subjects procedures were approved by the CDC Institutional Review Board.[36]

Measures

For the purposes of our inquiry, we restricted all analyses to students who both smoked cigarettes and had heard of electronic cigarettes at the time of survey implementation. The outcome variable was use of electronic cigarettes within the past 30 days. This was determined by the response to the question "In the past 30 days, which of the following products have you used on at least one day?" Students were given a list of nicotine and tobacco products and asked to choose as many as applicable. Those who checked e-cigarettes were classified as having the outcome.

Our exposure of primary interest was belief about whether e-cigarettes are safer than standard cigarettes. Belief about the safety of e-cigarettes was determined by participants' response to a question that asked, "Do you believe any of the following are less harmful than smoking cigarettes?" and instructed the participants that they may choose more than one. Those who selected e-cigarettes were classified as having low risk perception for e-cigarettes.

We also looked at intent to quit smoking "combustible" cigarettes within the next 30 days, testing it as an effect modifier. Intent to quit in the immediate future was determined by dichotomizing the response to the question "Are you seriously thinking about quitting cigarettes?" Those who answered 'Yes, within the next 30 days' were considered as having 30-day intent to quit, and those who answered that they intended to quit within a longer timeframe, or did not intend to quit, were counted as not having 30-day intent to quit. Non-smokers were excluded.

We included age, gender, race/ethnicity and prior intent to quit as covariates. Prior intent to quit was determined by whether the participant had ever, for any length of time, stopped smoking cigarettes with the intention of quitting. Prior intent to quit was controlled for, as it was conceptualized as a probable antecedent of future intent to quit that may also influence e-cigarette use. Race categories included non-Hispanic white, non-Hispanic black, Hispanic, and other/multiple race(s). Age was grouped as 9-12, 13-15, 16-17, and over the age of 18. These demographic variables were included as potential confounders based on theory and previous studies.[3,4,6,15,21,31,37]

Analyses

All analytic and descriptive statistics were confined to students who both smoked and who stated that they had heard of e-cigarettes. We described frequencies of the variables of

interest for the population overall, as well as stratified on e-cigarette use. We used the chi-square test to assess the statistical significance of associations with e-cigarette use.

We used logistic regression to determine the crude association between e-cigarette use and each independent variable. We also ran multivariate logistic regression models to assess the independent associations between perception about e-cigarette safety, future intent to quit, and e-cigarette use, adjusting for covariates. We then ran this multivariate logistic regression model with the addition of an interaction term between 30-day intent to quit and e-cigarette risk perception. Since a significant interaction was identified, we ran the multivariate model stratified on intent to quit smoking.

We also recoded the two primary variables of predictive interest together into one combined four-level categorical variable. The categories were 'has low risk perception and intent to quit,' 'has low risk perception but not intent to quit,' 'has intent to quit but not low risk perception,' and 'has neither.' We ran three separate fully adjusted multivariate logistic regressions, each with a different reference category for the four-level predictor variable. This was done order to establish the relative odds of e-cigarette usage for each combination of indicators, and to attain p values for each possible pairwise comparison.

Statistical significance for main effect was assessed at an alpha of 0.05. Because of reduced statistical power in the assessment of effect modification, we chose 0.1 as our a priori alpha level, as this has been shown to improve the power to detect moderate interactions in some cases.[38] All significance tests were 2-tailed. Statistical analyses were conducted using SAS 9.4 (SAS Institute, Cary, NC). Data were weighted, and the complex sampling method of NYTS was taken into account.

Negative Control Analysis

Commented [f3]: For your publication, maybe just talk about the negative control (what you did, why and results) all in the results section (as you do with the sensitivity analysis).

Certain characteristics unique to e-cigarettes may give them a relative advantage for being perceived as a smoking cessation tool, such as their ability to be used in concealment,[30] and their behavioral similarity to conventional cigarette smoking.[17] Neither of these characteristics pertain to hookah, another nicotine-containing product that is highly socially acceptable amongst teens and young adults.[13] Since hookah lacks those characteristics, and is also unlike cigarettes in that it is generally consumed in a seated group setting, we would not expect hookah to be used as a smoking cessation tool. Specifically, we would not expect that perceptions of hookah safety would interact with intent to quit smoking, to predict increased hookah use. We duplicated the interaction analysis using hookah-related variables, to probe for the presence of potentially spurious or misinterpreted results within the e-cigarette analysis. The control analysis models also contained the covariates gender, race, age and past attempts to quit smoking.

RESULTS

Description of the sample

E-cigarette users represented 30% of the analytic sample of adolescent smokers. Overall, 37.6% believed that e-cigarettes are safer than smoking conventional cigarettes. One fifth intended to quit smoking within 30 days, and 60.3% had attempted to quit smoking in the past. Almost five percent were between the ages of 9 and 12, 34.5% between 13 and 15, 42.7% age 16 or 17, and 18.1% age 18 or older. About sixty percent were non-Hispanic white, 8.3% non-Hispanic black, 22.5% Hispanic, and 8.4% were another race or multiple races. Males comprised of 55.3% of the analytic sample. Among students who had a low risk perception of e-cigarettes, 36.1% were e-cigarette users, while only 22% of those without such a perception used the

product (p<.001). Intention to quit smoking in the next 30 days was not associated with e-cigarette use, nor were any other variables examined. (Table 1)

Univariate models

In the unadjusted regression models, students who believed e-cigarettes were lower risk than smoking had twice the odds (p<.001) of e-cigarette use of students who did not hold that belief. Future intent to quit smoking was not predictive of e-cigarette use (p=.656), nor were any other variables examined. (Table 2)

Multivariate and interaction models

After controlling for all covariates, e-cigarette risk perception remained predictive of increased e-cigarette use (OR=1.79, p=.003). Future intent to quit smoking had no association with e-cigarette use (OR=1, p=.991). Hispanics ~~race was associated with~~had 1.7 times the odds (p=.034) of e-cigarette use compared to white non-Hispanics ~~race~~. All other covariates were not significant predictors. (Table 2)

The interaction between belief about e-cigarette safety and intent to quit smoking was statistically significant at our a priori alpha level of .01 (p=.056). (Table 2)

Stratified models

Among those with a 30-day intent to quit smoking, students who had a low risk perception of e-cigarettes had 3.84 times higher odds (p=.002) of using e-cigarettes, compared to those without such perception. In that stratum, no other covariates were significant predictors.

Among students without a 30-day intent to quit smoking, those who believed e-cigarettes were safer than smoking had 1.51 times higher odds (p=.059) of using e-cigarettes, but the association was of only borderline significance. Hispanic race was the only significant predictor ~~variable~~ in this model (OR=1.87, p=.013). (Table 3)

We also stratified the data on e-cigarette risk perception to determine whether intent to quit would have a significant effect within either strata. In the low risk perception strata, intent to quit smoking had an odds ratio of 1.5 (p=.27) and in the non low risk perception strata, intent to quit had an odds ratio of 0.70 (p=.25). Neither result was statistically significant. (Data not shown)

Four-category variable model

Commented [f4]: I am not sure how much this adds to the paper so if space is limited maybe cot this part out.

Students who had both indicators (intent to quit and low e-cigarette risk perception) had 3.85 times the odds of e-cigarette usage, compared to students who had only intent to quit (p=.0029). Students without intent to quit but who did have low e-cigarette risk perception had 2.23 times the odds of usage (p=.0156), also compared to those with only the intent to quit indicator. Those with neither indicator were not significantly different from those without low risk perception but with 30-day intent to quit (OR=1.49, p=.1651).

With regards to the rotating reference category analysis, we found that those with both indicators were significantly different from those with neither indicator (p=.0095) and from those with only intent to quit (p=.0029), but not significantly different from those only with low risk perception (p=.1853). Those with neither indicator did not, however, significantly different from those with only intent to quit (p=.1651) and were only borderline significantly different from those with only low risk perception (p=.0645). Those with only low risk perception were significantly different from those with only intent to quit (p=.0156).

Negative Control Analysis

In the multivariate negative control analysis without an interaction term, perception of hookah as safer than cigarettes predicted 2.75 times the odds of hookah use (95% CI: 1.99, 3.79, p<.001). Previous attempt to quit smoking was the only other significant covariate in the model,

wherein students who had previously attempted to quit cigarettes had 0.62 times the odds of smoking hookah (95% CI: 0.40, 0.98, p=.04).

The interaction term was also not statistically significant (p=.831). (Data not shown)

Sensitivity Analyses

We ran several sensitivity analyses to test how sensitive our results were to alterations in variable coding and covariate selection. To test if our specification of the intent to quit variable as intent to quit within 30 days was too narrow, we recoded a six-month intent to quit variable and reran the multivariate and interaction analyses. The strengths of the associations varied slightly but the overall results were similar. We also ran our multivariate and interaction models without including the past attempts to quit variable. Results were similar to those of the main analysis.

Our initial inclusion criteria were that the student had to have indicated that they had heard of e-cigarettes on a 'check all that apply' question. However, if a student accidentally skipped over this question, they would be falsely misclassified as not having heard of e-cigarettes, even if they answered affirmatively to subsequent 'check all that apply' e-cigarette questions. We ran three sensitivity analyses that broadened the inclusion criteria beyond students who checked that they had heard of e-cigarettes in three different ways (analytic N=948)– 1) by including students who checked that they currently use e-cigarettes but did not indicate that they had heard of e-cigarettes (analytic N=988), 2) by including students who checked that they currently used e-cigarettes, and students who checked that they believed e-cigarettes to be safer, but did not check that they had heard of e-cigarettes (analytic N=1063), and 3) by including students who checked that they believed e-cigarettes to be safer, but did not check that they had heard of e-cigarettes (analytic N=1033).

In the first sensitivity analysis, the interaction model and stratified model results were comparable, except that in the non intent-to-quit strata, harm perception was not a borderline significant predictor of e-cigarette use (OR=1.3, p=.14). In both the interaction term and stratified models of the second sensitivity analyses, all terms of interest (belief, intent to quit, interaction term) were not statistically significant predictors of e-cigarette use. In the third sensitivity analysis interaction model, the terms of interest were not statistically significant. We stratified, regardless of the non-significant p-value of the interaction term, and found that in the intent-to-quit strata, low e-cigarette harm perception predicted usage (OR=2.5, p=.02). The other strata did not have significant results.

Commented [f5]: I would suggest cutting this all out if you need to shorten the paper for submission. Maybe just move the citation you have in the discussion section about how your restriction has been used before up to the methods section as your justification.

DISCUSSION

We found that low harm perception of e-cigarettes predicted nearly four times the e-cigarette use amongst teen smokers who intended to quit within the next 30 days, compared to those without such perception. This association was not seen amongst teen smokers who did not intend to quit, and was also not duplicated in the negative control analysis with hookah. We believe our study to be the first to look at an interaction between e-cigarette harm perception and intent to quit amongst teen smokers, and the first to employ a negative control model to lend support for understanding the role of e-cigarettes in adolescent smoking cessation practices.

While many studies have looked at e-cigarettes and smoking cessation and reduction among adults,[17,18,21,27,32,39-41] and other studies have looked at e-cigarette usage and perceptions amongst teens and young adults,[4,6,7,13,15,29,30,42-44] few studies have looked at adolescent smoking cessation and e-cigarettes.[5,26,45] We were able to identify very few quantitative studies that examined e-cigarette harm perceptions within the question of smoking cessation, and their results supported our finding that a lower harm perception predicts use for smoking cesation.[29]

Our ~~unique~~ finding ~~is~~ that the relationship between e-cigarette harm perception and e-cigarette use is stronger amongst teens who wish to quit smoking~~,~~ suggest~~s~~~~ing~~ that intent to quit may be an underlying factor in the decision to use e-cigarettes for some adolescents.[6] Amongst teens who did not intend to quit, on the other hand, risk perception had a weak borderline statistically significant effect. Of note is the fact that future intent to quit had no independent main effect on e-cigarette usage, and does not reach statistical significance when stratified on harm perception, but was significant as an effect modifier for the harm perception variable. This may explain why some previous studies that tested intent to quit as a predictor of e-cigarette usage among adolescents found no association, since they looked at this variable as an exposure only and not in the context of an interaction.[26]

Commented [f6]: Sounds like you are trying too hard.

Interestingly, when we created the four-level categorical variable that included both the effect modifier and the exposure, we found that those with intent to quit but not e-cigarette low risk perception actually had an odds ratio point estimate that was even lower than those with neither indicator (OR=1 and OR=1.49, respectively). However, this difference was not statistically significant, which may have been a sample size issue. Additionally, those with both indicators had the highest point estimate of the relative odds (OR=3.85), and were higher than those with only low risk perception but not intent to quit (OR=2.23). This difference, however, was also not statistically significant (p=.1853). If these two differences had reached statistical significance, it would have suggested that intent to quit smoking may be protective against e-cigarette usage in the absence of low e-cigarette risk perception, but elevates the likelihood of e-cigarette usage when combined with low e-cigarette risk perception.

Several important limitations of this analysis must be considered. All measures were based on self-report, and social desirability bias is plausible. However, prior work suggests that

anonymous in-school surveys are a method to measure tobacco use accurately, compared to other survey implementation methods.[46] Given that NYTS is a cross-sectional survey, temporal order cannot be established, though the variables we chose do contain self-reported temporal components. Some concerns may exist about generalizability, given that the overall participation rate of NYTS was under 70% and that schools used different parental consent procedures. Because of reduced analytic sample size, we chose a priori to increase our interaction alpha level to 0.1, a decision which may have increased the risk of a type I error.

Another limitation is the fact that when we stratified by harm perception, we did not obtain significant results for the effect of intent to quit and in the four-level variable analysis, pairwise comparisons between variable levels that differed only by intent to quit were not significantly different. It is possible that the analysis was underpowered due to small sample size.

Another limitation to consider is that our sensitivity analyses for our inclusion criteria did not yield results consistent with our main analysis. While this is a finding to acknowledge, we are not highly concerned that our results were found spuriously due to selection criteria or problematic variable coding, since the data suggests that the widening of the inclusion criteria introduced only random error. A small proportion of respondents marked inconsistent and conflicting responses across the questions on e-cigarette usage, familiarity with e-cigarettes, and e-cigarette risk perception, and it is impossible to know what their true responses should have been. Therefore, we are confident in our decision to only include students who marked that they had heard of e-cigarettes. Another similar study also used the same criteria for determining a valid response to the question of harm perception.[42]

The fact that we ran the same analyses using hookah rather than e-cigarettes and found no interaction between hookah safety perception and intent to quit smoking cigarettes supports

hypotheses about the particular characteristics of e-cigarettes that may position them to be adopted and perceived as a smoking cessation tool. E-cigarettes, unlike other nicotine replacement therapies, more closely address the behavioral component of cigarette addiction, something that has been noted in qualitative research with adults who have quit smoking with the assistance of e-cigarettes.[17] While hookah smoking mimics the same bodily motions, it is less similar and generally is not used with the same frequency. Teen e-cigarette users have cited the fact that e-cigarettes can be consumed expeditiously, in concealment, without odor, and in many different places as reasons why they use them.[30] The same cannot be said for hookah. Our pattern of evidence, in combination with past research, provides strong support that a subgroup of teen smokers who believe e-cigarettes are safer than cigarettes are in fact using them with an intention to quit smoking.

Commented [f7]: Maybe also mention here how e-cigs are also promoted for smoking cessation while Hookah is not.

It is unsurprising that many teens would believe e-cigarettes are less harmful than conventional cigarettes. Reviews of advertising content have found that marketers portray them as a "guilt-free" alternative to smoking[47] and that advertising content in YouTube videos makes health and safety claims that may in fact be prohibited by the FDA.[48]

It is possible that e-cigarettes are of relatively lower harm than cigarettes, but evidence is not conclusive. The devices are not regulated and therefore may be inconsistent in their dosing and ingredients, and randomized control trials have found safety concerns.[45] It is also unknown if e-cigarettes actually assist with smoking cessation. While we know that adults are using them with the intention of smoking cessation, no randomized controlled trial has shown them to be effective for such use, and some studies have suggested that their use results in reduced likelihood of smoking cessation, and instead predicts dual use with conventional cigarettes.[39,49]

Additionally, e-cigarettes may displace effective smoking cessation programs,[47] which is of particular concern given that there are effect smoking cessation programs for adolescents.[33] More research on the relative and absolute safety of e-cigarettes and on their utility for smoking cessation is needed. Until definitive safety and smoking cessation information is available, it is important that adolescents and adults are made aware of the current state of the scientific evidence, so that they do not base health-motivated decisions on potentially inaccurate claims perpetuated by advertising or word of mouth.

Our research shows that a subset of adolescent smokers who wish to quit smoking conventional cigarettes, characterized by perceptions of low e-cigarette harmfulness, have a particularly raised odds of smoking e-cigarettes. Plainly, teens who wish to quit smoking and who believe e-cigarettes are safer than cigarettes may in fact be using e-cigarettes as a smoking cessation tool. Although no current federal regulations on e-cigarettes exist, some states have prohibited sale to minors.[9,50] The FDA is deliberating about changing the category under which e-cigarettes are classified, to allow FDA to regulate the product, while also allowing for the continuation of health research to explore product safety, and utility for smoking cessation.[50] Some researchers and health advocates are hopeful that this product may indeed be the smoking cessation tool that will make an unprecedented difference, particularly given its bio-behavioral similarity to combustible cigarettes.[17] However, as of yet, the evidence is neither plentiful nor clear.[18] In the absence of definitive safety data, regulations should be put in place that will prevent minors from procuring this product and will regulate advertising content and methods, to prevent the dissemination of unfounded health claims and marketing directed towards youth.[40,42,51]

Non-Hispanic black	1.51	(0.36, 6.35)	.573	1.34	(0.73, 2.46)	.341
Hispanic	1.14	(0.28, 4.63)	.859	1.87	(1.14, 3.05)	.013
Other or multiple	1.14	(0.31, 4.20)	.849	1.56	(0.84, 2.91)	.158
Gender						
Male	1.78	(0.74, 4.29)	.198	1.13	(0.78, 1.64)	.520
Female	1	-	-	1	-	-

[A]Chi-squared p-value

Figure 1. Relative odds of e-cigarette usage among adolescent smokers who have heard of e-cigarettes, predicted by four-level categorical variable, with p-values for all pairwise comparisons

N Model = 948
Model is adjusted for past quit attempts, age, race/ethnicity and gender.
All p values in figure are chi square p values.
Black lines represent differences significant at the .05 level.
Grey lines represent differences that are not significant at the .05 level, but may be borderline statistically significant.

EPI 752-Data Management
May 18, 2015

	Points Allowed	Draft comments	Final paper comments	Grade
OVERALL	I think the paper is very interesting and worth publishing, although a fair amount of work would be needed to get it into shape. Some possible journals to consider are JAMA Pediatrics or Pediatrics (a stretch but might be worth a first attempt), or Journal of Adolescent Health or Journal of interpersonal violence			
Introduction	20	Good, but you need to include more justification about the variables you are examining (i.e. source of birth control) in your introduction, expand on the literature that looked at similar associations, and justify your choice of confounders. Some of those confounders seem more like results of IPV (e.g. suicide, unsafe sex) rather than causes of IPV so some explanation in the introduction would help the reader understand your thinking.	The introduction probably needs to be shortened a bit. Also, I am still not convinced that some of your confounders are causes of IPV and not consequences of IPV (i.e. suicide). You might also talk a bit about the increased risk of IPV sexual minorities have.	18
Methods	20	Some reorganization of the measures section is needed.	The measures section still needs to be reorders as suggested on the	16

		Describe the outcome first, then all the exposures, and final the confounders.	draft.	
Results	20	You need to present the %s for the description of table 1 results. Table 1 should have row percents for the association by IPV, not column percents. For all regression models (1) present the crude associations unstratified (2) present the multivariate results unstratified (3) state what the interaction p-values were and if significant, then (4) present the stratified results. When the association is not significant, you need only say that and do not need to give details about the OR and CI in the text.	For the text describing table 1, I would suggest first describing the population overall, then describing the significant associations with IPV. You want to emphasize the increased risk sexual minorities have as I think that is a focal point. The sensitivity analysis results section is too long. Just say you reanalyzed the data in the various different ways and that the associations were essentially the same with the exceptions of … Add to table 1 the description of (n, %) participants	18

			reporting sexual IPV and physical IPV so the reader can see the numbers which will help with the interpretation of the sensitivity analysis results. For the publication, you might add the sensitivity analyses to your tables 2-5.	
Discussion	20	A bit more thorough discussion is needed. Discuss all your exposures, not just grade of sex ed. Expand on the PH implications and suggestions for future research.	Good, but maybe emphasize the increased risk of IPV among sexual minority youth. Also, do schools usually only offer birth control education in one year and it is up to the school to decide when? I recall having sex ed in 7th grade and then nothing after that, but that was a long time ago so I wonder if now sex ed is	19

			taught every year or only once. If only once, then your findings certainly are important and suggest, I think, that while sex ed early is important it should probably be retaught at a later grade as well when students are more set in their sexual identity and orientation and when more are sexually active.	
Other (endnote codes, grammar, etc.)	20	Yes	Good

Access to School-Based Sexual Health Resources for Sexual Minority Youths and Adolescent Intimate Partner Violence

Introduction

Adolescent intimate partner violence (IPV) is a prevalent health issue ~~affecting adolescents~~. In the 2013 New York City Youth Risk Behavior Survey (YRBS), approximately 12.6% and 13.0% of those who had dated in the past 12 months reported experiencing physical IPV or sexual IPV respectively. Studies that include psychological IPV suggest that the prevalence of IPV is much higher, affecting as many as 40-60% of teens.[1-3] Adolescent IPV can have lasting and serious consequences on future health outcomes.[4-9]

Intimate Partner Violence and Successful Interventions

The growing body of literature focusing on adolescent IPV demonstrates an association with ~~sexual risk~~ negative health behaviors,[10,11] including inconsistent condom use or coerced unprotected sex,[11-15] unprotected vaginal and anal sex, coerced sexual risk behavior, fear of requesting condoms or refusing sex,[11,12,15] mental health diagnoses and suicidality,[5,6,7,16-19] substance use/abuse,[5,8,11,16,17,20] community or school-based violence,[14,17,21-23] and peer influences.[16,17,23,24] Although the majority of research on these factors has been cross-sectional, there is longitudinal evidence showing early adolescent exposure to multiple sex partners,[13] community violence,[14] alcohol use,[14,16,17] marijuana use,[16] depression,[16,17] anxiety,[16,17] bullying victimization[16,20] or perpetration,[17] is significantly associated with later IPV victimization or ~~perpetration. Although causal direction is not firmly established, the~~perpetration. The factors associated with adolescent IPV are complex~~ly~~ inter-related[6,15] and fit into a social determinants of health paradigm.[25]

Commented [f1]: Not really health behaviors so maybe delete

Commented [f2]: It is unclear from this which is the cause and which the outcome

Commented [f3]: Which is?

Research on the efficacy of interventions to prevent or reduce adolescent IPV is limited, with a recent systematic review only identifying six randomized-controlled trials (RCTs) conducted through the end of 2013.[26] Among these six trials, five were school-based and those in the intervention arms of three trials reported less perpetration of IPV than those in the control arms.[26] Of successful, school-based studies, the only type of intervention found to have no impact on reports of IPV was that which was exclusively limited to the classroom, and did not include a structural, school-wide approach,[26] an approach that yielded significant results as a protective factor against IPV in one RCT and was recommended by the authors of two other studeies.[27-29] Earlier intervention is recommended as the prevalence of adolescent IPV is high for middle school students[7,13,29,30] and programs such as the Start Strong initiative, which focused on middle-school students, found significant decreases in factors thought to be interim outcomes on the pathway between successful interventions and IPV perpetration and victimization, such as gender stereotypes and acceptance of IPV.[30] School-based providers may be the first adults to whom adolescents disclose IPV[31,32] and if they are prepared to intervene, these providers can offer effective clinician-administered intervention[32,33] or can contribute to a systems approach within the institution.[34] A cluster randomized control trial found that the implementation of the School Health Center Healthy Adolescent Relationships Program (SHARP) in routine school health center visits was an effective intervention for addressing adolescent IPV.[32] Intensity-adjusted intervention effects were associated with increased knowledge of IPV resources and increased self-efficacy to use harm reduction strategies among intervention participants compared with controls.[32]

Structural Barriers to Sexual Health Education Access

Commented [f4]: So the studies looked at perpetrators not victim?

Commented [f5]: reword

School-based sexual education is not yet universal in New York City, and birth control education is one of the curriculum topics ~~that~~ from which parents may opt their children out ~~of~~. The 2013 New York City YRBS shows a significant number of students (n=2,338) reporting that they have never received classroom education on birth control methods. However, relationship management is a mandatory component of the now required semester of comprehensive sexual health education for New York City middle and high school students.[35] Thus these classes may provide education about IPV. Historically, New York City public schools have exhibited high levels of fragmentation and inconsistency in the provision of sexual health education.[36,37] Prior to the universal mandate in 2013, the availability of sexual health education in a school was largely determined by individual principals and school district budgets.[37] Although a comprehensive, city-wide evaluation of the state of sexual health education in New York City public schools has never been ~~done~~ conducted~~to assess the population-level causes of access to sexual health education in certain public schools~~, city and state grant-making patterns suggest that those schools with the fewest financial resources are the schools with the highest need for comprehensive health education.[36-38] We hypothesize that the same poverty-related health outcomes and risk behaviors that create a need for comprehensive health education are likely to impact students' school attendance and the ability of school administrators to dedicate resources towards sexual health education. Less healthy students are more likely to be struggling with basic academic requirements and without universal standards, sexual health education may be viewed as a luxury in many school districts.[37] Although indicators of poverty were not gathered in the 2013 YRBS dataset, poverty and lack of resources are known determinants of poor health and risk behaviors[25,39-42] and we hypothesize that several health and social conditions associated with poverty and with IPV, including mental health, bullying, risky sexual behavior, and

substance use, are also likely to be associated with the provision of sexual health education in schools, both in classrooms and by school-based clinicians providing both reproductive and non-reproductive care.

School-based health centers (SBHCs) provide primary care to students of all ages with parental consent and reproductive health services to high school students with student consent.[43] These health centers may also offer psychosocial services and thus provide services to help students experiencing or at risk for IPV. SBHCs are primarily located in areas with limited access to health care services[43] and are also not universal in New York City schools. As federally designated medically underserved areas are selected by criteria of poverty, limited access to healthcare providers and services, and population-level health indicators,[44] we hypothesize that several health conditions associated with poverty and IPV are also likely to be associated with access and use of SBHCs, such as mental health, bullying, risky sexual behavior, and substance use. A significant number of students (n=1,049) report not having an SBHC in their school.[43]

Studies assessing the effectiveness of IPV interventions have largely focused on interventions designed to target IPV, rather than on the effects of comprehensive sexual health education and services. To date, there have been no studies looking at the association between ~~age or grade~~timing of introduction to school-based sexual health education or school-based birth control encounters and adolescent IPV.

We hypothesized that earlier school-based health education on birth control methods ~~will~~ would be negatively associated with adolescent IPV, both due to the dialogue regarding sex and the negotiation, decision making, and communication skills regarding birth control (including condom) use taught in the approved NYC curricula on birth control.[36] We also hypothesize that to the presence of and use of school-based health resources and clinicians will be negatively

Commented [f6]: citation

Commented [f7]: You already said this so delete

associated with adolescent IPV, as has been shown in previous studies.[31,32,34] If students are not only using the SBHC resources, but also obtaining their birth control from a school-based source, we hypothesize that this will be negatively associated with IPV as there is a one-on-one educational opportunity between the student seeking birth control and the SBHC clinician or health educator for important topics surrounding birth control use, including birth control negotiation, that would not be available from other sources, such as bodegas or pharmacies. Previous studies show brief interventions by clinicians are effective at identifying adolescent IPV, regardless of the nature of the clinic visit.[45,46] As sexual minority youths are exceptionally vulnerable to IPV victimization[47-49] and since most school-based sexual health resources are designed for heterosexual students and the sexual health needs of sexual minority youth are often unaddressed,[50,51] we hypothesize that the effect of earlier birth control education and of the presence and use of a SBHC, including for birth control access, will be modified by sexual minority identity.

Commented [f8]: This paragraph could be shortened and more to the point.

Commented [f9]: Delete, you already said this

Methods

Data Collection

The 2013 New York City YRBS is a publicly available data set that was used for this analysis. The study consists of a cross-sectional survey among high school students in New York City. Participants were selected using a stratified, two-stage cluster sampling process that was designed to produce a representative sample of students.[52] In the first stage, schools, which are the Primary Sampling Units, were randomly selected with probability proportional to the schools' enrollment sizes.[52] Classes were then randomly selected and all students in the class were eligible to participate.[52] Data collection, data management and ethical oversight for the YRBS[53] and New York City's sampling methodology have been previously described.[52,54]

Previous studies have extensively examined the reliability and validity of the survey items.[55,56] The self-administered, anonymous survey was completed by selected students who were in attendance on the day of the survey.[52] ELS and special education students were excluded from the survey.[52] One week before the survey was conducted, parents were sent a letter with an opt-out form should they not want their child to participate in the survey.[52] The 2013 New York City YRBS collected surveys from 9,439 students from 81 public high schools, with a school response rate of 89%, a student response rate of 79%, and an overall response rate of 71%.[52]

Measures

Commented [f10]: Change the order of measures to describe (1) outcome (2) exposures of interest (3) effect modifier and (4) confounders. You talk about the most important things first.

We dichotomized sexual identity into an indicator for having a sexual minority identity, which included those who identified as lesbian, gay, or bisexual, versus those who did not including those who were unsure. We included those who identified as being unsure in the non-sexual minority group because we did not have sufficient power to examine them as a separate group as has been done previously.[57]

The primary exposure variable in this analysis was classroom instruction on birth control methods. Participants were asked, "In what grade were you when a teacher first taught a class about birth control methods such as the Pill, the ring, IUDs, birth control shots, patches, or condoms?" Response options were "I have never been taught a class by a teacher about birth control methods", and options for six grade level starting at"6th grade or earlier" up to "11th or 12th grade." Participants could also respond "Not sure," which was recoded as missing. These categories were collapsed into three grade level options, "7th grade or earlier", "8th grade or 9th grade", and "10th, 11th or 12th grade". Never having classroom instruction on birth control methods was used as the reference category for each of the 3 grade-categories.

Several potential confounders were assessed individually for the inclusion in the final model using the 10% change in beta criterion. We did not have sufficient power to examine race as a polytomous variable. We chose instead to examine Latino ethnicity rather than race, as has been done previously with the YRBS because the NYC YRBS oversamples Latinos and Latinos constitute the largest minority group in New York City.[57] Latino or Hispanic ethnicity was established by an affirmative answer to "Are you Hispanic or Latino?" Gender was included with male as the reference category. We chose to use suicidal thoughts or attempts, use of marijuana or alcohol in the past month, multiple sex partners, condom use, and bullying as confounders based on the literature that shows mental health, substance use/abuse, risky sexual behavior, and bullying as associated with both IPV and with poverty, the hypothesized distal cause of access to health education. We created a dichotomous indicator for any suicidal thoughts or attempts was based on the questions "During the past 12 months, did you ever seriously consider attempting suicide?" and "During the past 12 months, how many times did you actually attempt suicide?" We examined substance use (alcohol and marijuana) in the past month. We created a dichotomous indicator based on the questions, "During the past 30 days, on how many days did you have at least one drink of alcohol?" and "During the past 30 days, how many times did you use marijuana?" We created a dichotomous indicator for multiple sex partners based on the questions, "During your life, with how many people have you had sexual intercourse?" and "During the past 3 months, with how many people did you have sexual intercourse?" If a student had sex with more than four partners in their lifetime or more than one partner in the past three months, we considered them to have multiple sexual partners, based on the dichotomization of these questions into "Yes/No" questions in the 2013 YRBS codebook. We created a dichotomous indicator for always using condoms among students who reported having sex in the past three

months based on the question, “During the past three months, how often did you or your partner use a condom when you had sexual intercourse?” We created a dichotomous indicator for any bullying based on the questions, “During the past 12 months, have you ever been bullied on school property?” and “During the past 12 months, have you ever been electronically bullied?”

The secondary exposure variables were access to and use of a school-based health center (SBHC). Students responding either “Yes” or “No” to the question: “Have you ever used the school-based health center (school clinic) at your school?” were combined and considered to have access to an SBHC, while students who responded, “My school does not have a school-based health center” were categorized as not having access to an SBHC. To determine use of the SBHC, those who responded “Yes” had used the SBHC and those who responded “No” had not used the SBHC. Those who responded, “My school does not have a school-based health center” were excluded from the variable of SBHC use. The primary analysis conducted on this variable compared those with access to SBHCs to those without access, with not having an SBHC as the reference category. A second analysis was conducted to assess if, among those with access to an SBHC, use of the SBHC was associated with IPV, with non-use of the SBHC as the reference category.

We also looked at source of birth control as an exposure based on response to the question “The last time you used birth control, including condoms, from where did you or your partner get it?” We created a dichotomous variable among students having used birth control to differentiate between those students responding “School-based health center or somewhere else in school” and the other response options, “Community-based clinic or hospital”, “Pharmacy”, “Bodega or botanica”, “Someplace else” and “Not sure”, with receiving birth control outside of

Commented [f11]: I wonder if this should be among those with access to a SBHC and on birth control?

school as the reference category. This variable was only analyzed among those participants who reported ever using birth control.

The physical IPV outcome variable was determined by response to the question, “During the past 12 months, how many times did someone you were dating or going out with physically hurt you on purpose?” The sexual IPV outcome variable was determined by response to the question, “During the past 12 months, how many times did someone you were dating or going out with force you to do sexual things that you did not want to do?” Both outcomes had six response options, “I did not date or go out with anyone during the past 12 months”, “0 times”, “1 time”, “2 or 3 times”, “4 or 5 times” and “6 or more times”. Both variables were collapsed to be dichotomous variables comparing having experienced any IPV in the last 12 months to no IPV experienced in the last 12 months. Those with no date in the past 12 months were included in the no IPV category. We looked at physical and sexual IPV separately and we created an indicator for any IPV for those who had experiences physical and/or sexual IPV, which was considered the primary outcome.

Statistical analysis

We describe the distribution of all the variables of interest for the total sample and then separately for those participants who experienced any IPV (physical or sexual) and those who did not. We conducted chi square tests to assess statistical significance when examining association of a categorical variable with IPV. We then used crude and adjusted logistic regression models to examine the association between IPV and (1) grade at first classroom instruction on birth control methods, (2) presence of a school-based health center (3) among those with a school-based health clinic, use of that clinic, and (4) received last birth control method form a school-based health clinic. Potential confounders and covariates were chosen

based on the literature and included in the final multivariate model if a change in beta greater than 10% is observed for one of the primary exposures of~~a~~ interest when the potential confounder was added to the crude model. To explore the possibility that association of school-based sexual education and services with IPV is modified by asexual minority identity, we added an interaction term for sexual minority identity times each of the exposure variable in the final adjusted models. If an interaction term was significant, we then stratified on sexual minority identity.

All statistical tests were 2-sided with a P-value <0.05 for rejection of the null hypothesis. All analyses were conducted using SAS version 9.2 (Cary, NC), took the sample design into account and used the YRBS sample weight to weight the results to the population of New York City high school students.

Results

Table 1 presents selected descriptive statistics for the 2013 NYC high school population overall and by experience of intimate partner violence. Sexual minority youths represented 10% of the population and identifying as a sexual minority was significantly associated with IPV victimization (p<.0001), with 27.8% of sexual minority youths reporting IPV compared with 15.9% of non-sexual minority youths. Females represented 49.2% of the population and gender was not significantly associated with IPV (p=0.8811). Those identifying as Hispanic/Latino represented 37.6% of the population and ethnicity was not significantly associated with IPV (p=0.59). For grade of first birth control education, 31.2% of the population had never received education on birth control methods, 33.1% had received it in seventh grade or earlier, 28.2% had received it in eighth or ninth grade, and 7.4% had received it in tenth, eleventh, or twelfth grade. Grade of first birth control education was not significantly associated with IPV (p=0.3141). Ever

Commented [f12]: First describe the sample overall, then describe any significant associations with IPV

users of birth control constituted 22.5% of the population and was significantly associated with IPV (p<.0001), with 24.7% of ever users reporting any IPV compared with 13.7% of never users. Those with access to an SBHC were 85% of the population and SBHC access was significantly associated with IPV among those with SBHC access (p<.0001), with 15.9% of those with SBHC access reporting IPV compared with 25% of those without SBHC access. SBHC use among those with SBHC access was 35% and was not significantly associated with IPV (p=0.1649). Overall, 18.3% of the population reported suicidal thoughts or attempts and suicidal thoughts or attempts was significantly associated with IPV (p<.0001), with 38.5% of those reporting suicidal thoughts or attempts also reporting IPV, compared with 12.4% of those who had not reported suicidal thoughts or attempts. Alcohol or marijuana was used by 31.7% of the population in the past month and was significantly associated with IPV (p<.0001), with 25.5% of substance users reporting IPV compared with 10.1% of non-users. Those who reported having multiple sex partners were 11.2% of the population and having multiple sex partners was significantly associated with IPV (p<.0001), with 31.1% of those with multiple sex partners reporting IPV, compared to 11.5% among those who were not categorized as having multiple sex partners. Always condom use was reported by 48.7% of the population and was significantly associated with IPV (p<.0001), with 17.8% of those always using condoms reporting IPV compared with 30% of those not always using condoms. Bullying (cyber or in person) affected 18.7% of the population and was significantly associated with IPV (p<.0001), with 35.5% of those who were bullied also reporting IPV, compared with 12.6% of those who were not bullied.

Logistic Regression Models for Birth Control Education

There were no statistically significant associations in the univariate or multivariate models between grade of first birth control education and any IPV. The interaction term between sexual minority identity and receiving birth control education in seventh grade or earlier (p=0.0258) and in tenth, eleventh, or twelfth grade (p=0.0115) was significant at the 0.05 level. The interaction term between sexual minority identity and birth control education in eighth or ninth grade was not significant at the 0.05 level (p=0.4117). We therefore stratified the birth control education analysis by sexual minority identity. The association between grade of first sexual education and IPV showed a dose response among sexual minority youth, with an increasing protective effect as grade increased. In the multivariate model for the sexual minority youth strata, participants in the category for earliest birth control education had 0.152 times the odds of IPV victimization as those who did not receive any birth control education (95% CI 0.026-0.896), while participants receiving birth control education in eighth or ninth grade had 0.125 times the odds of experiencing IPV (95% CI 0.017-0.942), and participants receiving birth control education in the latest grade category had 0.017 times the odds of IPV victimization as those who received no birth control education (95% CI 0.001-0.225). Among non-sexual minority youth, there was no significant association between grade of first sexual education and IPV.

Logistic Regression Models for Access to a School-Based Health Center

The interaction term between access to an SBHC and sexual minority identity was not significant at the 0.05 level (p=0.9541), therefore we did not stratify the analysis between IPV victimization and access to an SBHC. In the univariate logistic regression, those with access to SBHCs had 0.525 times the odds of experiencing IPV as those without access to SBHCs (95% CI 0.393-0.701). There was no significant association between SBHC access and IPV

Commented [f13]: First describe the main effects results, then mention the interaction term.

victimization in the multivariate logistic regression. Among those with access to a SBHC, the ~~interaction term between use of SBHCs and sexual minority identity was not significant at the 0.05 level (p=0.8258), therefore we did not stratify the analysis between IPV victimization and SBHC use. The~~ association between SBHC use and IPV victimization was not significant in the univariate or multivariate logistic regression models. The interaction term between use of SBHCs and sexual minority identity was not significant at the 0.05 level (p=0.8258).

Logistic Regression Models for Birth Control Access

There was no significant association in the univariate or multivariate logistic regression between accessing birth control at school and IPV victimization. The interaction term between accessing birth control at school and sexual minority identity among ever birth control users was not significant at the 0.05 level (p=0.5628), therefore we did not stratify the analysis between IPV victimization and accessing birth control at school.

Sensitivity Analyses

In order to determine if there important differences between the two combined outcomes, physical IPV and sexual IPV, we conducted all of the above analyses separately for each outcome. There was no significant interaction observed between sexual minority identity and receiving birth control education in seventh grade or earlier (p=0.6264), in eighth or ninth grade (p=0.7347), or tenth grade or later (p=0.0578) for sexual IPV. Those receiving birth control education in seventh grade or earlier, eighth or ninth grade, and tenth grade had 0.609, 0.705, and 0.549 times the odds respectively of IPV victimization as those who received no birth control education, although none of these effects were significant (95% CI 0.294-1.262, 95% CI 0.368-1.353, 95% CI 0.157-1.925). There was significant interaction for physical IPV between sexual

Commented [f14]: This section is too long. Just say you looked at the associations for physical and sexual IPV separately and recoding sexual minority to include unsure or excluding those unsure and the results were generally the same with the exceptions that….

minority identity and receiving birth control education in seventh grade or earlier (p=0.0258) and in tenth grade or later (p=0.0115), but not for eighth or ninth grade (p=0.4117). Among sexual minority youth, those receiving birth control education in seventh grade or earlier had 0.122 times the odds and those receiving birth control education in tenth grade or later had 0.026 times the odds of physical IPV as those not receiving any birth control education (95% CI 0.025-0.598 and 0.002-0.387). Those who received birth control education in eighth or ninth grade had 0.243 times the odds of physical IPV victimization as those not receiving birth control education (95% CI 0.044-1.353). The interaction terms between sexual IPV and SBHC access, between sexual IPV and SBHC use, and between sexual IPV and receiving birth control from school were not statistically significant. There was no significant association between SBHC access and sexual IPV victimization, between SBHC use and sexual IPV victimization, or between accessing birth control at school and sexual IPV victimization. The interaction terms between physical IPV and SBHC access, between physical IPV and SBHC use, and between physical IPV and receiving birth control from school were not statistically significant. There was no significant association between SBHC access and physical IPV victimization, between SBHC use and physical IPV victimization, or between accessing birth control at school and physical IPV.

We categorized those responding “Not sure” about their sexual orientation with sexual minority youth instead of with their heterosexual peers as an alternative model. We also tried coding them as missing. When those who were unsure were categorized with sexual minority youth, the association between any IPV and grade of first birth control education was not statistically significant in the multivariate regression. The interaction term only remained significant between sexual minority youth and receiving birth control education in grades ten through twelve when those who were not sure were included with sexual minority youth

(p=0.0072) and when they were excluded (p=0.0107). When stratified, among sexual minority youth including those who were not sure, only receiving birth control education in grades ten through twelve remained significantly protective. Those who received birth control education in grades ten through twelve had 0.039 times the odds of those who never received birth control education (95% CI 0.005-0.294). When stratified, among sexually minority youth with those who were not insured excluded from the model, all three grade categories were significantly protective. Those who received birth control education in seventh grade or earlier had 0.152 times the odds of those who never received birth control education (95% CI 0.026-0.896), those who received birth control education in eighth or ninth grade had 0.125 times the odds of those who never received birth control education (95% CI 0.017-0.942), and those who received birth control education in grades ten through twelve had 0.017 times the odds of those who had never received birth control education (95% CI 0.001-0.225). Among non-sexual minority youth, there was no significant association between any IPV and grade of first birth control education when those who were not sure were included with sexual minority youth or when they were excluded.

The interaction term between SBHC access and sexual minority identity, including those who were not sure, remained insignificant at the 0.05 level (p=0.5340). When those who were not sure were excluded, the interaction term remained insignificant (p=0.9573). The association between SBHC access and any IPV in the multivariate analysis was also not significant when those who were not sure were included with sexual minority youth, although the p-value for SBHC access did diminish slightly and came very close to being significant, from 0.0549 to 0.0507. When those who were not sure were excluded in the multivariate regression, the association between SBHC access and IPV was not significant. The interaction term between SBHC use and sexual minority identity, including those who were not sure, remained

insignificant at the 0.05 level (p=0.1569). When those who were not sure were excluded, the interaction term remained insignificant (p=0.8427). The association between SBHC use and any IPV in the multivariate analysis was also not significant when those who were not sure were included with sexual minority youth and when those who were not sure were excluded.

The interaction term between receiving birth control at school and sexual minority identity, including those who were not sure, remained insignificant at 0.05 level (p=0.8433). When those who were not sure were excluded, the interaction term remained insignificant (p=0.6064). The association between receiving birth control and any IPV in the multivariate analysis was also not significant when those who were not sure were included with sexual minority youth or excluded entirely.

Discussion

Commented [f15]: Emphasize up front that sexual minority youth had higher IPV rates than non-sexual minority youth. This will emphasize the importance of your findings.

We believe this study to be one of the first to examine how sexual minority identities may modify the relationship between sexual health education and IPV victimization. These results show that health education addressing birth control methods may impact IPV among youths identifying as sexual minorities differently than their non-sexual minority peers. Specifically, health education addressing birth control methods may have greater protective effects for sexual minority youths than for non-sexual minority youths and the association increased for education given at first in later grades. This is in contrast to our hypothesis that earlier sexual education would have a stronger protective effect. It is possible that sexual health education is less relevant for younger students who have not yet initiated sexual intercourse and for younger sexual minority youth individuals, their identities have not yet solidified at a younger age. It is also important to note that birth control education is a broad term, encompassing not only hormonal methods of birth control to prevent unwanted pregnancy, but condoms, abstinence, and the

negotiations regarding the use of birth control as well. While exclusively same-sex partnerships are not at risk for becoming pregnant, not all who identify as gay or lesbian have only ever had sexual contact with the same gender. Women who identify as lesbian have been found to have been at higher risk for teen pregnancy than their heterosexual counterparts and providers of reproductive health care and family planning services should not assume that pregnant teenagers are heterosexual or that adolescents who say they are bisexual, lesbian or unsure of their sexual orientation are not in need of family planning counseling.[58] Sexual minority youth also includes those who identify as bisexual and individuals of trans experience who also identify as gay or lesbian, both of whom may be at risk for unwanted pregnancy.

Also contrary to our hypothesis, we found a strong protective effect of birth control education seen for sexual minority youth but not sexual non-minority youth. Considering that most sexual health education is not tailored to the unique needs of sexual minority youth in spite of the fact that those youths are at increased risk for sexual health outcomes,[51] it was expected that education on birth control methods would confer a more protective association on non-sexual minority youths compared to their sexual minority peers. However, there is very limited research on the impacts of sexual health education and resources for sexual minority youths.[50]

Our result for the protective effect of SBHC access was only statistically significant in the univariate analysis. It is likely that there is unmeasured confounding by neighborhood level socioeconomic status, although without additional information on the distribution and characteristics of school-based health centers in New York City public schools, it cannot be conclusively determined. Use of SBHC was not significant in the univariate or the multivariate analysis, however the direction of the association changed from a positive association in the univariate model to a negative association in the multivariate model, when the effects of related

health conditions were controlled. There is likely additional unmeasured confounding for parental involvement or support, which has been shown to be related to the covariates in the model as well as to IPV,[6,23,25,39,41] but like SES, was not asked in the YRBS survey. Only one RCT known to date has tested the ability of SBHCs to effectively intervene and address adolescent IPV.[32] Although obtaining birth control from school was negatively associated with IPV, as was hypothesized, this result was not statistically significant. As previous studies have demonstrated, there is an opportunity to integrate brief IPV screening into all clinical visits in order to identify adolescent IPV[31,45,46] and the effectiveness of brief screening programs should be explored in New York City SBHCs.

This study has several limitations. Most importantly, cross-sectional studies do not allow for the inference of causal relationships or temporal order. All measures used were self-report and were based on a survey that parents were allowed to opt out on behalf of their children. As parents may also opt out on behalf of their children for sexual health education lessons pertaining to birth control methods, it may be that those youths who were opted out of survey participation differ in important ways from those youths who were not opted out, especially on topics pertaining to birth control. Prior to the mandate in 2013 that a semester of comprehensive sexual health education was required for all middle and high school students, students' health education was varied and depended greatly on the school's individual principal.[59] Therefore, the primary exposure measure is also likely to be extremely varied and not uniform. The sensitivity analysis showed a difference between sexual minority youths and non-sexual minority youths only for the combined IPV measure and the physical IPV measure. If birth control education were truly associated with reduced IPV, we would expect to see consistency in these results across all IPV outcomes.

Commented [f16]: Could be due to lower power for one type of IPV? If you add the two forms of IPV to table 1 we can see what the numbers look like and assess if you had enough power for these analyses.

We did not have sufficient power to analyze sexual minority identity as a polytomous variable, and for the primary analysis, we categorized those who were unsure or questioning their sexual identity with their peers who identified as heterosexual. The sensitivity analyses, in which those who were not sure were included with sexual minority youth as well as excluded from the model altogether, only showed differences with the grade of first birth control as the exposure. When those who were not sure were included with sexual minority youth, the protective effect was only seen for receiving birth control education in grades ten through twelve. Including those who were not sure with heterosexual peers or with their sexual minority peers may have caused some heterogeneity within sexual identity categories. Future research focused on sexual minority youths should ensure sufficient power for differing sexual minority identities to ensure homogeneity within categories and to be better positioned for causal inference. Due to the nature of the study, only youths who were enrolled in the New York City school system were included. This excludes important populations, such as high school dropouts, incarcerated, homeless, or runaway youths, which may have threatened the external validity of the study. Sexual minority youths are more likely to be homeless,[60] which may compromise the generalizability of this study. Also, youths in NYC public schools may be different from NYC youths in private schools, youths in other parts of the nation, or in other countries, especially rural areas. The main outcome variable, physical or sexual IPV, does not include emotional or verbal IPV. As our sensitivity analyses of physical and sexual IPV as separate outcomes yielded different results from the combined measure, verbal and emotional IPV may also be different. It is expected that there is uncontrolled confounding for socioeconomic status, especially neighborhood or school district-level socioeconomic status, which ~~is~~ may be an important determinant in sexual health

education. Although this variable has been included in the YRBS prior to 2013, it was not available for analysis in this dataset.

If future research on this topic corroborates the findings of the present study in spite of these limitations, there may be an important opportunity to address intimate partner violence among sexual minority youth with sexual health education, including education on birth control topics. Adolescent IPV can have lasting and serious consequences on future health outcomes, including increased sexual risk and teen pregnancy,[4,5] higher risk of mental health diagnoses[6,7] and suicidality,[5] substance use/abuse,[5,8] future perpetration or victimization of IPV in adulthood,[7,9] unhealthy weight control behaviors,[5] and significantly poorer physical health into adulthood.[6] As disparities for IPV persist for sexual minority individuals,[47,48] classroom based sexual health education may provide a realistic and feasible possibility to begin to address those disparities early on, while healthy behaviors and attitudes are still forming. Future studies should assess the characteristics, distribution, and services of school-based health centers in New York City and their efficacy in addressing IPV and multiple conditions inter-related with IPV. Additional research is needed on the content of family planning and birth control encounters with school-based clinicians to know if skills useful for teens facing IPV are being discussed and if these interactions are successful in addressing adolescent IPV.

May 18, 2015

Dear Professor Kelvin,

Based your advice, I've taken this paper in a much broader direction. Rather than focusing in on one country and one risk factor, I've decided to look at multiple risk factors for suicidal ideation and behavior in 5 Latin American countries. This required overhauling most of the paper and I think the introduction and discussion need further substantial work in order to make a more cohesive paper. I have a few next steps planned for this analysis. They include 1) multiple imputation to determine if missing data biased the results and 2) conducting interaction analyses of related risk factors (e.g., physical fighting and alcohol misuse; hunger and low parental involvement) per your recommendation to my previous draft. I would appreciate any additional comments to direct the analysis and paper.

Many thanks,

Individual and social risk factors for suicidal ideation and behavior among school-going adolescents in five low- and middle-income countries of the Americas

Introduction

Globally, suicide is a leading cause of death among adolescents and in the Americas, as with other regions, it is a leading public health issue.(1) There is significant variability in the incidence of adolescent suicide in the Americas. For example, in Guyana the estimated age-adjusted suicide morality rate among adolescents is 15.3 per 100,000 population; however, in neighboring Brazil the rate is 3.4 per 100,000 population.(1) Suicidal ideation (i.e., seriously considering or planning suicide) and behavior (i.e., suicide attempts) are important precursors to completed suicide. Relative to high-income countries, there are limited data on the epidemiology of suicidal ideation and behavior and associated risk factors in low- and middle-income countries and even less data in low- and middle-income countries in the Americas.(1-3)

In our review of the literature, we identified a variety of studies in different low- and middle-income Latin American countries, mostly Mexico and Brazil, reporting specific risk factors for suicidal ideation and/or behavior in adolescents. Overall these studies support that low parental involvement(4, 5), alcohol misuse(6), drug use(6, 7), tobacco use(4, 6, 8), being physically attacked(9), bullying victimization(5, 10), and female gender(5, 7, 8, 10, 11) all increase the odds of suicidal ideation and/or behavior. However, these studies are difficult to compare because of differences in samples and study methodology (e.g., use of a convenience sample). Thus we do not know if the national differences in suicidal outcomes are due to differences in research methods, differences in the prevalence of the known risk factors for suicide, or some unknown risk factors influences the suicide rates in some countries. We did not identify any studies making multi-country comparisons in the region. Given the high degree of variability in the prevalence of completed suicides among countries, these data would be important to determine mental health-related public health priorities and interventions at the regional level.

Commented [f1]: Expand a bit

The objectives of this study were to compare the prevalence of suicidal ideation and behavior among school-going adolescents from Bolivia, Costa Rica, Jamaica, Peru, and Suriname and determine their associated individual and social risk factors using data from the Global School-based Student Health Survey (GSHS).

Materials and methods

Sample

The GSHS is a representative cross-sectional survey conducted among school-going adolescents developed by the World Health Organization, in collaboration with United Nations Children's Fund, the United Nations Educational, Scientific, and Cultural Organization, and the Joint United Nations Programme on HIV/AIDS, with financial and technical assistance from the US Centers for Disease Control and Prevention (CDC).(12) The GSHS has been conducted in various countries at different time points. For the present analysis, we pooled data from all countries in the Americas that were categorized as a low- or middle-income country by the World Bank(13), had nationally representative

data, had data on suicidal ideation and behavior and exposures of interest, used the same version of the GSHS questionnaire and were publically available at the time of data analysis (May 2015). The countries (and survey years) included for this study were: Bolivia (2012), Costa Rica (2009), Jamaica (2010), Peru (2010), and Suriname (2009). The overall response rates (school response * student response) were 72% from both Costa Rica and Jamaica, 85% for Peru, 88% for Bolivia and 89% for Suriname.

The GSHS used a two-stage clustered sample design. First, schools were eligible if they had students in grades that include 13 to 15 year olds and were then selected with probability proportional to their student body size. Second, classrooms were selected randomly from within each selected school. Students in selected classrooms were invited to participate. The survey was self-administered in the local language and was anonymous.(12, 14) Students entered their answers on computer scannable answer sheets, which were sent to the CDC for scanning, processing, and editing. Editing included setting to missing any values that were out of range (i.e., if a student selected a response that did not correspond to a possible response for a question), had multiple responses (i.e., if a student selected multiple responses to a single question), lacked logical consistency (i.e., if a student selected responses from two related questions that conflict logically), lacked sufficient responses by all students (i.e., each question had valid data for less than 60% of all students), or were incomplete (i.e., student had less than 20 valid responses). Local ministries of health of each country maintained ethical oversight over their respective country's survey.

Measures

We examined four suicide-related outcomes pertaining to suicidal ideation and behavior: 1) suicidal ideation without planning, 2) suicidal ideation with planning, 3) 1 suicide attempt, and 4) more than 1 suicide attempts. Suicidal ideation was defined as positive response to the question, 'during the past 12 months, did you ever seriously consider attempting suicide?' The variable was then split into two separate variables, suicidal ideation without planning and suicidal with planning based upon the response to the question, 'during the past 12 months did you make a plan about how you would attempt suicide?' Suicidal behavior was characterized by the number of suicide attempts based on a response of ≥1 to the question 'during the past 12 months, how many times did you actually attempt suicide?' We create two different outcomes, one an indicators for having attempted suicide at least once (versus never), and another for having attempted suicide more than once (versus 0-1) included were 1 suicide attempt and more than 1 suicide attempts

We looked at independent variables that previous research suggests are associated with suicidal ideation or behavior and simultaneously may be associated with low socioeconomic status. These variables were: 1) low parental involvement; 2) alcohol misuse; 3) hunger; 4) drug use 5) tobacco use; 6) physical fighting; 7) being physically attacked; 8) bullying victimization; and 9) truancy:

1) Low parental involvement was categorized as a dichotomous variable defined as a response of 'rarely' or 'never' to at least one of the questions pertaining to parental involvement and support: (1) 'during the past 30 days, how often did

your parents or guardians check to see if your homework was done?,' (2) 'during the past 30 days, how often did your parents or guardians understand your problems and worries?,' and (3) 'during the past 30 days, how often did you parents or guardians really know what you were doing with your free time?' Responses of 'sometimes,' 'most of the time,' and 'always,' to any of these three questions were categorized as not having low parental involvement.

2) Alcohol misuse was categorized as a dichotomous variable defined as a response of at least 1 time to the question, 'during your life, how many times have you got in trouble with your family or friends, missed school, or got into fights as a result of drinking alcohol?'
3) Hunger was categorized as a dichotomous variable defined as any response except 'never' (i.e., rarely, sometimes, most of the time, or always) to the question, 'during the past 30 days, how often did you go hungry because there was not enough food in your home?'
4) Drug use was categorized as a dichotomous variable defined as any response except 'I have never used drugs' to the question 'how old were you when you first used drugs?'
5) Tobacco use was categorized as a dichotomous variable defined as a response of at least 1 day to either of the following questions, 'during the past 30 days, on how many days did you smoke cigarettes?' and 'during the past 30 days, on ho many days did you use any tobacco products other than cigarettes, such as (country specific examples)?'
6) Physical fighting was categorized as a dichotomous variable defined as a response of at least 1 time to the question, 'during the past 12 months, how many times were you in a physical fight?'
7) Being physically attacked was defined as a response of at least 1 time to the question, 'during the past 12 months, how many times were you physically attacked?'
8) Bullying victimization was categorized as a dichotomous variable defined as a response of at least 1 day to the question, 'during the past 30 days, on how many days were you bullied?'
9) Truancy was categorized as a dichotomous variable defined as a response of at least 1 day to the question, 'during the past 30 days, on how many days did you miss classes or school without permission?'

Low parental involvement(15, 16), alcohol misuse(17), hunger(18), drug use, tobacco use(19), physical fighting(17, 20), being physically attacked(20), bullying victimization(21), and truancy(22) have all been associated with suicidal ideation and/or behavior among adolescents. We also included age, gender, and country of survey as demographic variables. Age and gender were self-reported by students. Age was categorized into ≤12 years, 13 years, 14 years, 15 years and ≥16 years with the youngest age group selected as a reference group. Country was based upon where the students took the survey and we selected Jamaica as a reference group as it had the highest frequencies of suicidal ideation and behavior.

Commented [f2]: All?

Commented [f3]: Can you give an example or two of what these might be?

Commented [f4]: Move to the introduction

Statistical analysis
We conducted Rao-Scott Chi-Square tests to compare the distribution of the frequencies of suicidal ideation and behavior, potential risk factors, and demographic variables by country. We then ran crude and adjusted multivariable logistic regression models evaluating the association between the potential risk factors and the two measures of suicidal ideation (suicidal ideation with and without planning) and two measures of suicidal behavior (at least 1 suicide attempt and multiple suicide attempts). The multivariable models were adjusted for demographic variables (age, gender, country) and included all of the potential risk factors.

For all analyses, the significance level was set at two-sided alpha of <0.05. All analyses were performed in SAS 9.3 (SAS Institute, Cary NC), adjusted for the sampling design, and were weighted to the school-going adolescent populations of the countries included.

Results
There were statistically significant differences when comparing the prevalence of suicidal ideation and behavior by country (Table 1), with suicidal ideation without planning highest in Jamaica (10.6%) and lowest in Suriname (4.9%). Suicidal ideation with planning was lowest in Costa Rica (5.2%), but was highest in Jamaica (15.7%). Reporting 1 suicide attempt was highest in Bolivia (13.7%) and lowest in Costa Rica (5.9%). Multiple suicide attempts were highest in Jamaica (13.1%) and lowest in Costa Rica (2.5%). There were also statistically significant differences between countries in distribution of age groups, gender, and potential risk factors for suicidal ideation or behavior with the exception of truancy (*P*=0.07).

Commented [f5]: Here you should report more data, including %s and p-values for the associations you highlight.

In crude logistic regression models (Table 2), alcohol misuse, hunger, drug use, tobacco use, being physically attacked, bullying victimization, and truancy were all significantly associated with increased odds of all measures of suicidal ideation and behavior. Only being in a physical fight was not significantly associated with suicidal ideation without planning. In terms of demographics, male gender was associated with significantly reduced odds of all measures of suicidal ideation and behavior. Older ages (13, 14, and 15 years) were associated with significantly lower odds of reporting 1 suicide attempt compared with students ≤12 years. When compared with Jamaica, other countries had reduced odds of suicidal ideation and behavior, which was statistically significant with the exception of the association for Peru when looking at suicidal ideation with or without planning and Bolivia when looking at the association with suicidal ideation with planning or 1+ suicide attempt

In multivariable logistic regression models adjusted for demographics and all potential risk factors (Table 3), tobacco use, being physically attacked, and bullying victimization were associated with increased odds of suicidal ideation (with and without planning) and behavior (1 suicide attempt and multiple attempts). Low parental involvement and alcohol misuse were associated with significantly increased odds of suicidal ideation with planning and suicide attempts. The only potential risk factors that were not associated with significantly increased odds of suicidal ideation or behavior were hunger and

physical fighting. In terms of demographics, male gender remained significantly associated with reduced odds of suicidal ideation and behavior. Compared with Jamaica, living in Bolivia was associated with higher odds of reporting 1 suicide attempt. Living in Costa Rica was protective for suicidal thinking with planning and suicidal behavior compared with Jamaica. Living in Costa Rica, Peru, and Suriname was associated with lower odds of multiple suicide attempts compared with living in Jamaica.

Commented [f6]: Add some ORs and p-values to the results text so the reader can see the strength of the associations.

Discussion

There were significant differences in the prevalence of suicidal ideation and behavior and their associated risk factors in school-going adolescents when comparing five diverse low- and middle-income countries in the Americas. Relative to the other countries, Jamaica had the highest overall burden of suicidal ideation and behavior and Costa Rica had the lowest. On their own, the majority of variables that we hypothesized were risk factor for suicidal outcomes were significantly associated with suicidal ideation and behavior. When combining all of these variables in logistic regression models with demographic variables, tobacco use, being physically attacked, and bullying victimization were significantly associated with all measures of suicidal ideation and behavior. In addition, low parental involvement and alcohol misuse were associated with suicidal ideation with planning and suicidal behavior. Male gender was protective for all measures of suicidal ideation and behavior.

Our findings are largely consistent with other studies from low- and middle-income countries of the Americas suggesting that low parental involvement(4, 5), alcohol misuse(6), drug use(6, 7), tobacco use(4, 6, 8), being physically attacked(9), bullying victimization(5, 10), and female gender(5, 7, 8, 10, 11) increase the odds of suicidal ideation and/or behavior. However, unlike these studies that focused on one specific country, we included five diverse countries in our analysis, representing distinct regions of the America (i.e., the Andean community, the Caribbean and Central America). We found that Jamaica, which had the highest burden of suicidal ideation and behavior, also had the highest burden of risk factors whereas Costa Rica, which had the lowest burden of suicidal ideation and behavior, had the lowest burden of risk factors. In fact, after adjusting for the known risk factors associated with suicide outcomes, only a few national differences in suicide outcomes remained, suggesting that much of the differences in national rates is due to difference in the prevalence of known risk factors. This suggests that interventions to prevent adolescent suicide in the region should have similar components, but may require different emphasis on specific risk factors within each country.

We found strong and consistent associations between tobacco use and suicidal ideation and behavior, consistent with other studies inside(4, 6, 8) and outside the region.(19) However rather than being causative, tobacco use may simply co-exist with pre-existing conditions that put adolescents at higher risk for suicidal ideation and behavior, such as mental health disorders and psychological distress, and may represent an overlapping indicator for self-harm.(23) In contrast, bullying victimization and being physically attacked are more plausible as causative exposures for suicidal ideation and behavior as

they are direct sources of psychological distress. Physical fighting was not independently associated with suicidal ideation or behavior. However, it may be that physical fighting only when combined with other risk factors, such as alcohol misuse, as found in a previous study(17), increase the risk for suicidal ideation and behavior.

Commented [f7]: explain

Although it approached statistical significance for 1 suicide attempt (P=0.05), hunger did not significantly increase the odds of suicidal ideation or behavior was hunger after adjusting for covariates. Although no studies from Latin America or the Caribbean have evaluated the impact of food insecurity or hunger on mental health outcomes, such studies have been conducted in the US and Canada. In a study using data from the third National Health and Nutrition Examination Survey (NHANES) in the US, food insecurity among adolescents was significantly associated with a previous suicide attempt (OR 5.0, 95% CI: 1.7, 14.6), but not suicidal ideation (OR 1.9; 95% CI: 0.8, 4.2) when adjusting for multiple demographic and socioeconomic variables, including family income and employment status.(24) In contrast to the GSHS, which has a single question about individual-level hunger, NHANES uses a validated tool to measure household food insecurity. Although similar conceptually, hunger is a potential consequence of severe food insecurity. Thus, it is possible that the GSHS might underestimate food insecurity and that is why we did not observe a statistically significant effect. However, it is also possible that the relationship between hunger or food insecurity and suicidal ideation or behavior may be confounded by other risk factors that tend to be more prevalent among higher poverty adolescents, such as bullying victimization and being physically attacked, which we included in our analysis, but have not been evaluated in other studies.(18, 24) As surveys such as NHANES do not collect such data, this will be important for future research to elucidate the relationship between food insecurity and suicidal ideation and behavior.

Commented [f8]: Also, it could be that the impact of hunger is context specific. Low level. Occasional hunger/food insecurity may impact suicide differently form constant hunger. I wonder if you try a 3-category hunger variable if you might find something?

Strengths of this study included that we used nationally representative samples of school-going adolescents. There are some important limitations for the interpretation of our findings. First, all data were from cross-sectional surveys and thus, temporality is unclear, particularly as recall for suicidal ideation and behavior was for the last 12 months and recall for some risk factors was in the past 30 days (hunger, tobacco use, bullying, parental involvement, and truancy) or without a specific time frame (low parental involvement, alcohol misuse, drug use). Second, data on additional relevant confounders, such as parental mental illness, that may increase the risk of adolescent suicidal ideation and behavior were not analyzed, as they are not collected as part of the GSHS. Third, our data are only generalizable to adolescents who go to school and were present the day of the survey and are only generalizable to the five countries that we included in this analysis (i.e., not all low- and middle-income countries of the Americas).

In this study, the burden of suicidal ideation and behavior was substantially different when comparing Bolivia, Costa Rica, Jamaica, Peru, and Suriname. We identified several modifiable independent risk factors, including bullying victimization, truancy, tobacco use, alcohol misuse, drug use, and being physically attacked, which partially explained the national differences in suicide outcomes. The school setting represents an ideal environment to implement public health interventions to reduce adolescent suicidal

ideation and behavior. In particular, interventions addressing bullying may have a substantial impact on reducing suicide morbidity and mortality. Additional research is needed to evaluate if the prevalence of suicidal ideation and behavior and their associated risk factors are different for adolescents in low- and middle-income countries of the Americas (and outside the region) who do not attend school.

Overcoming Barriers to Disinfection in Hospitals

[redacted]

HNSC 7171

Professor Eastwood

Spring 2015

Purpose & Type of Evaluation

Hospital-Acquired Infections/Healthcare-Acquired Infections (HAIs) or Nosocomial Infections (NIs) have become a major problem in many healthcare settings in the United States (Healthy People 2020), but are also some of the most preventable causes of death in the U.S. (Krein, Kowalski, Hofer, & Saint, 2011). HAIs are infections that patients can pick up when receiving treatment for medical or surgical problems. The spread of these infections are worsened by increasing numbers of antibiotic-resistant bacterial strains such as methicillin-resistant Staphylococcus aureus (MRSA) (Muniz, Sethi, Zaghi, Ziniel, & Sandora, 2012), which make infections harder to treat. MRSA can survive on inanimate objects and surfaces (Maki, 2014) for as short as 18 hours to as long as 7 months (Muniz et al., 2012; Shaw & Cooper, 2014). HAIs are a common cause of morbidity and mortality in hospitalized patients and 1 in 20 or about 5-10% of hospitalized patients may develop infections during their stay (Bandi & Conway, 2012; Rehman, Razzaq, & Owais, 2011). These infections lead to yearly increases in healthcare expenditures and cost the healthcare system $45 billion each year (Sharpe & Schmidt, 2011). HAIs can be found in acute care hospital settings, same-day surgical centers, ambulatory outpatient care in health clinics, and long-term care facilities such as nursing homes and rehabilitation centers (Healthy People 2020).

Proper hand hygiene (Mermel, 2010) and proper cleaning of medical equipment, such as stethoscopes, are essential in preventing the spread of HAIs. The problem though is that although many healthcare workers know they should be washing their hands often and disinfecting their stethoscopes and other medical equipment, large numbers of them still do not do so or do not do so as often as they should. Surveys have shown that 70-90% of physicians do not disinfect their

stethoscopes after each patient (Longtin et al., 2014). Another study found that 76% of respondents (healthcare workers) believed that their stethoscope could be a vector for disease, yet only 24% actually disinfected their stethoscope after each patient (Muniz et al., 2012). Thus, compliance by doctors, nurses and other healthcare workers has become an issue (Saloojee & Steenhoff, 2001). Some research has shown that the design of healthcare settings can either increase the chances of spreading the infections or can help prevent them from spreading (Hamilton, 2012).

Various interventions have been experimented with in order to determine the most effective form of disinfection for hands or stethoscopes. Stethoscopes are one of the most commonly used medical devices and because it makes multiple patient contacts throughout the day, it increases the chance of spreading HAIs (Jain, Shah, Jain, & Sharma, 2013). Isopropyl alcohol has been found to be most effective in reducing bacterial counts (Rehman et al., 2011), and alcohol wipes are the most commonly used form of disinfectant (Alspach, 2014). However there are often barriers in attempting to disinfect. Healthcare workers have stated that barriers that prevent them from cleaning as often as they should include time constraints, inconvenient location/absence of hand-washing/cleansing stations, and lack of visual reminders (Shaw & Cooper, 2014; Alspach, 2014). Lack of funds may be another barrier at some facilities. Some research has been done to determine if simultaneous washing of hands and stethoscopes with an alcohol-based cleanser, such as a foam or gel is an effective method of disinfection (Schroeder, Schroeder, & D'Amico, 2009). Although alcohol wipes may be effective in cleaning stethoscopes, they are not always readily available (Alspach, 2014). Therefore, replacing alcohol wipes with alcohol-based foams or gels may be helpful for healthcare workers in overcoming some of the barriers they face when it comes to disinfecting their stethoscopes and hands. In

addition, measures should be taken to reduce the time it takes for healthcare workers to disinfect and more signs should be placed reminding them to disinfect frequently (Alspach, 2014).

In order to determine if an intervention is effective, process and outcome evaluation is needed. Process evaluation is helpful for observing and recording the implementation of programs and can be useful in comprehending the elements of a program and its outcomes (Saunders, Evans, & Joshi, 2005). Outcome evaluation is focused on the more immediate effects of a program. Process evaluation helps to determine what was successful or unsuccessful in an intervention and why (Saunders et al., 2005). There are different elements used to measure process evaluation. The intervention discussed in this paper will include the measurement elements: reach, context, dose received, and recruitment. Reach is defined as the target audience that participates in the intervention, or the participation rate. Context has to do with the environment surrounding the program/intervention and the influence it has on the program/intervention. Dose received has to do with the information participants in the program/intervention received and the extent to which that information is continued after the intervention is completed. Recruitment is defined as the procedures used to draw participants to the intervention.

Evaluation Questions

This intervention and evaluation will seek to determine the barriers experienced by healthcare workers when it comes to disinfecting their medical equipment and/or their hands. What are the barriers? Depending on the answers given, why do healthcare workers think these are barriers for them? Is it time constraints? Is there a lack of materials for disinfection? Are wash stations placed at inconvenient locations? Is there a lack of funds? The purpose is to ask

healthcare workers what the biggest issues are for them and then to implement various changes to try to overcome the problems. The long-term goal of the intervention is to reduce/eliminate HAIs and improve health.

For this intervention, reach will be useful in determining the number of participants (healthcare workers) that were involved in the intervention after being recruited. Looking at context will be helpful in determining which factors could affect implementation or outcome. For this intervention context will involve looking at the physical environment in which the healthcare workers work and how it affects the intervention. Dose received will be important in measuring the success of this intervention. It will involve determining whether healthcare workers make changes once they are exposed to the intervention and if there is continued use of knowledge once the intervention is complete. Recruitment will be useful for measuring success of the intervention by recording the recruitment procedures used and then looking to see if the methods used were effective at bringing participants into the intervention.

Evaluation Design

This intervention will be a non-experimental pre-test post-test design. This design means that there will be a stage of measurement (a questionnaire), followed by the intervention, and then another measurement stage (another questionnaire). The population that will be receiving the intervention are healthcare workers in hospitals in Brooklyn, New York. Their contact information will be gathered from hospital distribution lists of doctors and nurses. Potential participants will be contacted through email and asked if they would be interested in participating in a study with the long-term goal of reducing HAI rates. Specifics about the intervention will not be revealed so as to protect the study from bias and to avoid giving potential

participants any pre-knowledge of what they will be doing, which also protects the study. The email will state that the participants' identities will remain anonymous in order to protect them should they choose to participate and that no one other than those conducting the intervention will see their results. In addition, the supervisors in those same hospitals where emails will be sent to doctors and nurses will also be contacted. The purpose of contacting the supervisors is to explain the scope and magnitude of the HAI problem and to have them encourage or require their doctors and nurses to take part in the intervention. The supervisors would also be contacted through email. Hospitals have infection control departments whose general mission it is to protect patients, healthcare workers, and visitors from risk of transmission from infections. Infection control departments would also be contacted for the purpose of establishing what type of infection control program they have and to inquire about collaborating with them for a seminar for the intervention.

The first step of the intervention is to conduct a survey (pre-test) of the healthcare workers. The survey will include questions about hygiene habits such as how often they wash their hands throughout a normal workday and when they wash, such as before and/or after examining a patient. The survey will also have a component asking about barriers that may prevent them from being able to practice proper hygiene, such as inconvenient locations for wash stations. The survey will consist of multiple choice and free-response questions and will be sent via email. The purpose of sending the survey through email is to make sure the healthcare workers are in a comfortable environment when answering and that they feel safe and not concerned about others seeing their answers. Although it is possible that healthcare workers may not be completely honest in their answers for the purposes of social desirability, past studies have found results that were not so flattering for healthcare workers when they were surveyed about

disinfection habits. This implies that they were mostly honest and could suggest that at least some of the respondents for the current intervention will answer somewhat truthfully.

The next step after the survey will be to implement changes based on the feedback from the survey (the intervention). If the healthcare workers state that the problem is inconvenient location of wash stations or lack of time, the solution will be to place wash stations outside of exam rooms. If they state that there is a lack of visual reminders, the change will be to put up posters and signs to remind them. If they express that the problem is lack of funds for supplies for cleaning hands or medical equipment, a simultaneous scrubbing of hands and stethoscopes with an alcohol-based cleanser would be the implemented solution.

In addition to the various changes made, there will also be the implementation of an education seminar. This will be done in collaboration with the already existing infection control departments in the hospitals. If there is already an informational session that exists, the material will be reviewed and decided if it should be included as is or if adjustments should be made to improve the quality of the material. The session will be a one-time course held over 3-4 hours and will discuss the impact of HAIs on the healthcare system and what it means for the future of healthcare. It will also include basics on hand washing and disinfection of stethoscopes and other medical equipment, and statistics on the number of patients affected and what could happen if the problem is not resolved. Healthcare workers who elected to take part in the pre-test survey will be expected to attend the session, and there will be multiple sessions, if necessary, to ensure that everyone is able to attend.

The evaluation component of the intervention will have two parts. The first part will be a follow-up survey (post-test). It will include questions about whether or not hand washing and hygiene practices have improved since the implemented changes. Questions will be asked in

order to determine if there have been increases in good habits and if the changes have a positive impact or not. Also, and importantly, the evaluation will elicit suggestions that the healthcare workers themselves might have to impeove good hygiene habits further. The second half of the evaluation will be to look at the numbers of patients with HAIs and compare them to baseline figures to see if there has been any improvement since the implemented changes. If the numbers show a decrease, it could be assumed that the changes made were effective in reducing HAIs. If the numbers stay the same or increase, more work will then be needed in order to fix the problem.

Data Collection Methods

Sources of Data—As stated above, data will be collected from healthcare workers such as doctors, nurses, and nurse assistants in hospitals. Data will be collected by questionnaires (pre- and post-test) that will be administered via email. The purpose of administering through mail is to ensure the participants are comfortable while answering and are able to complete it at a point when they are not busy and it will not interfere with their work.

Examples of Measures to be Collected—This intervention will seek to determine the barriers that healthcare workers experience when trying to disinfect their hands and medical equipment. The reach measurement will be helpful in determining if there were a sufficient number of participants involved in the intervention (the surveys with the changes made and the education seminar). Reach will involve looking at the numbers of participants recruited for the intervention and the numbers of participants that were involved until the end. The context measurement will be useful in determining if the changes made in the intervention in order to overcome the barriers stated by healthcare workers in the pre-test survey were helpful and actually led to changes in

healthcare workers' behavior. Dose received is a helpful measurement because it will look at and determine if the participants (healthcare workers) learned from the intervention and continued using that information after the close of the intervention. Did the changes made to overcome the disinfection barriers help and have they continued to improve the frequency of disinfection after the intervention ends? Was the education seminar successful in that healthcare workers accumulated knowledge and continued practicing proper hygiene after learning the correct way? The recruitment measurement will help establish if the process used to draw participants to the intervention was successful. A large number of participants may indicate that the recruitment procedures were effective.

Staffing

Staff will be needed in order for the intervention to function. A team of about 7-12 people (team #1) will be needed on a part-time basis (.5 FTE). These people will be in charge of developing the surveys (pre- and post-tests), contacting supervisors and healthcare workers via email for recruitment, either creating original or gathering existing visual reminders about hand washing, implementing/helping to implement the changes needed to overcome the disinfection barriers, and conducting the evaluation of the intervention once completed. These people will be needed for 1-2 weeks prior to the start of the intervention, on and off throughout the intervention, and then 1-2 weeks once the intervention has ended in order to evaluate the effectiveness of it. Once staff have collected basics on infection control departments in the hospitals and established what types of programs they provide, other staff will be needed for the education seminar portion of the intervention. The staff needed for the education seminar (team #2) will consist of a team of 6-10 people working on a part-time basis (.5 FTE). They will also be needed 1-2 weeks prior to

the start of the intervention in order for planning to take place. Most of these staff should be experts on disease infection or have some knowledge about infection and proper hygiene practices. They will meet with the infection control department to determine if there is already an existing educational seminar in existence and if it needs tweaking or not or if a session needs to be developed. From team #2, 1-2 staff will be chosen to teach the seminar (possibly in conjunction with those from the infection control department). These 1-2 staff members will be needed for 3-4 hours at least once (more than once if multiple sessions need to be scheduled in order to ensure everyone is able to attend). As many staff as possible from both team #1 and team #2 will be asked to participate in the evaluation portion of the intervention which will take 1-2 weeks to complete. The evaluation portion may require staff to be present full-time (FTE). An office space with at least 2-4 rooms will be needed for the planning and evaluation stages.

In literature, belief of first. What is the presence of stethoscope - borne infection? Staffing can be drastically reduced to the existing infection control staff

You must order MDs & RNs to attend sessions pre-intervention. Post-test can be handled by other staff.

This keeps getting better!

24/30

Accountable Care Organizations

Brooklyn College

[redacted]

April 28, 2014

INSC 7142

Abstract

Accountable care organizations (ACOs) are one of the organizational models that the Centers for Medicare are promoting in the Affordable Care Act to reduce cost, improve quality and provide access to care. Implemented in 2012, ACOs have been forming at a rapid pace with over 700 ACOs formed thus far. ACOs have a unique payment structure that involves providing incentives to providers who save money to the Medicare program by improving quality of care. This paper will focus on ACOs and how they are beneficial and some of the challenges that they can face.

One of the goals of the Affordable Care Act (ACA) is to address the issue of quality, cost and care. Around 49.9 million Americans were uninsured in 2010, before the major provisions took effect. Those that tended to be uninsured were those ages 18-34, minorities (Hispanic, Black and Asian populations) and those that did not have employer-sponsored insurance (Wilson, 2014). In 2011, the United States (U.S.) spent an average of 2.9 trillion dollars on medical care, making it one of the only industrialized nations in which it's GDP (17.9%) is mostly made up of medical care. The U.S. does not guarantee access to health care for its population even though it ranks high in medical developments and innovations (Cowen, 2006). Contributing to this problem is that the U.S. healthcare system has a fragmented medical care system in which prices are not governed by a one-payer system as in countries that have universal health care coverage (such as Canada and England). One of the solutions is the formation of an Accountable Care Organization (ACO) and the potential to achieve access, quality and cost control.

Accountable Care Organizations (ACOs)

Implemented in 2012, accountable care organizations has the potential to improve quality of care by providing high- quality services across a broad spectrum of services from primary care physicians, specialists to hospital care and ancillary services by creating partnerships with these entities for a defined patient population. Physicians and the ACO would be held accountable for all costs that are generated and can share in any savings that are saved in the form of financial incentives. Certain benchmarks would have to be met in order to qualify for any incentives. There are 33 established quality measures in four categories that would have to be met. Among them are patient and caregiver experience (7 measures), preventative health (8 measures), care coordination (6 measures) and healthcare for at-risk populations (5 measures) and much more

(CMS.gov). There has to be a minimum of 5,000 participants that it serves for at least three years.

Currently, there are two types of ACOs offered by CMS for Medicare beneficiaries, Pioneer and MSSP, of which an ACO decides which risk model to assume. Pioneer ACOs operate under a shared savings model (two-sided risks) in the first two years. In the third year, payment can begin to move from fee for service to capitated payment or global payment system that can continue into a fourth and fifth year. The Pioneer model is for organizations that have experience already in capitation, risk management (from HMOs experience) and patient populations. The Pioneer model has more stringent rules for participation than the MSSP model (Stenson & Thompson, 2013). The MSSP model is a three year contract and has two risk sharing options. The MSSP share in savings but not losses (one-sided risks) or share in both savings and loses (two-sided risks) (Burke, 2013, p.7). The differentiation is that the Pioneer model gets more return (and thus more risks) for hitting benchmarks, but would have to pay CMS any loses that it incurred.

ACOs can be big organizations that can handle large populations of patients on Medicare. An ACO can be made up of many medical practices, of which many providers and practices work together. An ACO can consist of a hospital, multi-specialty practice, post-acute care, and any health care costs generated by the defined population, including "out-of-network utilization, home health, nursing home care, pharmacy costs, medical equipment" and even long-term care. (Burke, 2013, p.3; Glenn, 2012). Costs are contained by having partnerships with multiple physicians, specialists, hospitals and ancillary services with an ACO so that patients do not have to bounce around to different providers and possibly ordering the duplicate tests. Patients can have their care coordinated with interdisciplinary providers communicating the patients' current

and past health status. Care providers are jointly held liable for the care of the patient and must achieve quality measures. Primary care physicians can be a part of more than one ACO (Glenn, 2012). An ACO differs from an HMO in that patients do not have to select a primary care doctor but can see any freely (Burke, 2013). Also, the HMO Act of the 1990s emphasized coverage of care and not delivery, resulting in more types of insurance coverage while not addressing health care quality (Burke, 2011). ACOs have a pay per performance component. Successful ACOs have the ability to be models for other ACOs and introduces transparency. According to the ACA's "statutory requirements, members of an ACO will indeed be required to transparently share their performance data on quality measures being used to assess performance" (Burke, 2011 p. 877). CMS also defined evidence-based medicine to be included in the practice of care. Providers would be encouraged to use current best evidence in making decisions based on thoroughly vetted research.

Savings

It is too early to gauge whether the ACOs that are forming under the ACA is meeting benchmarks or receiving any returns especially those that are still forming (Lewis, Colla, Carluzzo, Kler, & Fisher, 2013). Currently, there are "744 ACOs that now exist in all 50 states and cover 23.5 million people in the United States" however, that includes commercial ACOs which outpace Medicare by four to one (Leavitt Partners, 2015; Stenson & Thompson, 2013). It is hard to gauge the cost savings in the commercial ACOs compared to Medicare's because it is not a requirement to report to CMS. One study found that commercial ACOs had costs decrease by 2-12% (Peterson, 2014). Another study found that out of 32 Pioneer ACOs, they generated a cost savings of $147 million in the first year of service to the Medicare program (Leavitt Partners, 2015). Of course, this all varies according to the conditions of the ACO (geographic

location, size, structure, average spending on Medicare patients in that region) and how much they can save. A study done in 2012 found that ACOs formation was uneven and were more likely to form in high cost areas and high performing in quality measure and less likely to form in rural areas and areas of poverty (Lewis, Colla, Carluzzo, Kler, & Fisher, 2013). This could pose a problem because ACOs would be picking where they get the most incentives and not caring for the population that do not have access to healthcare and are thus sicklier. As of right now, there is no concrete evidence of how the new ACOs are performing (or saving) under the ACA Medicare guidelines since it is year three of implementation.

Legality

Another issue is the issue of if the formation of an ACO is legal under antitrust laws that could reduce competition and be subject to price fixing. There are certain protections for those under the shared savings program such as making a safety zone that is evaluated by CMS to make sure that anticompetitive effects are not taking place. A safety zone would be created that "reflects the view that they are highly unlikely to raise competitive concerns" (Federal Trade Commission/Department of Justice, 2011). Contracts cannot be made for private payers to exclusively pay an ACO. An ACO can get a rural exemption if a physician that participates in one has a practice in a rural area (which is determined by zip code). ACOs would need to make sure that they are compliant with the guidelines in order to be qualified.

Implementation Problems

A few problems with this model can arise with implementation. An ACO needs an estimated $600,000 in startup expenses and at least 1.3 million a year in administrative expenses (Glenn, 2012). If the organization were successful by reducing cost of care and generated savings, there would have to be clear delineations of how that savings is spent- in the

organization or to pay physicians. This would be a problem if the ACO has many parties involved.

There needs to be infrastructure and maintenance available. There has to be the health information technology (HIT) infrastructure available to monitor and measure if benchmarks are met. The infrastructure would have to be able to communicate and work across multiple computers and devices while making sure that it is efficient. Besides having electronic medical records available, much more IT infrastructure would have to be installed to complement it such as registries, e-prescribing, patient portals, quality monitoring, etc. A practice may want to add on tele-monitoring, e-mail, and video conferencing to increase access to care. Possibly adding more walk-in hours and weekend and holiday services would be an option. One study estimated the cost savings to be about $77 billion a year in inpatient and outpatient care because of its high efficiency in care coordination (RAND Corporation, n.d.). HIT technology also can prevent medical errors, medication errors and make sure that patients receive tests or services.

ACOs would have to decide on how to deal with providers who are not meeting benchmarks for care. An ACO can have a large amount of staff and would need to decide how to train and make sure providers are not over prescribing care or lacking in care. Administration would have to have a protocol on what discipline or training would need to be done for those identified providers. Ideally, HIT infrastructure would be able to identify and stop duplicate tests and make sure that certain criteria are met, but technology cannot be relied on upon solely.

Providers would have to view revenue a different way. The traditional fee-for-service model pays for services performed (which would still be used in the ACO model), which was an incentive to provide more. However, utilization of tests, procedures, visits would be viewed as costs as opposed to revenue. A physician would have to tailor his/her practice to the usage of less

services but making sure that adequate amount is performed for the proper diagnosis/purpose. A potential problem would be that a physician might feel under pressure to skimp on services or tests for their patient in order to save costs. This can be remedied by having a strong administration and care team to cross check care for each patient. And lastly, physician culture would have to shift to accept ACOs and being accountable for care. Physicians would have to shift attitudes favoring autonomy and individual accountability towards coordination of care with other providers (teamwork aspect) and accept responsibility.

And lastly, even though providers would have to change their practices, the issue of patient behavior also plays a role. ACOs would have to figure out how to engage the participants into coming into their practice for care especially those that are healthy (such as those in their prime years). Patients who are fairly healthy do not want to frequently travel to health centers if they deem that it is unnecessary. Some ethnicities (such as Blacks) have a mistrust of doctors and may not go see a doctor until a health condition worsens. Being that participation is voluntary, those that deem it too invasive and a waste of time may drop out and go elsewhere which could affect the statistics.

This paper only highlights some of the issues that could affect the outcomes for achieving access, quality, and costs and there are many more that would have to be factored. It is too early to gauge whether ACOs under the Medicare Pioneer or MSSP is achieving those goals but earlier analysis shows it to be quite promising in cost savings.

(RAND is a policy body - but details of how HIT works is beyond the scope of your paper.)

Many fine points. Some parts not really policy (HIT) & you'll learn to debate these big issues that you began to address!

Screening Brief Intervention and Referral Treatment (SBIRT) Implementation Plan in six Federally Qualified Health Centers (FQHC) in New York State

CUNY SPH
Brooklyn College Campus
Course 7141
Fall 2015

Introduction

This document presents an implementation plan for Screening, Brief Intervention and Referral to Treatment (SBIRT) approach for patients 18 years and above at risk for alcohol misuse across six federally qualified health centers (FQHCs) in New York State (3 rural and 3 urban).

Rationale

According to national statistics, untreated alcohol problems cost the United States an estimated $134 billion annually (SBIRT Colorado, 2015). In addition, excessive drinking was responsible for 10% of deaths among adults of working age aged (20-64 years). The Affordable Care Act (ACA) will expand coverage for medical and behavioral health insurance to over 14 million people in efforts to prioritize preventative services for underserved communities, including substance use disorders services such as screening, brief intervention and referral to treatment (SBIRT) (CBO, 2012). Federally Qualified Health Centers (FQHCs) will serve as the "primary care home" and the "public health gatekeeper" for the newly insured and will receive funding to lead preventative interventions in behavioral and physical health (Adashi, 2010).

SBIRT is an evidence-based practice used to "identify, reduce and prevent problematic use, abuse, and dependence on alcohol and drugs" (SAMHSA, 2015). The United States Preventive Services Task Force (USPSTF) recently updated their recommendations to include universal screening for all adults ages 18 years or older for alcohol misuse and provide brief behavioral counseling intervention to reduce alcohol misuse (Moyer, 2013). Using SBIRT in FQHCs will allow us to systematically screen and identify individuals who otherwise might not be seeking help harmful alcohol use as well as to reduce and prevent dependence (SAMHSA, 2015). As such, the Screening, Brief Intervention and Referral to Treatment (SBIRT) plan is one of the best approaches to move these goals forward. SBIRT provides effective strategies for intervention to target those with non-dependent substance use. SBIRT is not intended for the specialized group of individuals that meet the criteria for diagnosis of a substance use disorder.

In primary care settings, the use of counseling interventions has been found to reduce unhealthy alcohol consumption behaviors in adults identified as engaging in risky or hazardous behavior. There are a variety of behavioral counseling interventions that may vary in the mode of administration, length, and a number of other factors but evidence suggests that brief multicontact behavioral counseling has the highest level of effectiveness (SAMHSA, 2005). The separate phases of our implementation plan will be guided by the Fixsen model of implementation, which include 4 core stages: exploration, program installation, initial implementation and full implementation (Fixsen et al., 2005).

Design:

The expected total population undergoing screening brief intervention referral to treatment approach would be about 30,000 adults in total over the course of one year. This number is based on 8,000 adult visitors to each urban health center and 2,000 visitors to each

Commented [SJH1]: Why using a Colorado citation for national statistics instead of NSDUH or some other national source? Always use primary source

Commented [SJH2]: Needs transition-these seem dropped in .

Commented [SJH3]: Remember SBIRT only recommended for patients identified with harmful alcohol use-not for more serious conditions (either alc or drug)

Commented [SJH4]: good

Commented [SJH5]: this is what it is

Commented [SJH6]: this is where it is effective and what it does .but also need to address in this section why important (

Commented [SJH7]: need to clarify ..refer to the pyramid (McLellan et al.) that I used in lecture .only a small % of patients qualify as harmful users so not all 30,000 will receive SBIRT your process flow gets to it but the read is confusing until then ... All may receive screening-but most will not receive screening, some will be identified as harmful alcohol consumers and should proceed to BIRT, the rest will either qualify for less consumption (get no more services) others with higher drinking (referred to treatment). Throughout this plan need to clarify who does what and gets what, when.

rural center. The SBIRT Project team will consist of five members from each of the participating Federally Qualified Health Centers and one specialist from a contracted agency. Members include (1) intake receptionist, (1) medical assistant, (1) physician/ nurse practitioner/physician's assistant and a (1) behavioral therapist. The implementation process will contain four phases and the timeline for implementation is set for two years (24 months). The four phases of the implementation will consist of:

1. EXPLORATION 1-3 months
   Resource Assessment
   Staff Evaluation: Baseline measures
   Program Evaluation: Baseline Measures
   Systems Interventions: EHR Medical Records
   Facilitative Administrative Supports:
   - Off-site SBIRT training
2. INSTALLATION 3-9 months
   On-Site Training and simulation
   Selection: Sites 3 Rural and 3 Urban
   - Train-the-trainer led by urban site
   - Train-the-trainer led by rural leaders
3. INITIAL IMPLEMENTATION 9 -18 months
   Preservice Training: On-site training and implementation
4. IMPLEMENTATION 18- 24 months
   Pre-screening, SBIRT and follow-up are running smoothly and gaining traction in the patient population.

The SBIRT process will be directed by an external agency tasked with leading the off-site trainings, facilitating the on-site trainings, providing an advisory role in the train-the-trainer models and closely working with the FQHC in the evaluation phase.

Phase 1: Exploration

The exploration phase will assess what resources are available in terms of human capacity to take on the roles needed for implementation, the existence of computer infrastructure, space at the center or other built environment resources necessary to implement the SBIRT process. Finally, the assessment will look to see if the technological capabilities (EHR and online access to SBIRT training) are available on the operating systems within the FQHC. In addition to an assessment phase 1 will train the participants, provide the evidence for the SBIRT approach and introduce them to the Electronic Health Record interface for inputting data and information if they are unfamiliar with the interface. In addition to introducing the participants to the content and technology associated with SBIRT, the off-site training will focus on the importance of creating a learning culture within the organization and creating relationships with off-site rehabilitation centers. It will introduce the proper sequence for SBIRT delivery and note key barriers to implementation. After completion of the off-site training participants will be able to:

Commented [SJH8]: Who does what?

Commented [SJH9]: clarify

Commented [SJH10]: ditto

- Understand how health centers have incorporated SBIRT service delivery into their practices.
- Assess availability of human, infrastructure and technological resources for SBIRT implementation.
- Understand the facilitators for successful implementation.
- Gain an understanding of the challenges that impact implementation of SBIRT in health centers.
- Describe potentially successful implementation models that fit with health center environment.
- Understand their role in facilitating a successful implementation model.

Phase 2: Installation

On-site SBIRT training and simulation will occur within seven days of off-site training and allow staff and clinicians to operationalize the protocols learned off-site. Many of the benefits of this implementation plan include the simulation experiences available to staff before integrating the protocol using real-time actual patient data. One of the benefits of SBIRT are the many resources that are available through SAMHSA which include online courses which are crucial for sustaining implementation when an in-person option is not available.

During the on-site portion of the education phase one urban and one rural site will be deemed a "leader" for their geographic setting and an evaluator will be selected and trained. This location will serve as the model implementation site will be able to provide the other two locations with technical assistance. All sites will receive an implementation one-page clinical summary highlighting the specific sequences for implementation and they shall have a coy posted and available for viewing by the SBIRT team.

Commented [SJH11]: clarify

In addition to printed materials for the providers and staff there will also be geographically specific brochures with the information about the providers accepting referrals. Part of the on-site training will connect centers with quality rehabilitation centers to create sustainable relationships with treatment providers. Deciding which providers will also include ways of determining which transitional service providers are successful for supporting clients while waiting for admission to treatment.

Commented [SJH12]: unclear

In order to prepare the organization the urban and rural leaders will assist their geographic areas with ensuring all resources and drivers necessary for implementation and will lead the train-the-trainer workshops. One of the 3 rural sites and one of the 3 urban sites will serve as trainers and lead a variation of the training in two other urban sites and the two other rural FQHC locations. This will serve as a refresher and reinforcement for the concepts learned at the off-site training and a sequencing of events for all sites. The agency will prepare staff for upcoming implementation through hand-on trainings by urban leaders, rural leaders and agency leads.

Commented [SJH13]: I like the lead idea-but how did they become leaders and what are their responsibilities as such?

Commented [SJH14]: Needs to be clearer –what does it mean "to prepare staff "

Phase 3: Initial implementation

To accompany the on-site trainings, simulations and implementation preservice training, the data systems will be running to assist with the updating and managing of records. Technical assistance will be available to help manage changes and ensure that pre-screening, SBIRT and follow-up are running smoothly and gaining traction amongst the providers and in the patient population.

Commented [SJH15]: More here-describe the process from a patient's experience, step by step .wait-it is below .'process map' good

Phase 4: Implementation

At this stage the center will be monitoring the process leading up to SBIRT and the resulting follow-ups. The trained evaluator from each clinic will manage this phase to determine if fidelity and outcome benchmarks are being reached. In order to improve the quality of implementation and maintain fidelity the evaluator monitor and manage the implementation drivers.

Commented [SJH16]: Good –but describe what looking for, how anticipate, how make corrections in processes etc etc

SBIRT Process Map

Commented [SJH17]: This is a solid map. Well done

Upon entering the site the intake receptionist will be the first staff person to interact with the patient, and will administer a prescreening question. This prescreening tool is the National Institute on Alcohol Abuse and Alcoholism (NIAAA) 's prescreening question ("How many times in the past year have you had 5 drinks or more in a day [for men] OR 4 or more drinks in a day [for women]?"(SAMHSA, 2013). The question will be administer along with the patient intake form and is intended to be filled out by all adult patients 18 years and above coming through the FQHC. This information will be captured in the new electronic health record modules that are part of the data restructuring for tracking, treatment and reporting purposes. The prescreening question will determine the number of times the patient consumed alcoholic beverages in a harmful way over the course of a year. Based on the prescreening results, patients will proceed directly to their as-scheduled appointment, or if they were deemed to have moderate risk of alcohol use, be directed to speak with a medical assistant who will then administer the AUDIT survey to more accurately determine level of alcohol use. Patients that score low on the AUDIT will be deemed low-risk and will receive a brief intervention with the medical doctor (MD, nurse practitioner (NP or physician assistant (PA) during their visit. Patients that score in the hazardous, harmful or possibly dependent range on the AUDIT will be directed to the behavioral therapist on site. The behavioral therapist will then make the decision to refer the high-risk patient to a rehabilitation center as per SBIRT protocol. The center will be outfitted with a template of a printable referral form to ease the referral process. The therapist will follow-up with the center directly after one month to learn about progress. Patients that are deemed to have low or moderate-risk of alcohol use will receive 3-month follow-up phone calls from the receptionist and the behavioral therapist, respectively.

After implementation is adopted, sites will use the data on percentage of adult patients screened to deliver monthly metrics to the FQHC Director of Research & Evaluation in order to evaluate adherence to the implementation and see if there are any challenging points where a brief training could be addressed.

Targets

Based on the nature of our implementation, our targeted providers will be the primary care physician, physician assistant/registered nurse practitioner, behavioral therapist, medical assistant and the intake receptionist. To furnish SBIRT services, providers who will be targeted need to be licensed or certified to perform mental health services and working within their State Scope of Practice Act.

Measures

Several measures to assess the success of the implementation of SBIRT in the six federally qualified health centers will be set. Measures will be set at each of the stages of implementation. Specific measures to assess the extent at which the SBIRT intervention is being followed will also be specified.

Implementation Stages Measures

1. Exploration: Process mapping in the form of a workflow analysis will be conducted at each clinic to assess the overall readiness of the organization to implement the SBIRT prior to full implementation. EHR's at medical centers will be assessed for readiness. A focus group will be formed to gather qualitative information regarding provider's attitudes towards the possible SBIRT implementation. The target for this stage is to set a clear implementation plan for the installation and initial implementation stages (Fixsen et al., 2005).

2. Program Installation: Active Implementation drivers such as competency supports (training, practitioner, coaching); organization supports (facilitative administration, decision support data systems) and leadership supports (technical and adaptive) will be defined (NIRN, 2015). As part of this process, performance assessment measures (fidelity) will be set in agreement with NIRN standards (2015). Performance (fidelity) assessment measures will include:

- *Context measures* will describe the necessary precursor to high-level performance
    - Training:
        - SBIRT Team members completed full SBIRT intervention training
        - Each SBIRT Team member has the ability to perform their respective portion of the intervention (i.e.: NIAAA prescreening question for intake receptionist, AUDIT screening questionnaire for medical assistant)
    - Provider's Attitudes: Staff attitudes towards the SBIRT program and training will be documented through a short survey, that asks the following question "On a scale from 0-10 (10 being the most ready), how ready are you to put in practice your portion of the SBIRT process?" The agency evaluator will collect data from this section. Target for this measure is 80% of all trained staff respond 7 or above in the survey.

Commented [SJH18]: Helpful to differentiate roles a bit

Commented [SJH19]: Appendix c includes frequency measures but not the types of measures you describe in the section immediately below .the section below is quite good-just needs instrumentation to match

Commented [SJH20]: How measure

Commented [SJH21]: How measure?

- *Compliance measures:* will provide an outline of the core SBIRT components, their use by practitioners and staff, data collection mechanisms and patient-level expectations for each component.
    - See Appendix C - SBIRT Intervention Measures for a complete list of compliance measures for this section.
- *Competence measures:* will determine the level of skill and attention that SBIRT intervention components were delivered during interaction with patients
    - Staff member performs their respective component of the SBIRT intervention with high skill with time-sensitivity and an appropriate response to patients' contextual factors. Number of staff members that comply with this measure will be collected. Target is that at least 80% of staff members are able to identify opportunities for BI, BT and Referral.

3. Initial Implementation: At this stage, the fidelity to the SBIRT intervention will be measured once the SBIRT program is put into initial practice. The measures set at the program installation stage will be measured. As a measure of staff performance, we will determine the number of staff that meeting the fidelity assessment criteria (nominator). The denominator for this measure is the number of staff positions that are performing the SBIRT process. In terms of implementation fidelity, the degree of skill, time selection, and use of SBIRT tools and performance assessment will be measured as a system as indicated in the program installation stage.

4. Full Implementation: The full implementation stage is reached when at least 50% of practitioners and staff are using SBIRT with fidelity and good outcomes (NIRN, 2015). As such, the number of staff performing at full capacity will be collected (nominator). The denominator for this measure will be the number of staff positions performing the SBIRT process. In addition, a trained evaluator from each clinic will review the performances and workflow of the SBIRT process by observing staff directly every 6 and 12 months for a period starting at 18 months up to a maximum of 24 months expected for adoption. A standard form will be used to make detailed comments on the staff performance and provide a rating for each of the several areas of the core SBIRT intervention and prescreening. Qualitative data regarding performance, ratings and recommendations from these assessments will be promptly provided to staff. It is expected that most staff and practitioners will be performing at peak. Plan-do-study-act (PSDA) cycles will be used at this stage to ensure ongoing quality improvement and address issues through data collected and assessment of results (NIRN, 2015).

Data:

Project staff, including the agency specialist will collect quantitative and qualitative data throughout the project. NIIAAA prescreening and AUDIT screening questionnaire data will come from patient self-reporting on personal alcohol consumption and collected by the intake receptionist and medical assistant and inputted as specified in the measures. Data from brief interventions; brief therapy and referrals to treatment will log by the certified primary care physician or the certified behavioral health therapist. This information will include: the type of

Commented [SJH22]: How measure?

Commented [SJH23]: How measure

Commented [SJH24]: Good but how

Commented [SJH25]: Why did you choose 50%?

Commented [SJH26]: I am not quite getting this trained evaluator role why not someone responsible for quality and behavioral health?

Commented [SJH27]: Good – a template of the form would be ideal ..

Commented [SJH28]: This is good and introduces the need to identify lead, how know when meet goals, etc.

Commented [SJH29]: And presumably in emr?

interventions delivered to the patient, progress notes, follow up screening scores/outcomes and treatment utilization, physical and mental health symptoms or diagnosis, next scheduled screening or referrals made (SAMHSA, 2013). A specialist from the contracted agency will collect all other data regarding implementation stages and progress. Data will be collected on an ongoing basis during the implementation process will be to monitor the progress and compliance rates at six and twelve months marks and then at twenty-four months mark (at the end of the final implementation). Data will be stored at in the electronic health records, avoiding the need for a new data keeping system. Data will be pulled at the discretion of the contracted agency for evaluation purposes only. Quality assurance in data input will be responsibility of the evaluator and participating staff members, respectively. Data must be reviewed monthly in other to provide providers with the incentives and performance rewards.

To ensure provider buy-in, SBIRT will be implemented in a two-year period to elicit support and cooperation of staff and staff will be given feedback regarding performance as mentioned in the measures sections. Moreover, specific health benefits of SBIRT related to alcohol misuse will be discussed to providers and staff. Provider's concerns will be address at meetings but will also be resolved at training sessions, through ongoing direct supervision and monitoring activities (SAMHSA, 2013). Ongoing provider feedback data from the staff will also be collected from the staff as mentioned in the measure sections in order to gather information about the flow implementation process, easiness of data input to identify process issues early in implementation and generate ideas for improvement.

Data integrity will be maintained through existing confidentiality, privacy and integrity guidelines for providers and patients that are already in place at each community health center. These guidelines and provisions are maintained through the Federal Health Insurance Portability and Accountability Act (HIPAA) for guarding patient records and specifically protects the privacy of people seeking treatment for substance abuse which all six health centers must adhere to (SAMHSA, 2013). The contracted agency specialist will also adhere to equally complying integrity guidelines as part of the contractual agreement.

Costs:

Costs will be calculated based upon the presumption that the average number of visitors each year at the six FQHC is approximately 30,000. A maximum of 3,000 $ will be allocated for training purposes. This estimate will account for two training sessions per year at each of the FQHCs. For the paper-based prescreening and screening questionnaires, the proposed budget will be a maximum of 600$ per year.

Costs related to prescreening and SBIRT procedures have been calculated as follows:

The screening process conducted by the medical assistant comprising of filling in of the Prescreening is expected to be completed within one-three minutes per patient screened. Since 100% of population is to be prescreened, the total time spent by the receptionist on prescreening should not exceed 30,000 minutes annually, considering that each individual gets prescreened in one minute. The program envisages a financial bonus of 25$ per hour so the maximum cost to be

Commented [SJH30]: good

Commented [SJH31]: not sure how this will work at all ..EHRs not equipped for project management data you will need a separate data system

Commented [SJH32]: why not health centers?

Commented [SJH33]: Timing is right but I get a bit nervous about adding performance rewards to implementation the issue is what happens when incentives go away .performance rewards are usually added to get a boost in performance-not to implement .

Commented [SJH34]: This could go into a section called –"on boarding" or some such most of it doesn't fit in data

Commented [SJH35]: This needs to be revisited .will need a stand alone data base (the EMRs can contain patient specific data) but need another to monitor implementation

Commented [SJH36]: What does this mean?

Commented [SJH37]: Helpful to have a budget justification that itemizes how much each item costs (rate per hour, etc.)

Commented [SJH38]: See my earlier comments about bonuses /incentives

incurred for this activity shall be 12,5000 $ per year questionnaire and risk profiling of the patient is expected to take five - ten minutes per patient and then entering the data into the EMR. As it is expected that a maximum of 30% of population i.e. program envisages a financial bonus of 50$ per hour so the total expenditure for this activity shall be 37,500$. The estimated "median cost of screenings in primary health care settings is 0.42 per patient screened while the estimated median cost of performing the brief intervention comes up to be dollars 3.43 $ per patient receiving the intervention in the Primary clinics" (Zarkin, 2003)
It is anticipated that out of all the screened patients, a maximum of 15% patients will require brief intervention, around 1,350. These individuals falling in the low to moderate risk category will require between 5-15 minutes of the physician's time which will become around 112.5 hours. Whereas 60%, 81 patients falling in moderate to high risk category will require between 15-60 minutes maximum per session (behavioral therapy) which will be around 20.25 hours from a certified behavioral therapist.

The physician will spend 112.5 hours extra for the entire SBIRT process, the project envisages a financial bonus of 100$ per hour for the physician and behavioral therapist. There are no data collection costs. The data will be stored in the EHR by a specialist from the training agency and will only be shared with the providers and staff members monthly to improve their performance.

The health care centers pay about 10,000$ a year to maintain and develop their electronic health records and also train staff to utilize the system (CMS.gov, 2015). In addition, a budget of 1000 $ is earmarked for miscellaneous petty expenditures for project related activities like public awareness posters or brochures etc. The maximum expense for this activity is estimated to be around 77,875$ per year (see appendix E)

see earlier comments-need to be much more detailed if going to retain

In order to successfully implement the SBIRT program it is imperative that the effective participation of the service providers is ensured. The staff and the providers working in the FQHCs are already overworked and the SBIRT program will demand extra effort both in terms of time and physical effort over and above their routine jobs. Therefore, unless the providers have some form of motivation it is possible that they might not give the program its due attention, which will be extremely detrimental to the outcome and sustainability of the program.

One of the mechanisms to ensure that the program is implemented in letter and spirit and ensure its effectiveness is to introduce financial incentives (Flodgren, 2011) for the providers and the staff participating in the program. The financial incentive shall be in the form of bonuses and the providers shall become eligible for getting the bonuses on achieving specified performance benchmarks. Providers who fail to achieve the monthly targets they will not be entitled for payment of bonus for that particular month. It is also imperative for the success of the program that the providers are not forced into the implementation of the program, therefore only those providers should be included who volunteer to participate in the program.

The incentive program will be offered to the individual providers, the distribution of the incentives to the individual participant shall be decided by the organization according to the role and time spent by each provider including physicians and staff participating in the program. Financial incentives will also be in the form of accreditation points (credit types) offered by the American Academy of Nurse Practitioners, American Credentialing Centers).

The financial bonuses will be granted on meeting the measures expected and specified for the implementation of the entire SBIRT process.

SBIRT program shall be funded from the grants received from the Federal Agencies, NY substance Abuse and mental Health Service Administration, SAMHSA and health insurance plans. Out of the six FQHCs, those who successfully achieve these benchmarks will become entitled to bonuses, which should be no less than 10% of their monthly emolument. The bonus program should continue during the implementation stage. After this, we hope that individual and organizational reputation will keep the providers and the staff motivated to follow all components of SBIRT.

Challenges

Challenges that can arise throughout SBIRT implementation include: competing priorities, privacy issues, sustainability, generating support, lack of funding, lack of knowledge, patients characteristic and background, provider attitudes and competences, patient languages, patient culture, patient resistance, patients' expectations and available staff to perform SBIRT (SAHMSA, 2013). In order to alleviate these challenges and make SBIRT implementation a success, several strategies will be used to mitigate them. For example, if a staff member becomes reluctant to change how things have been done traditionally and sees SBIRT as an extra burden, staff members will be reminded of the importance of SBIRT intervention in terms of cost effectiveness and the benefits. Other strategies include using of small rooms to conduct screenings and prescreening to mitigate patient privacy issues (Vimont, 2012). Looking out for ways to acquire new grants from other agencies to fund the program can aid in lack of funding (Gryczynski et al., 2011). Training can be done in-house with resources that are available and for free on the internet (Gryczynski et al., 2011). Some unintended consequences related to incentives on provider's performance might be that incentives may undermine the provider's motivation, causing them to focus on the incentive and not on the provision of services or the quality of the care provided. These and other unintended consequences that come along with a program implementation can create a burden for staff in time and added work related to data collection, training and other components of the implementation process. These unintended consequences and challenges can affect can affect costs, quality and patient health outcomes. However, using a collaborative approach will help mitigate them.

Commented [SJH39]: Ok but by whom?

Commented [SJH40]: ? SBIRT is reimbursable in NY State by Medicaid and Medicare

Evaluation

The SBIRT implementation program will be evaluated to assess for its success at various stages and is expected to serve as a feedback mechanism for the medical director and staff.

Commented [SJH41]: This describes what ---not how .assume a compilation of data, reports and feedback but need to describe process .

Process Evaluations (Exploration, Program Installation, Initial Implementation and Full Implementation), Economic and a system-wide evaluations will be conducted by the contracted agency for the first 12-month of the project, followed by evaluations from a trained researcher and evaluator at each center. The use of this external evaluator will aid to achieve impartiality for the very important first year of the implementation. These evaluations will be assembled into a comprehensive annual and final report that will help identify challenges, solutions, lessons learned and information about the impact of SBIRT on alcohol abuse outcomes from the development of the program. Cost-benefit and sustainability information will be achieved as a result of these assessments. Data for the report will be taken from the various measures involved in the implementation of the program at the six community health centers. Periodic, cyclical evaluations conducted at the 6 and 12-month marks will yield an estimate of the project team success. In addition, the SBIRT project team will be administered an exit survey that will be done at a twenty-four month period to assess for the success of the training given to providers and to collect their impressions of the program's success.

Commented [SJH42]: Good and more

Commented [SJH43]: What does this mean?

Commented [SJH44]: Nice

Summary

Screening, Brief Intervention, and Referral to Treatment (SBIRT) is a comprehensive and integrated approach to the delivery of early intervention and treatment services through universal screening for persons with substance use disorders and those at risk. Guided by the Fixsen's implementation framework, our implementation will consist of 4 core stages (exploration, program installation, initial implementation and full implementation) at the 6 FQHCs throughout New York State. Target settings and staff will be defined, as well as important measures and indicators of success. Program costs, incentives for participation and evaluation mechanisms will be defined as proposed in the plan. Following careful, cyclical review of data and performance will ensure positive implementation outcomes as well as patient population levels. Sustainability options and the learning process will continue beyond the implementation stages to ensure that protocols and specific mechanisms continue to fit with the FQHCs.

Appendix F: Audit Screening Tool and Scores

Alcohol Use Disorders Identification Test (AUDIT)[a]

Alcohol consumption:

1. How often do you have a drink containing alcohol?
2. How many drinks containing alcohol do you have on a typical day when you are drinking?
3. How often do you have 6 or more drinks on 1 occasion?

Drinking behavior:

4. How often during the past year have you found that you were not able to stop drinking once you had started?
5. How often during the past year have you failed to do what was normally expected of you because of drinking?
6. How often during the past year have you needed a first drink in the morning to get yourself going after a heavy drinking session?

Adverse reactions:

7. How often during the past year have you had a feeling of guilt or remorse after drinking?
8. How often during the past year have you been unable to remember what happened the night before because you had been drinking?

Alcohol-related problems:

9. Have you or has someone else been injured as a result of your drinking?
10. Has a relative, friend, or a doctor or other healthcare worker been concerned about your drinking or suggested you cut down?

The AUDIT is scored on a scale of 0 to 40, with a score of 8 or higher considered positive and warranting further assessment. Details on scoring can be accessed at http://whqlibdoc.who.int/hq/2001/WHO_MSD_MSB_01.6a.pdf.

Inadequate (0 point)	Marginal (half of possible points)	Excellent (all possible points)	Points Possible	Points Earned	Comment & Feedback
Document is not well crafted. Has multiple typographical errors, gramatical errors, inconsistent verb usage, lacks organization. Term Paper

Section I

Concussion Under-Reporting and Pressure from Coaches, Teammates, Fans, and Parents

Kroshus et al. (2015)

1. The study's dependent variable is concussion reporting. It is clear that the research is about this phenomenon. Ongoing efforts to reduce the public health burden of concussions from sports span multiple levels, ranging from attempting to modify individual safety behaviors to changing the rules of sports to reduce exposure to potentially injurious head impacts.

2. There isn't too much evidence presented to substantiate the occurrence of this phenomenon. In the introduction, it is stated that more than eight million adolescents and young adults participate in competitive sports at the high school or collegiate level in the United States on an annual basis. However, no exact statistics were presented on how many of these athletes have reported concussions due to participating in competitive sports. It is stated that concussions due to contact with another athlete, equipment, or the playing surface are being increasing recognized as a frequent injury in many sports.

3. There is plenty of substantiation on why concussion reporting is important. It is stated that concussions are mild traumatic brain injuries. Although symptoms of most concussions resolve in less than two weeks, during this time period the somatic, cognitive, and emotional symptoms sustained can interfere substantially with an athlete's activities of daily living, and can pose a

significant health burden. In some cases, the neurologic consequences can extend across the lifetime.

4. The study's independent variable is the athlete's environmental pressure. This study focuses on one particular dimension of environment-athlete interaction: the pressure athletes experience from individuals in their sports environment to continue playing with symptoms after a possible concussion.

5. The study mentions that the Theory of Planned Behavior (TPB) may help explain between-individual variability in concussion reporting. Concussion reporting intention is associated with reporting behavior, and expectancy value cognitions such as perceived norms and attitudes have been found to be associated with reporting behavior. However, a lot of the variability in both intention and reporting behavior is still left unexplained by the TPB model. It is believed that TPB ignores the important role of context. It has been proposed that using an expanded model in which environment interacts with reporting intentions to influence symptom reporting would be beneficial. Building on this model, Bandura's Social Cognitive Theory (SCT) provides a more inclusive framework for explaining the athlete's experience making concussion reporting decisions in consideration of contextual influences. SCT outlines a triadic reciprocal relationship between individual-level psychological determinants of behavior, environmental factors, and behavior. Based on this information, the theoretical framework is clearly elaborated, applies to the dependent variable under investigation, and provides plausible assumptions.

6. There is plenty of empirical justification for the selection of this independent variable. Previous studies have found that a coach's response to concussion reporting influences future reporting behavior of high school athletes. Also, when individuals experience a gap between their behaviors and how they believe the referent group would behave, they can experience an

internal pressure to modify their behaviors or beliefs out of desire for social approval. Prior research has found a significant association between perceived teammate or athlete norms about concussion reporting and concussion reporting intentions or behaviors. Pressure to comply with the explicit or implied demands of a social group are heightened when the source of the pressure controls access to valued commodities, such as rewards or incentives from coaches or parents, which can be playing time, scholarships, tuition money, and affection. Spectators or team supporters also influence the pressure an athlete feels to continue playing while injured.

7. Prior research on concussion reporting has often used TPB as their theoretical framework. The authors of this study decided to use SCT, which builds off the model of TPB. Doing so allows the authors to apply the theoretical framework in a different way that will enhance knowledge.

8. The study tested the hypotheses that male and female US collegiate athletes who experience greater pressures from teammates and coaches, and to a lesser extent from parents and fans, to continue playing after a head impact will be less likely to intend to report a suspected future concussion. Therefore, the authors seem to be specifying a more complex causal theory using a moderator model. An athlete's environment causes concussion underreporting only when they experience pressure. No potentially confounding variables are measured, controlled, or ruled out by the authors.

9. The study's unit of analysis is the individual.

10. From the introduction, I do feel that I get a clear sense of the mental picture guiding this research. It is clear that the article will be concentrating on concussion reporting amongst collegiate athletes using the SCT model to see how the environment, specifically the pressure

athletes experience from individuals in their sports environment to continue playing with symptoms after a possible concussion, affects future concussion reporting.

11. The study's research case was the individual, making it an appropriate empirical reflection of the study's unit of analysis. The conceptual model did not articulate a multilevel research question or suggest cross socio-temporal comparisons.

12. The study's sample size was 328. There was no indication that the authors conducted a power analysis to determine the appropriate sample size. Being that the sample size is over 50, it does not seem small. I believe a sample size of 328 is large enough that the study's findings will not be inconclusive or have any type II errors.

13. Purposive sampling was used for sample selection of athlete participants. The population consisted of athletes from four northeast colleges that were not members of the Power 5 athletic conferences. The institutional response rate was 25%, with eight of the twelve schools contacted not responding or declining participation. Of the four schools, 19 of 35 eligible contact and collision team coaches (54%) allowed their team members to have the choice to participate in the study. On participating teams, the individual participation rate was 74%. There were six soccer teams, three lacrosse teams, three basketball teams, two field hockey teams, one softball team, and one volleyball team included in the study. The appropriate method was used to address the central research question, and the issue of comparability was mentioned. The inclusion of lower profile collegiate sports teams was a decision made purposively to explore the experience of collegiate athletes who are at risk of concussion, but whose injuries receive relatively less public attention. However, it is stated that it is not clear the extent to which the present findings compare to the experiences of football and hockey players, particularly those at higher levels of competition.

14. Concussion reporting was not explicitly defined. The authors do not discuss the possible strengths and weaknesses, or provide any rationale or justification for their definition. However, one can infer the definition of concussion reporting to be the act of reporting a possible concussion, based on known symptoms, to a family member, friend, coach, or doctor. I would say this is a good definition of concussion reporting as it seems quite self-explanatory to me.

15. Concussion reporting was measured using a written survey. However, concussion reporting intention was only one question on the survey. Intention to report symptoms of a suspected concussion was measured with an item reading: "I intend to report any symptoms I experience after a head impact if I think these symptoms are from a concussion." The question was scored on a seven-point Likert scale, with response options ranging from 1=strongly disagree to 7=strongly agree. Thus, this operationalization was clearly stated, however, the authors do not discuss the possible strengths and weaknesses, or provide any rationale or justification for it. I think this operationalization could have been done better by asking more than one general question about concussion reporting.

16. The only evidence of validity mentioned in the study was that validated measurement instruments were used where available, and where unavailable, items were developed for the purpose of the study. However, it is unclear if a validated instrument was used to measure concussion reporting intention. There was no mention of reliability measurements in the article.

17. The independent variable of environmental pressure is conceptualized as the pressure that athletes feel during injury recovery, which is described as a product of social and competitive pressures. A key concept is that pressure is an internal experience, in response to external demands. The authors do not discuss the possible strengths and weaknesses, or provide any rationale or justification for their definition. I feel that this is a well described definition.

18. Pressure to continue play after a head impact was measured through a written survey. Participants were instructed to think about the previous athletic season and indicate their strength of agreement with four statements reading: "I have felt pressure from (source) to return to play after a head impact." Pressure from four sources were given: teammates, coaches, parent/guardian, and fans. Responses to each item were scored on a seven point Likert scale, ranging from 1=strongly disagree to 7=strongly agree. The wording "head impact" rather than "concussion" was used to limit variability in responses attributable to differences in the athlete's ability to recognize which head impacts did or did not result in a concussion. Thus, this operationalization was clearly stated, however, the authors do not discuss the possible strengths and weaknesses, or provide any rationale or justification for it. I think this operationalization was done rather well because it got straight to the point.

19. Again, the only evidence of validity mentioned in the study was that validated measurement instruments were used where available, and where unavailable items were developed for the purpose of the study. However, it is unclear if a validated instrument was used to measure environmental pressure. There was no mention of reliability measurements in the article.

20. New data about participants' assessment of concussion knowledge, subjective pressure experiences, and intentions related to future concussion reporting was collected. Two key limitations about the data were discussed. Although there were no significant differences between participating and non-participating institutions in publically available characteristics, it is possible that there were differences in terms of institutional support for concussion safety, thus results are not generalizable to all institutions. Additionally, generalizability may be limited by the sport and level of competition of the teams included in the sample. I cannot think of any other limitations other than the use of a cross-sectional design, which is mentioned below.

22. This study used a cross-sectional design. There was no rational given for this decision. Longitudinal data, with reporting intention assessed at pre-season and recall of in-season pressure and reporting behavior, would allow for analyses of the extent to which pre-season reporting intention modifies the association between pressure and reporting behavior. Therefore, a longitudinal study may have been better fitting than a cross-sectional since cross-sectional limits the ability to confidently make causal inferences about the association between pressure and reporting behavior.

23. This study employed an observational design. There was no mention of confounders throughout the entire article, so one cannot be sure if any were identified and adjusted for in the analysis.

Section II

Understanding Concussion Reporting Behavior Using a Model Based on the Theory of Planned Behavior

Kroshus et al. (2013)

1. The study's dependent variable is concussion reporting. It is clear that the research study is about this phenomenon. Concussion underreporting is a problem that has been identified in multiple populations of youth and adolescent athletes. An athlete's report of concussion symptoms to coaches or medical personnel is an important component of concussion risk reduction.

2. There is evidence to substantiate the occurrence of this phenomenon. In a nationally representative sample of male and female high school athletes across 20 sports, 2.5 diagnosed

concussions were found to occur per 10,000 athlete exposures to a game or practice; the highest rates were observed in boys football, ice hockey, and lacrosse, and girls soccer, lacrosse, and basketball. I would assume that in order for these concussions to be diagnosed they must have been reported.

3. There is plenty evidence to substantiate the importance of this phenomenon. Participation in high school and collegiate sport in the United States is at an all-time high, with estimates suggesting that on an annual basis more than 7.6 million high school students and 450,000 collegians compete in organized sport. Although the benefits of participation in sport for adolescents are well established, there is a growing concern about the prevalence and consequences of sport-related concussions. Accumulating research about the short- and long-term neurologic and functional consequences of concussions and sub-concussive repetitive head trauma in sports makes it clear that a public health priority should be to reduce its burden.

4. The study's independent variable is intention to perform the concussion reporting behavior. Intention is said to be predicted by three factors: attitudes, subjective norms, and perceived behavioral control.

5. In the study it is stated that public health literature suggests that drawing upon existing psychosocial theories of health behavior to understand mechanisms underlying concussion reporting would be beneficial. The Theory of Planned Behavior (TPB) is a robust expectancy value theory that has been tested in a variety of contexts involving rational decision making. According to the theory, the most important predictor of a behavior is the intention to perform that behavior. Effectively intervening to increase symptom reporting first requires understanding the psychosocial mechanisms through which this reporting is facilitated or restrained. Based on this information, the theoretical framework is not elaborated as clearly as it should have been,

but it seems that it applies to the dependent variable under investigation, and provides plausible assumptions.

6. There is little empirical evidence for the selection of the independent variable other than stating that recent focus groups with high school athletes suggest that factors other than the lack of awareness and symptom knowledge, such as not wanting to stop playing, not wanting to look weak, and not wanting to let teammates down, may explain why athletes do not report symptoms of concussions.

7. It is not stated directly if the authors applied the theoretical framework in a different or creative way that will enhance knowledge. All that was stated is that to date there has been limited explicit application of behavior change theory to the field of sports injury prevention. However, there have been recent suggestions that TPB may be an appropriate frame for an understanding of concussion reporting behavior.

8. In a population of late adolescent and young adult male ice hockey players, the primary aim of the study was to empirically assess the fit of a model based on the constructs of TPB for explaining concussion reporting behavior. Therefore, the authors seem to be specifying a more complex causal theory using a moderator model. An athlete's intention to report concussions affects concussion reporting only when certain attitudes or subjective norms are in place. No potentially confounding variables are measured, controlled, or ruled out by the authors.

9. The study's implied unit of analysis is the individual.

10. Overall, I feel like I get a somewhat clear sense of the mental picture guiding this research from the introduction section. It seems that the authors are using TPB to see how intention to

report concussions affects concussion reporting behavior in adolescent and young adult male ice hockey players when certain attitudes and subjective norms are in place.

11. The study's research case was the individual, making it an appropriate empirical reflection of the study's unit of analysis. The conceptual model did not articulate a multilevel research question or suggest cross socio-temporal comparisons.

12. The study's sample size was 256. There was no indication that the authors conducted a power analysis to determine the appropriate sample size. Being that the sample size is over 50, it does not seem small. I believe a sample size of 256 is large enough that the study findings will not be inconclusive or have any type II errors.

13. Purposive sampling was used for sample selection of athlete participants. Study participants were 18-21 year old male hockey players who were competing in an American Tier III Junior A hockey league. Recruitment occurred first at the team level; 12 of 14 league coaches (86%) agreed to give team members the opportunity to voluntarily participate in study activities. Research staff visited each of these 12 teams and obtained informed consent from 97% of players in this age category. The appropriate method was used to address the central research question, and the issue of comparability was discussed. It is stated that the result may not be comparable to populations of athletes in other sports, at different levels of competition, and of the female gender.

14. Concussion reporting was not explicitly defined. The authors do not discuss the possible strengths and weaknesses, or provide any rationale or justification for their definition. However, one can infer the definition of concussion reporting to be the act of reporting a possible

concussion, based on known symptoms, to a family member, friend, coach, or doctor. I would say this is a good definition of concussion reporting as it seems quite self-explanatory to me.

15. Concussion reporting was measured using a written survey. Participants were asked whether during the current season they had experienced any of the symptoms mentioned in a previous question after an impact and did not immediately tell a coach or athletic trainer. The item was scored 0 or 1, with 1 indicating non-report. Thus, this operationalization was clearly stated, however, the authors do not discuss the possible strengths and weaknesses, or provide any rationale or justification for it. I think this operationalization could have been done better by asking more than one general question about concussion reporting.

16. The only evidence of validity mentioned in the study was that validated measurement instruments were used where available, and where unavailable, new items were developed based on relevant literature reviews with and pilot qualitative interviews conducted with late adolescent and young adult male hockey players. However, it is unclear if a validated instrument was used to measure concussion reporting. There was no mention of a reliability measurement for concussion reporting behavior.

17. Intention is conceptualized as being directly predicted by three factors: attitudes, subjective norms, and perceived behavioral control. As such, intention mediates the association among these factors and the performance of the behavior. Attitude reflects the individual's evaluation of the consequences of performing the behavior. Subjective norms reflect perceived pressure to perform the behavior from people whose opinions and behaviors are considered important to the individual in question. Perceived behavioral control reflects an individual's evaluation of the ability to perform the behavior. The authors do not discuss the possible strengths and

weaknesses, or provide any rationale or justification for their definition. I feel that this is a sound definition.

18. Intention was measured using a written survey. On the survey, participants were provided with a list of eight common symptoms of concussions and were asked whether they intended to immediately report the presence of each symptom to their coach or athletic trainer if the concussion were sustained after an impact. All items were similarly scored on a 7-point scale. In terms of attitude about outcomes of concussion reporting, participants reported how strongly they agreed or disagreed with eight statements about possible positive and negative outcomes of concussion reporting. Items were scored on a 7-point scale, with higher summed scores representing the belief that there are more negative consequences of a reporting a concussion. In terms of subjective norms, participants reported how strongly they agreed with seven statements about what a hypothetical athlete or one of their teammates would do in various reporting situations. Items were drawn from Rosenbaum and Arnett's Concussion Attitude Inventory, with modifications so that each item separately referred to athlete and teammate norms. The 14 items were scored from one to seven, and the sum of individual items was computed, with higher scores representing more negative normative beliefs about concussion reporting. In terms of self-efficacy, which is considered to be a component of an individual's perceived behavior control, participants reported confidence in their ability to report symptoms of a concussion under various challenging conditions with a five-item measure. Items were scored on a 7-point scale, with responses ranging from "strongly disagree" to "strongly agree." The sum of item scores was computed, with a higher score representing greater reporting self-efficacy. Thus, this operationalization was clearly stated, however, the authors do not discuss the possible strengths

and weaknesses, or provide any rationale or justification for it. I think this operationalization was done rather well because it seems very thorough.

19. The only evidence of validity mentioned in the study was that validated measurement instruments were used where available, and where unavailable, new items were developed based on relevant literature reviews with and pilot qualitative interviews conducted with late adolescent and young adult male hockey players. However, it is unclear if a validated instrument was used to measure intention. There is use of reliability measurements for intention to report concussion symptoms, attitudes about outcomes of concussion reporting, subjective reporting norms, and self-efficacy. A Cronbach alpha score of .89 shows strong internal consistency of the measure for intention to report concussion symptoms. A Cronbach alpha score of .62 shows that the internal consistency of the measure of attitudes about outcomes of concussion reporting was low, suggesting that this set of perceived consequences may not strongly reflect a single latent construct. A Cronbach alpha score of .74 shows that the internal consistency scale of subjective reporting norms was adequate. Finally, a Cronbach alpha score of .91 shows that scale internal consistency was high for self-efficacy.

20. New data were collected on the reporting behavior, intention, perceived norms, self-efficacy, perceived outcomes of reporting, and concussion knowledge of participants. A few limitations of the study were discussed. Limitations of the analysis included its generalizability to populations of athletes in other sports, at different levels of competition, and of the female gender. Attitude, norms, and self-efficacy measures were developed with particular reference to late adolescent and young adult male hockey players based on pilot qualitative interviews with this population, so their utility for analyses in other populations would need to be evaluated before future use. Additional limitations include the cross-sectional nature of the study, as well as the use of self-

report retrospective measures for behavior, symptoms, and diagnosed concussions sustained. Although intention has been shown to be a strong predictor behavior across a range of domains, use of this measure constrains the ability to make causal inferences. I cannot think of any other limitations.

22. The study used a cross-sectional design. There was no explanation given for this decision. It would be beneficial if future longitudinal research was done to test the prospective usefulness of TPB in predicating concussion reporting behavior, including the strength of the association between behavioral intention and future behavior.

23. This study employed an observational design. There was no mention of confounders throughout the entire article, so one cannot be sure if any were identified and adjusted for in the analysis.

Section III

Common Strengths

One of the main reasons someone may read a research article is because he/she finds the topic interesting and important. The importance of concussion reporting was prominent in both articles. This is vital because if the importance of the dependent variable is not stressed in the introduction, a reader may stop reading and move on to another article. Both articles mentioned the importance of concussion reporting right away and very thoroughly, which I find to be a great strength. Both studies also provided theoretical justification for their independent variables. It is interesting to note that both articles mentioned TPB. While the 2013 Kroshus et al. article used TPB as its main focus, the 2015 Kroshus et al. article used SCT, which built off of TPB.

Overall, these are the most prominent common strengths found in the introduction sections of the articles.

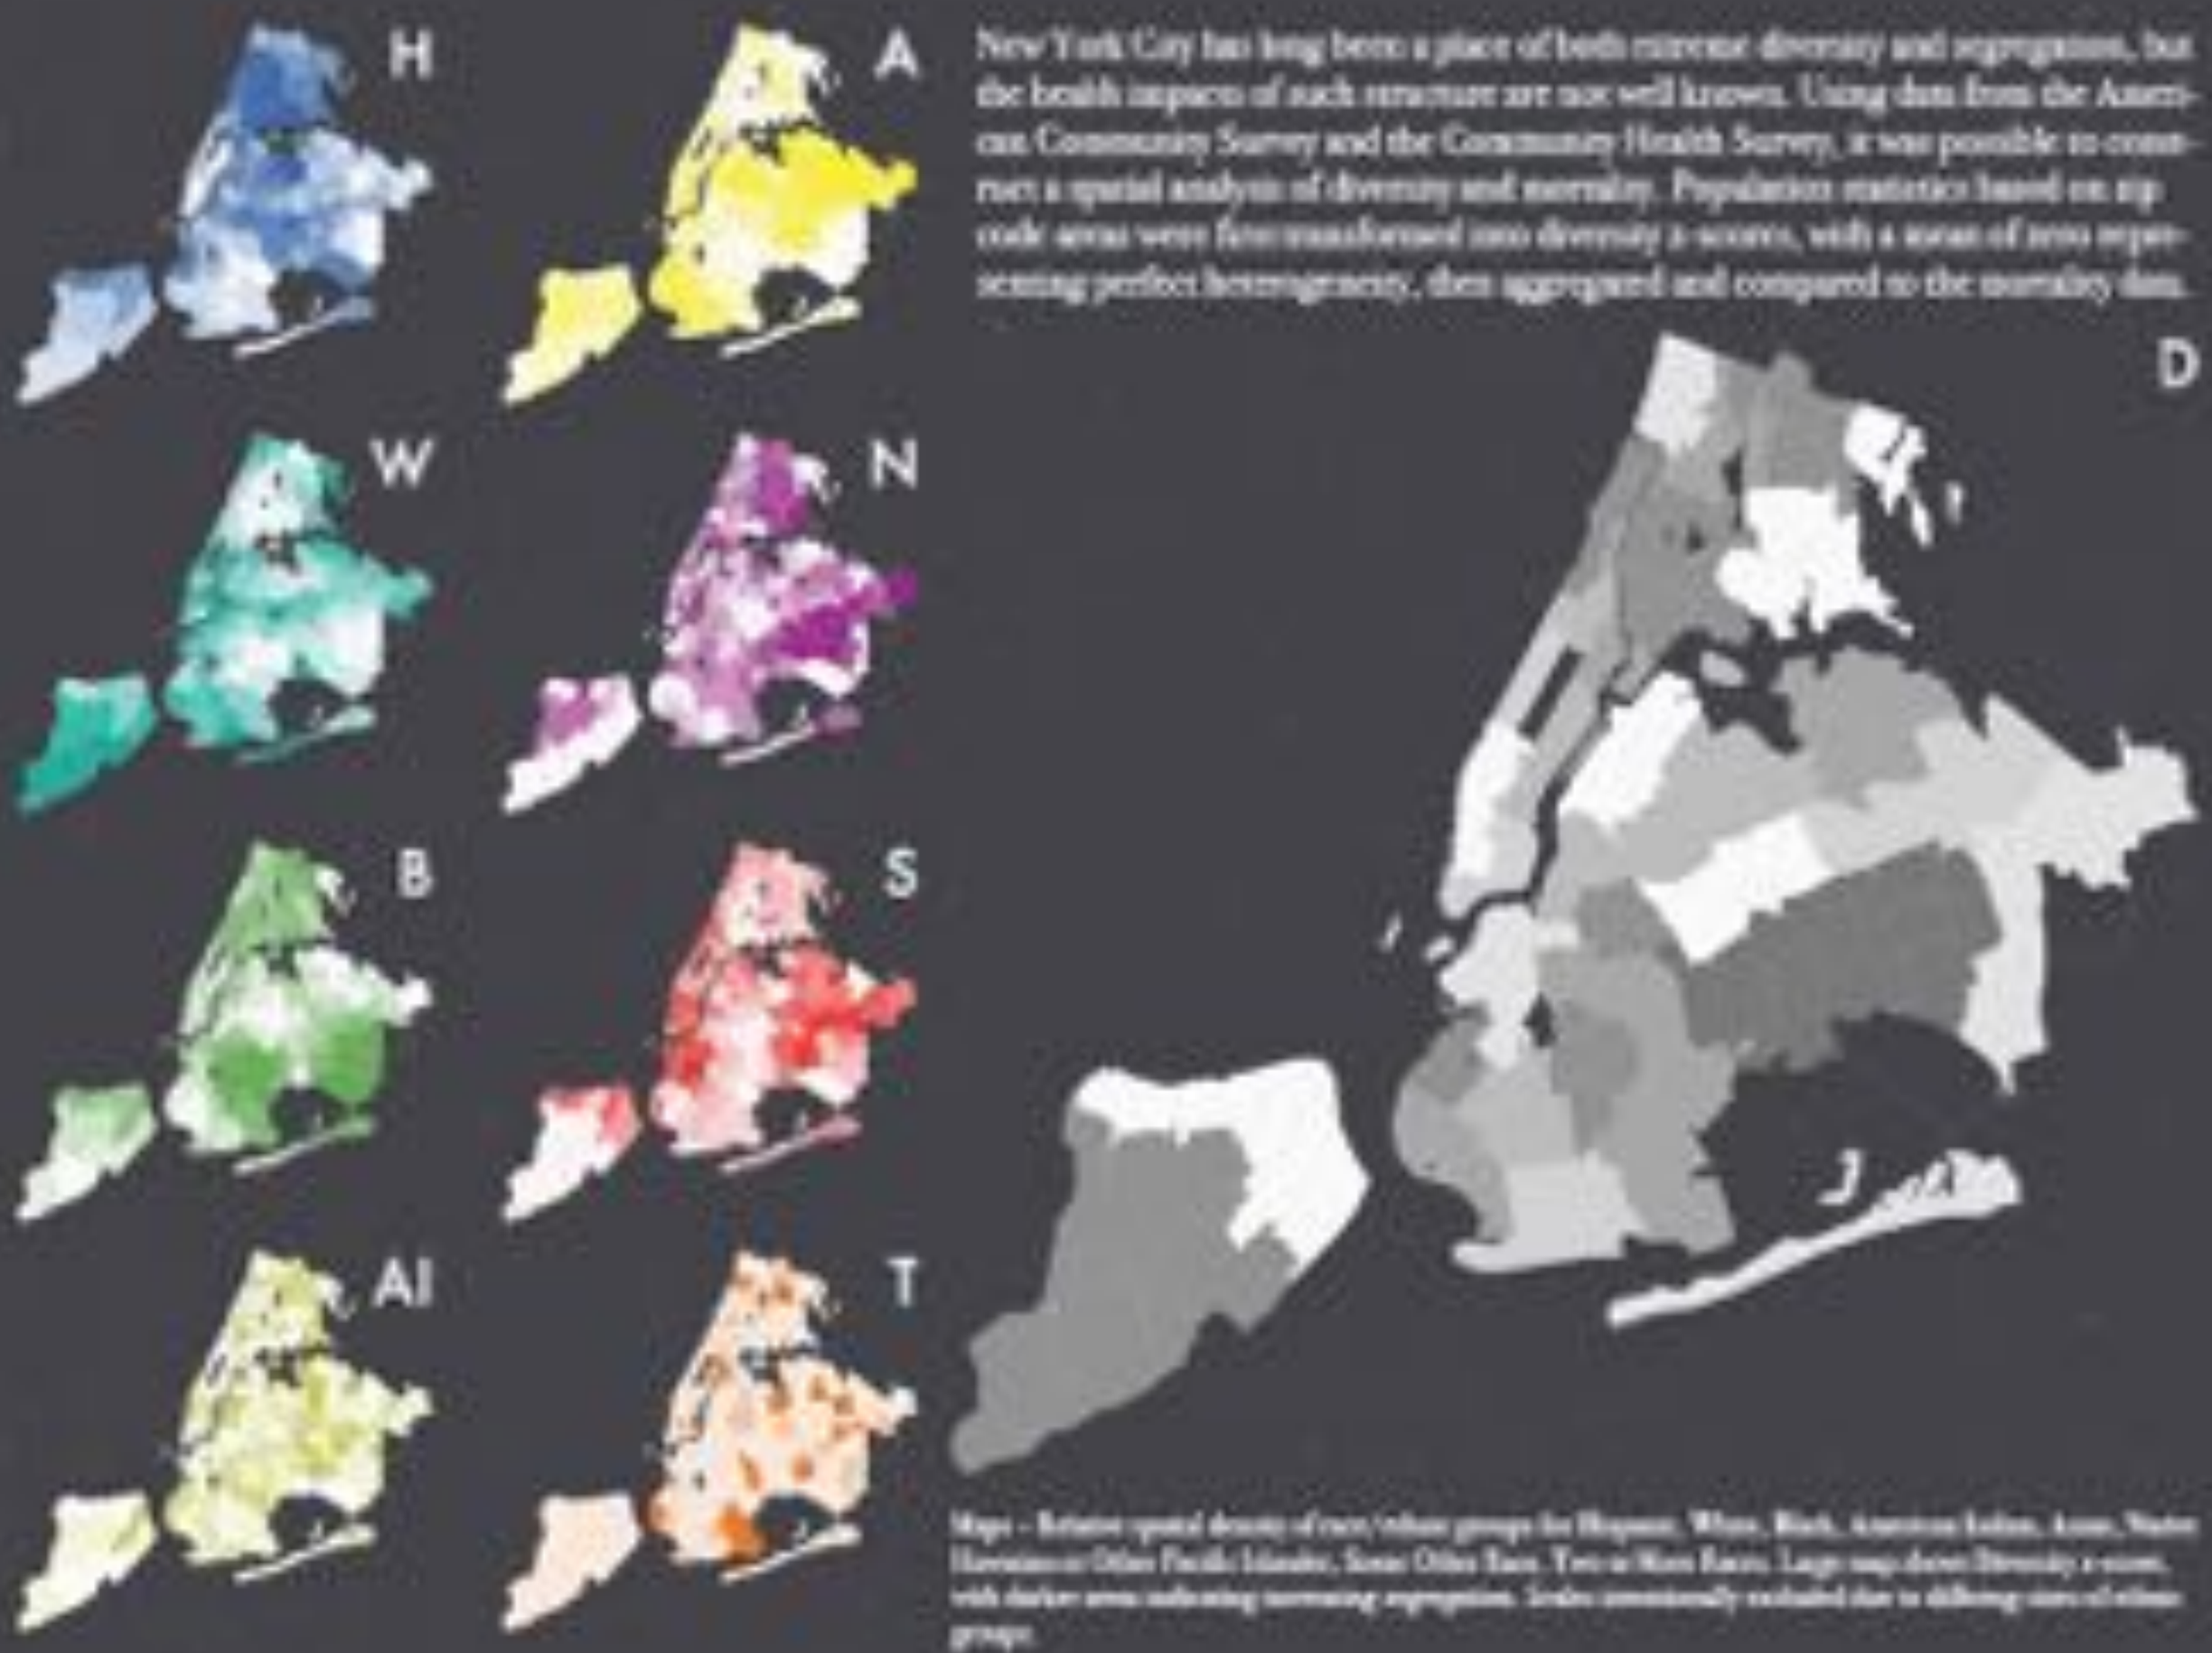
It is vital that the research case is an appropriate empirical reflection of the study's unit of analysis. One common strength found in the methods section of both articles is that each had research cases on the individual level, which was same level as the unit of analysis. Knowing how a variable is being operationalized is also very important for readers. Both articles did an excellent job of explaining how their dependent and independent variables were measured. All scales used were mentioned and explained clearly for the questions included on the written surveys in each article. Overall, these are the most important common strengths found in the method sections of these articles.

Common Weaknesses

One weakness I noticed right away was neither article conceptualized concussion reporting. Even if it seems rather self-explanatory, a research article should define its dependent variable clearly. It was also unclear what the nature of the relationship the authors expected to uncover between their variables was: whether the articles were aiming for causal identification or casual explanation. It was difficult for me to decide if the authors were using a rudimentary or a more complex causal theory because they seemed to jump back and forth between the two in both articles. Another major flaw was that neither article spoke about any potentially confounding variables that should have been measured, controlled for, or ruled out. Being that both studies employed an observational design, the authors needed to be aware of the possibility of confounders and control for them in their analyses. Failing to adjust for confounders can critically impact the results of their studies.

The last common weakness I found was that both studies employed a cross-sectional design. A cross-sectional study provides a snapshot view of a phenomenon as it exists at only one point in time. In a cross-sectional design, data is collected on subjects only once, and measures them simultaneously on the independent and dependent variables. While this design has its advantages, such as a lower cost, quick answers, and no worry about loss to follow up, the disadvantages seem more crucial. In addition to being susceptible to reverse causality, a cross-sectional design has limited internal validity, so the most that can be concluded is correlation not causality. Overall, I would say that using this type of study design is a weakness for both studies.

Section IV

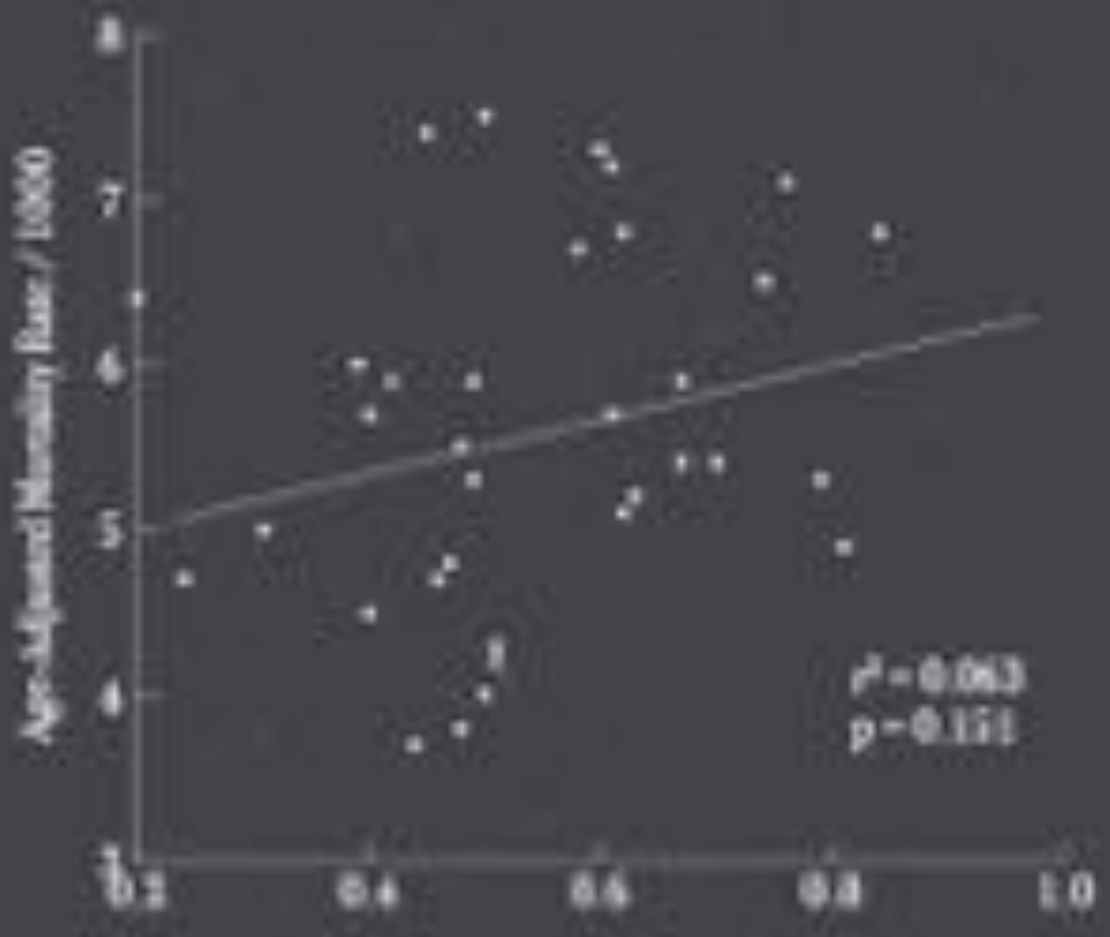


There are a few recommendations I would make for future researchers to do differently when studying concussion reporting. My first recommendation would be to generate a large sample size or conduct a power analysis to determine exactly how many participants are needed. While neither of these studies had a small sample size by any means, having a sample size of 2,000 would be better than 200. This larger sample size would reduce the chance that the study findings might be inconclusive and that any non-significant results may be a Type II error. I would also recommend conceptualizing the dependent variable, or concussion reporting, more prominently in future studies. While concussion reporting may seem rather self-explanatory to some, it is important that is explicitly stated in the paper. It is also important to present evidence of both reliability and validity for definitions and measurements of independent and dependent variables. If a measure is not reliable it cannot be valid. Reliability is relatively easy to assess in comparison to validity, and it is usually assessed first. Future studies should not stop after

providing evidence of reliability because a measure can be reliable, but not valid. Therefore, evidence of validity is also necessary.

While all the recommendations given above are important, my two biggest recommendations are to use a longitudinal research design rather than a cross-sectional one, and identify and adjust for potential confounders. Confounders distort the true relationship between the independent and dependent variables, making them very problematic. It is important to identify potential confounders and remove their distorting effects so the true relationship between variables is known. Controlling for confounding in an observational study can be done using multiple linear regression and multiple logistic regression. A longitudinal design should also be used over a cross-sectional design when able. Longitudinal studies rule out reverse causality because the design establishes that the independent variable preceded the dependent variable. They also allow for the inference that the independent and dependent variable are likely to be causally related, not just correlated. All the recommendations listed above would enhance the quality of the research and the strength of its causal conclusions in regards to concussion reporting.

Does Diversity Matter?



[redacted]

New York City has long been a place of both extreme diversity and segregation, but the health impacts of such structure are not well known. Using data from the American Community Survey and the Community Health Survey, it was possible to construct a spatial analysis of diversity and mortality. Population statistics based on zip code areas were first transformed into diversity z-scores, with a score of zero representing perfect heterogeneity, then aggregated and compared to the mortality data.

Maps – Relative spatial density of race/ethnic groups for Hispanic, White, Black, American Indian, Asian, Native Hawaiian or Other Pacific Islander, Some Other Race, Two or More Races. Large map shows diversity z-scores, with darker areas indicating increasing segregation. Grates intentionally excluded due to differing sizes of ethnic groups.

Mortality vs Diversity

Graph – Plot of mortality vs diversity for 34 United Hospital Fund Neighborhoods

Other Correlations

Variable	Correlation	Significance
servings of vegetables in the last 24 hours	-0.500	0.004
daily sugar sweetened beverage consumption	0.428	0.015
self reported BMI	0.426	0.015
household income	-0.352	0.048
age-adjusted mortality rate / 1000	0.305	0.090
proportion that have ever been tested for hepatitis C	0.384	0.115
proportion of age 16+ in labor force	-0.382	0.118
proportion unable to get needed medical care in past year	0.076	0.681
proportion that have seen personal care doctor in the past year	0.066	0.718

Table – Select correlations between diversity and variables examined from CHS and ACS data.

Appropriate targeting of hepatitis C testing in NYC: An evaluation using the Community Health Survey, 2013

[redacted]

Introduction

- Groups most at risk are those born between 1945-1965, Hispanics, and lower SES.
- >80% of HCV cases are curable, but only 5-6% of cases receive treatment
- Half of infected individuals are not diagnosed
- 1945-1965 birth cohort targeted for testing by CDC
- **Objective:** Assess whether appropriately targeted testing is being conducted in NYC according to racial and socioeconomic disparities and 1945-1965 birth cohort.

Methods

NYC Community Health Survey 2013

- Annual cross-sectional survey of non-institutionalized adults 18 and over in NYC
- Stratified random sample, stratified by 42 UHF neighborhoods in NYC
- 125 questions on multiple demographic and health topics, including HCV testing:

Statistical Analyses

- Response variable of interest: Have you ever had a Hepatitis C test? (Yes / No)
- Hypothesized predictors:

Race / ethnicity	Insurance status
Language spoken at home	Access to care
	Neighborhood poverty %
Household income	In 1946-65 birth cohort

- Chi-square and logistic regression were used to test for significant associations.
- Analyses conducted in R, accounted for survey design

Rationale:

- Response and predictor variables are categorical, data is cross sectional

Results

Table 1: Sample Characteristics & HCV testing rates

		n	% of Sample	% Hep C Test Ever
Race / Ethnicity	White	2977	35.5%	34.8%
	Black	1975	22.0%	54.7%
	Hispanic	2558	26.9%	39.8%
	Asian/PI	1008	13.5%	38.4%
	Other Non-Hispanic	180	2.1%	56.6%
1945-1965 Birth Cohort	Yes	3206	31.7%	36.0%
	No	5253	68.3%	44.8%
Neighborhood Poverty	<10% (low)	1837	21.1%	37.5%
	10 -<20%	2699	36.1%	40.5%
	20 -<30%	2095	24.6%	42.2%
	30 -<100% (very hi)	1827	18.1%	48.1%
Didn't Get Needed Health Care (last 12 mo.)	Yes	954	11.3%	46.9%
	No	7698	88.7%	41.1%

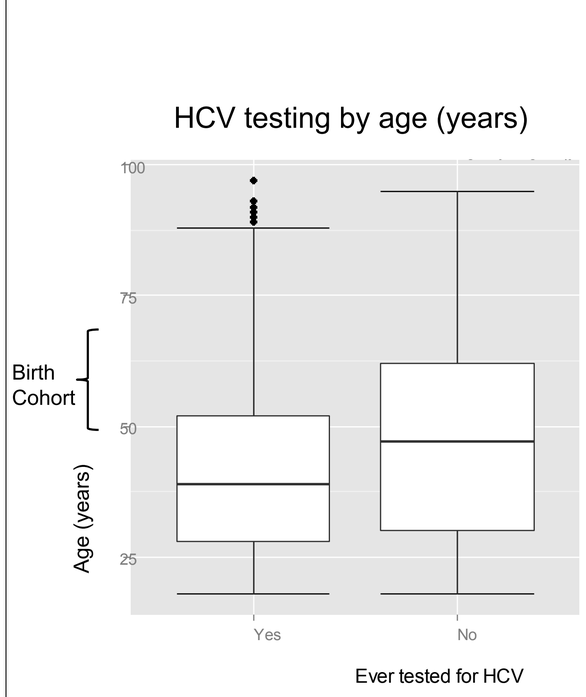

Figure 2: Individuals who report having been tested for HCV are 7.6 years younger on average (p <0.001).

Results *(cont'd)*

- n = 7452 individuals responding data on HCV testing (86.7%).
- 41.69% report having ever had an HCV test
- Significant predictors:
  - Black, Hispanic, or other non-Hispanic race,
  - Medicaid or uninsured,
  - Neighborhood poverty >30%,
  - Not receiving needed care in the last 12 months
  - Speaking English at home.
- Individuals born between 1945 and 1965 were significantly **less** likely to have received a test (OR 0.69, 95% CI 0.61,.079).
- No significant interaction was found between race/ethnicity and cohort status.

Table 2: Univariate regression models showed these characteristics significantly predicting ever having had an HCV test.

	OR	95% CI	p-value
Black	2.27	1.90, 2.70	<0.001
Hispanic	1.24	1.06, 1.46	0.009
Other Non-Hispanic	2.45	1.55, 3.88	<0.001
Birth cohort=No	1.44	1.26, 1.65	<0.001
Medicare	0.60	0.46, 0.69	<0.001
Medicaid	1.24	1.05, 1.47	0.011
Uninsured	0.74	0.62, 0.88	0.001
Neighborhood Poverty >30%	1.55	1.27, 1.90	<0.001
Speaking English at home	1.56	1.37, 1.79	<0.001
Ever had an HIV test	8.58	7.24, 10.16	<0.001
Gay/Lesbian	1.84	1.25, 2.71	0.002
Bisexual	2.31	1.83, 3.89	0.002

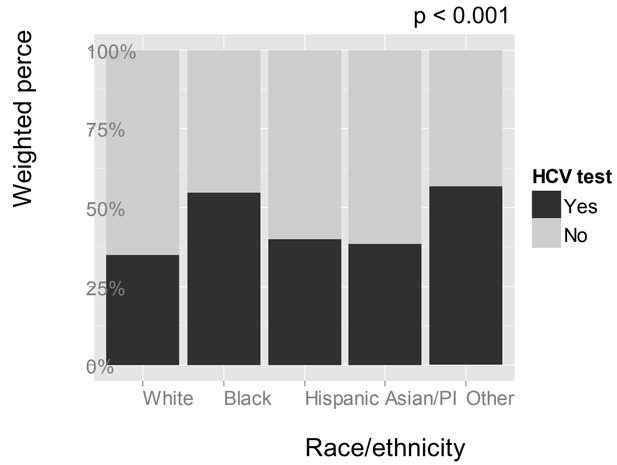

Figure 1: Individuals who report Black or "Other" as Race/Ethnicity are significantly more likely to have received an HCV test.

Discussion

- Hepatitis C testing initiatives have increased in NYC in recent years
- HIV/AIDS community service agencies are increasing being contracted to provide HCV testing
  - 86.5% ever tested for hep C also tested for HIV) (p < 0.001)
- Hepatitis C testing is primarily being offered to HIV risk population (younger, African American, gay/bisexual)– different risk profile associated with hepatitis C.
- Providers are more likely to target African Americans, Hispanics, other Non-Hispanics, and neighborhood poverty > 30%.
- 1945-1965 cohort at highest risk in NYC, and are not being adequately targeted. Hispanics at higher risk than African Americans & less likely to test
- People who do not speak English at home or are uninsured, or are in the 1945-1965 birth cohort are significantly less likely to have received a test.

The Efficacy of Mental Health Services in Reducing Recidivism Among Juvenile Offenders with Mental Health Issues: A Review of Selected Literature

PH 755.01, Fall 2015
Collaborative literature review

Abstract

Youth in juvenile detention have a high prevalence of mental health conditions and often lack prior access to appropriate mental health services. Services provided while in detention may be inadequate and these youth are often already at an increased risk of being rearrested. This paper reviews selected literature identified by specified criteria. We attempt to assess how different mental health programs provide care in an effort to reduce recidivism rates among juvenile offenders with mental health issues, by looking at outcomes such as number of rearrests, time until recidivism, and seriousness of reoffense. We review the efficacy and effectiveness of conventional, multisystemic, wraparound and diversion programs. Multisystemic, wraparound and diversion programs appear to be more effective than conventional approaches in reducing recidivism rates among juvenile offenders with mental health conditions. It is recommended that ~~These~~ programs addressing underlying conditions and socio-contextual aspects of the individuals' lives that may contribute to their recidivism and mental health conditions be implemented~~.~~ i~~I~~n order to reduce recidivism rates and improve individual and communal quality of life., ~~it is important to implement these programs.~~

Introduction

Commented [LR1]: Good overview!

Formerly incarcerated individuals are some of the most frequently stigmatized individuals in the United States. Depending on socioeconomic position, age, and health conditions, this stigmatization can create barriers that prevent successful rehabilitation. Equally, if not more vilified, are people living with mental health conditions. The proportion of youth with mental health conditions in detention centers is significantly higher than the proportion within the general public.[1] According to the National Center for Mental Health and Juvenile Justice (NCMHJJ), one in five youth experience a severe mental health disorder in their lifetime, while in the juvenile justice system about 70% of youth have at least one documented mental health condition.[2,3] These mental health conditions include mood, conduct, and anxiety disorders which, according NCMHJJ, can influence or lead to "disruptive or inappropriate behaviors". Many communities lack access to adequate mental health care and are often forced to utilize the juvenile justice system's mental health services.[3]

Commented [LR2]: Citation?

Many juvenile detention centers were built in the 1990s with the intent to address increasing crime rates amongst youth. These facilities grew to have a high prevalence of individuals with mental health disorders, often receiving inadequate care.[2,3] Juvenile offenders with mental health conditions are also at a higher risk for poor physical health, education, and occupational outcomes, which may further perpetuate high recidivism rates. The conditions of a high rate of recidivism coupled with a lack of proper care for juvenile offenders with mental health issues are pushing researchers and mental health professionals to reevaluate the effectiveness of mental health treatments for juvenile offenders. We expect to find that programs that address the underlying conditions influencing mental and behavioral difficulties will be most

effective in reducing recidivism. For example, programs that involve family members and account for and have the capacity to address the youth's social circumstances, such as educational, employment or even transportation needs, are most likely to be effective.[2,3]

Methods

Commented [LR3]: Good section!

To prepare this narrative review, the authors searched the databases PubMed, PsycINFO, and PsycARTICLES. We utilized various combinations of the search terms "juvenile," "mental health," "recidivism," "mental health service," and "adolescent." Articles were considered for inclusion if they referred to an adolescent population. No specific age criteria were used, since "juvenile" is not uniformly defined across jurisdictions. Furthermore, we included articles that described studies or evaluations attempting to assist juvenile offenders with mental health needs, but we did not require that the interventions have any specific characteristics. Additionally, we only evaluated studies that were conducted in the United States. We required that articles examined an outcome related to recidivism, such as number of rearrests, time until recidivism, or seriousness of reoffense. We focused on studies that evaluated the effectiveness of said programs, and included randomized control trials, quasi-experimental and observational studies.

Findings

Commented [LR4]: Good summary of what you found and how articles were selected.

We used the search terms *adolescent recidivism "mental health services"* in PubMed, which yielded 46 articles. We searched for "*mental health" AND juvenile AND recidivism* in PsycARTICLES and PsycINFO, obtaining 357 unique articles between the two databases. Some of these articles were duplicates with PubMed findings, and additional articles were identified through reviewing the reference sections in key articles.

In total, we identified 25 articles that fit our inclusion criteria. Three of these examined conventional mental health services, 6 examined juvenile mental health diversion initiatives, 2 examined wraparound programs, and 10 examined multisystemic therapies (MST). Four were categorized as 'other focus' including a meta-analysis on modified cognitive behavioral therapy (CBT), a meta-analysis on residential treatment, a study on modified CBT, and another on adventure therapy. In selecting articles to focus on, we chose to examine conventional approaches, multisystemic therapy, wraparound programs, and diversion programs. The number of articles and evidence provided on these interventions allowed the authors to comment on the apparent effectiveness of these interventions.

Discussion

Conventional Approach to Lowering Recidivism Rates. Conventional approaches to therapy generally focus on the individual and his or her mental state, without fully accounting for or involving their environment, social circumstances, living conditions, and relationships that influence their behaviors. In a study observing the time-to-recidivism following detention release among 8,363 Indiana juvenile offenders, researchers hypothesized that providing mental health services within detention facilities would decrease recidivism. While the program was successful at identifying youth with mental and behavioral health needs, those who received the services actually had higher recidivism rates, compared to those who did not. This was likely due to the fact that only those with the highest risk to recidivate received treatment because they had the most serious mental and behavioral health needs. Thus, the receipt of detention-based behavioral health services served as a proxy measure for the seriousness of the youth's mental and behavioral health challenges.[4]

Commented [LR5]: Interesting.

Another study investigated whether a new mental health screening program predicted reduced recidivism.[5] It attempted to increase the usage of conventional mental health services among juvenile offenders with mental health issues and in turn decrease recidivism. However, the program was unable to increase service usage and as such, any decreases in recidivism rates could not conclusively be attributed to the program's effect. In fact, recidivism was higher amongst the post-implementation cohort due to separate but simultaneous efforts by the local jurisdiction to reduce detention sentencing for youth who had committed less serious crimes. This caused a demographic shift within the detention center, such that post-implementation youth had a higher risk of recidivating, on average, compared to pre-implementation youth.[5] The research thus highlights the importance of taking a more holistic approach to understand the various dynamics that influence the relationship between mental health and juvenile recidivism.

Commented [LR6]: How determined?

Commented [LR7]: Good transition.

Multisystemic Approaches to Lowering Recidivism Rates. Multisystemic psychosocial interventions are intensive short-term treatments that address multiple factors of influence such as family dynamics and community environments in youth offenders with mental health conditions.[6,7] Multisystemic therapy (MST) has been demonstrated to reduce recidivism in chronic juvenile reoffenders.[8,9] The existing research on multisystemic approaches documents various recidivism-related outcomes such as the seriousness of the next offense,[10] time between offenses, the number of offenses or subsequent detentions,[11] and long term rearrest rate.[12] Multisystemic therapy can incorporate a variety of other programs, including transition planning. Transition planning from a juvenile incarceration facility generally consists of the youth being assigned a case manager prior to discharge who assists in connecting to various services, such as educational, health, and economic assistance. The case manager is meant to remain in contact

Commented [LR8]: Concise and thorough summary of the literature.

with the youth even after discharge. Within multisystemic therapy, transition planning has been shown to minimize recidivism among juvenile offenders with mental health conditions.[13]

An observational study of juvenile offenders with mental health conditions incarcerated for over six months found that only 20.5% of the youth received mental health services.[13] Receipt of detention-based mental health care in coordination with transition planning and post-release services, such as substance use counseling and financial assistance, successfully reduced recidivism amongst juveniles with mental health needs. Specifically, those who participated in the intervention had 0.09 times the odds of 12-month recidivism (95% CI .01-.77) compared to those who did not.[13]

A similar study looked at the Family Integrated Transitions (FIT) intervention program in Washington State~~,~~ that~~which~~ included multisystemic therapy, dialectical behavior therapy, which is therapy that aims to build self-worth, and to help understand how to deal with heightened emotions, and motivational enhancement, which uses motivational techniques to provide very rapid change that feels intrinsically motivated.[10] One hundred five adolescents who were released from incarceration were in the FIT program and 169 were in the conventional therapy comparison group. After 36 months in the program, they found a 30% decrease in felony recidivism in the FIT group. A great strength of this study is the 88% participation rate among eligible youth. Although this study has profound implications, there are some potential limitations in generalizability. Before scaling the program out, it would be important to understand any specific aspects of the local community landscape that were essential to the program's success in Washington State.[10]

Commented [LR9]: Yes!

The above studies describe important evidence supporting MST programs as an effective method to reduce recidivism. These studies were all non-experimental in design, leaving them

relatively susceptible to confounding. However, a randomized control trial in Missouri found similar results, observing recidivism rates among 176 juvenile offenders from 1983 to 1986,[14] followed by a 13.7 and 21.9 year follow up period.[12,15] This provides strong evidence for a causal effect of MST on reduced recidivism, when considered with the other evidence. In this study, investigators found that the multisystemic therapy was significantly better at reducing recidivism compared to conventional therapy, over both short and long term follow up periods. Over the 13.7 years of follow up observed, youth in the control group were 4.25 times as likely as youth in the treatment group to be rearrested and 2.57 times as likely to have a violent offense rearrest. Of those treated with conventional therapy, 81% recidivated, while only 50% of the MST group recidivated.[12] These trends remained the same during the 21.9 year follow up period. The felony recidivism rate was significantly lower in the MST group compared to those treated with conventional therapy (34.8% vs. 54.8%). Even the misdemeanor rate among the conventional therapy group was five times greater than the rate among the MST group.[15] This longitudinal study provides evidence that multisystemic therapy can have a long term beneficial outcome. One limitation is that results cannot be generalized to youth with psychosis or dementia, since those youth were excluded from participating.[12,14,15]

Commented [LR10]: Good analysis.

Wraparound Programs. Wraparound programs provide individualized care by incorporating the individual's family, community, health care providers, and any other service providers necessary to manage all sources of behavioral problems. Moreover, they have been shown to predict a delay in recidivism. Pullman et al. conducted a study in 2006 of a wraparound program to document the number of days between the initial offense and a re-offense for those who participated. This program, like other wraparound programs, was specifically tailored to

every individual participant. If, for example, there was a participant with a coexisting mental health condition, a substance abuse problem, and financial hardship, the program would connect the young person with substance abuse and mental health counseling services, as well as identify sources for financial assistance, to allow for the youth to enter back into society after their probation and to promote their well-being in doing so. Wraparound participants re-offended in an average of 344 days while the comparison group reoffended in an average of 104 days.[11] Though these results are promising, it is unknown whether the wraparound program would continue to perform better in the long term, such as by reducing total number or seriousness of rearrests.

Diversion Programs. Diversion programs are different from the approaches previously discussed because they seek to minimize an offender's exposure to the juvenile justice and detention systems, while the above programs assist youth who have already been incarcerated or adjudicated. Some researchers have concluded that the juvenile justice system is ill-equipped to handle the complexities of mental health conditions and that a single system to treat the entire population of offenders is ineffective at reducing recidivism rates.[16] Furthermore, exposure to the juvenile justice system has been shown to predict increased adult recidivism.[17] Diversion programs can prevent out-of-home placement, criminal charges and the establishment of a criminal record, providing tailored behavioral health treatment while keeping youth within their communities.

In Texas, evaluators compared the reoffense rate of participants in the Special Needs Diversionary Program with participants in other court-ordered programs and found that participation in the SND program significantly decreased re-offense rates.[16] This suggests that juvenile offenders with mental health issues benefit from receiving mental health services

outside of a detention center more than those who receive treatment as usual. The Enhanced Mental Health Services Initiative (EMHSI) implemented a diversion program for youth offenders in Texas who had been formally sentenced to probation or received deferred adjudication and had a clinical mental health diagnosis. The program used a waitlist comparison group with propensity score matching. Participants were approximately 23% less likely to be rearrested for a crime and 8% less likely for a violent crime within one year.[18] This suggests that diversion programs tailored for juvenile offenders with mental health conditions are effective at reducing recidivism.

Another evaluation by Behnken et al. analyzed a juvenile mental health court in Santa Clara, California, using a pre-post cohort design.[19] They studied 64 participants who had mental health conditions and were on probation, excluding individuals who had committed a violent crime, or had certain personality disorders. The mean number of arrests decreased from 2.98 before participation in the program to 1.14 after participation. This supports the possible role of diversion programs in successfully reducing recidivism for juveniles with mental health conditions. Although these results are promising, limitations include a small sample size and study methods lacking a concurrent comparison or control group.[19]

Commented [LR11]: Couldn't they also be diverted to Rx rather than detention?

Conclusions

Although the high prevalence of mental health disorders amongst juvenile offenders has been acknowledged and many detention centers offer basic mental health services, the development and evaluation of high quality and successful programs to reduce recidivism still lags. High recidivism rates are also associated with learning disabilities, unemployment, alcohol and substance abuse, and development of comorbidities, demonstrating the complexity of

treating affected individuals.[3] These factors inhibit members of the population from moving towards a stable and healthy lifestyle. Therefore, it is not surprising that our review found that programs that integrate individuals at risk of recidivating into community-centric models to address the issue were more successful. Multisystemic therapy and wraparound programs address the individual's social and structural environment and create individually tailored interventions. In contrast, conventional therapy is limited because it does not actively incorporate influential factors such as family, friends, access to services, community and socioeconomic position. Diversion programs take a preventative approach by minimizing contact with juvenile justice systems and detention. They often incorporate services similar to those found in MST and wraparound programs,[16] but they have the added capacity to remedy the over-representation of mentally ill youth in juvenile justice systems.

Commented [LR12]: Yes, an important insight.

In the long run, if adequate and successful mental health services are not provided it can lead to many issues that not only impact individuals but society as a whole. Communities feel the effect of the criminal activity and families suffer the trauma of involuntary separation when incarceration occurs. Developing community-based programs that support juvenile offenders with mental illnesses can serve to reduce recidivism rates and decrease trauma associated with incarceration for the individual, their family, and their community.

These findings highlight the need to continue work refining and evaluating effective interventions. Intervention research should focus on ensuring juvenile offenders receive appropriate mental and behavioral health care that addresses their life circumstances, supports them to live productively, and ultimately minimizes future encounters with the criminal justice system. Research should continue and focus on the community-based approaches, with special attention on diversion programs since this is a newer development. Additionally, it is not clear

how these programs will work in different settings since they rely heavily on the resources available in the individual's community. While additional research is needed, overall, it appears that programs such as multisystemic therapies and diversion programs hold promise to address long term gaps in the competence of the juvenile justice system's handling of offenders with mental health conditions.

Gender, Family, School, Incarceration and Work Place as Socially Structured Influences on Mental Health

City University of New York, Hunter School of Public Health, 2180 3rd Ave, New York, NY 10035, USA

Article history:
Submitted: 11, November 2015
Accepted: 16, December 2015

Abstract: The purpose of this literature review was to analyze the social structures that influence mental health in different populations and said populations' access to mental health services. Mental illnesses are prevalent in various populations and have provoked societal interventions on a large-scale. We reviewed research-based literature on how certain social structures influence the psychological, emotional, behavioral and social well-being of individuals. The five social structures examined here are gender, family, schools, mass incarceration and occupation.

Methods: Literature was gathered using the Boolean coding system & MeSH Terms. Criteria used for inclusion were that the papers identified a social structure of interest and examined its effect on a mental health outcome. Some examples of mental health outcomes searched were depression, anxiety, PTSD, and schizophrenia~~, etc~~. We excluded studies that were not relevant to our research due to confounding factors, articles older than 15 years to date or if the mental health outcome was not a primary effect of the social structure.

Results: The literature shows that social structures can contribute significantly to mental health outcomes. The lack of organized institutional supports or the inability or unwillingness of individuals to take advantage of such services can leave individuals vulnerable to a variety of negative mental health outcomes.

Introduction

Social structures deeply affect the means by which a society is governed both on an institutional and individual level. They are composed of social constructs that affect overall social norms and behaviors and can have beneficial or detrimental effect on individual health outcomes (Figure 1)[1]. For the purpose of this review, we define mental health outcome as the status of an individual's mental health that has been self or professionally diagnosed. The social structures examined in this review are gender, family, schools, mass incarceration and employment, each of which have been shown to have a profound effect on the mental health of individuals.

Gender as a social construct is a social structure that is deeply ingrained in cultural ideologies affecting equality and social norms. The family structure is a fundamental component in overall development and well-being of children and can form part of the foundation for social process. Similarly, the educational structure is an institution that significantly influences childhood

Figure 1 Contributing factors to mental health and well-being

health outcomes. Mass incarceration can have overall deleterious effects on the health of individuals, encompassing those who are both directly and indirectly involved. Finally, occupational environments and the physical and

Commented [LR4]: Good overview of your topic.

emotional toll placed on individuals during their daily work are shown to have direct effects on mental health. The methods by which each of these individual social structures affect mental health and well-being is examined, with the full understanding of the many other contributing factors to mental health and well-being not explored here.

Methods

Literature was gathered using the Boolean coding system & MeSH Terms. The websites used to identify this literature were PubMed, Google Scholar, SocIndex, and PsychInfo databases. Queries were gathered from September 2015 to December 2015. Literature was analyzed up to the present to account for the most current data on mental health issues and disorders. We restricted our review to studies that focused on specific social structures and how they target a variety of populations. Keywords and terms used in our search include gender, prison, families, schools, depression, anxiety, mental, PTSD, schizophrenia, psychiatric, stress, work, emotional, psychological, social.

Gender

Gender is embedded deeply in social structure because it operates not only within social processes at the individual level, but across institutional dimensions of society. Gender affects social behaviors and expectations which may define opportunities and restraints.[2,3] A gendered social structure may explain gender inequalities in health. Research suggests that the impact of gender on mental health usually stems from societal expectations of the various positions and roles that are either assigned or expected from men and women in the home, work force or in social groups.[4–6] The very definition of gender has evolved; many individuals do not identify with the traditional gender groups and may, therefore, face different mental health impacts.

Effects of gender contribute to whether individuals with diagnosed illnesses seek or decline to seek treatment. We see disproportionate effects on mental health differences based on the division of labor by gender. For example, gender differences and work related stresses such as socio-sexual behavior in the workplace, masculine expectations, etc[3–5] contribute to differences in prevalence of mental illness. In the home, women tend to experience more housework-related stress, which is often exacerbated by having a paying job outside of the home or when men do not share the housework load.[6] Interpersonal violence in the home often disproportionately affects women and consequently their incidences of mental illness.[7] Traditionally, men are less likely to report mental health problems than women and therefore receive less treatment for any existing conditions. Women are twice as likely as men to be treated for depression over their lifetime, even when they exhibit the same symptoms[8,9] but men are five times more likely to be diagnosed with anti-social personality disorder.[10] Ideas about masculinity and the stigma of mental health are among the greater contributing factors for low reports of mental health among men.[10, 11] One study among transgender adults showed almost a third of the participants took prescription drugs for nonmedical reasons linked to emotional distress and this was significantly associated with psychiatric symptoms.[13] Similar studies have found that poor mental health in transgender adults have resulted in poor physical health as many are fearful of seeking health services and that the greatest risk factors for poor mental health stemmed from victimization and stigma.[14,15] Another study on transgender youth recognized that they are also often at risk for poor mental health, especially because of rejection and marginalization. Family support played an important role as there were fewer depressive

Commented [LR5]: Well done. Missing # articles selected.

Commented [LR6]: Well done!

symptoms in transgender youth who had more parental support.[16] It is clear that gender matters in mental health outcomes and any efforts towards prevention and treatment cannot be gender neutral because there are certain risks that are gender specific.

Family Structures

Family structures are an influential component in the social processes and well-being of a child, his/her parents and for individuals within society. The composition of a family structure consists of residential and biological components, including whether parents and children are related by blood or marriage.[17] The influential component in social processes linked to family structures is the support system, which is beneficial between parents and a child within families.

Research suggests that the composition of a child's family origin influences mental health symptoms.[18] As children grow up, they may experience various family structures, which may appear "normal" to the child until they interact with other individuals outside of their family structure. The two common types of family structures are traditional (two parent) families and non-traditional (single parent and blended) families.

Over the past few years, the structures of families have become diverse and complex, with an increase in the pattern of single parent and blended families. These changes appear to be influenced by social factors such as socioeconomic status (SES), positive and negative interactions and stress. The sudden transition of family structures can have a profound impact on the well-being of individuals within a family, especially on children's experiences and life trajectories.[19]

The prevalence of traditional families has decreased from 85% in the 1970s[17] to 60% in 2009.[20] Retrospectively, data has shown that children are generally physically and mentally healthier in traditional families than non-traditional families. This data can be interpreted differently if measurements for race were included.

Family transitions seem to have a great impact on the mental health well-being of children in families. Research has shown that there has been a decline in marriages and increase in divorce rates. These transitions such as death, divorce, remarriage and separation can cause some adverse effects in the well-being of a child. These marital transitions of divorce or separation seem to be linked to stress factors that are experienced by the parents. During these times, there may be an increase of internalizing and externalizing problems by the children in these families, which can be a result of lack of social support and economic instability.

Schools

Schools influence the overall mental health of an individual and especially of young people. In the United States, students spend a large portion of their day in the school setting. From interacting with other students to interacting with the teachers, schools play a large role in the overall development of a student's self-esteem and character traits. Mental health is becoming more prevalent in the agenda for schools, as administrators are becoming more aware of the linkage between providing social support to students who are exhibiting behavioral problems or not succeeding academically. These students could be dealing with issues at home that affect their ability to focus in the classroom.

The need for mental health support in school settings is especially significant in middle and high schools where young people experience significant pressures from teachers and peers. In fact, the onset of most mental illness in adults can be traced to childhood and adolescence.[21]. The Mental Health in Schools Act of 2015 designates a requirement for schools to provide comprehensive

Commented [LR9]: Unclear. How so?

Commented [LR7]: Well done!

Commented [LR10]: Time period?

Commented [LR11]: Well done!

Commented [LR8]: Given your previous discussion of gender, might have been good to include LGBTQ families and studies indicating the mental health implications. To my knowledge, studies have indicated no differences than in other families, but would be worth including the literature on this.

mental health programs for children who deal with trauma and violence. A US study in an urban public school with 13 and 15 year old youth from economically disadvantaged households found that the relationship between mental health and academics was statistically significant; in fact, teacher support and school attachment were positively related to academic motivation[22]. When students feel emotionally supported by the school staff, they are more likely to stay motivated to complete their academic tasks. For schools where there is a lack of psychological or emotional support, school health centers have been created as hubs for connecting students to the services they need to cope with any struggles they are going through.

Many mental health clinics are developing partnerships with their local departments of education to tackle the mental health stigma of youth. As stated on the DOE website, there are over 200 school based mental health programs in clinics and offices throughout NYC. In order for schools to fully support a student's well-being, they have to be connected to additional resources, as not all schools have a school psychologist or a mental health counselor. Social workers, guidance counselors and attendance counselors are staffed at schools, but lack the full skills and training to target children with diagnosed mental problems such as depression or anxiety. As part of an initiative to understand adolescents' access to care and their mental health outcomes, mental health outcomes were measured in some school health centers in Alameda County, California. In the data gathered, school health centers were used by almost one third of students as a source for counseling.[23] Students in the study noted that they utilized the school health center because of confidentiality, free services, convenience and youth-friendly staff. As more schools see the need for these services for children, more youth will succeed in their personal lives and learn the skills needed to deal with life's problems. Because young people are uniquely at risk for developing mental illness, school administrations need to continue to ensure that students have the tools they need to care for themselves, especially given the challenges of youth accessing therapy or other support programs outside of school.

Mass Incarceration

The United States comprises 4.4% of the world's population but accounts for 22% of all its prisoners.[24] The prison system, therefore, is a significant social structure that, besides having political as well as economic repercussions, also significantly affects health.[25] The mental health of the imprisoned population is particularly vulnerable and these effects also extend into the communities from which the imprisoned are drawn.[26]

One study examines the collateral mental health effects in neighborhoods with a high prevalence of incarcerated individuals. Results show that there is a higher risk of psychiatric morbidity, specifically major depressive disorder and generalized anxiety disorder, among residents living in neighborhoods with higher prison admission rates.[27]

Within prisons though, because of policies such as the criminalization of substance abuse together with deinstitutionalization, many mentally ill individuals are diverted away from early treatment and are instead directed toward early punishment. The co-occurrence of severe mental illness and a history of substance abuse and prior incarceration were predictors for future imprisonment.[28] Of individuals with severe mental disorders, such as schizophrenia or other schizo-affective disorders, 70% also had substance abuse disorders at the time of imprisonment even though the majority were non-violent.[29]

The war on drugs, which disproportionately affects ethnic/racial minorities,

Commented [LR12]: Very well done!

is known to be discriminatory, consequently leading to inequitable treatment by law enforcement and the courts.[30] Moreover, it has previously been shown that the stigma or humiliation of racial profiling leads to psychological distress.[30]

A comprehensive study was conducted of over 45,000 first time NYC jail admissions between 2010 and 2013. A total of 14.8% were found to exhibit some kind of mental disorder upon intake. These individuals who were mentally ill upon entering into the prison system had longer jail stays, greater susceptibility to injury and higher rates of placement in solitary confinement.[25] Moreover, the study found that an adverse mental health diagnosis may have an association with placement in solitary confinement; 65% of all prisoners who were actually placed into single housing units during their stay were diagnosed with a mental health condition within 10 days before or after placement in solitary confinement and yet most, 71.1%, of the mentally ill prison population was diagnosed within the first 7 days of admission. This means that based on these findings, poor mental health may have developed during prison or as a result of confinement.[25] A separate analysis of the same population also found a significantly increased incidence of self-harm, a symptom of mental illness, in the segregated population.[31]

Disparities were also prevalent in the assessment and treatment of these mentally ill individuals within the NYC jails. Non-Hispanic black and nonwhite Hispanic males were more likely to elicit a punishment response rather than a treatment response; only 8.8% of whites, compared with 38.8% of blacks and 26.0% of Hispanics were ever placed in solitary confinement.[32]

So apparent are the adverse psychological effects of segregation that one study identified a set of specific psychopathological symptoms associated with solitary confinement, referred to as confinement in single housing units (SHU) in the study, and termed them together as a clinical diagnosis called SHU syndrome.[33]

However, some cross-sectional studies, did not find significantly different psychological effects of segregated individuals compared with their non-segregated counterparts. It is noted though, that the studies examined short term segregation and did not account for the inmates baseline psychological state before confinement.[34]

Many jails and prisons lack adequate staff or are afflicted with budgetary constraints which impede the provision of treatment of mentally ill prisoners as well as the implementation of measures to prevent adverse mental health outcomes among the population.[35] Without the resources to provide sufficient mental health care and proper staff training in order to care for the safety of the imprisoned, the detrimental effects of the prison system on mental health are apparent and must be addressed.

Workplace

Work and occupation also have a profound effect on an individual's psychological and physical state. The stressors of a job and the work-reward balance can impact an individual's physical and emotional well-being in both positive and negative ways. Some workplace environments are especially supportive for their workers resulting in lower prevalence of mental illness. Certain professions also attract certain personality types, thus skewing data for the prevalence of mental illness between different occupations.[36] Moreover, stressors and risk-factors differ by occupation, by managerial support, size of the employer and a number of other variables. Research shows that psychological demands, low reward, emotional demands and job insecurity are predictive of major depressive disorder and/or generalized anxiety disorders.[37] Psychological demands on individuals in the workforce include whether there is sufficient time to complete the

Commented [LR13]: Well done!

work at hand, the volume of work, and whether there are conflicting demands placed on the worker.[36] Workforce situations where there is high effort and low reward can cause those with a high-need for control to respond negatively, becoming more stressed and disease-prone than those who have less need for control.[36]

Studies examining mental health in the workforce have found direct relationships between profession and well-being. Risk factors for depression involve workplace situations that take away employees' autonomy – especially when the occupation involves 'caring' for others as part of the work role, and particularly where there is dependence on others for their livelihood. One example would be healthcare workers, who studies show have higher rates of psychological ill health compared to non-healthcare workers for reasons consistent with the demand-control model.[38] Moreover, the physical demands involved in the healthcare profession (e.g. patient lifting, positioning and transferring) conducted by nurses and other individuals in the healthcare direct service sector have been associated with work-related musculoskeletal problems and in turn, a negative effect on the overall health and well-being of employees.[39]

In addition, for those already experiencing psychological distress, many workplaces offer inadequate supports for those who need it, thus exacerbating their symptoms. In one study, over 75% of subjects interviewed identified management methods as contributory factors in their anxiety and depression and felt that unmanageable workloads had contributed to the development of their mental health problems.[40] When managers were approached, they were often dismissive because no other employees had indicated that they were having problems. Employees were found to be reluctant to disclose their condition to colleagues due to the stigma attached to mental illness.[40]

Workplace and occupational stressors can also be unique to the individual and workplace setting. For example, there have been shown to be increasing levels of violence in occupational settings usually considered to be "safe" environments (e.g., high school teachers and hospital staff, especially where there is exposure to intoxicated patients). These professions are especially prone to high stress because of the inability of individuals to express frustration when they first experience it. Several studies have pointed to the relationship between use of emotion-suppressing defenses and later mental health problems.[41]

No matter the profession, it has been shown that the social structure of the workplace can have a strong effect on the mental health and well-being of employees.

Discussion & Conclusions

None of the above social structures exist in a vacuum; and every individual contributes to and is encompassed by societal structures. More studies are needed to examine the causes and treatment opportunities for mental illness; however, the ability to implement mental health interventions and create or improve support systems in pre-existing structures (schools, prisons, workplaces) and to offer programs that are specialized for social determinants (gender, adverse family structures) can work together to improve the health and well-being for individuals at risk for developing mental disorders.

The research on gender specific mental health interventions suggest that there are often other variables in play that will determine how successful the intervention is. A conceptual framework may be key in addressing gender specific mental health issues, one that takes into account the individual, environment and system-based issues. For example, women are more likely to face more barriers to treatment of mental illnesses and therefore are less likely to seek

Commented [LR14]: Good catch, [redacted] Actually, the term is fine used here since it is assumed that only adverse family structures would require intervention. Nonetheless, it was not mentioned in the FS section so might require some explanation. :)

Commented [15]: J[redacted]e - what should this change to?

treatment. Interventions aimed at improving the mental health of women should consider the interface of primary care and improve the ease of access for women.[42] It appears that with men, age is a significant determinant of how and when a man may seek mental health treatment or take advantage of services aimed at promoting better mental health.[43] Interventions for men therefore should focus on age sub groups and comprise activities appropriate to age groups.[43] The National Alliance on Mental Illness recognizes that LGBTQ individuals are often hesitant about seeking medical care, particularly mental health services. Mental health interventions aimed at LGBTQ individuals should be ministered by culturally competent and knowledgeable providers who understand the specific issues that LGBTQ individuals face.

Family therapy or counseling is a proposed treatment that is deemed effective in alleviating stress and depression symptoms that may be pressuring the children and parental figures within a family. The counseling would also create space to address the internalizing and externalizing problems that have occurred for the children, as well as adults. There have been a few studies on parenting intervention programs addressing mental health problems and parental discipline. One intervention, was a Multilevel Parenting Program that was geared towards individual families but included the general public population in South Carolina. The program consisted of 5 levels , with components ranging from mass media information to mini trainings to 12-hour long sessions. Each level covered key concepts relating to parenting such as learning to deal with your child's aggressive behavior. A randomized control trial with the mass media level component was conducted in 18 counties in South Carolina. Results from this study were significant in showing the positive effects of parenting intervention of the entire population.[44]

Adolescents are especially at risk for mental health disorders. School and academic performance can be indicators of a young person's mental well-being. Students who are provided mental health therapy & treatment are more likely to succeed academically. The correlation between doing well academically and obtaining financial stability in the future are correlated in the United States, but students can only obtain these goals by feeling happy and receiving emotional support.

To address the wide-scale issues of mental illness in young people and adolescents, school-based interventions can have a profound effect. On site clinical staff at schools must continue to be available to support the mental health of students. Psychologists, licensed medical social workers, psychiatrists, and clinical social workers all play a role in providing students with the treatment necessary to overcome emotional and mental health issues.

Based on the available data, the mentally ill are largely incarcerated for a number of reasons; the most apparent being the insufficient and inadequate mental health treatment outside of the prison system (due to budgetary cuts or lack of access, etc.). A second important cause is the war on drugs; many mentally ill individuals, mostly non-violent with few resources are imprisoned because of the criminalization of drug use. For those individuals who are already incarcerated, imprisonment itself may exacerbate the symptoms of those with mental illness or cause psychopathologies in those with no previous mental disorders.

However some incarceration systems are affecting change. The results of the large scale 2013 study of NYC jails has prompted a movement towards the ban of solitary confinement among any individuals diagnosed with a mental illness; prisoners instead would be diverted to a more clinical setting for treatment. Furthermore, measures to eliminate long term solitary confinement have also begun to take effect.

Still many of the factors noted above must be addressed in order to effect change towards better mental health throughout the incarcerated

Formatted: Indent: First line: 0.5"

and other interconnected populations. These interventions include improvement of mental health treatment within and outside the prison system, effecting positive change of health and federal policy (such as elimination of the war on drugs), as well as improve the conditions within jails and prisons throughout the US.

Because of the prevalence of workplace mental health risks, the working environment offers a unique opportunity for interventions; working conditions are a modifiable risk factor.[45] A 2014 study identified a three-pronged approach[45] for workplace interventions:

1) Protect mental health by reducing work–related risk factors;
2) Promote mental health by developing the positive aspects of work as well as worker strengths and positive capacities; and
3) Address mental health problems among working people regardless of cause.

Adapting these integrated interventions to improve working conditions in any workplace setting will aim to improve or mitigate mental health comes. Proven therapeutic intervention methods in the workplace focus on identifying and recognizing strengths instead of trying to identify and rectify what is "wrong" in an organization, group, or individual.[45] The support of organizations and human resources in implementing mental health intervention strategies will help improve workplace morale and workplace productivity, thus lowering the risk for adverse mental health outcomes.

Studies reviewing the prevalence of mental illnesses within different social structures can only point to trends, thus necessitating the need for more examination. However, through examining the effects of family structure, schools, mass incarceration and workplace setting on mental health, it is evident that environmental situations contribute to the development or exacerbation of mental illness. Interventions must be specialized, specific, and replicable in order to enact long-term positive change.

Studies reviewing the prevalence of mental illnesses within different social structures can only point to trends, thus necessitating the need for more examination. However, through examining the effects of family structure, schools, mass incarceration and workplace setting on mental health, it is evident that environmental situations contribute to the development or exacerbation of mental illness. The Social and Economic Factors That Influence Adolescent Obesity

[redacted]

Brooklyn College

Abstract

Obesity is a global epidemic impacting people of all races and backgrounds. It is not simply an issue of adulthood, more and more young people are affected as well. The most recent data shows that among youth in the United States, nearly 20% are obese. Within that 20%, youth with low socioeconomic status [SES] are at twice as likely to become obese than their wealthier peers. In order to solve the obesity crisis, we must first identify the causes of obesity for this demographic. For the sake of our research, we will define adolescent as those between the age of 12 and 18. The purpose of this paper is to identify the major risk factors that contribute to obesity in urban, poor adolescents. Through a systematic review of literature, several key components that influence obesity were identified. These factors include the child's physical location, access their location affords them with regards to healthy food availability and greenspace, safety of their neighborhood, home and family dynamics, educational opportunities, and views of their community and family on health. These issues are rarely found in a vacuum though, and sadly many urban adolescents experience most or all of them at the same time, creating barriers to their health and wellbeing.

The Social and Economic Factors That Influence Adolescent Obesity

Obesity is a concern of epidemic proportion. It is estimated that at least one third of American adults are obese, defined as having a BMI of 30 or greater and, sadly, this number is climbing based on the most recent data published in November 2015 by the NCHS (Ogden, Carroll, Fryar, & Flegal, 2015; Centers for Disease Control and Prevention [CDC], 2015). This health crisis spares no demographic, affecting those of all ages and socioeconomic backgrounds. Adolescents, defined for ~~the sake of~~ this paper as youth between the ages of 12 and 18, are particularly vulnerable (Merriam-Webster, 2015). The excess weight of these individuals has been shown to have lasting, detrimental effects. Those who are obese as adolescents are at significantly higher risk of becoming obese adults and therefore experiencing all of the horrible sequelae that accompany excess weight. Before we can address the treatment for this dangerous problem, we must first identify the risk factors and causes of the weight gain for this demographic. Public health clinicians, medical professionals and social scientists have toiled to ascertain the root of the issue and have discovered several persistent, key factors that impact adolescent obesity. They found that adolescent obesity is strongly influenced by a broad range of social and economic factors including location, safety, family dynamics, education and culture. The cornerstone issue, from which many of the others are derived, is socioeconomic status. Obesity rates in youth who grow up in low income families are double those with higher socioeconomic backgrounds (Babey, Hastert, Wolstein, & Diamant, 2010). ~~With this in mind,~~ we will delve into the factors that increase the risk of adolescent obesity with a specific focus on urban, lower income populations.

Adolescent obesity has been long studied and the latest numbers posted by the CDC are astounding. They note 20.5% of youths in America between the ages of 12 and 19 are obese.

(CDC, 2015) That is one in five. This places these young people at a dramatically higher risk of comorbid disease and other damaging complications. Among those who are obese, the CDC (2015) notes that, "70% of obese youth had at least one risk factor for cardiovascular disease." They also either have or are likely to develop pre-diabetes, diabetes, high blood pressure, sleep apnea, arthritis and depression. This translates into not only a serious financial and economic burden on the nation, but also affects the child and their family on a personal, lasting level. As previously mentioned, it is proven that children in poverty are at statistical disadvantage in this battle. This was extrapolated in a study by Bethell, et al., where their data revealed, "44.8 percent of children in poverty were identified as being overweight or obese, compared to 22.2 percent of children living in households with incomes above 400 percent of poverty" (Bethell, Simpson, Stumbo, Carle, & Gombojav, 2010). For adolescents who already experience economic and social hardship, obesity and concurrent illness only exacerbates their predicament. In order to address this daunting problem, it is important to examine what causes adolescent obesity in the first place.

One of the many factors that contribute to adolescent obesity is the location within which the young adult is raised. Included in location is the type of neighborhood, proximity to grocery stores and fresh produce, prevalence of fast food establishments, and access to open green spaces and parks. Neighborhoods with a prevalence of low income members tend to struggle to a much greater degree with these issues than their more affluent counterparts. This sets up the children raised in this environment to develop obesity and other health-related concerns.

Physical location, as noted by Monnat and Pickett (2015), can determine the health of those who live in that community. In their research, they found that adolescents who grow up in either extremely rural or inner-city, urban settings have statistically poorer health outcomes and

higher obesity rates than their suburban counterparts. This is because both rural and inner city areas struggle from lack of access to resources and are generally more impoverished. (Monnat, & Pickett, 2015) Those of lower income cannot afford the luxuries provided to suburban, middle-upper class Americans. They also lack easy access to those resources for similar reasons. There is no incentive for organic or healthy establishments to put down roots in these areas when no one within that community can afford it.

With income in mind, children within these lower income areas are further at risk for obesity due to the type of restaurants that propagate their neighborhoods. The establishments that develop generally provide cheap, fast food that the community can afford. Carpenter and Davis (2009) have noted that these fast food restaurants often set up shop near local schools to increase their revenue as well. This structuring, naturally, impacts obesity levels of the students in these neighborhoods. Through their studies, they confirmed that students who are black or low income in urban settings, near these fast food restaurants, have measurably higher rates of obesity than their wealthier counterparts (Carpenter & Davis, 2009).

While poor youth have a greater quantity of fast food consumption, they conversely have a decrease in the consumption of healthy food, specifically fresh produce. This is due to lack of reasonable proximity to grocery stores with affordably priced, nutritious food options. The accessible meals, with wallet-friendly prices, come from places such as McDonalds, Burger King, and KFC, as well as their local bodega. The bodegas are corner, convenience stores that propagate inner city neighborhoods. They sell a variety of goods, but generally lack any healthy, quality snack or meal offerings. They often further exacerbate the poor eating patterns of adolescents by providing cheap, highly processed foods and sugary soft drinks. Soda consumption patterns by teens are elevated across the entire demographic, but are particularly

elevated for those "living in low income households, single parent homes and homes which the female head (or male head if no female head) is a high school graduate," (Rao et al., 2015). Through their study they saw that the variance in consumption quantity was due, in part, to unlimited access to these beverages through the bodegas. The study also found that beginning with unhealthy food and drink choices, there is a cascade of unhealthy behaviors including lack of exercise, frequent fast food consumption, sugary snack purchases and cigarette smoking. (Rao et al., 2015) Naturally, the cascade terminates with elevated BMI for these students and the associated comorbidities.

Finally, in regards to location, lack of accessibility to green spaces and parks are a risk factor for adolescent obesity. Rates of obesity are 1.21 times higher for adolescents who live in neighborhoods without easy access to a park or recreation center (Bethell et al., 2010). Neighborhoods with safe, open, green spaces encourage activity and health among their inhabitants. Conversely communities without these resources prevent teens from participating in regular physical activity due to a lack of space. As an alternative to exercise, these students tend to spend their time participating in sedentary activities such as of video games, TV viewing and computer usage. Although not conscious or intentional, the lack of greenspace creates the perfect environment for adolescent weight gain and obesity.

Safety is another vital component of teen health and has been shown to affect their obesity rates. Like green space, the availability of sidewalks and presence or perceived presence of crime directly influence the physical activity level of teens. Students will not participate in outdoor activities if they do not feel safe or are encouraged to do so, once again promoting a sedentary lifestyle and concomitant unhealthy behavior.

Safe sidewalks encourage activity by providing a safe space for teens and their families to walk both for exercise and recreation purposes as well as a means to get to school, the grocery store and other neighborhood destinations. The ease and security with which one can move about their neighborhood has been studied and is translated into what is defined as 'walkability.' Walkability is then combined with other factors such as neighborhood structure, accessibility to green space and overall safety generating a 'walk score,' (Bethell, et al. 2010) Higher walk scores indicate that a neighborhood is well built and safe for those living there. As expressed by Xu and Wang (2015), through analysis of the national 2012 Behavioral Risk Factor Surveillance System's data, "Better street connectivity and walk score lowers obesity risk." Alternatively, lower walk scores correlate with an environment that is not safe to traverse, once again promoting a sedentary lifestyle and subsequent elevation in adolescent obesity statistics.

Another aspect of safety within a neighborhood is its crime rate. Both perceived and actual crime affect adolescents of both genders, but with slightly different behavioral outcomes. This was documented in an article published by Forsyth et al.,

> BMI was positively associated with perceived crime among girls and boys and with reported crime in girls. For girls, there was an association between higher perceived crime and increased screen time; for boys, between higher reported property crime and reduced physical activity. Perceived crime was associated with reported crime, both property and personal, in both genders. (Forsyth, Wall, Choo, Larson, Van Riper, & Neumark-Sztainer, 2015)

This pattern is likely started much younger than one's teen years through parental projections and perceptions of safety. When studying preteens it was discovered that there is, "a higher level of

parental anxiety about neighborhood safety and a lower level of children's physical activity in a poor inner city community as compared with a middle-class suburban community." (Brand, Etelson, & Weir, 2006) Children can sense and internalize fear from their parent or guardian even if it is not overtly expressed. This fear will then become part the framework from which they operate and make decisions. If the fear of unsafe neighborhood conditions is present within their parents, students likely carry it with them as well. Those who feel unsafe will likely not spend much time outside or participating in recreational activities in their community. It once again reinforces sedentary activities and weight gain.

Since all of these factors cannot always be studied well on a single variable level, there have been studies performed to examine a number of these risk factors in conjunction. The collective components of location, environment and safety in relation to adolescent BMI were compiled and published in 2012. American Journal of Preventive Medicine presented this study which commented specifically that, "Among boys living in Cluster 6, "city commercial, low SES and safety," 29.8% were obese, which was significantly higher than the 21.3% of obese boys living in Cluster 2, city residential with parks, nearby convenience food, high SES and transit." (Wall et al., 2012). They noted similar results among the girls in the study. It is important to keep in mind that when looking at adolescent obesity all of these different factors ~~interplay~~ interact and cannot be totally isolated.

mention the authors, not the journal.

Just as adolescents are influenced by the environment outside, they are also shaped by their home environment and those who raise them. The home they grow up in is a large determinant of their health and wellbeing, including their BMI. Studies have shown that child and adolescent obesity rates are elevated for those whose parent have atypical work hours or multiple jobs, have a low income or other financial stressors, lack strong, meaningful

relationships with their parents or guardians and or those who were raised in an unsafe home environment. Reference

Adolescents whose parents work multiple jobs or have non-traditional work hours often have a higher BMI than their peers whose parents work typical nine to five jobs. According to research done by Han and Miller (2008), looking at adolescents 13 and 14 years of age, those who had parents working multiple jobs or swing shifts had significantly higher BMIs than their peers. The reason for this variation, they speculated, was due to a disruption of the "work-family balance" (Han & Miller, 2008). They found that this irregular household schedule encouraged the consumption of fast food or easy, unhealthy meals accompanied with a lack of physical activity on the part of the parent and the child (Han & Miller, 2008). Parents who work multiple jobs, long or atypical hours do not have the time or energy to devote to cooking nutritious food or performing regular exercise. These practices directly affect the children by modeling and habituating these unhealthy patterns long-term. Sadly, the parents that are employed by these irregular jobs are usually those in low income neighborhoods and are poorly compensated for their time and hard work. This perpetuates the cycle of poverty and adds yet another factor into the obesity risk equation for their children. It also sets them up to remain obese into their adult years. This was demonstrated in the Wisconsin Longitudinal Study. In the study, they followed adolescents over 36 years and found those with low socioeconomic status in their teens had a higher prevalence of obesity, both at that present time and into adulthood, than their peers with better financial means (Pudrovska, Reither, Logan & Sherman-Wilkins, 2014).

Just as children whose parents work long hours are more likely to become obese, those whose parents do not work are similarly at risk. The lack of family income, commonly coupled with reliance on government assistance for survival, is a hefty source of stress to everyone in the

household. Chronic stress is known to be associated with the increased risk of obesity as well as the development of comorbid disease processes. This correlation with regards to adolescent obesity was documented in the Social Science Research Journal using a longitudinal study of 12-17 year olds and the effect of numerous stressors on their weight. They concluded that, "Among older children, the associations between mental and physical health problems and child weight status, and financial strain and child weight status were statistically significant." (Garasky, Stewart, Gundersen, Lohman & Eisenmann, 2009) They suggested several key links between stress and obesity including the likelihood that these children use food as a means to cope with their emotions, an increase in cortisol levels due to chronic stress and a lack of physical activity encouraged by the other concurrent factors related to low socioeconomic status.

Although teens tend to feel 'too cool' for their parents, studies have shown that parental involvement in their lives, including regular family meals has a negative correlation with obesity. In a study performed by Chang and Halgunseth looking at parental involvement, family meals and adolescent obesity specifically within the Hispanic population they discovered that, "the combination of high levels of parental behavioral control and high frequency of family meals may protect against weight problems." (Chang & Halgunseth, 2014) They also note that, "Low parental control, on the other hand, may be associated with an unstructured home environment in the Hispanic culture. In a less structured family environment, youth may be less likely to self-regulate their food in-take or eat healthy food." (Chang & Halgunseth, 2014) This was confirmed in a broader study of adolescents by Atkin et al. (2015) In their discussion, they hypothesized the reason for this correlation was because, "adolescents with good family relations or better quality friendships spend more time with their family or friends, and thus report less time in behaviors that may principally be performed alone, such as playing video games, doing

homework or reading." (Atkin et al., 2015). Thus, parents in underprivileged communities are encouraged to focus on cultivating relationships with their children and teens. This is not always possible though since, as discussed, parents in these neighborhoods tend to work long or irregular hours. Despite great parental intention, this physical disconnect can further exacerbate elevated adolescent weight.

Safety within the home is another factor that influences adolescent BMI. A study investigating nearly 6,000 adolescents, half of whom had substantiated CPS claims of abuse or neglect, was conducted to validate this association. Based on the results, it was concluded that, "Overall, obesity prevalence among CPS-investigated children (25%) was higher than among children in the general population (17%) in the National Health and Nutrition Examination Survey (NHANES) data," (Helton & Liechty, 2014) Just like the connection between adolescents who are exposed to chronic stress and elevated weight, abused children are more prone to weight gain and obesity as a response to stress and trauma. They also have elevated cortisol levels and are at higher risk of participating in binge eating as a way to cover the feelings of guilt, shame and fear that abuse, particularly sexual abuse, can substantiate. Parental neglect has similar emotions and outcomes among children and adolescents as well.

Another broad predictor of adolescent obesity is related to education. It begins with the education level of the parents or caregivers. Lack of parental education is directly associated with the problems addressed previously such as the location of neighborhood the child is raised in, access to nutritious food, family income, stressors and safety. The physical location of the home afforded by the family often dictates the school the child goes to as well. Sadly inner city, urban schools are notorious for subpar academia and a more challenging environment. The student's social abilities and experiences in addition to their personal academic abilities influence

food choices and therefore their weight. School experience also plays a sizable role in that child's weight and well-being. Additionally, the resources and offerings such as governmentally assisted feeding programs and the presence or absence of physical education influence a student's health. Ref.

Poverty and poor health can be a vicious cycle, and, unfortunately factors such as parental education level are outside the control of the student, but impact their weight. In a study conducted by the CDC, "Overall, the prevalence of obesity among children and adolescents whose adult head of household had completed college was approximately half that of prevalence among children whose adult head of household did not complete high school." (May, Freedman, Sherry, & Blanck, 2013) In a surprising study by Goodman et al., (2004) it was shown that parental education level is even more significant in predicting adolescent obesity than family income level. They feel that it may be because, "education's effect may relate more to differences in coping styles and other interpersonal skills, such as communication, whereas income's effect may be more strongly associated with material goods and services." (Goodman, Huang & Slap, 2004) Other, less significant reasons may be the type of work and lifestyle the parent has resulting from their education level. Regardless, it appears that lower levels of parental education influence food choices, stress management and physical activity of their children resulting in a higher risk of them becoming obese.

On an individual level, the ability of a student to engage and do well in school predicts their risk of obesity. The success or failure of a child to be 'socially competent' at school, defined as "the set of skills and behaviors necessary for appropriate and positive social interaction," greatly impacts their weight. (Jackson & Cunningham, 2015) This association was documented in a study published by the American Journal of Public Health, and it was

speculated this correlation is due to binge or stress eating and a lack of participation in interactive activities among students who do not engage well socially. They suggest that preteens who struggle with this gravitate toward isolated, sedentary activities such as watching TV, playing video games or reading, over physical activity with their peers. (Jackson & Cunningham, 2015)

Similar isolating behaviors, poor food choices and elevated weight have been seen in adolescents who have lower cognitive abilities and struggle academically in school. This correlation was documented in the International Journal of Obesity. (Liang, Matheson, Kaye, & Boutelle, 2013) Broadly, they found that there is an, "inverse relationship between obesity and academic achievement." (Liang et al., 2013) They go on to deconstruct the data through the compilation of 67 longitudinal research studies and conclude that,

> This review showed that there is stronger and more consistent evidence supporting a relationship between obesity and deficits in the areas of executive functioning (22 out of 30 studies), attention (7 out of 10 studies), visual-spatial skills (2 out of 2 studies), and motor skills (17 out of 20 studies). (Liang et al., 2013)

Within the subset of attention, they also document a strong correlation between ADHD behavior in adolescent males and obesity. (Liang et al., 2013) There is also data to suggest that there are neurological differences in brain signaling among the obese children they observed which might encourage their eating behavior and affect their feelings of satiety. (Liang et al., 2013) Finally, they note that depression also plays a role in both academic function and the perpetuation of obesity among students too. (Liang et al., 2013) Often obese children are bullied or ostracized which, in conjunction with likely other risk factors, sets them up for failure.

Another school-related obesity factor for adolescents can be found in the cafeteria. Dining options for students at school can dictate their health and weight. Schools that provide breakfast programs for children are not always afforded healthy options and they don't always meet the recommended nutrient requirements. This has been an area of scrutiny the past few years and improvements have been made, but there is still room to grow. Highly processed and fattening foods are cheaper staples than fruits and vegetables. In a study done by the Institute of Medicine in 2008 it was reported that,

> Experts examined data on the content of school lunches in the United States, its findings were stark. Children ate strikingly few fruits and vegetables, with little variety. Potatoes accounted for one third of vegetable consumption. Intake of refined grains was high. Almost 80% of children consumed more saturated fat than was recommended, and sodium intake was excessive in all age groups. Children ate more than 500 excess calories from solid fats and added sugars per day. (Baidal, & Taveras, 2014)

This can translate into significant weight gain for students and has contributed to the obesity epidemic in schools. After that study and others were published, the government passed the Healthy, Hunger-Free Kids Act of 2010 (Sjerven, 2014) as an attempt to combat the issue. The problem was that schools complained about the cost and burden this act inflicted so, in an effort to pacify the schools, Congress created waivers and workarounds for stipulations found in the Act. (USDA Food and Nutrition Service, 2015) They are still in effect today. Schools have come a long way in addressing this issue in attempt to quell the adolescent obesity epidemic, but there is still room for improvement. For many low income children, the meals provided by the school are their main source of nutrition. Without well rounded, healthy options the health and weight of those students ~~and teens~~ suffer.

The final aspect examined within the education system in regards to adolescent weight is the presence or absence of PE or other active extracurricular programming. Without these programs or structured activity times, students spend their days performing sedentary activities which contribute to their likelihood of obesity. As advocated for by the US Department of Health and Human Services (2015), it is important that students participate in at least sixty minutes of physical activity a day. Underserved and poor, urban schools often do not have the resources, space or time to provide these offerings to their students. The students from these urban, poor schools are further ostracized due to the inability of most of these families to supplement the lack of in-school exercise with, generally costly, extracurricular or private sports programs. As noted in regard to location, these neighborhoods can also be unsafe or lack the green space to affordably supplement PE. This, as seen before, will increase obesity statistics among the youth of that community.

The final broad area of focus is the impact of the personal and cultural views of a family and neighborhood on adolescent weight. Until they leave home, children and youth are expected to model and participate in the views and culture of those in authority over them. How their guardians and community understand weight, exercise, and health molds the child's view of themselves and their world. The promotion of healthy behavior can have a positive effect on the weight and health of youth, but the converse has an equally strong detrimental effect.

The cultural and family view of weight reflects directly on their child. Stereotypically, certain cultures favor their members to be a certain size or shape which is projected onto the children and teens of that culture. Similarly, family views of weight and how obesity is defined impacts the actions and habits of the child. In a study by Wills and Lawton (2014), parents were interviewed concerning their child's weight, how they viewed it, and if they felt the need to

intervene. Based on their responses she notes, "The views expressed were often grounded in parents' own experiences of weight issues; lay notions of heredity; a lack of knowledge and understanding of physiological changes which might be 'normal' during puberty; and, a desire to protect their teenager's health and emotional wellbeing." (Wills & Lawton, 2014). It was also noted that if parents were overweight or obese themselves, they were much less likely to say anything to their child about it or attempt to intervene. Similarly ~~in an article published in the Sociology of Health and Illness they~~ observed eating habits of adults and adolescents in the context of their surroundings and concluded that, "People's eating patterns form in relation to other people, alongside everyday activities that take place in family groups, work and school. Eating does involve isolated choice, but it is choice conditioned by the context in which it occurs." (Delormier, Frohlich & Potvin, 2009) Therefore, children who grow up in homes with poor eating habits, either by choice or due to lack of resources, tend to continue those patterns and are at much higher risk of obesity as adolescents and adults.

Similarly, the parental view of exercise and its value impacts the activity of their children. Based on a number of systematic reviews, it was shown that parents, particularly in low income demographics, may see the importance of exercise but do not have the time or energy to invest in it. "Many parents cited tiredness as a reason for their lack of motivation and commitment to encouraging their children to exercise and for not preparing 'healthy' meals. Tiredness was perceived to be due to the demands of paid work and childcare." (Pocock, Trivedi, Wills, Bunn & Magnusson, 2010) There were also expressed concerns by the parents in those studies in regards to safety. Parents in the low income neighborhoods often felt that it was unsafe for their children to be outside or walk to school which further discouraged student exercise. (Pocock et al., 2010) This created further discouragement on the part of the parent. There was

also a correlation between parental involvement in the life of their adolescent, not specifically related to exercise, and the teen's behavior regarding their health, diet, exercise and self-esteem. "The results of our study show that parents have a significant influence on adolescent physical activity. Family cohesion, parent-child communication and parental engagement were significant predictors of adolescents meeting recommended MVPA [moderate to vigorous physical activity per week] guidelines one year later;" (Ornelas, Perreira & Ayala, 2007) This relationship, although present among those of all SES can be more difficult to achieve in low income areas when parents work long days or irregular hours, or there is potential instability within the home. Without an emphasis on healthy behavior and relationship, these adolescents are once again at risk for obesity.

A final key influence on an adolescent's weight is the culture they are a part of. People of similar background, race and SES tend to settle in the same neighborhood. With them, they bring their cultural lens in regards to life and health, which frames the views of the community and its children. Often cultures have different views on beauty and weight which they project on those around them. For example, "Studies have documented that larger body size may be more positively viewed in the black community, and that among overweight women, blacks tend to report less body dissatisfaction than whites." (Dorsey, Eberhardt & Ogden, 2012) It has also been documented that, "Overall, misperception was more prevalent among racial/ethnic minorities, men, and men and women with lower education levels. Among the overweight and obese, non-Hispanic blacks and Mexican Americans were more likely to have a weight misperception than non-Hispanic whites" (Dorsey et al., 2012) Classically, inner city neighborhoods are populated with minority groups and low income black families. This sets up

the adolescent for failure once again in regards to their weight with the combination of a food desert and cultural misperception of what an appropriate or healthy weight is.

As seen through extensive research, there is a plethora of factors, particularly targeting urban, poor adolescents, that significantly increases their risk of obesity. These issues are intertwined and set disadvantaged youth up for failure from a health standpoint. These students are subject to living situations that are often unsafe, lack green spaces, do not have access to healthy food, and consciously or subconsciously expose them to high levels of stress. The natural outcome of any number of these factors is an increase in sedentary behaviors, often in front of a television or computer, and poor eating habits. This sadly has a domino effect, leading to serious health conditions that have lasting and deadly consequences. The US government and public health community have been working hard to identify and target risk factors for these students, but there is still much to be done. Transforming culture and closing the gap socioeconomically is daunting, but that should not hinder people from doing their best to affect even a small part of it. As with the classic starfish tale, saving even one child is a step toward a better future.

Stress and Health

We all have felt it at some point of our lives. We experience the pressure that comes with our daily lives' demands and sometimes we feel that we do not posses the necessary resources for coping. When we feel this way we try to find ways to stay clear headed and proceed with our day-to-day activities but not everybody is able to accomplish this. This overwhelming feeling or struggle to maintain our internal environment is called stress.[12] Stress is not completely harmful. Sometimes it is temporary or acute and may not impose any health burden, in the contrary, it might help our immune system.[34] Persistent stress or chronic stress, however, can be a threat to older or unhealthy individuals to the extent that it can serve as a mechanism for serious health issues.[23]

Research on stress and its effect on health are vast and have been carried out for decades. Investigators have found associations between stress and health outcomes, they have created scales to measure stress and have performed many experimental studies including laboratory animal studies to examine this issue. These studies have contributed to the documentation and clarification of differences among social groups in stress exposure, health, and well being.[3] The majority of the literature indicates that differences in health begin early in life and accumulate over the years.[4] This public health brief provides an overview of some of the available information on stress and health outcomes. Also, it looks at how exposure to stress is unequally distributed in the general population, that is, we will look at the role stress plays in health inequality.

STRESS AND HEALTH OUTCOMES

Being exposed to stress and stressful environments account for different physical and mental health outcomes and these have been examined in several studies:

- Observational and experimental studies have found an association between stress and cardiovascular disease.[56] Using stress as the exposure variable, studies have found as outcome increases in blood pressure, changes in cardiac rhythm and changes in the viscosity of the participant's blood.[5]
- Among men and women, work stress was reported to be a predictor of incident coronary heart disease (CHD) and hypertension.[16] For women, however, it was found that marital stress was a better predictor than work stress for CHD outcomes.[1]

- There are different types of stress exposure and one that has been studied is discrimination stress. Discrimination refers to being treated unfair by others because of one's race, gender, social class or sexual orientation.[3] In a systematic review, investigators found a significant association between perceived discrimination and cardiovascular disease risk factors.[5] In general, it was found that discrimination stress is associated with self- reported poor health, chronic health conditions, depression among other health issues.
- Men with HIV were followed in a 7.5 years study and investigators found an association between stressful life events and faster progression to AIDS.[1]
- Studies have found that using more comprehensive stress measures such as work-family conflict, troubled relationships, and living in a dangerous area, etc., can explain 25 to 40 percent of the variability in psychological distress and depressive symptoms.[3]

HEALTH INEQUALITY AND STRESS

Stress is not experienced equally in the population. Some people are more exposed to stressful life events and this exposure varies by social status, race- ethnicity and gender.[3] Studies have found an inverse association between stress and social status, that is, the higher the social status the lower the exposure to stress.[3] Also, this unequal distribution of stress among different social groups seems to account for the higher rates of morbidity, disability and mortality observed in lower socioeconomic status groups.[3]

In the decades of stress research a lot has been found including how stress plays a role in health inequality and these results have been consistent. It was found that females, young adults, racially minority groups, divorced/ widowed, and poor and working class people deal, significantly, with more chronic stress and have more accumulated stressors in their lives as compared to the opposite groups.[3] This unequal distribution of stress is what many studies have found accounts for health disparities among these groups. Finally, a very important concept stress that has been explained is its proliferation over time and how this widens the gap between different social groups.[3] Stress proliferation means that one stressor can give rise to others, which in turn may cause more health damages than the initial one. It was found that this proliferation of stress piles up over the life course of individuals and this increases disparities in wealth, health and longevity.[3]

CONCLUSION

As mentioned, stress has been widely studied in different disciplines. Many studies have looked at the physiological mechanisms of "how stress gets under skin". Other studies have looked at behavioral mechanisms of stress while others study stress as psychosocial factor. These researches have provided us with hard data of the effects of stress on health outcomes, however, there seems to be a lot left to be done but it is believed that research being done in areas such as molecular biology, cognitive-emotional psychology, medicine, and clinical psychology may contribute greatly to the quantification of the effect long term stress has on health.

Now, what can be done to reduce the risk of stress among those that seem to be more affected at a social or individual level? It has been proven that having social support, strong coping strategies and high self-esteem may help reduce the effect of stress on health.[13] Also, in one study it was found that increasing positive effect, feelings like happiness and joy, might protect against cardiovascular risks.[4] Thus, when people feel intense stress it is recommended to increase their positive effect by finding enjoyable and relaxing hobbies or activities. Though, this may not work for everyone since we all deal with stress differently depending on our social group, race-ethnicity or gender. This is why intervention programs are needed. Aside from seeing a psychologist to try to find the roots of the problem, people should seek help from stress management programs such as psychosocial interventions. These programs focus on "decreasing perceived stress and negative mood, improve perceived social support and also provides patients with problem-focused coping strategies".[1] These kinds of interventions have proven to be beneficial, however, there are also things people can do as individuals to reduce their of stress. For example, people should avoid substance abuse and alcohol consumption as a way out of a difficult situation because then, all these behavioral factors will also play a role in increasing people's risk for disease.

Public Health Brief:

How location of Injection affects the health of PWID

Sarah Deutsch, September 2015

Background

Injection drug use is a risk factor for a variety of undesirable health outcomes, including the transmission of blood-borne disease such as HIV and hepatitis C (1). Several public health measures have been designed and popularized internationally to reduce the incidence of equipment sharing as a means to prevent further spread of infection. The most widespread example of this approach, often referred to as harm reduction, has been the implementation of syringe exchange programs (SEPs) in many countries. Yet, while great strides in access to equipment have been achieved, many urban areas continue to face ongoing barriers to prevention and care. These challenges are often associated with the impact of criminalizing drug use, including fear of arrest and incarceration for possession and/or use of drug paraphernalia and/or controlled substances. Some of the direct impacts of criminalization can be seen in the lack of regulation of substances, which impacts purity and increases the potential for overdose. Stigma can lead to injection drug users hiding their drug use and injecting in places that are unsafe or unhygienic. In turn, since 2000 New York City has seen an unprecedented rise in overdose (2), injection related injuries such as abscess or other vascular disease, and improper disposal of used injection equipment.

Impact

- In New York City, rates of opioid overdose increased by 256% between 2000 and 2013 despite a corresponding increase in the availability of the opioid antagonist naloxone, a vital tool in the reversal of opioid overdose (2).
- A whopping 53% of harm reduction participants who inject drugs reported having had a positive HCV test result at some point; only 12% reported having engaged in treatment (3).

A Logical Leap

Little research has been conducted on the local level to define the exact role of injection location in overdose deaths in New York City. Yet, there is one factor that affects the probability of fatality in both public and private locations: supervision. A person who overdoses is much more likely to die from the overdose if she or he is alone when the drug is consumed (4). How can we as a community address this established risk factor on a public health level?

Case Studies

Sydney, New South Wales, Australia

A 2001 cross-sectional study of 200 IDUs indicated that a majority of fatal overdoses were occurring in public places (4) and also reported that the more often injectors reported public injection, the more likely they were to experience associated harms such as scarring and abscess in addition to unstable housing.

Downtown East Side, Vancouver, Canada

Some of the reported positive impacts of Vancouver's Safer Injection Facility (SIF) include rapid crisis response, being able to take one's time, improved delivery of risk reduction education, and a lessening in reported fears related to injecting substances of unknown potency (5). Each of these safety measures plays a part in reducing the rate of overdose in the surrounding area.

Public Health Brief:

How location of Injection affects the health of PWID

Sarah Deutsch, September 2015

What is a Safer Injection Facility?

The International Drug Policy Consortium defines a Drug Consumption Room (DCR) or Medically Supervised Injection Site (MSIS) as a formal setting for IDUs to self-inject using pre-obtained drugs in a sterile environment – all while under the supervision of trained medical staff (6). Currently, there are 98 SIFs in 66 cities in ten countries around the globe, each of which plays an important role in protecting the life and wellbeing of urban drug users (6). While utilizing a SIF, injection drug users are made to feel safe, which helps individuals avoid rushing the injection process and thus reduce the risk of injury. In addition, SIFs are well-lit in order to ensure accuracy and prevention of vein collapse. Lastly, and perhaps most importantly, those who utilize the SIF do not run the risk of arrest or incarceration (6).

Current Events

In January 2014 in New York City, the Injection Drug Users Health Alliance (IDUHA) began a multi-phase cross-sectional study in order to assess the longitudinal health status of drug users across the five boroughs. The survey tool was developed to measure utilization of services in addition to outcomes of service utilization. In spite of the vast array of services offered and taken advantage of, a gap was identified; more than 60% of injectors reported recent injection in public spaces (3). Simultaneously, Bronx-based SEP BOOM!Health conducted a survey with local businesses about bathroom utilization, and almost half of all businesses with public bathrooms reported having had customer complaints about drug use in their bathrooms (3). As a result, and in alliance with VOCAL-NY, Drug Policy Alliance, and Open Society Foundations, IDUHA has launched a campaign to raise awareness about public drug use and its implications.

Next Steps

Community involvement is key! The campaign for SIFs in New York City is being launched tomorrow, September 30th, and the voices of key stakeholders must be heard. It is recommended that all those impacted by public drug use contribute to the cause by attending this forum to ensure policy reflects community need. In the meantime, SEPs can contribute to the health and wellbeing of their program participants by improving access to a clean, well-lit bathroom with sharps containers that are regularly maintained. The need for a monitored injection location is no longer a secret, and must be addressed.

The Outside Influence: Neighborhoods and The Built Environment As Exterior Health Determinants

PHE 702: Environmental Health

December 1, 2011

ABSTRACT:
This study addressed the idea that neighborhood and built environment are essential established determinants of health. These determinants must be adequately considered during urban planning and design in order to enhance wellness and minimize environmental injustices. Similarly, when comparing neighborhoods, discrepancies in overall socioeconomic status (SES), irrespective of individual SES, have positively correlated with observed heath inequities. Specifically, this study examined nine blocks located in the Southeast Bronx including thirty-nine corresponding audit points. Nineteen features of the urban neighborhood of interest were converted into measurable variables and subsequently investigated. Data concerning each of the variables were gathered for all points using an objective audit form. Results were compiled and spatial distribution of certain attributes was displayed using Geographical Information Systems (GIS) software. Analysis of results revealed a primarily quiet, safe residential area surrounding a major medical education institution. In order to better the health of this population, adequate utilization of public open space for recreation purposes was recommended. Sidewalk conditions, possibly serving as physical obstructions to pedestrians, needed to be improved to ensure safety of vulnerable individuals such as the elderly. Additionally, in attempt to reduce litter and pollution, the need for more garbage disposal sites was noted. An emphasis was placed on the importance of the built environment as a health determinant.

Commented [ARM1]: Very nice abstract

Commented [ARM2]: Odd sentence

BACKGROUND:

Commented [ARM3]: Excellent background… I get the feeling you have done this before.

When addressing population health, socioeconomic status and behavior are among the commonly highlighted health determinants. However, upon broadening the focus, external features such as neighborhood and the built environment emerge presenting critical implications for public health (Diez Roux & Mair, 2010). This can be seen dating back to the Industrial Revolution when spatial contexts played an important role in facilitating the spread of infectious disease through overcrowded, unsanitary living quarters. The effects continue today as the physical environment influences exposures and lifestyle, which contribute to chronic degenerative disease (Perdue, Stone & Gostin, 2003). Additionally, neighborhood and the built environment have been shown to mold social networks and dictate the prevailing socioeconomic characteristics (Cagney & Cornwell, 2010; Galea et al, 2007; Holton, 2004). Moreover, because social environment and socioeconomic status are demonstrated indicators of health outcomes, neighborhood and health are inextricably linked (Matthew & Yang, 2010). Carefully dissecting the relationship between the external environment and wellness is crucial for the success of public health.

It becomes specifically important in urban areas that are often designed without considering or acknowledging potential health consequences (Perdue, Stone & Gostin, 2003). The collective incorporation of public health and urban planning is necessary as city residents experience unparalleled physical and social stressors such as noise, traffic, pollution, crime, work and relationships (Northridge, Sclar & Biswas, 2003; Fan, Das & Chen, 2011). Because features of the built environment are capable of potentiating positive or negative health outcomes, they must be considered in order to optimize well-being. Green space, for example, providing public recreation in urban neighborhoods, has been shown to foster social networks and increase the physical activity of residents. Furthermore, increased physical activity and efficient access to recreational resources have been associated with lower BMI, and consequent decreased risk of obesity, diabetes and hypertension (Diez Roux & Mair, 2010). Conversely, lack of green space has been related to increased violence and absence of community (Perdue, Stone & Gostin, 2003). This is of profound importance when concerning elderly populations, as their health strongly relies on recreational access, social cohesion, and perceived level of safety (Cagney & Cornwell, 2010).

Interestingly, more intricate relationships are revealed and the idea of environmental justice becomes important when neighborhood socioeconomic status is incorporated into health outcome. The built environment ultimately delineates the overall socioeconomic status (SES) of a given area. Consequently, certain chronic degenerative diseases are more prevalent in neighborhoods of low SES. Therefore, environmental justice, described as the right of all individuals regardless of personal characteristics such as race, ethnicity or economic status to equal quality of environment, becomes jeopardized. When adjusting for individual SES and other prospective confounding variables, major depression incidence and asthma hospitalization rates have been shown to be significantly higher in urban neighborhoods of lower SES. Mental health impairment may be attributed to social disorganization and asthma prevalence is thought to rise due to increased pollutant and toxin exposure in these geographic locations (Galea et al, 2007; Maantay, 2007).

Commented [ARM4]: Not sure I agree with this completely

The latter study, demonstrating elevated asthma hospitalization rates, was explicit to the Bronx. Alarmingly, individuals living near toxic release sites were 66 percent more likely to be hospitalized for asthma complications. Further, residents living in these respective areas were 31 percent more like[ly] to live below the federal poverty limit (Maantay, 2007). Although this was one particular study, the Bronx serves as an attractive region for supplemental spatial analysis. Containing a population of nearly 1.4 million people, it is the not only the poorest of the five New York City boroughs, but also remains the most indigent urban county in the United States (U.S. Census, 2010). The Bronx is demographically unique, containing a population comprised of 89.1% minorities. In addition, the comprehensive education level is unsatisfactory with 31.3% of individuals not obtaining their high school diploma. Socioeconomic status is revealed by statistics such as these, however, the built environment and neighborhood must be examined through objective observation. The major goal of this study was to characterize the physical aspects of a discrete neighborhood in the Bronx by completing an objective environmental audit. Spatial analysis of the findings was subsequently conducted using Geographical Information Systems (GIS) software.

METHODS:

Commented [ARM5]: Very nicely put together.

Defining the area of study:

The study area was defined based on an interest in observing the neighborhood and built environment surrounding academic medical institutions in the Bronx. Hence, nine blocks, in the Southeast region of the borough, were chosen surrounding Montefiore and Albert Einstein College of Medicine (Figure 1). In order to ensure an exhaustive spatial analysis of the neighborhood, thirty-nine block faces exteriorly bounded by major nearby roads (Eastchester Road, Morris Park Ave and Williamsbridge Road) were included. As a result of physical barriers, only one block to the east of campus was observed, strongly favoring blocks to the west.

Figure 1: Audit map with block faces indicated

Data Collection:

After delineating the study area, nineteen physical and social environmental characteristics were specified and successively converted into measurable variables. Each of the neighborhood traits became either a categorical or ordinal variable. Thirteen of the nineteen features (residential presence, commercial presence, industrial presence, recreational presence, liquor availability, fast food presence, police presence, loitering, homeless presence, educational institutions, faith based organizations, hospital/emergency care, open space/lawn/gardens) translated into categorical variables with simple yes or no responses pertaining to the presence or absence of a given attribute (ex. residential presence: yes or no). The remaining six characteristics (traffic volume, sidewalk condition, residential condition, commercial condition, noise level, litter level) involved volume level or condition of a particular aspect and therefore became quantifiable ordinal variables. Assigned values for such variables were either low/medium/high or poor/fair/good, respectively (ex. traffic volume: low, medium, high; sidewalk condition: poor, fair, good). All nineteen characteristics were then inputted into the objective audit

form (Figure 3). Additionally, the streets corresponding to each audit point as well as their two cross streets were recorded.

Image 1: good and poor sidewalk conditions observed audit point 35 and 19 (left to right)

The neighborhood audit was conducted on an overcast Wednesday morning in mid-October between 9:00AM and 11:30AM. The ambient air temperature was 54º F. Data for all nineteen variables were gathered beginning at audit point 1 and continuing until completion with audit point 39. Each block face represented only one side of the street. The six categorical variables were assigned yes or no values based on whether the specific trait was present or absent. The ordinal variables were ranked relative to the entire neighborhood. Traffic volume was assigned a value of low, medium or high based on the number of cars observed within a thirty second period (low: 0 to 5 cars, medium: 6 to 10 cars, high: more than 10 cars). Similarly, litter level was determined according to the amount of garbage present along the block face (low: 0 to 5 pieces of trash, medium: 6 to 10, high: more than 10). Noise level was ranked low if the audit point was quiet, medium if there was average noise and high if it was loud. Typically, values of high were assigned to busy, congested streets where sirens and ambulance were heard. Sidewalk, residential and commercial conditions were evaluated as poor, fair or good. Values were distributed as follows: poor if the structure was noticeably deteriorating, fair if the structure was in decent condition, and good if the structure was well-manicured and in above average shape. (See Image 1 for example of poor and good sidewalk conditions). In conjunction with the objective audit, a "features of interest list" was recorded to gather unique information not accounted for in the objective audit from particular block faces (Figure 2). Documented observations included, but were not limited to sirens, alarms, signs and construction sites (Image 2 & 3).

Features of Interest List

Audit Point (ID)	Street (name)	XStreet1 (name)	XStreet2 (name)	Features of Interest (observation)
4	Pierce Ave	Hering Ave	Tenbroeck Ave	Ambulance siren is heard
5	Hering Ave	Van Nest Ave	Pierce Ave	Loud music, noisy children playing outside
6	Van Nest Ave	Yates Ave	Hering Ave	No littering sign, yet no garbage cans present, noticeable smell of garbage, beautiful home bordered by wooden fence, remainder of street bordered by metal and concrete baracade.
7	Yates Ave	Van Nest Ave	Pierce Ave	barking dog, presence of halloween spirit
8	Pierce Ave	Hering Ave	Yates Ave	No trespassing sign
9	Yates Ave	Van Nest Ave	Pierce Ave	Uncollected bags of garbage outside home
11	Williamsbridge Rd	Van Nest Ave	Pierce Ave	Two beautful adjacent homes are for sale. Homes are surrounded by run down properties
19	Hering Ave	Pierce Ave	Sackett Ave	Car alarm sounds
22	Morris Park Ave	Tenbroeck Ave	Hering Ave	Closed down commercial space
24	Van Nest Ave	Hering Ave	Tenbroeck Ave	Ambulance siren is heard
26	Morris Park Ave	Newport Ave	Tenbroeck Ave	Bus stop, pay phone, garbage can
29	Newport Ave	Morris Park Ave	Van Nest Ave	Horrible smell, waste collection site; animal feces and remains from the Animal Institute at Einstein deposited in a dumpster at this audit point.
33	Sackett Ave	Eastchester Rd	Tenbroeck Ave	Construction work at hospital
35	Morris Park Ave	Eastchester Rd	Newport Ave	Bus stop, well-maintained crosswalks, many students present
37	Loomis St	Eastchester Rd	Bassett Ave	Employment service center, people waiting outside
38	Bassett Ave	Loomis St	Morris Park Ave	Graffitti all over the street
39	Morris Park Ave	Eastchester Rd	Bassett Ave	Double parked cars, sirens are heard

Figure 2: Features of Interest List- additional observations noted at particular audit points

Data Analysis:

After the data was collected, results were compiled from the original audit form

using Microsoft Excel for all nineteen variables. Percentages or frequencies were calculated for each of the possible values assigned to a given attribute. Pie charts and bar graphs were subsequently assembled for traffic volume, sidewalk condition, noise level and litter level (Figures 4, 5 & 6). Residential presence and condition and commercial presence and condition were represented together as a pie of pie chart and bar of pie chart, respectively (Figure 7 & 8). Additional categorical variables were displayed in a table with calculated percentages indicated (Figure 9). GIS software was implemented to construct four maps outlining the spatial distribution of four separate critical neighborhood variables: sidewalk conditions, traffic volume, noise level, and open space/lawn/garden presence (Figure 10).

Image 2: Construction site noted at audit point 18 and recorded in features of interest list

Limitations:

Based on design and data collection, there are potential limitations to the study methods implemented. As previously mentioned, due to physical obstructions, the neighborhood of interest was predominately located to the west of campus, possibly missing observations that may have been unique to the east side. Although the study was designed to be objective, possible biases may have influenced values assigned at particular audit points. Attributes of interest were transferred to measurable variables in attempt to minimize this concern. However, I the auditor, may have had preconceived opinions and views based on prior familiarity with the neighborhood, which could have impacted the final audit. Further, the study covered an expansive area in the Southeast Bronx and required two and half hours to complete. Because it was conducted on a weekday morning between 9:00 and 11:30 AM, differences in certain variables between block faces such as noise, traffic and loitering may have been attributed to the time the measures were taken rather than the audit points themselves. Higher values may have been recorded in the beginning of the audit due to rush hour traffic, whereas data collected at the end of the audit (11:30 AM) may have been weaker as people entered the middle of their workday. The study was conducted during one morning and therefore, the measures only reflect a small piece of the total environment. For example, the neighborhood could have an entirely different data set if examined at night. The overcast weather may have also affected the results as lack of sunlight could have psychologically altered perception of the neighborhood. Lastly, if the dreary weather caused more people than average to remain indoors certain values, such as noise level, traffic volume and loitering, may have been underestimated.

Image 3: Sign noted at audit point 7 and recorded in features of interest list

RESULTS:

Commented [ARM6]: Wonderful

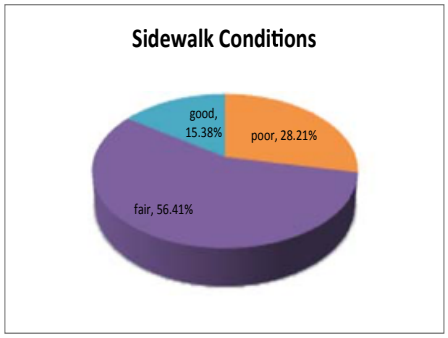

Figure 4: Pie chart representing distribution of neighborhood sidewalk conditions

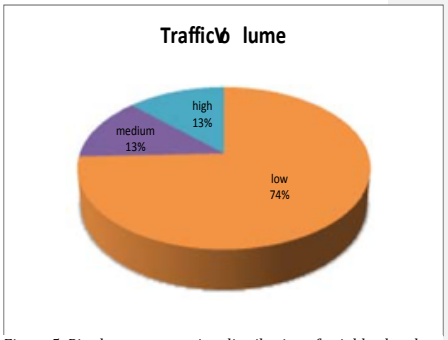

Figure 5: Pie chart representing distribution of neighborhood traffic volume

Percentages of sidewalk conditions and traffic volume are graphically displayed in Figures 4 and 5. The majority of sidewalks (56.4%) were in fair condition. However, there were a higher percentage of sidewalks in poor condition (28.2%) than in good condition (15.4%). Overall, traffic volume in the neighborhood was low (74.0%) with less than 5 cars passing every thirty seconds.

Noise level and litter level were also low (Figure 6 & 7). Of the 39 block faces observed, 24 (61.5%) had low noise volume and 0 had high noise volume. The litter level was only high (10 or more pieces of trash) at 2 points (5.1% %). It was reported as low levels at nearly half of block faces (19 of 39 or 48.7%).

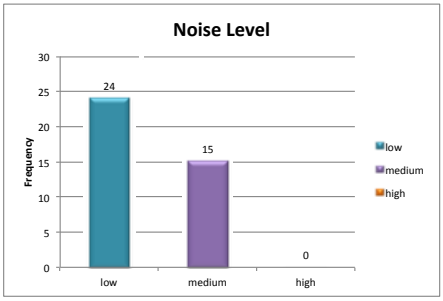

Figure 6: Bar graph depicting frequencies of neighborhood noise levels

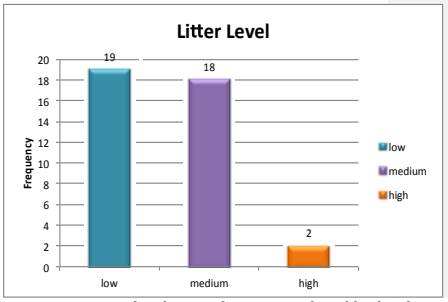

Figure 7: Bar graph indicating frequencies of neighborhood litter levels

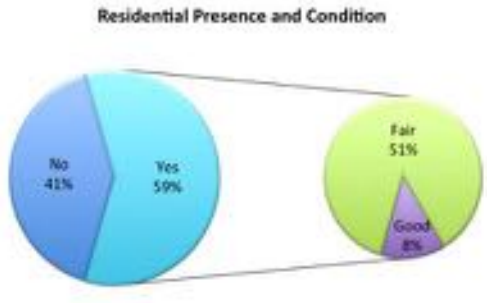

Figure 8: Pie of pie chart representing residential presence and condition

The neighborhood was also shown to be predominantly residential with a residential presence noted at 59% (23/39) of audit points. More specifically, the general condition of residences was fair (20 out of 23) and only 3 (13.0% of residences or 8% of total points observed) were considered

to be in good condition (Figure 8). There was a small commercial presence (15% or 6/39), all shown to be in fair condition (Figure 9).

Figure 10 can be referenced for the additional categorical variables observed. Interestingly, the neighborhood was void of recreation, police/law enforcement and homelessness. Educational institutions and hospitals/emergency care were each observed at approximately 18.0% of audit points. The industrial presence was minor (7.7%) and liquor availability and faith-based organizations were even less commonly noted (2.56% for both). Loitering was detected at 10.3% of block faces and 56.4% of audit points contained open space/lawns/gardens.

GIS software was employed to construct Figure 11. Here, the spatial distribution of sidewalk conditions, traffic volume, noise level and open space/garden/lawn presence are displayed.

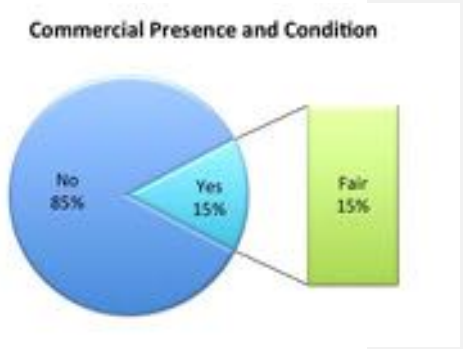

Figure 9: Bar of pie chart representing commercial presence and condition

Additonal Variables of Interest

	Yes (%)	No (%)
Industrial Presence	7.69%	92.31%
Recreation Presence	0.00%	100.00%
Liquor Availability	2.56%	89.74%
Fast Food Presence	5.13%	87.18%
Loitering	10.26%	89.74%
Homeless Presence	0.00%	100.00%
Educational Institution Presence	17.95%	82.05%
Faith Based Organization Presence	2.56%	97.44%
Hospital/Medical Care Presence	17.95%	82.05%
Open Space/Lawns/Garden Presence	56.41%	41.03%
Police/Law Enforcement Presence	0.00%	100.00%

Figure 10: Categorical variables represented as percentages

DISCUSSION:

Collaboration of personal observations, the objective enviornmental audit, and resulting data have provided substantial information regarding the study area of interest. After visually surverying the neighborhood encompassing Albert Einstein College of Medicine and Montefiore campus, it appeared to be a relatively quiet residential region with older homes lining the majority of block faces. Open space and lawns were quite prevalent in comparison to other observed urban neighborhoods. The built environment certainly did not seem to be dominated by commercial stores and industrial business. Aside from places of residence, hospitals and educational centers were frequently noticed. For a Bronx neighborhood, the atmosphere seemed safe and traffic appeared to be rather mild.

Intial thoughts regarding appearance proved to be satisfactory as collected data agreed with preliminary observations. Noise level, litter level and loitering variables all confirmed the apparent calmness of the environment. Noise levels were never reported to be high and over 60% of audit points were assigned low noise values. Litter levels were only high at 2 audit points and over 48% of block faces had low litter levels. Further, 74% of the neighborhood had low traffic volume. Generally reported low values of traffic, noise and litter levels could potentially suggest an uncongested, serene environment. Commerical presence was only found at 15% of audit points and industrial presence was even more scarce noted at 7.7% of block faces. Contrarily, both educational presence and hospital/medical care presence were observed at nearly 18% of study points. Further validating the apparent neighborhood characteristics were the low levels of loitering (10.3%) and the lack of police/law enforcement throughout the entire neighborhood. While the lack of presence of this latter attribute could be interpreted as a positive or a negative depending on how police presence is perceived, because of the nature of this study neighborhood, the absence could be attributed to low demand.

Commented [ARM7]: Nice maps… just be careful not to mislead your readers. The traffic map, for instance, may be easily misinterpreted to think that the red cars represent the high volume traffic since red is often associated with "trouble".

Commented [ARM8]: Excellent discussion/conclusion/findings/etc . section

According to the community health profile for the Southeast Bronx provided by the NYC Department of Health and Mental Hygeine, the statistics in this region are better than the Bronx as a whole. The small neighborhood of study is only a minor area of the entire Southeast Bronx for which the data was provided. However, when combining these statistics with the study's findings, plausible generalizations can be drawn. The Southeast Bronx has a lower poverty rate when compared to the entire borough (22% vs 31%). Similarly, data from this small study showed a 0% homelessness rate with overall fair residential and commercial conditions. 8% of residences were even reported to be in above-average condition. The attained educational level in this sector was better as well with 30% of individuals receiving a high school diploma compared to 26% of the entire Bronx borough. Perhaps, the strong prevalence of educational institutions noted in the audit contributes to this improvement. Altogether, mental health and substance abuse were also better with only 6% of individuals reporting chronic illness such as major depressive disorder and lower than average alcohol and drug related hospitalizations. Accordingly, the study area of interest reported extremely low liquor availability, with stores selling alcohol only present in 2.6% of the neighborhood. Likewise, social disorganization, which can result from lack of green space, has been shown to impair mental health (Fan, Das & Chen, 2011; Galea et al, 2007). Of the 39 block faces studied, 56.4% contained open space/lawns/garden presence, perhaps instrumenting enhanced mental health.

While many strengths were noted, certain features of the built environment needed improvement.
As stated in the community health profile, 24% of individuals living in the Southeast Bronx are obese, 1 in 10 have diabetes and 45% of residents report sedentary lifestyles, receiving no exercise at all. Therefore, there is a consequent higher than average incidence of heart disease. Analogously, the built environment studied documented no recreational presence. Prevalence of green space, as indicated by the high percentage of open space/lawns/ gardens is beneficial; however, it appears to be more advantageous when used as a recreational resource (Fan, Das & Chen, 2011). Increased physical activity, which is known to decrease BMI, incidence of obesity, hypertension and diabetes, has been correlated with use of public space for recreational purposes (Diez Roux & Mair, 2010). Therefore, a need for more recreation is crucial to health of this population. The fast food presence (5.1%) was relatively low and did not appear to contribute to these health concerns. However, while not directly measured, access to healthy foods appeared limited.

Image 4: Ineffective sign depicted by nearby litter (Audit Point 6)

Furthermore, higher than average asthma rates, as reported by the NYC Department of Mental Health and Hygiene, also presented a concern. As reported by Maantay (2007), pollutant and toxin exposure have been shown to exacerbate asthma prevalence. While litter levels were generally low, 51.3% of audit points had values of medium or high. Signs warning against pollution, threatening violators with fines, appeared to be ignored (See Image 4). Only 1 of 39 block faces had a garbage can (Figure 2: Audit point 26) and no recycle bins were noted. Moreover, audit point 29 seemed to be a serious pollution hazard. This area served as a waste collection site of animal feces and remains from the Animal Institute at Einstein. The rancid smell was not well-contained and clearly polluted the air (Image 5). The collaboration of these issues could ultimately lead to the documented increased asthma rates.

Demographically speaking, the community health profile reported an older population, with 43% of individuals 45 years of age or older. Moreover, 12% were observed to be 65 years or older. Elderly residents are a known vulnerable population affected by physical stressors responsible for altering perceived level of safety, such as graffiti and sidewalk conditions (Cagney & Cornwell, 2010). The former attribute was not included within the objective audit, but was noticed upon surveying the area (Figure 2, Image 6). Sidewalk conditions were generally reported as fair (56.4%). Yet, a significant portion of audit points were graded poor (28.2%), indicating the need for improvement.

Image 5: Potential source of air pollution noted at audit point 29

When considering characteristics of urban neighborhoods, this specific Bronx area of study was predominantly impressive. Nevertheless there is always room for quality advancement. In order to initiate optimal population health and reduce chronic stress, public health professionals, community members and city government officials must join together to ensure the sustainability of strengths, while addressing weaknesses. State or city funding should be provided to clean up litter, graffiti and improve sidewalk conditions. Certainly, there is also a strong need for increased garbage cans and recycle bins. Further, residents must hold themselves accountable for maintaining environmental cleanliness. Subsidies should be provided to institute public recreation sites and the community should work together to organize activities, forming a strong social network. Also, residents and pubic health professionals should advocate for increased access to healthy foods. The NYC Department of Health and Mental Hygiene must ensure institutions are abiding by safety regulations in order to limit possible sources of air pollution. In order to maintain low traffic and noise volume, construction of large scale business and industrial sites should be prevented and open space must be preserved.

Here are simply a few suggestions and solutions to possibly improve this nine-block neighborhood. Ultimately, however, we can only be certain public health will prevail when all accountable parties assume responsibility and take action to better their community. More specifically, it is imperative individuals recognize the significance of the built environment and its ensuing impacts on health.

Really very nice work. Your writing is clear and methods are solid. Aside from the few comments above, and what we discussed in class, I am extremely happy with your submission.

GRADE: A

INDOOR AIR QUALITY

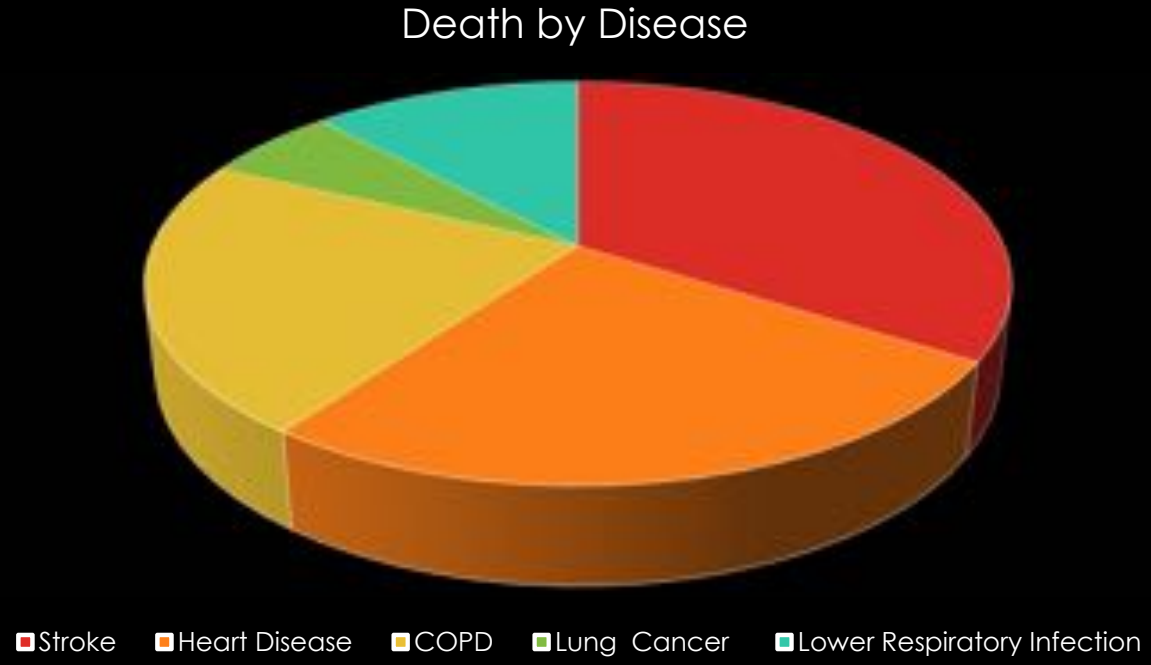
PH754

MAIN OBJECTIVE

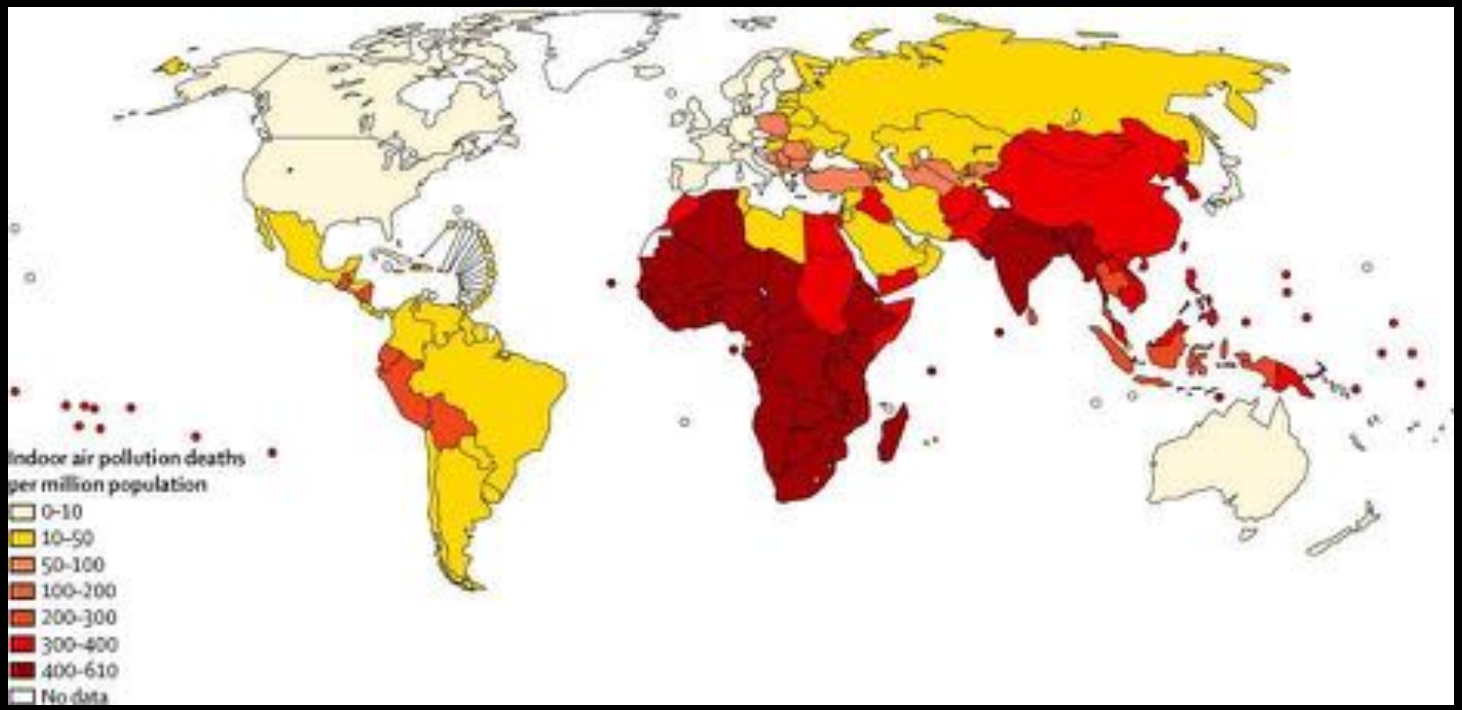
- To understand the effects of poor indoor air quality

TABLE OF CONTENTS

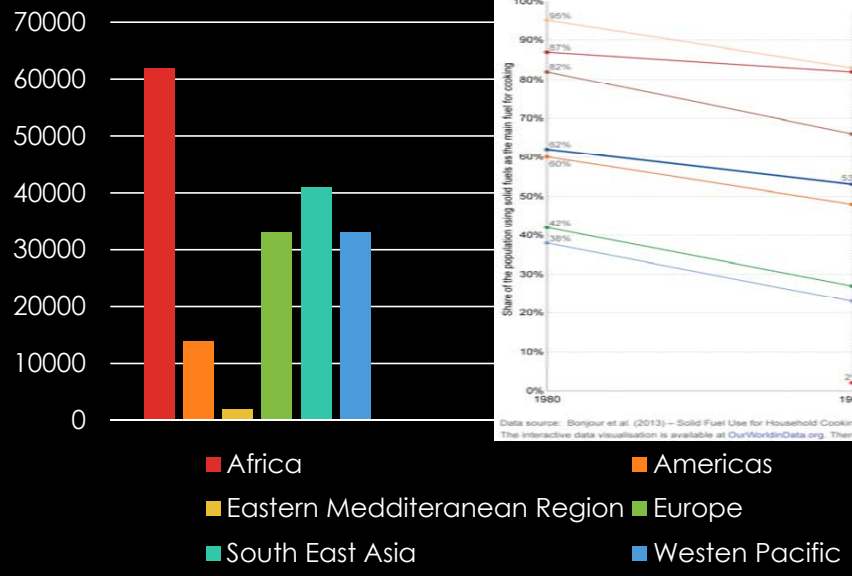
- Danger Levels of Indoor Air Quality
- Indoor Air Quality related deaths broken down by disease
- Indoor Air Quality around the world
- Attributable deaths resulting from burning fuel indoors around the world
- Hours spent in Africa around these fuels



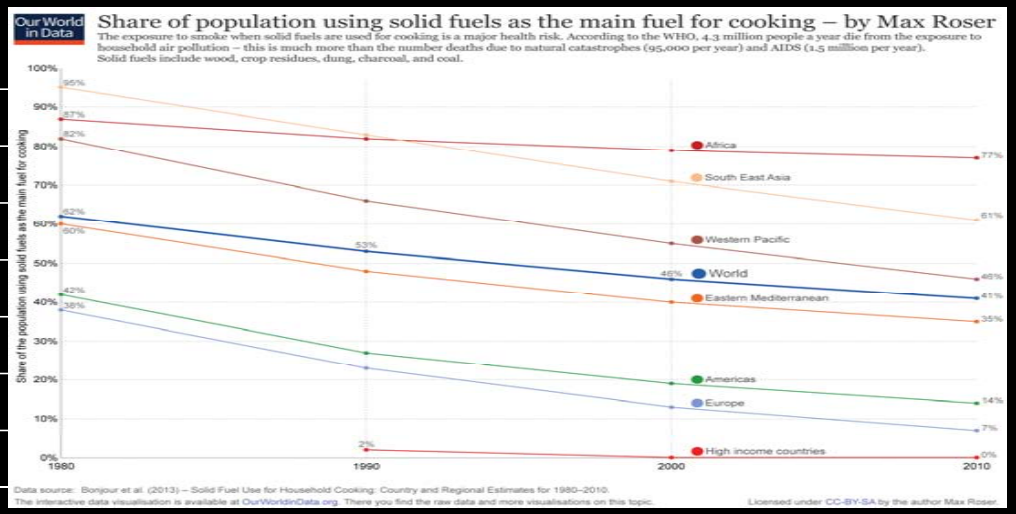
DANGER LEVELS OF INDOOR AIR QUALITY



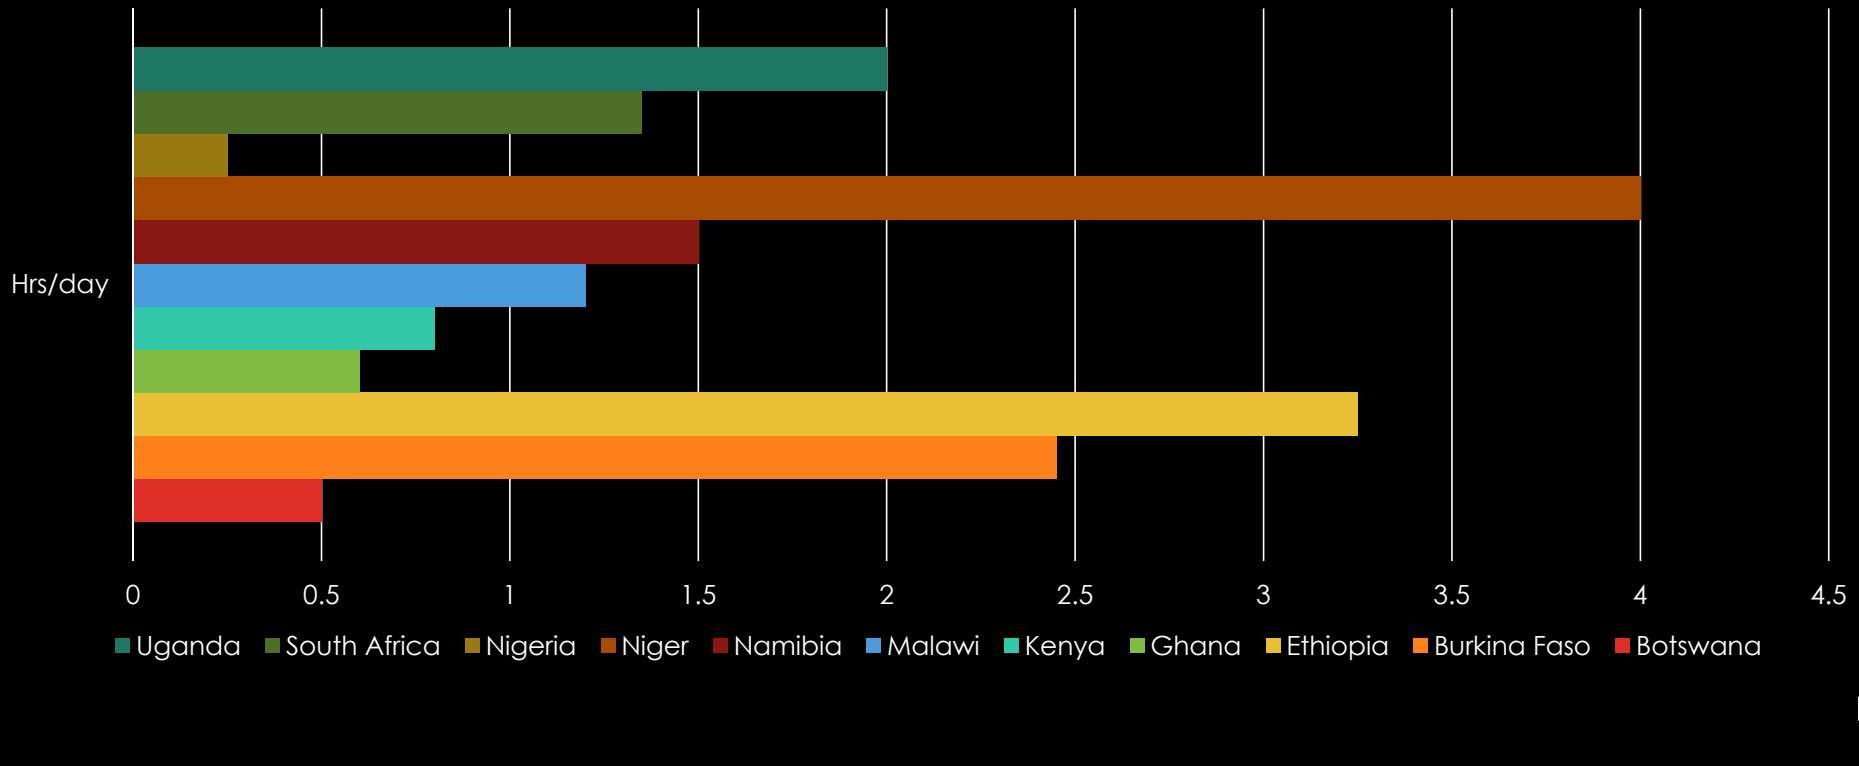
LEVEL 1	LEVEL 2	LEVEL 3
Allergens & Particulates	Infectious Agents	Toxic Compounds
Dust, Mold, Mildew, Smoke	Legionella, SARS, H1N1, influenza	Formaldehye, Toluene, Benzene
Health Effects	Health Effect	Health Effects
Nose and throat irritation, runny nose, congestion, sneezing, coughing, wheezing	Sinusitis, Upper respiratory Infection, Bronchitis, Pneumonia	Memory Lapse, Blurred Vision, Nausea, Vomiting, Headaches



AIR POLLUTION DEATHS BROKEN DOWN BY DISEASE



INDOOR AIR QUALITY AROUND THE WORLD



ATTRIBUTABLE MORTALITY PER 100 000 PEOPLE FOR INDOOR SMOKE FROM SOLID FUEL USE BY WHO SUBREGION

HOURS SPENT WITH SMOKE STOVES A DAY IN AFRICA

SUMMARY

- Poor Indoor air quality can have adverse health effects and can result in death
- Around the world Africa and South Asia have the biggest indoor air quality issues
- This is a result of the fuels they use for cooking
- This can be mitigated by cooking with cleaner burning fuels

FOOD BORNE DISEASES

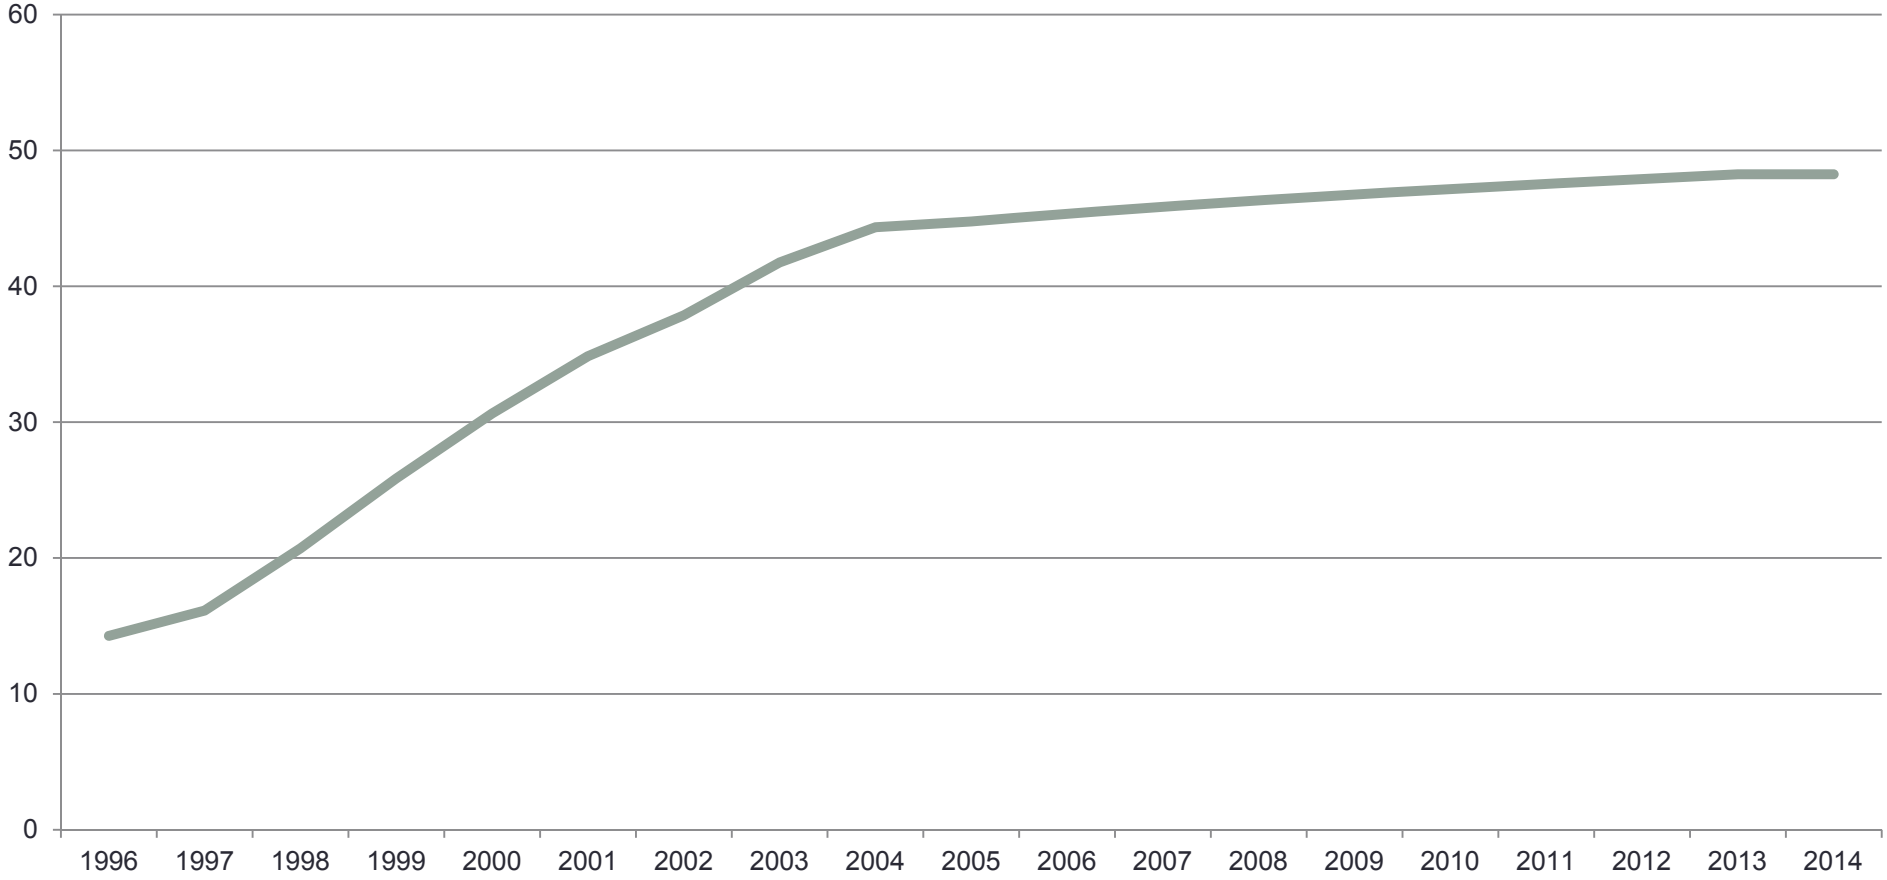
Environmental Health

What are they?
Causes
Food Borne Diseases
Trends
Chipotle Outbreak
Prevention

What are Food Borne Diseases?

Infectious disease spread through food or drinks

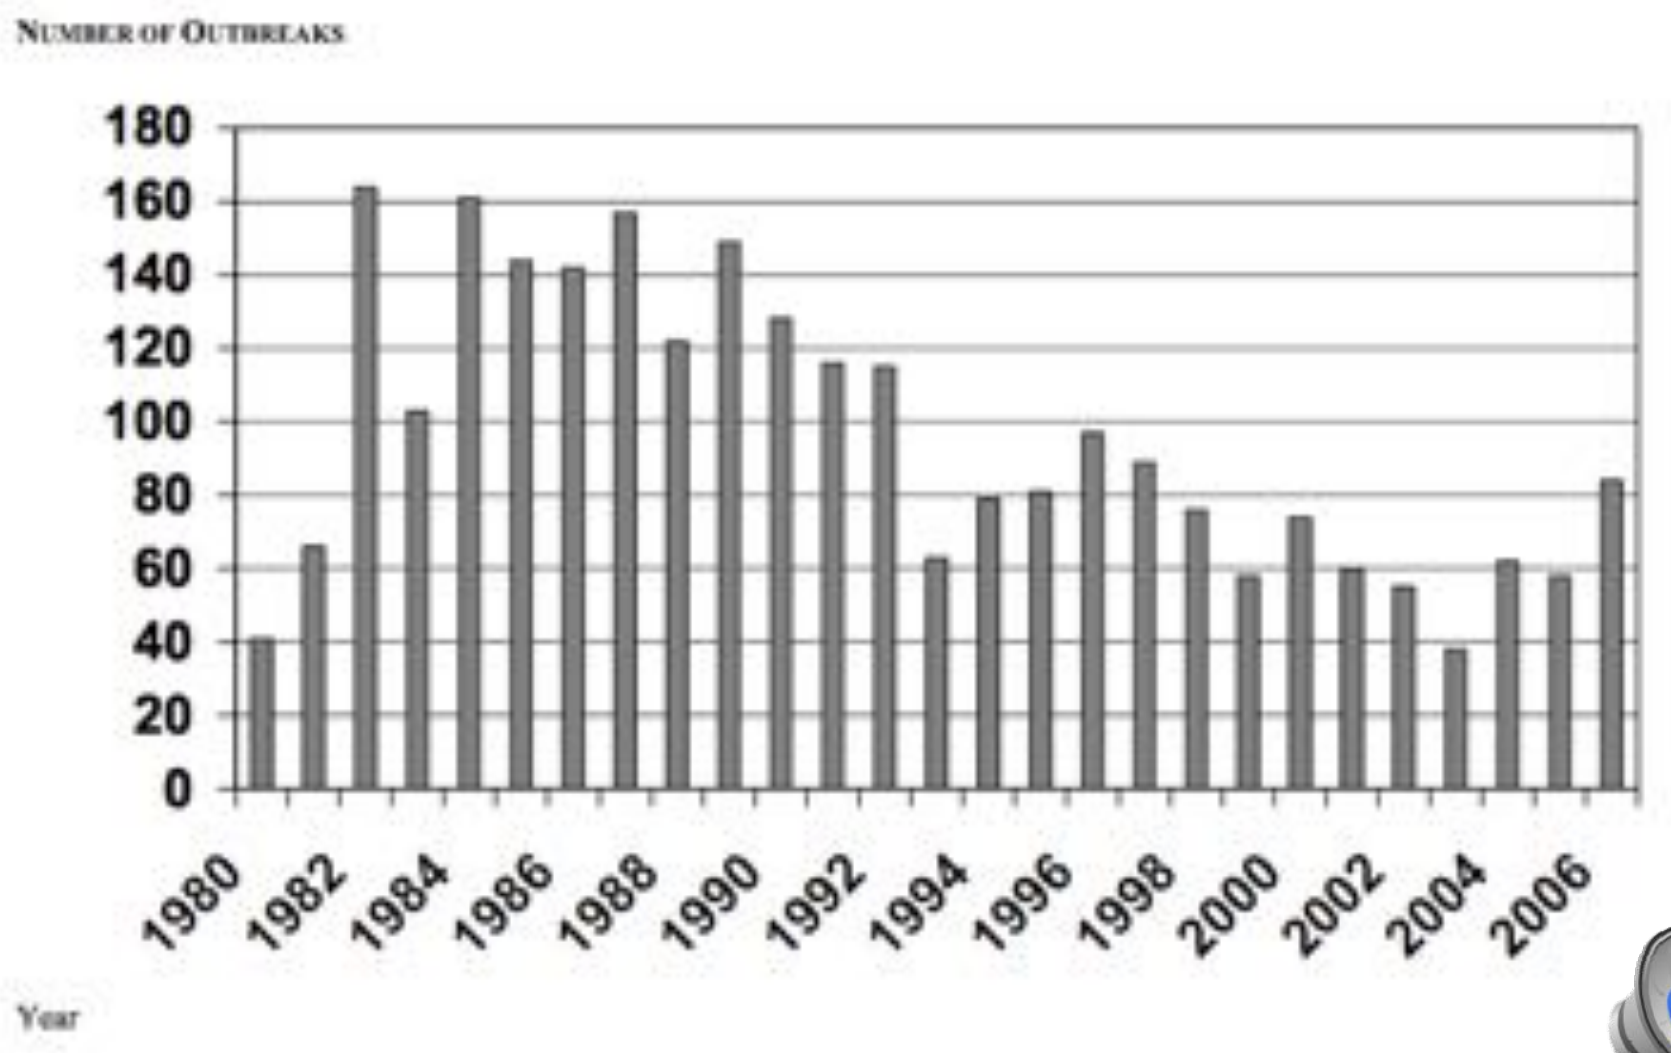
Can be caused by bacteria, viruses, or parasites



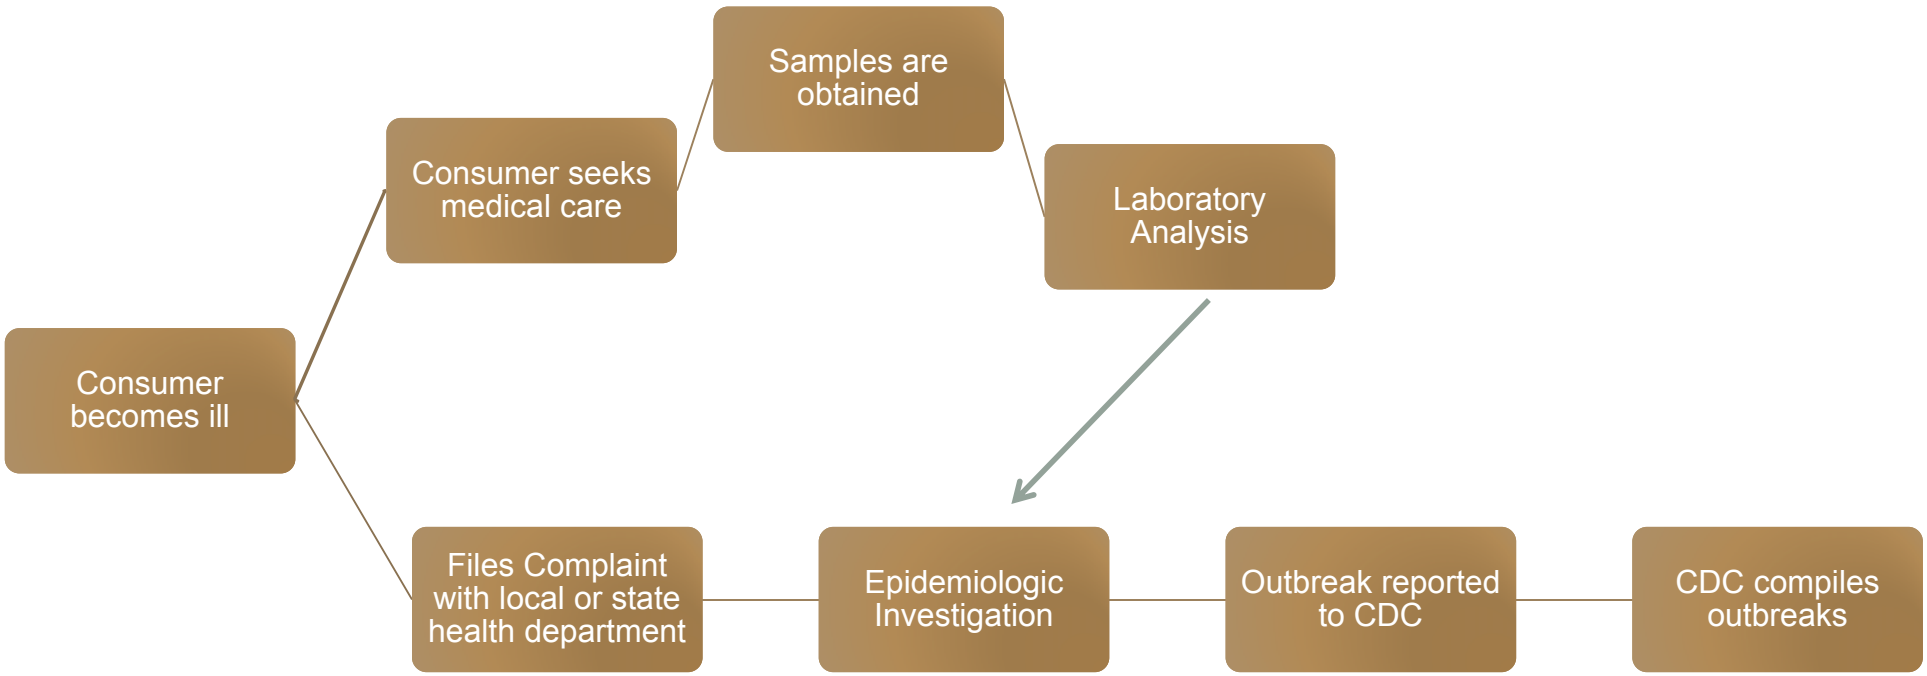
Common symptoms: diarrhea, vomiting, abdominal cramps, nausea, fever, joint/back aches, and fatigue

Botulism	Muscle-paralyzing disease caused by a toxin made by a bacterium
Campylobacteriosis	Infection occurs from handling raw poultry, eating undercooked poultry, drinking nonchlorinated water or raw milk, or handling infected human or animal feces
E. coli	O157:H7, cause serious poisoning in humans, including major disease outbreaks from contaminated food
Hepatitis A	Contagious liver disease that results from infection with the Hepatitis A virus from contact with objects, food, or drinks contaminated by the feces, or stool, of an infected person
Norovirus Infection	Commonly known as "stomach flu.” The virus causes your stomach or intestines or both to get inflamed
Salmonellosis	“Salmonella” bacteria. can be found in food products such as raw poultry, eggs, and beef, and sometimes on unwashed fruit
Shigellosis	Intestinal infectious disease caused by *Shigella* bacteria

Clean
Separate
Chill
Cook



Number of New Cases of Confirmed Food Borne Diseases in the US (millions)



Source: CDC
http://www.cdc.gov/features/dsfoodsafetyreport/

Number of Outbreaks in NYS

Consumer becomes ill
Consumer seeks medical care
Samples are obtained
Laboratory Analysis
Files Complaint with local or state health department
Epidemiologic Investigation
Outbreak reported to CDC
CDC compiles outbreaks

2015 Chipotle Outbreak

- Shiga toxin-producing *Escherichia coli* O26 (STEC O26)
- 52 people
- 9 states have been sickened
- 20 people hospitalized
- No deaths
- Investigation has not identified what specific food is linked to illness

In Conclusion .

- Food Borne Illnesses are infections of the GI tract
- Caused by Bacteria, Viruses, or Parasites
- In US number of food borne illnesses is increasing, although in NYS it appears to be declining
- Chipotle is the most recent foodborne illness outbreak, that has affected the United States nationally

The End

Descriptive Epidemiology Paper

[redacted]

Herpes Zoster in the US

Herpes Zoster (HZ), commonly known as shingles, is a disease that occurs in about 1 million people per year in the United States.[2, 4,7,11] The CDC estimates that in the United States 1 out of every 3 people will develop HZ at some point in their lifetime.[11] HZ manifests as a cutaneous disease that is typically localized to an area on the skin, and causes extreme pain.[3, 11] This rash typically lasts for 7 to 10 days, and can reoccur at different times, side effects from HZ can last for years. [11] Studies have shown that approximately 0.28 to 0.69 per 1 million deaths are associated with HZ each year.[6]

The cause of HZ is the varicella zoster virus (VZV), this is the virus that causes chickenpox. Once a person has recovered from chickenpox the VZV does not leave the body of the person. Instead the VZV stays dormant within the cranial nerve or dorsal root ganglia.[3-6,8,11] Reactivation of VZV changes the virus to HZ. [3-6,8,11] The virus mutation no longer presents as chickenpox, it now becomes the blistering painful rash known as shingles. Therefore any person who has ever had the VZV is at risk for developing HZ.

Even though the population at risk for HZ is very large there are certain risk factors that make HZ more susceptible to certain groups of people, and make the effects from contraction of the disease more dangerous. It is commonly known that people with medical conditions that suppress the immune system, or people taking medications that suppress the immune system are more likely to develop HZ, examples include; HIV, cancer, and people that have had transplants. [3,6-8,10] People who have underlying causes that develop HZ are more likely to contract postherpetic neuralgia (PHN). PNH is a continuing pain located in the area where the HZ rash was once located. [6] PHN is just one of many complications people suffer due to HZ. Other complications include scaring, and continuous tremors at the site of the rash.

As stated earlier, anyone who has ever had the chickenpox is at risk of developing HZ. This means that there is no age limit for contraction of this disease. A recent study showed occurrences of HZ in children as young as 6 years old. This particular study looked at 277 children with asthma vs 277 children without asthma. They found that there is a 12% increased associated risk for children with asthma to contract HZ than for children who did not have asthma.[4] Although this risk is relatively high, in general children are at a very low risk for contracting HZ, this is because most children in the U.S. are now being inoculated for VZV.[4] HZ is most commonly found in elderly populations.

In the US around 200,000 adults, 50 to 59 years of age, develop HZ annually. [9] Approximately 10 in every 1,000 people 60 years or older will develop HZ. [11] Of the elderly population at risk, studies have shown that females are at a much higher risk for the disease than men. [2,3,6,11] One study looked at HZ incidence rates in men and women from 1994 – 2000. This particular study showed that in 1994 there was a 28% increased incidence among females than in men. In 2000 the study showed that the increased incidence among females than males increased to 33%.[3] Another example is that of a 19 year study that was designed to study the links of HZ incidence related to the VZV vaccination. This study found that as of 2010, 14% of men and 20% of women in the U.S. who reached the age of 65 would have HZ during the remainder of their lifetime. [2]

Ethnicity also seems to factor into the risk of contracting HZ. A North Carolina cohort study showed that white people had 2/3 the risk of contracting HZ compared to black people. [6] Other studies examined referenced studies that showed white people at a higher risk of contracting HZ than black people.[1,2] One study that examined ethnicity found that white people had more than a 50% increase of contracting HZ, when compared to black and Hispanic groups. [2] One of the studies explained that there is a reduced risk of HZ among people with Caribbean and Central American origins.[6] This study concluded that it may be

because less people are exposed to VZV in those countries, and/ or that they may be exposed to VZV at later years of life than other ethnic groups.[6]

No research has been done that shows a significant relation of the HZ virus to geographical location. Some of the studies examined looked at cases of HZ from different parts of the country. One particular study grouped people according to their geographic region in the U.S. this includes; Northeast, South, Midwest, and West, the incidence after being standardize for age and sex showed to be 2.9, 3.2, 3.3, and 3.3 per 1000 person years respectively.[3] The study found very little variation between regions and their association with frequency of HZ.[3] Another study examined seasonal incidences of HZ but found no significant relation. [6] As stated earlier one study showed a reduce risk for HZ among people with certain ethnic backgrounds.[6] It is important to note that the study concluded that this was because most of those people may have been exposed to VZV at later ages compared with those in other ethnic groups. [6]

Currently research has shown that the incidence of HZ has increased over time. [2,6,11] One study that examined Medicare beneficiaries from 1992-2010 showed an " incidence increase of 39% from 10.0 per 1000 person-years in 1992 to 13.9 per 1000 person-years in 2010."[6] The CDC stated that the incidence of HZ has been increasing gradually over long periods of time.[11] Some studies believe that the increase in HZ over time may be due to the inoculation of VZV which leads to people who have already had VZV to not be exposed over time to the VZV in people surrounding them which they believe would have boost cell immunity. [2,3,11] A study examining the relationship of the incidence of HZ and the vaccination concluded that the increase of HZ in the U.S. was already occurring before the vaccination was in use.[2] One study discussed that the reason for the increase in incidence of HZ might be because of the increase in diseases that suppress immune systems, such as an increase of cancer over the years, or an increase of immunosuppressive drugs to treat different diseases.[6] It is important to note that although the current population of people 40 years and older have a 96.9% risk exposure to HZ because they were

never vaccinated for VZV, the upcoming generation will be different. [2,6] The amount of people vaccinated for VZV has been continually increasing since 1992.[2] Once the older generation dies out, the population in the U.S. at risk for developing HZ will be significantly lower. The risk for developing HZ has also decreased significantly because of the new HZ vaccination which was introduced into the U.S. market in 2006 for adults 60 years and older.[9] Since that time the FDA has made the vaccine available to adults aged from 50 years and older. This vaccine has shown a reduced risk of developing HZ by 70%.[9] Although the vaccine is relatively new, the CDC hopes that introduction of this vaccine into the U.S. population will begin to lower risks of people developing HZ.[11]

HZ is currently very prevalent in the U.S., as stated earlier the CDC estimates that 1 in every 3 people will develop HZ during their life time.[11] The main risk factor for making someone susceptible to the disease is the development of VZV in an individual. This means that there is no particular age group that is exempt from developing HZ. It is know that as people age the incidence of HZ increases significantly. This makes the population of people older than 50 years more at risk for developing the disease.[9,11] Studies have also shown that females have an increased risk of developing the disease.[2,3,6,11] White people in the U.S. have higher incidence rates than black and Hispanic people. [1,2] There have not been many studies done to show any links between socio-economic status, or geographic location in relation to increased incidence of HZ. It may be important to begin to examine the effect that the VZV vaccine has on the incidence rate of HZ over time. Currently the VZV vaccine seems to show no effect on HZ prevalence.[2] HZ has been increasing over time since before the introduction of the VZV vaccine in the U.S.. [2,11] There is no information as to why HZ has increased over time, some studies suggest that it could be because of the rise of immunosuppressant diseases or drugs. [6] Over time it is believed that the prevalence of HZ in the U.S. will begin to decrease due to the new HZ vaccine, and because of the VZV vaccine which would prevent occurrence of HZ.[6]

Epidemiology Descriptive Paper

Heart Disease in NYC

Heart disease is the number one killer in the United States. This is also true for New York and more specifically for New York City. It is been shown that 1 in 4 adults in the U.S dies from heart disease.[1] Heart disease is a general name given to diseases affecting the heart and the cardiovascular system. There are however, different types of heart disease categorized as: Coronary heart disease CHD, Cardiovascular Disease CVD, and Hypercholesteamia characterized by high levels of LDL in blood serum.[2] In this paper is discussed how heart disease is affecting New Yorkers; and assessment is made about the prevalence, rate and mortality trends in New York City.

Risk factors contributing to heart disease include: hypertension, obesity, lack of exercise, tobacco use, diet, high glucose levels, environmental pollution, and total high cholesterol levels. Even though mortality rates have been shown to decrease in the past decade, with a recorded decline of 28% age adjusted death rate from 1999-2009 nationally, heart disease is still a major problem in NYC.[2,1]

In 2009, the prevalence of hypertension in NYC among adults was 25.6% CI (23.4%-27.8%) Reference needed. Although males and females were found to have the same prevalence, males had a higher mean blood pressure of (120/73.8mmHg for men vs. 115.7/68.7mm Hg for women) Reference needed. Age is considered to be a major risk factor for heart disease, whereas this risk at baseline for adults in NYC in 2008 was 6.8% for 22-44yr olds , this risk was increased to 71.0% for adults aged 65 yr. or older Reference needed. Heart disease prevalence was much

higher for minorities compared to the white population in NYC. For Blacks this prevalence was 32.8% compared to Hispanics 26.5% compared to Whites (21.1% P<0.001). [3]This shows the racial disparities when it comes to heart disease in NYC.

Low socioeconomic status might be a factor in having such a high prevalence among minorities in NYC. Interestingly enough, a study done in 2004 found that foreign born adults residing in NYC, had the greatest mean level of total cholesterol compared to all other foreign born adults in the U.S. Reference needed Although this trend was true only for foreign born individuals who had been in New York City for more than 10 years.[4]

Centers for Disease Control report Coronary Heart Disease as the most common type of heart disease contributing to high mortality rates affecting 1 in 4 adults in the U.S Reference needed. A study done on the prevalence, awareness and treatment of LDL levels among adults in NYC in 2004, found that ¼ of adults had high LDL cholesterol, among those 1/3 of adults were not aware of this condition Reference needed. For the rest who were aware, less than 2/3 of them were taking medications to control cholesterol and less than ½ were actually able to control high LDL cholesterol. [4] These findings present the necessity for the establishment of food and tobacco policies that will have as aim the reduction of risky behaviors involving unhealthy food and tobacco use that are contributing factors in increasing rates of heart disease incidence in NYC.

Inequalities in getting medical care, might also contribute to heart disease. A study done by Nguyen et al in 2010, used NYC HANES data to find that inequalities in disease management contribute to the health disparities observed in NYC Reference needed. People that did not have regular checkups to primary care doctors , were more likely to be affected by heart disease even though they might have been insured Reference needed. Heart disease is a condition were primary care is crucial in avoiding the development of this disease. People who were not

receiving a constant routine medical care, were 2-3 times more likely to not get diagnosed early, or were unaware of their condition of hypercholestomeia or hypertension Reference needed. Not having a "place of care" is associated with having higher CVD rates associated with higher Blood pressure and higher HDL level. This was more pronounced for people living in underserved communities who were < 65 years old.[5]

Other studies have found a link relating socioeconomic status to heart disease. A study by Onwanyi in 1999 found that Central Harlem residents belonging to low socioeconomic status, mostly people of color aged 25-64 yr. old, were twice as likely to die from CVD compared to the rest of the NYC population Reference needed. They also reported hypertension as the leading cause of death among these minorities. This shows that socio-demographic factors are related to heart disease.[6]

Diabetes is another risk factor contributing to cardiovascular disease. In 2009, Thorpe et al found that 2/3 of adults greater than or equal to 20yr old who had been diagnosed with diabetes, were hypertensive Reference needed. 43.1% of those who had high blood pressure, did not control either with drugs. They also found that ¾ of adults diagnosed with diabetes had also high LDL levels and 42.8 of them were undiagnosed for high cholesterol Reference needed. Adults with diabetes were more likely to have high LDL and higher blood pressure than the ones who were not.[7]

Lifestyle changes have been shown to be successful in reducing heart disease rates in elementary school children. A study done on elementary school children in 2012, found that children who attended dance lessons after school, and were health educated, reduced heart disease and diabetes risk.[8]

All the above studies suggest that heart disease manifested through high blood pressure, high LDL levels or diabetes, is indeed a major health problem in NYC. The prevalence of heart disease has remained constant in New York City (25%), even though mortality rates have decreased in the past decade.[1] This shows that heart disease is a concern because it can affect everyone, although having low socioeconomic status certainly contributes to the high rates of this disease dominating in poorer areas. It is important to notice that heart disease does not only affect adults, it is also prevalent in young children and thus education and lifestyle changes are crucial to stop the spread of this disease.[8] Reforming health policies that mitigate the effects of low socioeconomic status, discrimination, poor diet, tobacco use and adapting healthy lifestyle changes, are good steps to start lowering heart disease rates in NYC.[9, 10]

PHE 606- Descriptive Epidemiology
Type 1 Diabetes

Type 1 diabetes- orT1D- has become fairly well-known in our society in recent years. Although the specific etiology of the disease is unknown, it is believed that external factors exacerbate pre-existing conditions within the body, causing an autoimmune reaction that destroys Beta-cells in the pancreas (Patel). This in turn causes the body to produce little or no insulin- a hormone necessary for the conversion of sugar to useable energy (Patel). Both adults and children are at risk for developing type 1 diabetes; 85% of people living with type 1 diabetes in the US are adults while 15% are children; this amounts to five percent of the total diabetes population (JDRF). Worldwide, the prevalence of T1D in youth- defined as individuals less than 20 years old- is estimated at 2.13 per 1,000 and is predicted to rise to 5.20 per 1,000 by the year 2050 (Patterson, WHO). Additionally, the cost of medical treatment for diabetics is at least two times greater than treating a non-diabetic (Dabelea). This disease is of importance because there is no cure for T1D and individuals with T1D have a lower life expectancy those who do not (University of Pittsburg).

The Juvenile Diabetes Research Foundation (JDRF) estimates that 15,000 children and 15,000 adults are diagnosed with type 1 diabetes annually and expects incidence rates to increase by 3% each year for children less than 14 years of age. The American Diabetes Association (ADA) estimated 1.2 million people had T1D in 2012. Between 2001 and 2009, there was a 21% increase in the prevalence of type 1 diabetes among youth less than 20 years old (Dabelea). During that time, increases in incidence rates were evident across almost all racial, gender and age groups; Native Americans and children less than 5 years old were the only

exceptions. The distribution of the disease however, remains constant over time. The prevalence of T1D in youth is greatest among non-Hispanics whites, followed by Hispanics then blacks (Dabelea, JDRF).

Most children are diagnosed with type 1 diabetes between the ages of five and seven years old (Patel). It is diagnosed when certain symptoms appear such as: increased hunger and food consumption without weight gain, increased thirst and frequent urination. Once diagnosed, a lifetime of balancing diet, medications, blood glucose monitoring and frequent doctor visits begin. If not properly controlled, high blood glucose levels in the body will cause damage to one or more of the body's internal systems which can result in comorbidities such as: kidney failure, blindness, cardiac disease, hypertension, stroke and amputation of limbs (Amed). If children are not taught how to manage their diseases early on, they develop habits that follow them into adulthood and the results are devastating physically, mentally and financially. Minorities and people with lower socio-economic status (SES) develop these adverse outcomes more frequently than whites, leading to higher morbidity and mortality rates (Darmon).

Frey links single-parent households, low socioeconomic and low socio-demographic status to poor nutrition- which is detrimental to the health of a diabetic. Management of this T1D requires individualized treatment plans involving proper dietary habits, physical activity and adherence to medications (CDC, JDRF). Minorities and individuals of lower SES may not have the financial means, availability of certain resources or access to healthier food options to help achieve their medical goals, so this population has lower rates of compliance with prescribed regimens (Darmon). This may be due in part to the disproportionate number of

unhealthy food sources that exist in these neighborhoods (Darmon) or to the higher prices of fresh fruits and vegetables that are essential to a diabetic's diet, especially when compared to fast foods or snack items. Other priorities and budgetary constraints may cause the management of the disease to be deferred until something serious occurs.

Unlike many other illnesses that may only affect a single body part or organ, diabetes has the potential to affect the entire body and treating the disease over a person's lifetime can add up very quickly. Annual medical costs for treating a diabetic is twice as high as treating a patient without diabetes; in 2012, the US spent about $245 billion on diabetes (ADA). These costs covered direct care expenses such as medical supplies, payment to facilities, providers and medications as well as indirect costs such as loss of productivity, absenteeism from work and mortality (ADA). The CDC lists diabetes as the seventh leading cause of death in the US in 2014- type 1 was not differentiated from type 2. The World Health Organization (WHO) lists diabetes as number 8 out of the 10 leading causes of death globally in 2012. Most of the deaths related to diabetes stem from cardiac complications (Davison).

Although medical advances have increased the life expectancy of T1D over time, it is still lower than that of the general population (Distiller). Some studies have found a reduction in the lifespan of a type 1 diabetic to be as much as 10-20 years. According to the CDC, the average life expectancy at birth for a male is 76.2 years and for a female it is 80.1 years. In 2012, the University of Pittsburg published a study that found the lifespan of type 1 diabetic to be 69 years old. Despite modern advances in medicine and healthcare, it remains a difficult disease to manage due to the fact that these individuals are diagnosed at such young ages (Distiller).

Unlike type 2 diabetes that is largely preventable and usually diagnosed at a later stage in life, T1D can start to have detrimental effects on the body during the earliest stages of life.

While newer studies are exploring other possible sources of T1D, science still remains unsure of its cause or why it is distributed the way it is among the population. In the early parts of the century, children with T1D were not expected to live more 3 to 4 years beyond age of diagnosis (Distiller, University of Pittsburg). Now, those odds have changed and the prevalence of adults with this disease has grown steadily, especially over the past 40-50 years. White children have a higher prevalence of the T1D, but they also have better long term outcomes when compared to blacks or Hispanics. Low socioeconomic status impacts how the disease is managed, but it does not seem to be directly or indirectly linked to a positive diagnosis. Modern research is headed in the right direction by looking to find sources of causality as other socio-demographic factors do not point to any one source.

	Total points	Points earned	Comments
Content:			
Paper includes brief description of the condition and its risk factors	5	**5**	
Paper describes distribution by person (using proportions and rates)	5	**5**	
Paper describes distribution by place (using proportions and rates)	5	**5**	
Paper describes distribution by time (using proportions and rates)	5	**5**	
Paper accurately summarizes incidence, mortality and/or prevalence data	5	**5**	
Paper cites 10 or more peer-reviewed articles	5	**5**	
Citations are appropriate; paraphrasing is used, rather than direct quotes	5	**4.5**	Citation style is more appropriate for social science papers. If not using AMA style, you should use in-text citations that include at least the author and year.
Writing:			
Sentences in paper are clear and well-written (few grammatical errors or typos)	5	**5**	
Paragraphs contain topic sentences, and develop one main idea using supporting details	5	**5**	
Paper is organized with a clear introduction, main body, and conclusion	5	**5**	
Total	50	**49.5**	

Your country has a universal health coverage system. However, are there services that are not covered, or only partly covered, under that system? If so, what are they? Are there any individuals or groups who are not covered under your system? Please specify the individuals and groups. How does this compare with the U.S. health care system?

Despite Germany having a universal health coverage system, a service not necessarily offered by statutory health insurance (SHI) is long-term care. Long-term care benefits are dependent upon individual care needs and certain maximum amounts, thus pushing individuals to purchase supplemental long-term care insurance. Both home care and institutional care are provided almost exclusively by private not-for-profit and for-profit providers (Blumel, 2012). In addition to this service not being covered, "Germany ceased coverage of over-the-counter drugs as a means of cost control in 2004" (Bodenheimer & Grumbach, 2011, p. 172).

Under the universal health coverage system, certain groups are not covered. Firstly, coverage is only universal for all legal residents. Undocumented immigrants are only covered by social security in cases of illness (Brown, 2012). Secondly, military personnel are not covered. They are, however, covered through special state programs (Schabloski, 2008). Thirdly, another group exempt from SHI is civil servants. Civil servants are refunded part of their healthcare cost through their employer (Blumel, 2012). Lastly, children are excluded from the social insurance plans. They are, however, funded by subsidies derived from federal taxes (Schabloski, 2008).

In comparison, the United States does not offer universal healthcare coverage. The United States is, however, making steps towards universal healthcare through the enactment of President Obama's Affordable Care Act.

Commented [A1]: GRADE: 7/7

Great paper! I am not including a grading rubric since it would pretty much just be "YES" checkmarks down the line.

HOWEVER, please do read the comments that I made in the "comments" of this draft. Just because you did not lose points on things this time, does not mean it won't happen next time! Things like the overquoting, and the odd 2003 vs. 2010 citation WILL cost points next time.

Commented [A2]: THANK YOU for your consistent use of thesis statements!

Commented [A3]: Throughout: There is too much direct quoting! Each time you start to quote text, think about whether it is something that you can say in your own words or if it is such a unique articulation that HAS to be in the words of the original authors. The example I sometimes give to students is that Martin Luther King Jr.'s "I have a dream" speech should probably be preserved in its original form in a quote, rather than paraphrased. However a statement like, "carrots in the control group contained surplus beta-carotene" is not so special and can probably be paraphrased.

For individuals who cannot afford private health insurance or who do not qualify for insurance through their employers, Medicaid and Medicare was signed into law in 1965. Like Germany, long-term care is not offered through the Medicare program; thus driving participants to apply for supplemental managed care plans or Medicaid (Bodenheimer & Grumbach, 2012).

In regards to providing coverage for children, the United States has made excellent strides. One such success lies within SCHIP, State Children's Health Insurance Program, which increased coverage for children by expanding eligibility requirements to two hundred percent of the federal poverty rate (Bodenheimer & Grumbach, 2012).

As a final point of comparison, just like Germany, the United States does not provide medical coverage to illegal immigrants.

Who contributes the money to pay for covered health services (services under the national health plan)? What percentages of total national health care expenditures, or contributions to the health funds (whichever numbers are most readily available to you) come from which sources? Where do the monies reside: central public funds, local public funds, employer funds, or a combination of funds? How does this compare with the U.S. health care system?

Germany has a universal healthcare system covering 85 percent of the population. In 2010, SHI spending accounted for 57.6 percent of the total health expenditure and the total public spending on health constituted 77.1 percent (Brown, 2003). This system, led by a government-run health fund, relies primarily on work-based social insurance contributions (Brown, 2003). Additionally, Schabloski (2008) states:

> Consumers pay both their solidarity tax and health insurance premium directly to the applicable sickness fund. The sickness fund then remits the solidarity fund contribution to the government health fund, while the solidarity fund distributes premium subsidies to the sickness funds (p.13).

Commented [A4]: You should have made the point that Medicaid and Medicare are only for certain groups (remember the pugs!).

Commented [A5]: How are you able to cite 2010 data from a source from 2013?

Consumers' contributions to sickness funds by consumers are set at a uniform rate (Blumel, 2010). Insured employees contribute 8.2 percent of their gross wages, and employers- or pension funds- pay an additional 7.3 percent. The combined maximum contribution is an estimated $759 a month (Blumel, 2010). In addition to employee and employer contributions, Blumel (2010) reported:

> Unemployed people contribute to SHI in proportion to their unemployment entitlements; for the long term unemployed the government contributes on their behalf. In 2010, these tax transfers amounted to $19.7 billion, approximately 8 % of total SHI revenue (p.2).

While healthcare in Germany is financed primarily though SHI, the United States has multiple ways to pay for healthcare. Such payments include: out-of-pocket, individual private insurance, employment-based private insurance, and government financing. Government financing, which covers 30% of the population, accounts for 47% of national health care expenditures (Bodenheimer & Grumbach, 2012).

Commented [A6]: You really like colons. I just wanted to point that out, in case you were not aware of it!

Government financing in the United States is through Medicare and Medicaid. In 2009, Medicare and Medicaid expenditures totaled $501 and $374 billion, respectively (Bodenheimer & Grumbach, 2012). Medicare is broken up into several parts, all of which have separate financing. Medicare Part A, i.e., hospital insurance, is financed largely through social security taxes. Both employees and employers pay 1.45% of wages and salaries to Medicare, the self-employed pay 2.9%, and those with incomes greater than $200,000 pay 2.35%. Medicare Part B, which covers outpatient services, is financed by federal taxes and monthly premiums made by beneficiaries. Medicare Part D, i.e., prescription drug coverage, is also paid for by federal taxes and monthly premiums from beneficiaries. Medicaid is run by the states and funded by both federal and state taxes. Recent provisions in the Affordable Care Act will result in an increased

amount of individuals covered by Medicaid, resulting in a federal government cost of over $40 billion per year (Bodenheimer & Grumbach, 2012).

Who pays out the money to providers, i.e. which institutions? Would you consider this to be a single payer system of payment, or not? Explain your conclusion. How does this compare with the U.S. health care system?

In Germany, rather than paying physicians directly, sickness funds pay a global sum each year to the physicians' association in their region (Bodenheimer & Grumbach, 2011). In turn, regional associations pay physicians on the basis of a detailed fee schedule. The payments are based on a risk adjusted capitation with increased payments for populations with greater health problems. Hospitals are paid through "diagnosis-related groups, which include the salary of hospital-based employees" (Bodenheimer & Grumbach, 2011, p 172). In Germany, SHI offers over 145 sickness funds and there are over 43 public health insurance companies (Blumel 2010).

In the United States, providers can be paid by: private health insurance, government-based insurance, put-of-pocket and employment-based health insurance (Bodenheimer & Grumbach, 2011). Physicians can be reimbursed through a variety of payment systems. Physician payments include: fee-for-service, payment-per episode-of-illness, capitation, and payment-per-time. Hospitals can also be paid in a variety of ways, including: fee-for-service, payment-per-day, payment-per-episode-of-hospitalization, payment –per-patient, payment-per-institution (Bodenheimer & Grumbach, 2011).

Neither Germany nor the United States have single payer systems. They are not considered single payer systems because: money is not put into one fund, a single payer is not reimbursing providers, private health insurance is an option, and one specific health insurance is not accepted by all providers.

Is there any private health insurance in your country? Who buys it and for what reason? What percentages of total national health expenditures are associated with private insurance? How does this compare with the U.S. health care system?

There is private health insurance in Germany. Once enrolled in private insurance, universal health coverage through SHI is discontinued. Ten percent of Germans, with incomes more than 49,500 Euros per year, choose voluntary private insurance (Blumel, 2012). The advantage of being enrolled in private health insurance is that the insurers pay higher fees than sickness insurance, thus ensuring policyholders receive preferential treatment (Bodenheimer & Grumbach, 2011). The percentage of total national health expenditures associated with private insurance is 9.3 percent (Blumel, 2012).

Commented [A7]: Not sure what is the numerator and what is the denominator?

The United States also has private health insurance. Five percent of the population is enrolled, a low percentage that is the result of high administrative fees. Overall, the annual percentage of total national health expenditures associated with individual private insurance is only 3 percent (Bodenheimer & Grumbach, 2011, p. 6). Reasons as to why individuals in America may buy private insurance include: not being eligible for government financing, inability to afford out of pocket payments, and not qualifying for employment-based insurance. Similar to Germany, individuals with private health insurance receive preferential treatment and better service than those with government financed insurance.

How will the ACA make the U.S. health care system more similar or dissimilar to that of your comparison country? Be specific about which provisions of the ACA you are referring to, and cite your sources.

Although, the Affordable Care Act will not automatically make healthcare universal like Germany, certain provisions will make American healthcare similar to the healthcare in

Germany. Provisions that will make healthcare similar include, but are not limited to: improvements in coverage and improvements in care.

A provision that pushes for expanded and affordable coverage includes the mandate that everyone is to have health coverage. To aid this expansion: coverage is being extended to the age of 26 for children under their parents health insurance, any pre-existing condition exclusions for children is terminated, and -dependent upon states approval -Medicaid eligibility will be expanded (U.S. Department of Health & Human Services, n.d.).

Commented [A8]: Unclear; also provisions can't "push".

Germany provides free preventive care for all individuals under SHI (Blumel, 2012). An improvement in care, through the Affordable Care Act, is the coverage of preventive care at no cost. However, the preventive services provision applies only to people enrolled in job-related health plans or individual health insurance policies created after March 23, 2010 (U.S. Department of Health & Human Services, n.d.).

National Medicaid Expansion: A Case for Universal Buy-In

Congressional Testimony Presented by

INTRODUCE THE GROUP

We are a student group presenting as part of the Public Health and Health Care Policy and Management course at the CUNY School of Public Health. We represent a wide variety of expertise on healthcare, public health, and public health policy. Throughout this course, we have studied the history, healthcare systems, policy-making processes, and guidelines that govern general public health and healthcare in this country. We are pleased to be here today to speak about the importance of expanding Medicaid services and coverage throughout all 50 states as originally mandated by the Affordable Care Act. We will address the positive and negative repercussions of Medicaid expansion from a public health perspective and will present some solutions to the oft-debated problems that such a policy could have.

STATING THE ISSUE

In our expert opinion, the states, federal government and the people of the US will benefit from getting more states to participate in Medicaid expansion. Since the Supreme Court ruling in 2012, all states have the power to decide to either adopt, partially adopt, or reject Medicaid expansion under the Affordable Care Act.[1] If states continue to refuse Medicaid expansion, insurance coverage gaps will emerge for individuals and families who fall between 50% and 100% of the Federal Poverty Levels (FPL),[2] and access to healthcare will decrease. The issue at hand is *how* the federal government can encourage more states to adopt expansion. From our perspective, the federal government's Medicaid expansion efforts should include: (1) Publishing financial comparisons of state health care budgets with and without Medicaid expansion - this will help state legislatures to see the value in participation;

(2) Emphasizing added cost for states if people use state-paid emergency services and uncompensated care because preventative care was out of reach due to lack of insurance coverage; (3) Communicating that all individuals will see reduced fees for insurance and health care if the Medicaid gap is eliminated; (4) Highlighting health care as a basic human right that governments are morally obligated to provide for their citizens; and (5) Accentuating the unique opportunity for states to start expansion *now*, while the federal government will cover all costs for the newly insured, and potentially offering longer duration of full federal financing for early acceptance of the expansion.

PROVIDE BACKGROUND

Medicaid was created as a part of the Title XIX Social Security Amendment of 1965.[3] Before the passage of the Patient Protection and Affordable Care Act (ACA), Medicaid eligibility and extent of coverage were chiefly determined by states, which had "substantial discretion to fashion eligibility and benefits to their liking"[4] though the program is financed jointly by states and the federal government, with the federal government's contributions known as the Federal Medical Assistance Percentage (FMAP).[3] FMAP is determined by the per capita income of the state, with between 50-75% of costs for those insured by Medicaid covered by the federal government.[3, 4] Generally, before the ACA, Medicaid offered "federal funding to States to assist pregnant women, children, needy families, the blind, the elderly, and the disabled in obtaining medical care"[1] with coverage for adults with children typically set below 100% the federal poverty level (FPL) and no coverage for adults without children.[5] With the passage of the

ACA, however, under Title II of the Act, eligibility for Medicaid was expanded federally to include "all individuals and families with incomes below 133 percent of the federal poverty level…"[4] a requirement that was to take effect in 2014.[5]

In 2011, the Supreme Court of the United States (SCOTUS) granted cert to hear a case formerly decided in the District Court for the Northern District of Florida, *National Federation of Independent Business* et al. *v. Sebelius, Secretary of Health and Human Services* , et al., in which fourteen states were joined by other plaintiffs in arguing, among other things, that "the Medicaid expansions were unconstitutionally coercive…"[6] SCOTUS ruled that the "threatened loss of over 10 percent of a State's overall budget is economic dragooning that leaves the States with no real option but to acquiesce in the Medicaid expansion" and that the "Medicaid expansion thus violates the Constitution by threatening States with the loss of their existing Medicaid funding if they decline to comply with the expansion."[1] Thus the Court inaugurated the current state of affairs for Medicaid in the U.S. in which 31 states, including the District of Columbia, have adopted the provisions of Medicaid expansion and 20 have not (although the issue is still under discussion in some states), (Figure 1) creating a "coverage gap" of almost 3.1 million people who are not "poor enough" to qualify for Medicaid in their state but not "rich enough" to qualify for tax credits provided by the ACA to help purchase coverage through the healthcare exchanges.[2] (Figure 2)

Those in the coverage gap are predominantly non-disabled adults without children (76%), as this population did not ever qualify for Medicaid under pre-ACA eligibility criteria, and the coverage gap has slightly more women than men (53% vs. 47%).[2] 40% of those in the coverage gap live in a family with a full-time worker, whereas 39% do not.[2] For the 1.5 million in the coverage gap who are working full-time, the majority are employed in the agricultural or service sectors (55%), 14% in professional or public administrative service, 17% in education and health services, and 8% in manufacturing or infrastructure services.[2] Incredibly, a fourth of those in the coverage gap reside in Texas, with 18% in Florida, 10% in Georgia, and 8% in North Carolina.[2]

(Figure 3) Those residing in states in the South are overwhelmingly disproportionately represented in the coverage gap (90%) as 11 of the 20 states that chose not to expand their coverage are Southern states, more poor uninsured in the U.S. are residents of Southern states, and Medicaid eligibility in these states generally is more limited than states in other parts of the country.[2] Blacks and Hispanics are also disproportionately represented in the coverage gap: 30% are Hispanic, 22% are Black, and 44% are White.[2] (Figure 4)

The ACA stipulates that from 2014-2016 those newly insured under the Medicaid expansion would have 100% of their costs covered by the federal government, a percentage that would gradually lessen until 2020, whereupon 90% of costs for those who newly qualified for Medicaid coverage under its ACA-mandated expansion would be covered indefinitely.[4] According to the Kaiser Family Foundation, though estimated costs for states that have not expanded Medicaid would increase by $38 billion dollars, from $971 billion to a little over $1 trillion dollars between 2015-2024, (Figure 5) this figure does not adjust for the estimated $266 billion-worth of care expected to be utilized by those excluded from Medicaid due to their state of residence opting out of the Medicaid expansion, which will thus will go unreimbursed.[7] Were Medicaid expansion adopted in these states, however, the burden of uncompensated care instead would be $185 billion between 2015-2024.[7] Because of variability in the amount of the burden each state would bear and difficulty in estimating these costs, the Kaiser Family Foundation estimates "that states would see between $5 and $10 billion in uncompensated care savings over the next 10 years" were they to opt into Medicaid expansion.[7] In a review of this issue, the Pew Charitable Trust points out that by not expanding Medicaid the majority of the states who have opted out are putting an added burden on their citizenry, as millions of dollars in local taxes go to local hospitals to help pay for uncompensated care for those who are indigent.[8] Overall, several studies have found "Medicaid expansion would help,

not hurt state budgets…"[7] For example, "Washington State has projected net savings of $79.0 million in state fiscal year 2014 and $258.7 million in 2015 due to expansion…[and] that Kentucky would spend $919.1 million less between state fiscal years 2014 and 2021 due to Medicaid expansion."[7]

Most importantly, however, residents of states that have not expanded Medicaid will face the hardships inherent in not having access to medical insurance, including having severe difficulties or being unable to obtain preventative care, screenings, or follow-up care for chronic illnesses, and being at an increased risk of medical bill-related debt and bankruptcy.[9] In addition, residents of states opting out of Medicaid expansion also will not be able to benefit from any additional programs being implemented by Medicaid to support housing and other supportive services, given Medicaid's "increased attention on the relationship between health and housing" and that "while Medicaid funds cannot be used to pay for room and board…[they] can support a range of housing-related activities, including referral, support services, and case management services that help connect and retain individuals in stable housing."[10] Thus, states and their citizenry, especially those currently falling into the Medicaid coverage gap, have much to lose in terms of health, financial solvency, and overall wellbeing by opting out of Medicaid expansion. **DISCUSS OPPOSING VIEW AND/OR PRIOR SOLUTIONS**

Some states are adamantly opposed to Medicaid expansion. Reasons given for opting out include: state fears regarding a greater dependence on federal financial support, increases in taxes that some assert must be made to raise the additional capital to cover expansion, that expansion will broaden health coverage but provide those covered with few to no healthcare options or quality doctors, increases in the cost of private health care, and that it will

necessitate restrictions in other state-funded services, such as education, transportation, and in-state tuition.[11]

Medicaid expansion would require a bit of funding from states initially, but studies indicate that the long-term benefits, both financial and health-related, far outweigh the short-term costs.[7, 12] The Congressional Budget Office estimates that "the federal government will bear nearly 93 percent of the costs of the Medicaid expansion over its first nine years (2014-2022)...[which] represents a 2.8 percent increase in what…[states] would have spent on Medicaid from 2014 to 2022 in the absence of health reform..."[12] Moreover, this 2.8 percent increase in costs is "significantly *overstate[d]*," for it does not take into account the financial savings that will result from lowering the number of uninsured in these states.[12] For example, according to the Urban Institute, a D.C.-based public policy think tank, state financial savings generated as a result of more people being insured were all states to adopt Medicaid expansion "will total between $26 and $52 billion from 2014 through 2019."[12, 13]

Strategies that successfully have been employed in states that were resistant to adopting Medicaid expansion or who are at least seriously considering Medicaid expansion currently are grassroots organizing, unilateral executive actions, political compromise, and increasing individual participation. Grassroots organizations such as the non-profit Community Catalyst are fighting for the expansion of Medicaid coverage, even developing a "Medicaid Expansion Campaign Planning Guide."[14, 15] Unilateral executive actions have offered prior solutions for expanding Medicaid in Kentucky, in which Governor Steve Beshear mandated the creation of the Kentucky Health Benefit Exchange ("Kynect") and expansion of Medicaid through executive order in spite of opposition from the state legislature and court challenges to his authority to do so.[16] The programs have been deemed a success and are very popular.[17] Political compromise proved effective in Arkansas, where flexibility in the

implementation of Medicaid expansion clauses proved necessary in appeasing conservatives in order for the state to adopt expansion.[18] Finally, increasing enrollment or "take-up" among those eligible for Medicaid as soon as expansion is adopted by a state will ensure that the state will maximize the money it receives for coverage of the newly insured, who will no longer be utilizing costly uncompensated care.[19]

STATE GROUP POSITION

All 50 states should participate in Medicaid expansion. The benefits to expanding Medicaid far outweigh the costs, both financially and in terms of health outcomes. Many states opposed erroneously anticipate expanded Medicaid coverage causing a significant and unnecessary increase in taxes and costs; thus, the federal government should educate misinformed state legislatures and governors on what impact increased coverage will have on health and state financial solvency in the long term.

Texas is one state that is opposed to expanding Medicaid. In the Dallas region, property owners paid $467 million last year in taxes, a portion of which went to providing healthcare services at a local hospital that provides services to the indigent and uninsured.[8] If the state of
Texas expanded Medicaid, property owners likely would owe significantly less in taxes because the federal government would be providing money to cover the portion of these taxes that currently are being used for uncompensated care.[8] In addition, with more residents covered for medical services they otherwise cannot afford, there would be less emergency room usage for non-emergencies and more usage of preventative care.[20] People without insurance would be able to access primary care services and see a physician for regular check-ups, keeping them out of emergency rooms for routine care as well as preventing emergencies due to untreated conditions.

Expanding Medicaid will influence health and healthcare in myriad ways and some of the many examples of its benefits are provided here. First, more individuals covered under Medicaid will allow new mothers to have access to prenatal services. Women are more likely to utilize prenatal services if they are more accessible, and thus Medicaid expansion would likely yield more prenatal appointments.[21] Fewer missed appointments and increased education improves birth outcomes related to healthy birth weight.[21] Because most children are covered under parental insurance plans, improved children's health will inevitably follow with parental coverage.[22] In addition, with health insurance coverage comes peace of mind and security. If people are insured, they are less likely to declare bankruptcy or be forced to choose between paying medical bills and other important expenses such as food, rent or transportation.[23] Medicaid expansion has the potential to lead to an improvement in the self-reported or perceived health status of individuals.[23] Perhaps the most obvious benefit to expanding Medicaid coverage is the increase in the number of people who would have health insurance. It is estimated that an additional five million people will be covered.[2] Additionally, expanding insurance coverage will help individuals gain access to lifesaving medications they otherwise could not afford. For example, a person with HIV or AIDS would be able to receive antiretrovirals to help control

their viral load and symptoms.[24] Access to drugs and medications improves quality of life, as people feel more "in control" of their medical conditions and can reduce symptoms or interferences with daily life. Lastly, Medicaid expansion will inevitably increase demand for services. More medical staff and allied health professionals will be needed in the workforce to meet the need for services, potentially stimulating the economy.[20]

Increasing insurance coverage via the expansion of Medicaid services is not only necessary from a physical health and financial standpoint, but also from a moral viewpoint.[25]

For the most part, people would agree that it is morally correct to help those who are in need and those who have less. In almost every other developed country around the world, healthcare is a basic right, not a privilege.[25] If the United States expands Medicaid coverage, it will demonstrate an effort to adopt an increasingly moral, compassionate and caring culture.[26] According the
United Nation's Universal Declaration of Human Rights, health care is a basic right for all.[27] Medicaid expansion will bring the United States closer to upholding this ideal. Thus, for health-related, financial and moral reasons, states should nationally expand Medicaid coverage.

SUMMARY

The ultimate objective of the Affordable Care Act was to provide access to healthcare for all U.S. citizens. One of the ways in which this would have been accomplished was through the most extensive expansion in Medicaid eligibility since 1965. To date, only 29 states have adopted Medicaid expansion, but we have outlined fundamental educational and action tools that hopefully will propel the remaining states to embrace this initiative. Claims that expansion will result in economic burden is simply unfounded. On the contrary, it will serve as a much-needed financial boost for states, channeling billions of federal dollars into their economies and stimulating job growth in the health sector. The federal government will bear 100% of Medicaid expansion costs through 2020 and no less than 90 percent thereafter. Additionally, Medicaid expansion will result in $18.3 billion in savings through 2022 in uncompensated care costs, an expense that is currently being shouldered by state and local governments.[28] So then, allow us to pave the way for Medicaid expansion. The key question to ask is not, "Can we afford to?" but rather, "Can we afford not to?"

CITY UNIVERSITY OF NEW YORK

HUNTER
The City University of New York

Brooklyn College

LEHMAN COLLEGE

The content of this Program Manual Supersedes that of all earlier Program Manuals

Note to Students and Faculty

This manual is designed to give Doctor of Public Health (DPH) Program students the information they need to successfully complete the doctoral degree and faculty the information they need to guide their students. The Graduate Center (GC) Student Handbook describes all relevant policies and is the official document for students at the GC. Students and faculty are encouraged to review that handbook as well as this manual and are expected to be familiar with all relevant GC and DPH policies.

Doctor of Public Health (DPH) Program
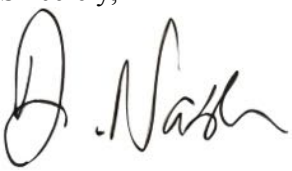
Letter from the Executive Officer

Dear Students & Faculty:

I am pleased to present you with this updated DPH Program Manual for students and faculty in which we provide an overview of the DPH program and its requirements.

The CUNY DPH Program aims to:



- Prepare public health researchers to rigorously generate and apply scientific evidence to improve the health of populations;
- Provide an interdisciplinary education in which graduates are capable of drawing on health-related theory and knowledge from multiple disciplines;
- Foster multilevel research and intervention - i.e., understanding and addressing public health issues at the individual, household, community, and policy levels; and
- Pay special attention to new and existing linkages between research, practice and policy with relevance to public health.

The mission of CUNY's DPH program is to:

- Prepare students to provide leadership in public health as researchers, managers, policy makers, advocates, and faculty in academic institutions;
- Contribute new knowledge to understanding the multi-level determinants of population health; and
- Assist communities, governments, and organizations to conduct research and interventions that promote health and prevent disease in populations.

The faculty and administration of the DPH Program work hard to ensure that the training and learning experiences of DPH students in our program are both challenging and rewarding. We want and need any help, suggestions, or feedback you can give us in order to realize our vision of a program dedicated to education leading to impactful research and action for public health. We look forward to working with you in this important phase of your training and career in public health!

Sincerely,

Denis Nash, PhD, MPH
Executive Officer, Doctor of Public Health Program, Graduate Center

Overview of the Doctor of Public Health (DPH) Program and the City University of New York (CUNY)

The Doctor of Public Health (DPH) Program

The Doctor of Public Health (DPH) program at the Graduate Center (GC) prepares students to be researchers, teachers, practitioners, and managers who can meet the public health needs of populations, including the population of New York City and around the world. It prepares future faculty members for the growing number of academic training programs in public and community health, and it prepares leaders for the public health workforce.

Courses are taught by doctoral faculty from the Public Health Programs at Brooklyn, Hunter and Lehman Colleges and the Graduate Center. Additional DPH faculty are from other participating CUNY campuses. By drawing on faculty from throughout CUNY, the DPH program offers comprehensive interdisciplinary perspectives on public health and related fields.

The CUNY DPH Program carries out teaching, research and service to create and sustain population health and to promote equitable, efficient, evidence-based solutions to pressing population health problems around the world. Informed by the values of public health, social justice and democracy, the DPH Program seeks to become a platform for collaboration to:

- Examine the causes of and solutions to pressing health problems;
- Engage the public in an ongoing dialogue on public health policy;
- Develop a workforce with the capacity to plan and implement health-promoting programs and policies.

Several themes define the unique approaches that distinguish the CUNY DPH Program. These include a focus on:

- Multi-level analysis, research and intervention;
- Understanding and improving living conditions and health to reduce inequities;
- An interdisciplinary blend of public health and social, behavioral and natural sciences;
- Practice-based research;
- Collaboration with government agencies and public health institutions (e.g. DOHMH, DOE, HHC);
- Diversity -- CUNY programs, students, faculty.

Specialization Tracks

- Community, Society and Health
- Epidemiology
- Environmental and Occupational Health
- Health Policy and Management

Qualified applicants in any track may also apply to an optional concentration in Public Health Nutrition or Maternal, Child, Reproductive and Sexual Health (MCRSH).

The City University of New York (CUNY)

The City University of New York provides high-quality, accessible education for more than 269,000 degree-credit students and 247,000 adult, continuing and professional education students at 24 campuses across New York City.

CUNY School of Public Health

The CUNY School of Public Health is committed to teaching, research and service that creates a healthier New York City and helps promote equitable, efficient and evidence-based solutions to pressing population-based health problems around the world.

Employing the resources of the nation's largest and most diverse urban university, the CUNY School of Public Health seeks to create new models of public health education for the 21st century. The school's consortial campuses (the Graduate Center and Brooklyn, Hunter, and Lehman Colleges) bring together students and faculty from throughout CUNY's academic and professional programs, engaging with practitioners, researchers, activists, community residents and policymakers from many sectors of New York City.

Vision

Promoting health and social justice in New York City and across the globe through innovation and leadership.

Mission

The mission of The CUNY School of Public Health is to provide a collaborative and accessible environment for excellence in education, research, and service in public health, to promote and sustain healthier populations in New York City and around the world, and to shape policy and practice in public health for all.

The Graduate Center (GC), CUNY

The Graduate Center (GC) is the principal doctorate-granting institution of the City University of New York. Offering more than thirty doctoral degrees from Anthropology to Urban Education, and fostering globally significant research in a wide variety of centers and institutes, the GC provides rigorous academic training in the humanities, sciences, and social sciences.

Through its extensive public programs—lectures, conferences, performances, and exhibitions—the Graduate Center contributes to the intellectual and cultural life of New York City and affirms its commitment to the premise that knowledge is a public good.

Brooklyn College, CUNY

Brooklyn College currently serves more than 17,000 students in its undergraduate and graduate program. Founded in the 1930s, Brooklyn College is an integral part of the civic, urban and artistic energy of New York and uses the entire city as a living classroom that broadens our students' understanding of the world around them.

Hunter College, CUNY

Hunter College is the largest college in the City University of New York (CUNY). Founded in 1870, it is also one of the oldest public colleges in the country. More than 23,000 students currently attend Hunter, pursuing undergraduate and graduate degrees in more than 170 areas of study.

Lehman College, CUNY

With more than 60,000 alumni and 12,000 students, Lehman College serves the Bronx and surrounding region as an intellectual, economic, and cultural center. The College is named after Herbert H. Lehman, who was governor of New York State, a U.S. Senator, and an internationalist. His values of dedicated public service continue to guide the College today.

Other CUNY Units

Several other CUNY campuses including the Baruch School of Public Affairs, the Sophie Davis School of Biomedical Education at The City College of New York, and health programs at Queens College and elsewhere contribute faculty to the CUNY DPH program.

Doctor of Public Health (DPH) Program Governance
Summary

The DPH program operates under bylaws established by the program faculty and approved by the CUNY Board of Trustees. The governance structure of the program consists of a single Executive Officer (EO), a single Deputy Executive Officer (DEO), an Assistant Program Officer (APO) and four Track Coordinators (TCs). There are five standing committees which serve to govern the program: the Executive Committee, the Elections Committee, the Faculty Membership Committee, the Curriculum and Examinations Committee, and the Admission and Awards Committee. The DPH program is represented at the Graduate Center by membership in the Graduate Council and the Doctoral Student Council.

The Executive Officer, assisted by the DEO and APO, is responsible for overall administration and oversight of the academic affairs of the program in accordance with the policies established by the standing committees, the program faculty, the Graduate Council of the GC and the CUNY Board of Trustees. The EO reports to the Provost of the Graduate Center and the Dean of the CUNY School of Public Health.

The Track Coordinators are responsible for the day to day operations of the tracks (i.e., academic operations, faculty advising). The TCs report to the EO and DEO.
See the complete DPH Program Bylaws on Blackboard.

The Executive Committee: This is the main policy-making committee for the DPH program. It is chaired by the EO, and has as members: the four TCs, one faculty member with a primary appointment at the GC (unless the EO has one), one faculty member who is not from a consortium college, three DPH students elected by their peers, and additional faculty (where necessary) to ensure representation from all of the SPH consortial campuses not represented by the EO and TCs. The minutes from the meetings of this committee are available to the public.

The Elections Committee: This committee is responsible for coordinating and overseeing all DPH program elections (both committee and TC). It has five members: the EO, one elected faculty from each of the three consortial colleges not represented by the EO, and one student member.

The Faculty Membership Committee: This committee recommends faculty members to the Executive Committee for consideration for appointments to the DPH faculty and formulates procedures for making new faculty appointments. It has seven members: The EO, four faculty members (at least one from each concentration) and two students.

The Curriculum and Examinations Committee: This committee is responsible for reviewing curriculum and recommending changes and for recommending procedures and standards for the conduct of the first and second exams. It has seven members: the EO, one faculty member from each concentration, and two student members.

The Admissions and Awards Committee: This committee recommends to the Executive Committee procedures and standards of admission and awards for the program and the concentrations. It consists of eight members: the EO, the four TCs, a GC based faculty member and two student members.

DPH Participation in CUNY SPH Governance - Summary

The governing body of the CUNY SPH shall be the Faculty and Student Council (FSC). The Faculty and Student Council shall consist of the Dean, the Associate Dean for Academic Affairs, the Campus Directors, all Core Faculty, two affiliated faculty, two staff in the title series HEO or CLT, and five students (one elected from students in each of the consortial campuses, except that two are elected from Hunter College, one from the undergraduate program and one from the masters programs). The FSC meets three times per semester.

Elections for all vacant positions shall normally be held in May prior to the semester in which service begins.
The FSC is responsible for: formulating educational policy and developing standards for admissions, academic performance and degree requirements for students consistent with the by-laws and policies of the CUNY Board of Trustees and other CUNY policies and procedures; reviewing programs and curricula; recommending to the Dean and the CUNY Board of Trustees the granting of undergraduate degrees, graduate degrees and honorary degrees to qualified candidates; considering any other academic matters and making recommendations to the Dean and the CUNY Board of Trustees; establishing or abolishing such standing or temporary committees as it deems necessary and considering reports and recommendations of those committees; and recommending revisions to the SPH Governance Plan.
See the complete CUNY SPH Bylaws and Governance Change May 22nd 2013, both on Blackboard.

DPH Participation in GC Governance - Summary

The Graduate Council is the academic governing body of The Graduate School and University Center, and the Bylaws of Graduate Council set forth its rules of governance. Members include representatives of the faculty, doctoral students, and administration. The President of The Graduate Center is the Chair of Graduate Council. The Executive Committee of Graduate Council formulates the agenda and brings actions to Graduate Council, which meets four times each year. Graduate Council is concerned with such matters as curriculum, degree requirements, standards of admission, academic performance, and program governance. Much of the work of Graduate Council is done through its standing committees. Elections of faculty and student program representatives to Graduate Council are required to be conducted annually, before April 1, by an election committee in each program; the basic formula for the election is one faculty and one doctoral student representative for each hundred or fewer matriculated doctoral students (GC Bylaws 2.1A–D).
If a student is not elected as the Graduate Council representative, the Doctoral Student Council representative is the default.

Doctoral Students' Council (DSC) – Summary

The Doctoral Students' Council and its officers are charged with representing student interests before the administration and external bodies.

In addition to informal and ongoing communications, the DSC officers meet with members of Graduate Center administration to report activities and exchange information.
Students may have issues presented by their DSC representatives or the DSC Executive Committee before the Doctoral Students' Council, or can personally address the Council by requesting to be put on the DSC agenda for an upcoming meeting. This may, in turn, result in discussion or actions taken within the DSC or between the DSC and the administration.

The DSC members also act as advocates for graduate student interests at the Board of Trustees, University Student Senate, University Faculty Senate, New York State Assembly, the Mayor's Office, and with Graduate Center administration.
Each spring, the DSC conducts elections for its representatives and student representatives to specific Graduate Center bodies. The nominations and elections process is held online; no paper ballots are mailed.
To make a nomination(s) for Program Representative, Advocate Advisory Board, OpenCUNY Board, At-large Representative, the Disciplinary Panel, Student Academic Appeals Officer, and the Student Elections Review Committee, see page 78.

Satisfactory Progress, Academic Honesty, Registration, Levels, and Advising

Satisfactory Progress

The Graduate Center requires its faculty to assess each semester whether students are making satisfactory progress. Those who are not making such progress will be asked to develop a plan to correct any shortcomings or will be asked to leave the program.

A DPH student is deemed NOT to be making satisfactory progress if she or he:

1. Has completed 36 credits and not passed the First Examination;
2. Has a cumulative grade point average below 3.00;
3. Has not completed the Second Examination within 48 credits of matriculating;
4. Has not completed the degree in six years*;
5. Has accumulated more than two open grades ("INC," "INP," "NGR," "ABS," and "ABP");
6. For students that do not have an MPH degree, not having completed all five core Master's level public health courses prior to enrolling in the second year of coursework.

If a student is found not making satisfactory progress a hold will be put on their record. A "SatProg" report is generated by the GC Registrar Office and both the DPH program office and the student is informed of the reason for the hold. A plan is developed by the student, advisor, and TC. The EO is informed of the student's progress and that plan submitted by the EO to the Student Affairs Office. Upon approval of the plan by the Vice President of Student Affairs, it is then submitted to the Registrar and the hold is lifted.

*The summer semester is considered an additional semester. For example, if a student takes courses in the fall, spring, and summer semesters in one academic year, this is reported as three semesters in the total 12 semester (6 year) allotment to complete the degree.

Academic Honesty

The Graduate Center outlines a clear definition of Academic Honesty and the DPH program expects students to know and follow the CUNY Academic Integrity Policy. Both can be found in the GC Student Handbook as well as through this link to the GC Avoiding and Detecting Plagiarism guide.
http://www.gc.cuny.edu/CUNY_GC/media/CUNY-Graduate-Center/PDF/Publications/Student_Handbook_web.pdf?ext=.pdf

Registration
DPH students can register only after the Tracking Form is completed by the student and approved by their Advisor, TC and the EO. Students are responsible for ensuring that the form is reviewed and signed (electronic or physically) by the Advisor and Track Coordinator.

If you plan to register for:

- A course at another CUNY school that is not co-listed with a DPH program course (i.e. does not have a PUBH prefix).
  Students must submit a Permit Out form to the APO. The Permit Out form can be found on the GC Registrar webpage. Please note that each CUNY college has its own rules for permitting in and that additional steps apply for permitting out for summer courses.

- A course in another program at the GC that is not open to DPH students.
  All GC courses can be found on the Dynamic Course Schedule. Students must contact the instructor and request permission to register for the course. Please be aware that GC Program's set their own policies. Depending on the Program, the override will be set by the instructor, the APO, or the EO. The DPH administrators cannot set overrides for courses outside of the DPH program.

- PUBH 807 Practicum Project
  Students must fill out the Practicum Project Application available on Blackboard. Please see pages 12-14 of this manual. Students can register only after the application is approved.

- PUBH 861 Independent Study
  Students must fill out the Independent Study Application available on Blackboard. Please see page 17 of this manual. Students can register using a faculty-specific CRN* only after the application is approved.

- PUBH 891 Advanced Research Seminar II
  Students must have defended their Second Exam or have permission from the instructor and have the Second Exam defense scheduled within the first two weeks of the semester. Students must successfully defend the Second Exam to continue the course past the first two weeks of the semester. Please see pages 15, 39-46 of this manual.

- PUBH 900 Dissertation Supervision
  Students must inform the APO which faculty member you intend to study with. The APO will reply to you with a CRN* number. Please see pages 16, 47-70.

At this time, DPH students can register for Inter-University Doctoral Consortium courses, but can only register for courses listed or cross-listed within any of the consortium Graduate School of Arts and Sciences (GSAS). Please read the section Inter-University Doctoral Consortium in the GC Student Handbook for additional details. Fill out the Consortium Permit Out form and submit it to the APO for the EO's signature. The APO will then submit it to the Vice President for Student Affairs for approval.

*identifies a particular course and section offered for the semester.

Semester Course Schedules
Prior to each semester's registration period, the DPH program will distribute and post on Blackboard the DPH schedule that contains DPH course listings, suggested courses in other programs, and processes for registering.

The GC Dynamic Schedule is updated live by the GC Registrar.
https://ssb.gc.cuny.edu/prod/plsql/bwckschd.p_disp_dyn_sched

The DPH website is periodically updated with semester course listings.
http://www.gc.cuny.edu/Page-Elements/Academics-Research-Centers-Initiatives/Doctoral-Programs/Public-Health-DPH/Courses---Curriculum

Graduate Center Registrar
Refer to the GC Registrar webpage for Course Listings and Schedule, Academic Calendars, GC Publications (GC Bulletin; Student Handbook), and important downloadable forms.
http://www.gc.cuny.edu/Prospective-Current-Students/Current-Students/Registration

Curriculum Changes Over Time
Students should refer to the GC Bulletin or pages 9-29 for the requirements by their year admitted. Hard copies of previous year's Bulletins are available in the Library and Registrar's office. However, if the change is more rigorous, then the student is grandfathered into the previous curriculum. If the change is less rigorous, it overrides the previous curriculum. Finally, if a student left the program and was readmitted (not including formal leaves of absence) the Bulletin from when the student is readmitted is the one they should follow.

Status
All students are required to be in status each semester. This means that students must either be registered or be on an approved leave of absence. Individuals who are not in status will be considered withdrawn from the Graduate Center and an application for remittance must be submitted.
http://www.gc.cuny.edu/CUNY_GC/media/CUNY-Graduate-Center/PDF/Forms/Readmission.pdf?ext=.pdf

Levels II and III
DPH students reach Level II after passing the completion of 45 credits and passing the First Exam. Tuition and status is atomically changed to full-time.

DPH students can request to be Advanced to Candidacy to Level III at the completion of all coursework (at least 48 credits) and passing the First and Second Exams and successfully defend their dissertation proposal. A student does not apply to be advanced to Level III and it is not "automatic." It is an online form that is submitted by the APO or EO and requires communication with the student. Once a student reaches the criteria noted, and if not flagged by either the Sponsor or Registrar, the student should contact the APO or EO and request to be advanced. The student should confirm the following: tentative or actual dissertation title; committee members and their roles; date of successful dissertation proposal defense, and the tentative or actual defense and deposit dates. Students must be advanced before deposit. Once a student is advanced, no changes can be made to the transcript. At this time, if the student has not had the Human Participants Clearance form submitted and processed (see page 51, dissertation proposal) the student will be asked to proceed with that process at advancement.

After advancement, tuition is atomically changed to full-time status and at a reduced tuition rate.

Waiving out of a DPH Program Course
With approval of the Advisor/Sponsor, Track Coordinator and Executive Officer a student may request to be waived from a DPH program course. If a course is waived, the student must replace the equal amount of credits with another course as approved by their advisor. For example, if a student took an advanced Masters level Epidemiology course deemed equivalent to PUBH 820 Epidemiologic Methods I, that student may be waived from PUBH 820 and will need to take a three-credit course in its place. Usual procedures for course waiver are to present a course description of the course taken elsewhere and the transcript noting the grade received or to pass an examination based on the course.

Weighted Instructional Units
Weighted Instructional Units (WIUs) are used to document that graduate study extends beyond traditional classroom learning. They do not have credit value but are a mechanism to recognize non-classroom academic work involved in earning a graduate degree. As such, they are used in calculations to determine if a student may be certified as having full-time status at The Graduate Center. They are typically used for more advanced students who have completed their coursework and are at the First Exam stage or beyond. Semester-specific WIU registration CRNs are distributed by the Registrar and the APO before each registration period. Students should register for 7 WIUs if full time status is necessary.

Faculty Advisors
A faculty advisor guides the student though the DPH coursework, completion of the first exam, and application for the second exam. Track Coordinators assign advisors before or during the student's first semester in the program. Advisors can also help students to develop dissertation ideas and suggest faculty who can serve as members of the Second Exam and dissertation committees. The faculty advisor may or may not serve as the student's second exam or dissertation sponsor.

The advisor will communicate with students to discuss course planning, academic issues, and career guidance. Advisors are also responsible for helping students make satisfactory academic progress towards their degree. Students are expected to communicate with their advisors at least twice a semester and more often as needed. Within the first year of coursework, students should discuss possible dissertation topics and research questions with their advisor, as well as potential faculty sponsors for the student's dissertation research.
Each semester the student will submit an electronic tracking form (on Blackboard) to their advisor for course selection approval. Students are responsible for ensuring that the form is reviewed and signed (electronic or physically).

Either a doctoral program faculty member or a student can request a change of advisor by discussing the request with the Track Coordinator, who must approve the change.

Coursework in the DPH Program

Credits

The DPH curriculum consists of 48 post-master's degree credits (note: the DPH Program is in the process of applying for approvals of a reduction in the number of credits associated with the dissertation of 12 to 0, for a total of 48. This manual reflects that change. If this change is not approved, an announcement will be made and an amendment to this manual will be posted on Blackboard). Students can take up to 6 credits within the CUNY SPH Master's in Public Health (MPH) Programs or other Master's level programs throughout CUNY. Students may also take up to 6 Independent Study credits at the Graduate Center. With the permission of their advisor and the EO, students may transfer in a certain amount (in general, no more than 12) of doctoral-level credits from other doctoral degree programs. For students who are waived out of a course, the same number of credits must be taken to replace the waived course. The degree must be completed within six years of matriculation or will be considered not making Satisfactory Progress, see page 5.

Students Without an MPH Degree

DPH students who do not have a Master's in Public Health (MPH) degree must have the five core MPH courses that are required by the CUNY SPH MPH programs completed by the end of their first year of enrollment. The five master's level courses are:

- Introductory Biostatistics
- Introductory Epidemiology
- Environmental Health
- Social and Behavioral Dimensions of Health
- Health Policy and Management

Three of the 5 prerequisite courses must be completed prior to acceptance into the DPH program. None of these credits will count toward the doctoral degree even if the remaining two master's-level courses are taken while matriculated in the DPH program. It is the responsibility of the student, in consultation with his/her Advisor and Track Coordinator, to ensure that remaining core MPH courses are completed within the first year of enrollment. Failure to do so will be considered not making Satisfactory Progress (see page 5) toward to degree and will interfere with the academic progress of the student.

Coursework and Curriculum

In keeping with the interdisciplinary focus of the DPH program, all students are required to take public health courses within a specialization area, additional courses in research methods, theory or public health practice, and at least one doctoral course outside of public health. Course selection is determined through consultation between the student and the advisor. If a DPH course is cross-listed with another GC program, that course can count toward the interdisciplinary requirement.

Students are required to complete the core DPH courses, track-specific course requirements, advanced research seminars and dissertation research.

Overview of Required Courses for all DPH Students

Requirements for all DPH students:	
PUBH 800	Cities, Society, and Health
PUBH 801	Interdisciplinary Approaches to Urban Health Research
PUBH 805/802 (EPI take PUBH 824)	Quantitative Research Methods with Applications to Urban Health
PUBH 806 (2012 and following cohorts)	Qualitative Research Methods with Application to Urban Health
PUBH 893	Leadership & Organizational Change Seminar
PUBH 807	Practicum Project
PUBH 820	Epidemiologic Methods I
PUBH 890	Advanced Research Seminar I
PUBH 891	Advanced Research Seminar II
PUBH 900	Dissertation Supervision
PUBH 898	Dissertation Seminar

Core Courses

PUBH 800 Cities, Society, and Health (3 credits): This course presents an ecological, multilevel approach to the study of urban health and brings together public health and social science disciplines to examine the impact of city living on population health.

- *Required for all cohorts, all tracks*

PUBH 801 Interdisciplinary Approaches to Urban Health Research (3 credits): This course prepares students to investigate causes and solutions to complex urban health problems by bringing together concepts, theories and methods from a variety of disciplines that contribute to our understanding of urban health. It also focuses on research that contributes to reducing health disparities and promoting well-being in urban communities.

- *Required for all cohorts, all tracks*
- *Prerequisite: PUBH 800*

PUBH 805 Quantitative Research Methods with Applications to Urban Health (3 credits): This course will introduce students to intermediate level approaches and applications in conducting quantitative research in urban public health. It follows introductory biostatistics and epidemiology courses. Course objectives include understanding the assumptions, application, and interpretation of generalized linear regression models, including linear, logistic, Poisson, and proportional hazards models; understanding standard methods for making inferences on model parameters, including Wald testing and ratio testing; and being able to fit generalized linear regression models and diagnose the appropriateness of models using standard statistical software. Particular attention will be made to choosing and defining the right outcome(s), given specific research questions and available data; defining appropriate comparison groups; and understanding the assumptions of each model in order to make appropriate choices and analytic decisions for different types of data and research questions common to urban health research. Labs will allow students to practice these new skills. The final examination will include a project in which students develop and carry out an analysis of an urban health research question using a publically accessible dataset.

- *Required for all cohorts in CSH, EOH, and HPM tracks. For EPI students PUBH 824 Applied Biostatistics should be taken in its place*
- *For cohorts preceding 2012, this course should be used to meet the prior requirement for PUBH 802 Advanced Methods & Ethical Issues in Urban Health Research*
- *Prerequisite or Co-requisite: 820 Epidemiologic Methods I or equivalent*

PUBH 806 Qualitative Research Methods with Application to Urban Health (3 credits): This course will introduce students to approaches in designing and conducting qualitative research in topics of relevance to public health. It is intended to provide doctoral students with a foundation in the various qualitative data collection and analysis methods, focusing on their application to public health practice and research. It will cover elements of qualitative research design, data collection, analysis, and writing for publication. This will be integrated with the main assignment in which students develop a proposal for a qualitative research project tailored to address a specific public health research question.

- *Required for the 2012 and following cohorts*

PUBH 807 Practicum Project(3 credits) (Pass/Fail): The DPH Practicum Project is a planned, supervised and evaluated experience that allows students to apply the knowledge and skills that they have acquired through learning experiences in a practice setting. The DPH Practicum Project requires 180 practicum hours that can be completed in a range of organizations across New York City or elsewhere. Students must document how the 180 practicum hours are spent. The student must complete a detailed learning plan, a summary report (that includes objectives), a self-evaluation, and a final report. It is the belief of the DPH Program and the CUNY School of Public Health that there is always a new topical, methodological, or positional approach that will allow students to gain new experience or skills or benefit from the additional practical experience. Therefore, the Practicum Project requirement cannot be waived, as even students with extensive experience in public health practice and leadership can benefit from applied public health experiences that they have not yet encountered in their careers.

A Practicum Project requires a Practicum Sponsor. A Practicum Sponsor is usually not a DPH faculty member, nor faculty of another academic organization, because the Practicum Project is meant to be action-oriented, leading to public health action. However, the proposed Practicum Project may meet this criterion if it involves collaboration between the CUNY SPH or another academic organization and an external, non-academic organization, with the express purpose of producing work that generates public health action.

Before the student registers, the PUBH 807 Practicum Project Application must be approved by the Practicum Sponsor and the Course Instructor (on Blackboard).

The content of Practicum Projects must be related to public health action and be practice-oriented. A Practicum Project can include any aspect of public health practice, including leadership, practice-based research or evaluation, dissemination, primary data collection, data management, data analysis, manuscript/report preparation, policy development or analysis, community-based or organizational capacity building in public health, conducting a systematic literature review, designing data collection instruments, developing research/evaluation/intervention protocols, and developing grant proposals. While any of this work can be part of a project team, the work that is specifically being conducted by the student and the student contribution to the project (over and above those of others on the project team) must be clearly delineated and approved by the Practicum Sponsor. See the Frequently Asked Questions on the next page.

The student will develop a detailed learning/work plan that includes the hours/dates associated with all activities, project objectives, a description of activities, and a description of the final product and how it will be assessed. This will be reviewed and approved by the Practicum Sponsor and will be used to evaluate the student at the end of the project. The student meets with the Practicum Project Sponsor weekly. The final assessment will be based primarily on the final practicum report, which must document the achievement of each of the project objectives. Each must include a detailed self-evaluation, a summary of the project activities and how the project objectives were met. The Practicum Sponsor must evaluate the final project and assign a pass/fail grade (where fail is less than 70%). The final Practicum Project grade will be determined by this grade in combination with grades given by the Course Instructor for three other submissions completed over the Project period: Detailed Learning Plan (15%), Progress Report (10%), Final Report (60%), Self-evaluation/Reflection (15%). The Course Instructor assigns the final grade.

- *Required for all cohorts, all tracks**
- *Approval of Application by Practicum Sponsor and Course Director*
- *Prerequisites: PUBH 800;PUBH 801*

PUBH 807 Practicum Project- Frequently Asked Questions

How many practicum hours must the DPH Practicum Project be to fulfill the program requirement? Am I required to complete these hours on a full-time working basis, or can they be spread out over time?

- Students must complete 180 hours on the DPH Practicum Project to fulfill the program requirement, but these hours may be spread out over the days and weeks of the semester.

What if I am unable to complete my DPH Practicum Project in one semester – can I take an Incomplete in the course, and complete it during the following semester?

- While the program discourages students from taking Incompletes, under some circumstances, an Incomplete may be the only option. For example, when a student's project work requires a longer period of time than the academic semester, or a different period of time, which extends into the next semester. This situation may arise due to the nature of the project or because of the practicum sponsor organization's timeline. A request for an Incomplete must be approved by the Course Instructor, and the incomplete grade must be resolved by the end of the subsequent semester.

I've worked in the public health field for many years, including in leadership positions, on many health issues, and across public and private sectors. Can I waive the DPH Practicum Project requirement and receive equivalent credit for my professional experience?

No. The DPH Practicum Project requirement may not be waived under any circumstance. It is the belief of the Program and the CUNY School of Public Health that there is always a new topical, methodological, or positional approach that will allow students to gain new experience or skills or benefit from the additional practical experience.

I already consider myself a public health professional. What are the goals of the DPH Practicum Project? What is the additional expertise or experience I'm expected to gain from this program requirement?

- The DPH Practicum Project is intended to provide students with real world experience in public health practice. Students should plan a Practicum Project in an area in which they do not have extensive experience in order to gain new skills and experience. This could take many forms, but must provide an application of public health knowledge and skills, and be action-oriented, i.e., work that leads to public health action. For example, students could work on designing or implementing a program, writing a grant, promoting an idea or policy via a report or a set of targeted papers or a series of policy briefs, etc.

Can I complete the DPH Practicum Project by doing research work with a faculty member at CUNY SPH or a faculty member at another academic institution?

- The main requirement for the DPH Practicum Project is that it must be conducted at or in collaboration with an external non-academic organization engaged in or with a mission of public health practice. The Practicum Sponsor for the DPH Practicum Project may be based at an academic organization, including CUNY SPH, but the work must be conducted in partnership with the external non-academic organization.

If I've identified an organization where I would like to complete my DPH Practicum Project, can I just tell them what I want to do there? What role do they have to play in the development and design of my project?

- Students must work collaboratively with the potential practicum sponsor organization to design and develop their DPH Practicum Project in accordance with the expectations of the DPH program. The work of the DPH Practicum Project must be linked to the practice mission of the practicum sponsor organization, including if it is an academic partnership, and oriented to develop the goals and objectives of that work.

What are the DPH Practicum Project criteria?

- First, the Practicum Project must be clearly oriented towards public health practice; the learning/work plan for the proposed Project must clearly reflect how it will contribute to public health action. Second, the Practicum Project must be directly linked to the mission, goals, and objectives of the practicum sponsor organization. Third, the Practicum Project must be conducted at or in collaboration with an external non-academic organization; an academic partnership, with CUNY SPH or some other academic organization, is acceptable, as long as the work is shaped by a practice orientation, rather than research.

Can I conduct research and write a paper for publication in the peer-reviewed literature as my DPH Practicum Project?

- Research and writing for publication alone do not meet the core expectations for the DPH Practicum Project. While these activities may be involved or even central, student practicum work must involve more than the generation and/or synthesis of knowledge. For example, a systematic literature review would be acceptable if it was linked to a public health practice goal of the practicum sponsor organization, such as if the review would be presented as evidence for the need to develop or modify a particular public health-related policy or intervention. As noted above, the Project must involve work that leads to public health action.

** Students in the 2013 and preceding cohorts who have not completed the Leadership Project may do so by registering for the PUBH 807 Practicum Project. Depending on cohort requirements (2012 and 2013 Cohorts: PUBH 89201 and 02 Leadership Project; 2011 and Preceding Cohorts: PUBH 89201 and 02 Leadership Project & a 3 credit leadership elective) this option will require replacing credits (3 or 6) with additional course(s).*

PUBH 820 Epidemiologic Methods I Research Design and Inference (3 credits): This course provides an intermediate-level understanding of the design and conduct of epidemiologic studies, including causal inference, measurement, major study designs, threats to validity, and their application to public health issues. The class includes lectures on research methods, hands-on data analysis exercises, discussions about determining causation through epidemiological research.

- *Required for all cohorts, all tracks*

PUBH 893 Leadership & Organizational Change Seminar (3 credits): The Public Health Leadership Seminar introduces students to theories and models of leadership and organizational change and helps students to analyze their own strengths and weaknesses as leaders. Using a case study approach, students analyze successful and unsuccessful examples of public health leadership and organizational change.

- *Required for all cohorts, all tracks*
- *Prerequisite: PUBH 800;PUBH 801*

Research and Dissertation Seminars

All students are required to complete an original dissertation research project. For a full explanation of this process, see pages 47-70 for Dissertation Guidelines. To prepare for the dissertation, students take two research seminars, the first within the second year of coursework (PUBH 890) and the second after completing all required courses (PUBH 891). While students are writing the dissertation, they register for PUBH 900 Dissertation Supervision and PUBH 898 Dissertation Seminar.

PUBH 890 Advanced Research Seminar I (3 credits): Students develop specific research questions pertaining to potential areas of interest for their doctoral dissertations and prepare a proposal that specifies a research question, a public health rationale for the study and an appropriate research design and methods. Students will be expected to complete a literature review and design a study, which may later lead to a dissertation proposal.

- *Required for all cohorts, all tracks*
- *Prerequisites: PUBH 800; PUBH 801*

PUBH 891 Advanced Research Seminar II (3 credits): Guides advanced students in the completion of their dissertation proposal and, if needed, Institutional Review Board (IRB) application for dissertation research. Faculty assist students to refine the research design, to fully develop appropriate research methods and analytic strategies and to provide protection for human subjects in their dissertation research. In order to take PUBH 891 Research Seminar II, students need to have defended the Second Exam or have permission of the instructor and have the Second Exam defense scheduled within the first two weeks of the semester. Students must successfully defend the Second Exam within the first two weeks of the semester in order to remain in the course.

As part of PUBH 891 students are required to complete and submit The Dissertation Progress Report.

The online component of CUNY's Responsible Conduct of Research (RCR) is a required part of this course. DPH students will be exempt from the in-person workshop of CUNY's RCR.

- *Required for all cohorts, all tracks*
- *Prerequisites: All other coursework; successful defense of the Second Exam*

PUBH 898 Dissertation Seminar (0 credits): This is a non-credit required course that students must take every semester they are working on the dissertation and registered for PUBH 900. The dissertation seminar meets up to four times a semester and serves as a workshop in which students attend Public Health Grand Rounds, present and discuss their dissertation research, and review aspects of each other's work (peer review).
The student must be registered for this course number in the same or preceding semester the student deposits the dissertation. After the student is advanced to candidacy, this course number will appear as audit on the transcript. See pages 47-70.

- *Required for all cohorts, all tracks*
- *Prerequisites: All coursework and exams*
- *Taken only while working on the dissertation and registered for PUBH 900*

PUBH 900 Dissertation Supervision (0 credits): Students pursue doctoral research leading to the required dissertation under the supervision of their dissertation sponsor. Doctoral faculty provide supervision on research design, data management and analysis, presentation and interpretation of findings.
The student must be registered for this course number in the same or preceding semester the student deposits thee dissertation. After the student is advanced to candidacy, this course number will appear as audit on the transcript. See pages 47-70.

Grades of NRP (No Record of Progress) or SP (Satisfactory Progress) will appear when the student is enrolled and will change to P when the student graduates.

- *Required for all cohorts, all tracks*
- *Prerequisites: All coursework and exams*
- *Taken only while working on the dissertation and registered for PUBH 898*

Examinations

Students in all cohorts and all tracks take two examinations to test their mastery of the curriculum. Students must apply in advance to take each exam and students must be in good academic standing to apply. The First Exam is given after students have completed core coursework. Students work on the Second Exam after all required coursework has been completed except PUBH 891 and the dissertation (PUBH 900 & PUBH 898). Students cannot take PUBH 891 or begin their dissertation research until they have passed this exam. See pages 37-46 for more details on the First and Second Examinations.

Topics Courses and Independent Study

PUBH 851 Topics in Public Health (1-3 credits): All provisional DPH electives are listed with the number PUBH 851. A provisional elective may run a total of three semesters, after which it must be approved by the Curriculum Committee and FSC and assigned a permanent course number.

PUBH 861 Independent Study (1-3): Students may work with a DPH faculty member sponsor on an independent study project ranging from 1-3 credits. A total of 6 independent study credits may be used toward the degree. A faculty member may not be on sabbatical while acting as an independent study sponsor. Faculty outside of the DPH program cannot sponsor an independent study, nor can adjunct faculty. Independent study can only be registered for during the regular academic year. As a guide, a one credit independent study should correspond to about 45 hours of work (3 hours per week X 15 weeks), a two credit independent study should correspond to about 90 hours of work (6 hours per week X 15 weeks), and a three credit independent study should correspond to about 135 hours of work (9 hours per week X 15 weeks). Applications for Independent Study can be found on Blackboard.

The sponsoring faculty member and student must have a one-page independent study proposal approved by the student's advisor and TC. The proposal must include learning objectives, milestones, evaluation criteria, and a timeline with a final evaluation by the sponsoring faculty member.

Community, Society, and Health (CSH)

This track prepares researchers and public health practitioners to advance scientific understanding of the social determinants of health, health behaviors, the delivery of health services, and the development of sound health policies. CSH graduates will be able to lead, plan, manage, and evaluate community health interventions. The track draws on the methods and theories from multiple disciplines to prepare students to design and implement public health programs and research/evaluation studies.

The CSH Track prepares researchers and public health practitioners who can:

- Advance scientific understanding of the social determinants of health, health behaviors, the delivery of health services, and the development of sound health policies.
- Lead, design, manage, and evaluate community health interventions.
- Draw on the methods and theories from multiple disciplines to design and implement research studies on population health.
- Formulate, analyze and advocate for policies that promote health and prevent disease.
- Teach students and professionals about the social determinants of health, health behaviors, health interventions, health policy, and health disparities.

Curriculum:
The core curriculum in CSH includes courses on social dimensions of health theories and research methodology. Electives are chosen in consultation with the faculty advisor.

Requirements for all CSH students:	
PUBH 810	Community Health Interventions: Theory and Methods
PUBH 811	Social and Behavioral Dimensions of Health: Theory and Methods
PUBH 816 (2012 and following cohorts)	Evaluation of Public Health Programs and Policies
Plus, cohorts preceding 2012:	
Five electives in research methods or public health practice, one of which must be from a Graduate Center program outside of Public Health (DPH courses that are cross-listed with another program can count toward this requirement), one leadership elective, Public Health or MPH courses on population or health problem specific issues; one elective course on social aspects of health in sociology, psychology, anthropology or related fields; and two research methods courses.	
Plus, cohorts 2012 & 2013	
Three advanced research methods or track-specific practice courses, one of which must be from a Graduate Center program outside of Public Health (DPH courses that are cross-listed with another program can count toward this requirement).	
Plus, cohort 2014 and following	
Four advanced research methods or track-specific practice courses, of which one must be from a Graduate Center department outside of Public Health (DPH courses that are cross-listed with another program can count toward this requirement).	

PUBH 811 Social and Behavioral Dimensions of Health: Theory and Methods (3 credits): This course prepares students to understand the impact of social structures and social environments on health and health behavior. Using an interdisciplinary approach, the course examines the contributions of sociology, anthropology, economics, psychology, history and political science to the study of health and health behavior.

• *Required for all CSH students*

PUBH 810 Community Health Interventions: Theory and Methods (3 credits): This course prepares students to lead research/intervention teams that plan, implement and evaluate community health interventions in community settings**.**

- *Required for all CSH students*
- *Prerequisite or co-requisite: PUBH 811*
- *At least two Master's level courses in program development or evaluation and at least one year of work experience in community health settings. These requirements can be waived with permission of instructor for students who bring other relevant experiences to the course.*

PUBH 816 Evaluation of Public Health Programs and Policies (3 credits): Prepares students to design evaluations of public health programs and policies; uses a systems approach to identify key constituencies and tasks in evaluation; students design an evaluation of an existing program or policy.

- *Required for the 2012 cohort and following cohorts*
- *For cohorts preceding 2012, this course can be used toward an elective requirement. Please check with your advisor.*

Epidemiology (EPI)

The mission of the Epidemiology Track of the DPH Program is to train epidemiologists as researchers and public health practitioners with a set of core competencies making them capable of rigorously applying epidemiological and biostatistical methods to the wide array of public health challenges. This includes the ability to: authoritatively generate, contribute, and disseminate new knowledge to their fields through research; to be critical consumers of evidence generated by others in their field; and to become independent, lifelong learners in development and application of epidemiologic methods. This mission is achieved through the teaching of epidemiologic methods and their applications to pressing public health problems, promotion of independent learning, and hands-on mentoring of rigorous, impactful and innovative epidemiologic research in the dissertation phase.

Curriculum:
The core curriculum in EPI includes coursework in epidemiologic methods and statistical methods. Electives are chosen in consultation with the faculty advisor.

Requirements for all EPI students:	
PUBH 821	Epidemiologic Methods II: Study Design and Analysis
PUBH 822	Epidemiologic Methods III: Seminar in Epidemiologic Methods
PUBH 823	Epidemiologic Methods IV: Seminar in applications of epidemiologic methods to urban health
PUBH 824 (required for the 2014 cohort and following)	Applied Biostatistics I
PUBH 825 (required for the 2014 cohort and following)	Applied Biostatistics II
Plus, cohorts preceding 2012:	
Four electives, one of which must be from a Graduate Center program outside of Public Health (DPH courses that are cross-listed with another program can count toward this requirement), one leadership elective, two in statistical methods and one elective in a specific content area, 2 electives, GC or Public Health courses in statistics, one of which can be a course in a software package and one in population or health-issue specific; and one elective course on statistics in sociology, psychology, or other related fields.	
Plus, cohorts 2012 and following	
Three advanced research methods or track-specific practice courses, one of which must be from a Graduate Center program outside of Public Health (DPH courses that are cross-listed with another program can count toward this requirement).	

PUBH 821 Epidemiologic Methods II: Study Design and Analysis (3 credits): Through lectures and problem-solving workshops, this course broadens the approach to epidemiologic methods, incorporating principles from Methods I into the design and conduct of studies and analysis of epidemiologic data. It consists of lectures and problem-solving workshops.

- *Required for all EPI students*
- *Prerequisite: PUBH 820 or equivalent or permission of track coordinator*

PUBH 822 Epidemiologic Methods III: **Seminar in Epidemiologic Methods (3 credits):** This seminar exposes students to emerging concepts and methods in epidemiologic research and provides students with an opportunity to apply new methods and consider how these strategies complement, and advance the more commonly used strategies in epidemiology.

- *Required for all EPI students*
- *Prerequisite: PUBH 821*

PUBH 823 Epidemiologic Methods IV: **Seminar in applications of epidemiologic methods (3 credits):** This seminar is intended to help students integrate the concepts and methods of epidemiologic research with specific inquiry directed at understanding, and improving the health of populations. This seminar requires students to develop proposals for epidemiologic research, identify strategies for data analysis that incorporate the lessons learned in Methods courses I, II, and III and to examine the application of those strategies to existing research. This course helps "bring together" the epidemiology theory and methods that have been discussed throughout the rest of the curriculum to the particular exigencies of public health research.

- *Required for all EPI students*
- *Prerequisite: PUBH 822*

PUBH 824 Applied Biostatistics I (3 credits):
For public health professionals to be effective, they must be able to ensure that policies and interventions are evidence-based. Epidemiologists design studies to determine which policies and interventions are most effective in promoting healthy individuals, families and societies. Biostatistics provides epidemiologists with the necessary tool kit to appropriately analyze public health data. The emphasis of this class is on acquiring a

set of foundational tools in regression models to apply to public health research questions and data. Topics include simple and multiple linear regression, logistic regression, ordinal and polytomous regression and model building techniques including assessing for multi-collinearity, effect measure modification, non-linearity and model fit statistics.

- *Required for the EPI 2014 cohort and following*
- *For EPI students, this course should be taken instead of PUBH 805*
- *Co or Prerequisite: Graduate-level introductory biostatics course*

PUBH 825 Applied Biostatistics II (3 credits):
This course is designed to expand on the biostatistical methods covered in Applied Biostatistics I to deepen the analytic repertoire of students with respect to regression modeling through the introduction of loglinear and generalized linear models including Poisson and Negative Binomial regressions as well as introduce techniques for analysis of longitudinal data including random and mixed effect models, and survival analysis.

- *Required for the EPI 2014 cohort and following*
- *Prerequisite: PUBH 824*

Environmental and Occupational Health (EOH)

The EOH track trains doctoral-level researchers and teachers about Environmental and Occupational Health problems affecting populations. Students have backgrounds in environmental science, occupational health, industrial hygiene, environmental policy, environmental epidemiology, and other related fields. The program includes a focus on Environmental and Occupational Health regulation, as well as planning and its impact on human health. The curriculum combines an understanding of how elements of the urban infrastructure – e.g., the built environment, commerce and productive activities, energy and communication systems, water, waste management and transport systems – interact with macrosocial trends (e.g., demographic, economic, and political processes) to affect environmental conditions (e.g., air, water, land and workplace) and human health. Coursework and research is aimed at furthering scientific understanding of the ways in which urbanization compromises the physical environment and human health as well as the ways in which it promotes health. topics such as environmental sustainability, environmental justice, economic viability, and political participation are examined.

The EOH track will produce graduates who can:

- Advance the scientific understanding of the impact of environmental and occupational conditions on health and disease.
- Plan, lead and manage studies to monitor and evaluate the heath effects of potential hazards in the workplace and broader environment.
- Plan, direct, manage and evaluate environmental and occupational health programs.
- Teach students and professionals about the impact of environmental and occupational hazards on the health of populations and about strategies for controlling such exposures.

Curriculum:
The core curriculum in EOH includes courses on the health impacts of the physical environment and research methodology. Electives are chosen in consultation with the faculty advisor.

Requirements for all EOH students:	
PUBH 830	Emerging Issues in Environmental and Occupational Health
PUBH 831	Environmental and Occupational Health Risk Assessment, Management and Communication in Urban Settings
One urban environment course (required for the 2014 cohorts and following)	
Plus, cohorts preceding 2012:	
Five electives: two in research methods in environmental or occupational health, one of which must be from a Graduate Center program outside of Public Health (DPH courses that are cross-listed with another program can count toward this requirement), one leadership elective, one course in statistics or instrumentation; one course in geographic information systems.	
Plus, 2012 cohort and following	
Four advanced research methods or track-specific practice courses, one of which must be from a Graduate Center program outside of Public Health (DPH courses that are cross-listed with another program can count toward this requirement) and one must be a course focusing on the urban environment.	

PUBH 830 Emerging Issues in Environmental and Occupational Health (3 credits): This course examines the impact of macro-level trends – such as corporate globalization, immigration patterns, and technological development – on the urban physical environment. It focuses on the relationship between the urban infrastructure (e.g., housing, transportation, sewage and waste disposal) and environmental media (e.g., air quality, water quality and land use). This course also examines the impact of macro-level trends on occupational health and safety conditions, focusing on such issues as outsourcing of manufacturing jobs to developing nations, the rise in the service and informal economies, immigrant labor, de-unionization, the new working class and the loss of the safety net. It examines the effectiveness of current policies in addressing these problems. Through focused readings and in-depth examination of case studies, students develop the tools for analyzing how macro-social trends affect the urban physical environment, workplaces and health. Teams of students then analyze an environmental and occupational issue, illustrate how it affects urban communities, and develop solutions to reduce environmental and occupational health burdens.

- *Required for all EOH students*

PUBH 831 Environmental and Occupational Health Risk Assessment, Management and Communication in Urban Settings (3 credits): This course examines the development and use of Environmental and Occupational Health risk assessment and its policy implications as applied to urban settings. Approaches to assessing, communicating about and managing urban Environmental and Occupational Health risks are critically analyzed within their political, economic, social and cultural contexts. Risk assessment and risk management procedures are evaluated in light of several themes including public participation, sustainable development, environmental justice, and natural and technological hazards. Students conduct risk assessments on real world environmental and occupational health problems, develop effective written and verbal approaches to communicating the results of risk assessments, and critically review case studies in which Environmental and Occupational Health risk assessments have been used in setting public policy.

- *Required for all EOH students*

Health Policy and Management (HPM)

The HPM track prepares students for careers in research, teaching, policy analysis and organizational analysis in the broad fields of health services, health policy, and health management. Students will select a concentration in either Health Policy or Health Management. Students who choose Health Policy as a concentration will develop a nuanced understanding of how a range of mechanisms are systematically associated with policy and influence population health. Students who choose Health Management as a concentration will incorporate organizational theory and analysis in understanding how organizational structures, networks, and behavior influence the health of populations.

The HPM track will prepare graduates who can:

- Contribute to new knowledge about the mechanisms that influence the delivery of health services and public health programs and the development of health policy.
- Develop and manage initiatives to strengthen the functioning of health systems, health care organizations and public health agencies and programs.
- Develop, advocate for and implement health care and public health policies.
- Analyze the impact of health and non-health policies on population health.
- Teach students and professionals about the social determinants of health, health interventions, health policy, health management and health disparities.

Curriculum:
The core curriculum in HPM includes coursework in management and research methods. Electives are chosen in consultation with the faculty advisor.

Requirements for all HPM students:	
PUBH 840	Seminar in Health Policy and Management
PUBH 841	Quantitative Methods in Health Services Research
PUBH 842 (required for the 2014 cohorts and following)	Public Health Economics
PUBH 843 (required for the 2014 cohorts and following)	Health Policy Analysis Methods
Plus, cohorts preceding 2012	
Five electives: one of which must be from a Graduate Center program outside of Public Health (DPH courses that are cross-listed with another program can count toward this requirement), one leadership elective, one course in policy or management (economics, sociology, and political science); two research methods courses (one in economics or finance; one in research design, data analysis, econometric analysis, quantitative decision analysis, policy analysis, management, or practice).	
Plus, 2012 cohort and following	
Four advanced research methods or track-specific practice courses, one of which must be from a Graduate Center program outside of Public Health (DPH courses that are cross-listed with another program can count toward this requirement) and one must be a Health Economics course.	
Plus, 2014 cohort and following	
Three advanced research methods or track-specific practice courses, of which one must be from a Graduate Center department outside of Public Health (DPH courses that are cross-listed with another program can count toward this requirement).	

PUBH 840 Seminar in Health Policy and Management (3 credits): The objective of the course is to understand patterns in the organization, financing, and delivery of health care, and their relationship to population-based health outcomes, through an integrated exploration of research from the various disciplines informing the health policy and management fields. With an emphasis on the development of critical thinking skills, students are introduced to multidisciplinary models from the social sciences as conceptual sources for health policy and management research. The course adapts a transdisciplinary approach to the examination of important topics in urban public health management and policy, such as the relationship between health systems and the urban-based health economy, and the interface between managerial functions and health policy analysis in addressing health status and outcomes disparities.

- *Required for all HPM students*

PUBH 841 Quantitative Methods in Health Services Research (3 credits): This course focuses on quantitative reasoning skills in health services research within the context of the principles of the scientific method and the logic of the research process. The logic and methodologies of problem formulation, development of hypotheses and objectives, multidisciplinary research design, sampling, operationalization and measurement are reviewed in connection with selected analytic strategies, such as cross-section/time-series design, multilevel analysis, cost effectiveness analysis, and health impact assessment. Methodological connections between practice-based performance assessment for management and population-based health outcomes assessment for policy are addressed.

- *Required for all HPM students*
- *Prerequisite: PUBH 840*

PUBH 842 Public Health Economics (3 credits): The broad literature on health economics helps improve the understanding of issues related to public health and its influence in the decision-making process of cost-effective interventions for the overall population health. The emphasis of this class is on acquiring a set of devices from the economic theory and a framework within which to organize empirical analysis to inform health and public health policy. Topics will include the analysis of the overall health market, and in particular the analysis of the demand for health, health care and insurance, the supply of health care and insurance, the

market structure of the health care sector, and, finally, the positive and normative aspects of performance of the health care sector.

- *Required for the 2014 cohort and following*

PUBH 843 Health Policy Analysis Methods (3 credits): This course is designed to expand and deepen the analytic repertoire of students with respect to (1) the analysis of problems or issues that face health policy-makers; (2) the analysis of alternative solutions so those problems and (3) the evaluation of selected solutions (including doing nothing). The course uses research and analytic methods drawn from epidemiology, decision sciences, political science, sociology, social psychology and economics. It emphases how methods developed within these disciplines can be applied to policy analysis in public health and health care.

- *Required for the 2014 cohort and following*
- *Pre or Co-requisites PUBH 840 and PUBH 841*

Course Sequencing

* Required for the first exam § Has prerequisites † Has Pre or Co-requisites	Part time: 4 courses an academic year Full time: 7 courses an academic year

Requirements for all Tracks - 2014 Cohort and Following				
Course Number	**Course Title**	**Full Time**	**Part Time**	**Semester Typically Offered**
PUBH 800	Cities, Society and Health*	1st year	1st year	Fall
PUBH 801	Interdisciplinary Approaches to Urban Health Research*§	1st year	1st year	Spring
PUBH 805	Quantitative Research Methods with Applications to Urban Health*† (CSH, HPM, EOH)	1st year	2nd year	Fall
PUBH 806	Qualitative Research Methods with Application to Urban Health*	1st year	1st year	Spring
PUBH 820	Epidemiologic Methods I*	1st year	1st or 2nd year	Fall/Spring
The First Exam	Requirements to apply for the First Exam are marked with an*	1st year	2nd year	2 weeks before Fall Semester
PUBH 890	Advanced Research Seminar I§	2nd year	3rd year	Fall
PUBH 893	Public Health Leadership Development Seminar§	2nd year	3rd year	Fall
PUBH 807	Practicum Project§	2nd or 3rd year	3rd or 4th year	Fall/Spring
The Second Exam	Eligible after all coursework completed except PUBH 891, PUBH 898, and PUBH 900.	3rd or 4th year	4th or 5th year	Student's own schedule (~4-9 months)
PUBH 891	Advanced Research Seminar II§	3rd or 4th year	4th or 5th year	Fall/Spring
PUBH 898	Dissertation Seminar§	4th and 5th years	5th and 6th years	Fall/Spring
PUBH 900	Dissertation Supervision§	4th and 5th years	5th and 6th years	Fall/Spring

Requirements for CSH - 2014 Cohort and Following				
Course Number	**Course Title**	**Full Time:** 1st year - Two courses from this section for the first exam*	**Part Time:** 1st year - One course from this section for the first exam; 2nd year - A second course from this section for the first exam*	**Semester Typically Offered**
PUBH 810	Community Health Interventions†	1st or 2nd year	1st, 2nd, or 3rd year	Spring
PUBH 811	Social & Behavioral Dimensions of Health	1st year	1st year	Fall
PUBH 816	Evaluation of Public Health Programs and Policies	1st or 2nd year	1st, 2nd, or 3rd year	Fall
Four advanced research methods or track-specific practice courses, one of which one must be from a Graduate Center department outside of Public Health.		1st or 2nd year	1st, 2nd, or 3rd year	Fall/Spring

Requirements for EPI - 2014 Cohort and Following				
Course Number	**Course Title**	**Full Time:** 1st year - Two courses (in addition to PUBH 824) from this section for the first exam*	**Part Time:** 1st year - One course (in addition to PUBH 824) from this section for the first exam; 2nd year - A third course from this section for the first exam*	**Semester Typically Offered**
PUBH 821	Epidemiologic Methods II§	1st or 2nd year	1st or 2nd year	Fall
PUBH 822	Epidemiologic Methods III§	1st or 2nd year	1st or 2nd year	Spring
PUBH 823	Epidemiologic Methods IV§	2nd or 3rd year	3rd or 4th year	Fall
PUBH 824	Biostatistics I*	1st year	1st year	Fall/Spring
PUBH 825	Biostatistics II§	1st or 2nd year	1st, 2nd, or 3rd year	Fall
Three advanced research methods or track-specific practice courses, one of which one must be from a Graduate Center department outside of Public Health.		1st or 2nd year	1st, 2nd, or 3rd year	Fall/Spring

Requirements for EOH - 2014 Cohort and Following				
Course Number	**Course Title**	**Full Time:** 1st year - Two courses from this section for the first exam*	**Part Time:** . 1st year - One course from this section for the first exam; 2nd year - A second course from this section for the first exam*	**Semester Typically Offered**
PUBH 830	Emerging Issues in EOH	1st or 2nd year	1st or 2nd year	Every other Fall or Spring
PUBH 831	Environmental & Occupational Health Risk Assessment	1st or 2nd year	1st or 2nd year	Every other Fall or Spring
One Urban Environment course (3 credits)		1st or 2nd year	1st, 2nd, or 3rd year	Fall/Spring
Four advanced research methods or track-specific practice courses, one of which one must be from a Graduate Center department outside of Public Health.		1st or 2nd year	1st, 2nd, or 3rd year	Fall/Spring

Requirements for HPM - 2014 Cohort and Following				
Course Number	**Course Title**	**Full Time:** 1st year - Two courses from this section for the first exam*	**Part Time:** . 1st year - One course from this section for the first exam; 2nd year - A second course from this section for the first exam*	**Semester Typically Offered**
PUBH 840	Seminar in Health Policy and Management	1st or 2nd year	1st or 2nd year	Fall
PUBH 841	Quantitative Methods in Health Services Research§	1st or 2nd year	1st or 2nd year	Spring
PUBH 842	Public Health Economics	1st or 2nd year	1st or 2nd year	Spring
PUBH 843	Health Policy Analysis Methods†	1st or 2nd year	1st or 2nd year	Fall
Three advanced research methods or track-specific practice courses, one of which one must be from a Graduate Center department outside of Public Health.		1st, 2nd, or 3rd year	1st, 2nd, or 3rd year	Fall/Spring

Concentration in Nutrition

The Nutrition Concentration is open to students in any specialization track who have prior training in nutrition, food sciences or food policy. Students can learn more about the requirements and expectations of the concentration by consulting Professor Arlene Spark, Coordinator of the concentration, or their Track Coordinator. Students in the concentration are expected to complete four courses (12 credits) that meet both track and concentration requirements, i.e., no extra credits are required. PUBH 814 Food Politics and Policies or its equivalent; SOC 828 Food, Culture and Society or its equivalent; an advanced three credit epidemiology course relevant to nutrition (e.g., Nutritional Epidemiology; Chronic Disease Epidemiology, Life Course Epidemiology) and one three credit elective in research methods relevant to public health nutrition.

PUBH 814 Food Politics and Policies (3 credits): This is a policy course that examines the effects of the food industry and government on diet-related disease, and on health promotion and disease prevention. Most readings have a strong political content. Central themes include: government action versus individual liberty, the contradictions of government support and opposition to certain policies, the role of litigation, and the importance of institutions (e.g., bureaucracy, Congress, the media).

SOC 828 Food, Culture and Society (3 credits): This course explores major issues in foodways, focusing on preparation and consumption, through readings and discussions as well as through the development of a culturally-informed public health nutrition initiative and fieldwork exploring a specific cultural food tradition. Theoretical frameworks include the food voice, cultural studies, political economy, and symbolic interactionism. Materials are drawn from across the social sciences and applied to public health.

Concentration in Maternal, Child, Reproductive and Sexual Health

MCRSH is a key to the long-term health of individuals, families, communities and societies. Reproductive and sexual health problems -- such as unintended pregnancies, maternal death, sexually transmitted diseases (STDs), gender-related violence and others -- are still the leading cause of illness and death for women of childbearing age worldwide. Although infant and childhood mortality is declining overall, some regions of the developing world still face significant burdens. The MCRSH concentration is designed to provide students with a theoretical understanding of the social and historical context that shapes maternal, child, reproductive and sexual behaviors and health outcomes across the life-span; and with practical experience in research, programs and/or policies to reduce disparities and promote health. Students in the MCRSH concentration will take three MCRSH specific courses: two required courses (PUBH 870 and PUBH 871) and one MCRSH-related elective (9 credits total). The MCRSH specific courses will replace the elective requirements of the Community, Society and Health track; students in the Epidemiology, Environmental and Occupational Health, and Health Policy and Management tracks may seek a concentration in MCRSH if they take these three required courses in addition to their track specific elective requirements. Students completing the MCRSH concentration are further required to have an MCRSH focus to their (1) PUBH 807 Practicum Project (3 credits) (2) PUBH 890 Advanced Research Seminar I (3 credits), (3) PUBH 891 Advanced Research Seminar II (3 credits), and (4) their second exam and (5) their dissertation (PUBH 898 Dissertation Seminar (0 credits) & PUBH 900 Dissertation Supervision (0 credits)). Thus the MCRSH concentration within the DPH will require that 18 of the 48 (or 57 for non CHS students) credits plus the second exam and the dissertation be focused on MCRSH, providing a solid foundation in this area.

PUBH 870 Maternal, Child, Reproductive and Sexual Health in Context (3 credits): A critical overview of public health issues, approaches and concerns in the area of Maternal, Child, Reproductive and Sexual Health. Topics will include the medicalization of maternity care and infancy/childhood; the consequences of 'risk' as a dominant ideology for Maternal, Child, Reproductive and Sexual Health care; issues in reproductive justice, with particular attention to race and class, and the historic and contemporary influence of eugenics in public health; the history of midwifery and global trends in midwifery care; and the role of public health interventions in infant care; sexual health and gender identity.

PUBH 871 Maternal, Child, Reproductive and Sexual Health: A Life Course Perspective (3 credits): Provides a theoretical framework as to how life course exposures affect vulnerability to disease, with an emphasis on the roles of maternal, child, reproductive and sexual health. This course also considers how intra- and inter-generational influences may be relevant to disparities in health. Readings will address empirical patterns, prevailing theories and controversies regarding life course influences, as well as addressing interventions or policies that may be applied to improve population health.

- *Prerequisite: PUBH 820*

First Examination Guidelines

Content
The First Exam is intended to assess students' mastery of the core courses and their preparedness to advance in the program. The exam assesses the capacity to synthesize material and apply knowledge from these required courses to analyze current public health issues and come to well-reasoned conclusions.

Requirements to Apply
Successful completion of courses listed below or their equivalent, or registered in the course at the time of application:
PUBH 800 Cities, Society, and Health
PUBH 801 Interdisciplinary Approaches to Urban Health Research
PUBH 805 Quantitative Research Methods with Applications to Urban Health (PUBH 824 for EPI students)
PUBH 806 Qualitative Research Methods with Application to Urban Health
PUBH 820 Epidemiologic Methods I

Examination Frequency and Timing
The First Exam is offered once per year two weeks before the start of the Fall semester.

Examination Format
The First Exam follows a take-home format, and includes questions based on peer-reviewed articles that are provided to the student at the start of the exam. The exam focuses on the application of key DPH competencies and critical analysis of public health issues in three public health domains: (1) Theoretical Frameworks; (2) Methodological Frameworks; and (3) Research Methods. Students write three essays in response to three questions (one from each of the above three domains). Responses are expected to demonstrate critical analysis skills, in depth understanding of public health theory, research methods, clear writing skills, and, at times, knowledge of specific content areas. Students are expected to draw on content from core courses, as summarized in a First Exam reading list provided. The student's understanding should be expressed in depth in a well written and organized answer in which selected relevant information is thoughtfully presented with appropriate citations from the literature. All assertions of fact are to be documented with references to published, peer-reviewed literature.

Process and Procedures
Students are responsible for ensuring that the Application for Eligibility for First Exam for the Doctor of Public Health Program is reviewed, approved and signed by their Advisor and Track Coordinator. The application due date will be announced the semester prior to when the exam is to take place. The application for the First Exam is on Blackboard.

While students may prepare for the exam with other students, they are required to work completely independently without any collaboration after the exam is distributed. Students may refer to relevant class notes and reference materials when writing the answers to the examination questions. Reading lists for the first exam are updated annually.

Students have two weeks to complete and submit the exam. The instructions for the exam will include due date and time and required formatting. Students must submit an electronic version by the due date and time and a hard copy signed statement of academic integrity should be mailed or hand delivered to the DPH Office and arrive within a week of the electronic due date. Once the exam is made available, all students approved to take the exam must submit a completed exam by the due date and time. Failure to submit the exam by the due date and time will result in a failing grade for the entire exam. Students must keep a record of their sent e-mail in the event that there are any questions regarding the timing of submission.

The DPH Curriculum and Examinations committee appoints a DPH First Exam Committee, which oversees and coordinates all aspects of the First Exam administration, from selecting readings to developing answer keys to grading. Members of this Committee will include representation from each DPH Track. All questions regarding a specific First Exam should be directed to the First Exam Committee Chair.

Assessment & Grading

Exams will be coded with a unique identifier for anonymous grading. A first reader (inside the student's track) and second reader (outside of the student's track) will be designated for each exam. The APO is the only person who knows the pairings of student exams to exam readers. Readers will independently read and grade the exam. Ratings will be based on how well the student demonstrates a capacity to apply knowledge and skills gained in the required coursework and synthesize information. Each question will be rated using the following scale

> Satisfactory – adequate understanding of and written communication about the subject matter.
>
> Unsatisfactory – fundamental misunderstanding or inadequate mastery of or poor written communication about key concepts or principles; inadequate responses to the questions being asked on the exam; additional work needed to meet program expectations.

Satisfactory Responses

Responses to a given question on the First Exam that meet the above criteria will be judged "Satisfactory." Please be aware that for each answer that meets this standard, detailed feedback will not be given to the student.

Unsatisfactory Responses

<u>"Unsatisfactory" response to only one question on the First Exam:</u>

Students with answers that receive an "Unsatisfactory" rating from both readers for one answer will be given the opportunity to rewrite it within a 2-week period. For answers to a given question that receive an "Unsatisfactory" rating from only one of the two readers on one answer, a third reader will be asked to rate that answer. If the third reader also judges the response to be unsatisfactory, the student will be given broad feedback on the problems with their responses, and the opportunity to rewrite that answer within a 2-week period. Students will be allowed only one chance to rewrite an answer to a question that received an "Unsatisfactory" rating. Failure to rewrite the answer within the given timeline or the receipt of an unsatisfactory grade on the rewrite will result in a failure of the exam. Students who fall into this category must work with their Track Coordinator or a designee to develop a plan for preparing for a one-time retake the entire First Exam the next time it is offered, which must be approved by Track Coordinator and Executive Officer within one month of the notice of the unsuccessful completion of the First Exam. Students must pass all questions in the re-take exam; students will not be allowed to re-write any question from a retake examination. Students are allowed to retake the exam only once and students who fail even one question on the retake or do not retake the exam at the next offering of the first exam will be asked to withdraw from the program.

<u>"Unsatisfactory" responses to more than one question on the First Exam :</u>

Students who are given an "Unsatisfactory" rating on two or three responses by both readers (or by the third reader in the event that the first two readers give discrepant grades) will be allowed one opportunity to retake the First Exam at the time of the next scheduled administration of the exam. Students who fall into this category must meet with their Track Coordinator or a designee to receive broad feedback regarding the problems with their responses. They must then work with their Track Coordinator or a designee to develop a plan for preparing to retake the First Exam, which must be approved by the Track Coordinator and Executive Officer within one month of the notice of the unsuccessful completion of the First Exam. Students must pass all questions in a re-take exam; students will not be allowed to re-write any question during a retake examination. Students are allowed to retake the exam only once and students who fail even one question on the retake or do not retake the exam at the next offering of the first exam will be asked to withdraw from the program.

Second Examination Guidelines

The Second Examination Guidelines section consists of:

- Second Exam Overview
- The Second Exam in Relation to Coursework, Registration, Timeframe
- The Second Exam Committee – Roles and Responsibilities
- Assessment of the Second Exam Applying for the Second Exam – Checkpoints
- Developing the Reading List and Writing the Second Exam – Checkpoints
- The Second Exam Defense– Checkpoints

Second Exam Overview

The Second Exam assesses the student's preparation and readiness to engage in dissertation research. It also further lays the groundwork for the student's dissertation research. The Second Exam has both a written and an oral component. It examines mastery of theory, evaluation of empirical evidence, and advanced methods relevant to the student's track and future dissertation research.

The Second Exam in Relation to Coursework, Registration, Timeframe

Students work on the Second Exam only after successfully completing the First Exam and all required and elective courses, with the exception of PUBH 891 Advanced Research Seminar II, PUBH 898 Dissertation Seminar, and PUBH 900 Dissertation Supervision. In order to take PUBH 891 Research Seminar II, students need to have defended the Second Exam or, by permission of the instructor, have the defense scheduled to occur within the first two weeks of the semester. Students must then successfully defend the Second Exam within the first two weeks of the semester in order to continue the course.

In order to stay active in the program while working on the Second Exam, students should register for Weighted Instructional Units (WIUs). See page 8 for details.

There are no established times for Second Exam approval or defense. The timing depends on the approval process, as well as the readiness of the student and the availability of committee members. It may be challenging to secure availability of committee members during the winter or summer breaks, and students should inquire about availability during those times, as well as upcoming sabbaticals, in advance and plan accordingly.

The Second Exam Committee – Roles and Responsibilities

The Second Exam committee consists of 3 members: Sponsor, Reader and Chair. Committee members must be approved by the Track Coordinator and the Executive Officer via the Second Exam application (found on Blackboard). All Second Exam Committee members must be members of the DPH Faculty. However, with adequate justification, requests for an exception may be made in writing to the Track Coordinator and Executive Officer.

Sponsor

The Sponsor (who may or may not be the student's Academic Advisor) is a DPH faculty member who works most closely with the student in preparing the Second Exam application and reading list and in developing a mature draft of the exam. The student and Sponsor discuss possible committee members, and these members are approached and invited to the committee by the Sponsor (not the student). The Sponsor works with the student to develop a working target date for the final submission of the written component of the exam. The Sponsor must approve the final readings list, and work closely with the student as s/he develops the written exam, approving the mature draft of the Second Exam before it is shared with t the Reader and Chair. Students should expect to work through a number of drafts before the written second exam is deemed ready for the oral defense. The Sponsor should be from the same Track as the student (unless otherwise requested by the student to the TC and approved by the EO) and serves as the primary liaison with the other committee members. If the Sponsor is not from the same Track as the Student, then the Reader must be, with no exceptions.

Reader

The preliminary reading list, developed by the Sponsor and Student, is submitted to the Reader who is a DPH faculty member and will provide feedback and approve the final reading list. The Reader and Chair are responsible for providing written feedback to the student on a mature draft (read and approved by the Sponsor) of the Second Exam. The Student works with the Sponsor to incorporate revisions accordingly, and the Sponsor approves a near final draft with revisions to be shared with the Reader and Chair. The Reader and Chair review the revised draft, provide feedback to the student as needed until they, together with the Sponsor, approve the revised Second Exam as 'defense-ready'. Once the Committee has approved the revised Second Exam as "defense ready", it is disseminated to the committee in its final format and a defense date scheduled. The timeline for the defense will allow 4 weeks for the committee to read the final version of the Second Exam prior to the defense. The Reader must be from the same Track as the student (unless otherwise requested by the TC and approved by the EO). If the Reader is not in the same track as the student, the Sponsor must be, with no exceptions. In rare instances the Reader may be from outside the DPH Program or CUNY, but this must be justified by the Sponsor and approved in advance by the Track Coordinator and Executive Officer.

Chair

The Chair is a DPH faculty member who schedules and runs the defense meeting, is responsible for ensuring that all procedures are properly followed, presides over deliberations regarding the final outcome, and communicates the final outcome of the defense to the APO, Track Coordinator, and Executive Officer. The Chair must approve the final reading list, and, along with the Reader, is responsible for providing written feedback to the student on a mature draft (read and approved by the Sponsor) of the written component of the Second Exam before the defense, and for reading the final version of the Second Exam prior to the defense.

Assessment of the Second Exam

Each committee member will rate the written and oral components based on the following:

Excellent – Clearly written, demonstrates mastery of subject matter, critical thinking abilities, concise synthesis and analysis of the literature. Ready to proceed to independent dissertation research.

Satisfactory – Clearly written, adequate understanding of subject matter and critical analysis and synthesis of the literature, with expectation that student will hone specific areas in order to be better prepared to commence independent dissertation research.

Unsatisfactory – Does not demonstrate understanding of subject matter and critical thinking abilities. Does not appear ready to commence independent dissertation research.

Applying for the Second Exam – Checkpoints

Student:

- Identify a Second Exam Sponsor by consulting with their Academic Advisor, tracking research activities of faculty working in areas of interest of the student, and meeting with faculty to explore possibilities for dissertation research.
- Discuss in detail the possibilities and work with the Sponsor to develop a draft, one page description of the planned dissertation research and Second Exam topic areas (see next bullet).
- Apply for the Second Exam by submitting a completed Application for Eligibility for Second Exam (found on Blackboard). Along with the application, students must submit a one page description of the planned dissertation background, topics/research questions, and methods (recognizing that these may be evolving) as well as a one page description about how the two topic/content areas and two methodological topics will feed into and support the planned dissertation research, to their Second Exam Sponsor.

Sponsor:

- Accepts the request to act as the Sponsor, and works closely with the student, serving as the primary liaison with the other committee members for the student's Second Exam.
- Approaches the Reader and Chair to invite them to act in those roles for student's Second Exam.
- Critically reviews and approves the student's Second Exam application and one page description.

Reader:

- Accepts Sponsor's request to act as the Reader for the Student's Second Exam.
- Critically reviews and approves the student's Second Exam application and one page description.

Chair:

- Accepts Sponsor's request to act as the Chair for the Student's Second Exam.
- Critically reviews and approves the student's Second Exam application and one page description.

Other:

- Track Coordinator reviews and approves the student's Second Exam application and one page description.
- Executive Officer reviews and approves the student's Second Exam application and one page description.

Developing the Reading List and Writing the Second Exam – Checkpoints

Student:

- Once the Second Exam application has been approved, the student has the primary responsibility for developing a preliminary reading list that covers two public health-related content areas and two relevant methodological areas that will support the proposed dissertation research. From the date the student's reading list is approved, it is expected that the Second Exam will take from 4 to 9 months to complete. If 9 months pass and no substantive progress has been made in completing the written portion of the exam, the student must submit another Application for Eligibility for Second Exam.
- The written component of the Second Exam comprises of a critical literature review of two substantive public health-related topic areas and two methodological topic areas relevant to the student's planned dissertation research. The exam should include a summary and analysis of the peer-reviewed literature and current state of knowledge in the particular area, a discussion of gaps in knowledge, and important areas for future research. When possible, the four topic areas should be related to each other (i.e. the discussion of the literature highlights a common methodological approach, or a methodological weakness or gap, which is then discussed in more detail in the methodological area potion of the exam that covers what the method is, its strengths and weaknesses, and how this method has been or could be applied to the topic areas). The Second Exam is intended to serve as a foundation for the dissertation proposal, but is often broader in scope than a specific dissertation topic and includes discussion of related theories and empirical evidence that sets a general context for the dissertation research area.
- The student revises the written component of the second exam to incorporate feedback from the Sponsor, and later the other committee members. Students should expect to work through a number of drafts with the Sponsor before the written exam is deemed ready to disseminate to other committee members.
- The penultimate draft and final version of the written component of the exam must be no more than 20 double-spaced pages, excluding references, figures, and tables.
- The student submits the Second Exam Progress report to the Sponsor every two months during this process.
- The Student works with the Sponsor by sharing detailed responses to committee member comments, and incorporate revisions accordingly. The Sponsor must approve a near final draft with revisions to be shared with the Reader and Chair for their comments.
- The Reader and Chair review the Sponsor-approved revised draft, and provide feedback to the student as needed until they and the sponsor approve the revised Second Exam as 'defense-ready'. Once the Reader has approved the revised Second Exam, it is disseminated to the committee as a whole and a defense date scheduled at least 4 weeks later.
- During the entire process, the student prepares for the oral defense, which can include questions from the approved reading list and any other reading list provided by the student's Track Coordinator (e.g., general readings for the discipline) at the time of Second Exam approval.
- The student prepares a 10-15 minute presentation for the Second Exam defense, and practices the presentation, ideally in front of others in a position to provide feedback, to ensure a clear, comprehensive, and concise delivery.
- The student informs the DPH Program of any special audiovisual needs beyond PowerPoint projection at least one week in advance of the defense
- The student brings hard copies of the slides for committee members on the day of the defense.

Sponsor:

- Works with the student on setting a realistic timeframe for completion of the exam.
- Reviews and submits bi-monthly Second Exam Progress reports to the TC and EO.
- Reviews, provides input on, and approves the Reading List, working drafts, and mature drafts of the Second Exam before sharing with Reader and Chair.
- Works with student to address comments of Sponsor, Reader, and Chair.

- Works with student to prepare the Second Exam Defense presentation.
- Critically reviews the final written portion of the Second Exam in advance of the defense, and comes to the defense with an initial rating of the written component (Excellent, Satisfactory, Unsatisfactory) along with supporting information and questions.

Reader:

- Provides feedback on and approves final Reading List.
- Provides written feedback on mature, sponsor-approved draft.
- Works with student to ensure comments of Sponsor, Reader and Chair are adequately addressed, ultimately approving a final draft as 'defense ready.'
- Critically reviews the final written portion of the Second Exam in advance of the defense, and comes to the defense with an initial rating of the written component (Excellent, Satisfactory, Unsatisfactory) along with supporting information and questions.

Chair:

- Approves the final Reading list.
- Provides written feedback on a mature draft.
- Critically reviews the final written portion of the Second Exam in advance of the defense, and comes to the defense with an initial rating of the written component (Excellent, Satisfactory, Unsatisfactory) along with supporting information and questions.
- Communicates with the committee about when the exam is ready for defense, schedules the defense data for no less than 4 weeks following receipt of the final revised document and requests a room for the defense from the APO.

Other:

- At the time of the Second Exam application approval, the Track Coordinators may supplement the student's reading list with the intention to guide the student in theory and methods.
- The APO will schedule a room with standard A/V equipment.

The Second Exam Defense– Checkpoints

Student:
The student is responsible for both the written content of the Second Exam as well as any material included on general supplemental readings that may be provided by each Track.

Sponsor:

- The Sponsor has worked closely with the student on the entire Second Exam.
- Critically reviews the final proposal in advance of the defense, and comes to the defense prepared with comments and questions.

Reader:

- The Reader has given feedback on and approved the Reading List, provided feedback on mature drafts and ensured the final version is 'defense ready'.
- Critically reviews the final proposal in advance of the defense, and comes to the defense prepared with comments and questions.

Chair:

- The Chair has approved the Reading List, provided feedback on a mature draft and ensured the final version is 'defense ready'. The Chair communicates with the committee and when all agree that the written exam is defense ready, s/he schedules the defense date (at least 4 weeks after the student has submitted the final, committee approved draft) and requests a room from the APO.
- Critically reviews the final proposal in advance of the defense, and comes to the defense prepared with comments and questions.
- The Chair presides over the Second Exam Defense and reports the outcome to the student and the DPH Program (TC, EO and APO).

Second Exam Defense Process

1. The defense should last approximately 2 hours.

2. All committee members and the student are expected to arrive on time, turn off mobile devices, and remain in the room for the duration of the defense.

3. Immediately prior to the defense, the Committee will convene briefly and the Chair will check if there are any outstanding issues, describe the defense process and assign the order of the questioning. The Sponsor has the option of choosing to be the first or last questioner.

4. The student makes a brief summary presentation (s/he may present slides if helpful). Since all committee members will be intimately familiar with the content of exam by this point, this presentation should be 10-15 minutes in length, and in no cases should it be more than 20 minutes.

5. All committee members should be given the opportunity to pose questions to the student on the content of the written exam as well as general theory and methods questions related to the student's disciplinary Track.

6. The student responds to questions posed by the committee members.

7. Immediately following the presentation, questions and discussion, the Chair asks the student to step out of the room and the committee members come to a consensus on an overall grade of *excellent*, *satisfactory* or *unsatisfactory*, which is based on each faculty member's initial critical review of the written component and the student's oral defense. In the event that a student receives a grade of unsatisfactory on the exam, an ad hoc faculty committee will be formed by the EO to discuss the student's continuation in the program. This committee may decide to require that the student take additional coursework or complete other work before retaking the Second Exam, or the committee may request that the student withdraw from the Program. Students may be allowed to retake the Second Exam only once. If they do not pass the retake of the Second Exam, the student will be asked to withdraw from the Program.

8. The Chair reports to the outcome of the Second Exam defense to the student, the TC, the EO, and the APO.

Dissertation Guidelines

The Dissertation Guidelines section consists of:

- The Dissertation in Relation to Coursework, The Second Exam, Registration, Levels, and Records
- The Dissertation Committee – Roles and Responsibilities
- Preparation of the Dissertation Proposal - Checkpoints
- Dissertation Proposal Defense - Process
- Guidance on the Three Article Dissertation Model
- Guidance on the Traditional Dissertation Model
- Dissertation Review, Approval, and Preparation for the Defense - Checkpoints
- Dissertation Defense – Checkpoints
- Dissertation Defense - Process

After completing all coursework and exams, students complete an original dissertation research project.

The Dissertation in Relation to Coursework, The Second Exam, Registration, Levels, and Records
Within the first year of coursework, students should discuss possible dissertation topics and research questions with their advisor and other faculty members. By the end of the first year of coursework, students should have possible research topics and research questions identified. And by the end of PUBH 890 Advanced Research Seminar I, students should have made substantial progress toward identifying a topic, research questions, possible methods, and source of data for the dissertation (i.e. planned self-collection, a publicly available data source, or data from the research study already conducted by the student, a faculty member, student's workplace, or some other source). In identifying potential data for the dissertation, students might consider some of the publicly available data sources which are included on a list posted on BlackBoard.

Once an area and initial research questions are selected, students should determine if the appropriate data can be acquired and if s/he has the requisite research skills to analyze the data correctly or can gain the expertise to do so. As each student's dissertation is unique, it is not possible for the required Program coursework to cover every research method that might be used for a dissertation and students are expected to plan their elective courses, independent studies, and even include additional coursework or training aimed at preparing themselves for their independent dissertation research and associated analytic techniques they are planning to employ in order to successfully complete the dissertation.

In PUBH 891 Advanced Research Seminar II students will refine the dissertation proposal. Students are required to complete and submit the annual Dissertation Progress Report annually (with review and approval by the sponsor) by the second week of the spring semester of each year until the dissertation is successfully defended and deposited.

Students must complete all coursework, pass the First and Second Exams, identify a Dissertation Sponsor, and convene a dissertation committee approved by the Track Coordinator before registering for PUBH 900 Dissertation Supervision and PUBH 898 Dissertation Seminar. PUBH 900 Dissertation Supervision and PUBH 898 Dissertation Seminar are non-credit required course numbers that students must be registered for every semester they are working on the dissertation. The student must be registered for PUBH 900 and PUBH 898 in the same or preceding semester that the student deposits the dissertation.

Students can only be advanced to Level III after the completion of all coursework, passing the First and Second Exams, and defending their dissertation proposal. See page 7.

The name of the student as noted on the dissertation to be deposited must match that of the name in Banner. If a student wishes to change name of record with the GC, they should request a change of name form from the Registrar's Office and submit that along with supporting documentation well in advance of the defense and dissertation deposit dates.

Upon depositing the dissertation, the student must show evidence that their record has been cleared by the Bursar, the Registrar, the Office of Financial Aid, the Director of the Office of International Students (if applicable), and the Mina Rees Library at the Graduate Center.

The Dissertation Committee – Roles and Responsibilities

The Dissertation Committee consists of four to five people: Sponsor, First Reader, Chair, Outside Reader, and an optional Third Reader. The roles must each be held by a different person (one person cannot fill more than one role on the committee). In no circumstances shall both the Sponsor and the First Reader be from outside the student's Track. The Track Coordinator, in consultation with the Executive Officer, makes the final decision on all committee member appointments and changes.

The members of the dissertation committee usually serve from the proposal stage through the dissertation defense. In situations when changes need to occur, the Sponsor must request and the TC and EO must approve any replacement committee members.

Sponsor

The Sponsor is a DPH faculty member who has prior experience serving on dissertation committees, expertise in the student's interest area and must be from the same disciplinary Track as the student. The student must negotiate a dissertation research project that the Sponsor agrees to supervise. The Sponsor is the faculty member who works most closely with and mentors the student to guide research content, study design and conduct, data analysis, writing, interpretation of results, and help to foresee and solve problems. When a student registers for PUBH 900 Dissertation Supervision, they do so under their Sponsor's name. The Sponsor will identify and recruit other dissertation committee members, usually in consultation with the student. The Sponsor is responsible for providing feedback on early drafts of the proposal and dissertation, approving the draft that is provided to the First Reader. The Sponsor also works with the Student to manage any revisions to the dissertation proposal and the dissertation itself requested by other committee members. The Sponsor cannot be on sabbatical while sponsoring a student. In this instance, an appropriate 'back-up' Sponsor must be identified well in advance and submitted by the Sponsor for approval by the TC and EO. The sponsor may continue to advise the student in an unofficial capacity or officially by taking-on a different role in the committee (e.g. the sponsor and another committee member may switch roles during the sabbatical).

First Reader

The First Reader is a DPH faculty member who must be from the same disciplinary Track as the student. S/he often reads several mature drafts of the proposal and dissertation, providing comments on the aims, design, and analytic approaches, The First Reader must read and provide thorough feedback on the first full Sponsor-approved draft of the proposal and dissertation in addition to the final versions but may provide comments on drafts between these two versions as well if needed. The First Reader, in consultation with the Sponsor, must approve the dissertation proposal and dissertation as 'Defense Ready' prior to circulating it to other committee members.

Chair
The Chair is a senior member of the DPH faculty (professor or associate professor) with experience in dissertation committee membership and student sponsorship, and is from the same Track as the student. The Chair will read and give feedback on Sponsor and First Reader approved drafts of the dissertation proposal and the dissertation at least once prior to each defense. He or she also oversees the process, convenes meetings, including the defense itself, and works to resolve any differences that might arise in the committee. The Chair presides over the dissertation proposal defense and dissertation defense, and reports on the outcome of the defense to the APO, Track Coordinator, and Executive Officer.

Outside (Second) Reader
The Outside Reader cannot be a DPH program faculty member. The outside reader may be a faculty member appointed to any other CUNY program, University, or from a professional organization or agency. The Outside Reader will provide specific expertise and quality control and will review the Sponsor and First Reader approved drafts of the proposal and dissertation and provide at least one round of feedback before the defense is scheduled. All outside readers must have demonstrated training, experience, and capability of rigorously evaluating research in the student's discipline. A CV of the outside member must be reviewed by the Sponsor and approved by the Track Coordinator and EO prior to their committee appointment.

Optional (Third) Reader
The optional Fifth Member can be either a DPH faculty member or from outside the DPH program or CUNY. The optional Third Reader will provide specific expertise and quality control and will review the Sponsor and First Reader approved drafts of the proposal and dissertation and provide at least one round of feedback before the defense is scheduled. Prior to the committee appointment, rationale for the appointment of a Third Reader must be provided to the TC and EO, along with a recent CV.

Preparation of the Dissertation Proposal - Checkpoints

Overview:

1) The Student works closely with the Sponsor to develop a comprehensive and polished draft of the dissertation proposal.
2) With the Sponsor approval, this draft is then shared with the First Reader who provides feedback and works with the student in consultation with the Sponsor to ensure that any additional comments are addressed.
3) Then, with First Reader approval, the proposal is circulated to the entire committee by the student and the committee is given 4 weeks within which they must provide written feedback to the student.
4) The Chair contacts the committee members to see if there is agreement that the proposal is ready for defense, if not, the student addresses comments and circulates the next draft to the entire committee (until the committee agrees it is ready for defense). Once the committee agree the proposal is ready for defense,
5) the Chair schedules the defense.

There are no established times for the dissertation proposal defense. The timing depends on the readiness of the student and the availability of committee members. It may be challenging to secure availability of committee members during the winter or summer breaks, and students should inquire about availability during those times, as well as upcoming sabbaticals, in advance and plan accordingly.

Roles of the Student, Sponsor, and other Dissertation Committee members

Student:

- Prior to finalizing the proposal, the student must complete the online CUNY's Responsible Conduct of Research (RCR) training . This is not mandatory for soon to deposit/defend candidates, however newer cohorts should anticipate having to complete this training as part of PUBH 891 Advanced Research Methods II.
  http://www.cuny.edu/research/compliance/Responsible-Conduct-of-Research.html
- After the proposal defense, the student completes, signs and submits GC Human Participants Clearance Form, dissertation abstract, and IRB approval or exemption to Nichol Gallimore at ngallimore@gc.cuny.edu.
  All questions regarding the GC Human Participants Clearance Form should be directed to Nichol Gallimore.
  http://www.gc.cuny.edu/CUNY_GC/media/CUNY-Graduate-Center/PDF/Research%20Funding/dissertation-form-letter_v2_1.pdf
  Please also review The CUNY Human Research Protection Program (HRPP) which comprises of 5 University Integrated Institutional Review Boards (IRBs) and 19 on-site HRPP offices.
  http://www.cuny.edu/research/compliance/human-subjects-research-1.html
- The student updates, submits and reviews the annual Dissertation Progress Report (found on Blackboard) with the Sponsor. The report must be approved by the Sponsor and submitted to the Track Coordinator by the second week of each spring semester until the dissertation is deposited.
- The Student prepares drafts of the dissertation proposal in the NIH format (see below) and shares with the Sponsor for review, input/feedback, and discussion.
- The Student may consult with other committee members regarding aspects of the proposal as it is under development.
- A mature, Sponsor-approved, full draft of the proposal is shared with the First Reader for review, input/feedback, and discussion. The student allows at least 4 weeks for review.

- The Student works with the Sponsor and First Reader to incorporate comments, suggestions, and feedback into a mature draft until it is approved by the First Reader, in consultation with the Sponsor.
- The First-Reader approved draft is then circulated to the entire committee for their review, input/feedback, and discussion. The student allows at least 4 weeks for review.
- All comments are shared with the Sponsor and First Reader for review and discussion. The student prepares responses to all major comments and reviews them with the Sponsor and First Reader.
- Additional revisions may be necessary, and the Sponsor and/or First Reader may recommend that the full committee review additional drafts. The Sponsor and First Reader work with the Student to revise the proposal accordingly.
- The Student must ensure that the proposal adheres to content and format guidelines below, including font size, line spacing, and page limits.
- Once the committee, approves the revised proposal (communicated to the Chair) as 'defense ready', the final proposal may be circulated to the full committee and a proposal defense date scheduled, allowing at least 4 weeks for review and identifying a day/time when all committee members can be present. The student prepares a 10-15 minute presentation for the Dissertation Proposal Defense, and practices the presentation, ideally in front of others in a position to provide feedback, to ensure a clear, comprehensive, and concise delivery.
- The student informs the DPH Program's APO of any special audiovisual needs beyond PowerPoint projection at least two weeks in advance of the defense.
- The student brings hard copies of the slides for committee members on the day of the defense.

Sponsor:

- Meet with the student regularly, review and provide input and guidance on all aspects of proposal development.
- Provide written feedback on all drafts of the proposal. Note that it is common for the proposal to go through multiple drafts before the Sponsor approves circulation of a full and mature draft to the First Reader.
- Review and ensure that the comments and revisions from all committee members are received and adequately considered and addressed as appropriate by the student.
- Approve mature draft of proposal for sharing with the First Reader.
- Consult with the First Reader on Student's proposal development progress and readiness to circulate to other committee members as needed.
- Critically review the final proposal in advance of the defense, and come to the defense prepared with comments and questions.

First Reader:

- Provide written feedback on full, mature, Sponsor-approved drafts of the proposal. Note that it is common for the proposal to go through multiple revisions before the First Reader approves circulation to the larger Dissertation Committee.
- Consult with the Sponsor on Student's proposal development progress and readiness to circulate to other committee members as needed.
- Critically review the final proposal in advance of the defense, and come to the defense prepared with comments and questions.

Chair:

- Provide written feedback on a mature, First-Reader approved draft.
- Communicates with committee members to determine when the proposal is ready for defense and a defense date can be scheduled.
- Schedules the defense, communicates with the APO to identify a room for the defense, and notifies the committee and student of the date and location for the defense.

- The Chair works with the Student and/or Committee Members as needed to resolve outstanding issues that cannot be resolved by the Student and the Sponsor or other committee members.
- Critically review the final proposal in advance of the defense, and come to the defense prepared with comments and questions.
- The Chair presides over the proposal defense and reports the outcome to the TC, EO and APO.

Outside (Second) Reader(s):

- The Outside Reader (and optional Third Reader) provide specific expertise and quality control.
- Provides written feedback on a mature, First-Reader approved draft. Critically review the final proposal in advance of the defense, and come to the defense prepared with comments and questions.

APO

- The APO will schedule a room with standard A/V equipment upon request from the Chair and student.

Dissertation Proposal Format

The dissertation proposal is a detailed plan that describes the content and methods of the planned dissertation. It is to be prepared in the NIH proposal format (below) and will include a statement of the problem, aims and research questions, a brief summary of relevant literature that explains the background and significance of the topic and describes the gaps that will be addressed by the dissertation, describes in some detail the study design, data sources, methods of data collection, and data analysis methods. Students are expected to describe and explain the theoretical framework for the study and include a power or sample size calculation for all quantitative analyses. The methods proposed should be both rigorous and feasible as it relates to achieving the aims and answering the proposed research questions as definitively as possible without major limitations that undermine or threaten the validity of the proposed research. The proposal should include a thorough description of the strengths and limitations of the proposed approach and a realistic timetable for completing the dissertation. It must also address human subjects issues related to your proposed research.

Elements of a Dissertation Proposal in the NIH format
Students should use the full 13 pages for their dissertation proposal, but no more than 13 pages.

1. Specific aims (1 page, single spaced)

2. Research Plan (12 pages, single spaced not including Human Subjects, citations and appendices)

    2.a. Background and significance, with 1 paragraph conclusion (no more than 2 pages)
    2.b. Innovation (about half a page)
    2.c. Approach (about 9.5 pages)

        2.c.1. Conceptual/Theoretical Framework w/ diagram (about 1 page)
        2.c.2. Preliminary data (if applicable, no more than half a page)
        2.c.3. Research design (6-7 pages, must address all proposal aims)
        2.c.3.1. Study design
        2.c.3.2. Study population and eligibility criteria (about 1-2 paragraphs)
        2.c.3.3. Data sources, collection, and management (about 1 page)
        2.c.3.4. Sampling/Recruitment procedures (if applicable)
        2.c.3.5. Primary and secondary outcome definitions
        2.c.3.6. Data analysis plan for each proposal Aim (i.e., statistical analysis/modeling or qualitative analysis)
        2.c.3.7. Statistical power and sample size for each Aim (if applicable, no more than half a page)

    2.d. Study timeline (1 paragraph or table)
    2.e. Generalizability (1 paragraph)
    2.f. Limitations and threats to the validity of the proposed research and how they will be managed (1 page)

3. Human Subjects (no page limit). For instructions, review Part II of NIH's Supplemental Instructions for Preparing the Protection of Human Subjects Section of the Research Plan.

4. Citations

5. Appendices (may include draft data collection instruments)

Dissertation Proposal Defense Process

1. The proposal defense should last approximately 2 hours.

2. All committee members and the student are expected to arrive on time, turn off mobile devices, and remain in the room for the duration of the defense.

3. Immediately prior to the defense, the Committee will convene briefly and the Chair will check if there are any outstanding issues, describe the defense process and assign the order of the questioning. The Sponsor has the option of choosing to be the first or last questioner.

4. Once the Committee and Student are assembled, the student gives a 10-15 minute formal presentation of the proposal (slides may be presented if desired). Since all committee members will be intimately familiar with the content of the proposal by this point, this presentation should be 10-15 minutes in length, and in no cases should it be more than 20 minutes.

5. Each committee member will ask questions and give feedback for approximately 15-20 minutes each.

6. The Chair will facilitate a discussion of the proposal.

7. Immediately following the presentation and discussion, the Chair asks the student to step out of the room and the committee members come to a consensus on the outcome of the proposal defense. The possible outcomes are: 1. Pass with no or minor revisions; 2. Pass with major revisions; 3. Failed. In the event of minor revisions, only the Sponsor must approve the revised dissertation proposal. In the event that major revisions are required, both the Sponsor and the First Reader must approve the revised dissertation proposal. In the event of a failed dissertation proposal defense, an ad hoc faculty committee will be formed by the TC and EO to develop a course of action.

8. The Chair will report the outcome of the proposal defense to the Track Coordinator, APO, and EO.

9. Final approved dissertation proposals must be submitted to the DPH Program office in PDF format by the Student for archival purposes.

Dissertation Preparation, Review, Approval, and the Dissertation Defense Process - Checkpoints

Overview:

1) The Student works closely with the Sponsor to develop comprehensive and polished drafts of individual dissertation chapters or manuscripts.
2) With the Sponsor's approval, draft chapters or manuscripts are then shared with the First Reader who provides feedback and works with the student in consultation with the Sponsor to ensure that any additional comments are addressed.
3) Then, with First Reader approval, individual dissertation chapters are circulated to the entire committee by the Student and the committee is given at least 3 weeks within which they must provide written feedback to the student on individual dissertation chapters.
4) The Student reviews comments with the Sponsor and incorporates revisions accordingly.
5) Revised, individual chapters are approved as 'Defense-ready' by the committee and communicated to the Chair (who notifies the Sponsor).
6) The Final Dissertation with all chapters is reviewed by the Sponsor and First Reader, and approved by both prior to circulation to the full committee, allowing 4 weeks for review and feedback.
7) Comments from the full committee are addressed, in consultation with the Sponsor and First Reader and upon approval by the Sponsor and First Reader, the Final Full Dissertation is disseminated to the full committee and a defense date is scheduled, allowing at least 4 weeks before the defense to allow time for all committee members to review the dissertation in its entirety.

There are no established times for the dissertation defense. The timing depends on the readiness of the student and the availability of committee members. It may be challenging to secure availability of committee members during the winter or summer breaks, and students should inquire about availability during those times, as well as upcoming sabbaticals, in advance and plan accordingly.

Student:

- The student updates, submits and reviews the annual Dissertation Progress Report (found on Blackboard) with the Sponsor. The report must be approved by the Sponsor and submitted to the Track Coordinator by the second week of each spring semester until the dissertation is deposited.
- The Student, in consultation with the Sponsor, chooses a dissertation format (3 paper model or traditional dissertation).
- The Student prepares drafts of individual dissertation chapters and shares with the sponsor for review, input/feedback, and discussion.
- The Student may consult with other committee members regarding aspects of the dissertation as it is under development.
- Mature, Sponsor-approved, full draft of individual chapters are shared with the First Reader for review, input/feedback, and discussion. The student allows at least 3 weeks for review of each chapter.
- The Student works with the Sponsor and First Reader to incorporate comments, suggestions, and feedback into a mature drafts of individual chapters that are approved by the First Reader, in consultation with the Sponsor.
- The First-Reader approved drafts of individual chapters are then circulated to the entire committee for their review, input/feedback, and discussion. The student allows at least 3 weeks for review.
- All comments are shared with the Sponsor and First Reader for review and discussion. The student prepares responses to all major comments and reviews them with the Sponsor and First Reader.
- The Student works with the Sponsor to address and incorporate all comments. A mature, Sponsor-Approved revised draft of each chapter is provided to the First Reader for their review, input/feedback,

discussion, and assessment of responsiveness to the committee's comment. The student allows at least 3 weeks for review.

- Additional revisions may be necessary, and the Sponsor and/or First Reader may recommend that the full committee review additional drafts of individual chapters. The Sponsor and First Reader work with the Student to revise the chapters accordingly.
- Once the committee has approved the individual chapters as defense ready (communicated to the Chair who informs the Sponsor), a full dissertation is developed with all chapters included for review by the Sponsor. This draft has incorporated and/or addressed all comments received by all committee members to date. The student incorporates final comments and edits from the Sponsor. A Sponsor-approved, full dissertation is then shared with the First Reader, allowing at least 4 weeks for review.
- Prior to circulating the full dissertation to the First Reader, the Student must ensure that the dissertation adheres to all content and format guidelines.
- Once the First Reader, in consultation with the Sponsor, approves the full dissertation as 'defense ready', the penultimate version of the full dissertation may be circulated to the full committee, allowing at least 4 weeks for review.
- Comments from the full committee are reviewed and incorporated by the student, in consultation with the Sponsor and First Reader. Once the Sponsor and First Reader determine that the feedback has been adequately addressed/incorporated by the student in a Final Full Dissertation, it may be circulated to the full committee, allowing at least four weeks for review prior to the scheduled defense date.
- The student prepares a 10-15 minute presentation for the Dissertation Defense, and practices the presentation, ideally in front of others in a position to provide feedback, to ensure a clear, comprehensive, and concise delivery.
- The student informs the DPH Program's APO of any special audiovisual needs beyond PowerPoint projection at least two weeks in advance of the defense.
- The student brings hard copies of the slides for committee members on the day of the defense.

Sponsor:

- Meet with the student regularly, review and provide input and guidance on all aspects of dissertation development.
- Provide written feedback on all drafts of dissertation chapters and the full dissertation. Note that it is common for dissertation chapters to go through multiple drafts before the sponsor approves circulation of a full and mature draft to the First Reader.
- Review and ensure that the comments and revisions to dissertation chapters from all committee members are received and adequately considered and addressed as appropriate by the student.
- Approve mature drafts before sharing with First Reader.
- Consult with the First Reader on Student's dissertation progress and readiness to circulate to other committee members as needed.
- Consult with the Chair on the readiness of the dissertation chapters for combining into the full dissertation.
- Work with the student to prepare the full dissertation, providing comments and feedback, and approve it for review by the First Reader.
- Work with the student to ensure committee comments on the full dissertation have been addressed.
- Critically review the final, full dissertation in advance of circulation for the defense, and come to the defense prepared with comments and questions.

First Reader:

- Provide written feedback on full, mature, Sponsor-approved drafts of individual dissertation chapters as well as the full dissertation. Note that it is common for dissertation chapters to go through multiple revisions before the First Reader approves circulation to the larger Dissertation Committee.
- Consult with the Sponsor on Student's dissertation progress and readiness to circulate chapters to other committee members as needed.
- The First Reader must approve the Final Full Dissertation as Defense-ready prior to scheduling the Dissertation Defense.
- Critically review the final dissertation in advance of the defense, and come to the defense prepared with comments and questions.

Chair:

- Provides written feedback on a mature First-Reader approved drafts of individual chapters as well as the full dissertation.
- The Chair works with the Student and/or Committee Members as needed to resolve outstanding issues that cannot be resolved by the Student and the Sponsor or other committee members.
- Communicate with committee members about their views on whether drafts of chapters and the first draft of the full dissertation will be ready for defense once comments have been addressed (or if the committee wants to see additional drafts).
- At least a month in advance of the defense , the Chair schedules the dissertation defense, requests a room for the defense from the APO, and communicates the date and location of the defense to the committee and student.
- At least a month in advance of the defense, the Chair provides the following to the APO with (1) Name of the student; (2) Title of dissertation; (3) Date, time, and place of the defense; and (4) Names of committee members, their affiliation, and email addresses to which invitations are to be sent.
- Critically review the final, full dissertation in advance of the defense, and come to the defense prepared with comments and questions.
- The Chair presides over the dissertation defense and reports the outcome to the TC, EO and APO.

Outside (Second) Reader(s):

- The Outside Reader (and optional Third Reader) provide specific expertise and quality control.
- The Outside Reader (and optional Third Reader) provide critical review and feedback on First Reader approved drafts of individual dissertation chapters as well as on the First Reader approved full dissertation draft.
- The Outside Reader (and optional Third Reader) will provide a critical review on the final, full dissertation, and come to the dissertation defense with prepared comments and questions.

Guidance on the Three Article Dissertation Model

Overview

This guidance is intended for students who choose to pursue a three article dissertation model. Students, sponsors, and other faculty serving on the dissertation committee should refer to this guidance in deciding whether the three article model would be appropriate for a given dissertation project, and subsequently when the dissertation is being written. This model is an option for DPH students and does not replace the current traditional dissertation model that has been used in the past and which remains as the alternate option. Some dissertation projects fit well under the three article model, and others are better written up in the traditional format. The choice of which model to work under for a given dissertation research project should be based on a discussion between the student and their sponsor, and the amount and complexity of the new research required for a dissertation would be similar no matter which format is chosen.

The DPH dissertation that conforms to the three article model comprises three separate papers (articles) of normal, discipline-specific, journal length that would be considered a 'publishable' research manuscript in a peer reviewed scientific or professional journal. The independence of the three papers reflects the fact that the articles may be read and understood without reference to one another; nevertheless, the papers must support an overarching research theme as outlined in the dissertation proposal. In addition, an overall introduction and conclusion to the dissertation in which the topics addressed in the three articles and, for the conclusion, their findings are synthesized together to provide an overall picture of the implications of the research to the field.

Format

The three papers are preceded in the dissertation document by an abstract and an introductory chapter, and are followed by a concluding chapter. Thus, the form of the 3-paper DPH Dissertation is as follows:

- Title page
- Abstract (for the overall dissertation)
- Table of contents
- List of Tables and Figures
- Acknowledgements and dedications
- Chapter 1: Introduction and background to the general topic area and gaps to be filled by the three articles.
    - Include the dissertation specific aims and hypotheses
- Chapter 2: First paper
- Chapter 3: Second paper
- Chapter 4: Third paper
- Chapter 5: Summary of results, conclusions and implications for policy and/or further research
    - Key Strengths and Limitations
    - Public Health Relevance
- Appendices

Specific Guidelines for the 3-paper DPH Dissertation

1. The introductory chapter provides an overview of the dissertation. It introduces the research theme and conceptual basis; establishes the public health importance of the problem under study; states the primary research questions and hypotheses; introduces methodological approaches; highlights and contextualizes salient literature; and briefly describes policy and programmatic implications. The specific aims and hypotheses of the dissertation must be included in this chapter.

2. The three papers must represent work that was initiated while the student was enrolled in the DPH program and approved by the student's entire dissertation committee at the dissertation proposal defense or officially in writing thereafter. The inclusion of research that was undertaken prior to defense of the dissertation proposal is permissible, however only with explicit committee approval prior to the dissertation proposal defense. As with the conventional dissertation model, all work must be independently conducted by the student.

3. The three papers must conform to the format of a typical scientific journal in the student's field of study, and be of normal length (3000-5000 words, depending on the target journal).For each of the three papers that are part of a student's dissertation, there will be a separate abstract. The three papers in the dissertation will likely include more in the way of methods and results than can fit into or is appropriate for a scientific journal article of normal length. Additional methodological detail, analyses or results synthesis conducted by the student or required by the committee (e.g., additional methodological detail, tables, figures, summaries, sub analyses, sensitivity analyses etc.) that is necessary for the dissertation, but not appropriate or too detailed for a journal article of normal length, should be included in the dissertation as appendices.

4. At least two of the three articles must be based on student analysis of data, either quantitative, qualitative, or mixed methods. A conceptual, theoretical, or methodological article is acceptable as a third paper, but must be closely aligned with the overall theme of the dissertation, and publishable, as judged by the dissertation committee. A literature review or synthesis is not acceptable for the third paper, as relevant literature should be critically appraised within the data analytic papers. However, systematic reviews and meta analyses are permissible.

5. "Publishability" of the articles is determined by the student's dissertation committee, which serves in the capacity of unofficial editorial board for the student. But in general, the committee should judge 'publishability' against the standard of leading peer reviewed scientific journals in the student's field of study.

6. Neither publication nor submission of the three articles is a requirement for completion of the DPH degree. Students may, however, submit committee-approved dissertation 'articles' to refereed scientific journals, even before the final dissertation defense, as external reviewer feedback will enhance quality and learning. In such cases, students should report feedback from peer reviewers to the sponsor and perhaps other committee members, and consult with them on incorporation of suggested modifications to the dissertation. A manuscript's acceptance for publication does not preclude committee members from requiring additional modifications to the manuscript for inclusion in the final dissertation.

7. The concluding chapter establishes the individual and collective contribution of the three articles to the student's area of inquiry. It discusses future research opportunities arising from the dissertation's development of the topic; It also details the public health relevance of findings (e.g., in terms of health policy, programs, practice or interventions). Finally, a critical discussion of key strengths and limitations of the research as it relates to the main findings across the three manuscripts must be included.

8. Authorship
    a. Independence: As with the conventional dissertation model, the DPH dissertation must be substantially the student's own work, and must be judged as such by the dissertation committee/examiners. However, once this has been established, in some cases it may be appropriate to include the dissertation sponsor and other dissertation committee members as co-authors on manuscripts being submitted to professional and scientific journals.
    b. The responsibilities of the first author: The student shall assume the role of first author on dissertation chapters submitted for publication. The responsibilities assumed of first author typically include: synthesis of the relevant literature, development of the major thesis, research question(s) and hypotheses; selection of an appropriate research design; development or adaptation of a conceptual model or framework; study design and data collection (where applicable); data management, analysis, and interpretation of results; preparation of major parts of manuscripts.
    c. Co-authorship: In no cases should authorship be expected or assumed by dissertation committee members. Students may invite dissertation committee members—or external mentors—to co-author a given paper from their dissertation, but the student must assume the role of "first author" on all articles. To be considered a co-author on a manuscript submitted for publication, faculty co-authors must contribute sufficiently to warrant co-authorship. Judgment of the potential contribution of co-authors can also be made by the student in consultation with the dissertation Sponsor, another committee member, or someone external to the dissertation committee. It is suggested that student use recommendations, such as those from the International Committee of Medical Journal Editors, as a guide to make determinations about authorship: (see http://www.icmje.org/recommendations/browse/roles-and-responsibilities/defining-the-role-of-authors-and-contributors.html), which recommends that authorship be based on the following 4 criteria:
        - Substantial contributions to the conception or design of the work; or the acquisition, analysis, or interpretation of data for the work; AND
        - Drafting the work or revising it critically for important intellectual content; AND
        - Final approval of the version to be published; AND
        - Agreement to be accountable for all aspects of the work in ensuring that questions related to the accuracy or integrity of any part of the work are appropriately investigated and resolved.

      Dissertation committee members or external reviewers who may be appointed by the DPH Program at some time in the future to serve as 'examiners' for the purposes of quality control cannot serve as co-authors, but should be thought of more as 'peer reviewers'.

9. This guidance was first issued by the DPH Program in June 2014 and again revised for the 2015 Program Manual. It will be included in the student manual and updated annually and as the program accrues experience with the three article model. Students and committees are expected to adhere to the most recent guidance from the DPH Program, regardless of when the student's dissertation research began.

Guidance on the Traditional Dissertation Model

Overview

This guidance is intended for students who choose to pursue a traditional (book format) dissertation model. Students, sponsors, and other faculty serving on the dissertation committee should refer to this guidance in deciding whether the traditional dissertation model would be appropriate for a given dissertation project, and subsequently when the dissertation is being written. This model is the format that has been used in the past and remains as an alternate option for DPH students who do not choose the three article format. Some dissertation projects fit well under the traditional model and others may be better suited to the three article model. The choice of which model to work under for a given dissertation research project should be based on a discussion between the student and their sponsor, and the amount and complexity of the new research required for a dissertation would be similar no matter which format is chosen.

The DPH dissertation that conforms to the traditional model comprises multiple chapters together in a book format. Unlike the three separate article format, the literature review, methods and conclusions will be presented all together each in its own, single chapter (rather than repeated at the beginning of each of the three articles). The results will also be presented together in one, or if more appropriate, a few chapters. In addition, an overall introduction and conclusion to the dissertation will be included in which the topics addressed in chapters are synthesized together to provide an overall picture of the implications of the research to the field.

Format

The traditional dissertation is organized into sections. Each section may be a single chapter or may include a few chapters, depending on the amount of information being presented and the optimal organization of that information. It is likely that the results section will include more than one chapter as the quantity of analysis required for this dissertation format is similar to that of the three article format. Thus, the form of the Traditional DPH Dissertation is as follows:

- Title page
- Abstract for the overall dissertation
- Table of contents
- List of Tables and Figures
- Acknowledgements and dedications
- Section 1: Introduction and background to the general topic area and gaps to be filled
    - Include the dissertation aims and hypotheses
- Section 2: Literature Review
- Section3: Methodology
- Section 4: Results & Interpretation
- Section 5: Conclusions, Discussion and Evaluation
- Appendices

Specific Guidelines for the DPH Traditional Dissertation

The dissertation must be based on student analysis of data, either quantitative, qualitative, or mixed methods. It may include a conceptual, theoretical, or methodological section as well. A systematic review or meta analyses may be included as part of the dissertation, but is not, in itself, sufficient and additional data analysis is required. Below is a brief description of what to include within each section of a dissertation written in the traditional format.

Section 1. Introduction

This section should introduce the aims of the study, including its justification within the field and its significance, both to the track and to public health overall. As well, this section should present the dissertation aims, guiding research question(s) and hypotheses to be tested. This section might also be used to specify the bounds of this study and its relationship to other ongoing research (if it is an analysis of a large data set that is at the center of multiple studies, for example).

Section 2. Literature Review

This section provides a thorough, critical, and analytical overview of existing literature and scholarship relevant to the aim(s) and research question(s) guiding this study. Ideally, a literature review should be comprehensive, balanced, up-to-date, and organized so as to flow logically.

Section 3. Methodology

The methodology section should clearly and minutely detail the methods of sampling, data collection, and data analysis used. Population and instrumentation should be explained. Where standard instruments are used, they should be appropriately referenced and a discussion of their evaluation in terms of reliability and validity included. This section should also discuss any and all ethical considerations, procedures, and approvals or limitations as well as how reliability and validity are assured for this study in specific. It is imperative that this section be thorough, detailed, and logically organized and clearly presented.

Section 4. Results & Interpretation

Ideally, findings should be presented in subsections. Tables and figures should be included when appropriate for clarity. All interpretation of the results may either be saved for a separate chapter of the dissertation (within this section), or the interpretation may be included the same chapter as the results in a subsection following the presentation of the results. The results might all be presented within a single chapter or, if they are extensive, the results might be organized into a series of shorter chapters by topic.

Results should be summed up in the simplest form first before presenting analysis, in tables if possible, and then interpretation as to significance and conclusions.

Section 5: Conclusions, Discussion, and Evaluation

The fifth and final section should begin by summarizing the study, its aims, any hypothesis, and methods. Then, in referring back to the results presented in section 4, this section should summarize the analytic findings and interpretations, concluding with a discussion of the signification of the findings, whether any hypothesis was proven, partially proven, or disproven. As well, this chapter should look back on the overall study critically, both making the case for its strengths and importance and also discussing any weaknesses or limitations. Finally, the public health relevance should be discussed, including any policy recommendations or practical intervention suggestions. This is a particularly important chapter, as it is the best opportunity to offer a comprehensive view of the study and its lasting significance and to leave the reader with any parting thoughts.

Authorship

a. Independence: As with the three article model, the DPH dissertation must be substantially the student's own work, and must be judged as such by the dissertation committee/examiners. However, once this has been established, in some cases it may be appropriate to include the dissertation sponsor and other dissertation committee members as co-authors on the book generated from the dissertation, individual chapters in the book, or manuscripts developed from the dissertation for submission to professional and scientific journals.
b. The responsibilities of the first author: The student shall assume the role of first author on any book published based on the dissertation as well as on any manuscripts developed from the dissertation and submitted for publication. The responsibilities assumed of first author typically include: synthesis of the relevant literature, development of the major thesis, research question(s) and hypotheses; selection of an appropriate research design; development or adaptation of a conceptual model or framework; study design and data collection (where applicable); data management, analysis, and interpretation of results; preparation of major parts of manuscripts.
c. Co-authorship: In no cases should authorship be expected or assumed by dissertation committee members. Students may invite dissertation committee members—or external mentors—to co-author the book, chapters within the book, or a given manuscript developed from their dissertation, but the student must assume the role of "first author" on all publications (book or manuscript). To be considered a co-author on a book, book chapter or manuscript submitted for publication, faculty co-authors must contribute sufficiently to warrant co-authorship. Judgment of the potential contribution of co-authors can also be made by the student in consultation with the dissertation Sponsor, another committee member, or someone external to the dissertation committee. It is suggested that student use recommendations, such as those from the International Committee of Medical Journal Editors, as a guide to make determinations about authorship: (see http://www.icmje.org/recommendations/browse/roles-and-responsibilities/defining-the-role-of-authors-and-contributors.html), which recommends that authorship be based on the following 4 criteria:
    - Substantial contributions to the conception or design of the work; or the acquisition, analysis, or interpretation of data for the work; AND
    - Drafting the work or revising it critically for important intellectual content; AND
    - Final approval of the version to be published; AND
    - Agreement to be accountable for all aspects of the work in ensuring that questions related to the accuracy or integrity of any part of the work are appropriately investigated and resolved.

    Dissertation committee members or external reviewers who may be appointed by the DPH Program at some time in the future to serve as 'examiners' for the purposes of quality control cannot serve as co-authors, but should be thought of more as 'peer reviewers'.

This guidance was first issued by the DPH Program in August 2015. It will be included in the DPH Program manual and updated annually and as the program accrues experience with the traditional dissertation model. Students and committees are expected to adhere to the most recent guidance from the DPH Program, regardless of when the student's dissertation research began.

Dissertation Defense - Checkpoints

The dissertation defense is open to the public. All committee members must be in attendance at the defense. Only the Outside Reader or the Optional Third Reader may, in extenuating circumstance, participate remotely. If both the Outside Reader and Optional Third Reader cannot attend in person, a different date must be scheduled. Questions, comments, or suggested revisions must be submitted to the committee Chair in writing at least 24 hours prior to the defense by a Reader who is not physically present. If the Outside Reader or Optional Third Reader has electronically attended, faxed/scanned email signatures for this purpose will suffice. All committee members will have read the full dissertation prior to the defense and will be prepared to pose questions and provide feedback/comments at the defense.

Student:

- The student has completed an original research project that addresses a particular public health problem or issue.
- The student has prepared a 10-15 minute formal presentation.

Sponsor:

- The Sponsor has worked closely with the student on the entire dissertation, helped select the committee and approve the dissertation for defense.

First Reader:

- The First Reader has reviewed and provided feedback on the dissertation as it progressed, approved the as the release of the dissertation chapters and the final full dissertation to the committee, and approved the dissertation for defense.

Chair:

- It is the Chair's responsibility to determine when the committee agrees that the dissertation is ready for defense, schedules the defense date, and runs the Defense - assigning the order of questioning, ensuring the productivity of the discussion, managing the voting and paperwork and reporting the outcome to the TC, EO and APO.
- The Chair has provided written feedback to the student on individual dissertation chapters and the full dissertation at least once prior to the defense.

Outside (Second) Reader(s):

- The Outside Reader (and optional Third Reader) has provided specific expertise and quality control.
- The Outside (and optional Third) Reader has provided written feedback to the student on the full dissertation at least once prior to the defense.

Other

- The APO will inform the GC Provost's Office of the defense who will then send a formal invitation to the committee and student.
- The APO will inform DPH Program faculty and students of the scheduled defense in the monthly DPH newsletter and by separate announcement.

Dissertation Defense Process

1. The defense should last approximately 2 hours, but the student and committee members should allow for up to 2.5 hours.

2. All committee members and the student are expected to arrive on time, turn off mobile devices, and remain in the room for the duration of the defense.

3. Immediately prior to the defense, the Committee will convene briefly and the Chair will check if there are any outstanding issues, describe the defense process and assign the order of the questioning. The Sponsor has the option of choosing to be the first or last questioner.

4. Once the Committee, Student, and Audience are assembled, the student will give a very brief (10-15 minute) presentation/overview of the dissertation to get the conversation started. Since all committee members will be intimately familiar with the content of the Dissertation by this point, this presentation should be 10-15 minutes in length, and in no cases should it be more than 20 minutes. This presentation should not detail all aspects of the dissertation, as all committee members will have read the dissertation in advance. It should summarize the gaps in the literature, specific aims, key findings and conclusions for each aim, and public health implications.

5. Each committee member will ask questions for approximately 15-20 minutes.

6. Audience members are allowed brief questions, moderated by the Chair.

7. After the questions end, the students and audience will be asked to leave the room.
   The Chair will facilitate a discussion of the quality of the dissertation and the defense. Then the committee will vote. There are four options,
   a) We certify that the candidate has passed the Final Examination. We accept the dissertation as presented;
   b) We certify that the candidate has passed the Final Examination. We will consider the dissertation acceptable after minor revisions are approved by the Sponsor;
   c) In our judgment the candidate's dissertation requires major revisions. It must be resubmitted for approval by the Sponsor and two members of the examining committee.*
   d) We certify that the candidate has failed the Final Examination, and make the following recommendations.

8. Committee members sign the signature page of the dissertation and the Report of Final Examination. The signature page original goes to the student and the original of the Report of Final Examination to the DPH Office for submission to the Provost' Office. The student cannot deposit without these signed documents.

*In this case, written feedback, prepared by the Sponsor and Chair, must be provided to the student on required revisions. The feedback must be shared with all committee members. The Sponsor and the Chair must review the revised dissertation to ensure that all revisions have been adequately attended to.

Student Professional Development

GC Interdisciplinary Concentrations

The Graduate Center offers a number of Interdisciplinary Concentrations. Some of these concentrations offer core courses, while others guide students in finding courses across different academic disciplines that fulfill the concentration requirements. When students finish the requirements for a concentration they are awarded a physical certificate but the IDS concentrations are not noted on their transcripts. The Interdisciplinary Concentrations include: Advanced Social Research, Cognitive Science, European Union Studies, Fashion Studies, Food Studies, Language and Literacy, Latin American and Caribbean Studies, Lesbian/Gay/Queer Studies, Psychology of Political Behavior, Public Policy and Urban Studies, Twentieth-Century Studies, and Urban Health and Society.

Concentrations will not appear on transcripts but the student will receive a hard copy document stating completion.

Many of these Interdisciplinary Concentrations offer Fellowships and Awards.

http://www.gc.cuny.edu/Academics-Research/Degree-Programs/Doctoral-Programs/Interdisciplinary-Concentrations

GC Interdisciplinary Certificate Programs

Interdisciplinary Certificate Programs are open to students enrolled in one of the existing doctoral programs offered at the Graduate Center. In addition to fulfilling the requirements of their doctoral program, students can choose to complete a Certificate Program.

Programs available to DPH students include: Africana Studies, American Studies, Demography, Film Studies, Interactive Technology and Pedagogy, and Women's Studies. Students who fulfill the requirements of a certificate program have this noted on their transcripts when they graduate.

Required courses for Certificate programs can be used, in some cases, as DPH electives. Meaning, a student in a certificate program may not need to take additional credits as the requirements for the DPH degree and the interdisciplinary certificate may overlap. This option should be discussed with the student's advisor and the director of the certificate program.

Certifications will appear on transcripts and the student will receive a hard copy document.

Many of these Interdisciplinary Certificate Programs offer Fellowships and Awards.

http://www.gc.cuny.edu/Academics-Research/Degree-Programs/Doctoral-Programs/Certificate-Programs

GC Professional Development Seminars

Students may register online for Professional Development Seminars. The courses are 0 credits and do not appear on student transcripts; they are free of charge and open to all matriculated doctoral students at the Graduate Center. Students register for them as they do their academic classes and can find them listed under "Professional Development" in the course schedule. For further information contact the Office of the Associate Provost at 212-817-7282 or RSponzo@gc.cuny.edu

http://www.gc.cuny.edu/Prospective-Current-Students/Student-Life/Professional-Development

GC Advanced Research Collaborative (ARC)

The Advanced Research Collaborative (ARC) extends the Graduate Center's global reach and prominence as an international hub of advanced study. Specifically, ARC promotes interdisciplinary research and partners with the Graduate Center's forty research centers, institutes, interdisciplinary committees, and other academic initiatives. Through its Distinguished Fellowship Program, a research-focused initiative, ARC will offer even more possibilities for collaboration between campus-based and Graduate Center faculty, in addition to visitors, doctoral students, and postdoctoral colleagues.

http://www.gc.cuny.edu/Academics-Research/Advanced-Research-Collaborative

GC Centers & Institutes
The Graduate Center is home to more than thirty interdisciplinary research centers and institutes focused on areas of compelling social, civic, cultural, and scientific concerns. Examples are the New Media Lab, Center for Lesbian and Gay Studies (CLAGS), and the Center for Urban Research.
Many of these Centers & Institutes offer Fellowships and Awards
http://www.gc.cuny.edu/Academics-Research/Advanced-Research-Collaborative/Centers-Institutes

GC Initiatives & Committees
http://www.gc.cuny.edu/Academics-Research/Advanced-Research-Collaborative/Initiatives-Committees

GC Student Business Cards
With permission from the APO, students may order GC business cards. The cards cost $17 for approximately 250. Order through the APO who will then direct you to the Office of Communications and Marketing.

Free Poster Printing at the GC
Free poster printing is available to GC students. Contact Ray Ring, Director of GC Building Design & Exhibitions rring@gc.cuny.edu 212-817-7394 and indicate that you are a student in the DPH program and include a 36" x 48" Power Point slide (which will be your poster) and include the GC logo on that slide. Logo is available by request. http://www.gc.cuny.edu/About-the-GC/Resource-Services/Communications---Marketing/Description-GC-Logo

Academic International Travel - GC Sponsored or Independent, documents required
Mandatory notification requirements and travel insurance for international academic travel by graduate students for independent research, internships, language study, practicums, conference attendance/presentation, or job interviews apply regardless of the source of funding. http://www.gc.cuny.edu/Prospective-Current-Students/Current-Students/International-Travel-Requirements-for-Current-Students

American Public Health Association Membership (APHA)
It is recommended that students join the American Public Health Association (APHA).The American Public Health Association is the oldest and most diverse organization of public health professionals in the world and has been working to improve public health since 1872. The Association aims to protect all Americans, their families and their communities from preventable, serious health threats and strives to assure community-based health promotion and disease prevention activities and preventive health services are universally accessible in the United States. APHA represents a broad array of health professionals and others who care about their own health and the health of their communities. http://www.apha.org/

Public Health Association of New York City Membership (PHANYC)
Public Health Association of New York City (PHANYC) Student Committee is dedicated to getting public health students more informed and involved in the activities of PHANYC, as well as helping to plan PHANYC activities which reflect the interests and needs of students in public health related fields in New York City.
http://www.phanyc.org/about/student.html

Career Services, Employment, Job Listserv/Lists, Awards, and Scholarships and Fellowships

Career Services

CUNY SPH Office of Student Services

The Office of Student Services has established a new initiative Interactive Student Centered Hub of Academia, Research and Entrepreneurship (I-SHARE). I-SHARE aims to facilitate student-centered environment through its various initiatives such as Mentoring program (Peer to Peer and Meet Alumni to enhance Career horizons, MATCH), Career Services, CUNY School of Public Health Student and Alumni Association, Student Innovation Initiative, and Student Resource Center.
sph.cuny.edu/student-services/

GC Office of Career Planning and Professional Development

As part of the 2011 Graduate Center Strategic Plan, the Graduate Center has launched a permanent central career planning and professional development office to prepare students for careers inside and outside the academy. Through one-on-one counseling, workshops, mentoring, job search resources, dossier review, internships, mock interviews and building relationships with employers and alumni, the Office of Career Planning and Development collaborates with faculty to ensure that GC students receive the best co-curricular training available as they prepare to enter the workforce.
http://careerplan.commons.gc.cuny.edu/

The GC Office of Career Planning and Professional Development sends weekly emails, holds online events and webinars, and has an online job search directory.
http://careerplan.commons.gc.cuny.edu/about/

DPH & CUNY SPH Employment

CUNY SPH Adjunct Positions

DPH students are encouraged to apply for adjunct positions at the CUNY SPH consortium schools (Brooklyn, Hunter, Lehman) or other four-year degree granting CUNY schools. Calls are sent via the DPH Jobs Listerv, see below. Students teaching under an adjunct line are eligible to apply for the CUNY Tuition Award. See page 75 for additional eligibility.

DPH & CUNY SPH Research Opportunities for DPH Students

A periodically updated listing of current DPH and CUNY SPH Faculty Research on which students may apply to work as paid and unpaid research assistants or as an independent study is posted on Black Board. Depending on the listing, benefits may be available. Students working on a graduate assistantship line are eligible to apply for the CUNY Tuition Award. See page 75 for additional eligibility.

Please be aware that GC doctoral students cannot act as Teaching Assistants or be asked to grade the work of peers in the same program that they are attending.

DPH Student and Alumni Job Listserv

DPH students and Alumni can subscribe and unsubscribe from the DPH job search listserv. First Register LISTSERV Password and then subscribe and unsubscribe here.

GC and CUNY Job Listings

Graduate Center jobs are listed on the Jobs at the GC page.
http://www.gc.cuny.edu/About-the-GC/Resource-Services/Human-Resources/Jobs-at-the-GC

CUNY-wide positions can be searched for on the CUNY Employment page.
http://www.cuny.edu/employment.html

DPH & CUNY SPH Awards

CUNY SPH Dean's Dissertation Grant

The Dean of the CUNY School of Public Health has committed to fund a limited number of DPH dissertation grants each year. The grant funding period is 12 months. All research funded by the grant must be completed within 12 months of receiving funding, and recipients must submit a final report of the activities completed for the grant and a final budget report detailing spending within 15 months following receipt of the grant.

Students in the Doctor of Public Health (DPH) program who have successfully defended their dissertation proposal are eligible to apply for this funding opportunity to help support the costs associated with dissertation research. In order to be eligible for a Dean's Dissertation Grant, students must be (1) actively enrolled and in good standing in the DPH program at the CUNY Graduate Center, (2) have successfully defended their dissertation proposal, and (3) Have received IRB approval for their dissertation proposal (or have been deemed exempt by the IRB).

Priority for these funds will be given to students who have also applied for external funding.

Proposals for this grant are usually accepted twice a year and the due dates will be announced via email. Additional requirements to apply for the CUNY SPH Dean's Dissertation Grant are part of the application located on Blackboard.

DPH Conference Presentation Travel Award

When funds are available, calls for applications will be sent via email for the DPH Conference Presentation Travel Award. This award is intended to fund DPH students who have been invited to give oral presentations at conferences other than APHA, or poster presentations at any conference (including APHA). Detailed eligibility requirements will be included with the call, which usually goes out towards the end of the spring semester. Students may submit proposals to cover the expenses related to conferences that they already attended or plan to attend during the current academic year.

CUNY SPH APHA Oral Presentation Awards

The CUNY SPH Dean has agreed to fund DPH students who have been invited to give an oral presentation at the annual APHA meeting. Calls for applications will be sent via email for students presenting an oral paper at APHA.

GC Institutional Aid

CUNY Tuition Award- GC Office of Financial Aid

Calls for nomination are sent via email within the first few weeks of each fall and spring semester. This award is not available during the summer. The award covers only New York State tuition charges. If an out-of-state or international student is eligible, they must pay the difference between their tuition charges and the NYS charges at the same level.

Eligibility:

1) Registered full time (7 or more credits);
2) A doctoral level student;
3) Teaching a minimum of 3 credits at a CUNY institution on an adjunct line or be on a graduate assistantship line;
4) Be within your first 10 semesters of attendance in the program;
5) Not have tuition covered by any other tuition award.

http://www.gc.cuny.edu/Prospective-Current-Students/Current-Students/Financial-Assistance/GC-Institutional-Aid

GC Certificate Program GC Centers & Institutes Fellowships/Awards

Please check the Professional Development section of this manual on page 71 for information on all available Certificate and Interdisciplinary Concentrations of which many offer Fellowships and Awards. The below are examples that are currently known to be available to DPH students.

Demography Fellowship (available to students enrolled in the Demography Certificate Program)
Continuing students should apply by submitting the following materials to Demography Certificate Program Coordinator, Shiro Horiuchi shoriuch@hunter.cuny.edu and to CIDR Director, Neil Bennett Neil.Bennett@baruch.cuny.edu: Curriculum Vitae, transcripts, any relevant publications, a 1-2 page description of research interests, and progress toward the dissertation, if applicable.
http://www.cuny.edu/about/centers-and-institutes/cidr/cpd.html

Women's Studies Fellowships & Awards

Please check each award's details as some are available only to students enrolled in the Women's Study Certificate Program, while others are available to all GC students.
Since 1977, the Center for the Study of Women and Society has promoted interdisciplinary feminist scholarship. The focus of the Center's research agenda is the study of gender, sexuality, race, ethnicity, class and nation in relationship to the experiences of women and men in societies around the world.
http://web.gc.cuny.edu/womenstudies/center/fellowships.html#Heilbrun

New Media Lab

THE NEW MEDIA LAB (NML) works with Graduate Center and CUNY faculty and doctoral students from a variety of academic disciplines to conceive and create groundbreaking multimedia projects based on student and faculty scholarly research. Our goal is to integrate digital media into traditional academic practice, challenging scholars to develop fresh questions in their respective fields using the tools of new technology. The NML is committed to a vision of new technology based on open access to ideas, tools, and resources. With ongoing support from CUNY, the New Media Lab has become a dynamic environment in which projects funded by the National Endowment for the Humanities, the Rockefeller Foundation, and other private and public sources demonstrate new approaches and methods of merging digital media, scholarship, and learning.
http://newmedialab.cuny.edu/

CUNY SPH Centers & Institutes
CUNY School of Public Health faculty are affiliated with several City University of New York research centers and institutes. These provide opportunities for faculty and student research.
http://sph.cuny.edu/research/centers-institutes/

GC Office of Research and Sponsored Programs
The Graduate Center Office of Research and Sponsored Programs (RSP) is the central administrative unit for overseeing GC-CUNY applications for, and awards of, governmental and foundation funding. The RSP is ready to answer questions about proposal preparation, submission, and administration for the entire GC Community including faculty and staff, Research Centers and Institutes, and, of course, students!

Funding opportunities, searchable databases as well as information on the Doctoral Student Research Grant Program, can be found at the link below.

Doctoral Student Research Grant Program (DSRG)
The mission of the Doctoral Student Research Grant Program is to foster a research-oriented academic culture among doctoral students and to encourage interdisciplinary discourse at the CUNY Graduate Center by: (a) providing incentives for students to model and meet, early in their careers, the requirements for succeeding in the competition for funds by clearly defining a problem, a project, and a realistic budget; (b) providing an occasion for faculty-student mentoring relationships that are oriented around the concrete problems of proposing, planning for, and executing research; and (c) furthering student professional progress by providing funds for pre-doctoral research publications, presentations, and professional networking. Applications are usually due in December or January.

http://www.gc.cuny.edu/About-the-GC/Resource-Services/Sponsored-Research-Grant-Funding

CUNY-Wide Scholarships &Fellowships

CUNY listings of available scholarships
Be aware that this section of the general CUNY website includes scholarships for all levels of higher education.
http://www.cuny.edu/admissions/financial-aid/scholarships.html

Macaulay Honors College Instructional Technology Fellows (ITFs)
Doctoral students in all disciplines at the CUNY Graduate Center are welcome to apply for the ITFs fellowship. Applicants must be currently registered full-time doctoral students at the CUNY Graduate Center in good academic standing to apply, and if selected as ITFs, must be registered, in good academic standing, and at level II or III at the CUNY Graduate Center during the period of the fellowship. Applicants should be interested in integrating technology and pedagogy for the benefit of students and faculty, both inside and outside of the classroom. They should also be eager to participate with other Instructional Technology Fellows in a multidisciplinary environment whose focus changes semester to semester.
http://macaulay.cuny.edu/eportfolios/itfprogram/

Federal Assistance

Federal Work Study

Federal Work-Study awards are based solely on financial need as defined by federal law. Federal Work-Study awards are packaged each spring for the following academic year. Because Federal Work-Study funds are limited, only students who have their FAFSA on file by the priority deadline (April 30th) are initially considered for awards. Federal Work-Study positions are assigned by the Executive Officer.

Fulbright U.S. Student Program- GC Provost's Office

Established in 1946, the Fulbright Program aims to increase mutual understanding between the peoples of the United States and other countries, through the exchange of persons, knowledge, and skills. Sponsored by the U. S. Department of State, Fulbright, the largest U.S. international exchange program, provides funds for students, scholars, and professionals in all fields of study to undertake international graduate study, advanced research, university teaching, and teaching in elementary and secondary schools.

Fulbright-Hays Doctoral Dissertation Research Abroad Program (DDRA)- GC Office of the Vice President for Student Affairs

The Fulbright-Hays Doctoral Dissertation Research Abroad Program (DDRA) funds individual doctoral students to conduct research in modern foreign languages and area studies for periods of 6 to 12 months. This program is sponsored by the U. S. Department of Education (ED) and is not related to the IIE Fulbright program, which is run by the State Department. The Fulbright-Hays DDRA Program is for students who intend to conduct dissertation research outside of the United States, excluding the countries of Western Europe, and is of particular interest to (but not limited to) students in the social sciences.

http://www.gc.cuny.edu/Prospective-Current-Students/Current-Students/Financial-Assistance/Federal-Assistance

Student Community

CUNY Academy Health Student Chapter

Initiated by DPH students, the CUNY Academy Health student chapter aims to encourage the exchange of knowledge, dissemination of research findings, and networking amongst Graduate Center students in health services research and health policy.
For more information on our AcademyHealth student chapter and how to join Academy Health, please email CUNYacademyhealth@gc.cuny.edu
cunyacademyhealth.ws.gc.cuny.edu
facebook.com/CUNYAcademyHealth
facebook.com/groups/CUNYAcademyHealth
linkedin.com/groups?home=&gid=8260481

The Doctoral Students' Council (DSC)

The Doctoral Students' Council (DSC) is the sole policymaking body representing students in doctoral and master's programs at The Graduate Center of The City University of New York.

The DSC allocates a certain amount of money each academic year to the DPH program. These funds will be used as deemed appropriate by the elected student representative.
www.cunydsc.org/
opencuny.org/dscfac/
facebook.com/cunydsc
See page 4 for more on the DSC.

DPH and CUNY SPH Committees

DPH and SPH committees have student representation. Student representatives in DPH committees represent DPH students. This includes going to meetings (once a semester, sometimes more or less), reporting any concerns students have, and also reporting back to the student body any issues or concerns that representatives feel they should know about. Calls for nominees and voting occurs every Fall semester. DPH Executive Committee (3 positions), DPH Elections Committee (1 position), DPH Admissions and Awards Committee (2 positions), DPH Curriculum and Examinations Committee (2 positions), DPH Faculty Appointments Committee (2 positions). SPH committees SPH Faculty-Student Council (1 position), SPH Curriculum Committee (1 position), SPH Assessment Committee (1 position). Incoming and continuing students are encouraged to participate.
See pages 3-4 for more DPH and CUNY SPH governance and student participation.

The CUNY Academic Commons

The CUNY Academic Commons is part of the City University of New York. We are dedicated to the free expression of our users in a collaborative and sharing environment. We are a community that seeks to use the Academic Commons as a means of fulfilling our highest aspirations for integrating technology into our teaching, learning, and collaborating. Members of the faculty, administration, staff, and graduate students of the City University of New York may register on the Site. We will take all reasonable measures to keep information and users safe.
Check the commons for scholarship, fellowship, and award opportunities.
http://commons.gc.cuny.edu/

OpenCUNY
The OpenCUNY Academic Medium is a student-based, open-source, academic, participatory digital medium for the CUNY Graduate Center community.
To date, OpenCUNY has worked with GC students to develop interactive open-source environments for chartered organizations, student associations, GC-based courses, student-run conferences, graduate research, health initiatives, student activism, personal websites, and an array of DSC initiatives.
http://opencuny.org/

Graduate Center Student Intervention Team (GCSIT)
The Graduate Center Student Intervention Team (GCSIT) supports a healthy and safe on-campus environment by assisting students whose behavior is worrisome or disruptive.
Any member of the college community can reach out to the GC Student Intervention Team to report a concern about a student through our on-line reporting form or by calling a the Student Affairs Office at x 7400. The GCSIT will review the report and take appropriate action. Reports may be made confidentially.
www.gc.cuny.edu/Prospective-Current-Students/Student-Life/Resources/Behavioral-Intervention-Team-%28BIT%29

Facebook - CUNY Graduate Center DPH Student Group
The DPH program has a student run Facebook group page.

Student Electronic Resources

GC Email Accounts
It is a policy of the GC that students regularly check their GC email accounts. Please note that students redirect at their own risk and it is recommend students periodically check their GC email account as they will need to change passwords at least annually. As of May 2015, students are required to have an @gradcenter.cuny.edu email address. This does not apply to faculty or staff who continue to use @gc.cuny.edu addresses.

Banner ID
All GC students are assigned a Banner ID number. This nine digit number is the unique identifier that students use for all administrative purposes with the GC.

The Graduate Center's Preferred Name Policy
While CUNY recognizes the importance that a change of name might have to students during their time with the University a preferred name is not a legal name, but is generally used to change how others refer to you. For this purpose, students may identify a preferred name to be recorded in the student system. Documents and records that may display a preferred name include, among other things, course rosters, student identification cards, student email addresses, and other documents issued by the University. A preferred name will not be reflected on, among other things, a student's official academic record, diploma, or transcript. To change the name that is displayed/reflected on the official academic record, diploma, or transcript students must follow the instructions on the Name Change Request Form available in the Registrar's Office. Official and legal name changes require specific documentation outlined on that form. The preferred name request form is available on the Registrar's webpage.

Blackboard
Blackboard is an online course management system. In addition to courses that students are registered for, all DPH students have access to CUNY SPH and DPH student Blackboard organizations.

The GC Student Handbook
The Student Handbook for the Graduate Center (GC) of the City University of New York (CUNY) available at http://www.gc.cuny.edu/CUNY_GC/media/CUNY-Graduate-Center/PDF/Publications/Student_Handbook_web.pdf?ext=.pdf. This handbook describes all relevant GC policies and is the official document for students at the Graduate Center. Students are encouraged to review this handbook and are expected to be familiar with all relevant GC policies.

Manhattan Research Library Initiative (MaRLI)
Any New York Public Library cardholder in good standing is eligible to apply to participate in a new library service that offers an unprecedented level of access to our collections. The Manhattan Research Libraries Initiative (MaRLI) offers approved NYPL cardholders the ability to borrow select research library material for at-home use for the first time ever. Additionally, MaRLI participants will be granted access to select materials owned by Columbia University and NYU.
http://www.nypl.org/help/research-services/MaRLI

CUNY Libraries Offer Free Access to the New York Times
Register for the NYTimes Academic Pass for free access through the NYTimes website and smartphone apps. If you already have a personal NYTimes subscription, read this post to find out how to cancel it and resubscribe through the Academic Pass. It also includes updated instructions about what to do if you already have a nytimes.com account (free or paid) tied to your CUNY email address.
http://gclibrary.commons.gc.cuny.edu/2014/04/09/free-nytimes/

Information for DPH Faculty Members

DPH Faculty Members- Roles, Duration, Course Release & Responsibilities

Role	Term	Course Release	Responsibilities
Executive Officer	Three academic years	Four course releases per year (12 credits total)	See Bylaws and above
The Deputy Executive Officer	One academic year	Two course releases per year (6 credits total)	See Bylaws and above
Track Coordinator	Three academic years	Two course releases per year (6 credits total)	See Bylaws and above
Advisor	Until dissertation stage	No course release	See Bylaws and above
Faculty Member	Three academic years, with option for renewal	Releases for defined activities as shown on this chart	See Bylaws, above, and PSC-CUNY contract
Chair of a DPH Committee	Three academic years	No course release	See Bylaws and above
Member of a DPH Committee	Three academic years	No course release	See Bylaws and above
Chair of First Exam Committee	One exam, as assigned	No course release	Chairs Faculty Committee that rates First Exam
First or Second Reader of First Exam(s)	One exam, as assigned	No course release	See above
Sponsor, Chair, and Member on a Second Exam Committee	From proposal to pass of second exam	No course release	See above
PUBH 900 Supervised Dissertation Research: Dissertation Sponsor	From dissertation proposal to defense	One course release for each 5 semesters of sponsorship§ (can be accrued but not banked) (3 credits total)	See above
Chair and Reader on a Dissertation Committee	From dissertation proposal to defense	No course release	See above
PUBH 861 Independent Study: Faculty Sponsor	From registration to completion	One course release for each five semesters of supervision can be accrued§ (3 credits total)	See above

§For example, sponsoring one student for five semesters or five students for one semester each both result in one course release. Once one release has been accrued it must be used.

GC Elimination of the use of Gendered Salutations and References of Students
Effective Spring 2015, the GC's policy is to eliminate the use of gendered salutations and references in correspondence to students, prospective students, and third parties.

Instructor to Student Course Ratio
A course will run with a minimum of five registered Graduate Center students. Courses that are team taught by two instructors require a minimum of 12 GC students. However, the decision that a course requires to be team taught is an academic decision, not one based simply on headcount and requires approval of the EO. A second instructor will not be added to a course after the first day of registration for continuing students unless the Provost has reviewed the program's reason for the requested and grants permission.
Minimum enrollment excludes auditors, non-matriculated students, and CUNY masters and undergraduate permits. The single exception is the PUBH 898 Dissertation Seminar where a minimum headcount enrollment that includes Level 3 auditors (PUBH 900) is acceptable.

CUNY SPH Syllabus Templates
All DPH course syllabi must follow the required SPH format. Templates with DPH core and track competencies are on Blackboard.
Faculty are to submit syllabi upon request from the DPH and/or CUNY SPH offices for records and to maintain accreditation.

Higher Education Opportunity Act Mandate to Notify Students about Required Course Texts
The College is required by the Higher Education Opportunity Act to make the costs of required course materials known to students when they register for classes.
It is necessary to report all required materials for a course that is running. For situations when an instructor does not know the edition of a book, a sample ISBN may be entered. If no texts are required note "no required texts." If at the time of entry you do not know which texts you plan to use, select texts you are likely to use and note "subject to change."

Change of Grade Forms
Faculty request a Change of Grade Form from the APO. Change of grade forms may only be signed and submitted by the instructor to the APO.

Notes on Admissions
The GC Admissions Office puts a hold on accepted applicants who have accepted our offer only when they have not completed a required degree (e.g. MPH). If the accepted applicant is missing Masters Core (Biostatistics; Epidemiology; Environmental Health; Social and Behavioral Dimensions of Health; & Health Policy and Management), the GC does not track this information and it is a responsibility of the student, advisor, and TC to do so.
Accepted students who wish to defer must write an email appealing to defer to the Chair of the Admissions Committee, the Track Coordinator, or the EO. The Chair notes the deferral to the GC Admissions Office either directly or via the APO.
If an incoming student wishes to take a Leave of Absence, they must instead defer.

Faculty Hiring DPH Students
Students may work as research assistants by individual grant holders, but may not act as Teaching Assistant or Graders in the same program that they are attending.

DPH Reappointment
Faculty will be requested to submit a self-assessment report along with a current CV for reappointment to the DPH program. Reappointments occur every three years.

Graduate Center Faculty Policies & Information
Please check the Graduate Center Governance, Policies, & Procedures links for additional information on GC faculty related regulations.
gc.cuny.edu/About-the-GC/Resource-Services/Governance-Policies-Procedures
gc.cuny.edu/Faculty

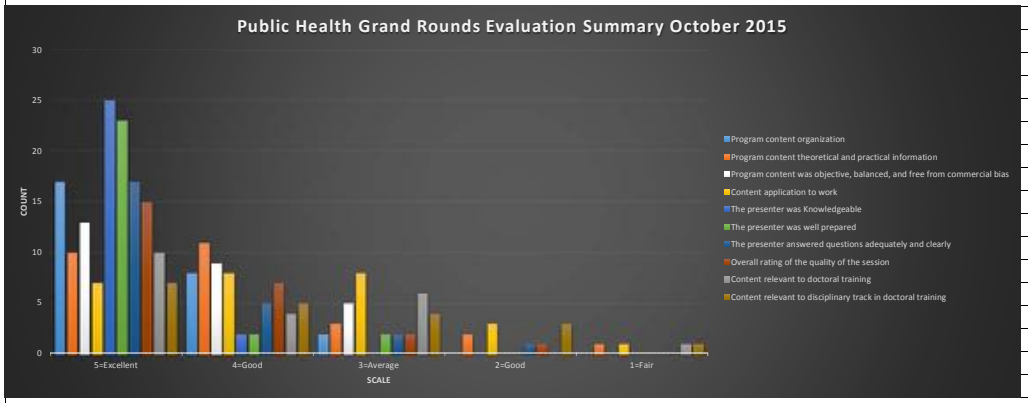
Room Reservation/Office Space
DPH faculty may make use of the conference room in 3317 at the Graduate Center by reservation only. It should be known that this space is shared by another Graduate Center doctorate program and is not available to the DPH program on Fridays. The conference room in 3317 can be reserved for office hours only by contacting the APO. Larger conference spaces and seminar rooms can be reserved by contacting the APO. The conference room should not be requested for regular class meetings.
Rooms must be requested two weeks in advance and no less than one week in advance.

GC Faculty Building Access After-hours
Faculty may request to the EO to grant after-hours authorization to the Director of Security & Public Safety.

GC Faculty ID Cards
Graduate Center ID Cards can only be obtained in person during regular business hours. Faculty and instructors should contact the APO to request a card. ID Cards require a valid ID Sticker for each semester which can be retrieved from the APO.
Lost ID Cards need to be reported immediately to the Office of Security at (212) 817-7777.

GC Faculty Computer Login and E-Mail Account
A valid Graduate Center Computer Account is required to access computers at the Graduate Center. Once an instructor is appointed to the faculty of The Graduate Center, the APO will contact the faculty member with the required Computer Account User ID and Password. The faculty member will be responsible for creating new his/her password. Problems with GC computers and email should be addressed to the GC Help Desk Helpdesk@gc.cuny.edu (212) 817-7300.
Additionally, it is a GC policy that faculty regularly check their GC email accounts or have it forwarded to their primary CUNY email account.
https://wa.gc.cuny.edu/owa/auth/logon.aspx?url=https://wa.gc.cuny.edu/owa/&reason=0

Faculty Courses in Blackboard
All Blackboard courses are hosted on centralized servers at CUNY CIS. DPH courses are created automatically using data provided by the Graduate Center Registrar's Office. Co-listed courses with the CUNY SPH consortium can be merged (e.g. PUBH 820 Epidemiologic Methods I/EPI 750/ PHE 723). If you are able to log in successfully as a faculty member but do not see your courses listed or need help merging courses, contact the GC Blackboard Administrator directly, Achia Samuels asamuels@gc.cuny.edu 212-817-7314 and/or the Help Desk helpdesk@gc.cuny.edu 212-817-7300.



Faculty Web/Banner
Unlike all other CUNY campuses, the GC uses Faculty Web for attendance and grade recording.
To access Faculty Web, use your 9-digit Banner ID. Upon appointment, you will be notified of your Banner ID. When logging in, be sure to use all the digits including the lead zeros. Your Banner ID and PIN will be the same from semester to semester. Problems with Banner and logging into Banner should be addressed to the GC Office of the Provost at 212-817-7200 provost@gc.cuny.edu.
https://ssb.gc.cuny.edu/prod/plsql/twbkwbis.P_WWWLogin

CUNYfirst and the GC
The GC has not fully transferred over to using CUNYfirst and it is not expected to do so until Fall 2016.

Presenter	Debrework Zewdie, PhD
Title	Leadership in Public Health: From AIDS to Universal Health Coverage
Date	10/05/15
No. in Attendance	46
No. Evaluations	27
Response Rate	59%

5=Excellent/ 4=Good/ 3=Average/ 2=Fair/ 1=Poor

Summary	Program content organization	Program content theoretical and practical information	Program content was objective, balanced, and free from commercial bias	Content application to work	The presenter was Knowledgeable	The presenter was well prepared	The presenter answered questions adequately and clearly	Overall rating of the quality of the session	Content relevant to doctoral training	Content relevant to disciplinary track in doctoral training

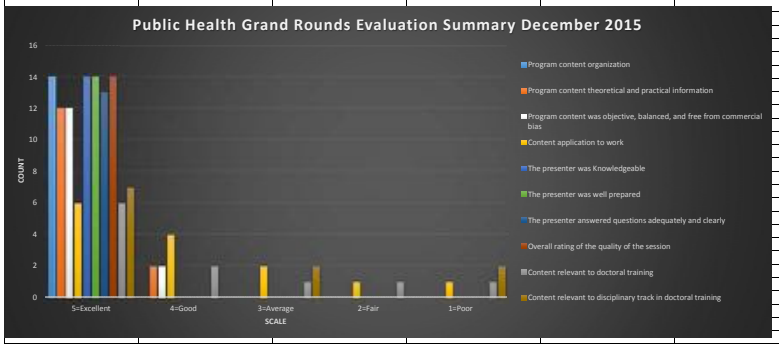
DPH student	4	4	3	1	5	5	5	5	4	4				
DPH student	5	5	5	5	5	5	5	5	5	5	Allocate more time for presentation	Real world application		
SPH faculty	4	1	3	4	5	5	5		NA	NA	UHC in the title of the presentation	The speaker was professional and inspiring		
DPH student	5	5	5	5	5	5	5	5	5	5	Microphone	Speaker was amazing		Politics in Health; How to navigate changing administration
DPH student	5	5	5	5	5	4	5		5	5				
SPH faculty	5	4	4	4	5	5	5	5	NA	NA	Include a slide for key outline of skills and abilities that students have for MPH and DPH	Speaker was 5		
DPH student	4	3	5	3	5	5	4	4	3	3	was more specific to AIDS, would have been interesting to hear more application to other health issues	Depth of speakers Knowledge		
DPH student	5	4	5	4	5	5	4	5	5	4			Very insightful for someone with plans to work in global health	Make these slides available online

DPH student	3	2	3	2	5	3	3	3	3	2	The content was too broad to learn applicable lessons from , the speaker had a lot of assumptions, which left me with questions rather than answers	The speaker was well known in the field		Based on the past lectures Leadership is too broad a topic for grand rounds
DPH student	4	5	5	3	5	5	4	4	3	2				
DPH student	5	5	5	4	5	5	5	5	5	5				
DPH student	5	3	4	2	5	5	5	4	4	2	More discussion on integration of perspectives of general population	personal anecdotes were interesting and strengthened the presentation		Domestic health issues and policy initiatives
DPH student	5	4	4	5	5	5	5	5	5	5				
SPH faculty	5	4	3	4	5	5	5	5	NA	NA	The presentation should be expanded into a course	summarizing decades of experience into a lesson on leadership		population interventions such as MTO
DPH student	4	4	4	4	5	5	5	4	4	4	More discussion on how to develop gross roots organizations in these countries	Experience of the presenter		More presentations on edit topics
DPH student	5	5	5	5	5	5	5	5	5	5		The presenter was extremely knowledgeable and presented information in a very clear and interesting way		
DPH student	5	5	5	3	5	5	5	5	5	NA	Could be little short	History, science, leadership		
SPH faculty	4	4	4	5	5	5	4	5	NA	NA				
DPH student	4	4	4	4	5	5		4	3	3		Clear presenter, Knowledgeable, 4 overall picture		
SPH faculty	5	4	4	3	5	5	5	5	NA	NA				
DPH student	5	5	5	3	5	5	5	5	5	4				
DPH student	5	5	5	5	5	5	5	5	5	5		Energy and attitude of presenter	More presentations at this level, Great presenter very inspiring	Round table where presenter share in less formal lecture form but guide interactive sessions of more depth involvement
Other CUNY	5	4	4	4	5	5		4	NA	NA	Increased audience participation, I would have liked to hear more of her personal experiences to audience to altitude those goals	very detailed history		Buying/selling in black markets, addressing New York city's vast wealth and health disparities
DPH student	5	5	5	3	5	5	5	5	3	3	I thought this was an 5 presentation and I whole heartedly agree with the presenters viewpoint , nothing really needs improvement	Realistic perspective, important viewpoint as someone from a country where there is a lot of development work being done	while this was a great presentation since in now at the point of working on my dissertation proposal I would actually like to spend more time in research seminars-2 where I could workshop with other students and devote lots of time to moving forward the proposal	
DPH student	4	3	4	3	4	4	3	3	3	3	More specific to practical documentation for strengthening leadership, clear resources for access post presentation	Presenter knowledge and experience		

DPH student	5	4	5	3	5	5	4	4	4	4	More personal experience, especially within the context of leadership it would have been useful to hear more about her experience as a woman of color in leadership position	clear , organized presenter is charismatic, very likeable		
DPH student	3	2	3	2	4	3	2	2	1	1	Better use of microphone,, deeper theoretical framework, more facts	personal anecdotes	last two presentations have been superficial and not truly challenging or deeply informative	since our focus is urban public health the international breakers should demonstrate what that looks like in other urban settings

Presenter	David Hipgrave MBBS, PhD, FRACP													
Title	Priorities and Challenges in Global Child Health in the Era of the Sustainable Development Goals													
Date	11/02/2015													
No. in Attendance	34													
No. Evaluations	14													
Response Rate	41%													
5=Excellent/ 4=Good/ 3=Average/ 2=Fair/ 1=Poor														

Summary	Program content organization	Program content theoretical and practical information	Program content was objective, balanced, and free from commercial bias	Content application to work	The presenter was Knowledgeable	The presenter was well prepared	The presenter answered questions adequately and clearly	Overall rating of the quality of the session	Content relevant to doctoral training	Content relevant to disciplinary track in doctoral training
5=Excellent	6	4	8	3	11	8	7	5	5	3
4=Good	5	6	4	7	3	5	3	6	5	5
3=Average	3	2	2	2	0	1	1	1	0	2
2=Good	0	1	0	1	0	0	0	1	2	2
1=Fair	0	1	0	0	0	0	0	0	0	0



Role	Program content organization	Program content theoretical and practical information	Program content was objective, balanced, and free from commercial bias	Content application to work	The presenter was Knowledgeable	The presenter was well prepared	The presenter answered questions adequately and clearly	Overall rating of the quality of the session	Content relevant to doctoral training	Content relevant to disciplinary track in doctoral training	Suggestions for improvement	Strengths of the presentation	Additional comments/Explanations	Suggestions for future topics and formats
DPH student	5	4	5	3	5	4	5	4	5	5	Technical difficulty with slides	interesting data		
DPH student	3	3	4	4	4	4	4	4	4	4				
DPH student	4	5	5	4	5	5		5	5	5		good figures		
DPH student	4	4	4	4	5	5	5		5	3				
DPH student	5	5	5	NA	5	5	5	5	2	2	more time for discussion less time for speaking	lots of facts and figures representing the topic		
DPH student	5	4	5	4	5	5	4	4	4	4	synthesize clear topic, slightly long and repetitive, the first half of presentation	good examples on importance of sub-external level data	some what repetitive, slides/data, keep emphasizing the same point rather than build on each other	

DPH student	4	4	5	4	5	5		4	4	3	more time foe questions	diversity of data nice data visualization some cutting edge findings		
SPH faculty	4	4	3	4	4	4	4	3	NA	NA	The slides were difficult to read increase the font and reduce number of graphs the presenter referred to proportions when absolute values were used	the topic area is given appropriate and pushing for current public health issues on health and development	the presenter presented absolute numbers as proportions and rates this is misleading	social epidemiology and aging
DPH student	5	4	5	4	5	5	5	5	5	4		Global issues and perspective generally not enough at CUNY DPH		
DPH student	3	2	3	2	4	3	3	2	2	2	It was mostly a presentation of data not enough focus on interventions or his personal experience in this field of work			
Outside CUNY	5	5	5	5	5	5	5	5					The stats were beautiful	
DPH student	4	3	4	5	5	4		4	4	4	Slide minimum per speaker, time cards for speaker	speaker presented fantastic data		sexual reproductive health rights in the US post ACH (birth control, abortion)
DPH student	5	5	5	5	5	5	5	5	5	5				please add opportunities for follow up, either possible work up speaker, within CUNY, course work etc.
DPH student	3	1	4	3	5	4	5	4	4	4	Lots of slides more inclusion of personal experiences would have been useful			provide resources related to topic for review of prior

Presenter	Sten Vermund, MD, PhD
Title	A Critical Look at HIV Prevention Research into 2016: TasP, PrEP, and Circumcision
Date	12/14/15
No. in Attendance	48
No. Evaluations	14
Response Rate	29%

5=Excellent/ 4=Good/ 3=Average/ 2=Fair/ 1=Poor

Summary	Program content organization	Program content theoretical and practical information	Program content was objective, balanced, and free from commercial bias	Content application to work	The presenter was Knowledgeable	The presenter was well prepared	The presenter answered questions adequately and clearly	Overall rating of the quality of the session	Content relevant to doctoral training	Content relevant to disciplinary track in doctoral training

DPH student	5	5	5	4	5	5	5	5	4	5		Inserted practical research takeways		
DPH student	5	5	5	4	5	5	5	5	5	5		Nice mixture of practical experience tied in with ideas on study design		
DPH student	5	4	5	3	5	5	5	5	3	3	it would have been helpful to learn more about the conceptualization and implementation processes otherwise was great			
DPH student	5	5	4	5	5	5	5	5	5	3		Very engagaing, great speaker		policy, racial equity, cross cutting issues (eg labor+health, etc)
SPH staff	5	5	4	5	5	5	5	5	NA	NA				
SPH faculty	5	5	5	5	5	5	5	5			this was an excellent presentation	the presenter was knowlegeable entertaining, engaged/ engaging, explained concepts thoroughly,	we need more speakers like him	can we approach lisa berkaman, wanly krileger, or sv subramaniah, (aging, race, multilevel interventions in PH)
DPH student	5	5	5	4	5	5	5	5	4	5		this was the best grand round presentation, great combinationof theory and practice, deep elaboration of		
DPH student	5	5	5	3	5	5	5	5	5	5	very interesting topic	very clear and interresting		
DPH student	5	5	5	2	5	5	5	5	2	1				
Other CUNY	5	5	5	5	5	5	5	5	5	5	Beeing taped	comprehensive coherent tale of classic public health		gun violence
DPH student	5	5	5	1	5	5	5	5	1	1	excellent presentation			policy management, economics, community health interventions, documentataion film, health communications
DPH student	5	4	5	5	5	5		5	5	5		great information		
SPH faculty	5	5	5	5	5	5	5	5						
DPH student	5	5	5	4	5	5	5	5	5	5				

Grand Rounds Evaluation Form

CUNY SCHOOL OF PUBLIC HEALTH

Your comments are very important to us! Please complete this evaluation so that we may provide more quality presentations in the future.

Which of the following best describes your role with the CUNY SPH?

_____ DPH student
_____ MPH student
_____ SPH faculty
_____ SPH staff
_____ Other CUNY
_____ Outside CUNY

5 = Excellent / 4 = Good / 3 = Average / 2 = Fair / 1 = Poor

The content was well organized.	5 4 3 2 1
The content had a good blend of theoretical and practical information.	5 4 3 2 1
The program content was objective, balanced, and free from commercial bias or influence.	5 4 3 2 1
I will be able to apply this content to my work.	5 4 3 2 1
The presenter was knowledgeable.	5 4 3 2 1
The presenter was well prepared.	5 4 3 2 1
The presenter answered questions adequately and clearly.	5 4 3 2 1
Your overall rating of the quality of the session.	5 4 3 2 1
For Doctoral Students Only:	
The content was relevant for my doctoral training broadly.	5 4 3 2 1
The content was relevant for my doctoral training within my disciplinary track.	5 4 3 2 1

How could this presentation be improved?	
What were the strengths of this presentation?	
Additional Comments/Explanations	
Suggestions for future topics and formats	

Thank you for your feedback!
